Bealby

(Continued from page 8)

hovered, as a trifling annoyance, as something pink and hot rustling a sheet of a discordant shade of pink, as something that got in the way of his legs and whistled softly some trivial cheerful air, just to show how little it cared. Presently, very soon, this vague trouble would pass out of his consciousness altogether. . . .

THE Lord Chancellor was no mere amateur of philosophy. His activities in that direction were a part of his public reputation. He lectured on religion and esthetics. He was a fluent Hegelian. He spent his holidays, it was understood, in the Absolute—at any rate in Germany. He would sometimes break into philosophy at dinner tables and particularly over the dessert and be more luminously incomprehensible, while still apparently sober, than almost anyone. An article in the "Hibbert" caught and held his attention. It attempted to define a new and doubtful variety of Infinity. You know of course that there are many sorts and species of Infinity, and that the Absolute is just the king among Infinities as the lion is king among the Beasts. . . .

"I say," said a voice coming out of the world of Relativity and coughing the cough of those who break a silence. "You aren't going to Shonts, are you?"

The Lord Chancellor returned slowly to earth.

"Just seen your label," said the very fair young man. "You see, I'm going to Shonts."

The Lord Chancellor remained outwardly serene. He reflected for a moment. And then he fell into that snare which is more fatal to great lawyers and judges perhaps than to any other class of men, the snare of the crushing repartee. One had come into his head now—a beauty.

"Then we shall meet there," he said in his suavest manner.

"Well—rather."

"It would be a great pity," said the Lord Chancellor with an effective blandness, using a kind of wry smile that he employed to make things humorous, "it would be a great pity, don't you think, to anticipate that pleasure."

And having smiled the retort well home with his head a little on one side, he resumed with large, leisurely movements the reading of his "Hibbert Journal."

"Got me there," said the very fair young man belatedly looking boiled to a turn, and after a period of restlessness settled down to an impatient perusal of "Black and White."

"There's a whole blessed week-end of course," the young man remarked presently without looking up from his paper and apparently pursuing some obscure meditations. . . .

A vague uneasiness crept into the Lord Chancellor's mind as he continued to appear to peruse. Out of what train of thought could such a remark arise? His weakness for crushing retort had a little betrayed him. . . .

It was however only when he found himself upon the platform of Chelsome, which as everyone knows is the station for Shonts, and discovered Mr. and Mrs. Rampound Pilby upon the platform looking extraordinarily like a national monument and its custodian, that the Lord Chancellor began to realize that he was in the grip of fate, and that the service he was doing his party by week-ending with the Laxtons was likely to be not simply joyless but disagreeable.

Well anyhow he had MacTaggart, and he could always work in his own room. . . .

BY the end of dinner the Lord Chancellor was almost at the end of his large but clumsy endurance; he kept his eyebrows furled only by the most strenuous relaxation of his muscles, and within he was a sea of silent blasphemies. All sorts of little things had accumulated. . . .

He exercised an unusual temperance with the port and old brandy his host pressed upon him, feeling that he dared not relax, lest his rage have its way with him. The cigars were quite intelligent at any rate, and he smoked and listened with a faintly perceptible disdain to the conversation of the other men. At any rate Mrs. Rampound Pilby was out of the room. The talk had arisen out of a duologue that had preceded the departure of the ladies, a duologue of Timbre's, about apparitions and the reality of the future life. Sir Peter Laxton, released from the eyes of his wife, was at liberty to say he did not believe in all this stuff; it was just thought transference and fancy and all that sort of thing. His declaration did not arrest the flow of feeble instances and experiences into which such talk invariably degenerates. His lordship remained carelessly attentive, his eyebrows unfurled but drooping, his cigar upward at an acute angle; he contributed no anecdotes, content now and then to express himself compactly by some brief sentence of pure Hegelian—much as a Mohammedan might spit.

"Why! come to that, they say Shonts is haunted," said Sir Peter. "I suppose we could have a ghost here in no time if I chose to take it on. Rare place for a ghost, too."

THE very fair young man of the train had got a name now and was Captain Douglas. When he was not blushing too brightly he was rather good looking. He was a distant cousin of Lady Laxton's. He impressed the Lord Chancellor as unabashed. He engaged people in conversation with a cheerful familiarity that excluded only the Lord Chancellor, and even at the Lord Chancellor he looked ever and again. He pricked up his ears at the mention of ghosts, and afterward, when the Lord Chancellor came to think things over, it seemed to him that he had caught a curious glance of the Captain's bright little brown eye.

"WHAT sort of ghost, Sir Peter? Chains? Eh? No?"

"Nothing of that sort, it seems. I don't know much about it. I wasn't sufficiently interested. No, sort of spook that bangs about and does you a mischief. What's its name? Plundergeist?"

"Poltergeist," the Lord Chancellor supplied carelessly in the pause.

"Runs its hand over your hair in the dark. Taps your shoulder. All nonsense. But we don't tell the servants. Sort of thing I don't believe in. Easily explained—what with paneling and secret passages and priests' holes and all that."

"Priests' holes!" Douglas was excited.

"Where they hid. Perfect rabbit warren. There's one going out from the drawing-room alcove. Quite a good room in its way. But you know"—a note of wrath crept into Sir Peter's voice—"they didn't treat me fairly about these priests' holes. I ought to have had a sketch and a plan of these priests' holes. When a chap is given possession of a place he ought to be given possession. Well! I don't know where half of them are myself. That's not possession. Else we might refurnish them and do them up a bit. I guess they're pretty musty."

CAPTAIN DOUGLAS spoke with his eye on the Lord Chancellor. "Sure there isn't a murdered priest in the place, Sir Peter?" he asked.

"Nothing of the sort," said Sir Peter. "I don't believe in these priests' holes. Half of 'em never had priests in 'em.

Skeleton Lined Oxfords — by actual test the practical way to make a low shoe for Summer comfort.

WHY wear leather lined oxfords when *every* Florsheim low shoe is Skeleton Lined? They keep your feet cool, fit better, wear longer—and no slipping at the heels. Made over "Natural Shape" lasts in 200 styles. Priced at $5—and up to $7.

It's all pretty tidy rot I expect—come to the bottom of it . . ."

The conversation did not get away from ghosts and secret passages until the men went to the drawing room. If it seemed likely to do so, Captain Douglas pulled it back. He seemed to delight in these silly particulars; the sillier they were the more he was delighted.

THE Lord Chancellor was a little preoccupied by one of those irrational suspicions that will sometimes afflict the most intelligent of men. Why did Douglas want to know all the particulars about the Shonts ghosts? Why every now and then did he glance with that odd expression at one's face—a glance half appealing and half amused. Amused! It was a strange fancy, but the Lord Chancellor could almost have sworn that the young man was laughing at him. At dinner he had had that feeling one has at times of being talked about; he had glanced along the table to discover the Captain and a rather plain woman, that idiot Timbre's wife she probably was, with their heads together looking up at him quite definitely, and both manifestly pleased by something Douglas was telling her. . . .

What was it Douglas had said in the train? Something like a threat. But the exact words had slipped the Lord Chancellor's memory. . . .

The Lord Chancellor's preoccupation was just sufficient to make him a little unwary. He drifted into grappling distance of Mrs. Rampound Pilby. Her voice caught him like a lasso and drew him in. "Well, and *how* is Lord Moggeridge now?" she asked.

What on earth is one to say to such an impertinence?

SHE was always like that. She spoke to a man of the caliber of Lord Bacon as though she was speaking to a schoolboy home for the holidays. She had an invincible air of knowing all through everybody. It gave rather confidence to her work than charm to her manner.

"Do you still go on with your philosophy?" she said.

"No," shouted the Lord Chancellor, losing all self-control for the moment and waving his eyebrows about madly. "No, I go *off* with it."

"For your vacations? Ah, Lord Moggeridge, how I envy you great lawyers your long vacations. *I*—never get a vacation. Always we poor authors are pursued by our creations, sometimes it's typescript, sometimes it's proofs. Not that I really complain of proofs. I confess to a weakness for proofs. Sometimes alas! it's criticism. Such *undiscerning* criticism! . . ."

The Lord Chancellor began to think very swiftly of some tremendous lie that would enable him to escape at once without incivility from Lady Laxton's drawing room. Then he perceived that Mrs. Rampound Pilby was asking him: "Is that *the* Captain Douglas, or his brother, who's in love with the actress woman?"

The Lord Chancellor made no answer. What he thought was "Great Silly Idiot! How should *I* know?"

"I think it must be *the* one—the one who had to leave Portsmouth in disgrace because of the ragging scandal. He did nothing there, they say, but organize practical jokes. Some of them were quite subtle practical jokes. He's a cousin of our hostess; that perhaps accounts for his presence. . . ."

The Lord Chancellor's comment betrayed the drift of his thoughts. "He'd better not try that sort of thing on here," he said. "I abominate—clowning."

DRAWING-ROOM did not last very long. Even Lady Laxton could not miss the manifest gloom of her principal guest, and after the good nights and barley water, and lemonade on the great landing, Sir Peter led Lord Moggeridge by the arm—he hated being led by the arm—into the small but still spacious apartment that was called the study. The Lord Chancellor was now very thirsty; he was not used to abstinence of any sort; but Sir Peter's way of suggesting a drink roused such a fury of resentment in him that he refused tersely and conclusively. There was nobody else in the study but Captain Douglas, who seemed to hesitate upon the verge of some familiar address, and Lord Woodenhouse who was thirsty, too, and held a vast tumbler of whisky and soda, with a tinkle of ice in it, on his knee in a way annoying to a parched man. The Lord Chancellor helped himself to a cigar and assumed the middle of the fireplace with an air of contentment, but he could feel the self-control running out of the heels of his boots.

Sir Peter after a quite unsuccessful invasion of his own hearthrug—the Lord Chancellor stood like a rock—secured the big armchair, stuck his feet out toward his distinguished guest, and resumed a talk that he had been holding with Lord Woodenhouse about firearms. Mergleson had as usual been too attentive to his master's glass, and the fine edge was off Sir Peter's deference. "I always have carried firearms," he said, "and I always shall. Used properly they are a great protection. Even in the country how are you to know who you're going to run up against—anywhen?"

"But you might shoot and hit something," said Douglas.

"Properly used, I said—properly used. Whipping out a revolver and shooting *at* a man, that's not properly used. Almost as bad as pointing it at him—which is pretty certain to make him fly straight at you if he's got an ounce of pluck. But *I* said properly used and I *mean* properly used."

THE Lord Chancellor tried to think about that article on Infinities, while appearing to listen to this fool's talk. He despised revolvers. Armed with such eyebrows as his it was natural for him to despise revolvers.

"Now, I've got some nice little barkers upstairs," said Sir Peter. "I'd almost welcome a burglar, just to try them."

"If you shoot a burglar," said Lord Woodenhouse abruptly, with a gust of that ill temper that was frequent at Shonts toward bedtime, "when he's not attacking you, it's murder."

Sir Peter held up an offensively pacifying hand. "I know *that*," he said, "you needn't tell me *that*."

He raised his voice a little to increase his already excessive accentuations. "*I* said properly used."

A yawn took the Lord Chancellor unawares and he caught it dexterously with his hand. Then he saw Douglas hastily pull at his little blond mustache to conceal a smile—grinning ape! What was there to smile at? The man had been smiling all the evening.

Up to something?

"Now let me *tell* you," said Sir Peter, "let me *tell* you the proper way to use a revolver. You whip it out and *instantly* let fly at the ground. You should never let anyone see a revolver ever before they hear it—see? You let fly at the ground first off, and the concussion stuns them. It doesn't stun you. *You* expect it, *they* don't. See? There you are—five shots left—master of the situation."

"I think, Sir Peter, I'll bid you good night," said the Lord Chancellor, allowing his eye to rest for one covetous moment on the decanter and struggling with the devil of pride.

Sir Peter made a gesture of extreme friendliness from his chair, expressive of the Lord Chancellor's freedom to do whatever he pleased at Shonts. "I may perhaps tell you a little story that happened once in Morocco."

"My eyes won't keep open any longer," said Captain Douglas suddenly, with a whirl of his knuckles into his sockets, and stood up.

LORD WOODENHOUSE stood up too. "You see," said Sir Peter, standing also but sticking to his subject and his hearer. "This was when I was younger than I am now, you must understand, and I wasn't married. Just mooching about a bit, between business and pleasure. Under such circumstances one goes into parts of a foreign town where one wouldn't go if one was older and wiser. . . ." Captain Douglas left Sir Peter and Woodenhouse to it.

He emerged on the landing and selected one of the lighted candlesticks upon the table. "Lord!" he whispered. He grimaced in soliloquy and then perceived the Lord Chancellor regarding him with suspicion and disfavor from the ascending staircase. He attempted ease. For the first time since the train incident he addressed Lord Moggeridge.

"I gather, my lord—you don't believe in ghosts," he said.

"No, sir," said the Lord Chancellor, "I don't."

"They won't trouble me to-night."

"They won't trouble any of us."

"Fine old house, anyhow," said Captain Douglas.

The Lord Chancellor disdained to reply. He went on his way upstairs.

(To be continued next week)

CONFIDENCE

Have you ever stopped to figure out what part **confidence** plays in business? Before a merchant ships goods on consignment to a retailer, he must have **confidence** in him. Before a person buys an article by mail in response to an advertisement, he must have **confidence** in the magazine.

Confidence is absolutely essential in the promotion of business. A magazine which creates **confidence** in the minds of its readers toward its advertisers will be a profitable medium for advertising purposes. In so far as possible, Collier's excludes from its advertising columns, both classified and display, all advertisers in whom **confidence** cannot be placed. One classified advertiser says:

> "Last week two men came into my office, laid down their money on my desk and said that they knew my goods were up to the mark because they were advertised in Collier's."
>
> The same advertiser says further: "I have found after years of experience that I can get more money from Collier's and one other magazine than from all others combined. I think it is because both publications appeal to men and because the readers have perfect **confidence** in the advertisers."

In addition to reader **confidence**—Collier's gives 750,000 or more circulation for only $3.00 per line, and splendid position—usually next to or opposite reading matter.

There is no better advertising medium for *most* advertisers.

What a Lot of Women Want

By C. T. HALLINAN

WILMER ATKINSON'S reliable "Farm Journal" vouches for the existence of a cooperative laundry which is making life vastly easier for the women in a certain cluster of Minnesota farms.

This little community had a cooperative creamery of the average type. A bright woman, who probably read COLLIER'S, said: "Why can't the creamery put in some laundry machinery and do all our washing?" Circulars were sent for and carefully studied; the paternal mail-order houses were consulted; finally the "committee" passed the hat for 85 to $25 subscriptions and plunged in the purchase of $2,500 worth of machinery.

Now they have a well-equipped laundry, built next door to the creamery and using the creamery engine—to everybody's delight. This is a big saving. The farmers take the family washing to the "laundry-creamery" when they take their cream, and get it on some subsequent trip. The washing bill is charged to the creamery account and deducted at the end of the month. Simple bookkeeping and no "bad accounts."

It is interesting to see the figures. This neighborhood laundry charges 5 cents a pound for washing clothes. It is very obliging and will run through the mangle once, free of charge, what the housewives call "flat work." A woman is employed to iron, and the patrons pay for her services at the rate of 15 cents an hour. A man on the "committee" who is of a statistical turn of mind says that the average week's washing costs 97.9 cents per family. Who can compute the time and labor and backache saved "per family"?

THOSE who say that American farmers can never cooperate may study the totals pertaining to this enterprise. At the end of the first eleven months the receipts were $4,807.21; wages paid, $3,556.25; 10 per cent rebate to cooperators, $480.32; soap, starch, and other supplies, $250; paid creamery company for power, $150; paid creamery company for rent, $100; dividend to stockholders, $100; incidental expenses, $166.64; total, $4,807.21.

If we no longer thrill, as our forefathers did, to schemes for ready-made "utopias" and "phalansteries," there is a good reason why. New England and the Middle West—especially Indiana—are covered with the ruins of those communistic experiments. But rural cooperation is a sturdier plant when once it gets rooted. Country life fifty years hence will see a vast multiplication of such sensible schemes as the one sketched here. The real "new woman" of the future will be the farmer's wife, "shooing" stupid drudgery off the place.

The Voice of Spring

(Concluded from page 30)

"Well, young man! What's the idea of this?" Birdie demanded after she had looked him over. Her guides stood back in awed expectation.

"Hello," Jimmie calmly returned. "I didn't think you could find me so quick. We was goin' to start to-night and go out with Jinglers' circus this spring. I know where it is—I read it in a theatre paper a fellow give me."

Miss McMullen sat down on a box and studied him with interest—the wanderlust of springtime had undoubtedly captured his adventurous spirit.

"Tell me about it, Jimmie," she suggested. "Ragon and Schnable and Miller didn't want to give you away—but I made them tell. I knew it was boy scouts that had you stowed away somewhere and I just bored it out of them."

"I was goin' to lie like anything first," Ragon cheerfully asserted. "I got leery as soon as I found out who you was off of Dutch Miller."

"Oh, I got tired of that school. They don't do nothin' there only say prayers all the time—except when you're studyin' lessons," young Mr. Ferris explained with fine scorn. "It's all right for girls, I suppose. But I ain't got no time to learn about no seven deadly sins. That gives me a pain."

"Jimmie!" Miss McMullen exclaimed sharply. "I'm surprised at you!"

"So was Sister Mary Ceophas, I guess, when I told her to go and jump in the lake," Jimmie retorted. "I had Pride and Gluttony all right, and I remembered the one about gettin' mad and fightin'. But then I got stuck. I couldn't remember that one about bein' lazy all the time, and Sister Mary Ceophas she says to me, she says: 'What's the one thing that's the matter with you, Jimmie?'

"That made me kind o' sore because I thought she was talkin' about me havin' red hair. So I says I don't know nothin' that's the matter with me, and she says if I did I could answer about that next deadly sin because I've got it. And when she told me what it was I wrote it down on a piece of paper so I'd remember it." He fingered in his waistcoat pocket a moment and brought up a grimy piece of paper. "It's 'Sloat,'" he announced, after glancing at it; "that's what she said I had."

"Yes, I understand, Jimmie," Miss McMullen said. "I think Sister Mary Ceophas has been studying you for a while. And then what?"

"Well, then she told me what it meant and she said I'd have to stay after school and write it a hundred times," Jimmie went on, "and so I told her to go jump in the lake, and then I beat it."

"Oh, yes. And when did you get the happy little thought about being a circus performer?" she asked, while the lesser lights curled up on the hay and drank it all in avidly.

"Oh, I knew about that long ago," he returned. "I met a fellow once that was in Jingler's—he wasn't any bigger'n me, and all he had to do was let one man throw him over his head and he turns a somerset on another man's shoulders and they have swell eats in a tent."

"And you told these boys what a grand game that would be, eh?" she pursued.

"I told 'em I was goin' and they all wanted to go with me," declared Jimmie. "Ragon says he's got sloat about goin' to school, too, and we wanted to take the little kids to hustle eats for us out of grocery wagons while we were travelin'."

Birdie looked suspiciously at the packages that Jimmie's satellites were trying to hide. "I brung my stuff from home," Ragon stoutly asserted. "We didn't tackle no wagons yet, Jimmie. We was goin' to this afternoon."

Miss McMullen rose and shook out her skirts. "I'll tell you what we'll do, fellows," she said, "we'll keep still about this, eh? Nobody'll know it but just us—and Jimmie's going back home to Mrs. Haskins's with me."

"But not to St. Agatha's?" he said in quick alarm.

"No, I think we'll have to fix you up in the public school where you can have all the deadly sins you want to without getting into a row," she returned. "And I won't tell Mrs. Haskins or anybody where you were all this time or how I found you, and Schnable's father will never know we might have had the patrol wagon at his barn, and Ragon and Miller's folks won't find out about what was taken out of the pantry for eats—not this time. Is that a go?"

"Sure!" they chorused cheerfully.

"Then we'll all swear an oath to keep our secret," she said solemnly, "we five, while we're alive."

She held out her hand. Timidly the four boys placed their hands upon it one by one and the compact was sealed.

"I'm kind of glad we ain't going with the circus," Ragon admitted with a little shiver. "The fellow that catches you on his shoulders might miss it some time."

"He does," Birdie assured him, "a couple of times a week. That's why they need so many boys—it takes new ones all the time to keep the act going."

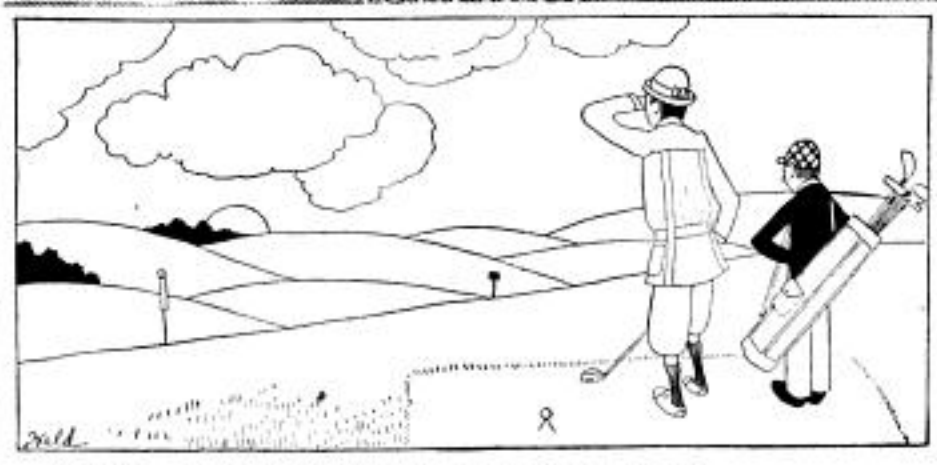
Jimmie Ferris looked at her anxiously. "Does Mrs. Haskins think I've got it?" he asked.

"Got what?" she inquired.

"Sloat," said Jimmie. The others waited anxiously for her answer. Upon it much depended.

"Not a bit of it, son," she declared. "And I don't either. But I want to tell you one thing—it's catching and you're liable to get it."

"All right," Jimmie said with a little sigh of relief, "then I'll go back home. But I wouldn't if I had it."



BILLY Sheehan called her up that afternoon with the joyful news that Jimmie Ferris had returned to his home of his own accord, safe and sound and well fed.

"I can't find out where he's been, Birdie," the amateur sleuth declared, "but I think he must have heard that one of these police officers I've been working with was after him. He acted kind of scared, but he wouldn't tell us a thing."

"I don't blame him," she promptly retorted. "It's a wise boy that knows enough to keep his mouth closed when the police are trying to slip over that third-degree stuff. Did he say he was feeling all right?"

"Oh, yes. And he looks dandy," Billy returned. "But there was one thing I didn't quite get that the kid pulled—when Mrs. Haskins asked him how he felt he told her he was afraid first that he had some kind of a disease that sounded like 'sloat.' And none of us could get him to talk about it afterward—I don't know what he was driving at."

"You don't? Why, 'sloat' is another name for spring fever," she retorted. "It's very common just now, Billy. You ought to be over your attack in a day or two—call me up when you're feeling all right again."

Golfer—Do you think I could do this in three?
Caddie (who has been out all day)—Yes, sir, hours or strokes?

What Thief Steals 20% of Your Efficiency?

AFTER five years investigation, the U. S. Army discovered that *the pointed shoe* is that thief.

And they adopted a shoe of the Educator type, which, tests have proved, will save that 20% of energy. Now if you have bent bones—and therefore corns, bunions, ingrowing nails, flat foot, etc.,—you are worth only about 80% of your real fighting self.

Get your whole family (men, women, children) into roomy, good-looking Educators—today. $1.35 to $5.50.

See that the EDUCATOR name is branded on the sole. It guarantees you the correct orthopaedic shape which allows your foot to grow as nature intended.

"Freak Shoes Make Frantic Feet" is a new book which tells you how to have straight-boned, healthy feet. Free. Send for a copy to-day.

The Cost of Tires

No-Rim-Cut Prices—Since 1909—Have Been Cut in Two. Last Year Alone They Dropped 28 Per Cent. Now These Tires—Once the Extra-Priced—Undersell 16 Other Makes

A curious thing has happened.

Once we had to explain why No-Rim-Cut tires cost more than other makes. Now men are asking why they cost them less. Did we over-charge you formerly, or do we under-charge you now?

Why They Cost More

They cost you more than others once, because they cost us more. And they cost us more today.

No-Rim-Cuts are the only tires which embody our costly, efficient way to put an end to rim-cutting.

They are the only tires which get an "On-Air" cure. That is, we final-cure on air-filled tubes, under actual road conditions. We save in this way all the countless blow-outs due to wrinkled fabric. This one extra process—used by us alone—costs us $450,000 per year.

They are the only tires in which hundreds of large rubber rivets are formed to combat tread separation.

They are the only tires which have our double-thick All-Weather tread. The anti-skid as smooth-riding as a plain tread, but with deep, resistless, sharp-edged grips.

Why They Cost Less

Of course, raw rubber has come down; but not more for us than for others.

Our overhead, since the days of small output, has dropped 24 per cent.

Our labor cost, through multiplied production, has dropped 25 per cent.

Our selling cost has dropped.

And our profits were pared until last year they averaged 6½ per cent.

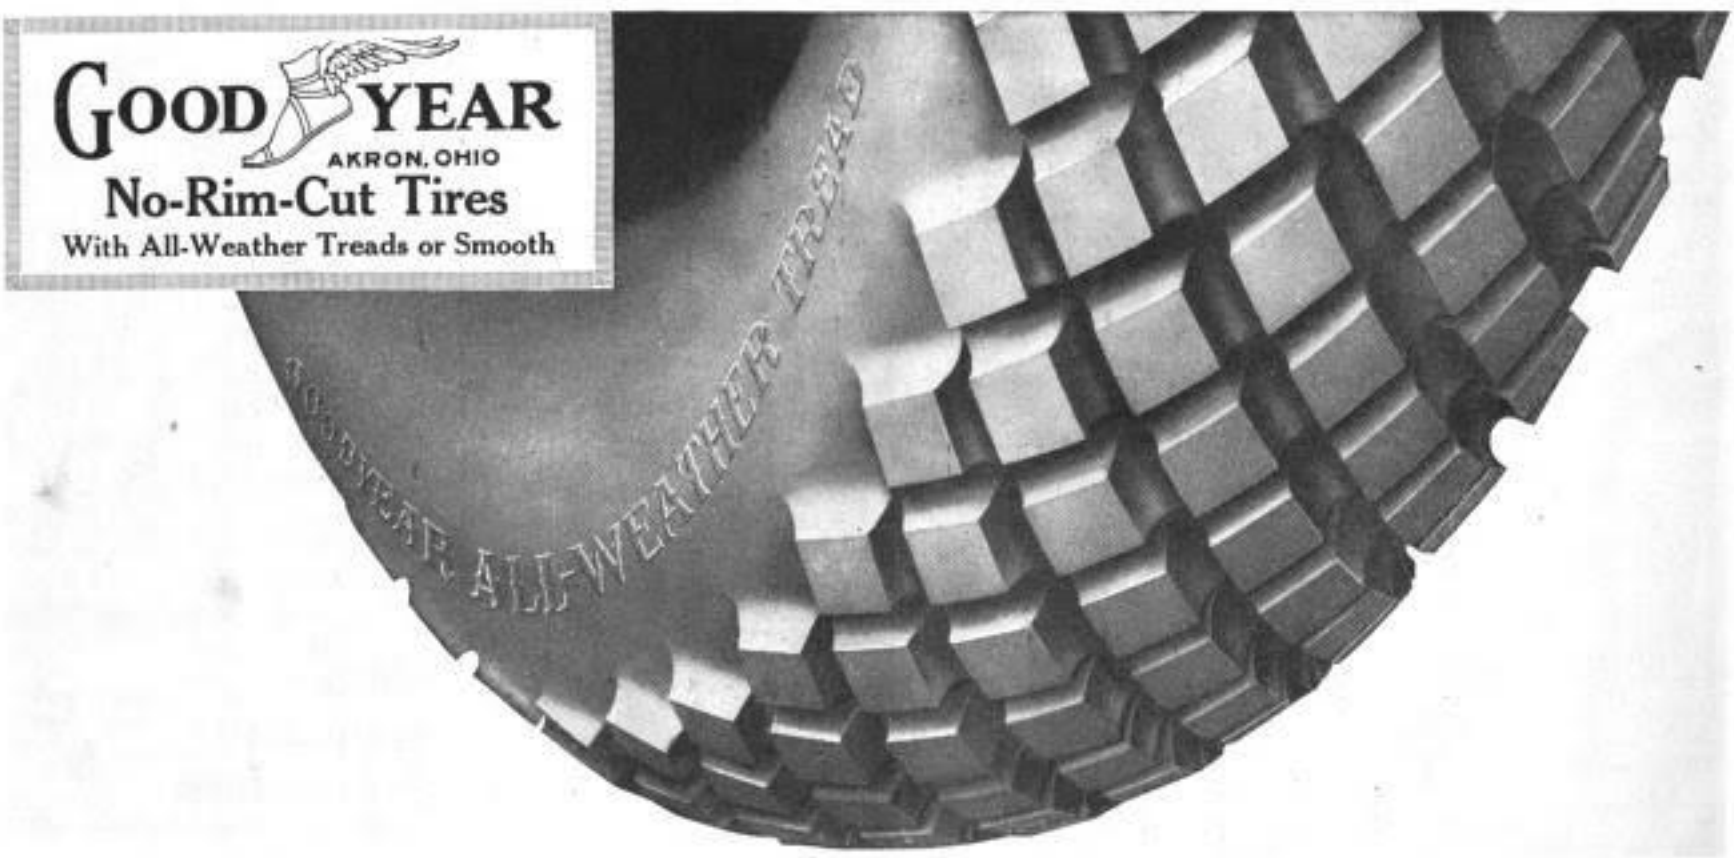
We have new buildings—new equipment—new efficiency methods. We often make in one day as many motor tires as we made in a month five years ago. Not another plant in the world has anywhere near such an output.

Tire Users Did It

Our present prices are largely due to the men who get them. They have bought these tires by the millions. And this year they are buying 55 per cent more than they ever bought before. We have used our multiplied sales to save all that we could for you. And we have given you more than we saved.

Extra Quality Can Anybody Give It?

Of course, the claim for extra price is extra quality. That's too indefinite to argue. We spend $100,000 yearly to find ways to better tires. That others excel us is simply unthinkable. More men have adopted Goodyears than any other tire in the world. It can't be supposed that so many men are mistaken.



We've told you four ways where Goodyear tires excel. They deal with the four greatest factors in upkeep. No man can think that we give those things and then skimp quality.

The truth is, Goodyear prices buy the utmost in a tire. When you pay for three tires what we charge for four, you pay more than you ought to pay. Any dealer will supply you Goodyears if you say that you prefer them.

NAPOLEON LAJOIE

peerless second baseman of the Cleveland American team, says:

"Tuxedo and I have been friends for years, and the longer I use it the better I like its mild, soothing effect."

N. Lajoie

Just Before You Start for the Game, Remember Tuxedo

Baseball and Tuxedo make a perfect combination. The perfect sport and the perfect smoke. In pipe or cigarette—Tuxedo is always ideal.

The fellows you see out there on the diamond know this; and after the game and the shower and the rub-down, their first bit of relaxation is a refreshing smoke of Tuxedo.

CHRISTY MATHEWSON

famous pitcher of the New York Giants, a great favorite with the "fans" all over the country, says:

"Tuxedo gets to me in a natural, pleasant way. It's what I call good, honest, companionable tobacco—the kind to stick to."

C. Mathewson

Tuxedo

The Perfect Tobacco for Pipe or Cigarette

Tuxedo is mild, healthful, wholesome, beneficial. If it wasn't, these ball players wouldn't continue to smoke it.

All sorts of famous athletes, opera singers, golfers, airmen, trapshooters—men who have to be right at the top notch of physical fitness all the time—use Tuxedo steadily.

There isn't a speck of irritation, scorch, sting or bite in a pound of Tuxedo. All that is removed by the famous *original* "Tuxedo Process"—a process that has had imitations *galore*—but the *original* "Tuxedo Process" is still the best.

Tuxedo is the *best* tobacco—made of rich, mellow, perfectly aged Kentucky Burley. None better can be bought, because none better is grown.

JOE TINKER

famous short stop and manager of Chicago Federal B. B. Team, says:

"A pipeful of Tuxedo after a game is the most restful smoke I can find."

Jos B Tinker

JOHN J. McGRAW

famous manager of the New York Giants, champions of the National League, says:

"Tuxedo gives to my pipe smoking a keen enjoyment that I have experienced with no other tobacco. Supreme in mildness and fragrance is Tuxedo."

John J. McGraw

YOU CAN BUY TUXEDO EVERYWHERE

Convenient pouch, *innerlined* with moisture-proof paper . . . 5c

In Tin Humidors, 40c and 80c

Famous green tin, with gold lettering, curved to fit pocket 10c

HUDSON Six-40 For 1915

As Pictured
$1,550

The Thoroughbred

The latest refinement in Sixes—one of the handsomest cars in the world—setting many new standards in high-grade cars, and another new record in quality price—the 1915 model of the car whose popularity compelled us in eight months to treble our output.

31 New Features

The HUDSON Six-40 came out last year to win a new field to Sixes. Our famous engineering corps—headed by Howard E. Coffin—had devoted three years to the model. It typed, in their opinion, the ultimate in Sixes, as denoted by modern trends.

In lightness, it set a new standard for cars of this capacity. It cut down old-time averages about 1,000 pounds. All this was saved, with no sacrifice of staunchness, by costlier materials and better engineering.

In economy, it lowered operative cost from 15 to 30 per cent under former like-powered cars. This by lightness, by employing six cylinders and by a new-type motor.

In beauty, design and equipment it excelled, in some respects, any other car of the year.

In price—then $1,750—it set a new record among quality cars which no other maker met.

We knew that men wanted this type of car. They wanted lightness, modest size, economy. They rebelled against over-tax. Yet they wanted quality and they wanted beauty. And they wanted, above all, a Six.

But we did not dream how many men waited such a car. They flocked by the thousands to HUDSON dealers, and placed 3,000 orders more than we could fill. At the end of the season men were offering premiums—as high as $200—to obtain this light Six-40.

Now our 48 engineers have devoted another whole year to this car. They have brought the weight down to 2,900 pounds. They have added comfort, convenience, silence and beauty in 31 important ways.

In the HUDSON Six-40 for 1915 we offer you the best consensus of present-day ideals. Many men must buy cheaper cars. Some will always want the big and the costly. But most men will concede this new HUDSON Six-40 to be America's representative car.

Price $200 Less

The HUDSON Six-40 demand has compelled us to treble our output for next year. Building three times as many, our cost per car will be lessened by $200. So the price for 1915 has been fixed at $1,550.

That accords with HUDSON policy. It is the latest of the thousand things we have done to bring the best within reach of the many.

Think of this ideal car—the very embodiment of all that's desirable—a HUDSON and a Six—selling for $1,550. Only a little while back there was no Six sold for twice that.

The new HUDSON Six-40 is a thoroughbred Six. Its very lightness denotes the highest grade of materials and a masterpiece in designing. It is distinguished in lines and beauty. Its finish, its beauty and equipment all show our infinite pains. It seats up to seven, with the disappearing tonneau seats.

A year of use in thousands of hands has proved the faultless construction. And now this new model shows all the refinements which 48 men in four years have worked out.

Go to your Hudson dealer and see it. It is the finest example you will find this year of the progress made in motor car building.

Six-40 Phaeton, $1,550 f. o. b. Detroit
Six-40 Standard Roadster, same price

The HUDSON Six-54, built on the same lines, but with larger motor and 135-inch wheelbase, sells for $2,350. It offers to men who want size and impressiveness the best that is possible, and at a modest price.

Hudson dealers everywhere now have these new cars on show. Our new catalog on request.

Note the Goodyears
As You See Tires on the Street

You can see for yourself how fast men are coming to Goodyear No-Rim-Cut tires.

And this comes, remember, after 15 years of tests. After men have used over three million Goodyears, and marked their mileage records.

Now more men buy Goodyears than buy any other tire. More buy this year than last year—by 55 per cent. We have just built in one month, to supply this demand, more than 216,000 motor tires.

Why This Rising Tide?

The only reason is that Goodyears show lowest cost per mile. That's what all tire buyers seek. And, in these days of odometers, they know when they get it.

No illusion—no chimerical advantage—can long mislead in this field of reality. Tire upkeep is a visible, provable fact.

Goodyears lead because they deserve to. We pay the price to give you here the best men know in tires. On research alone we spend $100,000 yearly—just to test new formulas, methods and ideas. Just to make sure that Goodyears always shall mark the limit in good tires.

Cost of Leadership

On one extra process—our "On-Air" cure—we spend $450,000 per year. It is done to save blow-outs—the countless blow-outs due to wrinkled fabric. We final-cure on air-filled tubes, under actual road conditions. And no other maker does that.

We create in each tire, during vulcanization, hundreds of large rubber rivets. This is done to combat loose treads. It reduces this danger by 60 per cent, and no other tire employs it.

We make rim-cutting completely impossible, by a faultless method which we control. It requires in each tire base six flat bands of 126 braided piano wires.

And we alone use the double-thick All-Weather tread. This tough, enduring tread is as smooth as a plain tread, yet it grasps wet roads in every direction with countless deep, sharp-edged grips.

Note that these four features—the four greatest in tire making—are found only in No-Rim-Cut tires. They combat, in exclusive ways, your four major tire troubles.

Yet They Cost You Less

With all these advantages, No-Rim-Cut tires now sell under 16 other makes. Numerous makers ask for three tires what Goodyear asks for four.

Not because the tires are better. That is unthinkable. For we have new factories, modernly equipped. We have efficient methods. We have an output far exceeding any other plant. These things immensely cut cost of production. And we sell at a profit which last year averaged only 6½ per cent.

These facts—and these alone—account for Goodyear prices. They belong among our countless efforts to lower cost per mile. No-Rim-Cut tires—though still rulers of Tiredom—cost half what they used to cost.

Remember Goodyear prestige. Remember this verdict of users. Remember our four exclusive features when you are asked extra prices for tires. You don't need to pay that extra. Any dealer, if you ask him, will supply you Goodyear tires. Our dealers are everywhere.

Our Adventurers in Tampico

By Jack London

Photographs by the Author

ONE must go and see in order to know. My advance impression of Tampico, for one, was of a typical Mexican port infested with smallpox, yellow fever, and a few American adventurers of pernicious activities and doubtful antecedents. There were also oil wells, I understood, in and about Tampico, operated by the aforesaid adventurers. And that was about all I knew of the place until I went and saw.

Aboard my steamer were oilmen returning after being driven out to our warships by the Mexicans the day our forces landed in Vera Cruz, and after being shanghaied by our State Department to the United States. A big steel barge, swept by every breaker, was pounding to destruction on the end of the breakwater that projected into the Gulf.

"That's our barge," one of the oilmen told me. "When the Federals fired our wharf, her mooring lines burned away and she drifted down the river."

He looked at me grimly when I remarked that they had got off lightly.

"Wait and see," was all he said.

A Massed Front of Industry

ONCE in the mouth of the Pánuco River, the landscape on either side sprouted into the enormous, mushroom growths of the tank farms. I was quite impressed, not having dreamed that our adventurers had done so much work. It was a creditable showing, a very creditable showing. But as we continued up the river, more and more terminals and tank farms lined both banks of it. This was the Corona terminal, and that was the Aguila on both sides, and adjoining were the huge solid buildings of Standard Oil. And still the names of companies were rolled off to me. There was the National Petroleum, there the Waters-Pierce, the Gulf Coast, the Huasteca, the Mexican Fuel, the Magnolia Petroleum, the Texas, the International Oil, the East Coast Oil—and thereat I ceased taking account of the companies and realized that there was quite something more to Tampico than I had anticipated.

"Ah," I remarked, "there's the city at last," indicating great masses of buildings on the north bank. But I was informed that the city was yet miles away, and that what I had mistaken for it was the boiler stacks, still stacks, warehouses, paraffin plants, and agitators of the refineries.

Ocean Tankers in Long Procession

THE ruined walls of a huge building were pointed out. "Six hundred thousand dollars went up there," I was told. "Two hundred and fifty box cars went up with it. The shells from the Federal gunboats did it."

We hoisted the doctor's flag and dropped anchor off a quarter of a mile of burned wharf.

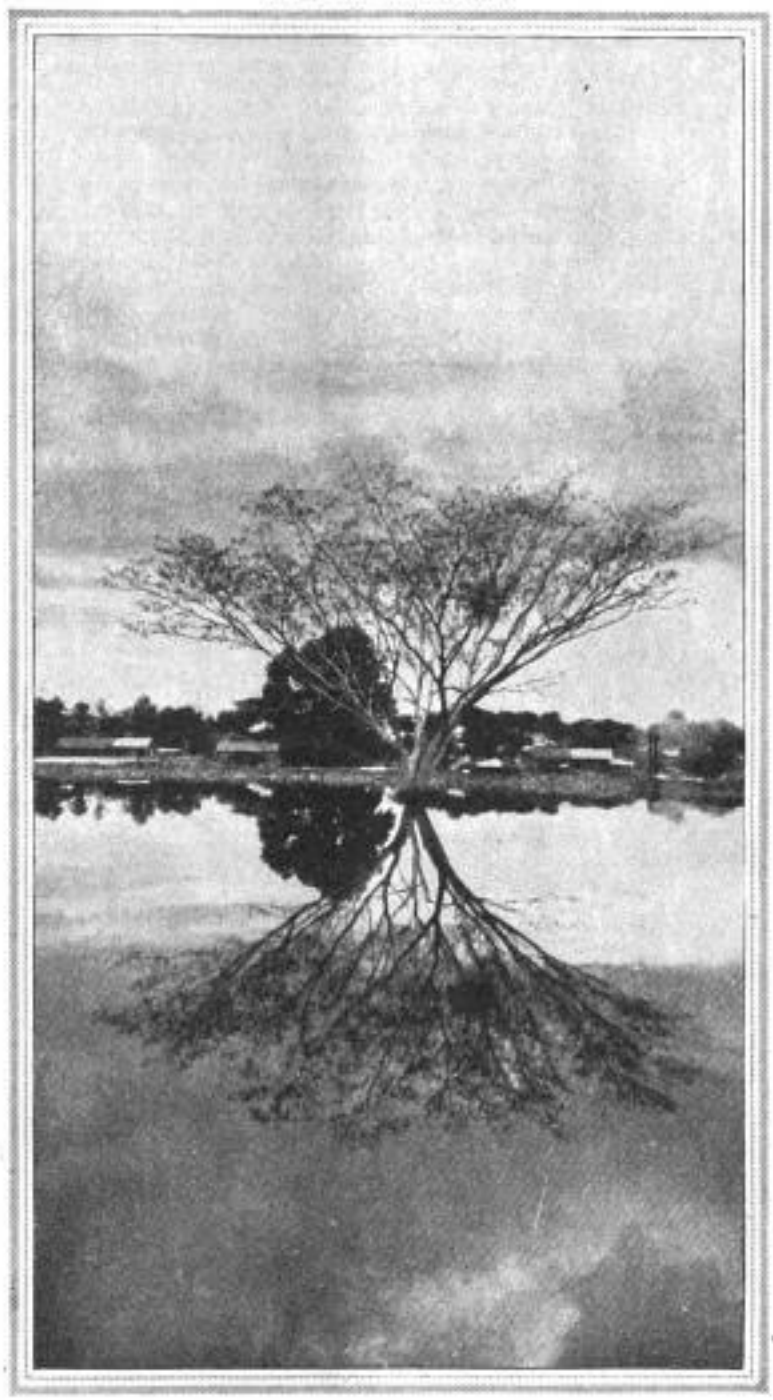
"You see," it was explained, "the rebels were working two machine guns here and a bunch of sharpshooters, and the Federals from the *Zaragoza* let us have it good and plenty. That was all brand-new wharf. In fact, we hadn't quite finished it. Three of our barges were sunk by the shells. Right there at the bottom lies the *Topila* and the *Spindletop*, and, just beyond, the *Santa Fe*. See what the fire left of that tank on top of the hill. It gave us a hot time. While it was burning we fought to keep it inside the fire wall, and all the time the *Zaragoza* was shelling us. Don't talk to me about the peon. I was right there with a gang of them. They were working for day's wages, but no trained soldiers could have behaved better. As soon as we'd jump up to fight the fire the *Zaragoza*'d loosen up on us. Inside ten minutes we'd have to lie down until the shells and machine guns slackened, and then we'd up and go at it again. And not a peon showed the white feather, and we held that burning oil where it was until it burned out. Some peons, hombre, some peons."

And while we waited for the port doctor, big ocean tanker after big ocean tanker in long procession came in from sea, flew the doctor's flag and dropped anchor.

"They come in, load, and go out all in the same day," I was told. "The *Huasteca* can load 9,000 barrels an hour. Why, there are tankers that have been coming in here for a year whose crews have never set foot on land."

Statistics of Pernicious Activities

I BEGAN to gather statistics of the pernicious activities of our American adventurers. One company alone had two roofed concrete tanks holding 1,250,000 barrels along with 120 steel tanks holding 55,000 barrels each. Since a steel tank costs 30,000 pesos, the cost of 120 steel tanks will total 3,600,000 pesos. At the rate of exchange prior to Mexico's present troubles, this investment in mere steel-tank equipment means 1,800,000 American gold dollars. When it is considered that this is but part of the one item of oil-storage equipment of one company, and that there are many other equally expensive items of equipment, the grand total of the equipment of the many companies is vaguely adumbrated.



The port doctor finally boarded and passed us and we continued up the river to Tampico. The Pánuco is a noble stream, deep of channel, swift of current, and wide; and as we rounded a grand bend between the interminable tank farms a whole fleet of anchored merchant steamers appeared, as well as warships, flying the flags of various nations. The *Des Moines* flew the only American flag.

Passing the customhouse and emerging through the Fiscal Dock, a long line of mounted Constitutionalists made me for a while forget oil and oil tanks. Before I knew what was happening, I found myself in the company of 500 of the Constitutionalists, dispatched to aid in the pursuit of General Zaragoza and his 4,000 Federals.

The Harum-Scarum Warriors

NEVER on the warpath have I encountered a bunch of warriors so harum-scarum, so happy-go-lucky, so brimming over with good food and high spirits. Everyone was mounted. Every horse was stolen. On the horses were the brands of every ranch and hacienda from the Rio Grande to the Pánuco. Occasionally there was a grizzled oldster. But the big percentage was youthful. There were boys of ten, eleven, and twelve, magnificently and monstrously spurred, astride lifted broncos, with pictures of saints in their sombreros and looted daggers and bowie knives in their leggings, with automatics and revolvers at their hips, bewaisted and beshouldered with belts and bandoliers of cartridges, and with the inevitable rifle across their saddle pommels. And there were women, young women all, mere soldaderas as well as amazons, the former skirted and on sidesaddles, the latter trousered and cross saddled, and all of them wickedly armed like their male comrades, and none of them married. When a soldadera comes along I should not like to be a stray chicken on the line of march nor a wounded enemy on the field of battle.

Crossing the Pánuco to the south bank on a barge, I tried to take the picture of

A Lake of Oil—*"A wad of cotton waste, saturated with kerosene and ignited and tossed into the oil, could have started a $2,000,000,000 bonfire. General Zaragoza could so have started it. So could any drunken peon"*

Digitized by Google

a coy and skirted soldadera. But all was vain until I won the good services of the Lieutenant Colonel by snapping him and his fellow officers. They were so delighted that all that they possessed was mine, and the soldadera was commanded to face the camera. The proud Colonel even interrupted proceedings in order to decorate the soldadera with his own cartridge belt, knife, and revolver. She was young, strong, uncorseted, cotton-frocked, all Indian, and she had ridden, as I learned, for two years with the revolutionists. She came from far in the North, and her near goal was Mexico City.

Ashore on the south bank, endeavoring to catch two or three of the rebels with my camera, I suffered from an embarrassment of riches. All the soldiers crowded into the immediate foreground—there were half a thousand of them—and my lens was not wide-angled. In twos and threes they struck the most bloodthirsty attitudes, and I could only escape them by patiently faking a pressure of the bulb and a rolling on of the film. They were as proud as peacocks, as excitable and naive as children. Just as I pressed the bulb on a long row of them on horseback, one of them, beside himself with too much valor, accidentally discharged his rifle. His fellows laughed at him. His officers did not even frown. It was too common an occurrence. They were merely skylarking boys on the rampage, these rebels who had exchanged the tedium of the day's work for a year-long picnic. Picnic was what it was with a horse to ride, a peso and a half a day, good grub, a chance to loot, and, best of all, a chance to shoot their fellow men, which last is the biggest big-game hunting that ever falls to the lot of man. Through the fires of sunset—men, women, and small boys—they rode up the winding trail in single file and disappeared south on the road to Mexico City, their hearts high with the hope that they might overtake and terminate the lives of some of the unfortunate, limping, poor devils of Federals lagging behind the beaten army of Zaragoza.

"Klondike Faded to a Fare You Well!"

RETURNING by launch, I found that Tampico was mostly surrounded by water and was half a Venice. The backyards, or patios, rather, of the water-front dwellers overhung the canal, which teemed with dugout canoes and chalans (the open, native boat), on which lived many families. But in addition to all this was the evidence of the activity of our American adventurers. Everywhere boat building and repairing was going on. There were paint shops, machine shops, and shipways; and there were river steamers, barges, and launches, not by the score, but by the many hundred.

A carriage, drawn by the thinnest, boniest, mangiest pair of horses I had even seen, took me to the hotel. The reason for the condition of the horses was obvious. Only such animals could have escaped for half a year the horse-stealing Federals and rebels. The hotel was modern, five-storied, had elevators, and was in every detail—from the café tables copied after Sherry's to the Tom Collins glasses that were duplicates of Martin's—a New York hotel. Mine host even had cold beer, having added to his stock by purchase from the Constitutional officers of a carload which they had confiscated at Monterey, and which they had run into Tampico over the Mexican Central Railway, also confiscated.

But the hotel was not the interesting thing. It was the men in it—Americans all, who were already gathering back after their enforced journey to the United States. The atmosphere was of the West, of the frontier, of the mining camp. I was more nearly reminded of the men of Klondike than of anywhere else. In truth, within an hour I encountered a dozen sourdoughs, known in the old days in Alaska. Two of them I had Said one from whom I had parted seventeen years before in Dawson City:

"Jack, this ain't no Klondike. It's got Klondike faded to a fare you well and any other gold camp the world has ever seen. You know my old claim on Eldorado, from rim rock to rim rock and 500 feet up and down stream—well, that was a humdinger and it cleaned up half a million. But shucks, that ain't anything alongside of these diggings. Why, there's the old well at Ebano, the first in the country, a gusher when they struck it twelve years ago, and still a-gushing. They ain't had to pump it yet. It just naturally gushes.

"And the Dutch, up above Pánuco, have got an ornery eight-inch hole, nothing to look at, but it can throw 185,000 barrels a day when it ain't pinched down. Figure it up. Say oil at 50 cents a barrel, that makes $90,000 gold a day; in ten days $900,000; in a hundred days $9,000,000; in a year, allowing sixty-five days for delays and accidents, $27,000,000—and that's gold, United States gold coin with the eagle and the Indian. Eldorado and Bonanza together, mouth to source, bench claims and all, didn't turn that much out in the first two years of skimming the cream."

And there were women, young women all, mere soldaderas as well as amazons, the former skirted and on sidesaddles, the latter trousered and cross saddled, and all of them wickedly armed like their male comrades and none of them married

I learned that the Pánuco field alone was estimated by conservative expert oil men to contain at least $2,000,000,000 worth of oil. One really conservative expert put it at $2,500,000,000, but after a moment, without prompting, amended his figures to $2,000,000,000. And the Pánuco was only one of three big fields, the other two being Ebano and Huasteca, while there were two lesser fields, the Chila and the Topila, each with its noteworthy producing wells, and all five fields as yet scarcely scratched.

And from oil and oilmen I drifted into war and soldier men in the shape of a couple of rebel officers. One, a colonel, with no English, presented me with a handful of Federal money confiscated at Monterey and declared worthless by the Constitutionalists. That was why he gave it to me, and, promptly and absent-mindedly, I bought cold beer with it for all of us and received good Constitutional money in change from the large bills. The other officer, a major, was soft voiced and gentle faced as a woman, and at the same time as sanguinary as any hero of the bull ring. He had been in the field four years. He had fought under Madero. He was now fighting under Villa and Carranza. Two of his brothers had been killed in battle. All his property was destroyed. He had but recently recovered from a bullet which had perforated him just under the heart, right side to left, in and out again. "We shoot our men who loot," he said softly, with no more emphasis than if he had announced that they slapped looters on the wrists. "We shot four of our men here in Tampico. It is true we are civilized. At Monterey we shot one colonel and one captain for looting. No, it is not permitted. We are not savages."

Yes, he was a four years' veteran. It had been a long fight, with many a day and week of hunger when the very thought of a tortilla made one sick with longing. And straight beef after a month, cooked hot from the hoof, did sometimes make one tired. Had I heard how Huerta shaved? Well, Huerta stood erect while the barber shaved him, one hand in his pocket on a revolver with which to get the barber if the barber cut his throat.

It was all lies about the Constitutional atrocities. All such things were committed by the Federals. They dragged their wounded enemies to death with lariats, while the Constitutionalists took their wounded enemies to hospital and nursed them. It was true they did sometimes execute captured Federal officers, but only when such officers were known assassins and traitors.

"Zaragoza?" he repeated, after my question at parting. There was a white flash of small, even teeth, and the soft voice enunciated ever so softly: "He is in the trap. He cannot escape."

"And when you catch him?" I queried.

"He is an assassin," came the answer, indirect it was true, but a complete, straight-out answer.

In the morning, in a speed boat, accompanying the general superintendent of an oil company, I went up the Pánuco River. Except where there were wharves for loading oil, or where the cut banks were too steep, the rich alluvial soil was farmed by the Indians to the water's edge. And here, amid coconut palms, banana trees, and trees of the mango and the avocado, I saw demonstrated the statement that soil and climate were such as to permit the raising of three crops of corn a year. Side by side there were patches of corn just sprouting, of corn that was in the tassel, and of corn that was being harvested.

The Vivid Multifarious Life

IT WAS amazing to see the cattle drinking knee-deep in the river, and horses and mules along the bank. Not all the stock had been run off by the soldiers. From time to time our swift craft swerved in nearer to the bank in order that the superintendent might try to identify familiar-looking animals. In this he was occasionally successful, the animals having escaped from the fleeing Federals and drifted back to their own pastures.

Where the Tamesi River flowed in we passed the drawbridge wrecked by the Federals, and the sunken gunboat, the *Vera Cruz*, abandoned with open sea cocks when the Constitutionalists took the town.

We continued up the Pánuco, past the tiled roofs of Americans who farmed the land, past the grass huts of the natives, and past many brown-skinned September Morns bathing in the shallows. The American farms were deserted, the owners not yet having come back from their forced trip to the United States. One such holding consisted of 1,200 acres, 1,000 of which were in bananas. Other Americans had gone in for grapefruit, and all ran stock in the rich pastures. No hay is cured in this land, nor do the natives feed grain even to their work animals. The horses and mules are grass-fed and leaf-browsed, and grass and leaves are green the year around. Rain falls every month in the year, the "rainy season" merely connoting the period of excessive rain.

The Pánuco River was alive with traffic. The first returning adventurers were already moving oil. River steamers and ocean tugs moved up and down with long tows of tank barges, and here and there, against the banks, barges were loading oil from the pipe lines of near-by wells. Also, we passed the sites of ancient towns, whose totality of inhabitants, in numbers of from twenty-five to fifty thousand, had been massacred by the Aztecs or taken up for the great sacrificial festivals in the lake city of the Montezumas.

There were, on the river, many hundreds of the chalans, or long poling boats of the Indians, going upstream with purchases from town, coming down on the current loaded with chickens, vegetables, charcoal, corn, raw sugar, bananas, pineapples, sugar cane, and all manner of things from the soil that fetch a price in Tampico. The honesty of these Indians is proverbial. From the headreaches of the Pánuco they

Never on the warpath have I encountered a bunch of warriors so harum-scarum, so happy-go-lucky, so brimming over with good food and high spirits. Everyone was mounted. Every horse was stolen. On the horses were the brands of every ranch and hacienda from the Rio Grande to the Panuco

Digitized by Google

are sometimes months in making the round trip, and they are often trusted with thousands of pesos with which to make purchases in Tampico.

From every foreigner in Mexico comes the same testimony of the rock-ribbed integrity of the Indian. It is always the mixed breed who is unveracious, dishonest, and treacherous. It was the mixed breeds who composed the mobs in Tampico that cried death to the gringos. And many of these half-breeds, so crying, were the very employees of the gringos they wanted to kill and whose property they wanted to destroy. And it was the peon, the Indian, who remained faithful to his salt.

Indian Faith

AS AN example of this, part way on our journey in the Topila field, the superintendent ran the boat in to a small wharf where an Indian was loading two barges with oil. When the Americans were driven out, this Indian, without instructions, threatened by the soldiers, had stuck to his post and moved the flowing oil from wells to tanks and to the emergency reservoirs. Nor had a barrel of oil been lost. Yet three times the Federals had strung him up by the neck in an effort to persuade him to volunteer in the army. As he told them, and he is legion:

"I don't want to fight. I have trouble with nobody. I don't want trouble. When I first came to work here for the gringos I had nothing. I went barefooted. Now I wear shoes. When I worked I got sixty centavos a day. Now I get four pesos a day. I have a nice house. There are chairs in my house. I have a talking machine. Before I lived like a dog. No, I won't be a soldier and fight. All I want is to be left alone."

Forty-seven miles above Tampico we came to the superintendent's wells in the Pánuco field. Two days before, his handful of American employees had returned to the looted camp and begun moving oil and building new emergency reservoirs against the time when they might again be driven out. The foreman in charge, a lean, low-spoken Texan, in reply to the superintendent's query for news, said:

"Oh, everything's moving along slowly. The trouble is that our peons have taken to the brush and there'll be some time getting confidence into them to come back. You know so-and-so—well, the cuss was out here this morning, with a few drinks in him, and throwing the fear of God into the few peons I have gathered in, telling them that we'd soon be gone and that every one of them that had worked for us would be shot. Oh, and he cussed us out good and plenty to our faces, telling us that what would happen to the peons wasn't a circumstance to what was coming to us."

The superintendent turned to me with a weary smile.

"That man," he explained, "is the Mexican, the same old half-breed type, with no virtues and all vices. He runs one of the biggest stores in Tampico. Our books will show that we have spent in his store in the last twelve months over $100,000 gold. And he has been invariably courteous and friendly to us. And now he selects our particular camp in which to voice his threats."

The Blunder at Tampico

THAT a blunder was made in not landing our troops at Tampico the same time we landed them at Vera Cruz cannot be doubted by anyone who has gone over the ground and studied the situation. To make matters worse, our American warships were withdrawn from the river and anchored in the open Gulf, ten miles away. The Mexicans, inflamed by the invasion of their country at Vera Cruz, took this withdrawal of our naval forces from Tampico as a sign of timidity. Mobs formed in the streets, and the Americans—men, women, and children—took refuge in the hotels, while the mobs tore down and spat upon American flags and cried death to all Americans.

It is a curious sort of reasoning that brings about a conclusion that the only way to save the lives of our countrymen and countrywomen is to run away and leave them in such a city under such circumstances.

To make matters worse, the United States, by virtue of the old Monroe Doctrine, had warned the other powers off and announced her ability to deal with the situation. The captains of the Dutch and English war vessels declined to interfere for the deserted Americans even when the captain of the German warship approached them to join with him in a shore party to rescue the besieged Americans. This was on the night that succeeded the day of the landing at Vera Cruz.

That night, for an instance, over a hundred Americans, including their women, were sheltered in the Southern Hotel. Those who did not have guns had armed themselves with machetes and clubs for what looked like the last stand. The mob roared in the street and repeatedly attacked the doors with battering rams. And at one in the morning two German officers arrived from the battleships. The English and the Dutch captains had declined to cooperate, and the German commander was acting on his own responsibility. And so, thanks to the Germans, the Americans in Tampico were rescued.

But there were several hundred men, women, and children far up in the oil fields. From Tampico to the Pánuco field was forty-seven miles by the winding river, and ten miles away, in the opposite direction from Tampico, lay the American warships. A superintendent, accompanied by a young Texan, braved the streets in the early morning of the second day. They were spat upon and reviled, and were only saved by an armed guard. But they managed to win across the river and to get the crew of a stern-wheel steamer to volunteer to go up to Pánuco. Fired at by soldiers and looters, followed by troops of Federal cavalry along the banks, they nevertheless cleaned up every camp and brought back with them some three hundred adventurers of their kind. Yes, somebody blundered in this Tampico affair.

Prayer of the Bullet

By DE WITT HUTCHINGS

GREAT LORD OF EVIL, Demon of hate, thy servant awaits thy call!
Other servants hast thou; poison, dagger, sword:
Or others still more subtile; man's avarice and greed,
His passions and his lies, despair, accident, and pain;
But I serve thee as loyally, as surely and as well.
Out of black earth I came, in the gleaming flames was made,
On my birth I sang a song of blood to thee.
All my days have I praised thee, attending thy shrine;
Give me my work to do. Hear now my cry and my plea.

Loose the gaunt hosts of war. Let pillage stalk forth.
Make brother against brother stand; father against son;
Let families be riven; heart turn from heart; love cease.
Send forth fire, pestilence, starvation, death.
Cover the land with famine. Make the sun withhold his light.
Let industry end; the fertile valleys lie in waste;
Let ruin grip the earth. Give me my work.
Through trampled grain fields let contending armies go;
In the trench let soldiers lie, their country's strongest sons,
Have parching heat and chilling cold at hand
To torment and to rack the nerves made weak by me;
Have trigger pulled that speeds me in straight flight
To human goal across the deadly space.
No sudden death I'd bring, but rather tear and rend.
Imbed me in soft flesh; muscle and sinew riven.
Let the victim's blood drench all the ground,
His nostrils fill with smell of bruised flesh,
Have ghouls tear from his neck the locket of his wife.
Answer his cry for water and for bread with laughter harsh.
Give no pause to his pain the weary hours through.
Summon fever of the body and the brain
And bid them stir the caldron of his life afresh.
Have vultures and lean dogs cry back his cries
And moaning wind and crash of storm.

Grant that my work shall not cease there,
But send it gathering force adown the years.
Visit his children and his wife, bereft, with woe.
Let hunger, want, and illness them torment,
And blight their lives with his firm arm removed;
The generation gone, so strong through peace,
The race to follow weak and maimed by me.

If not in formal battle my work lies,
Let me in other ways serve thee as well.
Perhaps in city street where ambush lurks,
From hidden casement dealing death unseen;
Perhaps from gun on headland sending shell
That tears its way through armored hull
To heart of battleship, and hurls the monster
Skyward with its living load and strews
Them in the wreckage on the tide.

Whatever work thou hast for me to do.
Whether my part be great or small,
Let me sing blood and hatred, war and death,
And serve thee truly in thy ravaging of man.

Salvation in a Threat

WHEN General Zaragoza, with his 4,000 Federals, evacuated Tampico, he retreated on a number of long railroad trains. But beyond Ebano the tracks were blocked by the rebels. Abandoning the trains, General Zaragoza retreated across country to the Pánuco oil fields. On this march he shot fifteen of his lagging men as a spur to the rest to keep up. In the old town of Pánuco he rested while getting horses and provisions for his men. He was a beaten man, and, but for one thing, he would have been destroyed. He sent a message to General Pablo Gonzales, commanding the rebels that had driven him out of Tampico.

"I am a beaten man," was the tenor of Zaragoza's message. "My men are exhausted. I am short of ammunition. If you attack me, I am lost. But the moment you attack I shall fire the oil wells."

And the rebels did not attack. It was a pretty situation. The rebels planned to add to their treasury by shaking down the oilmen. If the oil wells were ruined, the oilmen would have nothing for which to be shaken down. Zaragoza took his time ere he drifted away south across the hot lands in his effort to find a way up the mountains to the great tableland.

Child-minded men, incapable of government, playing with the weapons of giants! A $2,000,000,000 oil body, a world asset, if you please, at the pleasure of stupid anarchs! And all that saved it, the desire of a portion of the anarchs to loot, by forced contribution, the gringos who had found and developed the oil fields!

Two thousand feet under the surface lies the Pánuco oil body. The formation overlying the oil sands is so broken and creviced by ancient upheavals that the casings are not tight. To seal a well under such conditions would force the oil to rise to the surface outside the casing. At the best, with the wells "pinched down" to the limit of safety, the flow of all the wells could not be reduced below a daily run of 100,000 barrels. From the time when the oilmen were driven out and shanghaied to the United States this great volume of oil accumulated in the tanks and in the open emergency reservoirs. A wad of cotton waste, saturated with kerosene and ignited and tossed into the oil, could have started the $2,000,000,000 bonfire. General Zaragoza could so have started it. So could any drunken peon.

Marvels of the Oil Field

PERHAPS no oil region has been tapped that will compare with the Tampico region. The wells on all the five fields are gushers, and, unlike most gushers, are slow in gushing themselves out. The well at Ebano, previously mentioned, has been flowing for twelve years. In the Huasteca field is a well that has gushed 23,000 barrels a day for four years. To-day it is still gushing its 23,000 barrels, the oil has the same twenty-two gravity, has yet to show a trace of moisture, and carries less than two-tenths of 1 per cent of sediment.

In passing, it may be remarked of the last-mentioned well that, when the Americans were forced out and the half-breed employees had gone to rioting, an old Indian employee took charge of his fellow Indians, and in twenty-two days handled the 500,000 barrels of oil and pumped it over the pipe line to the tank farm and terminal, 105 kilometers away. Not a barrel of oil was lost, and when the Americans returned they found it ready to load into the ocean tankers.

But, while the Tampico oil region is unthinkably big and rich, so much time and money have been required in development that, out of eighty-nine oil-producing companies operating during the last fourteen years, only three have so far paid dividends. One particular company has invested $28,000,000 and has paid but a dividend and a half. There are other companies that have invested more than this one. A single company, which has so far paid one dividend, has 4,000 men on the pay roll, (Concluded on page 24)

The Toe of Retribution

By Frank R. Robinson

ILLUSTRATED BY F. B. MASTERS

"YE HAVE a clear case," observed Finnigan, raising himself to a seat on a baggage truck beside the three men in oily overalls and jackets. "Ye have a clear case. As Æsop's widow remarked, ye have merely t' presint your grievance and then prepare for a hard bump, or prepare beforehand."

"It's a just cause," stated one of the engineers with conviction. "This deal o' transferring an engine division is equivalent to eviction, an' it'll bear investigation."

"So will Mormonism or a carbuncle," rejoined the conductor. "You people took th' righteous course. Ye probed the superintendent of motive power, yer nearest ancestor, officially speakin'. He told ye ther' was nothin' compulsory about yer followin' th' destiny of th' road. She'd try and continue to operate widout yer cooperation, wasn't that it? An'—hold on, listen to th' arbitrator—an' then take yer grief to th' division superintendent. He refers ye back to Motive Power McGill. Yer next court o' appeal is the general superintendent, an' he'll return ye t' Strand wid his respects. Then ye climbs along t' Beveridge an' there ye gits a letter o' introduction to General Superintendent Caton. When ye reach th' president's office ye'll meet wid an expression o' surprise at th' G. M. permittin' him t' be annoyed wid a grievance committee, an' ye'll git waved back t' Beveridge fer further particulars."

"YER compass now points t' th' directors who reprisint the soullessness o' this particular monopoly. If ye find 'em—which ye won't—they'll probably drop ye way down to McGill, an' request ye t' turn th' other cheek. What ye'll have accomplished is makin' sore noses all up an' down th' ladder, an' by far th' most inflamed proboscis will be worn by McGill right at the roundhouse gate. Theoret-ically, it's th' privilege o' every employee havin' a grievance to submit his variety o' pang—an' take th' consequince, which is always in practical shape."

"But we own our homes at Ixonia," protested Quaid, "an' there's th' question of increased mileage, too, Ixonia's th' proper division point."

"Ye're right. Ye were before ye spoke. But against yer rectitude stands th' consistent fact that th' president an' directors own a large tract of land near Melville. They might intend to presint it t' th' city as a park, which'ud be a graceful act an' surprise everybody—themselves most of all. But seein' they're constructin' shops an' a roundhouse an' extensive coal chutes, an' gently but firmly persuadin' their West End enginemen that it's t' their interest t' move, it looks t' me like one o' th' smoothest operations yet recorded t' th' credit o' that new sect, th' captains o' industry."

"It's a rank outrage," growled Cleary, another engineer.

"True fer you," assented the conductor urbanely, "an' one o' th' finest colonization schemes perpetrated. Show me another real-estate boom where th' boomees were bullringed t' th' sod, whither or no."

"TH' Brotherhood will take a hand in this," asserted Cleary.

"It will not. Ye've a case by itself. Ye can appeal it, as I've already shown, an' get th' worst o' it comin' an' goin', or ye can give in, sanctimonious an' cheerful, an' reap th' benefit o' peace. That's me advice, an' ye have it free."

"Who's asked your advice?" inquired Cleary irascibly.

"Nobody," returned the conductor; "I just butted in out o' pure good will an' t' relieve me mind, which gits turbulent when I see good men an' true goin' up against th' appeal proposition which never won in th' long run an' never will. Now t' me mind comes th' case o' Willie Hood—"

"What are you to do when your immediate superior won't remedy a complaint?" interrupted Cleary.

"Figure out his reasons an' generally lay down yer hand. McGill's a human bein' like yerself. He likely understands yer position an' blamed well he understands his own. It's not in his mitt t' make explanations. That ain't sayin' he wouldn't like t'. But he has a family t' support an' a job t' keep warm as well as th' rest o' us. S'pose when ye went after him he had told ye: 'R'yes, ye have me sympathies. Yer cause is just. It's nothin' less than a malignant shame that ye're required t' leave th' homes ye own an' move into th' company's reservation at Melville. But, ye see, I has no say. It's beyond me jurisdiction. Th' bunch above, that consumes th' champagne an' private cars an' lobster an' sherbet, has syndicated th' plat, an' intend t' develop it wid th' material at their disposal, which happens t' be yerselves.'

"Did he say that? No, he did not. If he had ye'd gone away wid yer lacerated feelin's soothed an' lost no time in circulatin' McGill's sentiments th' length o' th' pike, wid th' result that th' superintendent o' motive power'ud have been wrenched loose from th' pay roll in short order fer lack o' policy in dealin' wid subordinates.

"An' so ye've shot over McGill an' Strand, an' queered two good friends who has stood for ye before an' would have helped ye again when in th' nature o' things they could. There was th' case o' Billy Hood."

"Well, what about Billy Hood?" demanded Cleary.

"YE'RE not conversant wid th' hist'ry o' William, prince'pally"—Finnigan produced a blackened clay pipe—"prince'pally—have ye a pipeful, Halsey? I don't like t' carry it fer fear o' scentin' me uniform—because yer not in touch wid th' diplomacy o' th' train service which is th' brakemen. Who makes th' time cards? Th' brakemen. Who constitutes th' consultin' authority o' th' president? Who railroads in their sleep? Th' brakemen. Billy Hood? Well, Billy was a leadin' light an' tactful. He couldn't read or write, but he was instinctive. Would sit an' pore over th' bill o' fare at th' Campbell House an' wait until some other party gave an excessive big order an' then yawn an' say: 'Well, just bring me th' same.' Billy broke fer Joe McQueen. Joe's dead now—God rest his generous soul! Ye all remember Joe. His opinion o' himself was far from commonplace. Right after I was set up t' passenger work I met him in th' conductor's room at Portal. We registered at th' same time, an', standin' beside me, Joe tuk out seven cegars, checked 'em up careful, put wan in his mouth, an' six back in his pocket. He didn't know I smoked? He did that. But th' cegars which had touched th' sanctity o' his waistcoat, them cegars was too swell fer th' likes o' a man just set up, wid th' callouses yet on his hands.

"Billy worked for Joe. Th' company paid his munificent salary, an' Joe seen he earned it. Joe would leave his overcoat in th' rear sleeper an' walk t' th' baggage car an' send Billy after th' coat. Billy must brush and groom Joe an' work diligintly t' stand in wid his noble patron.

"That was the layout at th' time o' th' S. W. strike. Ye know how th' company requisted th' special service o' their oldest employees t' do switchin' at th' terminal? That meant Joe, amongst several others. Well, they went t' Ransom, as ye know, an' they rode cars an' threw switches an' dodged an' caught links an' pins for twelve long days an' nights. Then th' strike broke, an' back they come, bloodshot, triumphant, an' bruised.

"Th' company giv' 'em a banquet, cegars was smoked, speeches was made by th' officials glorifying th' employees, an' by th' employees payin' tribute t' th' nobility o' th' powers that be. It was wan o' them occasions when th' official fergits his divine origin an' relaxes his strut. Some o' ye has seen 'em thus at wrecks. There seems t' be somethin' about smashed rollin' stock an' damaged freight scattered over a mile or two o' right o' way that puts th' average official on speakin' terms wid other human bein's. Well, th' banquet was over, th' cegars were smoked, an' th' lights put out. One week after th' blowout th' company put collectors on all th' passenger runs.

"Do you realize th' effect of a collector on a passenger run? Ye do not, an' it's just as well. Ye have trouble o' your own.

"It takes years o' twistin' brakes an' hangin' t' icy runnin' boards t' git a passenger run, an' then after feelin' that ye are it fer a few short years t' have a walkin' cash register, drawin' th' same salary as yerself, fresh from th' office rug, march ahead o' ye an' usurp yer hard-earned perrogatives.

"FER instance, along comes old Bobby Buchanan, who is Joe's side pardner an' has rode wid him off an' on fer years. Joe's a-standin' by th' engine comparin' time wid th' eagle eye. 'Hello, Joe, ole dog,' says Bobby, 'guess I'll ride up th' line wid ye to-night.'

"'Can't carry ye, Bob,' says Joe, 'got tickers now, ye know.' 'Tickers?' says Bobby, 'wat's tickers?' 'That,' says Joe, pointin' t' th' collector down alongside th' train, '*that* which just now is askin' my brakeman if th' bell cord is all that holds th' cars together is th' ticker. It has brass buttons an' a sign on its cap, "Collector," resemblin' "Conductor" so close that th' passengers often thinks it's th' captain. That's th' imitation t' be asked if ye kin ride, an' which won't be consulted by me nor for me, so, Bobby, ye have yer choice o' three selections: pay yer fare, walk, or stay at home. Thus has th' mighty fallen,' says Joe, a-grittin' his teeth, 'an' them wid their damn terminal strike an' banquet.'

"Which anecdote pictures th' sentimental side. Th' practical side is—hush, it's me fergittin' I'm a member o' th' privileged class. Well, anyway, on th' Prairie Division alone th' receipts from cash fares swelled out o' all ratio th' first week th' tickers was on.

"Now, a check-up of this sort is bad medicine, because it reprisints a diversion of funds from their accustomed channel which, whatever its moral perch, carries wid it all th' pangs of a deficit. On th' other hand, it's sourin' t' observe that what you ain't gettin' is pilin' up evidence fer yer undoin'.

"THIS were th' painful situation o' th' passenger cons—reduced incomes an' sword hangin' over their heads when Billy Hood made th' remarks about Joe.

"Says he: 'Th' trip after th' banquet, Joe was that aristocratic I wouldn't dare pass him in th' coach. I had to go over th' top o' th' train t' keep out o' his way. Then come th' collectors, an' now th' poor old cuss is simply wind broke. Tame! He's that domesticated he'll purr widout strokin'.'

"This were perpetrated whin Billy an' a concourse o' brakemen was cleanin' lamps in th' oil room. Billy made th' observation confidentially, which is probably th' reason that Joe had it word for word th' next day. A confidential knock is the most efficient form o' advertisin'.

"It was a case o' back th' kiser an' less majestee strung together. When Joe heard about it he frothed at th' mouth fer fair.

Digitized by Google

"'Th' ungrateful swine. After all I've done fer him,' says he.

"'Of all mortal sins, ongratitude cuts th' deepest. It 'ud have been unreasonable fer Joe to' felt different after allowin' Billy t' earn th' salary th' company paid him besides performin' valet duty.

"Joe consulted wid th' other cons, an' they was o' wan mind: 'Git rid o' him! Can th' insultin' whelp!'

"A month before, as luck 'ud have it Morgan, th' Prairie Division train master, tirin' o' doin' half a man's work, had issued instructions thet each conductor should hire an' fire his own brakemen. I s'pose it give him a chance t' sign a bulletin an' git properly aloof from th' subordinate herd.

"I expect th' cons was all itchin' t' try their hands at this new equipped authority, an' it was pie fer Joe t' have th' first fling.

"So he ordered a new man, an' when Billy showed up t' go out, Joe broke th' news t' him.

"Billy took it hard.

"'Discharged?' says he. 'What's th' cause?'

"'Ye talk too much,' says Joe; 'yer work's all right. Nothin' 'tall t' complain about yer work. Ye're a good brakeman fur as that goes, but ye're impertinent t' yer superiors an' disloyal. Disloyalty can't be tolerated,' continues Joe; 'soak that into yer mind, so's when ye git another job wid some good man you'll know enough t' keep yer mouth shut.'

"'Am I blacklisted?' inquired Billy wid tears in his eyes.

"'You're in a biased position wid th' conductors o' this road, an' I doubt if any o' them would employ ye,' says Joe; 'but I don't want t' see ye starve, so I'll give ye a recommend if ye want.'

"'I believe I'd like one. I got t' work an' I'm no good at anythin' outside railroadin'. I wish ye could see yer way clear t' reinstate me,' says Billy.

"'I wish I could, but, ye see, it's a case o' discipline. Discipline an' example. We conductors has our prestige t' look out fer, an' yer remarks was simply nefarious. I'd advise ye t' strike out West, where ye ain't known, an' take a fresh start. Come up t' my house when I git back, an' I'll give ye a good testimonial.'

"NOW, Earl Moe was brakin' them days an' takin' a night medical course. Fine practice now in Wyocena. Th' distressed William told Earl how he had been dispensed wid by Joe, an' also concernin' th' prospective testimonial.

"'I'll git Joe's letter,' says he, 'an' it's me t' th' turbulent West an' a close mouth fer Billy when he gits another job.'

"Earl contemplated. There was a feller who could contemplate right.

"Finally says he: 'Th' letter's yer gait, Hool. Ye may not have t' go West. Git th' letter an' bring it t' me. But begin this minit workin' yer close mouth precept t' th' limit.'

"Two days afterward Billy passed th' letter over t' Earl. Earl read it. It was a fine recommend. Joe wasn't a bad feller at heart, an' I s'pose he felt kind o' remorseful over jammin' it into Billy. Besides, it was a brand-new glory t' him. Th' letter was all there, an' strong. Joe laid it on thick in efficient an' faithful service entirely satisfactory. Regret t' lose so capable an employee, an' a lot more.

"Earl read it again. Then he says: 'Yes, indeed. Quite so. Now, Billy, you take this letter t' Mr. Beveridge an' tell him th' facts.'

"'Th' general manager!' yells Billy. 'He won't see me. I can't git by th' coon.'

"'He'll see ye all right. Tell th' boy jist who ye are, an' that ye want a minute's talk wid Mr. Beveridge. Don't take off none o' yer clothes, except yer hat. Ye needn't prepare any oration. Answer his questions. That'll keep yer mind occupied. Th' only thing that worrits me,' says Earl, contemplatin' some more, 'is precisely where th' lightnin's (Concluded on page 26)

The Widow's Mite

By Kennett Harris

ILLUSTRATED BY SIDNEY M. CHASE

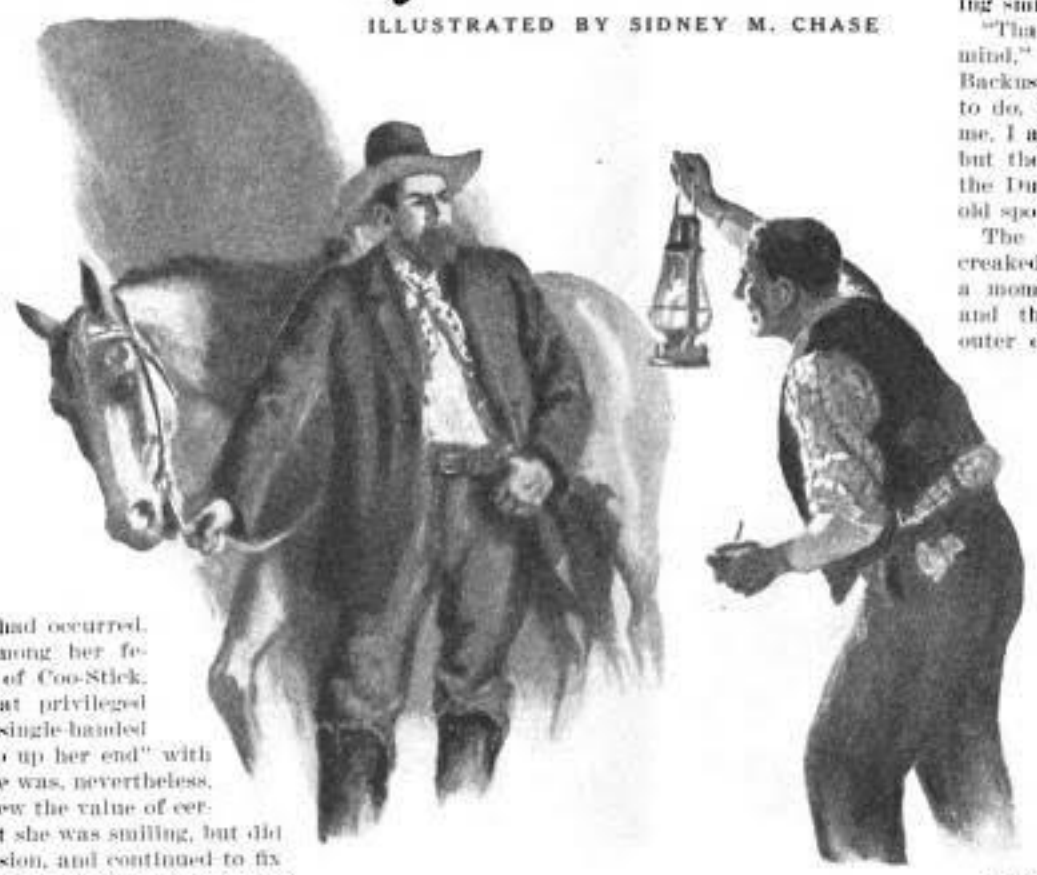
IT WAS a comfortable-looking room. The rag carpet toned by age was one of the things that made it so; the big base-burner whose polished hips reflected the ruddy glow from its mica panes, was another; the cat added considerably, curled in blissful somnolence near the fire; the "After - Clouds - Sunshine" motto against the floral background on the wall, the red crêpe shaded lamp, the capacious Boston rocker and Mrs. Ed Backus who sat therein and knitted — all these spoke eloquently of comfort.

The only inharmonious element in the composition was Seth Gifford, who sat with a rigid back and right-angular knees facing Mrs. Backus, but not looking at her, and to all appearance uncomfortable to the last degree.

A lull in the conversation had occurred. Mrs. Backus was known among her female intimates in the camp of Coo-Stick, and by some outside of that privileged circle, as "a pretty good single-handed talker!" one who could "keep up her end" with a foot or two to spare, but she was, nevertheless, a woman of sense, and she knew the value of certain silences. Gifford felt that she was smiling, but did not dare to verify his impression, and continued to fix his stolid gaze upon a particular rosebud in the chintz pattern. Certainly, as far as ease was concerned, he might as well have been in the front room with the slippery horsehair sofa, the crayon portrait of the late lamented Ed Backus, the marble-center table, the sea shells, and the blue-plush album. Still, she would have to say something pretty soon, and then—

He glowed at the awful possibility and rubbed his exceedingly moist palms on his knees.

Finally the click of the knitting needle ceased and the—whatever it was she was working on—dropped in her lap.



"Well, Seth!" she said with a half-malicious challenge in her tone.

GIFFORD looked into her laughing eyes and the brick-dust red of his face deepened a shade. He cleared his throat. "Well, Marthy," he replied huskily, and cleared his throat again. A footfall sounded on the porch and he half rose and reached for his hat, as a knocking at the front door succeeded.

"What was you goin' to say, Seth?" asked Mrs Backus, disregarding the interruption.

"There's some one knockin' at the door," stammered the man. "Shall I—"

"I'll go," said the widow rather irritably. "You set right where you are." She threw her knitting on the table and left the room. Gifford dragged his shambling six feet of length out of the chair and with a knuckly, virile hand tugging nervously at his brown beard stood listening intently. He heard the musical voice of Mrs. Backus say in accents of glad surprise, "Why, Mr. Nyswanger!" and ejaculated, "Dern the luck!" Then the widow reappeared, piloting a particularly neat and dapper man of middle age, slightly bald, whose sagacious business nose drooped over a mustache of surprising jettiness, and who, at the sight of Gifford, stared uneasily. His manner, however, was breezy and confident as he extended his hand.

"Will ye look at the r'yal raiment on him!" He picked up the lantern and surveyed Gifford critically

"This is one on me," he remarked smiling genially. "I didn't reckon you was havin' company, Mrs. Backus. How are you, neighbor?"

"I'm all right," replied Gifford gruffly. Then in a shamefaced way he added: "I jest dropped in to tell Mrs. Backus I seen that cow she was askin' about, rangin' with some Flyin' V dogies over by Willow."

"Sho!" ejaculated the newcomer with a grin. "Is that so? Now I jest came to see Mrs. Backus. Didn't have nothin' to tell her—nothin' she don't know a'ready. I come for the reason I jest naturally couldn't keep away."

"Well, set down both of you," said the widow. "It's as cheap as standin'. What did you do with that cow, Seth?"

"Left her there," replied the ranchman. "I allowed if you wanted her I'd bring her in or I'd get her at the round-up. Feed's good and that's her old range anyway. No, I won't sit down. I reckon I'd best be hittin' the breeze."

"What's your rush?" asked Mrs. Backus.

"Evenin's young yet," observed Mr. Nyswanger smilingly. "Don't hurry yourself off. We'll be lonesome. Well, if you must—"

"You hush!" commanded the widow. "You don't need to go now, Seth."

"It ain't strictly necessary," supplemented Nyswanger. "Still, I s'pose there's the stock to look after."

"I reckon I'll go now," repeated Gifford helplessly, trying to evade the widow's appealing eye and coaxing smile.

"That's one thing I like about Seth—his stren'th o' mind," said Nyswanger approvingly, addressing Mrs. Backus. "When Seth once settles on what he's goin' to do, there ain't no stoppin' nor turnin' him. Now me, I ain't like that. Sometimes I can be tol'able set, but there's some folks I can't say 'no' to. It beats the Dutch how firm Seth is, though. So long, Seth, old sport!"

The ranchman nodded and his high-heeled boots creaked noisily as he went out. Mrs. Backus hesitated a moment under the smiling regard of Nyswanger and then hurried after him. He turned at the outer door, and his face in the light of the dimly burning bracket lamp showed unmistakable resentment. Mrs. Backus smiled at him, a bewitching, appealing smile, but it had no thawing effect. His hand sought the knob of the door.

"You ain't goin' off mad, are you, Seth?" she inquired sweetly.

"What'd I be mad about?" asked Gifford rather sulkily.

"I don't know, I'm sure," answered the widow. "But you'll come again an' let me know how the cow's gettin' along, won't you?"

"She'll be all right," growled Gifford opening the door.

"You know I didn't expect no other comp'ny," said Mrs. Backus hurriedly. "I couldn't help—"

"Yes, you could," said the ranchman. "He wouldn't come less'n you wanted him to come, that's a cinch."

"How about you then, Seth?" asked the lady archly.

"That's it. I'm all right and he's all right. He ain't got no aidge on me, o' course, an' I ain't got no aidge on him. Well, you make up your mind which it's to be an' let me know."

"I sure will," said Mrs. Backus with sudden iciness. "I'll get me a rig and drive out and tell you when I make up my mind that I can't have anybody come to see me who behaves like a gentleman and who's a friend of mine. Good night, Mr. Gifford, and don't you put yourself to no more trouble about my stock, either."

She shut the door.

It was a moment or two before Gifford quite recovered from the surprise of it.

At the livery stable, going directly to the stall where his horse was tied, he brought him out and began to saddle him. As he did so, the door of the little boxed-off recess dignified by the name of "office" opened and a small, round man with vivacious black eyes and a long smoothly shaven upper lip peered out into the stable.

"WHAT in—oh, it's yourself, is it?" he said, advancing as he spoke. "Well, what d'ye mean walkin' into a man's stable an' helpin' yourself to your horse, you long-legged jude? Tryin' to jump the honest bill I've got agin you? Will ye look at the r'yal raiment on him!" He picked up the lantern and surveyed Gifford critically by its light, his black eyes twinkling humorously. "Sure you're a fascinatin' objec', Seth, when you get them clo'es on you. I don't wonder the little horse snorts."

Digitized by Google

Gifford pulled the back cinch to a judicious tightness and dropped the stirrups. At that point the little man caught the hitch rope that dangled overhead and snapped it in the ring of the horse's bit. "Now he'll be ready for you when you're ready for him," he remarked calmly, catching the ranchman by the arm. "Come into the office an' tell me what's the trouble. Don't resist, or I'll pick you up an' carry you."

"Honest, I've got to go, Larry," remarked the ranchman.

"Honest, you can't go until you've paid your bill," said the little man tugging at his arm. "You come into the office an' settle afore I call the police. Will I take a wrench to you?"

GIFFORD forced a laugh and suffered himself to be led into the office and thrust into a chair. "Now tell me."

"Tell you what?"

"You've been gone less than an hour. That isn't any time for an evening call as I remember it, if everything's all right. You come back an' you haven't a word to throw to the best friend you have on earth, which is Larry MacFadden. Not that Larry's feelin's count. Ever since you took the notion that you was formed for female society it's little I've seen or heard of you an' little I expect to."

"That's all over now," said Gifford. "I'm shook."

MacFadden pulled the little black clay from his mouth. "What?" he cried.

"That's what," Gifford assured him. "Come to a show-down. Nye or me. It's Nye."

"Him!" ejaculated MacFadden. "That tin horn? Well, I'm glad to hear it. If she'd take Bill Nyswanger, she ain't the kind o' woman for Seth Gifford, that's dead sure. The second reason is because now we can go around to Pete's and celebrate. Nye? Do you mean to say he's goin' to take her now?"

"What do you mean?" demanded Gifford, reddening slightly. "I guess he'll take her quick enough if he gets a chance, and I reckon he's goin' to get the chance. He's there now."

"Then I'll bet a billion to a blind bridle he doesn't know," chuckled MacFadden.

"Doesn't know what?"

"Doesn't know she's lost her money. Didn't you know it either? Holy smoke! Why, yes, sure. She had the whole pile in the Redwater bank that busted last July. She never said nothin' about it, but I guess 'most everybody in Coo-Stick knows it. She told Mrs. Bixby in strict confidence as long ago as the day before yest'd'y. Cried about it. That's what old lady Bixby says. She sure picked a good one to tell it to. Yes, she's afraid she's a-goin' to have to mortgage the house."

Gifford pulled his beard thoughtfully.

"Come over to Pete's," urged MacFadden.

Gifford rose: "Pete's some other night," he said. "I've got to get back to the ranch. I want to think this over an' it takes me time to think. But Nye will prob'bly marry her."

"Would you feel bad about it?"

"Not me," said Gifford stoutly. "S'far's I know, he's played a square game. Where did Jack hang my spurs?"

"You're all right," said MacFadden approvingly. "It was the darndest fool notion anyway, you thinkin' you wanted to be a married man. You're too good a fellow for that. Come in soon now, or I'll be comin' after you. I want to tell you about a mine I've got. I'll let you in on it, too."

GIFFORD nodded and, leading his snorting steed out into the street where it would have room for its usual preliminary gymnastics, swung himself quickly into the saddle and went undulating down the gulch at the imminent hazard of his neck, and MacFadden, after standing to watch him for a moment or two, shook his head and returned to the stable.

"Would he feel bad about it?" On consideration he decided that he did feel bad about it, after all. But he certainly had only himself to blame for it. The peculiar thing about the whole matter was that he had not intended in the least to speak roughly or unkindly to her. He was just mad clear through with Nyswanger. Mad with himself for his slowness of wit and his weakness; and it came out somehow. And she treated him properly, calling his bluff in great shape. Good for her, too! Anybody acting that way got what was coming to him in all equity. "Darn my fool hide!" ejaculated Gifford.

He began to have brilliant afterthoughts. "What I ought to have said to him was, 'Well, I reckon I won't hurry myself off sence you're anxious to have me stay; I'll wait till after you've gone.' No, what I ought to have done was to have got up and asked him politely to step outside with me to talk over a matter of business, so as Martha wouldn't have suspected nothing, and then when I got him outside, belted the hay out o' him. It certainly would do me good to paste him a few, but I reckon he wouldn't put up any sort of a scrap. He's pretty slick, he is. Now he'll get her. It ain't natural to suppose he was just after that little wad of money she had. If she was any other sort of a woman than what she is, he might, but she's good enough for anybody without it. If he should pull out of the game—"

That momentary gleam of hope faded almost as soon as it occurred. It was too preposterous. Just then the gray splashed belly-deep into the Beaver Creek Crossing, on the other side of which lay the Gifford domain.

WHEN Mrs. Backus returned to the comfortable sitting room and her dapper visitor her naturally high color was considerably heightened, a fact that Mr. Nyswanger did not fail to notice. There was more than one construction to be placed on the circumstance, however, and he proceeded to fish diplomatically for the right one.

"A mighty fine fellow, Seth," he remarked. "They don't make no better men than him. They're considerable scarce around here in this section, anyway."

"That's as may be," said the widow tartly. "There may be worse, but that ain't sayin' he's the best there is. It's my opinion there ain't much to choose among you men folks, anyway."

"What's your rush?" asked Mrs. Backus. "Evenin's young yet," observed Mr. Nyswanger smilingly. "Don't hurry yourself off. We'll be lonesome"

NYSWANGER repressed an inclination to smile. "I don't say he's got any more sense than the territorial statutes allow him," he supplemented.

"I guess he hasn't," agreed Mrs. Backus. "There's some as has though," she added. "They're so smart that the grand jury has to get after 'em once in a while."

Nyswanger let that pass. His own little misunderstanding with the lady referred to was settled to the satisfaction of everybody concerned except the wrong-headed and impulsive person who had claimed to be swindled by mining stock in a nonexistent mine, issued by the guileless proprietor of the Bon Ton Clothing Emporium. It was Eastern capital anyway, and it had left no stain on Mr. Nyswanger's character.

"But when it comes to choosin'," pursued Mr. Nyswanger insidiously, "I leave it to you whether a loving heart and horse sense ain't worth while thinking over. Not to mention a good business and some of the richest mines in the richest hundred miles square on the face of the earth, if Hammond Hayes is any authority."

"I never heard of him lookin' over your mines," observed the widow, "if it's your mines you mean. Have you got any holes dug in 'em yet? Still, I don't deny that it might be a comfort to have a good business man to turn to for advice. I'm needing some right now myself."

A TENDER look appeared in the bulging eyes of the good business man. "I know of one you can tie to every time," he said. "If it's investments—"

"My land, no!" said the widow with a sigh. "Investments! No, I was wonderin' if there wasn't some way of getting a little somethin' out of that Redwater bank. I can't make head nor tail of the statements I'm getting from the receiver. I've heard that there won't be 3 per cent when they've realized on all the assets."

"Do you mean to say you had anything in the Redwater bank?" asked Nyswanger.

"Mighty nigh all I had in the world," replied the widow, sighing again. "I've been a-worrying over it all summer. The house is clear, though."

Nyswanger pulled the neatly disposed red silk handkerchief from his breast pocket with a jerk and wiped his brow as he allowed his breath to escape in a gasp. Mrs. Backus raised her knitting and wiped her eyes.

"Seems like when a woman is alone and unprotected in the world, folks is bound to take advantage of her," she said pathetically.

"It's—it's too bad," said Nyswanger blankly. Presently, after a popeye contemplation of the "After-Clouds-Sunshine" motto, he said: "You didn't put your cows in the bank?"

"No," replied the widow. "I've got them chattel mortgaged for $500 to George Reynolds. They wouldn't bring much at sheriff's sale, but if I could pay the first note an' stave off the next one till spring—I can see it now, but I guess I got kind o' rattled at the time I done it. A woman ain't no business with stock, anyway. I'd ought to have sold 'em in the first place. But then," she added, philosophically, "if I had, the money'd have gone into the bank with the rest and I'd have been out that much more."

NYSWANGER pulled a large, ornately chased gold watch from his pocket and consulted it anxiously. Mrs. Backus sighed.

"I did think when Mr. Backus died that nothing couldn't never tempt me to get married again," she said. "I don't reckon I ever will, either, though there's them—" She checked herself and let her eyelashes drop modestly. "Still," she resumed, "I certainly didn't have to lay awake nights an' wonder what was going to become of me when he was alive. Poor Pete!"

"We must all go some time," said Mr. Nyswanger in a flubbily consoling tone, "and that reminds me—" He rose from his chair.

"Set down," said Mrs. Backus, and Nyswanger reluctantly obeyed.

"Yes, a man certainly is handy to have around at times," she continued. "What you was a-sayin' just now about a lovin' heart and horse sense—"

"Gifford's sure got 'em," said Mr. Nyswanger. "I wouldn't p'sume to mix in, but seein' as you've touched on the subject, I say again they don't make no better men than what he is around this section."

MRS. BACKUS fixed him with an indignant stare, under which he shifted uneasily in his chair.

"Who was talkin' about Seth Gifford?" she demanded. "Has Seth Gifford got a good business an' some o' the richest mines in the richest hundred miles square on the face of the earth?"

"Ranchin' ain't a bad business," suggested Mr. Nyswanger in a conciliatory tone. "Seth's done pretty tolerable well for the time he's been at it."

"Has he got mines?" asked the widow severely.

"Come to think of it, I wouldn't swear that he had any mines," admitted Mr. Nyswanger. "But then that ain't no reflection on his character an' you know as well as I do that mining is mighty uncertain. There's more money sunk in the ground than ever was took out of it. I've got some good mines myself, but it takes capital to work 'em."

Bealby

Chapter II
In the Secret Chamber

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

WHEN the Lord Chancellor sat down thoughtful before the fire in the fine old paneled room assigned to him, he perceived that he was too disturbed to sleep. This was going to be an infernal week-end. The worst week-end he had ever had. Mrs. Rampound Pilby maddened him; Timbre, who was a Pragmatist—which stands in the same relation to a Hegelian that a small dog does to a large cat—exasperated him; he loathed Laxton, detested Rampound Pilby and feared—as far as he was capable of fearing anything—Captain Douglas. There was no refuge, no soul in the house to whom he could turn for consolation and protection from these others. Slinker Bond could talk only of the affairs of the party, and the Lord Chancellor, being Lord Chancellor, had long since lost any interest in the affairs of the party; Woodenhouse could talk of nothing. The women were astonishingly negligible. There were practically no pretty women. There ought always to be pretty *young* women for a Lord Chancellor, pretty young women who can at least seem to listen. . . .

And he was atrociously thirsty.

His room was supplied only with water—stuff you use to clean your teeth—and nothing else. . . .

No good thinking about it. . . .

HE DECIDED that the best thing he could do to compose himself before turning in would be to sit down at the writing table and write a few sheets of Hegelian—about that Infinity article in the "Hibbert." There is indeed no better consolation for a troubled mind than the Hegelian exercises; they lift it above—everything. He took off his coat and sat down to this beautiful amusement, but he had scarcely written a page before his thirst became a torment. He kept thinking of that great tumbler Woodenhouse had held—sparkling, golden, cool—and stimulating.

What he wanted was a good stiff whisky and a cigar, one of Laxton's cigars, the only good thing in his entertainment so far.

And then Philosophy.

Even as a student he had been a worker of the Teutonic type—never abstemious.

He thought of ringing and demanding these comforts, and then it occurred to him that it was a little late to ring for things. Why not fetch them from the study himself? . . .

He opened his door and looked out upon the great staircase. It was a fine piece of work, that staircase. Low, broad, dignified. . . .

There seemed to be nobody about. The lights were still on. He listened for a little while, and then put on his coat and went with a soft swiftness that was still quite dignified downstairs to the study, the study redolent of Sir Peter.

HE MADE his modest collection.

Lord Moggeridge came nearer to satisfaction as he emerged from the study that night at Shonts than at any other moment during this ill-advised week-end. In his pocket were four thoroughly good cigars. In one hand he held a cut-glass decanter of whisky. In the other a capacious tumbler. Under his arm, with that confidence in the unlimited portative power of his arm that nothing could shake, he had tucked the siphon. His soul rested upon the edge of tranquillity like a bird that has escaped the fowler. He was already composing his next sentence about that new variety of Infinity. . . .

Then something struck him from behind and impelled him forward a couple of paces. It was something hairy, something in the nature, he thought afterward, of a worn broom. And also there were two other things softer and a little higher on each side. . . .

Then it was he made that noise like the young of some large animal.

He dropped the glass in a hasty attempt to save the siphon. . . .

"What in the name of Heaven—?" he cried, and found himself alone.

"Captain Douglas?"

The thought leaped to his mind.

But indeed it was not Captain Douglas. It was Bealby. Bealby in panic flight from Thomas. And how was Bealby to know that this large, richly laden man was the Lord Chancellor of England? Never before had Bealby seen anyone in evening dress except a butler, and so he supposed this was just some larger, finer kind of butler that they kept upstairs. Some larger, finer kind of butler blocking the path of escape. Bealby had taken in the situation with the rapidity of a hunted animal. The massive form blocked the door to the left. . . .

IN THE playground of the village school, Bealby had been preeminent for his dodging: he moved as quickly as a lizard. His little hands, his head, poised with the skill of a practiced butter, came against that mighty back, and then Bealby had dodged into the study. . . .

But it seemed to Lord Moggeridge, staggering over his broken glass and circling about defensively, that this fearful indignity could come only from Captain Douglas. Foolery. . . . Blup, blups. . . . Sham Poltergeist. Imbeciles. . . .

He said as much, believing that this young man and possibly confederates were within hearing: he said as much—hotly. He went on to remark of an unphilosophical tendency about Captain Douglas generally, and about army officers, practical joking, Laxton's hospitalities, Shonts. . . . Thomas, you will remember, heard him. . . .

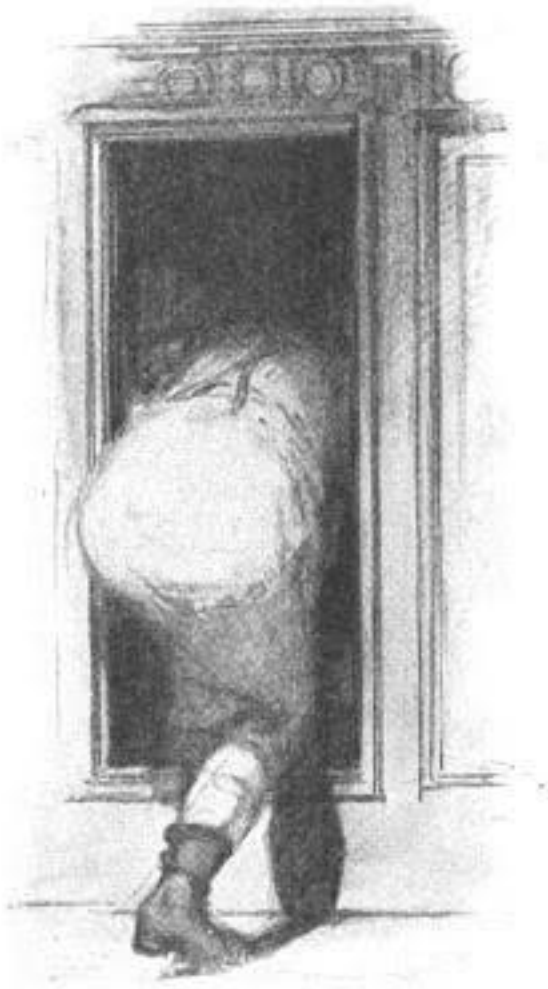
Nothing came of it. No answer, not a word of apology. At last in a great dudgeon and with a kind of wariness about his back, the Lord Chancellor, with things more spoiled for him than ever, went on his way upstairs.

When the green baize door opened behind him, he turned like a shot, and a large foolish-faced butler appeared. Lord Moggeridge with a scepterlike motion of the decanter very quietly and firmly asked him a simple question and then, then the lunatic must needs leap up three stairs and dive suddenly and upsettingly at his legs.

LORD MOGGERIDGE was paralyzed with amazement. His legs were struck from under him. He uttered one brief topographical cry.

(To Sir Peter unfortunately it sounded like "Help!")

For a few seconds the impressions that rushed upon Lord Moggeridge were too rapid for adequate examination. He had a compelling fancy to kill butlers. Things culminated in a pistol shot. And then he found himself sitting on the landing beside a disgracefully disheveled manservant, and his host was running downstairs to them with a revolver in his hand.



On occasion Lord Moggeridge could produce a tremendous voice. He did so now. For a moment he stared panting at Sir Peter, and then emphasized by a pointing finger came the voice. Never had it been so charged with emotion.

"What does this *mean*—you, sir?" he shouted. "What does this mean?"

It was exactly what Sir Peter had intended to say.

Explanations are detestable things.

And anyhow it isn't right to address your host as "You, sir."

Throughout the evening the persuasion had grown in Lady Laxton's mind that all was not going well with the Lord Chancellor. It was impossible to believe he was enjoying himself. But she did not know how to give things a turn for the better. Clever women would have known, but she was so convinced she was not clever that she did not even try.

Thing after thing had gone wrong.

How was she to know that there were two sorts of philosophy—quite different? She had thought philosophy was philosophy. But it seemed that there were these two sorts, if not more; a round, large sort that talked about the Absolute and was scornfully superior and rather irascible, and a jabby-pointed sort that called people "Tender" or "Tough," and was generally much too familiar. To bring them together was just mixing trouble. There ought to be little books for hostesses explaining these things. . . .

THEN it was extraordinary that the Lord Chancellor, who was so tremendously large and clever, wouldn't go and talk to Mrs. Rampound Pilby, who was also so tremendously large and clever. Repeatedly Lady Laxton had tried to get them into touch with one another. Until at last the Lord Chancellor had said distinctly and deliberately, when she had suggested his going across to the eminent writer, "God forbid!" Her dream of a large clever duologue that she could afterward recall with pleasure was altogether shattered. She thought the Lord Chancellor uncommonly hard to please. These weren't the only people for him. Why couldn't he chat party secrets with Slinker Bond, or say things to Lord Woodenhouse? You could say anything you liked to Lord Woodenhouse. Or talk with Mr. Timbre. Mrs. Timbre had given him an excellent opening: she had asked, "Wasn't it a dreadful anxiety always to have the Great Seal to mind?" He had simply *grunted*. . . . And then why did he keep on looking *so dangerously* at Captain Douglas? . . .

Perhaps to-morrow things would take a turn for the better. . . .

One can at least be hopeful. Even if one is not *clever*, one can be that. . . .

From such thoughts as these it was that this unhappy hostess was roused by a sound of smashing glass, a rumpus, and a pistol shot.

She stood up, she laid her hand on her heart, she said: "*Oh!*" and gripped her dressing table for support. . . .

After a long time and when it seemed that it was now nothing more than a hubbub of voices, in which her husband's could be distinguished clearly, she crept out very softly upon the upper landing.

SHE perceived her cousin, Captain Douglas, looking extremely fair and frail and untrustworthy in a much too gorgeous kimono dressing gown of embroidered Japanese silk. "I can assure you, my lord," he was saying in a strange, high-pitched, deliberate voice, "on my word of honor as a soldier, on-my-word-of-honor-as-a-soldier, that I know absolutely nothing about it."

"Sure it wasn't all imagination, my lord?" Sir Peter asked with his inevitable infelicity. . . .

She decided to lean over the balustrading and ask very quietly and clearly:

"Lord Moggeridge, please! is anything the matter?"

Ensignette Cameras

THE Ensignette is a dainty little Camera which easily fits the vest pocket. It's always at hand — never in the way.

The tariff has permitted us to reduce the price from $7.50 to $6.00.

The Ensignette has been imitated in appearance, but its London made quality and reduced size are unique.

It takes pictures 1¼ x 2½, which enlarge perfectly and cheaply to post card size.

Any make of films of this size may be used. At the new price, the Ensignette is

A Vacation Necessity

There are a number of other Ensign models. The Ensign Folding Reflex (lighter and more compact) and the Zeiss Ensign Cameras are both designed for the most critical and exacting.

Ensign Films are Non-Curlable and Double Instantaneous, and are guaranteed longer because they are made better.

Your dealer sells Ensign Cameras and Films. If substitutes are offered, write us.

Beautiful new Illustrated Catalog Free. Write today!

Our Adventurers in Tampico

(Concluded from page 7)

a monthly wage list of $100,000 and a monthly grocery bill of $10,000.

I spent a quiet Sunday with the chiefs of one of these companies. The superintendent and I had last parted at the tail of a glacier on the slope of Chilcoot Pass. He was a mere adventurer, of course, but just the same I desire to describe just a little of this, his Mexican adventure.

We sat in a hot room. The afternoon breeze had not yet sprung up. The house stood on a hill. All about were the visible evidences of peripatetic activity. The low hills were crowned with steel tanks and reservoirs. The slopes down to the river were covered with machine shops, carpenter shops, warehouses, an ice plant, an electric-light plant, a foundry, and parks of wagons, auto-trucks, road scrapers, graders, and rollers. The river was wharf-lined and the wharf was lined with tankers loading oil. There were dredgers, pile drivers, launches, barges, river steamers, harbor tugs, huge ocean-going tugs, and a fast steam yacht (bought a year before for the purpose of rushing the American employees away to the safety of the sea in case of need).

And there was more than could be seen. This particular company ran truck farms, chicken farms, and orchards of avocados, oranges, lemons, grapefruit, and figs—all for feeding its employees. I knew that to the west, in the Ebano field, were this company's hospitals, clubhouses, and railroad shops. Oh, yes, it possessed two railroads which it had built as well as run. Also, at Ebano, was its asphaltum refinery, reckoned the largest in the world, and a mere stock farm where imported Hereford bulls, Percheron stallions, and Missouri jacks graded up the inferior stock of Mexico, and where 10,000 head of animals had run prior to the raids by Federals and Constitutionalists.

From this house on the hill ran a graded wagon road through the jungle, built by the company, into the far Huasteca country, connecting with the terminal of the company's railroad at Dos Bocas. All this distance, and more, to a hundred miles away, ran the company's telephone lines. Two pipe lines for oil, one for water, and one for gas paralleled the wagon road.

Under Stress of War

IN that hot room of the house on the hill the telephone was never idle. Now the superintendent, now one chief, and now another answered it. A call would come from some distant station. Two horses had been run off by Constitutionalists. Another call: the Federals had just killed five cows and a bull for food, and the superintendent, in return, desired to know if his pony was still safe.

An employee arrives on the porch with the news that four of the auto-trucks lifted by the rebels have been recovered in Tampico and are being brought across the river on a barge. Another employee brings the word that the launch *Hoodle-bug* has just been commandeered by the rebels.

Over the telephone comes word that General Zaragoza, with 3,400 of his men, has burned a village and is lifting every horse and mule in sight. The Federals are drifting toward Amatlán the voice over the wire goes on.

"Getting close to our mules," remarks one of the chiefs, and then to me: "We've got 600 mules down there—200 of them from the States."

A tidy item that—sixty to seventy thousand dollars' worth of mule flesh; and the superintendent, over the phone, orders the moving of the mule herd to another potrero away from the line of Federal driftage.

She was young, strong, and she had ridden for two years with the revolutionists

The water station at Tamcochin sends in word that the Federals are reported drifting down on Tamcochin.

"All right," advises the superintendent. "Keep the tanks full to the last moment, and be prepared to run for it. Have a horse saddled for each one of you, and run the rest off now."

Like Job's Calamities

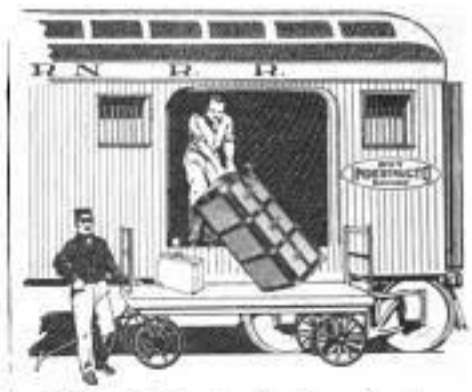
IN a lull one of the chiefs begins inquiring over the line for the pursuing rebels, and locates a station through which 500 of them had passed two hours earlier.

A call announces that the 600 mules are on their way to potreros green and hidden.

The chiefs try to reason the drift of the Federals. It is concluded that so far they have failed to gain the table-land, but that they are bound to try again because, to the south, they are blocked by the rebels, who have captured the port of Tuxpan.

"It does hurt to be called an adventurer," one of the chiefs begins, but is interrupted by a clatter of hoofs and the eruption of a splendid specimen of an Indian who dismounts and reports that after recovering thirty of the company's horses he has just had them taken away by a bunch of rebels.

Another station telephones a rumor that the 500 rebels have run into the 3,400 Federals and are having a hot time of it.



One of the chiefs telephones a subordinate to hire a launch to take the place of the commandeered *Hoodle-bug*. Scarcely is this done when a slender half-breed presents himself with a fresh commission to be a colonel and to raise a regiment of 500 men for the rebels. The superintendent shows the new Colonel every consideration. He is compelled to, or else the Colonel will enlist the men from the company's laborers. Also, the Colonel wants to borrow a launch for a couple of days. It is blackmail, but the superintendent smilingly lends it, and as soon as the Colonel is gone sends orders to hire another launch for the company in Tampico. Following that, at his suggestion, a chief telephones a lone man in a lone station in the path of the Federal drift to be ready to disconnect the wires and cut and run for it.

Between telephone calls a broken conference is held on the problem of moving the Ebano oil. A chief states that the company's shop at Ebano is occupied by seven engines which the rebels have captured from the Mexican Central and are repairing. Another chief, whose activities are patently diplomatic, is instructed to attempt to persuade the rebel leaders to use the repair shops at Tampico. It is decided, since the Ebano oil must be moved because of lack of further storage, to get the rebels to move it over the captured Mexican Central.

"If they won't or can't," the superintendent concludes, "then propose that they let us move it over their lines. We can furnish our own trains, crews, and everything."

Pleasant Dreams

AND the foregoing is just a sample of what went on for all that blessed day and half the night in that hot room of the house on the hill. One last thing I must give. Over the telephone came the verification of the earlier report of fighting. The 3,400 Federals had pretty well cut to pieces the 500 rebels, who were dropping back. Also, the Federals had ceased drifting and were making fast time for the mountains. And in the evening I fell asleep in my chair while the telephone rang on and on, and while the superintendent and his chiefs conferred and planned and considered immediate problems vastly profounder than any I have mentioned here.

What kind of a trunk have you; will it last through your next trip?

If it is an Indestructo, you are sure that it will last for at least five years of the hardest kind of service you can give it.

That's our guarantee; five years trunk service, regardless of what happens or how far you travel.

But if you are going to buy a new trunk, what style have you in mind? Have you thought of a wardrobe trunk? A trunk that will enable you to keep your clothes hung up throughout the entire trip as smooth and wrinkleless as they are in your closet at home.

The choice of the right sort of a wardrobe trunk is most important when you consider the tremendous strain to which a wardrobe trunk is subjected.

Indestructo wardrobes embody the famous Indestructo construction and are the strongest wardrobe trunks made.

The box is made of six-ply hardwood veneer, strong as a safe. The interior is built to wear. The clothes hangers will not break.

For your own protection avoid wardrobes built to sell at a price.

Remember! You get what you pay for.

Every Indestructo wardrobe is made to wear indefinitely, and we guarantee five years of service.

If your trunk is lost or damaged of any cause whatsoever, we will replace or repair it free of charge.

If you want trunk service you will buy Indestructo.

If you are after low price and the short life that goes with it, let Indestructo alone.

We believe we are morally responsible to our customers for every trunk we sell. Each article is exactly as we represent it.

Why not write today for the Indestructo catalogue.

Gamblers' Wives

(Continued from page 15)

habit of heaping insult on the name of his friend of other days at every opportunity. If Sommers ever met up with him he would have to fight. Also Sommers would let the other fire first; he always did. This fact and distance fortified Bonnor in his bravado.

"What Sommers wanted me to do was to go with him and be around if trouble came—and be a witness to the fact that Bonnor fired first, in case Sommers was the survivor of the affair. It was a general superstition that Sommers would survive, because—well, it was one of the ironies of fate that this man who wanted to die, who notoriously held his life cheap, seemed in all these affairs to bear a charmed existence.

"'But,' I told him, desperately, 'I must have the money now, at once, else I would as well not have it at all. I have a sick wife who is in immediate need of the care this money would furnish her.'

"He saw my anxiety and thrust a roll of bills into my hand. 'Here,' he said, almost roughly, 'I am not such a Shylock. Go. See to her at once. And if she needs you, stay by her. You owe me nothing until your own good time.'

"Hurriedly, in my haste to get to my wife, I pressed upon him my fervent thanks. But as I left him I pledged myself to go with him on the morrow if my wife's condition warranted, once she was in good hands.

"As it turned out, I did go with him. My wife seemed to be doing nicely, and I was anxious to go, as I knew there would be good chances of making some money. I left instructions that if there were the least signs of a turn for the worse, I should be notified by wire at once."

BRANNON paused for a moment, as if in reverie, gazing into space, then resumed: "It was the second day we were there—the men came together. It happened almost directly in front of Bonnor's home along in the late afternoon. In that hot, dusty street of that lazy Texas town they met, a sneer on the face of one, fear and dread written on that of the other. Bonnor knew that he would be shot down like a dog, whether he fired or not, but he also knew he would be given ample time to fire first. With a desperate effort to make the most of his opportunity, he pulled and fired with all the steadiness his failing courage could muster. Sommers, waiting with his hand on his gun, fired instantly after. The two shots sounded almost as one. I remember I saw first that Sommers was wounded in the left shoulder, and then turned to Bonnor in time to see him pitch forward and fall to the street, the blood streaming from his breast. Also I remember noting in the back of my mind a bunch of loafers in front of a livery stable down the street a piece, scattering and disappearing inside with wonderful agility; the ducking out of sight of a straggler or two, and the opening of a window.

"Then I heard a woman's shriek, and Bonnor's wife came running out and sank across the form of her husband. She wore a snow-white dress, and when she rose to her feet her own soft bosom was all crimson and begrimed with the dust and blood, as though there, too, the ruthless bullet had plowed and torn its way. Just then a little curly-haired baby girl, all white and fresh, too, probably just from its afternoon nap and bath, came toddling out to her mother; she snatched the child up in her arms and turned on Sommers, scorn and hate flashing from her eyes. But her bitter arraignment died on her lips before this man who stood there facing her with a weary smile, his hands held out in a little shrug of disappointment. Casting at him one last look of horror, she fled into the house.

"The usual program was gone through with, bond was speedily arranged for, and I was free to go back to my wife.

"But I was sickened, and at the thought of that little baby girl clasped to its mother's stained breast, unable to realize the tragedy that had come into her life so early, the shattered peace of a home, I bitterly reproached myself. I could have given them warning, might have prevented it. I had made some money the night before, and was in good shape to make plenty more before the week was out, but I wanted to get out of the town.

"I hurried back to Fort Worth and at the bedside of my wife told her of the affair. No matter what her own feelings, she, as ever, laughed down my distress, told me I couldn't have helped it, that it was bound to have happened, soothed me, cheered me, and soon had me back to my normal self. But they buried her—my girl—a week later. It seemed our prosperity came too late."

His voice had sunk almost to a whisper. After a moment's silence, he again took up the thread. "I made a lot of money after that"—there was mockery in his tone. "I couldn't lose at anything—" Brannon turned to reminiscences of Sommers, as if closing the door on more intimate memories. After his quiet tones had rehearsed more than one strange story of a strange man, after he had given the true version of Sommer's death (with half a dozen bullets in him at last) in the Crystal Palace at San Antonio, he rose and laid a hand on Buddie's shoulder. "Be good to that little wife of yours, son," he said. "You don't know how lucky you are to have a little girl like that to stick with you through thick and thin. Whenever there's some one that has to give in you be that one, always. Never hesitate. And the first thing you know she'll be beating you to it. Cherish her and ask her advice about things. You'll be surprised to learn what a wise little soul she is, I'll bet you."

Buddie almost cried: "That little girl down in Laredo that day—Bonnor's daughter," he said softly, "is my wife."

BRANNON stared a moment, and then in silence, with a little sweep of his hand, recognized the mysteries of Fate.

That night Buddie bent over Molly's sleeping form and brushed her forehead

With a mental "So much for hunches," he sank into one of the big, soft leather chairs in the richly appointed Iroquois Club just in time to note the entrance of Tom Brannon

The Meeting Place in Summertime

Is Around a Dish of Puffed Grains

Every morning, countless families are now meeting around a dish of Puffed Wheat or Puffed Rice. Some eat them with cream and sugar—some mix them with their fruit.

Every evening, legions again meet around Puffed Wheat or Puffed Rice in milk. At suppertime or bedtime these dainty morsels form an ideal good-night dish.

At noontime, Puffed Wheat and Puffed Rice form the welcome luncheon. At dinner, they are scattered like nut meats over the ice cream. In the afternoon, girls use them in candy making, and hungry boys eat the grains like peanuts when at play.

The millions who do this know the utmost in a cereal-food delight.

The Perfect Foods

Prof. Anderson, in these puffed grains, has created the perfect foods. Here, for the first time, all the food granules are broken. Digestion can instantly act.

Inside of each grain there occur in the making a hundred million steam explosions. And the airy morsels which result are the best-cooked foods in existence.

They are foods for any hour. They never tax the stomach. And every atom of food value has been made available. No other method has ever created such ideal foods as these puffed grains.

Puffed Wheat, 10c
Puffed Rice, 15c *Except in Extreme West*

In the hot days coming—when you want to save cooking—when you want cool foods, easy to digest—serve a wealth of Puffed Wheat and Puffed Rice.

Serve them as breakfast cereals, as dairy dishes. And use them like confections, for the taste is like toasted nuts.

Each puffed grain has a different flavor. But each is crisp and bubble-like and thin. Each is a dainty which everyone enjoys. Each marks the limit in good food.

Serve them both. Order a package of each from your grocer, then let the children vote on which they like best.

Your Ford Car

Why it should be lubricated with Gargoyle Mobiloil "E"

IN lubricating Ford Cars, there are eight vital considerations. Each one must be met if the motor is to deliver its full power and be free from undue heat and wear.

These factors are:

(1) Speed, Bore and Stroke. Under the hood you have a small, high-speed motor. The Ford speed conditions demand oil of a different *body* from that demanded by low-speed conditions. The body of Gargoyle Mobiloil "E" meets this Ford need with scientific exactness.

(2) Piston Clearance. The Ford pistons are closely fitted. Each piston has two upper rings, and one lower ring and an oil groove. The lower ring tends to prevent a surplus of oil working into the combustion chamber, while the oil groove insures proper lubrication of the wrist-pin. Engineering tests show that the body of Gargoyle Mobiloil "E" forms the correct film for the Ford piston clearance.

(3) Lubricating System. The oil is supplied to the crank case. The connecting rods dip. All parts of the Ford motor are supplied by splash lubrication, requiring an oil which will atomize readily. Gargoyle Mobiloil "E" has the scientifically-correct *body* to properly distribute to all the friction surfaces.

(4) Cooling. The Ford motor is water-cooled by the Thermo-Syphon system, and is equipped with two forward speeds. The continued use of low gear often causes overheating. For full protection, oil should be used which distributes freely to the heated frictional surfaces, as Gargoyle Mobiloil "E" does.

(5) Ignition. The Ford system of ignition is by low-tension magneto, located in the fly-wheel, employing a four unit coil of the vibrator type. Gargoyle Mobiloil "E" will burn cleanly from ignition points—a most important consideration.

(6) Bearings. The Ford bearings are of the two-bolt type, brass with Babbitt lining, closely fitted. The correct *body* of Gargoyle Mobiloil "E" enables it to properly reach all parts of the closely-fitted bearings.

(7) Carbon Deposit. To insure the least carbon under all conditions, an oil should be used whose only deposit will be of a dry, non-adhesive character—easily and naturally expelled through the exhaust. Gargoyle Mobiloil "E," if the proper level is maintained, will deposit little if any carbon in a Ford motor.

(8) Extreme Weather Conditions. On hot summer days you will sometimes see Fords running under overheated conditions, often due to faulty lubrication. Ford owners who use Gargoyle Mobiloil "E" are free from this trouble, owing to the ability of the oil to absorb and radiate heat. On cold winter days oil is required of a fluidity which enables it to meet low-temperature conditions and permit ease in cranking the motor. Gargoyle Mobiloil "E" completely fills these requirements.

Above we have said little about *quality*. The Vacuum Oil Company, recognized world-leaders in scientific lubrication, have been specialists in the manufacture of high grade lubricants for almost half a century.

We guarantee Gargoyle Mobiloil "E" to be fully up to the high standard demanded of all Gargoyle products.

It easily reaches all friction surfaces and gives thorough protection after distribution.

In one case, however, Gargoyle Mobiloil "E" should *not* be used.

1910 Models. In the models of that year motor conditions were slightly different. For 1910 and earlier models use Gargoyle Mobiloil "A" for summer and Gargoyle Mobiloil "Arctic" for winter.

To Owners of Other Cars:

The analysis above is one of over 400 similar engineering studies of different American and foreign cars.

Whatever the make or model of your car, you can get the benefit of these analyses and our advice, based on them, from our complete Lubricating Chart. A copy will be mailed on request.

We will also mail you on request a pamphlet on the Construction, Operation and Lubrication of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

It is safest to buy Gargoyle Mobiloils in original barrels, half-barrels and sealed five and one-gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

GARGOYLE

Mobiloils

A grade for each type of motor

Gargoyle Mobiloils can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

For information, kindly address any inquiry to our nearest office. The city address will be sufficient.

VACUUM OIL CO., Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

DOMESTIC BRANCHES: Detroit, Philadelphia, Boston, Indianapolis, New York, Minneapolis, Chicago, Pittsburgh

with his lips. She stirred slightly, and then the eyelid fluttered open and she looked up into Buddie's face.

"You don't have to go home, honey," he whispered. "Look what an old friend and admirer of yours staked me to," and he flaunted some bills before her eyes. He smiled as Molly looked up at him inquiringly.

"Yes," he said slowly. "An old friend of yours. He first met you eighteen years ago." The wondering eyes still fixed upon him, for some reason he suddenly sank to his knees close beside her and clasped her to him.

"Maybe," said Molly, after a while, "you'll tell me some time what it's all about?"

"Maybe," said Buddie tenderly. "Maybe, some time."

The Toe of Retribution

(Concluded from page 9)

goin' t' strike. An', chances are, Joe's record's so septic that this complication will necessitate amputation; but, comin' or goin', discipline is discipline, so go about. Subdue yer feelin's an' give it t' him straight.'

"Well, th' coon passed Billy in all right, an' there he stood in th' precinct o' royalty.

"'What can I do fer you, Mr. Hood?' says Beveridge.

"Then Billy hands him th' letter an' blows his spiel in tremulous accents.

"'Let me git at th' matter clearly, Mr. Hood,' says Beveridge. 'I understand that you were in th' passenger service an' have been discharged. Who discharged you?'

"'Conductor McQueen.'

"'For what reason?'

"'He objected to a remark I made about th' collectors comin' on. Th' cons is all sore about that,' says Billy.

"'And he gave ye this letter—afterward?'

"'He did that. This mornin'. See th' date?' says Billy.

"'Since when did conductors git authority t' discharge employees o' th' company?'

"'Bout a month ago. Morgan's bulletin.'

"'Morgan? Who is Morgan?'

"'Th' Prairie train master.'

"'Superintendent Hargrave's train master?'

"'Yes, sir.'

"BEVERIDGE pushed a button, an' th' porter came in.

"'Tell th' operator t' have Mr. Hargrave, superintendent o' th' Prairie Division, an' his train master, Morgan, report at this office as soon as possible. Notify Conductor Joseph McQueen also.

"'Mr. Hood, you'll return t' work. I shall investigate this case thoroughly. We're not delegatin' authority t' conductors nor dischargin' men fer talkin'. Good day, sir!'

"Billy hung round outside, watchin' developments. Pretty soon 'long comes Chain-gang Hargrave at a quick sprint an' Morgan wid him. They was too occupied t' notice Billy, fer when a division superintendent an' his 'mediate subordinate gits summoned t' th' G. M., it generally means somethin' sear an' yellow, an' th' earth has a cross-eyed aspect. Then Joe looms up, pale as wax, feelin' o' hisself t' see if he's all there.

"When Joe seen Billy, another buzzard must 'a' flopped askew o' his horizon. He stopped short an' looked at Billy like an idee had struck him suddenlike. 'Lemme see that letter a minit, Hood,' says he.

"'Mr. Beveridge has th' letter,' says Billy.

"At that Joe wilted fer fair. He give Billy one heartreadin' look an' walked lopsided into th' office. What Beveridge handed t' them three men hasn't ever been given out fer publication, but when they came out they looked weary and dejected.

"Billy was anchored t' th' spot. He wanted t' creep away, but seemed like he couldn't move.

"CHAIN-GANG HARGRAVE looked at Billy. Then he mopped his face. His collar had gone mushy. Says he: 'Hood, you return t' McQueen's crew an' stay fer further orders.'

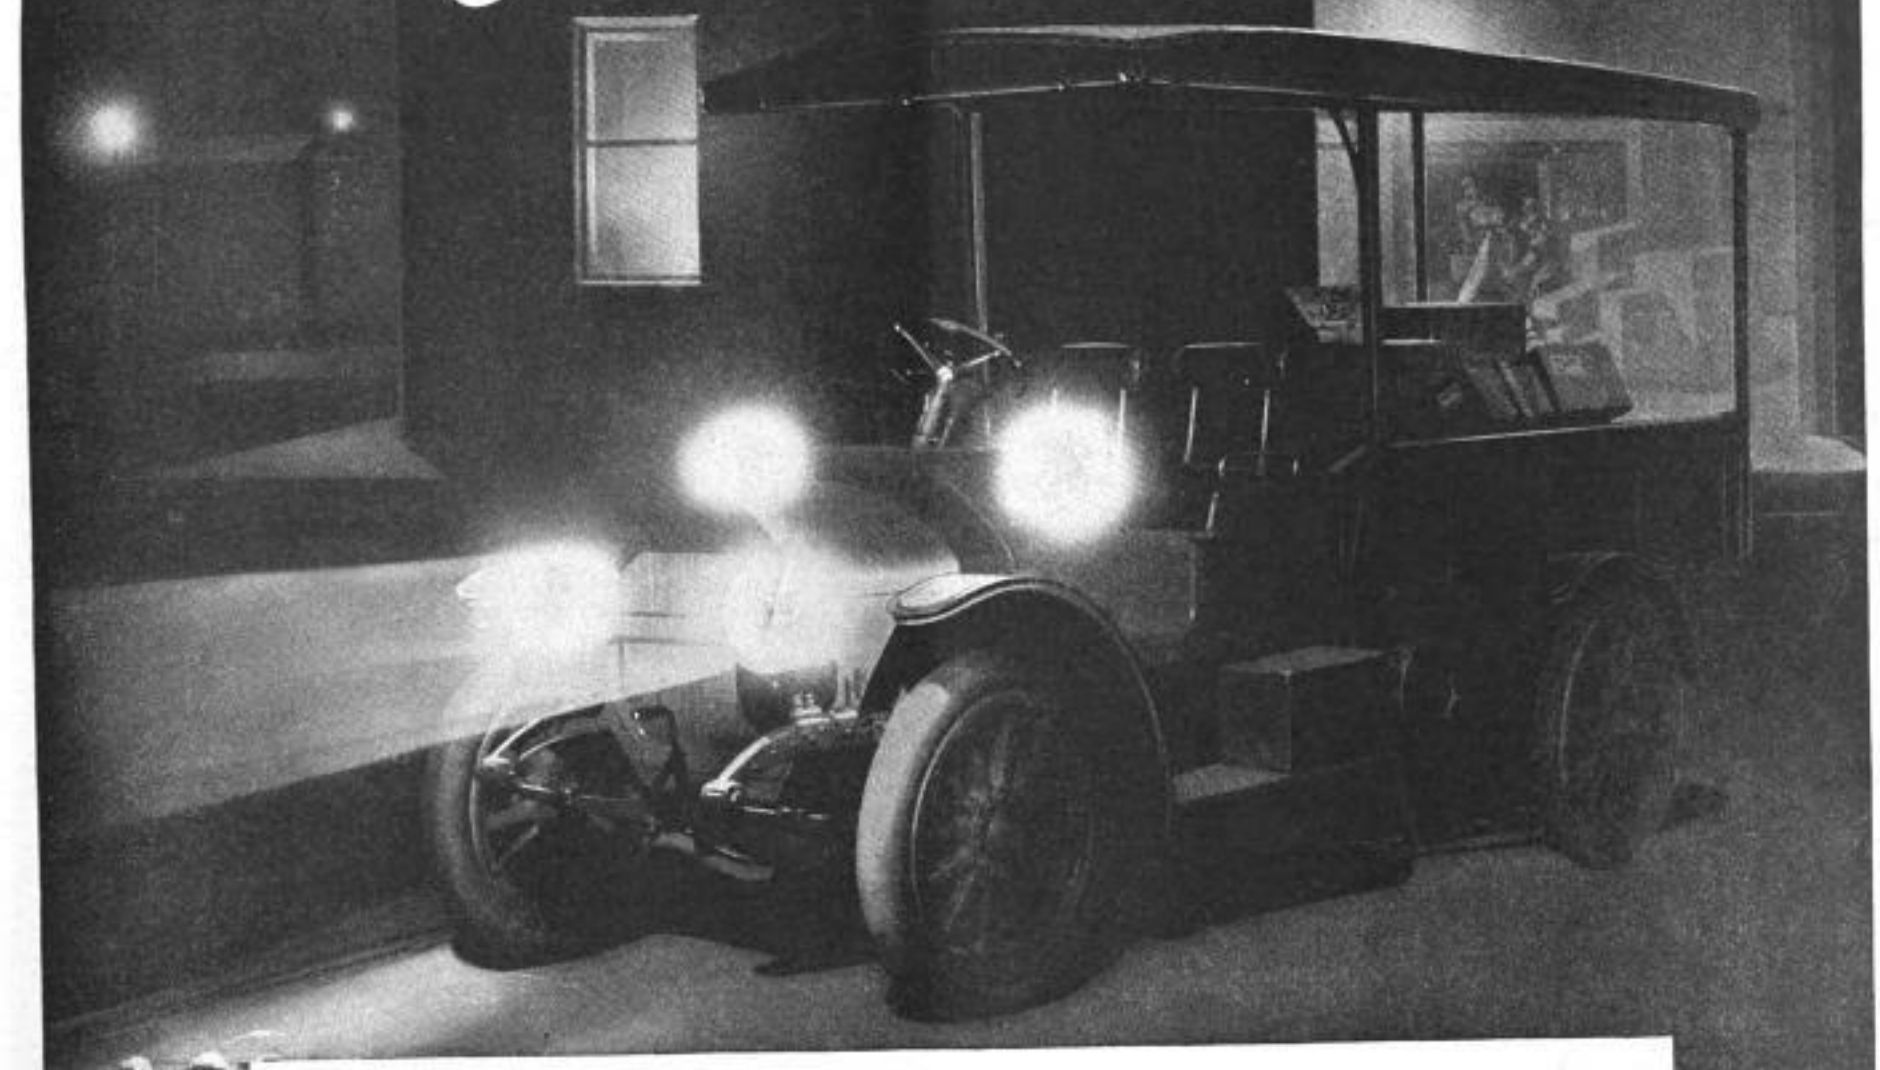
"An' there ye have th' hist'ry o' Billy Hood," concluded Finnigan.

"Well, there's a devil of an argument against appealin' a case, I must remark!" exclaimed Quaid. "Finnigan, you'd make a good attorney. If yer man was due fer a straight drunk fine, you'd git him hung? What better evidence o' th' advantage o' takin a case t' th' head o' th' class could ye offer?"

"Ye've got a flat wheel, Finnigan," added Cleary. "Now, after all yer talk, ye prove by yer own account that this Billy Hood went at it blind, an' won out widout half tryin'. Why, he set right down in th' lap o' justice—"

"An' dropped through onto th' toe o' retribution," interrupted Finnigan. "You fellers sop up th' climax like a sponge. I was waitin' fer it t' git clear t' ye, but ye're that quick. It does ye credit. Did I say I was through? There's yet th' sequel. Three weeks after th' transaction ye're so wrought up over, Billy opened th' switch at Ella t' let Number Three take siding fer th' Mail. Three had besides her reg'lar train one extra sleeper an' General Superintendent Caton's private car on th' rear wid his Juleps in it. Maybe Billy was reflectin' on bein' in th' favor o' princes. Maybe he was sleepy. Anyhow he counted th' usual number o' cars passin' an' closed th' switch. Th' front part o' th' train took sidin' an' th' last two cars went up th' main an' t' th' bad. Th' safety chains held, an' there in th' dead o' night ye behold Caton's car a-straddle th' track an' near tipped over, an' th' old man's head out th' window warblin' language that withered th' foliage in that vicinity. Th' miscue laid out both trains a matter o' three hours.

"DID Caton fire Billy? Did he? He chased him out o' th' right o' way an' wouldn't let him ride on th' train. No show fer appeal in that case. It was fer cause, an' yet, as ye know, Matt Willard, Pop Gilroy's brakeman, did th' same thing last May, an' Pop squared it an' had him back workin' in less than a week. But Hargrave was Billy's touchstone, an' Hargrave wouldn't look at him. I'reemptery orders from Caton. Last I heard of Billy he was plantin' shrubbery in a cemetery.



"As I remarked in beginnin', fellers, it does warm th' soul t' git yer superior screwed down by his superior, but when th' minit comes that ye land in his distinguished presince wid a frayed record an' wid nothin' t' expect from him but th' jolt that it's only human nature fer him t' throw into ye, th' sensation is differ'nt from anythin' in th' book o' rules or on th' time card."

"S'pose he had told ye: 'B'yes, ye have me sympathies. Yer cause is just. . . . But it's beyond me jurisdiction. Th' bunch above, that consumes th' champagne, has syndicated th' plat, an' intind t' develop it wid yerselves'"

Willys Utility Trucks

The Extravagant Way to do Business is to Use the Methods of Yesterday

FROM a business standpoint the motor truck is probably the greatest economic factor ever introduced.

It has proved its economy, its productiveness and its downright efficiency over the horse in every possible respect.

Yet, in spite of this, some business men still prefer to be backward by continuing to use, and lose money, on the out-of-date methods of yesterday.

What does it cost you to do business with horses?

Ten to one you cannot answer!

But—

In answer to, whatever your answer might be, how can you reply to the following:

The Peninsular Wet Wash Company of Portland, Oregon, replaced three teams, (6 horses) with one Willys Utility Truck. And in addition to greatly reducing their hauling investment they cut delivery operating expenses $250 a month or $3000 a year. Bear in mind that one Willys Utility Truck alone effected this enormous saving.

Now what about your horses?

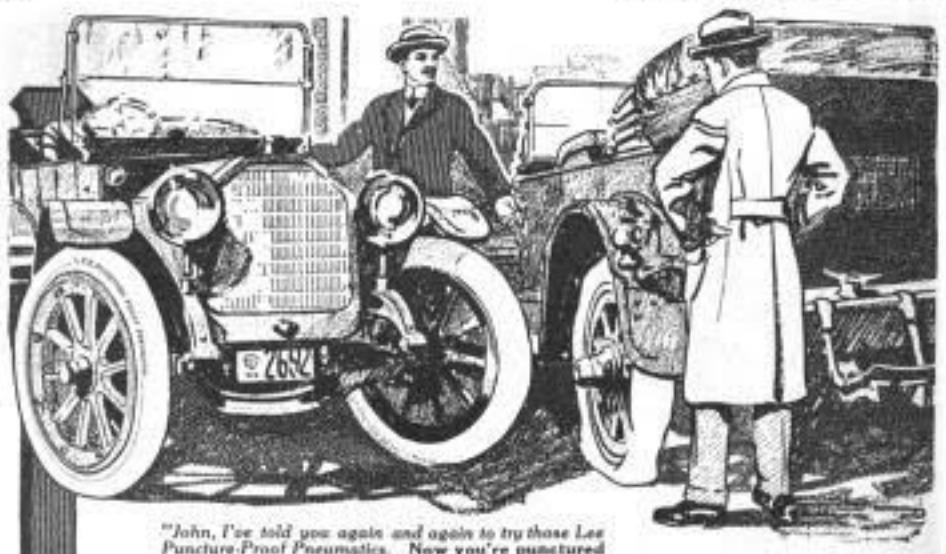
And this is but one of scores of similar cases!

Yet economy is not the greatest asset of this truck. Increased business is what makes for increased profits, and there is where the real value of this truck comes in.

With one of these trucks you do infinitely more work than you can do with three or four teams. You can cover more territory, get at more customers, develop more business—in short make more money.

Understand this is not a theoretical statement. Willys Utility Trucks are accomplishing this for hundreds of others. They can do precisely the same for you. Their adoption will increase your business and decrease the cost of getting and handling it.

We have the facts and figures in connection *with your business* to prove this. We will be glad to present them at any time you appoint.



Write us direct for literature, special body book, complete details and data. All gratis, address Dept. 153.

The Willys-Overland Company, Toledo, Ohio

Three-Quarter Ton Capacity—$1350

Boys——
Vacation——?

Vacation days are here.

How often have they become really tiresome, long before school reopened, and how often have you wished for something definite to do.

Time and again you have interfered with your mother's housework, and she too has often scolded you.

All this because you had nothing to occupy your mind, or to which you could devote your energies.

Let us tell you how to enjoy this vacation more than ever because under our plan you can make it profitable as well as pleasant.

We are anxious to get in touch with a real live boy in each community, and tell him about our "REWARDS OF MERIT" which we are giving in addition to the profit you make.

Tear off the coupon and mail it today.

C W. 6-21

Junior Sales Dept.
P. F. Collier & Son
416 West 13th St.
New York City

Please tell me more of your plans for boys to profitably occupy their time during vacation.

"Every a relief to Know by Her Mirror"

The Widow's Mite

(Continued from page 10)

"It takes mines to work capital, too, don't it?" asked the widow sarcastically. "Well," she snapped, picking up her knitting again, "I don't ask your opinion about mining or ranching, an' maybe I can get somebody to straighten out my business for me. If the worst comes to the worst, I can take washin'. Maybe I can reckon on gettin' your shirts to do up. Much obliged to you, Mr. Nyswanger."

The proprietor of the Bon Ton Clothing Emporium rose from his seat. "Now don't you get mad at me because I can't give you advice right off, Mrs. Backus," he said, with a deprecating gesture. "I'm going to study on it and you don't know but what I may hit on some scheme that will help you out. You give me time to think it over for you. We'll see what we can do. Did I bring my hat in or did I leave it in the hall? Now don't you mind coming to the door with me. Good night."

In another minute he was outside taking deep breaths of the cool air and expelling them in an ecstasy of relief.

HE had reached his store where, in a back room, he had his bachelor quarters, and was feeling for his key, when he heard the sound of approaching footsteps on the board sidewalk and a female voice of a peculiarly penetrating character which he recognized.

"But it was all in the Redwater bank," said the voice. Mr. Nyswanger buried himself deeper in the shadow of the doorway and listened intently.

"Don't you fool yourself," came to him in deep manly tones. "She had it all in the Redwater bank, but she got a tip from Reynolds an' took it out just afore the smash an' salted her down in the Lead National. I got that straight."

"Then why for the Lord's sake—?"

"Search me," said the other. "I've quit trying to find out whys where you womenfolks is concerned. Some scheme."

"But she told me—" began the woman; and then as the light of the lantern they carried flashed on the bent figure in the doorway: "Why, Mr. Nyswanger!"

"Evenin', Mrs. Bixby. Evenin', Spencer," said Nyswanger, rattling his key in the keyhole. "I'm having trouble with this lock. Been to the social?"

Just then the stubborn lock yielded and the wayfarers passed on. Mr. Nyswanger entered the store, made his way to his room and sat down to reflect with a grin on his face and a finger on the side of his nose.

"So that's the game, is it?" he soliloquized. "Well, I reckon it ain't altogether too late to cogger the bet." He considered further and then: "Still, it's best to make sure in matters like these here." So saying, he carried his lamp to his desk in the store and wrote a letter addressed to Lead City and, an hour later, delivered it to the mail carrier who drove through the camp in his buckboard.

MRS. BACKUS, en négligé, the sleeves of her figured calico wrapper rolled above the dimples in her elbows, was sweeping the floor of her front porch. Intent upon her work, she did not notice the approach of Mr. Nyswanger until a delicate cough apprised her of his presence. He was smiling in his accustomed confident manner. Mrs. Backus did not smile. "Fine morning," remarked Mr. Nyswanger with a graceful flourish of his hat.

"I can see that for myself," said the widow ungraciously.

Mr. Nyswanger appeared a trifle discomfited. "I guess you're busy this morning," he said, "but—"

The lady did not give him time to complete his sentence. "You're a good guesser," she said. "If you'll stand to one side, you won't get none o' these sweepin's on your clo'es," she added, pausing as she brushed the litter to the edge of the steps.

"Excuse me," said Nyswanger removing himself. "I didn't know I was in the way."

"Some never does," commented Mrs. Backus. "Don't step on that there flower bed." With a vigorous whisk of the broom, she gave the sweepings to the morning air, and lightly dusted off the lower steps, after which she turned to reenter the house, but stopped as Mr. Nyswanger began to follow her. "Well?" she said, not very encouragingly.

"You act like you was mad at me," said Nyswanger reproachfully.

"You'll have to excuse me," said the widow. "I've got my work to do."

"You're mad at me," persisted the proprietor of the Bon Ton. "Here I've been a-figuring and a-studying on some way to help you out ever since I left here last night. I told you last night I was a-goin' to figger some way out. Well, ain't I here?"

"I RECKON you are," said Mrs. Backus. "It looks suthin like you anyway."

"I tell you there's some as wouldn't be," said Nyswanger. "There's some turns their backs on their friends when they get into trouble. I ain't that way with my friends, least of all with you. I ain't got but one wish and that's to see you satisfied and happy."

"You didn't talk that way last night," said Mrs. Backus with a slight relenting in her tone.

"I was struck all of a heap," pleaded Nyswanger. "Maybe I didn't say all I wanted to say, but I've had time to think since then. Now you show me them receiver's statements you was talkin' about."

Mrs. Backus hesitated and blushed slightly. "I guess I won't trouble you," she said.

"Don't say trouble," begged Nyswanger ascending two steps. "Nothin' I could do for you would be any trouble. You'd ought to know that." His hesitation seemed now gone and his manner was ardent. "There ain't nothin' I've got but what's yours," continued Nyswanger. "All you need to do is to say what you want."

"Quit now," commanded the widow. "Here's Mrs. Bixby comin'."

"Dern Mrs. Bixby!" muttered Mr. Nyswanger. "See here—"

"She's comin' up this way," warned Mrs. Backus.

NYSWANGER went down two steps as a stout, elderly woman clambered with difficulty along the shade of the pathway. "When I spoke about Gifford," he said hurriedly, "I reckoned that you and him— It didn't make no difference in my feelin's. I says to myself this morning, 'I'll help her anyway,' I says. 'All I want is to see her happy. If I can do that, I says to myself—Jim Bristow says it's good sound wood, and he'll let you have it for two dollars a cord, hauled. It's better'n pitch pine—not so hard on stoves. Morning, Mrs. Bixby. *You* don't want no green cordwood, do you?"

"Not me," replied the stout woman breathlessly. "My! but it's a climb up here, Martha! Phew! No, I've got all the wood I want. Oh me, oh my! I'm about tuckered out!"

"Come right in an' set down," said Mrs. Backus hospitably. She smiled at Nyswanger. "If you're passin' this evenin' about eight o'clock, maybe you'll look in, Mr. Nyswanger," she said. "I'll think what I'd better do about it."

"What I've said about the wood is all so," said Mr. Nyswanger artfully. "It's wood you can depend on."

"I ain't got no doubt about that wood now," said the widow kindly. "It was real kind o' you to tell me about it."

"Don't name it," said the polite proprietor of the Bon Ton. "You're more'n welcome. I'll be up this evenin' sure. So long, ladies."

"What's that crazy loon talkin' about?" inquired Mrs. Bixby when she had settled her ample person as comfortably as might be in a corner of the horsehair sofa.

MRS. BACKUS tittered.

"You needn't tell me," said the elder woman. "I know well enough, Martha Backus, you just answer me one question. Have you took him?"

"Why, Mrs. Bixby!" exclaimed the widow in accents of surprise.

"Yes, Mrs. Bixby!" chuckled that lady. "It's good United States, ain't it? Yes or no?"

"No," answered Mrs. Backus.

"Thank Providence for that!" ejaculated Mrs. Bixby piously. "But then you're a-goin' to think it over an' let him know this evenin'. Well, you let him know that you ain't no such fool as to take him. All he wants is your money."

"He knows I've lost my money," protested Mrs. Backus.

"Yes, he knows you have and he thinks you haven't. You needn't look at me. Listen! Last night Spencer Damon was

Digitized by Google

takin' Mert home from the social an' he told me you'd drawed out of Redwater an' hunked at Lead afore the smash came, an' we was a-passin' Nye's and Nye heard it. Now whether that's so or no, I don't know. I only know what you told me, an' that ain't what Nye believes now."

To Mrs. Bixby's mortification, the widow showed no sign of surprise, but smiled and nodded to herself several times. "I suspicioned that story'd got out some way since last night," she commented. "Well, we'll see. If you ain't got nothing on hand to-night, you might come over at about eight, too."

GIFFORD was usually an early riser, but on the morning after his ill-starred visit to Coo-Stick, he forsook his blankets a good hour before dawn, and by the dim light of a smoky kerosene lamp he appeared to occupy himself with some sort of literary composition.

After breakfast he handed the production to his assistant with instructions to deliver it personally to Mrs. Backus. "Take care you don't lose it, Mert," he said. "It's mighty important."

"What is it?" asked Mert weighing the package in his hand. "A book o' po'try an' a lock o' your hair?"

"It's suthin to make blamed fools ask questions," said his employer severely.

"What do you want her to ask you?" asked Mert. "Excuse me," he added with hasty politeness. "It ain't none o' my derned business o' course. Any message—your love or anything? Well, all right. You don't need to get wrathy."

Gifford stood and watched him splash through the ford, and then with a sigh, went about some of his usual morning chores. But at last he went to the stable and saddled the gray.

He found Larry MacFadden seated on an inverted pail in the doorway of the Fashion Livery barn, cleaning a set of harness. The little man's greeting showed nothing but pleasure and he held out a hand slimy with castile soap and grimy with paste dressing, and chuckled when Gifford unsuspectingly grasped it. "Wipe it off on your whiskers," he suggested. "You certainly ought to make some use o' that underbrush, Seth. It ain't no ornament. Go put up your horse and then come and set down and enjoy yourself. Excuse me rising."

GIFFORD led his horse into a stall, unbridled him and loosened the saddle girths, brought a chair from the office and seated himself beside MacFadden in the doorway.

"I saw Mert around a while ago," said the liveryman. "What's brought you in?"

"Had a little business," replied Gifford. "What's new?"

He asked the question perfunctorily. He was looking across the street at Mrs. Backus's home. "Who's up at the house now?" he asked with a real interest.

MacFadden shaded his eyes with his hand. "There is somebody there, sure enough," he said with an air of surprise.

"It's Nye," said Gifford.

"It does look like Nye," said MacFadden.

"And he's talking to her," groaned the ranchman.

"I wouldn't wonder," said MacFadden. "I guess they've got it fixed up between 'em. Nye as good as told me so a while ago. He's heard about her losing her money, too." He cast a sidelong look at his friend whose eyes were still fixed on the porch, and shrugged his shoulders.

"HE'S square, anyway," said Gifford presently, with an effort.

"He's what you might call a lulu bird," said MacFadden.

"He's acting square now," Gifford maintained.

"Sure," agreed MacFadden. "Hello! There's mother Bixby buttin' in. Ain't she the worst old hen? Here comes Nye back now."

In a minute or two, the proprietor of the Bon Ton approached them on his way to the store. His face wore a complacent smile, and he waved his hand to the ranchman with marked cordiality, and winked half derisively at MacFadden.

"You're in late, Seth, old sport," he said to the ranchman.

"Is he in too late?" asked MacFadden meaningly.

"I guess he is," said Mr. Nyswanger with unblushing hardihood. "Yes, he's just a little too late. So long, gentlemen." With another wave of his hand, he passed on.

Gifford had turned a trifle pale and his big fists were clenched.

"I'm going to hike out back to the ranch," he announced shortly. And accordingly and with no waste of time he hiked.

WHEN Larry MacFadden returned from dinner, his assistant, Hank, was "cleaning" himself in anticipation of his noonday relief. "Lady in here lookin' for you, Larry," said the helper from behind the roller towel. "Real disappointed because you wasn't around."

"There's no use tryin' to keep 'em away," sighed MacFadden. "If you'd only turn the hose on 'em, I might have some peace. Who was it this time?"

"Mrs. Backus," replied the stableman. "She wouldn't wait."

"Heaven be thanked!" ejaculated MacFadden with fervor.

"She left word for you to come up to the house this evenin' at a little after eight. It's suthin particular and you're not to disappoint her on no account."

MacFadden whistled.

"She seemed sorter flustered. She got Kit and Bess an' the top buggy. D'yer leave anythin' for me to eat up at the hotel?"

"Did she say where she was a-goin' with the rig?" asked MacFadden.

"SURE," grinned Hank. "I ast her an' she told me. She said she was goin' out a ways an' back agin to see how far it was." Whereupon the factotum departed.

"This evenin' at eight," mused MacFadden. "Well, the plot certainly's a-thickenin'," with which he picked up a currycomb and went to work on the toilet of a wicked-eyed roan mare, with an absence of mind that a moment later nearly cost him a fractured skull.

"If you'll stand to one side, you won't get none o' these sweepin's on your clo'es"

World's Record in Economy by Saxon Cars

34.53 miles average per gallon of gasoline.
Less than half a cent a mile for fuel.
Less than one-fourth cent per mile per passenger.
Best record 47.05 miles per gallon.

These are a few records of Saxon cars in 200-mile nation-wide non-stop runs, made on the same day in more than 100 cities.

This contest was not a "stunt" affair on a single gallon of high grade gasoline, but an impressive, common-sense test. In one day at each city a Saxon car made 200 miles in *non-stop* running. The motor had to run whether the car was making mileage or not—during all stops, no matter for what cause. All records were vouched for by newspaper men who acted as official observers.

200 Miles Without Motor Stopping

Think what these records mean—not only in economy but in reliability as well. Over 100 Saxons in more than 100 different places covered 200 miles each in non-stop running under official observation—in all kinds of weather, over all kinds of roads, up all kinds of hills—setting a world's record in economy, averaging 34.53 miles per gallon of gasoline, making perfect scores and showing speed as high as 45 miles per hour.

Most Economical of all to Run

In one day the Saxon proved to the whole nation that it is the most economical car to run—and that it can stand up and keep running under the severest service.

More evidence of Saxon reliability is being supplied by the "135-mile-a-day" Saxon. This Saxon, after travelling 135 miles a day for 30 days, *equivalent to a year's average service*, is now crossing the Lincoln Highway—from New York to San Francisco.

See the nearest Saxon dealer—name on request—and arrange for a Saxon ride.

The Howard Watch

THE predominance of the HOWARD Watch among yachting men illustrates some interesting conditions in American business and professional life.

There is in this country no exclusively yachting class, as such. Practically every American yachtsman is a man of affairs, who finds his greatest relaxation on the water, and who takes his HOWARD Watch with him when he goes aboard.

The thing that makes him a yachtsman and an American disposes him to like the HOWARD Watch—with its fine traditions, its trim, racy lines, and its way of showing its clean American heels to the talent of the watch-making world.

The wonderful character of the HOWARD Watch is that it meets men of so many different kinds and occupations on their own ground. Men in commerce, in the technical industries, in the professions, in official life.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is *fixed* at the factory and a printed ticket attached—from the 17-jewel (*double roller*) in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel in 18K gold case at $170—and the EDWARD HOWARD model at $350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U.S. Navy. You'll enjoy it. Drop us a post card, Dept. A, and we'll send you a copy.

Jerry Nyswanger's heart was particularly heavy as he climbed the trail that evening to the cottage of the widow Backus. The answer to his midnight letter had come by special messenger from Lead—three words, but words of woe: "No account here." Mr. Nyswanger was not so much troubled about the painful necessity of withdrawing from his suit. He was confident of his ability to do that neatly, even gracefully, but the only way to square the house of Aaronson & Liebenstein in Omaha was by an actual and immediate payment on account, and there were some notes to be met at the bank in Lead, to say nothing of divers and sundry smaller obligations. The widow's little nest egg would have squared up all these and put him comfortably on his feet and, in the absence of that nest egg, the chances of squirming through were slight.

As he ascended the porch steps, he fancied he heard Mrs. Backus's rather musical laugh. But when the door opened it was Larry MacFadden who stepped forward and grasped him by the hand, shaking it with effusive cordiality.

"Come right in," cried MacFadden in loud and joyful tones. "We was beginning to think you wasn't coming. We're all set and waiting for you. This way, old son."

THE sitting room was brilliantly lighted as was the parlor beyond. In the big rocking-chair, imposing in green silk brocade and gold rope watch chain, sat Mrs. Bixby, her fat double-chin set in folds of rigid severity; and close beside her sat George Reynolds, gun-girt, gray-bearded, leathery-faced, lean and muscular, eying the newcomer with a grim, menacing smile. Opposite him was an elderly male stranger of mild and benevolent aspect whose necktie was a white bow, and on whose knees reposed a book with limp morocco covers. Somewhat in the background, Seth Gifford, in his ranch clothes, booted and spurred, occupied an uncomfortable straight-backed chair. His expression did not seem exactly reassuring to Mr. Nyswanger. Excepting Larry MacFadden, who still beamed upon him, with his back to the door, Mrs. Backus appeared to be the only one to manifest unqualified pleasure at his entrance.

It was by no means the Mrs. Backus who had swept the porch in a calico wrapper that morning. A different Mrs. Backus entirely; Brown silk, if you please, and creamy lace at the neck and sleeves of the enticingly trim bodice; a yellow rose from the bush in the front yard in her dark hair, and red roses on her cheeks. Wonderful what a little fixing up will do for some women! But Nyswanger was pale as he looked at her and the company.

She rose and went to him with a winning smile—an absolutely affectionate smile—and held out her hand. "I knew you would come," she said in honeyed accents. "They were trying to plague me. Mrs. Bixby said you wouldn't."

Mr. Nyswanger shook her hand mechanically as his gaze wandered from one to another of the party and settled apprehensively on the mild looking man in the white necktie.

"I've been a-tellin' 'em how kind you've been to me, Nye," said the widow, "an'—" Her eyelashes fluttered downward for an instant— "You've met the Rev. Johnson, haven't you? Mr. Johnson, this is Mr. Nyswanger."

"Very glad to meet you, sir," said the Rev. Mr. Johnson advancing and extending his hand. "Very glad to meet you, indeed."

MR. NYSWANGER looked upon him with a lack-luster eye, and ignored the proffered palm.

"I thought, after what you said this mornin'—" began the widow.

Nyswanger cleared his throat. "Er—Mrs. Backus—ma'am," he said huskily, "I—er—I hope you haven't misunderstood nothin' I said to you this mornin'."

MacFadden edged up to him. "Now you aren't a-goin' to try to back out, are you?" he remonstrated below his breath.

"What does he mean?" cried Mrs. Backus, looking about her helplessly.

"What *do* you mean?" growled Reynolds, rising and pushing back his chair. Gifford also rose.

"We're a-waitin' for you, old son," suggested MacFadden.

All of Nyswanger's confidence seemed to have deserted him. He made a deprecating motion with his hand toward Reynolds and Gifford.

"Don't be hasty, gentlemen," he said. "No occasion. All I came up for here this evening was to 'tend to a little matter o' business with Mrs. Backus here—about the money she lost in the Redwater bank. Nothing more than that—nothing whatever beyond pure business and friendliness."

HE paused, moistened his lips and resumed. "I—I—er may have a little way a-talkin' to ladies," he said, stammering. "It might be misunderstood. I don't say I ought to have it, an' I'm willin' to apologize if—er—I mean to say that I didn't come up here with no matrimonial intentions. That's the long and short of it," he concluded desperately.

There was a moment's silence. Then Mrs. Backus began to laugh. There was nothing hysterical in the quality of her laughter. It was entirely mirthful, hearty, and unaffected. She evidently enjoyed it. Reynolds joined her in a sort of dry cackle and Mrs. Bixby's fat sides began to shake. MacFadden forgot the proprieties so far as to whoop and the clerical gentleman smiled broadly. Nyswanger turned and sought the door, but MacFadden interposed.

"Don't go," called Gifford. "Evenin's young yet. We'll be lonesome if you hurry yourself off." Then he exploded in a roar of laughter.

"This may be darned funny," Nyswanger began pulling himself together a little.

MacFadden nudged him in the side. "Mrs. Backus wants to talk to you," he said, pointing to the widow, who was dabbing her eye with her handkerchief and trying to attract his attention.

"I guess I might as well tell you," said Mrs. Backus. "It's Mr. Gifford come up here with matrimonial intentions. No, he didn't either. I went after him and brought him—in a livery rig—same's I told him I would the night you and him was both here. I've got to own up to that, haven't I, Seth?"

"You didn't hafter," replied the ranchman, "an' I sure was easy to bring," he added.

"You did send me a billy doo first," continued the widow. "I'll say that much for myself. There was a bank book in it showin' how much he'd got in the bank an' a check ready signed so I could fill it in for whatever I needed. I'm goin' to keep that check too, Seth."

"You're welcome," said the ranchman, reddening with embarrassment.

"And Mr. Nyswanger," said the lady dimpling maliciously, "as far's the business is concerned, you don't need to trouble yourself. That was a little joke o' mine. I took the money I had in the Redwater bank out a month before it failed and I told Reynolds that I was going to put it in the Lead bank, but I didn't. I put it in—" Mrs. Backus hesitated and colored a little—"in a safe place."

MRS. BIXBY, MacFadden, Nyswanger, and Gifford gasped simultaneously, and the widow began to laugh again.

"Martha, if you ain't a case!" exclaimed Mrs. Bixby.

"What a woman won't do," said MacFadden. "Just to think of that now! Fooled us all!"

"Ladies and gentlemen," said Mr. Nyswanger, "if you'll kindly excuse me, I'll say good evening to you all. To tell you the honest truth, I feel a little sick."

This time MacFadden stood aside and let him pass out. No one spoke as the outer door closed. Perhaps there was a reaction of pity.

Presently MacFadden coughed behind his hand and Gifford passed his arm about the particularly trim waist of the widow and led her in this fashion before the minister. There was a general movement of grouping and a whisper or two. The minister opened the limp morocco-bound book and settled his glasses on his nose. "Dearly beloved," he began.

AN hour later the guests had departed. Seth and Mrs. Gifford sat very close together before the glowing base-burner, the well-fed cat curled at their feet. The festal blaze was softened to the cheerful light of the red crêpe-shaded lamp. There was no inharmonious note in the comfortable composition now.

"This is somethin' like," ejaculated Seth with profound satisfaction and for the tenth time. "And just think how near I come to missin' it!"

His wife looked at him and a smile half fond, half humorous, dimpled her comely cheeks.

"Seth," she said, pressing his arm, "you was never within a hundred miles of missing it."

The Passing of the Prairie

(Continued from page 14)

sounds, and as we galloped along together it was easy to imagine ourselves the hunters of our sunset song, chasing the Indian and the bison."

In this way the boys came to know all the open country to the north, which seemed to them very beautiful. On the uplands a short, light-green, hairlike grass grew, intermixed with various resinous weeds, while the lowlands produced luxuriant patches of blue-joint, wild oats, and other large grasses. Along the streams and in the "sloos" cat-tails waved above thick mats of wide-bladed marsh grass. Without realizing it, Lincoln came to know every weed, every curious flower, every living thing big enough to be seen from the back of a horse.

"Nothing could be more generous, more joyous, than these natural meadows in June. The flash and ripple and glimmer of the tall wide-bodied grass, the myriad voices of ecstatic bobolinks, the chirp and whistle of red-winged blackbirds swaying on the reeds or in the willows, the meadow larks piping from grassy bogs, and the swift snipe and wailing plover adding their voices as they rose and fell on the flowery green slopes of the uplands. It was a big land and a big, big sky to us, children of the coulée, and possessed besides a hint of the still wilder country to the west.

"The gray hermit, the badger, made his home in deep dens on the long ridges, and on sunny April days the mother fox lay out with her young on southward sloping swells. The swift prairie wolves slunk with backward-glancing eyes from copse to copse, and many a mad race we gave them. Deer were occasionally seen, and to me it seemed that just over the next ridge toward the sunset the shaggy brown bulls still fed in thousands, and in my heart was a longing to ride away into that marvelous world. All the boys I knew talked of 'the West,' never of the East; always of the plains, of mountains, of cattle raising, of mining and Indians; never of cities. And none of us had any desire to go East. 'We'll have our rifles ready, boys, ha, ha, ha-ha!' was still our favorite chorus, and Kansas and Colorado our far-off wonderland.

"My Uncle David had brought with him his long, heavy, old-fashioned muzzle-loading rifle, but had little use for it. I tried it, but found it too heavy. I carried the family shotgun, however, with all the confidence of a man, and was able to kill a few ducks and prairie chickens in season. I hunted gophers regularly during the days when the sprouting corn was in most danger, and Owen became quite expert with the snare.

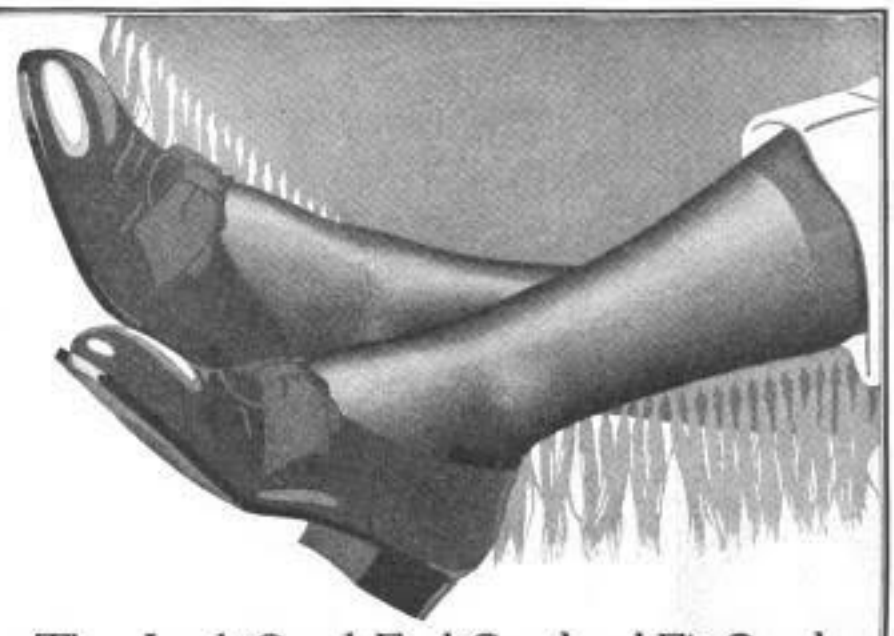
"To the north and west the soil was wet and difficult of cultivation, and remained unplowed for several years. Scattered over these clay lands were small groves or clumps of popple trees, called 'towheads' by the settlers. They were commonly only two or three hundred feet in diameter, though in some cases they grew along a ridge many acres in extent. Against these islands seas of hazel brush rolled, interspersed with lagoons of blue-joint grass, that most beautiful and stately product of prairie soil.

"Over these uplands, through these lakes of hazel brush, and around these coverts of popple, Hester and I and Burton careered, chasing rabbits, hunting the cows, killing rattlesnakes, rueing the half-wild colts, and pursuing the prowling wolves. It was an alluring life for a boy, and my sister seemed to enjoy it quite as much as we did. She could ride almost as well as Burton, who was my high admiration, and all of us were natural horse tamers.

"We all rode in army fashion—that is to say, we held our reins in one hand (the left) and guided our steeds by the pressure of the rein or the knee rather than by pulling at the bit. Our ponies were not allowed to trot, but were taught a peculiar gait which we called the 'lope,' which was a canter in front and a trot behind (a very good gait for long distances), and were drilled to keep this pace steadily and to fall at the word into a swift walk without the usual intervening jolt. Nearly every boy could ride, but Burton was our constant companion—and was a light and graceful figure on his big black horse."

He will be safe if she doesn't notice his dog

DURING his twelfth year Lincoln had not much leisure. In haying he drove the horserake. In harvest he carried bundles or rode the lead horse. In the autumn he plowed or handled bundles on the stack, or held sacks for the threshers during threshing season. And last of all, when the earth was frozen too hard for the plow, he husked "the down row" behind the farm wagon, till at last came November and school.



Duncan was a good farmer even on rented land, but now that he was on his own acres he took the greatest pains in pulverizing and seeding his land. He kept Lincoln at it till the boy was fairly disheartened. The roots of the hazel brush were forever clogging up the teeth, and it was necessary to lift the frame of the harrow to clear them, and this was hard work for a boy of twelve. It was necessary also to guide the horses so that the harrow "lapped half," and sometimes the dust flew so thick that not only was his face coated with it, but his eyes were blinded and tears of rebellious rage stained his cheeks with comic lines. At such times he looked away at Owen (riding after the cattle) as a prisoner on the treadmill regards a swallow.

THIS thoroughness of method brought disaster to Duncan. "One day during the third spring," writes Lincoln, "and just after the wheat had begun to spring from the soil, a powerful wind arose from the west and blew upon us with such fury that the air became filled with dust from the field, darkening the sky and turning noon into twilight. It was the most appalling natural catastrophe we had ever experienced, and made us long for the sheltered valleys of Wisconsin. All day it raged, sifting the house full of grit, blinding our eyes, destroying the sprouting grain, and carrying away thousands of tons of the richest loam from the top of our farm.

"Father was in despair. It seemed to him, as to us, that the entire earth was taking flight—and the ironical part of the whole matter lay in the fact that this loss was due entirely to the extra care which we had used in pulverizing the ground. 'If only I had not rolled that land,' he groaned in my hearing. His impotent fury and bitter despair made an indelible impression on my mind—nearly one hundred acres of the grain had to be reseeded."

MOST authors, in writing of life on the farm, leave out such an experience as this. They leave out the mud and the dust and the heat and the bad smells. These were honorable phases of manly warfare. But I bitterly hated the filth and the grime and the mud of the barnyard and the stable.

Corn planting, which followed wheat seeding, was a very pleasant job that year, for the seed was dropped by hand, and "changing works" with the neighbors brought Cyrus and Eva Benson to

They Look Good, Feel Good and Fit Good

Do not buy socks simply because strength is guaranteed, for socks that are sold on the basis of wearability only are invariably hard and uncomfortable. Every pair of Bachelors' Friend Socks is guaranteed as to wear, but our appeal to you is based on Quality—the high grade of the yarns from which these socks are made—their careful knit and special reinforcing.

Bachelors' Friend TRADE MARK SOCKS

Reg. U. S. Patent Office and Canada

are dressy looking, feel soft to the skin; they are cool, fit snugly and are extremely comfortable. They cost no more than ordinary guaranteed hose, but the difference in quality is very noticeable.

Sizes 9's to 12's—all leading colors—four grades.

Put up in boxes containing 2, 3 and 4 pairs at $1 per box, according to quality. Every pair guaranteed 30 days.

SPECIAL—In addition to the above line we make the lightest weight guaranteed gauze socks—box of 3 pairs guaranteed 3 months, $1.00.

If not at your dealer's, order direct, at the same time giving us the name and address of your dealer, so that we can arrange for your future wants.

Two Inks in One Bottle

YOU signers of checks, writers of letters, keepers of books and makers of records—here is a new ink. Carter's Inx are well known for their brilliancy, smoothness and permanency.

Carter's
Pencraft
Combined Office and Fountain Pen
Ink

is especially famous because it is equally adapted *to fountain pens and regular steel pens.* Pencraft Ink writes a blue and dries jet black. It will not gum or corrode. All the best stationers have it in various sizes at prices from $1.00 (quart) to 15c per bottle.

After all, no ink like Carter's.

The Carter's Ink Company
Boston, Mass.
New York Chicago Montreal
Largest Manufacturers of Writing Inks, Adhesives, Typewriter Ribbons and Carbon Papers in America.

New!

Filmless, plateless camera just out. Amazing invention. Elbert Hubbard says: "The ease, facility, fun, and frolic the 'Mandel-ette' supplies, exhausts my adjectives." Finished pictures made on the spot in a minute's time. No plates, films, or dark room. No fussing. No experience needed to operate.

The "Mandel-ette"

A one minute camera. Takes pictures about on 2½ x 3½ inch paper post cards. Clear, sharp pictures at almost any distance. Daylight loading—no dark room. Add to vacation's joys—get a "Mandel-ette." Gives you all the fun of picture-taking AT LITTLE COST.

$5 Complete Outfit $5

Add 50c for parcel post. Outfit includes camera, and supplies for making 12 finished pictures. Tripod, $1 additional. Extra cards, 25c per package of 12. Money back if not satisfactory. Order your outfit now—or send for FREE BOOK telling all about this new camera.

help for a day or two. Hester and Eva and Lincoln worked side by side at this task, while Cyrus and Duncan and Charles followed with hoes to cover the kernels, and little Owen painfully planted pumpkin seeds.

"Most of the duties of farm life required the lapse of years to seem beautiful in my eyes, but there was another season which had charm and significance—even at that time—and that was haying. In Iowa summer is at its most exuberant stage of vitality as the last days of June come on, and even the faculties of our toiling elders, dulled and deadened with never-ending drudgery, caught something of the superabundant glow and throb of Nature's life.

"The cornfield, dark green and sweet smelling, is beginning to ripple with multitudinous stir and sheen and swirl. Waves of dusk and green and yellow circle across the growing grain and long leaves upthrust, at intervals, like spears. The trees are in heavy leaf, insect life is at its height, and the air is filled with buzzing, dancing forms and with the sheen of innumerable gauzy wings.

"The wind is laden with ecstatic voices. The bobolinks sail and tinkle in the sensuous air, now sinking, now rising, their exquisite notes filling the air with falling strings of silver bells. The kingbird, ever alert and aggressive, cries out sharply as he launches from the top of a poplar tree upon some buzzing insect, and the plover makes the prairie sad with his wailing call. Vast purple and white clouds move like bellying sails of purple ships before the lazy wind, dark with rain, which they drop momentarily like trailing garments upon the earth, and so pass in stately measure with a roll of thunder.

"The grasshoppers move in clouds with snap and buzz, and out of the luxuriant stagnant marshes comes the ever-thickening chorus of the toads, while above them the killdees and snipe shuttle to and fro in sounding flight, and the blackbirds on the cat-tails and willows sway and sing, uttering with lifted throats their liquid gurgle, drunk with delight of the sun and their own music. And over all and through all moves the slow, soft west wind, laden with the breath of the far-off lands of the sunset, hushing and filling the world with slumberous haze. At such times it seemed to me that we had reached the golden region of our song."

THIS boyhood on the plain had much that was alluring, much that was splendid. In all essentials Lincoln's life was typical of the time and place. His parents, from the neighborhood point of view, were not poor. They were in truth quite as successful as most. "We all lived in the same restricted fashion," declares Lincoln, "without grace, without color, in poor barren little houses of wood or stone, with very few books or magazines. There were no aliens among us—no Europeans. It was a democracy wherein my father was as good as any and my mother beloved by all who knew her. I don't believe there was a bathroom in the county; electric lights were unknown, and gas was something to read about—the telephone still a laboratory experiment.

Here Lincoln breaks out in rapture of the prairie. "Oh, ineffaceable sunsets! Oh, mighty sweep of flower-decked plain beneath a vast and glorious sky! Your light and song and motion are ever with me. I hear again the shrill, myriad-voiced choir of leaping insects whose wings flash fire amid the glorified reeds. The wind wanders by, lifting my torn hat rim. The locusts rise in clouds before my pony's feet. The lone quail pipes in the hazel thicket, and far in the dusk I hear the cowbell's steady clang. Even in our hours of toil, and through the sultry skies, the sacred light of beauty broke. Worn and grimed as we were, we still could fall adream before the marvel of joyous earth and glowing sky."

BUT alas! Each year the inexorable share gnawed at the edges of their bright world. Section by section, mile by mile, the ridges and meadows turned black. The cattle came meekly into pasture. The colts submitted reluctantly to the harness. Lanes of barbed wire replaced the winding roads. The pools dried up. The towheads disappeared, and rows of Lombardy poplar and clumps of cottonwood sprang up around the barns. And so at last the saddles gathered dust on their pegs in the barns, and Owen and Burton and Lincoln went forth on horseback only on visits to the neighbors or on occasional trips to town to fetch the doctor or the mail. The land of the deer and the buffalo receded noiselessly, swiftly, and at last the song of the sunset regions was itself a memory.

FOR the first few years the crops on Duncan's new farm were prodigious, and he, like all his neighbors, became a worshiper of wheat. Wheat harvest always came in the hottest and driest part of the summer, and was the hardest, most exciting work of the year. It demanded early rising for man, woman, and child. It meant broiling over the hot fire for the cooks, and it meant incessant toil from dawn till sunset on the part of the harvesters. On many days the thermometer rose above ninety in the shade, but with immense fields of grain ripening at the same moment rest was impossible.

Says Lincoln: "There was no task on the farm which surpassed the severity of binding grain on a station. It was a man's job, and every boy of us was ambitious to take his station. In 1874, when I was but fourteen years of age, I was promoted to be one of the five men to bind after the self-rake reaper, and I went to my place like a soldier to battle."

Apparently he gloried in his physical powers, for when the following year his father purchased a Marsh harvester he ambitiously demanded place on this wonderful contrivance, which carried its workmen on a platform, thus enabling two men to cut and bind as many acres of grain in a day as five men were accustomed to harvest on the ground. "I can hear now the note of surprise and contempt in the voice of the hired man as he said: 'Is that boy going to bind with me?' and recall the satisfaction I felt when father said: 'You needn't worry about that boy.'

"Our home, notwithstanding the enormous crops of wheat, grew in grace but slowly. Our dwelling remained practically unchanged, but the trees which we had planted shielded the farmstead from the blizzards of winter and gave some little shade in summer. Our garden brought us fruit and vegetables in season, and a constantly improving collection of farm machinery lightened somewhat the burden of the husbandman. But my mother's drudgery did not correspondingly lessen. I fear it increased, for with the widening of the farm acres came the doubling of the number of men to be fed, and she continued to do most of the housework herself—cooking, sewing, washing, and nursing the sick from time to time. Of course I did not realize, and I am sure my father did not realize, the burden, the endless grind, of her daily life. Hester helped, of course, and Owen and I churned and carried wood and water; but even with our aid her round of duties must have been as relentless as a treadmill. Even on Sunday, when the men were free for a part of the day, she was required to furnish forth three meals and to help all the rest of us dress for church. If I could only go back for one little hour and tell her how much we owed to her during those days!

"WE were not so poor as all this would seem to imply, but father considered our home 'good enough.' Hester and I felt quite differently about it. We wanted a sitting room like the Gardner's, and nice chairs and a real carpet like the Knapp's. Our only carpet was of rags, which we had all helped to tear up and sew and dye, and we considered it only an excuse for floor covering. Our only pictures were chromos, 'Wide Awake' and 'Fast Asleep,' which came with subscriptions to some periodical—not one touch of beauty lighted our home.

"Hester developed early and considered herself a woman at fifteen. She was small and dark and very moody, and it was almost impossible to separate her from a book. We were a good deal alike, but Jennie was mother's consolation. She was an exquisite child, always singing to herself, always smiling, with none of the peculiarities which made Hester and myself 'trials.' Though small and delicate, she was self-reliant and self-entertaining.

"Her chief peculiarity was a complete indifference to dolls. She cared nothing for games which imitated the work of a mother or a housekeeper, but she spent many hours in lonely, contented play with sticks which she treated as horses. Each stick was named and had its proper stall, and her endless repetition

A Week or Two in the Rockies this Summer

Will give you new life for the rest of the year. In Colorado nature will take you in hand, put new corpuscles in your veins, stimulate your imagination, clear the cobwebs from your thoughts, drive the languor from your system and steep you in the magic ozone of the mountain forests.

Let me tell you how little the cost will be, what to see and do when you get there and all about the "Rocky Mountain Limited," the finest train between Chicago and Colorado. Other fast trains. Finest, modern all-steel equipment.

We maintain Travel Bureaus in all important cities. Our representatives are travel experts, who will help you plan a wonderful and an economical vacation, give you full information about hotels, camps, ranches, boarding places, and look after every detail of your trip.

Write today to L. M. Allen, Rock Island Lines, Room 722 LaSalle Station, Chicago.

Low fares June 1 to September 30.

DO YOU WANT INFORMATION *Regarding ALASKA*

"THE LAND OF OPPORTUNITY"?

If so, write to Collier's Washington Bureau, 902 Munsey Building, Washington, D. C. This service is entirely without charge, but requests for information must be received prior to July 28th

of the acts of leading them to water and feeding and currying them amused me then, but gives me a twinge of pain now. Dear, sweet little sister! I fear I neglected you in those days, turning away from your bright face and pleading smile to lose myself in some worse than useless book! I rejoice that I did sometimes put you on the back of a real horse and permitted you to chatter from the plow seat as I drove to and fro in the cornfield.

"Owen was not strong and could not hold his own with me in anything like the proportion of his age. He was flat-chested and sallow, but had almost as much self-amusing skill as Jennie. He cared nothing about books, but as Hester became more and more interested in dances and dress he came more and more into my plans—at such times as I could not have the aid of Burton.

"During all this time my Uncle David continued to be my ideal. Dark, handsome, dreamy-eyed, with the strength of a bear and the heart of a poet, he seemed to me a veritable chieftain among men. Often at the close of an hour's playing of the violin he put his instrument away with an expression of self-depreciation and despair. I could not understand this at the time, but I felt it distinctly and powerfully, for there was as close kinship between us as there was between my mother and myself. I now understand that he had begun to realize in some degree the futility of his life and longed for something higher. Without doubt this was only an occasional mood, due to the dark Celtic strain which ran deep in his blood, but he was both singer and poet, and it irked him to be incapable of expression in either art.

"Mister, do you want a couple of strong fellers to carry water to the elephants?"

Sketches from Awayback

"He continued to be the captain of a threshing machine, and as I was now old enough to cut bands for the feeder, I often worked side by side with him, feeling his strength and courage, as a sailor looks up to his commander on the bridge through the spray of the storm. He had the air of quiet command, the calm assurance of unbounded strength, which made him altogether admirable to me."

MEANWHILE Hester was growing into womanhood. At fifteen the girls of her circle had suitors, and at sixteen considered themselves full-grown women. When she entered the Cedar Valley Seminary, in the autumn of '74, Owen and Lincoln drew closer together. "We all missed her in the home, for she sang and played the organ, but I was glad to have her in touch with town life. I think I began at once to dream of some time going to the seminary myself, although my father considered a district-school education ample even for a Congressional career.

"How primitive all our notions were! Up to my fifteenth winter I had never had an overcoat, and a single suit served for both summer and winter. In lieu of fur collars we wound long, gay-colored scarfs about our heads and necks—scarfs which our mothers, sisters, or sweethearts knitted for us; and our footwear continued to be tall cavalry boots with pointed toes, high heels, and wrinkled tops. Our collars were either home-grown linen or paper ones at fifteen cents per box, and some men went so far as to wear 'dickies'—that is to say, false fronts of pasteboard. No one in our neighborhood ever owned a real tailor-made suit, and, for the most part, our garments never fitted—they merely inclosed us.

"As for the girls—they made all their own clothing or assisted their mothers in doing so, and their best gowns were white muslin tied at the waist with ribbons. But as I write, recalling the glowing cheeks and shining eyes of Agnes and Hattie and Elizabeth, I feel again the glow of admiration which they kindled in me as they came down the aisle at church or as they *balanced* and *promenaded* in 'Honest John.' To me they were exquisitely clothed and divinely moving.

"I repeat, we were not poor. In a sense, we were rich. My father was farming over three hundred acres of land and owned a stableful of horses and cattle. And just why we continued to live in a little house and dress in rude fashion I cannot understand. Of this I am certain—our neighbors did the same. Neighbor Benson, with more land than we, lived in an old stone house of three rooms; and the Baileys, my Uncle David, and almost everyone we knew or visited, cooked and ate in the same room—at least in winter. True, interest was ten per cent and machinery was high, but I suspect the men held primitive notions as to the rights of women. It was a joke oft repeated that if a woman wanted a new churn or a sewing machine, times were 'hard'; but no man went without the latest reaper or mowing machine. These were necessities—sewing machines and patent wringers were luxuries.

"The lack of room in our house is brought painfully to my mind by the fact that when my sister Hester was taken ill and returned from school in the spring of '75 she was put to bed in my mother's room, for our attic chamber was unwarmed, like those of our neighbors, and the sick were dependent upon the kitchen stoves. Winter was indeed a time of endurance for the women and children—and many failed to endure. My sister was one of these.

"She grew rapidly worse all through the joyous days of April, and as we were necessarily out in the fields at work, and mother was busied with her household affairs, the lonely sufferer was glad to have her bed moved into the living room, and there she lay, with the bustle of the family all about her, her bright eyes following our movements. She grew whiter and whiter until at last, one beautiful, tragic morning in May, my father called me in to say good-by to her.

"She was very weak, but her mind was perfectly clear, and she kissed me farewell with some word about being a good boy, and then, blinded with tears and almost benumbed, I crept away to the barnyard and there hid like a wounded animal, appalled by the weight of despair and sorrow which this vision of my comrade sister had suddenly thrust upon me. All about me the young cattle called, the spring sun shone, and the fowls sang, but they could not mitigate my grief, my dismay, my sense of loss. Hester was passing from the earth—that was the agonizing fact which appalled me."

Mingled with the tragic scenes which followed were happenings so startling as to be almost ludicrous. For the first time in their lives Owen and Lincoln wore ready-made suits and had new gloves and new black hats. Even in the midst of their bitter grief Lincoln acknowledges an absurd satisfaction in his newly acquired splendor. "The crowded room, the undertaker's stealthy movements, the delight which certain old women took in the solemn ceremonies—nothing escaped us. Perhaps we were the more acutely observant because of our grief. This was my first close contact with death, and it filled me with awe and with question.

"My mother was long in recovering from this loss, but at last Jennie's sweet face, which had in it the light of the sky and the color of a flower, won her back to smiles. The child's acceptance of the funeral as a mere incident of her busy little life in some way enabled us all to take up and carry forward the routine of our shadowed home."

The next installment, "Lincoln Enters Hostile Territory," will appear in an early issue

"Your Move" is the name of a book that tells why paint without

Zinc

is not paint. When we say it is not paint, we mean that it will not do all the things that paint could and should do, and which you pay to have done. You pay anyway, Zinc or no Zinc.

Zinc makes the paint to which it is added look better, last longer and guard more safely.

Zinc in paint is not a new thing except to you. All the best paint manufacturers use it in all their best paint. If you get and read the booklet, "Your Move," you will know why.

The New Jersey Zinc Company, 55 Wall Street, New York

For big contract jobs consult our Research Bureau.

SPECIAL

Electrical men are always in demand. The Bliss Electrical School, with its well equipped shops and laboratories, is peculiarly qualified to give a condensed course in Electrical

Engineering

Every detail taught. Actual construction, installation, testing. Course, with diploma, complete.

In One Year

21 years' reputation, with over 2000 young men trained. 32nd year opens September 22nd. Send for new catalogue. 110 Takoma Ave., Washington, D. C.

SPECIAL

Detroit College of Law

Established 1891. Prepares for the Bar in all States. Two distinct schools—Day and Evening. Three years' course leads to the degree of LL. B. Students may witness 20 courts in daily session. Law Library 19,000 Vols. Catalog mailed free. Self-supporting students should write for pamphlet describing our efficient Bureau of Self-Help. Address MALCOLM McGREGOR, Sec'y, 540 Penobscot Building, Detroit, Mich.

Study Dentistry at the INDIANA DENTAL COLLEGE

YOUNG men and women, here is an exceptional opportunity for you to study dentistry at an extremely moderate cost for tuition and living expenses. The course is three years. The faculty able and experienced. Clinical facilities unexcelled. Write for catalogue. Address INDIANA DENTAL COLLEGE, 5 W North St., Indianapolis, Ind.

Dana's Musical Institute

WARREN, OHIO

Forty-sixth year opens Sept. 14th. Music taught in all its branches. Lessons daily and private. Fine dormitories for pupils. Pure water, beautiful city, and healthy. Superior faculty. Fine recital hall, with an orchestral concert and soloists every Wednesday night. Send for 64-page catalogue blue book and historical sketch to WILLIAM H. DANA, B.A.M., President.

Michigan College of Mines

A state institution offering engineering courses leading to the degree of Engineer of Mines. Located in the Lake Superior mining district. Mines and mills accessible for college work. For Year Book and Booklet of Views address President or Secretary.

HOUGHTON MICHIGAN

The New York State School of Agriculture at Morrisville, N. Y. offers practical courses in Agriculture and Domestic Science. Free tuition for New York State boys and girls. Small Tuition for others. New equipment, big staff, 2 0-acre farm, good environments. For catalog and Particulars Address Director F. G. HILTAR, Drawer W, Morrisville, N. Y.

Grand River Institute

A strictly high grade school with *Boarding Room and Tuition* only $100 per year. Large endowment makes this possible. Academic, Music, Shorthand, Art, Oratory, Manual Training Courses. E. W. HAMLIN, Principal. Ohio, Austinburg.

BOYS

Peddie A School for Boys

Meets the parents' requirement of modern equipment, high scholastic and moral standards and a rational, healthy life. It secures the enthusiastic co-operation of the boy because of its body of 250 picked students, its fine equipment for athletics, high standing in all outdoor sports, strong literary and musical clubs and general policy of keeping its students busy in worth-while ways.

Peddie Institute has a strong faculty of sixteen college-trained men. Liberal endowment permits of moderate rates, since financial gain is no object. Modern and sanitary school buildings. Athletic field. Gymnasium and swimming pool. Campus of sixty acres. Equipment includes library, observatory, laboratories, etc.

Certificates from Peddie Institute are honored by all colleges accepting certificates. Former Peddie students are notably foremost in scholarship and all student activities in the colleges they attend.

Peddie is in its 49th year. It is located midway between New York and Philadelphia, nine miles from Princeton. *The Lower School* is conducted for boys of eleven to fourteen years. Separate dormitories, personal care and individual training are provided.

Catalog and special booklets sent on request. Address

R. W. SWETLAND, A. M., Headmaster
Box 6 M, Hightstown, N. J.

Miss E. C. WEIMAR, Principal.

Bealby

(Concluded from page 18)

attempting something and perpetually thwarted. . . .

The Lord Chancellor did not sleep a wink. The first feeble infiltration of day found him sitting up in bed, wearily wrathful. . . . And now surely some one was going along the passage outside!

A great desire to hurt somebody very much seized upon the Lord Chancellor. Perhaps he might hurt that dismal *farceur* upon the landing! No doubt it was Douglas sneaking back to his own room after the night's efforts.

The Lord Chancellor slipped on his dressing gown of purple silk. Very softly indeed did he open his bedroom door and very warily peep out. He heard the soft pad of feet upon the staircase.

He crept across the broad passage to the beautiful old balustrading. Down below he saw Mergleson—Mergleson again! —in a shameful dishabille—going like a snake, like a slinking cat, like an assassin, into the door of the study. Rage filled the great man's soul. Gathering up the skirts of his dressing gown, he started in a swift yet noiseless pursuit.

He followed Mergleson through the little parlor and into the dining room, and then he saw it all! There was a panel open, and Mergleson very cautiously going in. Of course! They had got at him through the priest hole. They had been playing on his nerves. All night they had been doing it—no doubt in relays. The whole house was in this conspiracy.

With his eyebrows spread like the wings of a fighting cock the Lord Chancellor in five vast noiseless strides crossed the intervening space and gripped the butler by his collarless shirt as he was disappearing. It was like a hawk striking a sparrow. Mergleson felt himself clutched, glanced over his shoulder and, seeing that fierce, familiar face again close to his own, pitiless, vindictive, lost all sense of human dignity and yelled like a lost soul. . . .

SIR PETER LAXTON was awakened from an uneasy sleep by the opening of the dressing-room door that connected his room with his wife's.

He sat up astonished and stared at her white face, its pallor exaggerated by the cold light of dawn.

"Peter," she said, "I'm sure there's something more going on."

"Something more going on?"

"Something—shouting, and swearing."

"You don't mean—?"

She nodded. "The Lord Chancellor," she said, in an awe-stricken whisper. "He's at it again. Downstairs in the dining room."

Sir Peter seemed disposed at first to receive this quite passively. Then he flushed into extravagant wrath. "I'm *damned*," he cried, jumping violently out of bed. "If I'm going to stand this! Not if he was a hundred Lord Chancellors! He's turning the place into a bally lunatic asylum. *Once*—one might excuse. But to start in again. . . . *What's that?*"

They both stood still listening. Faintly yet quite distinctly came the agonized cry of some imperfectly educated person . . . "Elp!"

"Here! Where's my trousers?" cried Sir Peter. "He's murdering Mergleson. There isn't a moment to lose."

Until Sir Peter returned, Lady Laxton sat quite still, just as he had left her on his bed, aghast. She could not even pray.

The sun had still to rise; the room was full of that cold, weak, inky light, light without warmth, knowledge without faith, existence without courage, that creeps in before the day. She waited. . . . In such a mood women have waited for massacre. . . .

Downstairs a raucous shouting. . . .

SHE thought of her happy childhood upon the Yorkshire wolds before the idea of week-end parties had entered her mind. The heather. The little birds. Kind things. A tear ran down her cheeks. . . .

Then Sir Peter stood before her again, alive still, but breathless and greatly ruffled. She put her hands to her heart. She would be brave.

"Yes," she said. "Tell me."

"He's as mad as a hatter," said Sir Peter.

She nodded for more. She knew that.

"Has he—*killed* anyone?" she whispered.

"He looked uncommonly like trying," said Sir Peter.

She nodded, her lips tightly compressed. "Says Douglas will either have to leave the house, or he does."

"But—Douglas!"

"I know, but he won't hear a word."

"But *why* Douglas?"

"I tell you he's as mad as a hatter. Got persecution mania. People tapping and bells ringing under his pillow all night—that sort of idea. . . . And furious. I tell you—he frightened me. He was *awful*. He's given Mergleson a black eye. Hit him, you know. With his fist. Caught him in the passage to the priest hole—how they got there I don't know—and went for him like a madman."

"But what has Douglas done?"

"I know. I asked him, but he won't listen. He's just off his head. . . . Says Douglas has got the whole household trying to work a ghost on him. I tell you—he's off his nut." Husband and wife looked at each other. . . .

"Of course if Douglas didn't mind just going off to oblige me," said Sir Peter at last. . . .

"It might calm him," he explained. . . . "You see, it's all so infernally awkward. . . ."

"Is he back in his room?"

"Yes. Waiting for me to decide about Douglas. Walking up and down."

For a little while their minds remained prostrate and inactive.

"I'd been so looking forward to the lunch," she said with a joyless smile. "The county—" She could not go on.

"You know," said Sir Peter, "one thing, I'll see to it myself. I won't have him have a single drop of liquor more. If we have to search his room."

"What I shall say to him at breakfast," she said, "I don't know."

Sir Peter reflects. "There's no earthly reason why you should be brought into it at all. Your line is to know nothing about it. *Shout* him you know nothing about it. Ask him—ask him if he's had a good night. . . ."

(To be continued next week)

Suppose You Knew You Were to be Cast on a Lonely Island——

And would have to spend the rest of your life there. What books would you take?

What few great histories, biographies, dramas, novels, works of science and travel, are so good that they would never lose their interest—would have in themselves all the elements that make a satisfying, well-worded mental diet?

A group of sixty-seven great authorities, under the guidance of Dr. Eliot, have answered that question.

Their answer is printed in a free booklet; ask for your copy; it tells the story of

THE FAMOUS FIVE-FOOT SHELF OF BOOKS

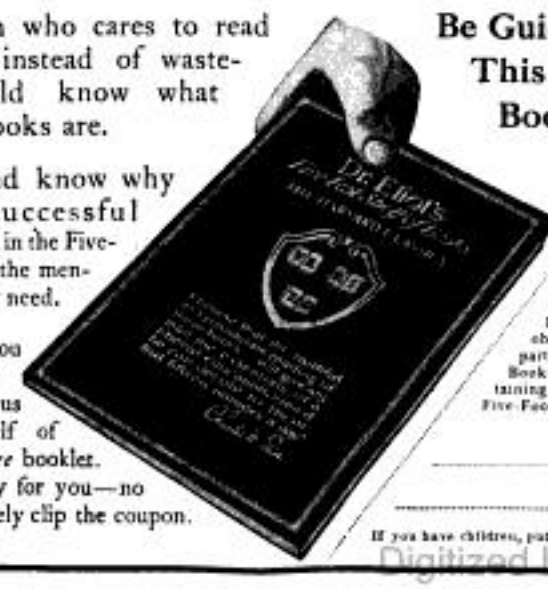
Before you add another volume to your library you should have this free booklet.

You should know the story of how all the books in the world were tested to find these 418 that are permanently worth while.

"A Man Would Die in the First Alcove"—

"There are 850,000 volumes in the Imperial Library at Paris," said Emerson. "If a man were to read industriously from dawn to dark for sixty years, he would die in the first alcove."

And he would not die a *well-read man*.



But if a man could know what few great books are enduringly worth while and could read those few—he would become well read, even though he could devote to them but a few pleasure moments a day.

418 masterpieces at a few cents apiece

Any man who cares to read efficiently, instead of wastefully, should know what these few books are.

He should know why 100,000 successful men are finding in the Five-Foot Shelf just the mental stimulus they need.

Everything you need to know about the famous Five-Foot Shelf of Books is in a *free* booklet. There is a copy for you—no obligation; merely clip the coupon.

Be Guided by This FREE Booklet

Coll. 6-27

P. F. Collier & Son, 416 W. 13th St., N.Y. City

Mail me, without obligation on my part, your free "Guide Booklet to Books" containing the story of the Five-Foot Shelf.

When We Put It Up to George

JULY Fourth sticks out in this nation's history as the day our great-grand-daddies and uncles and cousins put it up to "Kink" George that he wasn't doing the job right. July 4th is particularly a day for Jimmy Pipers and

PRINCE ALBERT

the national joy smoke

because it typifies "the spirit of '76" that broke loose when good old P. A. put it up to all the Georges and Harrys and Bills and Dicks, whether they wanted freedom from tongue torture with just the bulliest, sweetest smoke thrown in or whether they'd go on paying tribute to the tongue-crisping brands of pipe food. Did they revolt? Why, they beat it to P. A. so fast and strong that they made tobacco history! Nothing ever like it before, nothing before or since like good old P. A. for Pipe Lovers. Nothing like it for the makin's of home-rolled cigarettes. Prince Albert can't bite the tongue, because of the patented process that took out the bite and made the big tobacco revolution.

P. A. can be had anywhere the flag flies; toppy red bags for cigarettes, 5c; tidy red tins, 10c; also in handsome pound and half-pound humidors.

Know Motor Car Values

To *know* motor-car values you need to know the values of the parts.

Because the motor car is a machine. And its use-service-value depends upon the rightness of its component parts.

No parts are more important to know than the bearings—because they safeguard the other vital moving parts that give "life" to the car.

Where the Bearings Are: On the axle spindles in the hubs of all four wheels, in the steering knuckle heads, in the transmission, on the pinion shaft, each side of the differential—these are the hard service places where only the best bearings will stand up to year-after-year use.

What the Bearings Must Do: Bearings must reduce friction to almost nothing—all good anti-friction bearings do this. They must sustain the vertical load and the sudden increases in that load that come with rapid travel over rough road surfaces. They must meet severe end-pressure along the line of the shaft, a force that often exceeds vertical load.

Weight of car and passengers or freight pressing down on wheel bearings is a good example of vertical load. "Mass-momentum" of car and contents pressing sidewise against the wheels as you round a corner is a good example of end-thrust. Keep both vertical load and end-thrust in mind as you read further.

Types of Bearings in Use: Anti-friction bearings may be divided into two general groups—Ball Bearings and Roller Bearings. These groups may be subdivided thus:

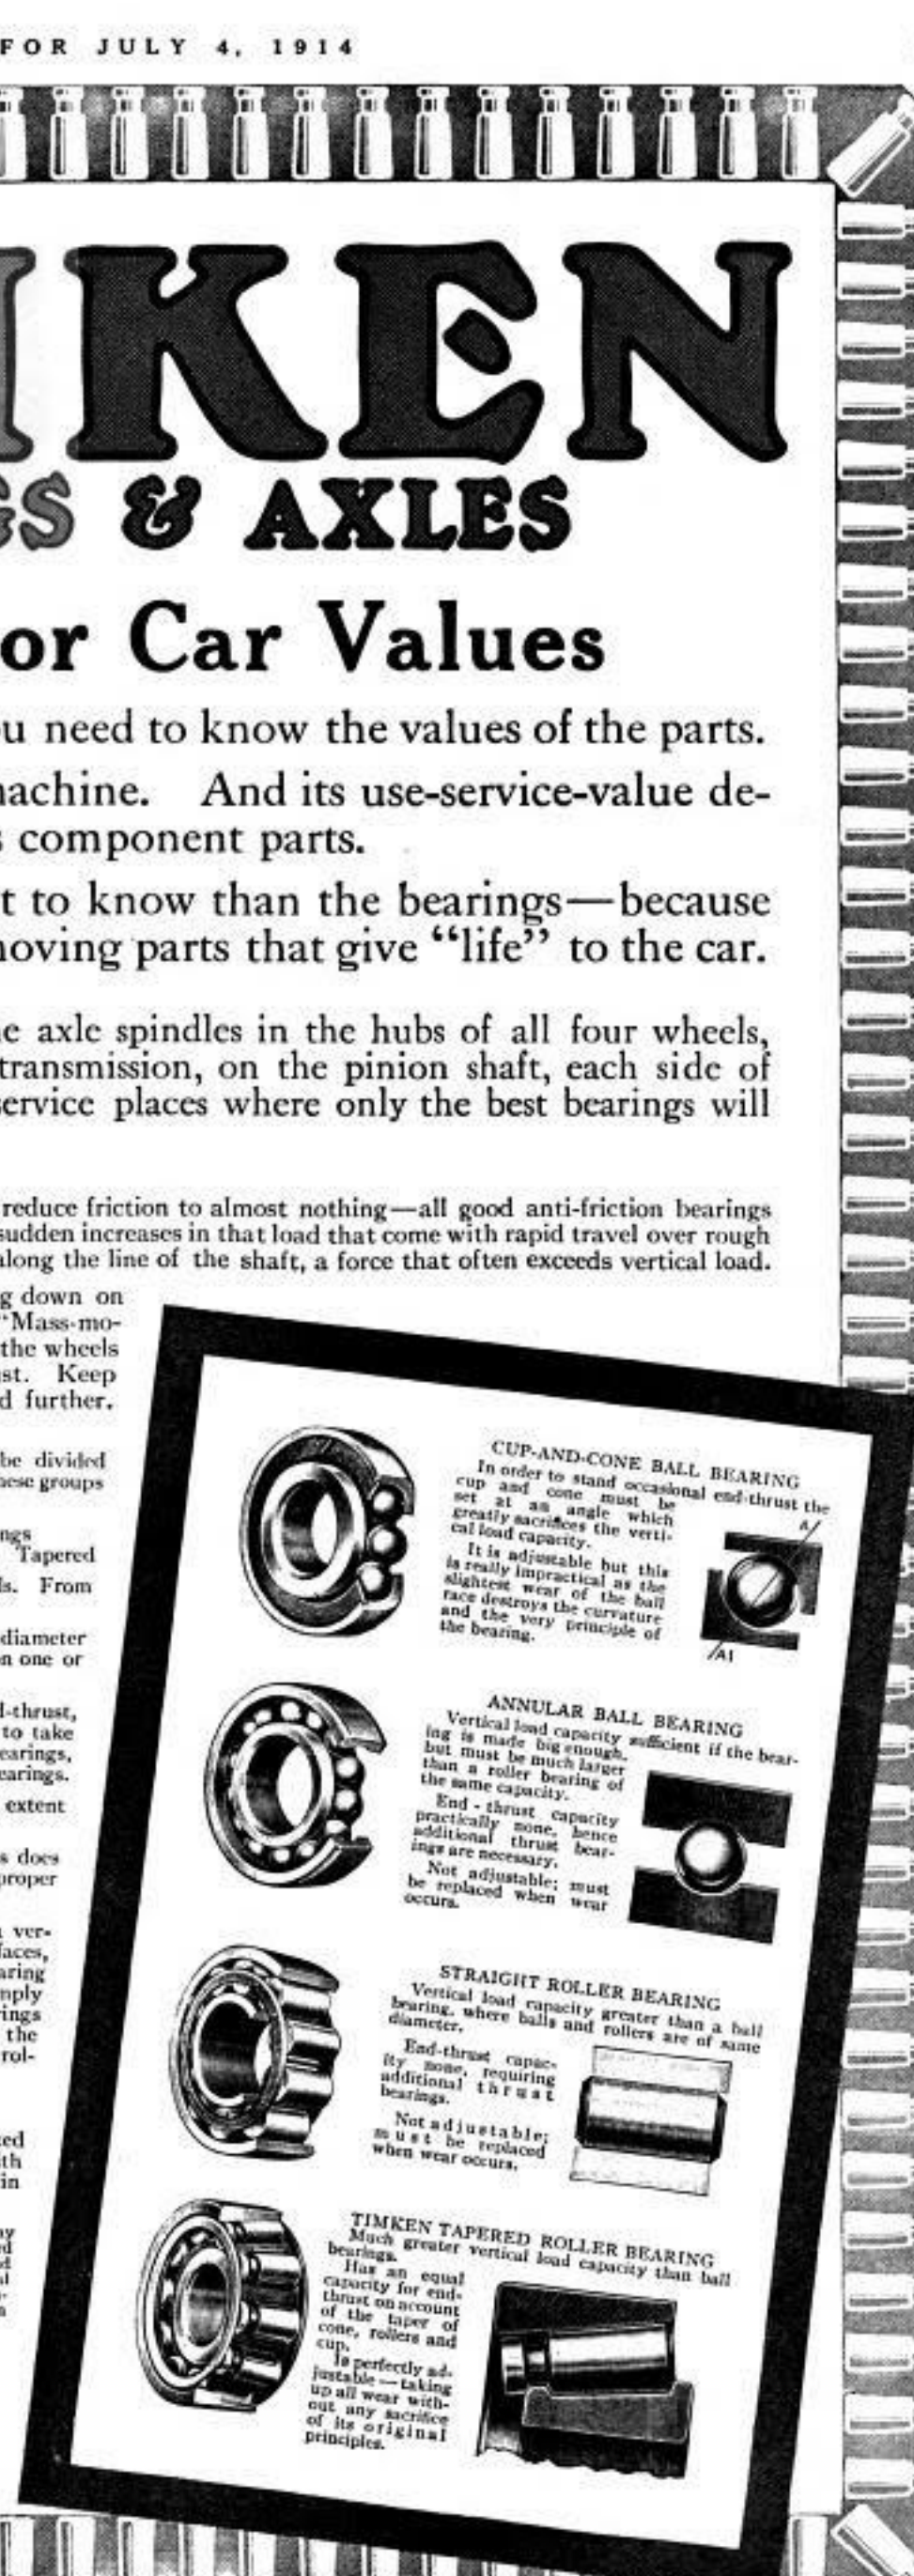
Ball Bearings		Roller Bearings	
1. Annular	2. Cup-and-Cone	3. Straight	4. Tapered

The illustrations show an example of each of the four kinds. From the text with the pictures you will note these interesting facts:

(*a*) A roller carries more direct load in proportion to its diameter than a ball because it carries the load along a line instead of on one or two mere points.

(*b*) Annular ball bearings have very little capacity for end-thrust, and straight roller bearings none and they cannot be adjusted to take up wear. Hence, they are often used with additional thrust bearings, and when sufficiently worn, both must be replaced with new bearings.

(*c*) Cup-and-cone ball bearings meet end-thrust to some extent but only at great sacrifice of capacity for vertical load.



(*d*) Cup-and-cone ball bearings can be adjusted—but this does not restore full efficiency because the slighest wear destroys the proper curvature of the ball race.

(*e*) Tapered roller bearings have greater capacity for both vertical load and end-thrust. Pressure is distributed over wide surfaces, hence wear is minimized. The slight wear inevitable in any bearing cannot affect the taper of cone, rollers or cup. Therefore, simply moving these parts into slightly closer contact with each other brings cup, rollers and cone into the same relations that existed before the minute wear occurred. This "adjustment" restores the tapered roller bearing to full efficiency.

The Conclusion is Irresistible: What's more it is backed by the experience of several hundred thousand motorists with Timken Tapered Roller Bearings *at the points of severest service* in the great majority of high-grade motor cars.

The story of bearings and axles is told in an interesting, human sort of way in three Timken booklets, one "On Bearings," another "On Axles," a third "The Companies Timken Keeps" which tells where Timken Bearings and Axles are located in each model of Timken-equipped pleasure and commercial cars. Write for these three Timken Booklets to Department B-3, either Timken Company. They'll be mailed to you free. No follow-up, no salesman will call. Write today.

Ford Owners Ride With Velvety Ease

Save Your Tires, Your Engine, Your Car With a Full Set of Double Spiral Springs

TEMCO Shock Absorbers

ONLY $15

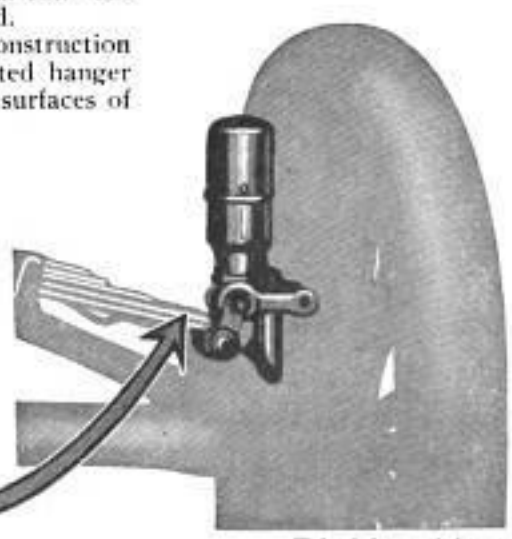
The Temco Electric Motor Company are the original Manufacturers of shock absorbers designed especially for Ford cars. Thousands of sets in daily use.

Avoid Imitations, Infringements and Experiments.

RIGHT NOW—make sure of the luxury of riding—anywhere, all the time, with Temco Shock Absorbers, designed and built specially for Ford cars only. Only $3.75 each—$15 for the full set of four—and you have tire protection, engine protection, car protection, that actually save the cost in cash many times over.

And all the comfort and luxury besides. Just one trip over Temco Shock Absorbers and you would not be without them at four times the price. The old pitching and side jerking is a thing of the past. Car holds the road. Temco Shock Absorbers give a gentle up and down swing on the roughest going—take up all the sharp jars of paved streets—**make your car ride with the buoyant sensation of a large launch. You rest in your car.**

Complete Set Only $15



Temco Shock Absorbers give your car great flexibility—actually help the steering mechanism—reduce friction between the motor and the running gear—preserve the alignment—save repair and upkeep expense—keep your car in better condition, thus giving you the most use and the most pleasure—add to the sales value of your car.

All the claims we here make for Temco Shock Absorbers are actual—proved by daily service upon thousands of Ford cars. We will refer you to these owners in all parts of the country. We back every set with our absolute guarantee of complete satisfaction—**or your money immediately refunded without question or argument.**

Double Spiral Vanadium Steel Springs

The known quality of high-grade springs proves the standard efficiency of the Temco—long double coil sensitive to the least jar—tough and tested quality to outlast any car. This is a new element in shock absorber construction—based upon scientific mechanical principles—not the product of a "cold blacksmith" or experimenter. The special creation of a master designer whose work has won him great reputation. No friction whatever. Design and construction covered by our original patents (Sept. 9, 1913) and patents now pending, covering **double** spiral spring and other improvements as here illustrated in sectional cut. All infringements will be vigorously prosecuted.

Observe the simplicity of mechanical construction—load is entirely suspended from warranted hanger bolts, yet neither bolts nor springs touch surfaces of polished steel—mud proof—ice proof—dirt proof case.

Sold Upon 30 Days' Trial—Money-Back Guarantee

Equip your Ford with Temco Shock Absorbers, and learn the possibilities of your car for service and luxury of motion. You can apply them yourself. No changes. No holes to drill. If you cannot get them of your dealer, order direct from us. $15 prepaid to any address in the U. S. List price in Canada $20 per set of 4. Canadian Sales Office, Canadian Temco Sales Co., Ingersoll, Ont. Write today for complete information, with illustrated circular free.

The Girl at the Ad Counter

By Meredith Nicholson

ILLUSTRATED BY ERNEST FUHR

MISS KELLY'S other name was Jean. She stood behind the marble-topped counter in the "Advertiser" office every day, receiving small ads, handing out copies of the paper and imparting information. Although two other girls shared these humble duties, it was clear to the most careless observer that Jean transacted rather more than a third of the business. Jean was twenty-two. Her hair and eyes were brown, and her complexion was more to be desired than much fine gold. She couldn't help being the prettiest girl in the business district, but her air of aloofness, the chilly disdain with which she rebuffed familiarity, seemed only to intensify the desire of man to hurl himself upon the rocks imaginably represented by the "Advertiser's" counter. The shaggy foreman emeritus of the composing room, who was so old that he all but remembered Gutenberg, daringly leaned on the counter occasionally to pass the time of day; and the exchange editor was another of the favored, having acquired merit by handing her now and then a copy of the Bellefontaine "Hawkeye." (Jean was from Bellefontaine; but she was not sensitive about it.) Jean had no intention of computing the cost of small "ads" and answering foolish questions all the days of her life. Art beckoned to Jean. At least it seemed to. No other student in the Bellefontaine high school had developed quite her skill in free-hand drawing. She attended a night class at the Art Institute and was saving every dollar she could in the hope of earning leisure for a year's study in New York. Billy Wilkins, who covered police for the "Advertiser," found Jean's presence behind the counter highly disturbing. No one seeing Billy lift his hat as he passed the counter would have suspected that she interested him particularly. Sometimes Jean nodded in return; usually she didn't. Frequently one of the other girls picked up Billy's greeting like a foul tip, but Jean never saw this. Or if she did she betrayed no emotion. Yet Billy called on her at her boarding house; and he had taken her to the dog show that fall, and thrice to the theatre. Now and then Fred Gibbs, who was the "Chronicle's" reliance in affairs pertaining to infractions of the peace and dignity of the commonwealth, visited the "Advertiser" office, ostensibly to call on his friend, the advertising manager. The bitter rivalry between the "Advertiser" and the "Chronicle" made it impolitic for him to visit above stairs; but there was no reason why he shouldn't pass the time of day with Fenway, whose private office lay beyond the polar island where Miss Kelly was immured. Gibbs, like Wilkins, found Jean's appearance wholly satisfying, and he, too, had paid her slight attentions. What Gibbs was to the "Chronicle," Wilkins was to the "Advertiser," but with differences. Billy had none of his rival's jauntiness; he was lean and nervous, and worked harder for his effects. Unlike Gibbs, he was unknown to the matrons who keep an eye out for presentable young men with a view to filling in dinner lists or making up dancing parties. Mrs. Worthington Adams had passed favorably upon Gibbs's social availability and had advertised her approval by displaying him in a box at the theatre.

X-46 carried his letter to the front window where the bulletins were hung and opened it. The answer must have been the briefest; he read it at a glance

Gibbs was inspecting the haberdashery in a window near the "Advertiser" office at five o'clock one sharp evening in December, and caught step with Jean as she emerged and started briskly homeward. He had scored a "beat" that morning that had confirmed him in his exalted seat as the best reporter in town. The "Advertiser" had barely saved itself with a few sticks in an extra.

"Well, you cleaned us up this morning," remarked Jean. "It was a mighty good story. Yours?" (She knew it was his!)

"Oh, yes," said Fred in his large, generous fashion. "We all have to take our medicine occasionally; it's all in the day's work. You might be interested to know just how I got on to that story. It was sheer good luck."

Jean said she would like to know. It was flattering to receive the confidence of the day's journalistic hero.

"I'm almost persuaded that it's profitable to do more work than you're paid for. I helped out the other day by taking a little case the revenue people had dug up. An old fellow in a shanty boat moored in the river right near the big bridge was making corn whisky under the noses of thousands of people every day. He put up cash bail after his hearing. The police had never heard of him, and, so far as the Federal officers knew, it was his first offense against the revenue laws. I thought the mere arrest and being bound over by the commissioner didn't quite cover the case, so as things were dull I strolled out yesterday evening to see if he was still on his battleship. I spoiled a good suit of clothes climbing over a barbed-wire fence to get to the place. Boat frozen tight in the ice. All as dark and quiet as sin. But I screwed my courage to the sticking point, walked aboard, found the door ajar, struck a match and saw Graybill lying there, stabbed to death. Business of being thunderstruck by discovery."

"Excuse these shudders; pray continue," said Jean.

"Of course it wasn't up to me to throw away a big chance like that," said Gibbs, striking the walk with his stick in excess of good feeling. "I went back to a grocery by the bridge and called the office to ask them to hold a few yards of space. Then I bought a roll of wrapping paper and a handful of candles and went back to the boat and began my story. A strip off a $20 note was clutched in his hand; it was a bad bill. Tom Hill, the secret service chief, had one that had been sent him from Colorado and he'd shown me its defects. That's how I got that point. Presumably after the murderer had handed Graybill the faked money he regretted it, stabbed him and then

Digitized by Google

tore the bill out of his hand and skipped. That was a big card—you couldn't overdo it on a job like that. I searched every corner of the shanty for anything that would serve to identify the dead man or his murderer. I suppose my joyous emotions, as I ground out my yarn there in the icebound house boat, were those of a war correspondent writing an account of a big battle. Rather picturesque?" he queried with his easy laugh.

"There's no doubt that you did a bully story; and the next big thing will be to find the murderer," observed Jean.

"Oh, the secret service men are interested now, on account of that scrap of the bad bill in the dead man's hand; but they confessed to-day that they were stumped."

"It was a clever job clear through, and you have reason to be proud of yourself."

"Thanks, and thanks repeated! I appreciate that—particularly from you, Miss Kelly."

HIS voice assumed a tone of tenderness and he held her hand a moment in saying good night at her door. "And I wish there were something I could do to help you along. I realize perfectly that you have no business behind that counter; you deserve better things." Jean laughed, to show that she didn't take this too seriously. "Please don't be sorry for me; I get what I deserve. But I mean to deserve something better than I'm getting."

"That's the stroke that wins!" Gibbs agreed.

It happened to be one of Jean's free nights and after supper she settled herself comfortably to a pen-and-ink assault upon a bust of Grant she had borrowed from the mantel in the boarding-house parlor. She was surprised when her landlady knocked to announce Wilkins. Billy had never called before without giving her warning of his coming. She tripped down the stairs and greeted him cheerfully in the dingy parlor.

"Hello!" she called as she poised an instant in the door. But it was clear that Billy was not in a hailing mood. "Good evening," he said dolefully, as they shook hands.

HE REFUSED to take off his ulster, in which he huddled in an uncomfortable chair; it symbolized sackcloth and ashes and she saw that he was indulging himself in that grim mood that makes a luxury of unhappiness.

"If you are worrying yourself sick about getting scooped, I'll tell you right now that I'm sorry. It's too bad; but you're something of a scoopist yourself. You've laid out the 'Chronicle' heaps of times."

"They've changed my job," he replied doggedly; "made a shift at the office to-day and pulled me off the police. That's all. Maybe you can get some consolation out of that!" he ended with the first bitterness she had ever heard from him.

"Oh," she answered, "you're too good a man to waste yourself on police anyhow."

"What do you think they've done with me!" he blurted defiantly. "Going to use me as an odd man on meetings: gave me a foreign-mission conference to sit through to-morrow."

"Well, you can do just as picturesque a story on a missionary meeting as you can on a murder. I wouldn't get sore if I were you. It's all right to drop in and tell me about it; but don't let anybody else know you're miffed. We've got to keep a stiff upper lip, Billy."

She had never called him Billy before and he looked at her quickly. His nickname had slipped from her lips naturally, unconsciously.

"I didn't **mean** to blubber; but it's no joke to fall down that way. I guess I never told you that I handled the State conventions for the New York 'Atlas' last year, and later when they had Gordon, a staff man, out here for the campaign wind-up I hit it off with him pretty well and he offered to put my name in the hat at the 'Atlas' office. Of course I haven't been counting on it, but I'd like to get a foothold in New York. And I'd hoped to be put on the Legislature this winter. The city editor had spoken of it. Good joke—to find police work a preparation for the reporting of our Assembly!"

HE SMILED forlornly and rose. He had to interview a missionary, he explained.

"I should think," remarked Jean, standing and resting her hands on the back of a chair, "that this Graybill case still offered opportunities. The man who learns the truth about the murder will score a bigger hit than the man who discovered it."

"I suppose that's so. And of course Gibbs will follow it up."

"But even if he does, there's no reason why you shouldn't work on it. It will be a diversion from the missionaries."

"I'd like to score on that case. It would be a big thing for me. "I'd like to do it," he added, "just to show you I'm not a dead one."

"You don't look like a man who's all in," she answered. "Fight off the blue devils, but if they still persist, bring them up here. You'll do that, won't you?"

"Be sure I will! You've cheered me up a lot. I suppose," he said ruefully, "I ought to be glad I didn't get fired."

She called him Mr. Wilkins as they shook hands and he went away wondering whether the Billy hadn't been a slip; then he argued himself into believing that it was even nicer as an inadvertence, for that meant that she must have been thinking of him as Billy.

A MONTH passed and the Graybill case remained a mystery. One day, during an unusually busy hour, Jean accepted an advertisement which attracted her attention from the fact that it was written in curious script on a bit of smooth paper. Practically all the ads that passed through her hands were scrawled on soft copy paper at the standing desks in the countingroom. This had been prepared in advance and carried to the office. It read:

WANTED

Report from party recently handling article required in every home.

She wrote "Advertiser" X-46 on the copy and gave the man an identification card. He stipulated that the ad should appear under Agents Wanted. There was no objection to this, as the "Advertiser's" classification rules were flexible. He was a low-spoken person, thirty-five or forty years old, and wore spectacles with unusually thick lenses. The neatness of the copy and the slender white hands of the man interested Jean.

That evening as she was about to pull down the shade in her window she noticed a light in a room directly across the alley from hers. The house was an old residence whose rooms were let to an unstable line of tenants.

As she glanced out for a weather observation the next morning she noticed a change in the window shade opposite. The day before there had been only one shade; now a second had been added halfway down, making it possible for the tenant to admit light above, while screening himself with a darker shade that covered the lower half of the window.

This was none of Jean's affair; but when she ran back to her room after breakfast and looked out again she caught a quick glimpse of her neighbor. His head bobbed for an instant above the screen, and she recognized the pallid, spectacled face of the man who had given her the "Agents Wanted" advertisement. She was quite sure that he hadn't seen her. In transacting his business at the counter it was clear that his curious, protruding eyes were unusually myopic.

Late that afternoon the old foreman stopped at the counter for a word with her.

"Billy Wilkins is mighty sore about that Graybill case; doesn't get it out of his system. And you know the boys are saying hard things about that 'Chronicle' chap who put it over on him."

JEAN'S eyes expressed mild surprise and interest. She accepted a "House Wanted" while the foreman waited.

"It's leaked out that Billy had proposed to Gibbs that they visit the house boat together the night Gibbs went alone. Billy thought it would be a good stunt to ask the old fellow up to the Robin Hood Club—you know what it is—a bunch of newspaper boys, artists, and musicians, and they make a point of inviting interesting people to come up for a high jinks. If it hadn't been for Billy, Gibbs wouldn't have gone out there."

Jean tapped the marble counter with her lead pencil and pondered this. Both Wilkins and Gibbs had talked to her about the murder, and it was significant that neither had spoken of this phase of it. It was like Billy not to mention it. But as for Gibbs. . . .

"Well, that night Billy had to run down a rumor that there was to be a shake-up in the police department, and he telephoned Gibbs he couldn't go. Gibbs said all right he'd wait, as it was only a lark anyhow. Then he sneaked out alone and got the best story any of the papers has had in half a dozen years."

"But even if that's true," said Jean, anxious to be just, "you could hardly expect a man to share a thing like that. It was too big."

"Wrong font! If Billy had got it under those circumstances, he'd have let Gibbs into it all right," said the foreman with emphasis. "Don't think for a minute that Billy's beefing. Atkins was by when Billy proposed it to Gibbs—the three of them were having lunch together—and he's been telling the other boys upstairs."

"That's too bad," murmured Jean. "I didn't think Mr. Gibbs was that kind of a man."

"The boys want Billy to tell the city editor about it, but he won't stand for it—says he'll resign if they squeal." Jean nodded. It was quite like Billy not to play the baby in his misfortunes. Old Bob left her pondering these matters. She could see that there were two sides to the case; and yet the foreman's attitude had influenced her in Billy's favor. And Billy's step, as he passed the counter, had certainly lost its spring. She must find an opportunity for speaking to Billy.

IN SORTING the mail three days later Jean had thrust into its proper box a letter addressed "The Advertiser, X-46," in an irregular hand and postmarked Bluffton, Ind. She had scrutinized the envelope carefully. At eleven o'clock the man with the white, delicate hands presented his check.

X-46 carried his letter to the front window where the bulletins were hung and opened it. The answer to his advertisement must have been the briefest, for he read it at a glance and returned it to its envelope. He then looked round casually, thrust the letter into the inside pocket of his coat, and walked back to the counter.

"If you please I'd like copies of the paper for December 14 and 15."

He thanked her for her trouble in finding the papers, and as he counted out the pennies she noted the lines of his face carefully. When he had gone she seized a moment of leisure to make a memorandum sketch of his head on a newspaper wrapper.

Wilkins, who had been in Bluffton reporting a meeting of the State League of Women's Clubs, dropped in at the boarding house that evening. Billy was tired; the affairs of the State League had bored him. The "Chronicle" had sent a woman to report its deliberations, and this was rather rubbing it in.

"Everybody seems to have passed up the Graybill case," suggested Jean carelessly, after his doleful recital of the day's happenings.

BILLY struck his hands together sharply.

"A bunch of those same twenty-dollar bills was let loose in Bluffton yesterday. I picked that up in the hotel. The local police wired here for the secret service men."

"I've been thinking about the Graybill case a good deal, and I've decided that it's up to you to catch

"I suppose my joyous emotions, as I ground out my yarn there in the icebound house boat, were those of a war correspondent writing an account of a big battle"

Digitized by Google

Jean produced her drawing materials and began a large sketch of the prisoner while Billy fell upon the typewriter greedily. On the way to Hill's he had planned his story so that he wrote as easily as though taking rapid dictation

the murderer and find who's making those bad bills. If you can do that it will take away the reproach of that scoop."

"Some good men are still working on it, but it's a new gang—not the usual case where the Government operatives look through a card catalogue and then go out and pinch the right ones."

"I think," she remarked quietly, "that I have seen the man who's making the bills. In fact, I shouldn't be surprised if he were within a few feet of us now."

"What's the joke? That's too easy to be true."

BILLY listened incredulously while Jean told her story. "I've doped it out this way: Graybill was the confederate of the man next door. Our counterfeiter skipped after the murder—waited a month—it was a month to a day when he came in with that queer want ad. And he had another confederate, who had gone off with a batch of his bills. Naturally, reading in the papers of the murder and of that fragment of bill, he would lie low. There had been an arrangement between them that if it became necessary they would communicate through want ads in newspapers. The envelope was plainly marked Bluffton. I took a good look at it. And he coolly bought copies of the paper that contained the coroner's investigation and the findings of the jury."

"But you'd think that they'd make a long jump for safety. If they were ingenious enough to think of sending letters through newspaper offices, they wouldn't be fooling around this neighborhood."

"We'll have to find a motive for that, too. Suppose there's something around here that they're particularly interested in and that they don't want to abandon entirely." Billy's face lighted.

"That's a good guess; first rate, in fact," he assented.

"This man looks as though he wouldn't be stampeded easily. Here's a rough sketch I made of him at the counter," Jean continued, handing him the drawing. "I forgot to say that he spoke like a man of education—an unusual accent—might have been an Englishman."

WILKINS rose, crossed the room, and then stopped abruptly before her, staring at her drawing. "Great Scott! He wouldn't have the nerve to do that!"

"Who wouldn't?"

"Why, Charlie the Canuck! When I first began doing police three years ago a circular letter was sent out by the Canadian Government asking for the arrest of a smooth crook with a long line of aliases who had been a confidence man in Australia, a gentleman thief in England, and a forger in our Eastern States. But it's hardly possible that he's camped here right under our eyes!"

"There's a vacant room in the lodging house. Why not take it?" suggested Jean. "In that way you can study this stranger at leisure. If I prove a bad guesser I'll apologize, and if I'm right it will be lots of fun to have had a hand in it."

"That readjustment of his blinds to give him light while screening the window looks suspicious," said Billy. "And then that letter from Bluffton, the last place where those twenties were passed, is an important link. It's worth getting busy on."

Wilkins paid a week's board and moved into the lodging house, representing himself as an agent. The room of the man who had aroused Jean's suspicions was across the hall from his own. The landlady mentioned him as a quiet person, and volunteered the information that he was an artist. This, reduced to terms, seemed to mean that he was engaged in coloring photographs. His name was Redmond, and he worked, she explained, only in the morning when the light was best for his purposes and went out soliciting in the afternoons. This was plausible, and accounted for the extra blind.

For two days Billy failed to catch even a passing glimpse of his neighbor. He got excused from the office on the third day the better to make observations.

He heard nothing until shortly after two o'clock when the door opposite opened softly. He waited an instant, then crept out to the guardrail and saw Redmond disappearing through the front door. Billy grabbed his hat and coat and followed.

Redmond went directly to the post office, passed down the corridor to the mailing windows and dropped in a long blue envelope.

BILLY, feigning to inquire for a letter at the general delivery, saw the tall figure pass through the door into the street. He went back and knocked on the glass front of the canceling desks. A clerk opened the wicket and Billy pointed to the blue envelope, still lying where it had fallen through the chute.

"Please hold that just where it is till I bring an inspector. I'll be back in two minutes."

He turned round, bumped into Captain Hill of the secret service and asked him to speak to the clerk who held the wicket open watching their colloquy.

"All right, Billy; I'll attend to it. Go up to my office and wait."

The detective joined him in a moment, saying that he asked a post-office inspector to confiscate the letter.

"It will be up here in a minute. What's the game?"

"It's a big thing for you and me both if we land it, Cap. I missed that Graybill case, you know, and they took me off police. Now, I've got a clue that may turn out good, and I need your help. But I want you to promise that I shall have all the time I want to handle the story—if there proves to be one."

"You've always been on the level, Billy, and if you're putting me next to something you shall have the full benefit of it."

"All right, Cap," and Billy told his story.

THE inspector came in and produced the blue envelope, which bore three two-cent stamps. It was addressed in a smooth, regular hand, with symmetrical shadings on certain letters:

George B. Lockwood, Esq.,
127 Milk Street,
Terre Haute, Indiana.

The detective bent it in his fingers, holding it close to his ear, then he handed it back to the inspector.

"I want a look inside; open it carefully so we can remail it."

In ten minutes the inspector returned with the envelope, whose flap had been freed by a process that left no telltale traces.

Hill locked the door when the inspector left and then spread out the contents.

Five new, unfolded $20 bills lay on his desk and with a murmur of delight he bent over them with a magnifying glass.

"Smooth; mighty smooth," he chortled. "Take a look at 'em and then I'll show you something."

Hill opened the safe and pulled out several slightly worn bills, the exact fellows of the new twenties. He then added to the exhibit the right-hand corner of a twenty that matched the intact bills perfectly.

"That's the piece they found on the old chap in the shanty boat. These two are from Colorado and that other bill is one of the three that were passed on the Bluffton merchants. They were originally $1 bills that have been cleaned off and twenties printed on 'em. The plate's been done by a real engraver."

Wilkins amplified his account of Jean's part in the discovery, and the detective repeated his promise to handle the case in a way to give the reporter the first chance at it.

"Don't worry, Billy; I owe your friend Gibbs one for printing a story I told him in confidence a while back. He said he thought the arrest had been made or he wouldn't have printed it; but that doesn't go. I'll be glad to hand him one."

THE blue envelope traveled toward Terre Haute by due course of mail on the train with one of Hill's men, who had orders to keep Lockwood under observation and await instructions. Hill undertook to watch the lodging house while Wilkins went through the "Advertiser's" files to refresh his memory of the biography of Charlie the Canuck.

Billy told Jean as she was leaving the office that matters were moving satisfactorily. In an hour she telephoned him that the dark shade had disappeared from Redmond's window and he left at once for the lodging house.

As he jumped from the car he ran into Hill.

"Thought it safer for your end of this sketch to bring matters to a head," said the detective. "I've given him a little jar—sent a man to your house a while ago to ask for the gentleman who tints photographs. Of course Redmond hasn't been talking water colors anywhere but to his landlady, so he had a real thrill when he got home and found a customer had asked for him. As soon as he got the news he came out to make a test to see if he was watched. Then he went to that drug store down there and telephoned for an express wagon to come up right away. You'd better leave me and go round to the alley back of the house and keep guard. When you hear the wagon, come out front. There's an auto back there by that doctor's office. It's in charge of my boy. Keep your car out for the express wagon, and if your friend tries the back gate when his traps leave, nab him. If he comes out front and rides off with the wagon, that will be all right."

In twenty minutes Wilkins, perched on a woodshed in the alley, heard the crunching of wheels as a transfer wagon drew in to the curb. He waited until it drove away and then ran out to the street and saw it turning the corner toward town. When he reached the auto he found Hill impassively smoking a cigar.

"Sent my kid to follow and he's sitting on the tail gate of the wagon. The gent in specs is on the front seat with the driver. If he gets out of my territory with that trunk, I'm a ruined man, Billy. But," he added, as he started the machine, "he ain't going to."

THE wagon reached the railway station and drew up at the baggage room, and a moment later Wilkins was in line at the ticket window three men behind Redmond, who bought a ticket to Columbus, Ohio, and went back to check his trunk. He then made another test to find out whether he was watched. Strolling through the train shed, he left the station and dived into an alley. As he emerged at the next street Hill's boy, who just then crossed the alley, noticed that he had substituted a fedora hat for his cap, and that his gray overcoat had turned black. He passed unsuspectingly by Hill as the detective stood as though waiting for a street car at the next corner, seemed satisfied that he hadn't been observed, and boarded a car. Hill's boy reappeared, sprinted after the car, and planted himself in the corner of the platform. In a moment Hill and Wilkins were following rapidly in the automobile.

"It's been my guess that there's a 'plant' out by the shanty boat," said Wilkins, who controlled his excitement with difficulty. "There has to be a motive for Redmond's coming back after the murder; there's something he wants."

"Easy, son; he may still be testing; when they're as keen as this chap they don't make any false moves."

As the car turned riverward the presence of the boy on the platform was an assurance that Redmond was still inside. The auto was held back at a discreet distance and stopped a block east of the bridge. Hill bade Wilkins follow the car while he ran the machine into an alley.

"I saw the boy jump," said the reporter when Hill joined him. "Redmond must have got off at the front end of the car."

HILL'S boy crawled through a fence that guarded the steep approach to the bridge and reported that Redmond had left the car, walked down the road some distance, and then dropped over into the bottoms. The detective sent the boy back to the machine.

Detroit the Dynamic

Chapter IV of "Abroad at Home"

American Ramblings, Observations, and Adventures

By Julian Street

Illustrated by Wallace Morgan

BECAUSE Buffalo, Cleveland, and Detroit are, in effect, situated upon Lake Erie, and because they are cities of approximately the same size, and because of many other resemblances between them, they always seem to me like three sisters living amicably in three separate houses on the same block.

As I personify them, Buffalo, living at the eastern end of the block, is the smallest sister. She has, I fear, a slight tendency to be anemic. Her husband, who was in the shipping business, is getting old. He has retired and is living in contentment in the old house, sitting all day on the side porch, behind the vines, with his slippers cocked up on the porch rail, smoking cigars and reading his newspapers in peace.

Cleveland is the fat sister. She is very rich, having married into the Rockefeller family. She is placid, satisfied, dogmatically religious, and inclined to platitudes and missionary work. Her house, in the middle of the block, is a mansion of the seventies. It has a cupola and there are iron fences on the roof, as though to keep the birds from falling off. The lawn is decorated with a pair of iron dogs. But there are plans in the old house for a new one.

The first two sisters have a kind of family resemblance which the third does not so fully share. Detroit seems younger than her sisters. Indeed, you might almost mistake her for one of their daughters. The belle of the family, she is married to a young man who is making piles of money in the automobile business—and spending piles, too. Their house, at the western end of the block, is new and charming.

Scandalous! And Yet—!

I AM half in love with Detroit. I may as well admit it, for you are sure to find me out. She is beautiful—not with the warm, passionate beauty of San Francisco, the austere mountain beauty of Denver, nor the strange, sophisticated, destroying beauty of New York, but with a sweet domestic kind of beauty, like that of a young wife, gay, strong, alert, enthusiastic; a twinkle in her eye, a laugh upon her lips. She has temperament and charm, qualities as rare, as fascinating, and as difficult to define in a city as in a human being.

Do you ask why she is different from her sisters? I was afraid you might ask that. They tell a romantic story. I don't like to repeat gossip, but— They say that, long ago, when her mother lived upon a little farm by the river, there came along a dashing voyageur from France who loved her. Mind you, I vouch for nothing. It is a legend. I do not affirm that it is true. But—*voilà!* There is Detroit. She is different.

If you will consider these three fictitious sisters as figures in a cartoon—a cartoon not devoid of caricature—you will get an impression of my impression of three cities.

They are merely symbols, like the figures of Uncle Sam and John Bull. A symbol is a kind of generalization, and if you disagree with these generalizations of mine (as I think you may, especially if you live in Buffalo or Cleveland), let me remind you that some one has said: "All generalizations are false—including this one." One respect in which my generalization is false is in picturing Detroit as young. As a matter of fact, she is the oldest city of the three, having been settled by the Sieur de la Mothe Cadillac in 1701, ninety years before the first white man built his hut where Buffalo now stands, and ninety-five years before the settlement of Cleveland. This is the fact. Yet I hold that there is about Detroit something which expresses ebullient youth, and that Buffalo and Cleveland, if they do not altogether lack the quality of youth, have it in a less degree.

In midstream passes a continual parade of freighters . . . and in their swell you may see, teetering, all kinds of craft, from proud white yachts to canoes

So far as I recall, Chicago was the first American city to adopt a motto, or, as they call it now, a "slogan."

I remember long ago a rather crude bust of a helmeted Amazon bearing upon her proud chest the words: "I Will!" She was supposed to typify Chicago, and I rather think she did. Cleveland's slogan is the conservative but significant "Sixth City," but Detroit comes out with a youthful shriek of self-satisfaction, declaring that: "In Detroit Life is Worth Living!" Doesn't that claim reflect the quality of youth? Doesn't it remind you of the little boy who says to the other little boy: "My father can lick your father"? Of course it has the patent-medicine flavor, too; Detroit, by her slogan, is a cure-all. But that is not deliberate. It is exaggeration springing from natural optimism and exuberance. Life is doubtless more worth living in Detroit than in some other cities, but I submit that, so long as Mark Twain's "damn human race" retains those foibles of mind, morals, and body for which it is so justly famous, the slogan of the city of Detroit guarantees a little bit too much.

I find the same exuberance in the publications issued by the Detroit Board of Commerce. Having just left the Cleveland Chamber of Commerce, I sedulously avoided contact with the Detroit body—one can get an overdose of that kind of thing. But I have several books. One is a magazine called "The Detroiter," with the subtitle "Spokesman of Optimism." It is full of news of new hotels and new factories and new athletic clubs and all kinds of expansion. It fairly bursts from its covers with enthusiasm—and with business banalities about Detroit's "onward sweep," her "surging ahead," her "banner year," and her "efficiency." "Be a Booster," it advises, and no one can say that it does not live up to its principles. Indeed, as I look it over, I wonder if I have not done Detroit an injustice in giving to Cleveland the blue ribbon for "boosting." The Detroit Board of Commerce even goes so far in its "boosting" as to "boost" Detroit into seventh place among American cities, while the "World Almanac" (most valuable volume on the one-foot shelf of books I carried on my travels) places Detroit ninth.

Like Cleveland, I find that Detroit is first in the production of a great many things. In fact, the more of these books issued by commercial bodies I read, the more I am amazed at the varied things there are for cities to be first in. It is a miserable city, indeed, which is first in nothing at all. Detroit is first in overalls production, in stoves, varnish, soda, and salt products, automobile accessories, adding machines, shipbuilding on the Great Lakes, pharmaceutical manufactures, aluminum castings, and, above all, in the manufacture of motor cars. And, as the Board of Commerce adds significantly, "That's not all!"

But it is enough.

Why Is Success

THE motor-car development in Detroit interested me particularly.

When I asked in Buffalo why Detroit was "surging ahead" so rapidly in comparison with certain other cities, they answered, as I knew they would: "It's the automobile business."

But when I asked why the automobile business should have settled on Detroit as a headquarters instead of some other city (as, for instance, Buffalo), they found it difficult to say. One Buffalonian informed me that Detroit banks had been more liberal than those of other cities in supporting the motor industry in its early days. This was, however, vigorously denied in Detroit. When I mentioned it to the president of one of the largest automobile companies he laughed.

"Banks don't do business that way," he declared. "The very thing banks do not do is to support new, untried industries. After you have proved that you can make both motor cars and money they'll take care of you. Not before. On the other hand, when the banks get confidence in any one kind of business they very often run to the opposite extreme. That was the way it used to be in the lumber business. Most of the early fortunes of Detroit were made in lumber. The banks got used to the lumber business, so that a few years ago all a man had to do was to print 'Lumber' on his letterhead, write to the banks and get a line of credit. Later, when the automobile business began to boom, the same thing happened over again: the man whose letterhead bore the word 'Automobiles' was taken care of." The implication was that sometimes he was taken care of a little bit too well.

"Then why did Detroit become the automobile center?" I asked.

The question proved good for an hour's discussion among certain learned pundits of the "trade" who were in the president's office at the time I asked it.

First, it was concluded, several early motor "bugs"

Digitized by Google

happened to live in or near Detroit. Henry Ford lived there. He was always experimenting with "horseless carriages" in the early days and being laughed at for it. Also, a man named Packard built a car at Warren, Ohio. But the first gasoline motor car to achieve what they call an "output" was the funny little one-cylinder Oldsmobile which steered with a tiller and had a curved dash like a sleigh. It is to the Olds Motor Company, which built that car, that a large majority of the automobile manufactories in Detroit trace their origin. Indeed, there are to-day no less than a dozen organizations the heads of which were at one time connected with the original Olds Company. This fifteen-year-old forefather of the automobile business was originally made in Lansing, Mich., but the plant was moved to Detroit, where the market for labor and materials was better. The Packard plant was also moved there, and for the same reasons, plus the fact that the company was being financed by a group of young Detroit men.

The Delphic Oracle Up to Date

IT WAS not perhaps entirely as an investment that these wealthy young Detroiters first became interested in the building of motor cars. That is to say, I do not think they would have poured money so freely into a scheme to manufacture something else—something less picturesque in its appeal to the sporting instinct and the imagination. The automobile, with its promise, was just the right thing to interest rich young men, and it did interest them, and it has made many of them richer than they were before.

It seems to be an axiom that, if you start a new business anywhere, and it is successful, others will start in the same business beside you. One of the pundits referred me, for example, to Erie, Pa., where life is entirely saturated with engine and boiler ideas simply because the Erie City Iron Works started there and was successful. There are now sixteen engine and boiler companies in Erie, and all of them, I am assured, are there either directly or indirectly because the Erie City Iron Works is there. . . . In other words, we sat in that office and had a very pleasant hour's talk merely to discover that there is truth in the familiar saying about birds of a feather.

When we got that settled and the pundits began to drift away to other plate-glass rooms along the mile, more or less, of corridor devoted to officials' offices, I became interested in a little wooden box which stood upon the president's large flat-top desk. I was told it was a dictagraph. And, of course, not having seen a dictagraph before, and being something of a child, I wished to play with it as I used to play with typewriters and letterpresses in my father's office years ago. And the president of this many-million-dollar corporation, being a kindly man with, of course, absolutely nothing to do but to supply itinerant scribes with playthings, let me toy with the machine. Sitting at the desk, he pressed a key. Then, without changing his position, he spoke into the air:

"Fred," he said, "there's some one here who wants to ask you a question."

Behind the Veil, Behind the Veil

THEN the little wooden box began to talk.

"What does he want to ask about?" it said.

That put it up to me. I had to think of something to ask. I was conscious of a strange, unpleasant feeling of being hurried—of having to reply quickly before something happened—some breaking of connections.

I leaned toward the machine, but the president waved me back: "Just sit over there where you are."

Then I said: "I am writing articles about Buffalo, Cleveland, and Detroit. How would you compare them?"

"Well," replied the Fred-in-the-box, "I used to live in Cleveland. I've been here four years and I wouldn't want to go back."

After that we paused. I thought I ought to say something more to the box, but I didn't know just what.

"Is that all you want to know?" it asked.

"Yes," I replied hurriedly. "I'm much obliged. That's all I want to know." Of course it really wasn't all—not by any means! But I couldn't bring myself to say so then, so I said the easy, obvious thing, and after that it was too late. Oh, how many things there are I want to know! How many things I think of now which I would ask an oracle when there is none to ask! Things about the here and the hereafter: about the human spirit: about practical religion, the brotherhood of man, the inequalities of men, evolution, reform, the enduring mysteries of space, time, eternity, and woman!

Pedigrees

A FRIEND of mine—a spiritualist—once told me of a séance in which he thought himself in brief communication with his mother. There were a million things to say. But when the medium requested him to give a message he could only falter: "Are you all right over there?" The answer came: "Yes, all right." Then my friend said: "I'm so glad!" And that was all.

"It is the feeling of awful pressure," he explained to me, "which drives the thoughts out of your head. That is why so many messages from the spirit world sound silly and inconsequential. You have the one great chance to communicate with them, and, because it *is* your one great chance, you cannot think of anything to say." Somehow I imagine that the feeling must be like the one I had in talking to the dictagraph.

Among the characteristics which give Detroit her individuality is the survival of her old-time aristocracy; she is one of the few Middle-Western cities possessing such a social order. As with that of St. Louis, this aristocracy is of French descent, the Sibleys, Campaus, and other old Detroit families tracing their genealogies to forefathers who came out to the New World under the flag of Louis XIV. The early habitants acquired farms, most of them with small frontages on the river and running back for several miles into the woods—an arrangement which permitted farmhouses to be built close together for protection against Indians. These farms, handed down for generations, form the basis of a number of Detroit's older family fortunes.

Later He Ruled Uncle Sam's Navee

TO-DAY commerce takes up the downtown portion of the river front, but not far from the center of the city the shore line is still occupied by residences. Along Jefferson Avenue are many homes, surrounded by delightful lawns extending forward to the street and back to the river. Most of these homes have in their back yards boathouses and docks—some of the latter large enough to berth seagoing steam yachts, of which Detroit boasts a considerable number. Nor is the water front reserved entirely for private use. In Belle Isle, situated in the Detroit River, and accessible by either boat or bridge, the city possesses one of the most unusual and charming public parks to be seen in the entire world. Here, in lagoons fed by the river, there is a great deal of canoeing. Furthermore, there are many pleasant places near Detroit which may be reached by boat, among them the St. Clair Flats, famous for duck shooting. All these features combine to make the river life active and picturesque. In midstream passes a continual parade of freighters, a little mail boat dodging out to meet each one as it goes by. Huge side-wheel excursion steamers come and go, and in their swell you may see, teetering, all kinds of craft, from proud white yachts with shining brasswork and bowsprits having the expression of haughty turned-up noses, down through the category of schooners, barges, tugs, motor yachts, motor boats, sloops, small sailboats, rowboats, and canoes. You may even catch sight of a hydroplane swiftly skimming the surface of the river like some amphibious, prehistoric animal, or of that natty little gunboat, captured from the Spaniards at the battle of Manila Bay, which now serves as a training ship for the Michigan Naval Reserve.

A good many of the young aristocrats of Detroit have belonged to the Naval Reserve, among them Mr. Truman H. Newberry, former Secretary of the Navy, about whom I heard an amusing story.

According to this tale, as it was told me in Detroit, Mr. Newberry was some

THE CAMPUS MARTIUS—*The automobile has not only changed Detroit from a quiet old town into a rich, active city, but upon the drowsy romance of the old days it has superimposed the romance of modern business*

Digitized by Google

years ago a common seaman in the Reserve. It seems that on the occasion of the annual cruise of this body on the Great Lakes a regular naval officer is sent out to take command of the training ship. One day, when common seaman Newberry was engaged in the maritime occupation of swabbing down the decks abaft the bridge, a large yacht passed majestically by.

"My man," said the regular naval officer on the bridge to common seaman Newberry below, "do you know what yacht that is?"

Newberry saluted. "The *Tenant*, sir," he said respectfully, and resumed his work.

"Who owns her?" asked the officer.

Again Newberry straightened and saluted.

"I do, sir," he said.

Two Social Groups

WITHIN the last few years there has come to Detroit a new life. The vast growth of the city, owing to the development of the automobile industry, has brought in many new, active, able business men and their families, whom the old Detroiters have dubbed the "Gasoline Aristocracy." Thus there are in Detroit two fairly distinct social groups—the Grosse Pointe group, of which the old families form the nucleus, and the North Woodward group, largely made up of newcomers.

The automobile has not only changed Detroit from a quiet old town into a rich, active city, but upon the drowsy romance of the old days it has superimposed a new kind of romance—the romance of modern business. Fiction in its wildest flights hardly rivals the true stories of certain motor moguls of Detroit. Everyone can tell you these stories. If you are a novelist all you have to do is go and get them. But, aside from stories which are true, there have developed, in connection with the automobile business, certain fictions more or less picturesque in character. One of these, which has been widely circulated, is that "90 per cent of the automobile business of Detroit is done in the bar of the Pontchartrain Hotel." The big men of the business resent that yarn. And, of course, it is preposterously false. Neither 90 per cent nor 10 per cent nor any appreciable per cent of the automobile business is done there. Indeed, you hardly ever see a really important representative of the business in that place. Such men are not given to hanging around bars.

Autos Instead of Curbstones Line the Streets

I DO not wish the reader to infer that I hung around the bar myself in order to ascertain this fact. Not at all. I had heard the story and was apprised of its untruth by the president of one of the large motor car companies who was generously showing me about. As we bowled along one of the wide streets which passes through that open place at the center of the city called the Campus Martius, I was struck, as any visitor must be, by the spectacle of hundreds upon hundreds of automobiles parked, nose to the curb, tail to the street, in solid rows.

"You could tell that this was an automobile city," I remarked.

"Do you know why you see so many of them?" he asked with a smile.

I said I supposed it was because there were so many automobiles owned in Detroit.

"No," he explained. "In other cities with as many and more cars you will not see this kind of thing. They don't permit it. But our wide streets lend themselves to it, and our Chief of Police lends himself to it, too. He lets us leave our cars about the streets because he thinks it a good advertisement for the town."

As he spoke he was forced to draw up at a crossing to let a funeral pass. It was an automobile funeral. The hearse, black and terrible as only a hearse can be, was going at a modest pace for a motor, but an exceedingly rapid pace for a hearse. If I am any judge of speed, the departed was being wafted to his final resting place at the somewhat sprightly clip of twelve or fifteen miles an hour. Behind the hearse trailed limousines and touring cars. Two humble taxicabs brought up the rear. There was a grim ridiculousness about the procession's progress—pleasure cars throttled down, trying to look solemn—chauffeurs continually throwing out their clutches in a commendable effort to keep a respectful rate of speed.

Is there any other thing in the world which epitomizes our times as does an automobile funeral? Yesterday such a thing would have been deemed indecorous; to-day it is not only decorous, but rather chic, provided that the pace be slow; to-morrow—what will it be then? Will hearses go shooting through the streets at forty miles an hour? Will mourners scorch behind, their horns shrieking signals to the driver of the hearse to get out of the road and let the swiftest pass ahead, where there isn't all that dust? I am afraid a time is close at hand when, if hearses are to maintain that position in the funeral cortège to which convention has in the past assigned them, they will have to hold it by sheer force of superior horsepower!

Almost Everybody Suspected of a Million

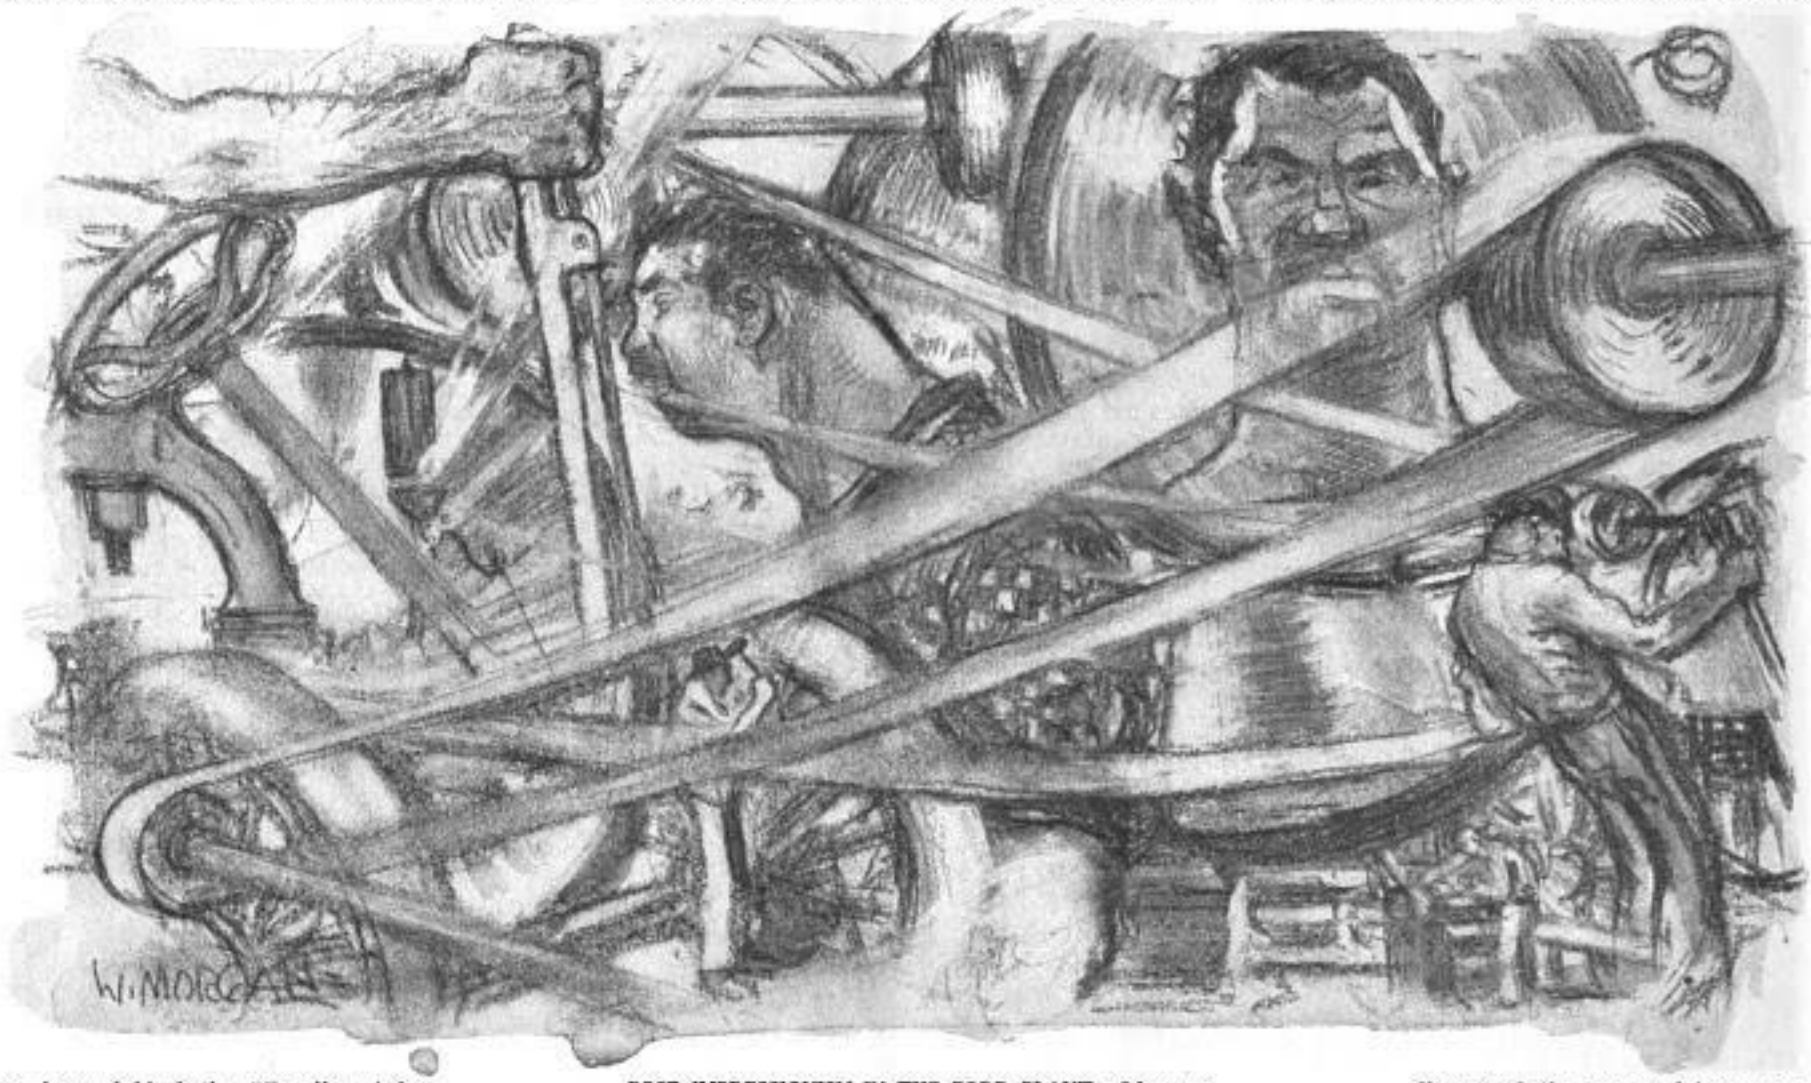
DETROIT is a young man's town. I do not think the stand-pat, sit-tight, go-easy kind of business man exists there. The wheel of commerce has wire spokes and rubber tires, and there is no drag upon the brake band. Youth is at the steering wheel—both figuratively and literally. The heads of great Detroit industries drive their own cars; and if the fact seems unimportant, consider: do the leading men of your city drive theirs? Or are they driven by chauffeurs? Have they, in other words, reached an age and a frame of mind at which men do not drive because it is not safe for them to do so, or worse yet, because it is not dignified? Have they that energy which replaces worn-out tires—and methods—and ideas?

I have said that the president of a large automobile company showed me about Detroit. I don't know what his age is, but he is under thirty-five. I don't know what his fortune is, but he is suspected of a million, and whatever he may have, he has made himself. I hope he is a millionaire, for there is in the entire world only one other man who, I feel absolutely certain, deserves a million dollars more than he does—and a native modesty prevents my mentioning this other's name.

Looking at my friend, the president, I am always struck with fresh amazement. I want to say to him: "You can't be the president of that great big company! I know you sit in the president's office, but—look at your hair; it isn't even turning gray! I refuse to believe that you are president until you show me your ticket, or your diploma, or whatever it is that a president has!"

Yes, but See "Who's Who" for 1914!

BECOMING curious about his exact age, I took up my "Who's Who in America" one evening ("Who's Who" is another valued volume on my one-foot shelf) with a view to finding out. But all I did find out was that his name is not contained therein. That struck me as surprising. I looked up the heads of half a dozen other enormous automobile companies—men of importance, interest, reputation. Of these I discovered the name of but one, and that one was not (as I should have rather expected it to be) Henry Ford. (There is a Henry Ford in my "Who's Who," but he is a professor at Princeton and writes for the "Atlantic Monthly"!)



Now whether this is so because of the newness of the automobile business, or because "Who's Who" turns up its nose at "trade," in contradistinction to the professions and the arts, I cannot say. Obviously, the compilation of such a work involves tremendous difficulties, and I have always respected the volume for the ability with which it overcomes them; but when a Detroit dentist (who invented, as I recollect, some new kind of filling) is included in "Who's Who," and when almost every minor poet who squeaks is in it, and almost every illustrator who makes candy-looking girls for magazine covers, and almost every writer—then it seems to me time to include, as well, the names of men who are in charge of that industry which is not only the greatest in Detroit, but which, more than any industry since the inception of the telephone, has transformed our life.

The fact of the matter is, of course, that writers, in particular, are taken too seriously, not merely by "Who's Who" but by all kinds of publications—especially newspapers. Only opera singers and actors can vie with writers in the amount of undeserved publicity which they receive. If I omit professional baseball players it is by intention; for, as a fan might say, they have to "deliver the goods."

Art Owns a Homestead in Detroit

BAEDEKER'S United States, a third volume in the condensed library I carried in my trunk, sets forth (in small type!) the following: "The finest private art gallery in Detroit is that of Mr. Charles L. Freer. The gallery contains the largest group of works by Whistler in existence and good examples of Tryon, Dewing, and Abbott Thayer as well as many Oriental paintings and potteries."

But in the case of the (*Continued on page 23*)

POST-IMPRESSIONISM IN THE FORD PLANT: *Of course there was order in that place—relentless system—terrible "efficiency"—but to my mind it expressed but one thing, and that thing was delirium*

The Loot and the Lieutenant

By Will Adams

ILLUSTRATED BY GAYLE PORTER HOSKINS

"THE Major's compliments, and he wishes to see you at headquarters immediately, sir."

"Tell the Major I'll come at once."

"Yes, sir." The orderly saluted, pivoted on correct military heel, and departed the way he had come, while Lieutenant Stone threw down his three-months-old home paper and took his legs down from the railing of the officers' club porch. "Now what the deuce can the Old Man want at this time of day?" muttered Lieutenant Stone.

"Now you understand, Stone, it's officially an exploration and mapping trip. The island is small and little known on account of the fierce tribe that lives there. They're very much like the worst of the Igorrotes—only much more so. Spain never meddled with them much—neither have we except once when Jikiri took refuge there and we had to smoke him out. The natives keep very much to themselves and don't make trouble outside of their own island—stay-at-home lot they are, thank fortune. There's a reason going round why they stick so close to home and mother. The natives here say it's because they have a small pearl fishery hidden away on their island. I can hardly believe that, though—it's a little too improbable. First thing, it's a bit far up for pearls and it's asking too much to believe that any island in the Philippines could produce good pearls and not be known for them. If the pearls were of any value, they would trade them and become a known pearl island like Sulu—but they never do. If the pearl-fishery rumor has any basis in fact at all, the pearls must be of such a piffling sort that they know it's not worth while trading and must just keep them or store them up somewhere. And that's another thing: there's to be no looting. We're not at war with these people, and even if we were—remember some of the messes the men got into in China? It's a temptation, I admit, but orders are strict. No looting. I'll expect you to see that your men don't take a thing."

"I'LL do my best, sir, of course—but I see my work cut out for me if there's any loot goin'. You know what soldados are and the length they'll go to get it and hide it."

The Major knew; none better. He had led the prize troop of roughnecks into Peking. He grinned:

"All right then. And mind you set them a good example. Now about this shipwreck business. The *McArthur* that came in this morning reported a wreck about a hundred miles to the westward; no one on board. Later she picked up two empty boats drifting south. As she was in such bad shape herself from the typhoon, the captain decided to put in here and send from here an expedition to Paganay Island to see if any of the survivors of the wreck might happen to be there. The boats were very evidently coming from that direction, and Captain Marsh thinks it likely that they might have been moored there and got adrift. If there are any white people there, we must send at once, for God knows what these natives may do to them. You will take a sergeant, a corporal, and eight men of your troop. Take the largest launch, the one with the Hotchkiss in the bow. Don't fight unless you have to, but take rifles, pistols, and plenty of ammunition. Pack along a transit and sketching cases and get what you can done; the only map of Paganay we have at present is this thing."

HE DISPLAYED a rough outline sketch of the island with only a few things marked in it.

"Yes, sir, but if no one's there, hadn't we better let you know immediately in case—"

"Oh, that's all right," interrupted the Major. "We're sending the *Lady Love* to cruise about and see what she can find so as to make sure in either case. If the survivors *are* at Paganay, of course leave all mapping and rush them back here to the post. Here's the map. You'd better go see the Q. M. now; he's getting the launch loaded up with extra supplies in case the wrecked people are there. Look it over, ask for anything else you think you'll need, and get off as quickly as you can. I'll see you again before you go."

"Now set 'em up again," said Shorty. "One or two propped against the rock, so if the simple villagers look up all will seem to be in order. Drag the others inside the cave mouth"

AND so it came about that at dawn the next morning Lieutenant Stone sat up in the bow of the launch *Tuft* and gazed at the dim outline of a little island just showing out of the mist of rose and gray ahead. Little tingles of expectation vibrated unexpected nerves all over his body. For this was his first detail—the very first big thing that had come his way "on his own" since his recent winning of his commission. And, as Stone thought: "Gee! What a detail! Don't I wish Shorty could see me now?" Hostile natives, pearls (possible but not probable), rumors of a shipwreck! But his only expressed thought at all the exaltation and pleasant anticipation was: "Bloomin' good chance for me. We'll have a bully time."

"Mornin', Lieutenant," said a deep, cheerful voice, and Stone's daydreams fell away with a bump.

It was "Battle-Ax Bob," otherwise Sergeant Robert Ewart, who greeted him. "Mornin', Sergeant," answered Stone mechanically, still a bit dazed.

Battle-Ax Bob grinned: "Excuse me, sir, but I've been watchin' you a minute or two, sir. I've been in the service so long and seen so many of you. Battle, murder, and sudden death, wasn't it, sir?"

Stone reddened. "You're a very good guesser," he answered, admiringly. The other men were awake by now, and as they neared the island they breakfasted.

The corporal, Hilary, was a young person of singularly good family, but, having scrapped with every member of it but a younger sister, he had hitched up as a horse soldier in the United States army, and was going after a commission tooth and nail without asking anything of his displeased relatives. The transit and sketching cases were consigned to his care, for just now he was "boning" on that part of his work. Sergeant Ewart—Battle-Ax Bob, as he was known through the length and breadth of the service, wherever the flag fluttered and the morning gun boomed—was one of the few survivals in active service of the "Old Army," the enlisted force as it was before the Spanish War, the army of small, far-scattered Western posts, Indian fights, and prairie hikes—though actually the word hike itself didn't come into use until after '98. Very tall was Bob, with sandy hair and mustache and a complexion like a thimble, for in the days of his youth he had caught a fine case of smallpox from some Mexicans down around Fort Apache. Besides his face there wasn't an inch of his body that wasn't scarred—not with smallpox but with nicks from bolos. For during the insurrection Bob had been captured and tortured by Igorrotes and had been rescued only just before spirit and body parted. Bob knew all about Gu-gus, could speak Tagalog and Spanish fluently, and had a smattering of some of the other native languages. Stone, who could only speak a mongrel brand of soldado Español, realized what a treasure his Top Sergeant was on an expedition of this sort and wisely resolved to let Bob attend to most of the dispositions of the campaign. Not long from the position of Top Sergeant himself, Stone surely knew a good man when he saw one. The others of the party were privates, but carefully picked men.

BATTLE-AX and Stone had studied carefully the map the Major had given them and decided not to risk the barrio landing nor the main harbor. They planned to skirt along the ocean side of the reef, as the sea was very calm, and with the aid of powerful field glasses find out if there were any signs of the shipwrecked ones on the beach; if not, they would go around to the western shore and land near the mouth of the upper river, where the map showed a landing was practicable. The launch carried two large boats, either of which would easily hold them all, and Bob proposed to Stone the plan of using one to land with and leaving the other on the launch, together with one of their men, to augment the crew of two the *Tuft* boasted. "They can cruise around to the northeast and lay off for signal with all steam up. Seems that would be the most likely place to catch up our wigwags, and they'll be in a strategic position to come and take us off with the other boat in case we need an almighty quick getaway. And it's my opinion we'll need it all right."

"It was clever of Bob to think of that," said Stone, relating this part of his adventures. "Because it might never have occurred to me, and, as it turned out, that launch was right pat in the very place where she was needed most."

OPPOSITE the beach they raked it with the field glasses, but, seeing absolutely no signs of the shipwrecked party, they continued on around to the west, landed in one of the boats, which they made fast just above the mouth of the second stream, and followed it up as well as they could for the thick, tangled growth along the bank.

Suddenly Stone, ahead, raised his hand as a signal to halt. He beckoned Bob, who crept to his side as quietly as possible.

"Look!" whispered Stone.

About fifteen yards ahead of them, at the foot of a tree, a small man lay sleeping the sleep of utter exhaustion. His face was turned away—in fact, his

Digitized by Google

whole head was buried in his arms. He wore clothing—of a sort so tattered, stained, and grimed that it seemed at one with the earth itself. No native, that was sure, but evidently some one shipwrecked; for what Stone had noted at the first glance was the pair of stout, American-made, brown shoes the man was wearing. And then his eyes, traveling upward, beheld a thing he could scarcely believe—puttees incased the man's stumpy little legs.

"United States army, or I'm a goat!" whispered Bob. "But how *could* it be?"

"Mighta been on the wrecked boat. Deserter maybe, tryin' to make a git-away."

"Gee! I hope not! Troubles enough as it is." The men were crowding behind them in an eager, expectant group. Stone's eyes were fascinated by those stumpy puttees: there was something very familiar about them—they looked exactly like Shorty's (Stone's old troop commander)—but of course it couldn't be Shorty: no such luck. Captain Campbell was in Leyte with old J Troop at Muymaras. But if it only *was* Shorty! Gosh! Wouldn't that be great? He hated to wake the man, who was evidently worn out, but if he was a white man he would be glad enough to see them, and if he wasn't it didn't matter.

So Stone signaled the men to follow, and quietly they surrounded the man, ready in case of need. Then Stone bent over and shook him by the shoulder, at first gently and then more roughly. The man did not wake, but turned over on his back. It *was* Shorty!

"It's Captain Campbell, my old troop commander!" whispered Stone to Battle-Ax. "He must be worn out to sleep like that. We'll camp here till he wakes. He'll probably be able to tell us everything we want to know."

"So that's Shorty," mused Bob (for the nickname was known throughout the army)—"the feller who defeated his own side in the maneuvers that time. He sure must be some potatoes."

STONE spread his blanket over his beloved Captain and sat beside him to wait for such time as he should wake. The men slept; all but Hilary, who was working on his map, and Bob, who was kindling a small, inconspicuous fire, making coffee and laying out a good big ration of food.

"He'll need it when he wakes," whispered Bob, nodding toward Shorty.

"Thank you, Sergeant," said Stone. "He sure will."

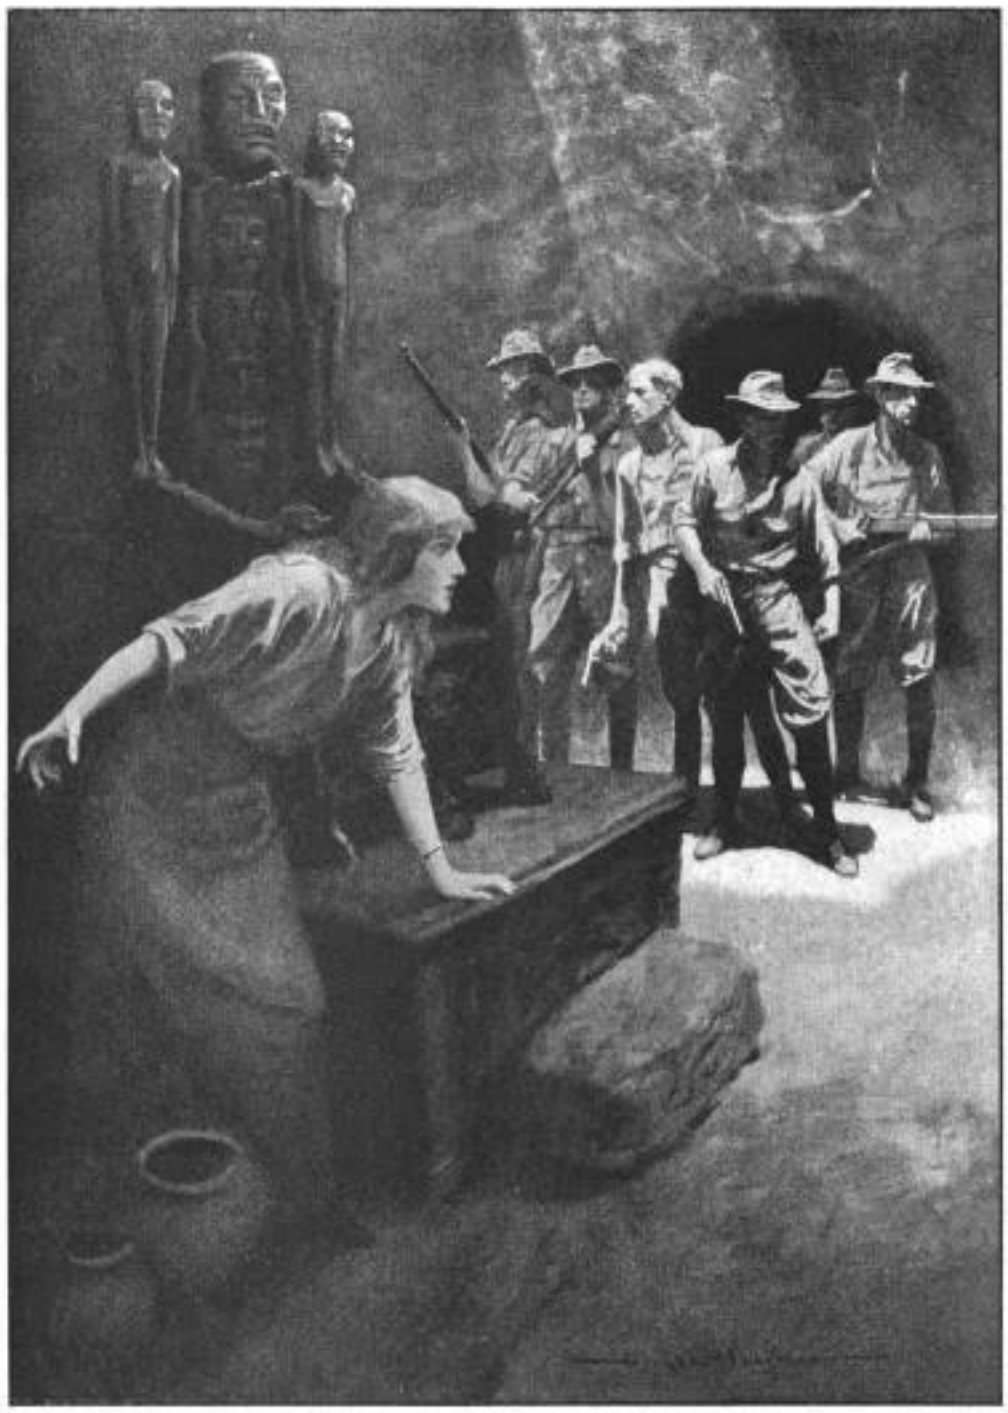
The Captain was never a beauty; now with his countenance very drawn and haggard, caked with dirt, streaked with sweat, and with a six days' fuzz of a beard on it, he hardly appeared an object on which to lavish affection; but Stone, warming to that tired dirty, ugly little mug, hung over Shorty with the solicitude of a mother over her child. At a little after twelve, when the men were eating their dinner, Shorty awoke. At the first glimpse of Stone's face above him he looked puzzled, then abruptly sat up and gazed about him. As his eyes, more squinty than ever with sleep, took in the surroundings, he demanded belligerently: "What the blank are you doin' here? Where the deuce *am* I anyway?"

"Paganay Island, Captain," said Stone. "*We're* under orders. What are you doin' here yourself?"

"It's not official," said Shorty, grinning and further eclipsing his eyes. "I was shipwrecked—that's all. Gee! That coffee smells good—and the chow, too. I'm starved."

He wolfed down the stuff. "First square meal I've had in six days—and the last two it's been nothin' but bananas. What time is it?" and, being told it was one o'clock, he consented to give an account of himself. "For," said he, "there's plenty of time."

"Time for what?" demanded Stone.



"You'll find out when I tell you," was the cryptic reply. "Well, to get back to Genesis, the troop sort of got on my nerves down there in Muymaras and I put in for leave to get away from it for a while."

"Don't believe it," said Stone flatly. "*That* is just one big whopper of a lie!" But he grinned when he said it, so the bald statement gave no more offense than that other offensive remark that you must "smile when you say it."

"You never even said 'Excuse me,'" said Shorty plaintively.

Battle-Ax Bob chuckled, the men inched closer, full of curiosity to hear what was coming next. Shorty deliberately turned his back on them (they weren't *his* troopers) and addressed himself exclusively to Stone:

"No, honestly, hombre, *that* wasn't it. I took leave because there hadn't been much doing in Muymaras for a while and not much prospect either, and I'd sorta got interested in pearls and pearl fisheries and began bonin' up on 'em. Burns had some books about 'em and I read 'em all—two or three times. It was interestin'. Then I put in for the two months' leave that was comin' to me to go down to Sulu and northern Borneo and poke about on my own. Thought, too, I might stop off at your place on my way home if I had time, but that blamed typhoon blew up that

"Where the deuce is she?" cried Shorty. At the sound of his voice a figure crept from behind the throne. "Captain Campbell! Soldiers! Oh, Fred!"

part. Well, I had a good look-see and saw all their makee pidgin, and I was comin' up to you on the sailin' ship *Mary Lee* when the typhoon struck us, and here I am. The whole thing was more almighty interestin' than I had imagined—especially the typhoon. Did you say this was Paganay? I had suspicions, but of course wasn't sure."

"YES," said Stone, "it's Paganay all right." It struck him as very strange that active, vibrating little Shorty should suddenly develop thus late in life a passion for pearl fishing. It reminded him oddly of the shock he had once had when a real-estate man—a subdivision boomer—he had known, a hustling, all-for-business, rather unimaginative yap with a perpetual glad eye and hand, had revealed his secret and consuming interest in bees, and how when he had "made his pile" his one desire was to have a quiet little bee ranch somewhere in the "real country," far from subdivisions, booming, and otherwise.

"You never know what bug will sting you," thought Stone. But Shorty! Still, he was erratic occasionally, witness his one-time passion for aeronautical work! But a slow-poke thing like pearls!

"There's lots of excitement in pearls," pursued Shorty. Stone's meditations were all upset again. "I'm glad this is Paganay; that's luck anyway; I've heard things about this place."

"But tell us how you got *here*, right in this spot where we found you. Was there anyone with you? Where are the others? You must have had a boat or something. Where is it? *Tell* something!"

Thus adjured, the castaway continued his narrative:

"The *Mary Lee* went all to smash and started sinkin' in the middle of the night—I'm no flatfoot, so I can't tell you just what happened. We'd been warned, so were ready to take to the boats. There were only two passengers on the *Mary Lee*—me and a girl: an army girl who'd been visitin' some of her people who were fool missionaries down in the Malay archipelago somewhere, and was comin' back to keep house for her brother, who's a captain of infantry somewhere up in Luzon."

There was a smothered exclamation from among the men. "Hilary! Was her name Hilary?" excitedly inquired the Corporal.

"It was," said Shorty. "Who are *you*?"

"She's my sister. My sister, I tell *you*! Where is she?" His voice mounted in a shrill crescendo.

"She's safe. Or safe for a while anyway—and we're going to get her all right. Don't you worry, hombre." Shorty was used to these situations when one member of a family was an officer and the other was enlisted in the ranks. "You must be the brother she told me about. How queer you should be in Stone's troop. Well, men, we'd better get along. I can explain as we hike."

"But," insisted Hilary, "where *is* Madge? Where is she? For God's sake, tell me!"

"She's in a cave up the mountain, quite safe, waitin' to be married to the chief of—"

"*To be married*—"

"There, there, keep your shirt on, son. It's a good thing for her she *is*—or I don't like to think what might have happened. All ready? For'd har!" Shorty walked between Stone and Hilary and explained as briefly as he could.

"THERE were four of the crew, your sister and me in our boat. The only boat that got away, I think. The ship sank as they were getting the others off. I'd have given a heap to save that captain's wife, but she wouldn't leave him. I tried to force her; I couldn't. She'd make two of me. Fought me like a cat. Yesterday morning our boat got in here. Managed to beach inside the reef all right. We hadn't beached long when down came the Gu-gus, killed the crew clean—thank God for *that*—no torture, and took Miss Hilary along with them."

There was a suppressed oath from the Corporal; it sounded like a groan.

"You may wonder where I was that I allowed 'em to get her alive, but, hombre, I wasn't there at all, or I'd have died, too, before they took her. But I was off in the jungle gettin' firewood and had to go pretty far to get it dry enough. When I came back it was all over and the natives had got your sister into the boat and were well off shore. I think she must have fainted, for I never heard a scream from her and she looked awfully limp, poor girl! They were just out of range of my six-shooter or I'd have killed her. Golly, I'm glad now they were! They went out of the lagoon and headed north and east, skirtin' the shore just far enough out to avoid the breakers and my bullets—me followin' on shore, keepin' in the jungle shadow. Thank God the trees grow thick right down to the beach. Up near the northeast corner of this island is a big barrio where they all live and that's where they took her. We're pointin' for it right now. I lurked round on the edges and saw 'em put her into an empty shack and take her in some chow. They put a guard over her and then they all held a mass meetin' out in the middle and they were crazy excited. 'Course I know gettin' a white woman would excite the hombre some, but this seemed different somehow, for even the women and kids were all worked up. If they'd been white, they'd all been givin' three cheers over somethin'. That's how they acted. I wiggled up near as I could—the trees grow right up to the clearin', and, as they were talkin' pretty loud, I managed to hear enough to put me wise. Their lingo's pretty much like Tagal, so I could sabe it all right, and I heard that they were keepin' her for the chief to come back. The buck I'd thought was the head man turned out to be only the vice president, and he put it to 'em straight that (*Continued on page 32*)

Bealby

The Happy Caravanners — Chapter III

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

NEVER had the gracious eastward face of Shonts looked more beautiful than it did on the morning of the Lord Chancellor's visit. It glowed as translucent as amber lit by flames. Its two towers were pillars of pale gold. It looked over its slopes and parapets upon a great valley of mist-barred freshness through which the distant river shone like a snake of light. The southwest façade was still in the shadow, and the ivy hung from it darkly greener than the greenest green. The stained-glass windows of the old chapel reflected the sunrise as though lamps were burning inside. Along the terraces a pensive peacock trailed his sheathed splendors through the dew. Amid the ivy was a fuss of birds.

And presently there was pushed out from amid the ivy at the foot of the eastward tower a little brownish buff thing, that seemed as natural there as a squirrel or a rabbit. It was a head—a ruffled human head. It remained still for a moment contemplating the calm spaciousness of terrace and garden and countryside. Then it emerged further and rotated and surveyed the house above it. Its expression was one of alert caution. Its natural freshness and innocence were a little marred by an enormous transverse smudge, a bar sinister of smut, and the elfin delicacy of the left ear was festooned with a cobweb—probably a genuine antique. It was the face of Bealby.

He was considering the advisability of leaving Shonts—for good.

Presently his decision was made. His hands and shoulders appeared following his head, and then a dusty but undamaged Bealby was running swiftly toward the corner of the shrubbery. He crouched lest at any moment that pursuing pack of butlers should see him and give tongue. In another moment he was hidden from the house altogether, and rustling his way through a thicket of budding rhododendra. After these dirty passages the morning air was wonderfully sweet—but just a trifle hungry.

GRAZING deer saw Bealby fly across the park, stared at him for a time with great, gentle, unintelligent eyes, and went on feeding.

They saw him stop ever and again. He was snatching at mushrooms, that he devoured forthwith as he sped on.

On the edge of the beech woods he paused and glanced back at Shonts. Then his eyes rested for a moment on the clump of trees through which one saw a scrap of the head gardener's cottage, a bit of the garden wall. . . .

A physiognomist might have detected a certain lack of self-confidence in Bealby's eyes.

But his spirit was not to be quelled. Slowly, joylessly perhaps, but with a grave determination, he raised his hand in that prehistoric gesture of the hand and face by which youth, since ever there was youth, has asserted the integrity of its soul against established and predominant things.

"*Ketch* me!" said Bealby.

BEALBY left Shonts about half-past four in the morning. He went westward because he liked the company of his shadow and was amused at first by its vast length. By half-past eight he had covered ten miles, and he was rather bored by his shadow. He had eaten nine raw mushrooms, two green apples, and a quantity of unripe blackberries. None of these things seemed quite at home in him. And he had discovered himself to be wearing slippers. They were stout carpet slippers, but still they were slippers—and the road was telling on them. At the ninth mile the left one began to give on the outer seam. He got over a stile into a path that ran through the corner of a wood, and there he met a smell of frying bacon that turned his very soul to gastric juice.

He stopped short and sniffed the air—and the air itself was sizzling.

"Oh, Krikey," said Bealby, manifestly to the Spirit of the World. "This is a bit too strong. I wasn't thinking much before."

Then he saw something bright yellow and bulky just over the hedge.

From this it was that the sound of frying came.

He went to the hedge, making no effort to conceal himself. Outside a great yellow caravan with dainty little windows stood a largish dark woman in a deerstalker hat, a short brown skirt, a large white apron and spatterdashes (among other things) frying bacon and potatoes in a frying pan. She was very red in the face, and the frying pan was spitting at her as frying pans do at a timid cook. . . .

QUITE mechanically Bealby scrambled through the hedge and drew nearer this divine smell. The woman scrutinized him for a moment, and then blinking and averting her face went on with her cookery. Bealby came quite close to her and remained, noting the bits of potato that swam about in the pan, the jolly curling of the rashers, the dancing of the bubbles, the humming splash and splutter of the happy fat. . . .

A pleasant woman was talking over the counter to a stout and worried one who carried a bundle. They both stopped abruptly at the appearance of Bealby

(If it should ever fall to my lot to be cooked, may I be fried in potatoes and butter. May I be fried with potatoes and good butter made from the milk of the cow. God send I am spared boiling: the prison of the pot, the rattling lid, the evil darkness, the greasy water. . . .)

"I suppose," said the lady prodding with her fork at the bacon, "I suppose you call yourself a Boy."

"Yes, miss," said Bealby.

"Have you ever fried?"

"I could, miss."

"Like this?"

"Better."

"Just lay hold of this handle—for it's scorching the skin off my face I am—" She seemed to think for a moment and added: "entirely."

IN SILENCE, Bealby grasped that exquisite smell by the handle, he took the fork from her hand and put his hungry, eager nose over the seething mess. It wasn't only bacon; there were onions, onions giving it—an *edge!* It cut to the quick of appetite. He could have wept with the intensity of his sensations.

A voice almost as delicious as the smell came out of the caravan window behind Bealby's head.

"*Ju-ly!*" cried the voice.

"Here! I mean—it's here I am," said the lady in the deerstalker.

"Judy—you didn't take my stockings for your own by any chance?"

The lady in the deerstalker gave way to delighted horror. "Sssh, mavourneen!" she cried—she was one of that large class of amiable women who are more Irish than they need be—"there's a Boy here!"

There was indeed an almost obsequiously industrious and obliging Boy. An hour later he was no longer *a* Boy but *the* Boy and three friendly women were regarding him with a merited approval.

He had done the frying, renewed a waning fire with remarkable skill and dispatch, rebodied a neglected kettle in the shortest possible time, laid almost without direction a simple meal, very exactly set out camp stools and cleaned the frying pan marvelously. Hardly had they taken their portions of that appetizing savoriness than he had whipped off with that implement, gone behind the caravan, busied himself there, and returned with the pan—glittering bright. Himself if possible brighter. One cheek indeed shone with an animated glow.

"But wasn't there some of the bacon and stuff left?" asked the lady in the deerstalker.

"I didn't think it was wanted, miss," said Bealby, "So I cleared it up."

He met understanding in her eye. He questioned her expression.

"Mayn't I wash up for you, miss?" he asked to relieve the tension.

He washed up, swiftly and cleanly. He had never been able to wash up to Mr. Mergleson's satisfaction before, but now he did everything Mr. Mergleson had ever told him. He asked where to put the things away and he put them away. Then he asked politely if there was anything else he could do for them. Questioned, he said he liked doing things. "You haven't," said the lady in the deerstalker, "a taste for cleaning boots?"

Bealby declared he had.

"Surely," said a voice that Bealby adored, "'tis an angel from heaven."

HE HAD a taste for cleaning boots! This was an extraordinary thing for Bealby to say. But a great change had come to him in the last half hour. He was violently anxious to do things, any sort of things, servile things, for a particular person. He was in love.

The owner of the beautiful voice had come out of the caravan, she had stood for a moment in the doorway before descending the steps to the ground, and the soul of Bealby had bowed down before her in instant submission. Never had he seen anything so lovely. Her straight, slender body was sheathed in blue; fair hair, a little tinged with red, poured gloriously back from her broad forehead, and she had the sweetest eyes in the world. One slender hand lifted her dress from her feet; the other rested on the lintel of the caravan door. She looked at him and smiled.

SO FOR two years she had looked and smiled across the footlights to the Bealby in mankind. She had smiled now on her entrance out of habit. She took the effect upon Bealby as a foregone conclusion.

Then she had looked to make sure that everything was ready before she descended.

"How good it smells, Judy!" she had said.

"I've had a helper," said the woman who wore spats.

That time the blue-eyed lady had smiled at him quite definitely. . . .

The third member of the party had appeared unobserved; the irradiations of the beautiful lady had obscured her. Bealby discovered her about. She was bareheaded; she wore a simple gray dress with a Norfolk jacket, and she had a pretty clear white profile under black hair. She answered to the name of "Winnie."

The beautiful lady was Madeleine. They made little obscure jokes with each other and praised the morning ardently. "This is the best place of all," said Madeleine.

"All night," said Winnie, "not a single mosquito."

None of these three ladies made any attempt to conceal the sincerity of their hunger or their appreciation of Bealby's assistance. How good a thing is appreciation! Here he was doing with joy and

Digitized by Google

pride and an eager excellence, the very services he had done so badly under the cuffings of Mergleson and Thomas. . . .

AND now Bealby, having been regarded with approval for some moments and discussed in tantalizing undertones, was called upon to explain himself.

"Boy," said the lady in the deerstalker, who was evidently the leader and still more evidently the spokeswoman of the party, "come here."

"Yes, miss." He put down the boot he was cleaning on the caravan step.

"In the first place, know by these presents, I am a married woman."

"Yes, miss."

"And miss is not a seemly mode of address for me."

"No, miss. I mean—" Bealby hung for a moment and by the happiest of accidents a scrap of his instruction at Shouts came up in his mind. "No," he said, "your—ladyship."

A great light shone on the spokeswoman's face. "Not yet, my child," she said, "not yet. He hasn't done his duty by me. I am—a simple Mum."

Bealby was intelligently silent.

"Say—*yes, mum.*"

"Yes, mum," said Bealby, and everybody laughed very agreeably.

"And now," said the lady, taking pleasure in her words, "know by these presents— By the bye, what is your name?"

Bealby scarcely hesitated. "Dick Maltravers, mum," he said, and almost added: "The Dauntless Daredevil of the Diamondfields Horse," which was the second title.

"Dick will do," said the lady who was called Judy, and added suddenly and very amusingly: "You may keep the rest."

(These were the sort of people Bealby liked. The *right* sort.)

"Well, Dick, we want to know, have you ever been in service?"

IT WAS sudden. But Bealby was equal to it. "Only for a day or two, miss—I mean, mum—just to be useful."

"*Were* you useful?"

Bealby tried to think whether he had been, and could recall nothing but the face of Thomas with the fork hanging from it. "I did my best, mum," he said impartially.

"And all that is over?"

"Yes, mum."

"And you're at home again and out of employment?"

"Yes, mum."

"Do you live near here?"

"No—leastways, not very far."

"With your father?"

"Stepfather, mum. I'm a *Norfan*."

"Well, how would you like to come with us for a few days and help with things? Seven-and-sixpence a week."

Bealby's face was eloquent.

"Would your stepfather object?"

Bealby considered. "I don't think he would," he said.

"You'd better go round and ask him."

"I—suppose—yes," he said.

"And get a few things."

"Things, mum?"

"Collars and things. You needn't bring a great box for such a little while."

"Yes, mum. . . ."

He hovered rather undecidedly.

"Better run along now. Our man and horse will be coming presently. We shan't be able to wait for you long. . . ."

Bealby assumed a sudden briskness and departed.

At the gate of the field he hesitated almost imperceptibly and then directed his face to the Sabbath stillness of the village.

Perplexity corrugated his features. The stepfather's permission presented no difficulties, but it was more difficult about the luggage.

A voice called after him.

"Yes, mum?" he said attentive and hopeful. Perhaps—somehow—they wouldn't want luggage.

"You'll want boots. You'll have to walk by the caravan, you know. You'll want some good stout boots."

"All right, mum," he said with a sorrowful break in his voice. He waited a few moments but nothing more came. He went on—very slowly. He had forgotten about the boots.

That defeated him. . . .

It is hard to be refused admission to Paradise for the want of a handbag and a pair of walking boots. . . .

BEALBY was by no means certain that he was going back to that caravan. He wanted to do so quite painfully, but—

He'd just look a fool going back without boots and —nothing on earth would reconcile him to the idea of looking a fool in the eyes of that beautiful woman in blue.

"Dick," he whispered to himself despondently, "Daredevil Dick!" (A more miserable-looking face you never set eyes on.) "It's all up with your little schemes, Dick, my boy. You *must* get a bag—and nothing on earth will get you a bag."

He paid little heed to the village through which he wandered. He knew there were no bags there. Chance rather than any volition of his own guided him down a side path that led to the nearly dry bed of a little rivulet, and there he sat down on some weedy grass under a group of willows. It was an untidy place that needed all the sunshine of the morning to be tolerable; one of those places where stinging nettles take heart

The owner of the beautiful voice had come out of the caravan, she had stood for a moment in the doorway before descending the steps to the ground, and the soul of Bealby had bowed down before her in instant submission

and people throw old kettles, broken gallipots, jaded gravel, grass cuttings, rusty rubbish, old boots—

For a time Bealby's eyes rested on the objects with an entire lack of interest.

Then he was reminded of his not so very remote childhood when he had found an old boot and made it into a castle. . . .

PRESENTLY he got up and walked across to the rubbish heap and surveyed its treasures with a quickened intelligence. He picked up a widowed boot and weighed it in his hand.

He dropped it abruptly, turned about and hurried back into the village street.

He had ideas, two ideas, one for the luggage, and one for the boots. . . . If only he could manage it. Hope beat his great pinions in the heart of Bealby.

Sunday! The shops were shut. Yes, that was a fresh obstacle. He'd forgotten that.

The public house stood bashfully open, the shy, uninviting openness of Sunday morning before closing time, but public houses, alas! at all hours are forbidden to little boys. And besides he wasn't likely to get what he wanted in a public house; he wanted a shop, a general shop. And here before him was the general shop—and its door ajar! His desire carried him over the threshold. The sabbatical shutters made the place dark and cool, and the smell of bacon and cheese and chandleries, the very spirit of grocery, calm and unhurried, was cool and sabbatical, too, as if it sat there for the day in its best clothes. And a pleasant woman was talking over the counter to a stout and worried one who carried a bundle.

THEIR intercourse had a flavor of emergency and they both stopped abruptly at the appearance of Bealby. His desire, his craving was now so great that it had altogether subdued the natural wiriness of his appearance. He looked meek, he looked good, he was swimming in propitiation and tender with respect. He produced an effect of being much smaller. He had got nice eyes. His movements were refined and his manners perfect.

"Not doing business to-day, my boy," said the pleasant woman.

"Oh, *please*, 'm," he said from his heart.

"Sunday, you know."

"Oh, *please*, 'm. If you could just give me a *sold* sheet of paper, 'm, please."

"What for?" asked the pleasant woman.

"Just to wrap something up, 'm."

She reflected and natural goodness had its way with her.

"A nice *big* bit," said the woman.

"Please, 'm."

"Would you like it brown?"

"Oh, *please*, 'm."

"And you got some string?"

"Only cottony stuff," said Bealby, disemboweling a trouser pocket. "Wiv knots. But I dessay I can manage."

"You'd better have a bit of good string with it, my dear," said the pleasant woman whose generosity was now fairly on the run. "Then you can do your parcel up nice and tidy. . . ."

THE white horse was already in the shafts of the caravan, and William, a deaf and clumsy man of uncertain age and a vast, sharp nosiness, was lifting in the basket of breakfast gear and grumbling in undertones at the wickedness and unfairness of traveling on Sunday, when Bealby returned to gladden three waiting women.

"Ah!" said the inconspicuous lady, "I knew he'd come."

"Look at his poor little precious parsivel," said the actress.

Regarded as luggage it was rather pitiful, a knobby, brown paper parcel about the size—to be perfectly frank—of a tin can, two old boots and some grass, very carefully folded and tied up—and carried gingerly.

"But—" the lady in the deerstalker began and then paused.

"Dick," she said, as he came nearer, "where's your boots?"

"Oh, please, mum," said the dauntless one, "they was away being mended. My stepfather thought perhaps you wouldn't mind if I didn't have boots. He said perhaps I might be able to get some more boots out of my salary. . . ."

The lady in the deerstalker looked alarmingly uncertain and Bealby controlled infinite distresses.

"Haven't you got a mother, Dick?" asked the beautiful voice suddenly. Its owner abounded in such spasmodic curiosities.

"She—last year. . . ." Matricide is a painful business at any time. And just as you see, in spite of every effort you have made, the jolliest lark in the world slipping out of your reach. And the sweet voice so sorry for him! So sorry! Bealby suddenly veiled his face with his elbow and gave way to honorable tears. . . .

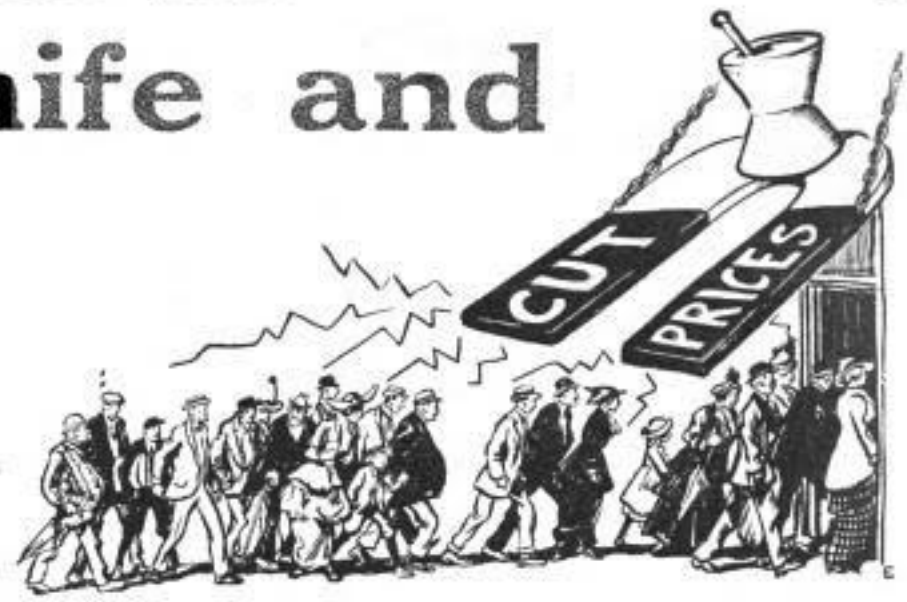
A simultaneous desire to make him happy, help him to forget his loss, possessed three women. . . .

"That'll be all right, Dick," said the lady in the deerstalker, patting his shoulder. "We'll get you some boots to-morrow. And to-day you must sit up beside William and spare your feet. You'll have to go to the inns with him. . . ."

"It's wonderful, the elasticity of youth," said the inconspicuous lady five minutes later. "To see that boy now you'd never imagine he'd had a sorrow in the world."

"Now get up there," said the lady who was the leader. "We shall walk across the fields and join you later. You understand where you are to wait for us, William?"

SHE came nearer and shouted: "You understand, William?"



William nodded ambiguously. "'Ent a *'ool*," he said.

The ladies departed. "*You'll* be all right, Dick," cried the actress kindly.

The Price Knife and the Law

By Richard Washburn Child

ILLUSTRATED BY W. J. ENRIGHT

TWO phrases to which the American people have attached an ugly meaning are about to trick our good commercial sense into a jungle of chaos and folly.

These two phrases are "price maintenance" and "price fixing."

At the sound of either of these phrases the average man—and unfortunately the average *intelligent* man—and lawyers and, worst of all, even Congressmen—think of monopoly and the high cost of living—and suppression of competition and the poor consumer. Thus minds are closed. So prejudice has its day.

Nevertheless, that price fixing under some conditions may be the godsend of the honest, independent manufacturer, the small dealer and the consumer, and that it may almost alone furnish the guarantee of fair competition, is an idea which clear thinkers are carrying forward at this moment.

The idea is not complicated. The price-fixing question may be separated and pigeonholed without difficulty. It is extraordinary that it has not been made foolproof long ago.

It is like the tariff—folks buried it in words. The tariff was much simpler than the talk about it. The labor question will probably be found to be much simpler when the vapor blows off. The price-fixing subject is simpler than either of these.

By whom can prices be fixed?

Take, for example, the prices on razors: First, suppose there is a razor trust. It has grown up by combinations of the larger makers which have driven the smaller out of business. Now it has a monopoly. What is this monopoly? It is a monopoly of things—*razors*. The trust controls the supply of razors; the trust can "fix the price" because it controls the source of supply.

What does the law say as to that? The old common law declared against it; the Sherman Law, built on top of that by Congress, declared against it. The Supreme Court has declared against it. State courts have declared against it. The people have declared against it. One group of theorists, headed by President Wilson, would want to restore competition in razors so that prices might not be fixed; and another group, headed by Colonel Roosevelt, would want the Government to fix prices so that competition would be restored. Take your choice. In any case, we are *all* against the fixing of prices *when fixing prices is the result of the monopoly of a class of things*.

The Law's Illogical Stopping Place

BUT now comes a man, not with a monopoly of *razors*, but with a monopoly of *one kind of a razor*. He does not have the monopoly of *things*, such as sugar, steel, coal, flour, or razors or corsets; he has the monopoly of one kind of razor—of a *thing*.

Who gave him this monopoly? We did. The United States gave him the monopoly. The man invented a particular kind of razor. We say that, having invented that new kind of razor, he may manufacture and sell it without competition. We give him a patent right. We say—the Supreme Court has said it over and over again—that we grant the monopoly for a period of years so that rewards shall be given the man for his inventive genius. He may make the new kind of razor, or lease the right and take his profits slowly, or he may sell the right to make it and take his profits in a lump. There is a good deal of buncombe about this doctrine of reward for inventive genius, and it is amusing to hear the courts talk about it so solemnly. But that is our policy. Pass it by.

There is no question that the man with a patent monopoly of a thing may fix any price he chooses when he sells it. Somehow it is easy to feel that if he has this absolute right to a monopoly of a *thing*—and can make as few or as many as he wishes and sell the *thing* for any price he can get, or even refuse to make a price at which anyone would buy—that he might be expected to have also the right to make the man who buys the thing agree not to resell it at all. And if he has a right to make a buyer agree not to resell at all, anyone would guess that he would have the right to make the buyer agree that he would not resell except at a particular price. But the Supreme Court has said what amounts to this: "Oh, no! Nothing of the kind. He may make the price at which he sells to the buyer, but there's an end of it." A good many lawyers—I am one—disagree with the sense of this. If it is not against "public policy," as the courts say, to give the man the sole right to make the thing and sell it, it is hard to see why it is against "public policy" to say: "Wherever this thing travels, with it it will carry an agreement which concerns the price of the thing itself."

Where Thought Goes Into the Ditch

AND now comes a man with a third kind of monopoly of *things*. This man has a patent monopoly on a new kind of razor. And he says: "I will not sell this razor to anyone who does not buy my shaving soap—the 'Grand Foam Shaving Stick.'" Is the power to force the sale of the unpatented common shaving soap one of the rewards which we intend to give inventors of new razors? Who would say so? But using the patent right to force the sale and fix the price on *things* not patented is an abuse which our legislatures and public attorneys have made but a poor and feeble attempt to prevent.

So the situation seems to be this: A monopoly of *things* without patent rights is illegal. But plenty of these monopolies, with power to fix prices, thrive in spite of all our laws and attorney generals and solemn judges who take "dissolution" suits much more seriously than the man who has to buy oil or beef or tobacco. The monopoly of *things*, when there are patent rights, however, is not only legal; it is *created* by the Government.

But now comes the confusion.

There is another kind of monopoly which concerns razors, or any other article. Here comes a man who makes a common razor. No other man is prevented from making a razor like his or selling it for less or for more—if this other man has the skill or the selling ability equal to that of the first man. This man who makes the common razor stamps his name on the razor, or he calls his razor "The Quickutter." The law recognizes his exclusive right to do this; the law protects the property rights in names, brands, and trade-marks.

Now comes the point where thought so often goes off the track and into the ditch. In fact, the chances are excellent that your Congressman's thought has been in the ditch all through this discussion of the trust and monopoly and price-fixing and price-maintenance questions in Washington. The chances are even better that you can go over to see your neighbor and find him without a glimmer of light about price fixing.

A Nice Round Expression

THE whole story can be told in this sentence: "*The monopoly of a name is not a monopoly of a thing.*" It is not a monopoly of any article which the American public buys. Because—if you do not like the "Quickutter" razor, which is a common razor, you can buy the "Stropdull," which sells for the same price, or the "Tornado," which sells for less, or a razor with no brand name at all, made, nevertheless, by the Hackitt Cutlery Company, which unnamed razor sells for more.

Now then the price-fixing question becomes a different question. No court and no sane person would question the right of the man who makes the "Quickutter" to sell it to the buyer at any price he pleases. If he marks it too high, you will buy some other kind. He can fix the price for you. He can fix the price when he retails direct to you—the consumer. He can fix the price to the retailer to whom he sells direct. He can fix the price to the wholesaler to whom he sells direct.

But the law—the wise, thoughtful, highest court in the land—has left the matter now so that it looks very much as if he cannot sell to the wholesaler under a contract by which the wholesaler agrees to maintain the price to the retailer, or the retailer to maintain the price to the consumer.

Listen!

If the man wants to sell you direct, he can charge you a fixed price upon a fixed quality of article. You can take it or leave it. There are other razors—a whole field of competing razors.

But because the manufacturer is one who finds the best and cheapest system of distribution to be through wholesaler and retailer, the law says he cannot fix the price at which his razor finally is offered to you.

Here again the courts talk about "public policy" as a reason for the possible prohibition.

That is a nice round expression—"public policy."

Driving a Senseless Idea Into a Corner

LET us go out of the court room and into the business world, and leave theories and face conditions and see what "public policy" really demands—the public policy which has a bowing acquaintance with the needs of the manufacturers, big and small; the wholesalers, big and small; the retailers, big and small; and, above all, the needs of the *consumer*.

Before we continue any laws or pass any laws against these different classes—and, above all, against the right of the *consumer* to be protected from price cutting, and saved from the price knife, and insured a continuance of sound American merchandising methods, let us take a look at the consequences which follow upon mistaking the monopoly of *names* for the monopoly of *things*. Let us drive into a corner the senseless idea that the consumer suffers because a man who makes common razors wants to maintain his particular razor at his particular price.

Let us consider whether we have not acquired, in spite of all our fast-moving and sometimes abnormal economic development, certain national virtues of trade, and distinctive, honorable, and noteworthy customs of business which we would be sorry to lose by taking the wrong road on the price-maintenance question. Then let us come down to actual cases and see whether it is not true that the consumer *himself* is vitally concerned on the side of *allowing* any maker to say at what price, in a competitive market, his product shall be retailed.

A little over half a century ago American business was being conducted from top to bottom on the jockey-

Digitized by Google

ing, higgling, bartering basis. Manufacturers, as a general custom, were selling in one territory at prices higher than in others, discriminating in prices between individual customers, "trading out" orders. On the other end, the retailer was still a shopkeeper who regarded the customer with a "'walk into my parlor,' said the spider" attitude. The customer was prey. He was charged what he would pay. Competition between merchants was competition which was more exclusively based upon price, and did not emphasize, as there are now emphasized, "house" reputation, standard dealing, and service. The old principle of the common law, "caveat emptor"—let the buyer keep his eyes open, because the law says he takes the risk—had more of an application then than to-day.

Is Merchandising to Retrograde?

SPECIALIZATION of industry—the development of manufacturing toward the point where a few rather than the many products, and a class rather than a diversity of products, were made by one plant or group of plants—began to make it imperative that loose trade methods be relinquished. It was no longer a question of what the maker could get from his customer by "trading"; it became rather a question of figuring manufacturing costs plus a certain profit, and then basing upon these figures the price. With the development of the field of manufacturing and its arts, the old era, when "a shoe was a shoe," and there was competition on prices, gave way to a new era, when special shoes were made for special purposes and shoes were made with individuality. Competition was no longer primarily on price; competition in America had evolved into competition on *quality*.

So also with the service a retail store rendered. It was a business volcano when A. T. Stewart, the great New York merchant, and the Hoveys in Boston announced that they were about to put into effect a "one-price-to-all" system of retailing goods. But these changes marked the beginning of a new commercial principle.

In America, *Barter* was being supplanted by *Merchandising*.

To-day, it is still true that in general the retailing method in foreign countries remains in the bartering class. To-day, it is still true that we retain full belief in a national business custom of one price, based upon cost and offered to the world without discrimination. Our national competition is a competition on *quality*. We have no cause for alarm about our national business as long as we have competition and as long as that competition leads toward the making of a better *product*. But it would be unfortunate if the "down with quality" competition were opened again and we began a retrogression toward the state which the law still recognizes in its maxim: "The buyer takes the risk; let him beware."

Blows Aimed at Standardized Quality

WE HAD moved away from that unsavory principle. Business had become large enough so that a manufacturer who made a special product looked forward, not alone to selling this year a cheap, adulterated, or doctored article for the most he could get for it, but toward a succession of years during which he could build up a steady business, because a demand had been created *for his standard article of "proved quality."* The evolution of industry made a large investment necessary, not only in the plant itself, but in selling and building up a good will. It was to the interest of the manufacturer to put his name or his brand on his goods so that the consumer might know them from competing goods; it was to the interest of the consumer that any manufacturer should adopt a brand or put his name on goods because it was an evidence of good faith given to the buyer, no matter how remote, who was offered the goods. It tended to standardize quality and raise American business out of the "caveat emptor" class.

Instead of approving this tendency, however, our legislatures and courts, no doubt confusing the fixing of retail prices by a monopoly in a noncompetitive field with the fixing of retail prices by the maker of a competitive product in a competitive field, have been striking blows at our system of "good-faith quality," attempting to penalize the maker of products who goes to the consumer with a standardized product, identified by his name or his brand mark, and tending to reward the maker, wholesaler or retailer, who conducts the fly-by-night, trade-piracy, price-knifing quality-cutting type of business.

Follow the idea out in actual cases.

A publishing house has built up an individual reputation in a competitive market. The name of the house appears upon all its books. Among its books are those written by certain authors whose literary property in their works is unquestioned. The publishing house, *in a competitive field*, relies upon its reputation for procuring the right to publish the works of good authors, for producing attractive, serviceable books. It has no means of saying to the public: "You must buy our books." It merely says: "We offer these books. We are trying to appeal to the tastes of readers, just as numbers of other houses make their appeal." It arranges to publish books at a certain cost, which, with a retailer's profit, shall reach the reader at a certain price. It spends large sums of money in advertising. It depends on numbers of retailers of books, whose exclusive business is the retailing of books. After the demand has been "reached" by the advertising investment these are the retailers who make distribution of the product.

But a department store installs a book department. The department store does not intend to sell books at a profit. It intends to conduct a book department at cost in order to attract into its store customers who will buy *other* goods at a profit—and sometimes at an unreasonable profit. The department store knifes the price of the publishing house's books. The retailer of books up the street cannot compete. He cannot carry a stock of the reputable publishing house books. He "pushes" other books upon which there *is* a profit. The publishing house has to meet this situation. The better the reputation of this publishing house, the more advertising it has done; the larger the demand of the public for its distinctive quality of printing, papers, bindings, or authors, the more it is made a victim of this price-cutting dilemma. The department store has *stolen* the business good will of the publishing house, and, on top of that, it sells books at a price which gives the public the untrue fancy that the regular prices represented an undue profit.

Hoofit Hose was the bait. *On each of the half dozen hose he "saved" 9 cents; on each of the half dozen shirts he was "out" 15 cents*

To meet the situation the publishing house must either change its policy of building up a trade based on reputation or it may go to the lawmakers and the courts and say: "I want to protect myself. I want to be able to sell my product so that the buyers will agree to sell to the consumer at a price which is uniform. I have no monopoly of books. If you give me the right to fix resale prices, my competitors will still be able to undersell me or compete with me in quality and appeal to public demand. If you give me that right, you will protect me and the legitimate retailer as against the big store, the chain stores, or mail-order houses who use my books as 'come ons' and 'leaders.'"

The Law Really Stifles Competition

BUT the law is leaning toward the point where it will say "No," and will add: "It is against public policy"—and, in fact, will punish the publishing house for adopting sound business methods and for building up a business in a competitive market based on satisfaction furnished to consumers.

Let there be no confusion on this point: the law very properly forbids publishing house A and publishing house B from agreeing to fix prices. No one objects to the law forbidding *that*, because it tends to suppress competition. But the law is doing a different thing if it forbids A, who competes with B, C, and D, from attaching a price to his product, which shall follow through any resale, until the consumer is reached by A's own and exclusive article of manufacture. And everyone should object to a law forbidding *that*, because the prohibition tends not to encourage competition but to stifle it.

Let us see how. A manufacturer of tooth paste believes in his product. He attaches his name or his trade-mark so that you and I may know that tooth paste from other competing tooth pastes. We buy it, choosing it from among all other tooth pastes, because we learn that it has a quality. It costs a quarter. We pay the quarter because we want to. We prefer to pay a quarter for the Killgerm Paste rather than fifteen cents for the Bigtube Paste.

Business Damaged by "Sales"

BUT now a chain of retail drug stores cuts the price—either as a "come on" to catch patrons or *as a means of "knocking out" the small independent drug store*. The "independents" cut the price lower, trying to compete. By and by there is no retail profit on Killgerm. The Jones Drug Company, Smith & Brown, Apothecaries, and Robinson, the Pharmacist, cease to carry Killgerm, or they "talk up" the inferior "pink mud" in the Bigtube, which yields a large retail profit at fifteen cents. The upshot of all this is that the Killgerm Company is punished for attempting to serve the public with "a good-faith quality." The combine of drug stores is given another knife to cut into little competitors.

Another actual case without the real names: A maker of men's hosiery sells the Hoofit Hose to retail at 25 cents. He guarantees them to wear six months or money back. Does anyone have to wear the Hoofit Hose? Not at all. If anybody is willing to pay 25 cents for Hoofit quality, it is not because there are no other socks to buy; the market is flooded with competing socks. If there is any demand for Hoofit, it is a demand which the Hoofit has *earned*. Now comes a New York department store "featuring" Hoofit Hose at 95 cents a half dozen. A consumer who likes Hoofit and knows about the guarantee goes to the sale, buys half a dozen pair; while he is in the store he is tempted into buying six shirts marked at $1.15 and worth $1. The Hoofit Hose was the *bait*. On each of the half dozen hose he "saved" 9 cents; on each of the half dozen shirts he was "out" 15 cents. When he arrived at home he found the usual guarantee slip had been taken off the socks. A man who found himself in this situation wrote the manufacturer. His letter says: "I phoned the department store. . . . They absolutely refuse to do anything about it, and simply say, as only 95 cents was paid, they could do nothing. In their ad in the papers it distinctly said they were $1.50 quality; and they are in boxes with your trade-mark on the end. I am quite positive a firm like yours would not do such business. Very truly yours, L. B. C."

But the department-store-advertised "sale" did not damage good will only; it damaged *business*. Retailers who carried the Hoofit Hose in and around New York City began to complain. "How do you account for this advertising?" one storekeeper wrote the manufacturer. "How can we small dealers sell goods which are being advertised at smaller prices? Respectfully, Edward Kolb, Romney, New Jersey."

To such an extent has this evil of price knifing been conducted that sometimes even the more honest department stores find objection to branded goods because of the risk in handling them.

Where the Consumer Comes In

TWO forms of argument have appeared on the other side. One is that before manufacturers of branded articles are allowed to fix the resale price of their products, they should first be compelled to put into effect a one-price system in their sales to jobbers or retailers. The claim is made that makers of branded goods discriminate between large and small distributors. In answer to this it may be pointed out that the modern tendency is to do away with such discriminations on the ground of good business policy. One of the largest brand-marked cereal companies in the country has found a great asset of good will in a "single-price-to-all" system. But the more complete answer is that evil trade practices between maker and distributor have little or nothing to do with the matter of price maintenance as between the maker, his agents and distributors, and *the consumer*.

The second form of argument is that makers of branded articles are often recipients of undue profits and that the price cutter is therefore a public benefactor. This, like many of the fallacies about price maintenance, overlooks the fact that where there is competition in articles serving the same purpose, prices are regulated by what the consumer chooses to pay for an article of standard quality. It is as much an offense to the consumer to cut the price, discredit the article, and tempt the maker to cut quality, as it would be for another retailer to raise the price in the hope of obtaining an unmerited profit. The consumer knows the branded product, and buys it at a fixed price in preference to other brands at the same or different prices. The price cutter, instead of being a consumer's benefactor, disturbs the ideal trade situation in which the consumer "knows what he is getting," and pays for what he wants a price *which he is willing to pay*. If the consumer buys an advertised standardized brand which competes with a field of like products, it is because he is convinced that he wants that specific article, carrying a trade-mark or maker's name as a guarantee of good-faith quality. If the advertising is honest, no one can better represent the con-

Heat Waves

By George Fitch

ILLUSTRATED BY RODNEY THOMSON

EVER since the glorious Fourth has been observed in this country there has been a marked advance in civilization, education, prosperity, happiness, and general good feeling. The alphabet commission at Niagara Falls should be urged to come to an agreement by to-day in order that Mexico may also celebrate the Fourth of July hereafter, and reap all the innumerable benefits of freedom at the cost of a few ruined fingers and burned thumbs per year.

Seasonable Sonnets

THE DENATURED FOURTH

When the red-coated tyrant held our land
In his dread grip, our bold forefathers rose
And smote him hip and thigh and likewise nose
Till freedom bloomed and grew to beat the band.
Ages have passed since Concord's mighty stand.
Do we forget? Not much. Their bravery
We laud each glorious Fourth with clap of hand;
With silken banners and with sweet iced tea.
Still are we valiant, brave, and eagle-free,
Our orators proclaim—in voices soft
Which wake no eaglet sleeping peacefully,
Safe on its listening mother's breast. Aloft
The rude flag soups and strains—fie on such noise
That sets so poor a pattern for our boys.

Mellen Food for Directors

FOR years we have heard a great deal about "High Finance" without knowing much about the meaning of the term. The late disclosures of Mr. Mellen, however, enable us to imagine with some slight accuracy the proceedings in a directors' meeting of a good old-fashioned railroad system running from Wall Street to Hades.

CHAIRMAN OF BOARD—C'm to order. Sec'l read min'ts. App'vd. Moved'n s'ec'd that we buy the Jiggerstown & Western Railway. All'n favor—

FIRST DIRECTOR—How much will it cost?

CHAIRMAN—None of your business. Motion carried.

SECOND DIRECTOR—I see by the report that we have spent $35,000,000 for the Solong & Elsewhere Railroad. Th' darn thing only cost $5,000,000. Whad'd we spend all this for?

CHAIRMAN—Well, we had a chance to borrow the money, and if we hadn't the Central people would have borrowed it. All in favor of buying the Clam Bay Ferry say "Aye." Carried.

THIRD DIRECTOR—How much do we have to pay for it?

CHAIRMAN—How much have we got in the treasury?

TREASURER—About $3,000,000, but the bank'll take some more second serial refunding equipment depreciation 6 per cent debentures.

CHAIRMAN—About two bushels of those 6 per cents ought to do.

FIRST DIRECTOR—Say. There isn't any Clam Bay Ferry. It burned down last year and we wouldn't let the ferryman rebuild it.

CHAIRMAN (angrily)—What'r you crabbing this game for? You don't know any more about finance than a rabbit. Anyway, I bought it last year, so dry up.

FIRST DIRECTOR—Did you pay for it at the time?

CHAIRMAN—I suppose so, but the owners are friends of ours and they need more money.

FIRST DIRECTOR—Just the same I don't think it's right to pay them twice.

CHAIRMAN—You big fool, we aren't paying them. We're just giving them bonds.

(Knock at the door.)

CHAIRMAN—Whaddye want?

GENERAL OPERATING SUPERINTENDENT (pokes head in cautiously)—I'm sorry, sir, but we're awfully short of locomotives, sir. We can't run all our trains.

CHAIRMAN—Whaddye mean, man? We've got scads of locomotives. I ordered a thousand last year.

SUPERINTENDENT (very nervous)—I know, sir, but those New York gentlemen, sir, they've been playing poker with a ten-mogul limit. We can't keep the engines at all, sir. They took one off the limited last night, sir.

CHAIRMAN—They ought not to do that. You ought to stop 'em.

SUPERINTENDENT—Me! My God!

CHAIRMAN (much peeved)—That's a fine trick. It'll take a month to get more engines. We'll have to rent some. Move we buy 500 new engines. Carried. (To Superintendent) Now, you take care of these engines, d'ye hear? Don't fritter them away.

SUPERINTENDENT—But the gentlemen insist on using them for chips. Can't you speak to—Him?

(Breathless pause. Chairman pales slightly.)

CHAIRMAN (gets bright idea)—I'll tell you what. You take the drivewheels off and keep them hidden. Tell 'em we got the stuff cheap and they held out on the drivewheels.

FIRST DIRECTOR (belligerently)—But how you going to run trains with no drivewheels? The people are kicking already.

CHAIRMAN (in deep disgust)—Argh, the people! You mean the agitators. We'll issue a statement saying that, owing to adverse legislation, we can't afford to buy equipment.

FIRST DIRECTOR—Say, we can't take care of our business now. We got to have more trains.

CHAIRMAN—Sit down. You give me a pain. We'll double the commutation rates. That ought to keep down business.

OTHER DIRECTORS—Fine idea.

CHAIRMAN—I have here a letter from a European banking house saying they'll take $100,000,000 new bonds.

ALL—Hurrah.

CHAIRMAN—Moved'n carried, issue hundr'd mill'n new bonds. Now, gentlemen, what shall we buy?

Kansas—Blissfull and Wheatfull

OF ALL known degrees of bliss, the extra superlatively perfect degree can be found in Kansas just now. Never has there been so much wheat in the State before, and unless the tired earth turns over with a convulsive grunt and buries it, the crop will break all previous records by 50,000,000 bushels.

This means that the Kansas wheat farmers will gather in upward of $125,000,000 in money this fall. Debts will be paid, business will boom, new farmhouses will spring up, barns will grow bigger and redder, automobile agents will work nights, tramps will have prosperity thrust upon them and the farmers' boys will go up to Manhattan (Riley County) by the thousands next year, armed with corpulent bank rolls, to study agriculture. Kansas is so happy that there aren't enough birds in the State to sing its joy and the thresher men are putting chime whistles on their engines.

Strange what varying significance a rainstorm has in various sections of the world. Rain is no great shakes in New York or even Illinois. It is a part of the general program and is only noticed when it fails to show up for two months. But as soon as Kansas has taken its first anxious look at the wheat fields sprouting green in the early spring it begins to watch the heavens.

One big rain means some wheat. Two soakers mean a fair crop; and a third deluge means canceled mortgages, bank accounts, new pianos for the parlors, trips to Europe, a year of auriferous joy.

They say one rainstorm added 25,000,000 bushels to the wheat crop of Kansas in May.

New York puts up half a million a year for grand opera, but a peal of thunder is music in Kansas which would make Caruso's tones sound like mournful bleats. In Kansas it can rain all day Saturday and Sunday, and not one golf player will say "Drat the Luck!"

Churched!

SLOWLY tobacco seems to be winning its way in the churches. Apparently it has been for many years a part of the ritual of the Episcopal Church—at least we have seldom seen an Episcopal rector unaccompanied by a cigar. And recently the use of tobacco by Methodist ministers in the South was forbidden by a majority of only two votes out of 234. We may yet see the day when the customer at a church supper who finds an oyster in his soup will be entitled to a good cigar.

Spelled Down

AS AN evidence of the progress of education in our leading colleges and universities, we submit the news that the freshman spelling team of Knox College defeated the Lombard College team last month in an exciting contest, the losers taking the count on the word "subterranean" amid tremendous applause.

Our Golf Department

Conducted for the Weak and Helpless

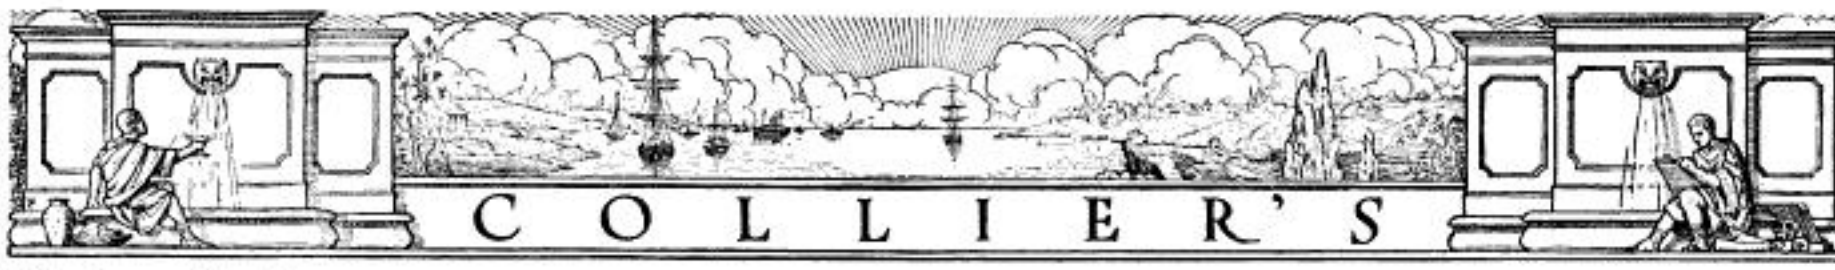
A MAGNIFICENT victory for the cause of the Dub Golfers has been won in an Eastern city. A veteran player whose driver was taken away from him by an eighteen-year-old boy who attempted to give him a few lessons was acquitted of the charge of assault. This is splendid news for those unfortunate players who have suffered so severely from advice during the last few years.

Preparations for the first annual tournament of Dub Golfers are already under way. The course has not yet been selected, but the nine-hole course in Jackson Park, Chicago, is favorably mentioned. It is about 1,800 yards in length and the only hazard is Lake Michigan.

A Miami, Fla., golfer who has spent as many as thirteen strokes in a bunker under the old system has invented a new club for use in a sand pit. It is short and thick, and is shaped like a shovel. With this club the inventor has succeeded in putting four pounds of sand, three large stones, and the ball itself on the green at a distance of thirty yards in a single stroke.

Answers to Correspondents

Discouraged, New Orleans—*If you took 25 strokes for a 350-yard hole, there must be something wrong with your game. Do you keep one foot on the ground while driving?*



G. B. S., Indianapolis. *If you played your approach into a baby carriage beyond the green, your opponent has a right to make you play it out. On the other hand you have a right to buy the carriage and wheel it onto the green before upsetting it. A baby carriage is a movable hazard.*

F. R. B., New York. *Golf rules were invented by the Scotch, who do not trust each other even in the smallest details. If you touched the ball when you didn't intend to, it should be charged off against the last time you didn't hit the ball when you intended to.*

The Day and the Flag

THE FOURTH OF JULY is, above all others, the day of our flag—"the flag that is like a flower," as the Chinese said when our banner was seen at Canton. The spirit of day and flag alike has never been more beautifully expressed than in these lines from the speech that Secretary of the Interior FRANKLIN K. LANE made to the clerks of his department on Flag Day:

> Then came a great shout from the flag:
> "The work that we do is the making of the real flag. I am but its shadow. I am whatever you make me, nothing more. I am your belief in yourself, your dream of what a people may become. Sometimes I am strong with pride, when men do an honest work, fitting the rails together truly. Sometimes I droop, for then purpose has gone from me, and cynically I play the coward. But always I am all that you hope to be and have the courage to try for. I am song and fear, struggle and panic, and ennobling hope. I am the day's work of the weakest man, and the largest dream of the most daring. I am the Constitution and the courts, statutes and statute makers, soldier and dreadnought, drayman and street sweep, cook, counselor, and clerk. I am the battle of yesterday and the mistake of to-morrow. I am the mystery of the men who do without knowing why. I am no more than what you believe me to be, and I am all that you believe I can be. I am what you make me, nothing more. My stars and my stripes are your dreams and your labors. They are bright with cheer, brilliant with courage, firm with faith, because you have made them so out of your hearts, for you are the makers of the flag, and it is well that you glory in the making."

In "Who's Who in America," Secretary LANE's biography begins like this: "Born Prince Edward Island, Canada, July 15, 1864. . . . Removed to California in early childhood; educated at the University of California, 1886." Secretary LANE is an American.

Good Appointments, These

PRESIDENT WILSON'S appointments to the Federal Reserve Board are beyond reproach. Few men have the combination of scholarship and experience possessed by Mr. WARBURG, and none could approach a public service with a higher devotion to the public good. The other appointments are, according to the testimony of those who know the men, equally high. Many acts of Mr. WILSON'S Administration have been such as to excite enthusiasm for his high standards, none more than these appointments. They constitute a fitting perfection to what is probably, considering its intricacy, the best devised and most intelligently worked-out piece of important legislation that has been passed in Washington in more than a decade. For the quality and value of the currency bill, credit is due almost wholly to the high intelligence and steady hard work of President WILSON. It is a pity that, in execution, it is going to be slightly marred by the favoritism and arbitrariness shown in the selection of reserve cities by Secretary MCADOO and Mr. JOHN SKELTON WILLIAMS.

The Achilles Heel

THE VULNERABLE POINT of the Democratic party in the Congressional elections this fall lies in the following quotation from their platform of 1912:

> We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. *We demand a return to the simplicity and economy which befits a democratic government.*

In the face of this plank the present Democratic Congress has been the most wantonly wasteful in the history of the Federal Government. If we were in charge of the anti-Democratic campaign this fall we would set the statisticians and the investigators busy upon the Democratic "pork" bills and confine our compaign to them alone. It wasn't merely wanton wastefulness. It comes near being larceny on the part of individual members, for they are taking the money with a private motive—to buy their way back to Congress with public money.

An Ancient Wail

THE ABLE CALAMITY HOWLERS who are twisting facts about tariffs and trade balances to make it appear that this country is hell-bent are urged by a correspondent of ours, Dr. H. C. MYERS of Spokane, Wash., to read the "Ladies' Repository" for June, 1853. The article is entitled "Speculation, Opulence, Beggary":

> A Wall Street journal thus discourses: "Real estate rising daily, the poor man becoming poorer, and the rich one gloating over rising rents and an increased price for those articles necessary to life. This is called a prosperous and healthy state of things. Never in our life have we seen beggars so staring us in the face on each corner—our streets swarm with them; while our public thoroughfares are crowded with carriages and finery bought with paper; our fashionables squandering paper on those who want it least; houses built for princes rather than republicans; extravagances rampant; city railroads sold by a venal, corrupt, and so self-admitted corporation, composed of the worst class of our citizens—a government whose imbecility is portrayed by the press, both friend and foe; millions on millions of credit piled up; indebtedness abroad daily increasing; exchange above the specie point; falsehood in every financial press, with few exceptions; our imports exceeding by millions our exports; and still we are sometimes asked, why are you a bear? While admitting, for we see it daily before us, the growing wealth of our country, the increased receipts of our great railroad lines—we know its noble destiny—we also know the base of the fabric is paper; the architect, the mob; the structure, artificial. It is hard to oppose the current—a dead fish cannot; but we, being alive, troutlike, will attempt to swim upstream."

And the swimming has been notably good since 1853. What does Dr. MYERS think of Representative HUMPHREY of his own State? Our own thought is that Mr. HUMPHREY would have done his State credit in Congress—about 1853.

A Prodigy

YEAR AFTER YEAR, season after season, we have waited for it to happen, hoping against hope, almost despairing that it could ever occur. But at last the ball dispatches of June, in the year of our LORD 1914, have brought the glad tidings. A ball game between Washington and St. Louis was the scene of the great event:

> ERNIE WALKER [of the St. Louis Browns] was presented with a floral tribute and immediately hit to center for a home run.

And yet they say the day of miracles is past!

Friends in the Dark

OUR CRITICISMS of LORIMER's friend, GEORGE WHEELER HINMAN, as president of a little college at Marietta, Ohio, have drawn a number of letters from his friends, one of the more pungent being addressed to the "Idiotorial Department, the Pro Bumo Publico Magazine":

> Your malicious mud slinging at the former editor of the Chicago "Inter Ocean" is extremely funny; it reminds me of a cockroach attacking a lion. GEORGE WHEELER HINMAN, when editor of C. L., was known as one of the few brilliant journalists of this country, a man whose scholarly and keen intellect was too rare for an editor of an American paper to make his paper a financial success; up to the present America has still a rural conception not only of morals but of all phases of civilization.

Cheers! We hope that this "rural conception of morality" will last a great while longer than HINMAN or our own "Idiotorial Department"—but we have a question to ask: Why do all HINMAN's friends neglect to sign their names to the letters they write us? We have had several, and we have wanted to print them in evidence of fair-mindedness—but the names are never given, and the fragment above is all that is decently enough written to go into a family paper.

If

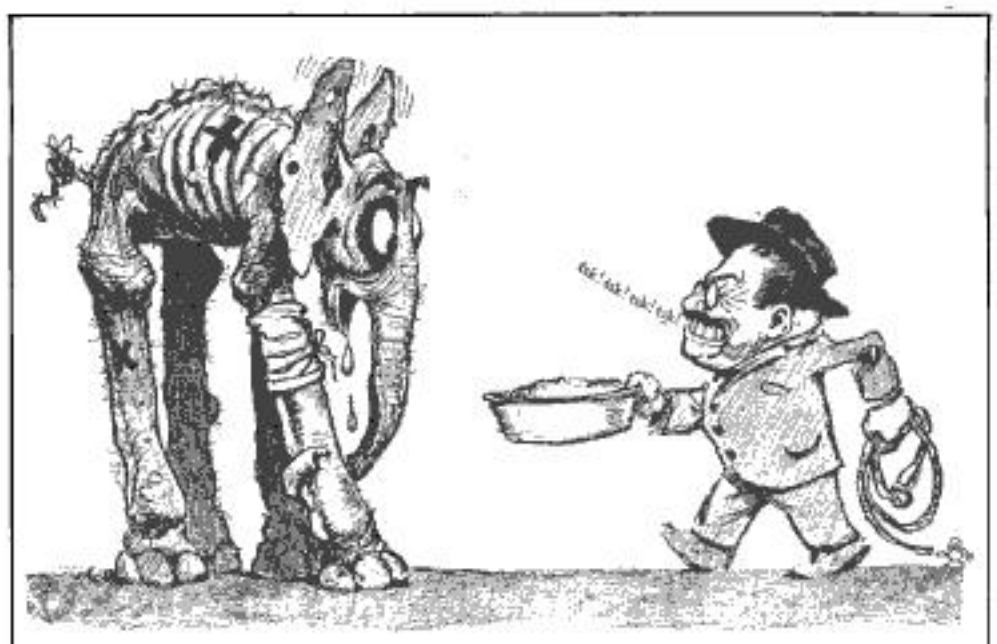
IF A MAJORITY of the voters of the United States cast their ballots this fall in favor of Democratic candidates for Congress, it will be solely upon the theory that the best way to run the United States is to provide WOODROW WILSON with a sufficient number of pawns to do with exactly as he wishes. What has been worth while in the history of the present Congress has been done almost wholly on the President's initiative and insistence.

Getting Down to Business

A DISCUSSION of one of the most important points relative to the pending antitrust legislation at Washington is Mr. RICHARD WASHBURN CHILD's article, "The Price Knife and the Law," in this issue. Mr. CHILD has ably presented the view which is commonly associated with its foremost advocate, Mr. LOUIS D. BRANDEIS.

A Vindicated Brow

WHO IS FOREMOST of the artists of the last quarter century? WHISTLER, MONET, and CÉZANNE might suggest themselves to some of us as candidates, or possibly one of the Spaniards, SOROLLA or ZULOAGA; but the New York "Evening Journal" unhesitatingly discards them all and picks HARRISON FISHER. The choice may not win the unanimous approval of the world's art critics, yet there is a sense in which the "Evening Journal" is right as a fox. For no artist of the last quarter century has finished off Mr. HEARST with more artistic neatness and dispatch than Mr. FISHER did the other day. With no apparent provocation, the "Evening Journal" leaped upon a caricature of HARRISON FISHER (copyrighted property of the McClure publications) and printed above it "Copyright, 1914, by the Star Company," and below it "TOO MUCH FACE—TOO LITTLE BRAIN." Mr. FISHER was not named in the editorial, but the picture was in current circulation, and no one who knew the victim or had seen



Digitized by Google

THE NATIONAL WEEKLY

the drawing could fail to know at whom the thrust was aimed when Sir Oracle BRISBANE, he of the towering forehead, wrote:

> It is, of course, a caricature, but serves well as an illustration. This is one of the best instances we have ever seen of too much face and too little thinking machinery. . . . And you can tell fairly well what a man amounts to by looking at his face as you look at this picture, and deciding for yourself how much of the head you look at is face and how much is thinking machinery.

Crool woids, them—but soon to be unwritten! Through sixty or seventy editions the following day the "Evening Journal" carried a fulsome puff of HARRISON FISHER, past, present, and future. It occupied all of a full page but space enough for two sticks of city news and a couple of patent-medicine advertisements. The headline screamed: "HARRISON FISHER MAKES THE WORLD SEE THE RADIANT, ELUSIVE BEAUTY OF THE AMERICAN GIRL." The text described HARRISON FISHER as "foremost of the artists of the last quarter century," with a fame not of the United States alone, but world-wide. "It has come to be said," we see by the "Evening Journal," "that 'circumstances created the American man, but HARRISON FISHER created the American girl.'" If we were in HARRISON FISHER'S place, we wouldn't torture ALSOBRANDOLPH any longer. Yours is the last chortle, Mr. FISHER—"Let 'im up! He's all cut!"

Easier Hunting

Cartoon by F. G. Cooper

Keep Off the Grass!

NOW that the open season for wrecking parks is on, we would like to point out that those who steal flowers, break shrubs, and trample grass are precisely on a moral level with the franchise grabbers and contract robbers who also infest our cities. Both sorts put the law aside for their own selfish purposes, both prefer their own mean immediate advantage to the common welfare. One set of rascals is bigger than the other, but we will have to get rid of both before our cities are really good places to live in.

The Man from the Machine

THE BEST DESCRIPTION of HENRY FORD of Detroit so far printed is the interview with him included in Mr. STREET'S article in this issue. Mr. STREET'S work in this case is entitled to the overworked but useful phrase: a human document.

Stenography and Style

DOES THE DICTATION HABIT tend to a loose and wandering style? The slovenly multiplicity of our business correspondence is a favorite topic among efficiency engineers. This blight is now invading the very citadels of our intellectual life. Has anyone, anywhere, at any time, seen a worse sentence than this?

> He was wise enough to see this, and it is an extremely convincing fact that while the announcement of his purpose to provide the largest single foundation which has ever been left by any one man for professional training in his own calling—so that the Pulitzer foundation stands alone in this respect, without any other example or instance in the whole round of beneficent gifts during the last century, while this announcement was received with doubt, with some derision and much skepticism a decade ago when it was first proposed, now that the school is to be opened, the widespread announcement of the first steps of its organization and the selection of its head has had this year from the press of the country an approval, an acceptance, and a readiness to support with sympathy and encouragement the new step such as never attended any previous proposal for the training of the journalist in the history of the calling, short though these annals be.

Yet the able and learned man who did this is teaching others to write, and on a large scale at that, being none other than Dr. TALCOTT WILLIAMS, Dean of the Joseph Pulitzer School of Journalism in Columbia University. The example quoted stands (or sprawls) on pages 237 and 238 of the Columbia University Quarterly, Vol. XIV, No. 3.

Men and Women: Human Beings

WE HAVE COMMENTED on the loose "nature-faker" generalizations which are bandied about concerning the "sex question." The most nonsensical of these lunacies are those perpetrated concerning men by overwrought women, and those got off about women by complacent men. For example, Mr. OWEN JOHNSON, fiction-writing son of a man of letters, author of the new gospel that you may wallow in pitch and be profited, not defiled, whose novels are almost as interesting as scandalous gossip—Mr. OWEN JOHNSON comes forward with this sweet new bit of amateur sociology:

> Man has in him certain deeply grained intuitions toward order from the fact that he is a creator and an impelling force in life, even when he is no longer under the discipline of religion, and comes naturally toward a formation of rules and standards which give him the discipline he himself needs to enforce discipline upon others.
>
> Woman, on the other hand, due to the fact that for centuries she has been almost a benevolent parasite, has in her very little natural instinct for order. To her religion has brought the necessary element of stability in her various attitudes toward the duties and responsibilities of life. For ages this has been her bulwark, her defense against the world, and her protection from herself.

There is just enough truth here to make the untruth really offensive. If the "successful" author would leave "his sitting room at the Vanderbilt Hotel" long enough to take a few observations, he might learn that to attempt to explain things by wholesale is merely to be the more mistaken. People are orderly as individuals, not just by sex. And we should really like to see Mr. OWEN JOHNSON tell his grandmother that she was "almost a benevolent parasite." That is such an impudent, unmannerly falsehood!

More Than a Joke

"OF COURSE I'm open to conviction," remarked a charming lady in the course of some trivial discussion, "but I'd just like to see the person who could convince me." She was tossing off an idle pleasantry. But we have never heard any one sentence which so completely reflects the attitude of all reactionaries.

The Golden Hour

PSYCHOLOGISTS have scrutinized it, philosophers have discoursed upon it, cynics have sneered at it, bigots have thundered against it, artists have painted it, poets have rhapsodized over it. Yet no one has ever completely caught it—this hour of radiant girlhood. And naturally enough, for it is the most intangible and fleeting hour in all life. It marks the passing forever of the days of dear mud pies and dolls. And a great poet has hinted that with the relinquishment of childhood come the shades of the prison house. But was he not wrong? Is not rather this young girlhood the span which seems to catch and mingle for one magic instant the unreasoning blitheness of childhood with the tenderness of maturity? And the vivid and vital young girl herself—what shall be said of her? Shall one emphasize the mere external details—the lengthening of dresses and the looping up of hair, or the host of interchanged confidences with girl friends, or the comradeships with boys which now suddenly become tinged with all manner of moonshine and innocent coquetries, or the romantic dreams, or the first actual romance—in truth, a passing trifle, but filling the sky for the moment and never quite forgotten? No one of those will make the picture: it needs a little of all. Neither poet nor pedant can analyze the fragrant charm of girlhood, and in that very fact lies the real secret of its charm. Surely here is the quintessence of all living beauty, this golden instant when the dreams of youth come their nearest to fulfillment. By the mere sight of it the whole workaday world is enriched.

COMMENT ON CONGRESS

SENATOR ROOT raised a broader and more pressing question of public moment than is commonly suspected when he asked in the Senate whether our methods of transacting public business are not breaking down; whether our arrangement for the discharge of our duties [in the Senate] does not imperatively demand revision; whether the business of the country is not becoming so vast and complicated that we must have new parliamentary institutions within these bodies of Congress for the performance of our duty?

Senator Chamberlain immediately expressed his entire accord with the sentiment. "It has been almost a physical impossibility," he told the Senate, "to get the Public Lands Committee together. It is a very large committee, and we never have a full committee meeting." Senator Fall said: "I can say the same thing of other committees of the Senate, and I can say the same thing of the Committee on Mines and Mining." Senator Smith bore testimony: "Senators have to serve on too many committees. There is the whole folly of the present organization. I am a member of six or seven committees, and two of the most important meet on the same day." Senator Clapp thought the vice lay in the inordinate size of committees and the growing tendency to accommodate Senators by constantly increasing the membership. Senator Lane thought the present method "such that it would bankrupt a barber shop." He compared the veneration and respect the Senate feels for its committee system to the sacred bulls of India, "which go about eating up all the cabbages of the poor people, and it ought to be knocked on the nose and jarred loose." The truth is that both the Senate and the Lower House are swamped with the amount of work they have to do. Practically every Senator is conscientious in fidelity to work and public duty—indeed, several deaths that have occurred in the Senate during recent years are generally attributed to overwork. Congress has been in session a longer time during the past four years than in any similar period of history.

A Possibility

THE serious impeding of public business which Senator Root describes is one of the most obvious conditions to be observed at Washington. In his last few words he hints at some fundamental change in our form of government. Whether that will come in the near future remains to be seen. Everybody at Washington is agreed that the country has had about as many innovations and fundamental changes in the recent past as it can well digest for a few years to come. The general feeling is that reform and change will not be popular in the near future. And yet a constitutional convention or some form of revision of the form of government is by no means impossible. It is believed that President Wilson realizes that time has made some of our forms unnecessarily cumbersome, and would be entirely willing to initiate the call for such a constitutional convention if he felt the demand for it to be strong enough.

The President's Share

ONE of the chief present causes for delay in the expediting of the public business is the manner in which President Wilson insists upon dominating what is done. At the beginning of his Administration he had laid out a program which could well have been completed within two years but for the fact that the Mexican problem intervened. President Wilson himself initiates all the important legislation and performs the work of substantially shaping the bills, work which in other administrations is left to the proper committees of the Senate and House. This is a very great tax on the President's time and strength. He would have been able to do it well enough but for the demands on his time and vitality which have been made by the unexpected complications in Mexico.

A Serious Matter

ONE who is well informed about the shipments of arms to the Mexican combatants says there are more rifles in Mexico to-day than in the United States.

It's a Grave World

THE absence of humor and of a sense of humor is a marked characteristic of this Congress. Never has the public business been taken so seriously. There is not a recognized humorist at Washington. There has always been at least one professed humorist in the House and the Senate, but aspirants for that job in the present posture of affairs have no materials upon which to work. It isn't the present fashion to regard anything lightly or humorously. While "life is real, life is earnest," anybody who makes a joke is subject to suspicion. As most things do in Washington at the present time, the responsibility for this comes back to the President. As he discloses himself in his public formal aspect, his demeanor is serious. In his private life and his hours of ease he is reputed to have a proper sense of humor, but of this side of his character political Washington knows nothing.

Mr. Wilson is not to be blamed for not emphasizing the lighter aspect of public affairs. While there may be need, there is no occasion for humor. With foreign affairs shaping as they are, and the ever-present overshadowing Mexican problem, the humorous aspect would not betray itself to any man who did not have Lincoln's profound philosophy.

If We Should Fight

WILLIAM KENT, Representative of California, "can claim knowledge of and a sympathy with the common everyday people, whom we vaguely know and often despise as peons." Mr. Kent offers this contribution to the solution of the Mexican problem:

> If we can have ten years more of peace, I believe the Mexicans will come to be friendly with us. I cannot tolerate the thought of war with these people, looked at either from our viewpoint or theirs. Thousands of our soldiers would be killed by a people fully armed, incompetent in many warlike ways, but a people in a fighting state of mind. We all know that, psychologically, as between a man who is mentally in a state of peace and a man who is mentally in a state of war, you can shoot the latter through the heart, and before he falls he will kill his adversary, whereas the man who is mentally peaceful will quit with the slightest wound. Those people are excited; as we cowpunchers say, they are 'on the prod.' They have arms which they did not have until recently, and as long as their ammunition holds out they will make a desperate fight, and it will be a war of miserable reprisals. If we fight, it will be against a people who do not know civilized methods of war, and who can blame them for not understanding the absurd refinements of murder?

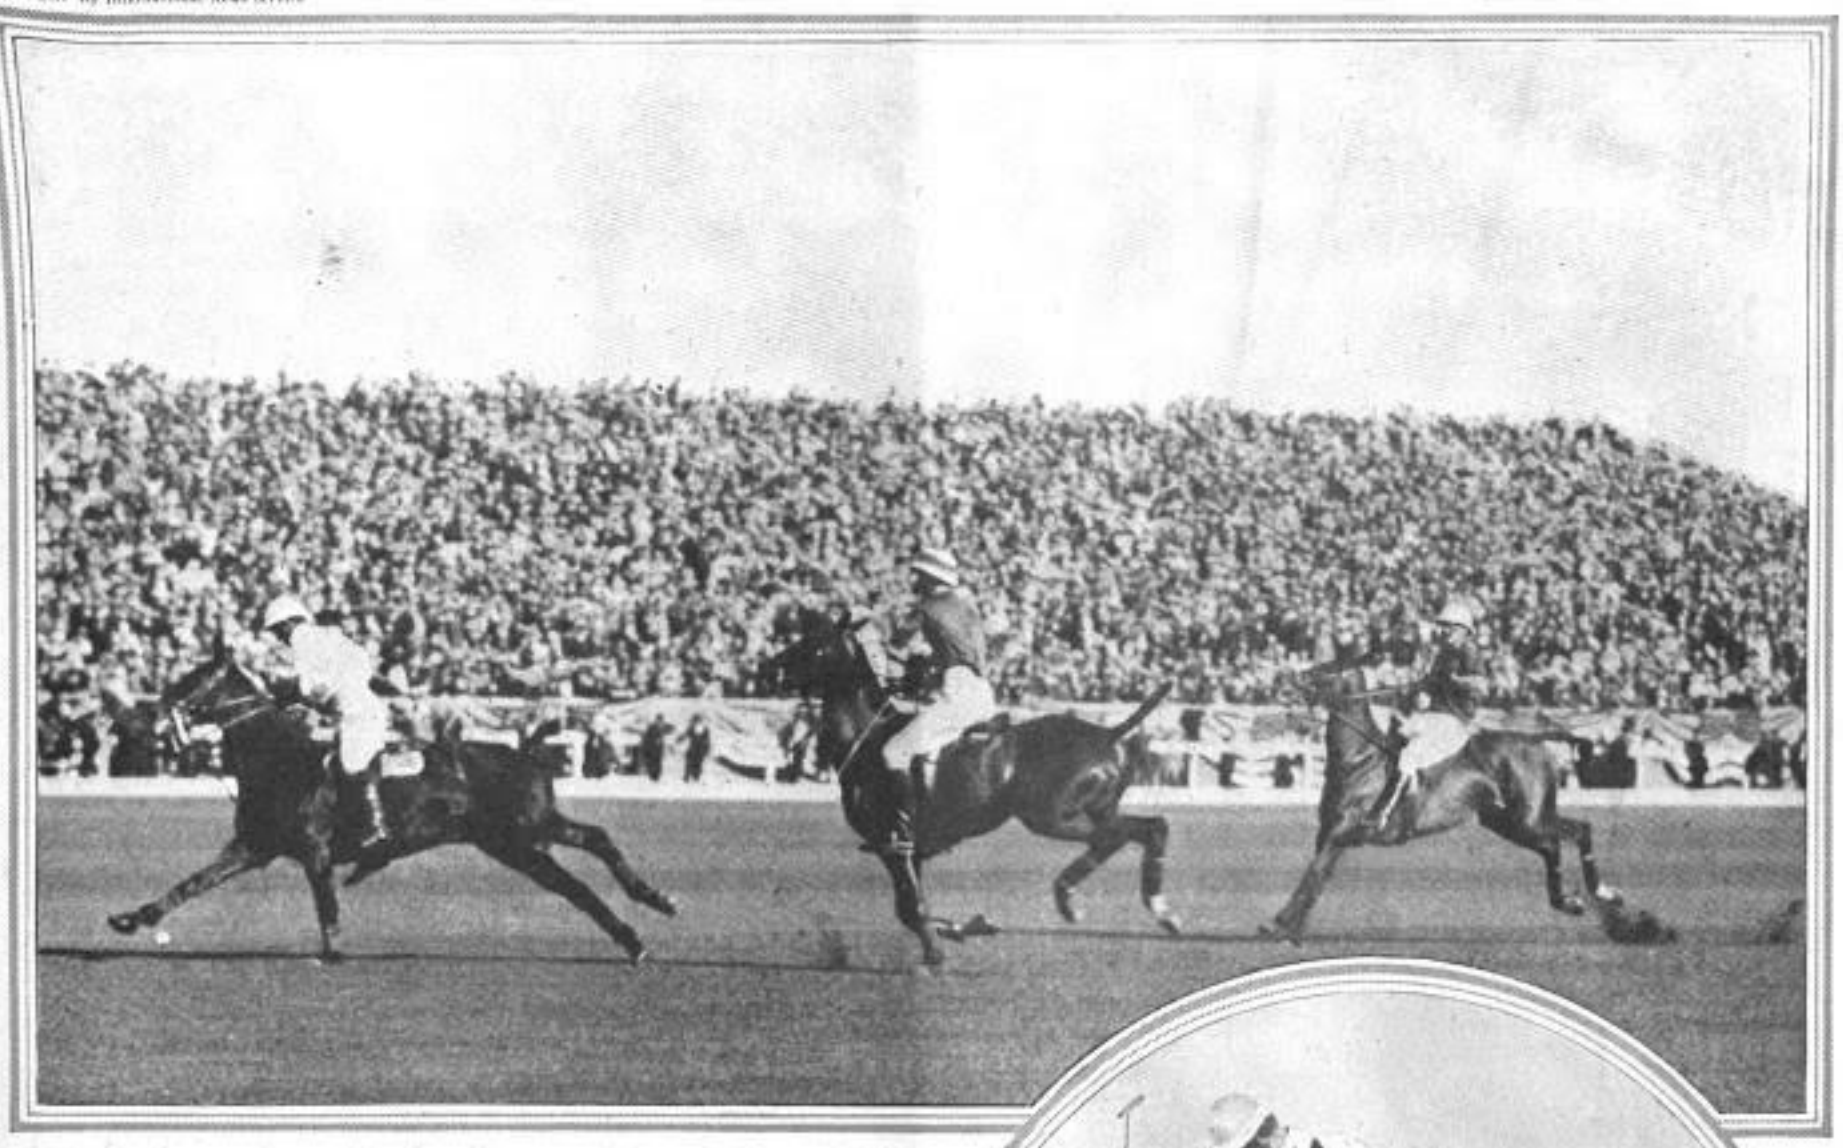
In the Olden Time

MEMBERS of Congress store away curious and interesting facts in their minds and repeat them on occasion, garnished with sound platitudes. Old Mr. Payne of New York, assistant maker of an unpopular tariff bill and the oldest man in the House in point of service, some time ago, while the House was talking about taxation in the District of Columbia, remembered

> when our present great Secretary of State broke into Washington as a member of Congress. The fact was announced that Vanderbilt was putting two front doors on his house that cost $100,000 apiece, and Mr. Bryan thought it was an awful waste of money. I said no, the bronze and other materials in those doors cost a very few paltry dollars, and the other part of the $75,000 or $100,000 went to labor. I think that is the best way to help the laborer, to give him something to do, and the more money they spend in that way the better I like it, because it helps to scatter that money among the poor and deserving people. The best way to help a man is to give him some work to do and pay him well for doing the work.

No exception was taken to this very human political economy.

How many persons besides Mr. Borland of Missouri can recall offhand Louisa M. Alcott's description of the physical appearance of Washington in 1874? Mr. Borland, while telling the House what he knew about taxation in the District, brought in his remembrance of how Miss Alcott "described in detail the pigs she met on Pennsylvania Avenue, and their individual traits and habits." And the cows still fed in Lafayette Square.



THE RECORDS OF CONGRESSMEN

FOUR hundred and thirty-five Congressional vacancies and thirty-one Senatorial vacancies will be filled at the primaries this summer and the election next November. In the great majority of cases the present incumbents are candidates for reelection. The best basis for determining whether they should be elected is, to a large extent, the way they have voted upon important measures. Collier's Washington Bureau will provide the record of the votes of any Senator or Congressman on every important roll call since March 4, 1909. This service is entirely free of charge. Give the name of the Congressman or Senator whose record you wish and address

"The Grandest Polo Game Ever Played!"

AFTER winning the second and final game the other day in the international polo contest at Meadow Brook, Long Island, Lord Wimborne's team cabled this message back to England: "We are coming home with the cup after the grandest game of polo ever played!" They may have exaggerated a little, but they did not go far beyond the popular verdict. The game gave a crowd of 35,000 people all the thrills they were looking for. The first game was easily won by the Englishmen, but in the second the Americans gave them the fight of their lives. The cup defenders—R. La Montagne, J. M. Waterbury (captain), Lawrence Waterbury, and Devereux Milburn—did marvelous work, but the British army men—Captain H. A. Tompkinson, Captain Leslie St. George Cheape, Major F. W. Barrett (team captain), and Captain Vivian Lockett—equaled the Americans for speed and surpassed them in teamwork. All the players covered themselves with glory, but Captain Cheape and Mr. Milburn got a little more applause than the others.

In the photograph above, Milburn, the American back, is carrying the ball down the field toward the English goal posts in the second game and is being chased by Captain Cheape (center) and Captain Tompkinson. The picture in the circle shows J. M. Waterbury in action.

The score of the first game was 8½ to 3, and the second was 4 to 2¾. The American team will be reorganized before it challenges the British team, as the Waterbury brothers say they will retire from the "Big Four." England won the championship in 1886 and held it twenty-three years. Then the Americans won it back and held it five years. They are counting on bringing the cup back across the Atlantic in less than five years, while the Englishmen are equally confident of future victories.

The 1914 tournament was a financial success. The box-office receipts for the two games are said to have been $200,000.

Women's Clubdom Goes Over to the Suffrage Cause

THE long fight over the suffrage question in the General Federation of Women's Clubs is over. The equal-rights advocates worked hard for twenty years to convert the national organization to their way of thinking, and the victory was won on June 13 at the biennial convention at Chicago. Practically every State delegation voted for the resolution. A few weakly voiced "noes" came from individuals when the vote was taken, and nobody attempted to speak against the measure. The triumph was due largely to a radical change of sentiment in the Southern States since the last biennial convention. Prominent clubwomen who had been strongly opposed to the political-equality movement were among its chief supporters this year. Our photograph shows the president, Mrs. Percy V. Pennypacker of Austin, Tex., calling the convention to order. She was re-elected without opposition and the regular ticket for other offices was chosen.

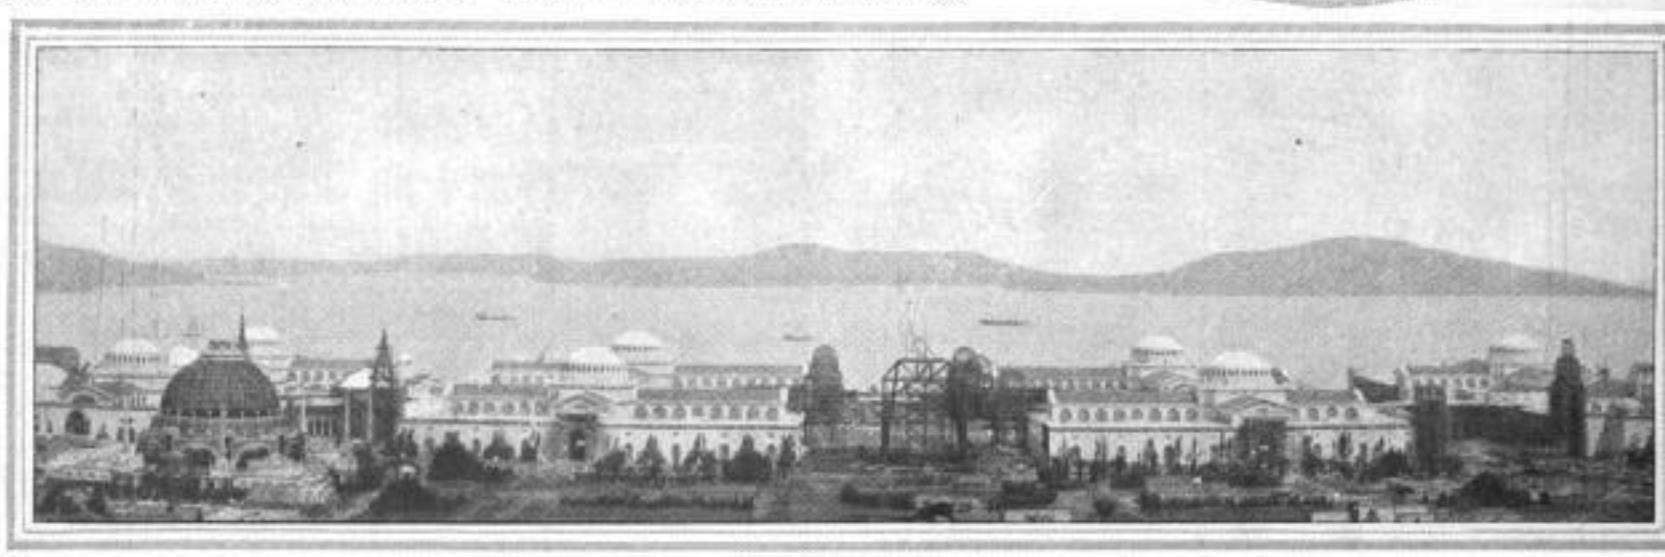
The First Liner Through Gatun Locks



THE snapshot above shows the *Alliança* of the Panama Line on the first trip ever made through Gatun Locks of the Panama Canal by an ocean liner. She is leaving the upper west chamber on her way to Gatun Lake on the Pacific side of the Divide. The ascent from the sea level to Gatun Lake, eighty-five feet, took an hour and twenty-four minutes. The return trip was about ten minutes longer. The *Alliança* is a small steamer—she had a gross tonnage of only 4,000 when on June 8 she went through the locks—but the test was as good as if she had been one of the biggest liners afloat. The experimental trip was to try out the electrical towing machines, which were operated with the accuracy of a perfectly regulated clock. But the speed with which this test was made is not regarded as indicative of the time required to take a bigger ship through the locks.

Finding Motor Trouble with a Lung Tester

THE motor-car makers have borrowed a good idea from the medical profession. They are using the stethoscope to detect irregularities in the workings of automobile engines. The factory instrument which is being applied to an engine by the man at the right in the circle is essentially the same as the stethoscope used by doctors in testing the lungs and other internal organs of the human body.

Copyrighted 1914 by the Panama-Pacific International Exposition Company

THE PANAMA-PACIFIC INTERNATIONAL EXPOSITION IS 85 PER CENT COMPLETE.—*Eight of the finished buildings are shown in this photograph. The four facing the harbor, left to right, are the palaces of Food Products, Agriculture, Transportation, and Mines. Again proceeding from left to right: Education, Liberal Arts, Manufactures, and Varied Industries. The domes of the paralleling exhibition buildings are 160 feet above the floors. The large structure in the foreground (left) is the Palace of Horticulture, whose dome is 186 feet high and 152 feet in diameter. The steel framework in the center is for the 435-foot Tower of Jewels*

Detroit the Dynamic

(Continued from page 10)

Detroit Museum of Art, Baedeker bursts into black-faced type, and even adds an asterisk, his mark of special commendation. Also a considerable reference is made to various collections contained by the museum: the Scripps collection of old masters, the Stearns collection of Oriental curiosities, a painting by Rubens, drawings by Raphael and Michelangelo, and a great many works attributed to ancient Italian and Dutch masters. "The museum also contains," says Baedeker, "modern paintings by Carl Melchers, Munkacsy, Tryon, F. D. Millet, and others."

I have quoted Baedeker as above, because it reveals the bald fact with regard to art in Detroit; also because it reveals the even balder fact that our blessed old friend Baedeker, who has helped us all so much, can, when he cuts loose on art, make himself exquisitely ridiculous.

The Art in One Man's Head

THE truth is, of course, that Mr. Freer's gallery is not merely the "finest private gallery in Detroit"; not merely the finest gallery of any kind in Detroit; but that it is one of the exceedingly important collections of the world, just as Mr. Freer is one of the world's exceedingly important authorities on art. Indeed, any town which contains Mr. Freer—even if he is only stopping overnight in a hotel—becomes by grace of his presence an important art center for the time being. His mere presence is sufficient. For in Mr. Freer's head there is more art than is contained in many a museum. He was the man whom, above all others in Detroit, we wished to see. (And that is no disparagement of Henry Ford!)

Once in a long, long time it is given to the average human being to make contact for a brief space with some other human being far above the average—a man who knows one thing supremely well. I have met six such men: a surgeon, a musician, an author, an actor, a painter, and Mr. Charles L. Freer.

I do not know much of Mr. Freer's history. He was not born in Detroit, though it was there that he made the fortune which enabled him to retire from business. It is surprising enough to hear of an American business man willing to retire in the prime of life. You expect that in Europe, not here. And it is still more surprising when that American business man begins to devote to art the same energy which made him a success financially. Few would want to do that; fewer could. By the time the average successful man has wrung from the world a few hundred thousand dollars, he is fit for nothing else. He has become a wringer and must remain one always.

A Real Job for a Biographer

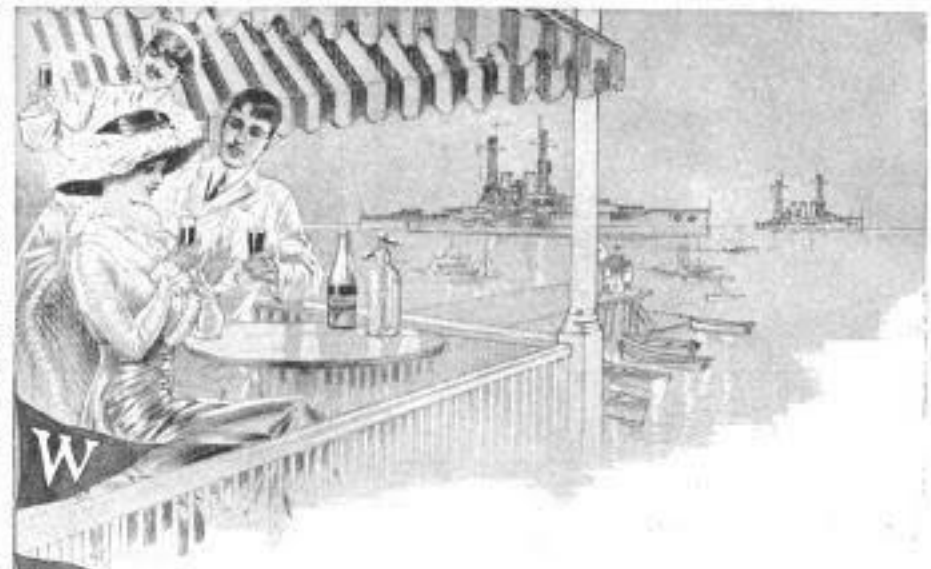
OF course rich men collect pictures. I'm not denying that. But they do it, generally, for the same reason they collect butlers and footmen—because tradition says it is the proper thing to do. And I have observed in the course of my meanderings that they are almost invariably better judges of butlers than of paintings. That is because their butlers are really and truly more important to them—excepting as their paintings have financial value. Still, if the world is full of so-called art collectors who don't know what they're doing, let us not think of them too harshly, for there are also painters who do not know what they are doing, and it is necessary that some one should support them. Otherwise they would starve, and a bad painter should not have to do that—starvation being an honor reserved by tradition for the truly great.

Very keenly I feel the futility of an attempt to tell of Mr. Freer in a few paragraphs. He should be dealt with as Mark Twain was dealt with by that prince of biographers, Albert Bigelow Paine; some one should live with him through the remainder of his life—always sympathetic and appreciative, always ready to draw him out, always with a notebook. It should be some one just like Paine, and as there isn't some one just like Paine, it should be Paine himself. Probably as a development of his original interest in Whistler, Mr. Freer has, of late years, devoted himself almost entirely to ancient Oriental art—both paintings and ceramics. The very rumor that in some little town in the interior of China was an old vase finer than any other known vase of the kind, has been enough to set him traveling. Many of his greatest treasures he has unearthed, bargained for and acquired at first hand, in remote parts of the globe. He bearded Whistler in his den—that is a story by itself. He purchased Whistler's famous Peacock Room, brought it to this country and set it up in his own house. He traveled on elephant-back through the jungles of Java in search of buried temples. Now he will be pursuing a pair of mysterious porcelains around the earth, catching up with them in China, losing them, finding them again in Japan, or in New York, or Paris; now discovering in some unheard-of Chinese town a venerable masterpiece, painted on silk, which has been rolled into a ball for a child's plaything. The placid pleasures of conventional collecting, through the dealers, is not the thing that Mr. Freer loves. He loves the chase.

You should see him handle his ceramics. You should hear him talk of them! He *knows*. And though you do not know, you know he knows. More, he is willing to explain. For, though his intolerance is great, it is not directed so much at honest ignorance as against meretricious art.

Drunk with the Esthetic

THE names of Chinese painters, of emperors who practiced art, of dynasties covering thousands of years, of biblical periods, flow kindly from his lips:



"This dish is Grecian. It was made five hundred years before the birth of Christ. . . . This is a Chinese marble, but you see it has a Persian scroll in high relief. . . . And this bronze urn: it is perhaps the oldest piece I have—about four thousand years—it is Chinese. But do you see this border on it? Perfect Greek! Where did the Chinese get that? . . . Art is universal. We may call an object Greek, or Roman, or Assyrian, or Chinese, or Japanese, but as we begin to understand, we find that other races had the same thing—identical forms and designs. Take, for example this painting of Whistler's, 'The Gold Screen.' You see he uses the Tosa design. The Tosa was used in Japan in the eleventh and twelfth centuries, and down to about twenty years ago. But there wasn't a single example of it in Europe in 1864, when Whistler painted 'The Gold Screen'; and Whistler had not been to the Orient. Then, where did he get the Tosa design? . . . He invented it. It came to him because he was a great artist, and art is universal. . . ."

It was like that—the spirit of it. And you must imagine the words spoken with measured distinctness in a deep, resonant voice by a man with whom art is a religion and the pursuit of it a passion. He has a nature full of fire. At the mention of the name of the late J. P. Morgan, of the Metropolitan Museum of Art, or of certain Chinese painters of the distant past, a sort of holy flame of admiration rose and kindled in him. His contempt is also fire. A minor eruption occurred when the automobile industry was spoken of; a Vesuvian flare which reddened the sky and left the commercialism of the city in smoking ruins. But it was not until I chanced to mention the Detroit Museum of Art—an institution of which Mr. Freer strongly disapproves—that the great outburst came. His wrath was like an overpowering revolt of nature. A whirlwind of tempestuous fire mounted to the heavens and the museum emerged a clinker.

He went to our heads. We four who saw and heard him, left Mr. Freer's house drunk with the esthetic. Even the flooding knowledge of our own barbarian ignorance was not enough to sober us. Some of the flame had gotten into us. It was like old brandy. We waved our arms and cried out about art. For there is in a truly big human being—especially in one old enough to have seemed to gain perspective on the universe—some quality which touches something in us that nothing else can ever reach. It is something which is not admiration only, nor vague longing to emulate, nor a quickened comprehension of the immensity of things; something emotional and spiritual and strange and indescribable which seems to set our souls to singing.

Lost to Detroit

THE Freer collection will go, ultimately, to the Smithsonian Institution in Washington, a fact which is the cause of deep regret to many persons in

WELCH

The drink that needs no chaperon

Welch's Grape Juice is such a drink. Its rich color appeals to the eye; its fruity flavor delights the palate. And with its good qualities are mingled no "after effects."

Welch's solves the beverage problem. If your thirst or your fancy demands more than the "aqua pura" of Nature, you can get Nature's best fruit drink, AT its best in

Welch's

"The National Drink"

When traveling or away from home you naturally take extra precaution in what you drink. It is then especially that you come to appreciate Welch's, now so generally available.

The purity of Welch's makes it absolutely safe for young and old, and if you have discovered but a part of the many ways in which it may be used in the home and in entertaining, you are buying your Welch's by the case.

A Suggestion

To extend the use of Welch's, June 29 to July 4 is "Welch Week" in the stores of the principal distributors of Welch's.

A Welch Week or at least some Welch "occasions" will be appreciated by your family and friends—don't forget the youngsters.

At the party, for that veranda "affair," at the picnic on the Fourth—nothing quite so good as Welch's.

Look for the store with the Welch display
The National Drink for the National Day.

Do more than ask for Grape Juice —say WELCH'S and GET IT!

If unable to get Welch's of your dealer we will ship a trial dozen pints for $3.00, express prepaid east of Omaha. Sample 4-ounce bottle by mail, ten cents.

The Welch Grape Juice Company

Westfield, New York

Cussin' is jest grindin' of a feller's mental wheels. Grease the axle, I say, with a little oil o' human kindness. When I feel my dander gettin' up I jest lubricates with a pipe o' VELVET. Hev a tin o' VELVET handy in your pistol pocket and when y' see trouble coming, you draw first.

Velvet Joe

ANYBODY who understands human nature will tell you that no man can be really downright, rearin', tearin' *mad* while he's smoking cool, slow burning VELVET, the Smoothest Smoking Tobacco.

The tobacco of which VELVET is made is the one tobacco which has all the full flavor and "body" and tobacco fragrance of a real *man's* pipe smoke, without the harshness found in many kinds. VELVET is made of Burley leaf which, owing to the most thorough cultivation, is the finest and richest grown. By the time we have finished the long, slow process of curing, all the natural qualities of this Kentucky *Burley de Luxe* have been brought out to the full and "fixed." There's an aged-in-the-wood mellowness in VELVET.

Detroit, more especially since the City Plan and Improvement Commission has completed arrangements for a Center of Arts and Letters—a fine group plan which will assemble and give suitable setting to a new Museum of Art, Public Library, and other buildings of like nature, including a School of Design and an Orchestra Hall. The site for the new gallery of art was purchased with funds supplied by public-spirited citizens, and the city has given a million dollars toward the erection of the building. Plans for the library have been drawn by Cass Gilbert.

It seems possible that, had the new art museum been started sooner, and with some guarantee of competent management, Mr. Freer might have considered it as an ultimate repository for his treasures. But now, apparently, it is too late. That the present art museum—the old one—was not to be considered by him, is perfectly obvious. Inside and out it is unworthy. It looks as much like an old waterworks as the new waterworks out on Jefferson Avenue looks like a museum. Its foyer contains some sculptured busts, forming the most amazing group I have ever seen. The group represents, I take it, prominent citizens of Detroit—among them, according to my recollection, the following: Hermes, Augustus Cæsar, Mr. Bela Hubbard, Septimus Severus, the Hon. T. W. Palmer, Mr. Frederick Stearns, Apollo, Demosthenes, and the Hon. H. P. Lillibridge.

I do not want to put things into people's heads, but—the old museum is not fireproof. God speed the new one!

More Contents of Detroit

THE great trouble with Detroit from my point of view is that there is too much which should be mentioned: Grosse Pointe with its rich setting and rich homes; the fine new railroad station; the "Cabbage Patch"; the "Indian Village" (so called because the streets bear Indian names) with its examples of modest, pleasing, domestic architecture. Then there are the boulevards, the fine Wayne County roads, the clubs—the Country Club, the Yacht Club, the Boat Club, the Detroit Club, the University Club, all with certain individuality. And there is the unique little Yondatega Club of which Theodore Roosevelt said: "It is beyond all doubt the best club in the country."

Also there is Henry Ford.

I suppose there is no individual having to do with manufacturing of any kind whose name is at present more familiar to the world. But in all this ocean of publicity which has resulted from Mr. Ford's development of a reliable, cheap car, from the stupefying growth of his business and his fortune, and more recently from his sudden distribution among his working people of ten million dollars of profits from his business—in all this publicity I have seen nothing that gave me a clear idea of Henry Ford's personality. I wanted to see him—to assure myself that he was not some fabulous being out of a Detroit saga. I wanted to know what kind of man he was to look at and to listen to.

The Ford plant is far, far out on Woodward Avenue. It is so gigantic that there is no use wasting words in trying to express its vastness; so full of people, all of them working for Ford, that a thousand more or less would make no difference in the looks of things. And among all those people there was just one man I really wanted to see, and just one other man I really wanted not to see. I wanted to see Henry Ford and I wanted not to see a man named Liebold, because, they say, if you see Liebold first you never do see Ford. That is what Liebold is for. He is the man whose business in life it is to know where Henry Ford *isn't*.

On the Ford Trail

TO get into Mr. Ford's presence is an undertaking. It is not easy even to find out whether he is there. Liebold is so zealous in his protection that he even protects Mr. Ford from his own employees. Thus, when the young official who had my companion and me in charge received word over the office telephone that Mr. Ford was not in the building, he didn't believe it. He went on a quiet scouting expedition of his own before he was convinced. Presently he returned to the office in which he had deposited us.

"No; he really isn't here just now," he said. "He'll be in presently. Come on; I'll take you through the plant."

The machine shop is one room, with a glass roof, covering an area of something less than thirty acres. It is simply unbelievable in its size, its noise and its ghastly furious activity. It was peopled when we were there by five thousand men—the day shift in that one shop alone. (The total force of workmen was something like three times that number.)

Imagine It if You Can!

OF course there was order in that place; of course there was system—relentless system—terrible "efficiency"—but to my mind, unaccustomed to such things, the whole room, with its interminable aisles, its whirling shafts and wheels, its forest of roof-supporting posts and flapping, flying, leather belting, its endless rows of writhing machinery, its shrieking, hammering, and clatter, its smell of oil, its autumn haze of smoke, its savage-looking foreign population—to my mind it expressed but one thing, and that thing was delirium.

Fancy a jungle of wheels and belts and weird iron forms—of men, machinery and movement—add to it every kind of sound you can imagine: the sound of a million squirrels chirking, a million monkeys quarreling, a million lions roaring, a million pigs dying, a million elephants smashing through a forest of sheet iron, a million boys whistling on their fingers, a million others coughing with the whooping cough, a million sinners groaning as they are dragged to hell—imagine all of this happening at the very edge of Niagara Falls, with the everlasting roar of the cataract as a perpetual background, and you may acquire a vague conception of that place.

Fancy all this riot going on at once; then imagine the effect of its suddenly ceasing. For that is what it did. The wheels slowed down and became still. The belts stopped flapping. The machines lay dead. The noise faded to a murmur; then to utter silence. Our ears rang with the quiet. The aisles all at once were full of men in overalls, each with a paper package or a box. Some of them walked swiftly toward the exits. Others settled down on piles of automobile parts, or the bases of machines to eat, like grimy soldiers on a battlefield. It was the lull of noon.

From Chaos—the Finished Car

I WAS glad to leave the machine shop. It dazed me. I should have liked to leave it some time before I actually did, but the agreeable young enthusiast who was conducting us delighted in explaining things—shouting the explanations in our ears. Half of them I could not hear; the other half I could not comprehend. Here and there I recognized familiar automobile parts—great heaps of them—cylinder castings, crank cases, axles. Then as things began to get a little bit coherent, along would come a train of cars hanging insanely from a single overhead rail, the man in the cab tooting his shrill whistle; whereupon I would promptly retire into mental fog once more, losing all sense of what things meant, feeling that I was not in any factory, but in a Gargantuan lunatic asylum where fifteen thousand raving, tearing maniacs had been given full authority to go ahead and do their damnedest.

In that entire factory there was for me but one completely lucid spot. That was the place where cars were being assembled. There I perceived the system. No sooner had axle, frame, and wheels been joined together than the skeleton thus formed was attached, by means of a short wooden coupling, to the rear end of a long train of embryonic automobiles, which was kept moving slowly forward toward a far-distant door. Beside this train of chassis stood a row of men, and as each succeeding chassis came abreast of him, each man did something to it, bringing it just a little further toward completion. We walked ahead beside the row of moving, partially built cars, and each car we passed was a little nearer to its finished state than was the one behind it. Just inside the door we paused and watched them come successively into first place in the line. As they moved up, they were uncoupled. Gasoline was fed into them from one pipe, oil from another, water from still another.

Then as a man leaped to the driver's seat, a machine situated in the floor spun the back wheels around, causing the motor to start; whereupon the little Ford moved out into the wide, wide world, a completed thing, propelled by its own power.

The Handy Inexpensive Cleaning Device for Every Day Use

IN COTTAGE or palace, no matter what other methods are employed for sweeping carpets or rugs, there still remains the every day necessity for a good, hand propelled carpet sweeper that promptly and efficiently gathers up all dirt and litter without noise, dust or effort

BISSELL'S

"Cyco" BALL BEARING

Carpet Sweeper

is clearly the accepted sweeping appliance practicable for daily use and furnishes the fullest measure of solid comfort and convenience. An extra sweeper for upstairs doubles its helpfulness. There is a pattern for every home. Prices range from $2.75 to $5.75 depending upon style and locality. Sold by the best stores everywhere.

The HUDSON Six-40 For 1915

$1,550 This Year

The extra tonneau seats disappear when not wanted

Our Gem Car

The New HUDSON Six-40 Described by Howard E. Coffin

There are 48 of us—each a skilled designer—in the HUDSON corps of engineers. All are quality men—men of high ideals; so we never have aimed to make the HUDSON a cheap car. Engineering reputations are not gained in that way.

Prices have dropped because costs dropped—due to multiplied output and standardization. This year—with a trebled production—the new HUDSON Six-40 will sell for $1,550. But we engineers have naught to do with this price matter.

From our standpoint—as a piece of fine engineering—we consider this the gem car of 1915. We are proud of it. Without respect to the price-mark, it's our ideal of a car.

The Evolution of Sixes

The best engineers have for years aimed at Sixes. Continuous power is essential to a smooth-running, flexible car, and Sixes alone afford that. But the early Sixes were heavy and wasteful, so this logical motor was confined to high-priced cars.

European engineers first solved this difficulty. They conceived the small-bore, long-stroke motor which reduced fuel cost immensely. It also reduced explosive shocks by 50 per cent as compared with our same-powered Fours. This permitted lighter construction.

In the HUDSON Six-40 we have worked out the ultimate in this type of motor. The result is, an operative cost nearly 30 per cent less than we ever attained in a Four of like power.

How We Attain Lightness

All of us formerly built heavy cars. We used iron where we now use aluminum. We used castings where we now use drop forgings. Instead of proper designing and costly materials, we employed mere size. Those heavy cars were not nearly so staunch as the light HUDSON Six of today.

For years we have worked to combine lightness with strength, but every pound saved added cost to construction. This new HUDSON Six-40, constructed on old lines, would weigh at least 4,000 pounds. We have made it weigh 2,900 pounds. Thus we save you the weight of seven people—all that extra tire cost and fuel. Yet last year this Six-40, in thousands of hands, failed to develop one weakness. We never built a stauncher car.

Our 31 New Features

We devoted three years to this HUDSON Six-40 before we shipped the first car. Our fourth year on it—the year just past—has been spent on refinements. We took part by part and studied ways to improve them.

This new model shows 31 important betterments. They are mostly in comfort and convenience. Among them are better carburetion, automatic spark advance, locks on lights and ignition. All wires are run in conduits. Seats are wider and higher. There is more room for the driver.

We have here now one of the handsomest, one of the best-equipped cars in the world. In no way that we know of can any car excel it. And many of these attractions are exclusive to the HUDSON.

Men's Refining Tastes

The evidence is that motorists are turning away from extremes. They want sufficient size and power, but not excessive. The pressure on us for years has been to bring down upkeep cost, and to do that in a Six.

Here is the final result. Here is all the power, all the room you have use for—enough for seven passengers comfortably. Here also is a matchless lightness and low operative cost.

The fact that no car can be built any better is shown by this record lightness. A car must be built of the finest materials, in the most skilful way, to attain such staunchness with this weight.

The HUDSON Six-40 has met modern ideals. Last spring there were two buyers waiting for every car we could build. We have trebled our capacity, yet we cannot hope to keep up with demands. Men who see this car won't be content with cars which fall below it. We know that every car sold will win new converts to our gospel of refinement.

Howard E. Coffin

Phaeton, seating up to 7 passengers, $1,550 f.o.b. Detroit. Standard Roadster, same price.

The New Hudson Six-54

We build on the same lines a larger model with one-third more power and a 135-inch wheel-base. It is for men who want the HUDSON features in a larger, more impressive car. This new HUDSON sells for $2,350.

Hudson dealers everywhere have these new models on show. Go see the new features. New catalog on request.

HUDSON MOTOR CAR COMPANY, 8039 Jefferson Ave., Detroit, Mich.

Make use of our Washington office. Write us upon any subject about which you have reason to believe we can be of help. Write us as often as you like. No charge to the subscribers of Collier's.

Collier's Washington Bureau, 901-902 Munsey Building, Washington, D. C

In a glass shed of the size of a small exposition building the members of the Ford staff park their little cars. It was in this shed that we discovered Mr. Ford. He had just driven in (in a Ford!) and was standing beside it—the god out of the machine.

"Nine o'clock to-morrow morning," he said to me in reply to my request for an appointment.

I may have shuddered slightly. I saw my companion shudder. I was aware for one brief instant of a strong desire to intimate to Mr. Ford that ten o'clock would suit me better. But I restrained myself.

On Time—but No Ford

INWARDLY I argued thus: "I am in the presence of an amazing man—a prince of industry—the Maecenas of the motor car. Here is a man who, they say, makes a million dollars a month, even in a short month like February. Probably he makes a million and a quarter in the thirty-one-day months when he has time to get into the spirit of the thing. I wish to pay a beautiful tribute to this man, not because he has more money than I have—I don't admit that he has—but because he conserves his money better than I conserve mine. It is for that that I take off my hat to him, even if I have to get up and dress and be away out here on Woodward Avenue by 9 a. m. to do it."

Furthermore, I thought to myself that Mr. Ford was the kind of business man you read about in novels; one who, when he says "nine," doesn't mean five minutes after nine, but nine sharp. If you aren't there your chance is gone. You are a ruined man.

"Very well," I said, trying to speak in a natural tone, "we will be on hand at nine."

Then he went into the building, and my companion and I debated long as to how the feat should be accomplished. He favored sitting up all night in order to be safe about it, but we compromised at last on sitting up only a little more than half the night.

The cold, dismal dawn of the day following found us shaved and dressed. We went out to the factory. It was a long, chilly, expensive, silent taxi ride. At five minutes before nine we were there. The factory was there. The clerks were there. Fourteen thousand one hundred and eighty-seven workmen were there—those workmen who divided the ten millions!—everything and everyone was there with a single exception. And that exception was Mr. Henry Ford.

True, he did come at last. True, he talked with us. But he was not there at nine o'clock, nor yet at ten. Nor do I blame him. For if I were in the place of Mr. Henry Ford, there would be just one man whom I would meet at nine o'clock, and that man would be Meadows, my faithful valet.

Apropos of that, it occurs to me that there is one point of similarity between Mr. Ford and myself: neither of us has a valet just at present. Still, on thinking it over, we aren't so very much alike, after all, for there is one of us—I shan't say which—who hopes to have a valet some day.

The Gods He Worships

MR. FORD'S office is a room somewhat smaller than the machine shop. It is situated in one corner of the administration building, and I am told that there is a private entrance, making it unnecessary for Mr. Ford to run the gantlet of the main doorway and waiting room, where there are almost always persons waiting to ask him for a present of a million or so in money; or, if not that, for four or five thousand dollars' worth of time—for if Mr. Ford makes what they say, and doesn't work overtime, his hour is worth about four thousand five hundred dollars.

He wasn't in the office when we entered. That gave us time to look about. There was a large flat-top desk. The floor was covered with an enormous, costly Oriental rug. At one end of the room, in a glass case, was a tiny and very perfect model of a Ford car. On the walls were four photographs: one of Mr. James Couzens, vice president and treasurer of the Ford Company; another, a life-size head of "*Your friend, John Wanamaker*," and two of Thomas A. Edison. Under one of the latter, in the handwriting of the inventor—handwriting which, oddly enough, resembles nothing so much as neatly bent wire—was this inscription:

To Henry Ford, one of a group of men who have helped to make U. S. A. the most progressive nation in the world.
THOMAS A. EDISON.

This Is Henry Ford

PRESENTLY Mr. Ford came in—a lean man, of good height, wearing a rather worn brown suit. Without being powerfully built, Mr. Ford looks sinewy, wiry. His gait is loose-jointed—almost boyish. His manner, too, has something boyish about it. I got the feeling that he was a little bit embarrassed at being interviewed. That made me sorry for him. I had been interviewed the day before myself. When he sat he hunched down in his chair, resting on the small of his back, with his legs crossed and propped up upon a large wooden wastebasket—the attitude of a lanky boy. And, despite his gray hair and the netted wrinkles about his eyes, his face is comparatively youthful, too. His mouth is wide and determined, and it is capable of an exceedingly dry grin, in which the eyes collaborate. They are fine, keen eyes, set high under the brows, wide apart, and they seem to express shrewdness, kindliness, humor, and a distinct wistfulness. Also, like every other item in Mr. Ford's physical make-up, they indicate a high degree of honesty. There never was a man more genuine than Mr. Ford. He hasn't the faintest sign of that veneer so common to distinguished men, which is most eloquently described by the slang term "front." Nor is he, on the other hand, one of those men who (like so many politicians) try to simulate a simple manner. He is just exactly Henry Ford, no more, no less; take it or leave it.

And if you are any judge of character at all, you know immediately that he is a man whom you can trust. I would trust him with anything. He didn't ask me to, but I would. I would trust him with all my money. And, considering that I say that, I think he ought to be willing, in common courtesy, to reciprocate.

The Great Secret!!

HE told us about the Ford business. "We've done two hundred and five millions of business to date," he said. "Our profits have amounted to about fifty-nine millions. About twenty-five per cent has been put back into the business—into the plant and the branches. All the actual cash that was ever put in was twenty-eight thousand dollars. The rest has been built up out of profits. Yes—it has happened in a pretty short time; the big growth has come in the last six years."

I asked if the rapid increase had surprised him.

"Oh, in a way," he said. "Of course we couldn't be just sure what she was going to do. But we figured we had the right idea."

"What is the idea?" I questioned.

Then with deep sincerity, with the conviction of a man who states the very foundation of all that he believes, Mr. Ford told us his idea. His statement did not have the awful majesty of an utterance by Mr. Freer. He did not flame, although his eyes did seem to glow with his conviction.

"It is *one model!*" he said. "That's the secret of the whole doggone thing!" (That is exactly what he said. I noted it immediately for "character.")

Having revealed the crux of things, Mr. Ford directed our attention to the little toy Ford in the glass case.

"There she is," he said. "She's always the same. I tell everybody that's the way to make a success. Every manufacturer ought to do it. The thing is to find out something that everybody is after and then make that one thing and nothing else. Shoemakers ought to do it. They ought to get one kind of shoe that will suit everybody, instead of making all kinds. Stove men ought to do it, too. I told a stove man that just the other day."

That, I believe, is, briefly, the business philosophy of Henry Ford.

"Money to Use, That's All"

"IT just amounts to specializing," he continued. "I like a good specialist. I like Harry Lauder—he's a great specialist. So is Edison. Edison has done more for people than any other living man. You can't look anywhere without seeing something he has invented. . . . Edison doesn't care anything about money. I don't either. You've got to have money to use; that's all. . . . I haven't got any

Six More miles per gallon—

A Speedler on your car will give you an average of 6 more miles from every gallon of gasoline. Try this test: Put on a Speedler for 30 days free trial. Set the gasoline throttle at the 10-mile notch. Then touch the Speedler Control; and watch the speedometer jump to 35 miles. You get 5 miles extra speed without an extra drop of gas. The Speedler air spray does it.

Speedler

"Less Gas—More Mileage"

Gives you extra power from the gasoline by mixing extra air in the manifold. Instant control at your finger-tip. *Over 17,000 individual owners equipped their cars with Speedlers last year.*

Free Trial

Your garage man or dealer can get you a Speedler for 30 days free trial from his nearest wholesale supply house. Learn how easy it is to cut your gasoline bill almost in half. Price only $5; refunded if you are not pleased. Pays for itself in a month. Get one today. 13

job here, you know. I just go around and keep the fellows lined up."

I don't know how I came by the idea, but I was conscious of the thought that Mr. Ford's money worried him. He looks somehow as though it did. And it must, coming in such a deluge and so suddenly, I asked if wealth had not compelled material changes in his mode of life.

"Do you mean the way we live at home?" he asked.

"Yes; that kind of thing."

"Oh, that hasn't changed to any great extent," he said. "I've got a little house over here a ways. It's nothing very much—just comfortable. It's all we need. You can have the man drive you around there on your way back if you want. You'll see." (Later I did see; it is a very pleasant, very simple type of brick suburban residence.)

Ford Hobbies—What Are They?

"DO you get up early?" I ventured, having, as I have already intimated, my own ideas as to what I should do if I were a Henry Ford.

"Well, I was up at quarter of seven this morning," he declared. "I went for a long ride in my car. I usually get down to the plant around eight-thirty or nine o'clock."

Then I asked if the change had not forced him to do a deal of entertaining.

"No," he said. "We know the same people we knew twenty years ago. They are our friends to-day. They come to our house. The main difference is that Mrs. Ford used to do the cooking. Lately we've kept a cook. Cooks try to give me fancy food, but I won't stand for it. They can't cook as well as Mrs. Ford either—none of them can."

I wish you could have heard him say that! It was one of his deep convictions, like the "one model" idea.

"What are your hobbies outside your business?" I asked him.

It seemed to me that Mr. Ford looked a little doubtful about that. Certainly his manner, in replying, lacked that animation which you expect of a golfer or a yachtsman or an art collector—or, for the matter of that, a postage-stamp collector.

"Oh, I have my farm out at Dearborn—the place where I was born," he replied. "I'm building a house out there—not as much of a house as they try to make out, though. And I'm interested in birds, too."

No Pose in This Reply

THEN, thinking of Mr. Freer, I inquired: "Do you care for art?"

The answer, like all the rest, was definite enough.

"I wouldn't give five cents for all the art in the world," said Mr. Ford without a moment's hesitation.

I admired him enormously for saying that. So many people feel as he does in their hearts, yet would not dare to say so. So many people have the air of posturing before a work of art, trying to look intelligent, trying to "say the right thing" before the right painting—the right painting as prescribed by Baedeker. True, I think the man who declares he would not give five cents for all the art in the world thereby declares himself a barbarian of sorts. But a good, honest, open-hearted barbarian is a fine creature. For one thing, there is nothing false about him. And there is nothing soft about him either. It is the poseur who is soft—soft at the very top, where Henry Ford is hard.

I saw from his manner that he was becoming restless. Perhaps we had stayed too long. Or perhaps he was bored because I spoke about an abstract thing like art.

I asked but one more question.

"Mr. Ford," I said, "I should think that when a man is very rich he might hardly know, sometimes, whether people are really his friends or whether they are cultivating him because of his money. Isn't that so?"

He Does

MR. FORD'S dry grin spread across his face. He replied with a question:

"When people come after *you* because they want to get something out of you, don't you get their number?"

"I think I do," I answered.

"Well, so do I," said Mr. Ford.

"MICHIGAN MEANDERINGS," the next adventures of Mr. Street, will appear in the issue of July 18 Battle Creek and Kalamazoo take notice!

There's "An Ocean Of Comfort" In B. V. D.

YOU wear a *coat* and a *smile* with B. V. D. On land or sea, in city or country, outdoors or in the office, B. V. Tarvia

Preserves Roads
Prevents Dust—

Mandell Estate, Hamilton, Mass. Tarvia-macadam.

Dust costs money—

DUSTY roads are expensive, for the presence of dust means that costly road material is being cast away to the four winds of heaven. Sooner or later it must be replaced at great expense.

Ordinary waterbound macadam is not sufficiently bonded to resist modern traffic. A stronger binder is needed. That is why modern engineers are turning to Tarvia—a coal tar product of great adhesive power, which is used to cement the stone together.

Under heavy loads a tarviated road is somewhat elastic—not brittle—and traffic wears it smoother. The Tarvia also has the effect of making the road surface waterproof and preventing ravelling by rain torrents.

The addition of Tarvia to the macadam costs so little that it is more than balanced by the saving in maintenance expense. The road, instead of being torn up by traffic and blown away by the winds, stays where it is put and the annual repair bill is reduced materially.

Progressive engineers in hundreds of towns are using Tarvia regularly.

Tarvia booklets on request. Address our nearest office.

The Girl at the Ad Counter

(Concluded from page 7)

They walked warily over the rough ground, pausing frequently to listen. In the pitch blackness they fell into a barbed-wire fence; and once Wilkins nearly slipped over the edge of the bank.

"Steady," whispered Hill. "We're close enough. I remember this tree."

On his last word a spurt of light cut the darkness. A moment later it was repeated. "Pocket lamp," murmured Hill.

They were within fifty feet of the shanty. A firefly flash was seen again, but at a point they judged to be beyond the boat, and there was a sound of dull blows. They began crawling over the ground, guided by the pounding. The strokes ceased suddenly and a spurt of the electric lamp struck the sycamore at whose roots apparently the suspect had been digging. They now heard sounds as of some one stamping. Hill chuckled and whispered in Wilkins's ear:

"Got his plunder and filled the hole; covering it with leaves—you don't need a light to see him work. Smooth—?"

Frozen twigs snapped in the underbrush as Redmond began his retreat. He staggered heavily along, feeling blindly for the path, and then his outstretched hand touched Wilkins's face. Redmond jumped back instinctively and before he recovered Hill threw him over and clapped his hand to his mouth. Surprised as he was, the prisoner struggled furiously. In the dark it was difficult for Wilkins to lend assistance, but in stumbling about trying to get into the fight he fell across the suspect's legs, seized them and held on. He then heard Hill saying:

"No good making a fuss. I'm holding a gun and if you yell she pops. We're secret service men. If you're not the man we want you'll have plenty of time to explain. Let him stand up, Billy."

Wilkins fished a revolver and an electric lamp out of the prisoner's overcoat.

"I've lost my spectacles, gentlemen," remarked Redmond, blinking as Billy turned the light on him, "and as I'm extremely nearsighted I'd like to have 'em."

Wilkins found them intact. Hill held his automatic against Redmond's nose.

"Stick 'em on for him, Billy," said the detective cheerfully.

REDMOND thanked them courteously and then asked in the same quiet tones just what they proposed to charge him with. "Oh, not much," remarked Hill: "counterfeiting, forgery, murder, and some little things like that."

"Is it possible!" ejaculated the man ironically, as Hill clicked on the handcuffs.

Billy searched the prisoner's pockets while Hill held the gun and flashed the lamp. A big clasp knife, $30 in good bills, a bunch of keys, and a long flat jeweler's case were the principal results of the search. Wilkins dropped them into his pockets hastily.

"Can't waste any time inspecting the trinkets now," said the detective. "We've got to get to cover as quickly as possible."

They found the boy guarding the machine and the detective sent him to a public telephone to direct a man he had on call at the Federal building to go at once to Hill's house.

"Now, Billy," said the detective as Redmond was squeezed between them in the machine, "you can have all the time you want on this case. We'll carry our friend to my house and Salzby will be there to watch him while you write. I'll go to the baggage room and bring up the trunk and wire our man in Terre Haute to gather in Lockwood." . . .

"I'll want a page or two, that's all," said Wilkins to his city editor over Hill's telephone. "I can't tell you what it is or where I am. I've got a boy to carry in copy, and I want the story held for the last edition. You'd better guard the composing room till the paper's off."

He summoned Jean, who arrived in a taxi, bringing copy paper and a typewriter she had borrowed from a stenographer in the boarding house. She identified the prisoner as the man who had filed the "ad" and called for the Bluffton letter, and as the same person she had seen at the lodging-house window.

Jean protested her drawing materials and began a large sketch of the prisoner while Billy fell upon the typewriter greedily. On the way to Hill's he had planned his story so that he wrote as easily as though taking rapid dictation.

In an hour Hill arrived with the trunk, which he began unpacking in the hall so that he might not disturb the absorbed reporter, or the artist, whose model sat handcuffed with Salzby watching him. "It's a safe play, all right," called Hill. "The $20 plate and a portable press that's a wonder."

The most amazing incident of that crowded evening came when Wilkins had posted the boy off with his second batch of copy and paused to stretch himself. He had forgotten that he had thrust into his overcoat pockets the articles taken from Redmond on the river bank. Hill asked for them and a moment later gave a yell as he opened the case and held suspended in his hands a diamond necklace that glittered and shone brightly. "No wonder he waited to pick this up!" cried Jean, taking it in her hands wonderingly.

"That nails the identification!" chirruped Billy. "That necklace was stolen from the wife of the Canadian Premier last August—supposed to have been taken by a dinner guest. I've got all Charlie's history in my head. For God's sake keep still and let me write!"

JEAN accepted small ads for the "Advertiser" the next morning with a copy of the city extra spread out on the counter. She had contributed a column and a half with her own hand, describing the incident of the advertisement. Her drawing of the famous criminal had come out splendidly; and she had made sketches of the trunk and diamond necklace, which helped beyond doubt to embellish Billy's story.

"Hear that yelling?" asked the veteran foreman stopping at the counter at noon just after Billy had gone upstairs. "They tore up the place when Billy came in. I guess that boy's vindicated now. And they've decided to steal the necklace and give it to you!"

Later in the day, after Billy had related the circumstances surrounding the scoop, with due emphasis on the fact that it was really Jean who had made the capture possible, there was a lively debate as to ways and means of rewarding Miss Kelly. And when the instructor of the art school gave an enthusiastic estimate of her talents, it was determined that as a staff artist Miss Kelly would be more valuable than as a clerk. At any rate, the "Advertiser" was under obligations to her, and a scholarship in a New York art school with the privilege of returning to the paper at the end of the term, seemed the proper acknowledgment. All of which, with a light blue check for $500 was laid on the marble counter before the amazed girl as she was about to leave the office.

"It's the grandest thing that ever happened," declared Billy that evening in the boarding-house parlor; "only it's going to be pretty lonesome in these parts, I can tell you!"

MRS. WORTHINGTON ADAMS, the most active trustee of the Art Institute, undertook to see Jean safely settled in New York. Accordingly, on the afternoon of New Year's Day, there was a representative gathering of Jean's friends at the station—students from the night art class, girl friends, and six young gentlemen from the "Advertiser's" city room, each accompanied by a box of violets. But Billy Wilkins was not visible on the landscape, and the "Advertiser's" delegation wondered at this. And maybe Jean did!

There was the usual flutter when the New York train was called and Jean shook hands all round for the third time. Inside the train shed she turned to wave her hand and saw the crowd part to permit the passage of a gentleman in haste who lawlessly ran by the gateman flourishing a long green ticket.

It was Wilkins and, puffing hard from mighty exertions, he stood a minute later in the door of the stateroom which Mrs. Adams was to share with Jean.

"Why, Billy!" cried Jean, staring in wide-eyed wonder.

"Nearly missed the train," panted Billy, as though everybody had known from the beginning of time that he had meant to cross the Alleghenies on this particular train. "Got a wire from good old Gordon that the 'Atlas' is ready for me and here I am. Turned down an offer to go to Washington for the 'Advertiser' just one hour ago—"

"I hope," said Mrs. Adams, after Jean had presented the breathless Billy, "that this doesn't mean that you're going to interfere with Jean's career?"

"Don't know about *her* career," grinned Billy; "but I was sure mine would suffer without her!"

The Perfect Suburbanite

By Anne Hard

ILLUSTRATED BY MORRIS HALL PANCOAST

WHEN Martin doesn't like anything that he has to endure just the same, he is as placid and withdrawn as a little bronze Buddha.

I never would have married one of these men that kick over chairs at the inevitable and damn the inescapable. Martin is an artist at enduring. He doesn't even look patient. I should say, on the whole that, next to the swearing man, the I-should-suffer man makes the worst husband. Martin is neither.

That's why, when I saw him spading up the back twenty feet of our newly acquired suburban lot, I just ached for him. Not in the same places he was aching, of course. I was aching in my heart and he was aching—not in his shoulders, as you might think, for up to a few months before he'd played handball too regular at the city Y. M. C. A. to mind a bit of spading—but in his brain.

Every shower of red clay as it hit the pile punctuated a shudder. Martin's whole manner seemed to say without a word: "The perfect suburbanite! The perfect suburbanite—"

I suffered with him. I stopped picking nasturtiums and went over to the battle field.

"Isn't it exercise enough?"

Anything for an opener.

Martin spaded hard.

"Look at the light on those hills! Isn't it beautiful! And smell . . . Oh, do smell! Isn't that petunias', that sort of thick, pink smell . . .?"

"Don't you mean those petunias . . .?" Martin muttered.

MARTIN, if he hadn't happened to be general manager, would have made a great little school-teacher.

"You wouldn't have an air like this to breathe if we'd kept on living in town . . ."

Martin shoveled.

"Anyway, you know I couldn't find a sunny place . . ."

"The Wilds and the Smiths and the Digbys have plenty of sun . . ."

"But the Wilds have a Boston and the Smiths a Persian. And the Digbys only a grand piano. Now you know with our children and our aged parent . . ."

"That's it. The children. *And* the schools. But stick to that. We came out here on account of the *children!* But don't try to make me admit *I* like it."

"Look at your beans, dear, and your corn and your radishes. Don't you like *them?*"

Martin shoveled.

"If we'd taken that house out on Convent Avenue, you'd have been a half an hour, *and* the subway and this way you're only forty-five minutes. I don't see why you grudge that extra fifteen . . ."

"I don't. I don't grudge anything. It isn't the city. Get that? It isn't the *city.*"

I felt perfectly helpless.

"Of course it isn't the city. It's precisely ten miles shy of it. But what . . ."

"How d'ye do?"

I wish you could hear Martin's howdy. It's like the funny page written in primitive sign language translated into winds and sky and sunshine. *That* isn't a bit citified, I tell you.

Our neighbor next door was just turning on his hose.

"Fine for your first year," he said pleasantly as he wiped some of the spray from his face—the hose had turned on too fast. "But we're both of us duds to Jenkins."

We all looked across the street to the Jenkins shaved, painted, raked, seeded, scrubbed, screened, fertilized, pruned place.

"There," said Martin to the neighbor in words meant for my ear alone, "there is a perfect suburbanite. I bet Jenkins knows how many tons of coal he burned last winter and the winter before and . . ."

THE neighbor looked at Martin as if he hadn't heard well.

"Of course," he said.

There is something of the mosquito in most women. They aren't satisfied with getting what they want out of their husbands. Some buried instinct compels them to keep on singing and humming around the poor creature even after he is subdued.

"I wish you liked it out here better . . ." I said tentatively as soon as we were alone.

"I can't make you understand."

Like the mosquito's victim, he at last straightened up and went to the mat with his tormentor.

"I like this place as well as any place. Any place that is outside the city.

"I repeat, it isn't the distance to the office *only* nor furnace *only*. It is really something that I have no doubt you will in no way understand. It is the spirit of the suburb. That's it. The spirit of the suburb. I tell you, you can't get away from it. If you stay there, you'll get—I mean it'll get you."

"Don't talk like ten-year-old Puck, please, and allude to bundles . . ."

"I'm not. This is a recent misery, and it has nothing to do with packages . . . of that kind."

"Oh, ho! Now we're getting to it. You want our innocent children to have to pass by rum palaces and the dens of King Alcohol as they wend their way to school!"

"No gentleman—by that I mean no one who has the price—needs to take refuge in such arguments," Martin was walking up and down. He looked warm to me.

"Won't you take off your coat, dear?"

"There you have it again. No. I wore my coat in the office all day, and I see no reason for removing it now that the evening has rendered the air appreciably cooler."

"That chap next door begins to peel before he gets the screen door open. Jenkins, I have no doubt, puts on an alpaca coat at the station. And that reminds me, I've never seen Jenkins himself. Have you?"

"No, I haven't. There is a Mrs. Jenkins, but it isn't his wife; it's his mother. He does some kind of work that keeps him in town at night, and she is very quiet and never goes anywhere . . ."

THEN I stopped. We both laughed.

"You see," Martin went on, "it's got us already. An interest in the neighbors. Nothing else to think about but Jenkins and his mother."

"But"—he was not to be deflected—"I'm going to get understood right now, and then, for Heaven's sake, let's drop it.

"A suburb is a great big bedroom. It's neither farm nor city. It has no spine and very little heart and practically no arteries . . ."

"You used to go to bed early in town, and our friends come out here as often as they did in town to dinner, and the children . . ."

"There you are. You always bring up at the salient point the children. Remember. They're why. But wait till Bert is ready for college . . ."

"Back to the city?"

"You bet. It's real. It's genuine. There's something about the people. . . . Why, look what the suburb does to you. Take that fellow Jenkins . . ."

"You've never seen . . ."

"Sure, but I know him. I know him as well as if I'd roomed with him in college or carried a chain with him on a Western railroad extension. He gets out of bed at exactly a quarter to—an admirable virtue, I admit. All his virtues are admirable. You have only to look across the way to prove it.

"He takes the 'fifty-five' regularly, and brags to the fellow at the desk next to him: 'One hour from bed to desk. That's what I do from Fairmont.' At exactly half past he goes to lunch and passes up dessert because he promised to bring home a yard of pink ribbon. He won't buy a hat till it's marked down, not because he can't afford it, but because he's afraid it may look a 'little startling,' and he can't get around to root for the Giants, so he sees the game between the Fairmont Athletics and the Hoboken Flyers. He votes for president of the Fairmont Improvement Society, and his favorite art is the illustrations in the seed annuals.

"Sure," said the man next door. "Sure he lives here. Right across the street. That's Jenkins"

"It's all right for these people that have children. I've got a certain amount of respect for a man that gives up all that is vital and real and moves out into a nondescript, bridge-playing, Pharisaical area divided at geometrical right angles into patches fifty feet on a side in the exact center of which are erected cubical sections of sleeping quarters if he has a young family and his wife tells him he can't bring 'em up anywhere else (though, for the matter of that, there seem to be enough children in the city), but he's got to fight it or it'll get him. And as for a man who has no children, such as this Jenkins of yours . . ."

"He isn't mine . . ."

Martin swept on. His sails were up and all hands leaned to. I was a cockleshell.

"As for this Jenkins of yours . . ."

"Whom you haven't seen . . ."

"I don't need to see him. I tell you I know all about him. He is the perfect suburbanite."

MARTIN breathed hard through his nose.

"And to-night I will *not* put on my flannel trousers with a blue serge coat and white canvas shoes, in imitation of English country life, and go with you to 'call' upon the Hodgsons who have just moved into the new house on the hill. Mrs. Hodgson shall bite her nails in peace upon the porch, and Mr. Hodgson shall in vain try to interest her by a reflected long-distance interest in the accounts of sports enacted far from this suburbium in the open stretches of the great metropolis—or in the fluctuations of the world's gold output as chronicled in the heart of the great city—for all of me. Let the children go to their hygienic schools, and you, Friend Wife, may do your tatting with every other lovely suburban lady in all Fairmont. As for me, I rebel. I am a prisoner till such time as Bert shall have passed his college entrances.

"In the meantime you shall not make a Jenkins out of *me*."

Martin leaned over and picked a little bunch of mint from the patch we had started against the August drought. "There shall be consolation," he murmured. "There shall be balm in Gilead. Is there plenty of ice?"

AS he spoke a tall, thin man dressed in a cutaway suit of black-and-white check bound with braid, who was passing just the other side of our low hedge, paused and looked pleasantly at Martin. Martin can't let a thing like that go by.

"Good evening," Martin said.

"How's crops?" said the stranger.

"The visible supply seems to be adequate," Martin began.

"I've had my eye on that little patch for quite some time," said the stranger. "First thing when you moved in here I noticed you set out that bed among the early varieties."

"Got another among the late bearing." Martin had his back to me by this time. He had his right arm parallel to the stranger's left arm, and that sort of a hunch to the shoulders that two men always get when the conversation is strictly masculine and nothing feminine need apply.

The stranger's voice became very gentle. "Our cook threw kerosene into the finest patch in town last Friday," he said. "But the rest of the necessary crops are safe. 'Twas fortunate, too, for the key never leaves me. I'd be glad to show you the finest that was ever called Kentucky home."

Martin silently handed his greenery to the stranger. The man next door was looking on during this colloquy. When it was over and the speckled suit had disappeared behind the lilac screen at the edge of our yard, he turned off his hose and strolled over into our yard.

"Know him?" he said.

"No," we answered.

"Nice chap," the man next door went on. "Used to be a sporting editor. He's a wine agent now and the most popular referee in the city.

"Why, you must know *him*," he went on. "*He's* the chap they call 'Electric,' because, they say, he's not seen the sun in twenty years except in the middle of summer."

"Doesn't live here, then," said Martin. "Where does he . . .?"

"Sure," said the man next door. "Sure he lives here. Right across the street. That's Jenkins."

We looked at each other.

Neither of us smiled.

"Did you say you would like to call on the Hodgsons to-night, Martin?"

"No, madam, I will not," said Martin.

"It is the spirit of the suburb. That's it. The spirit of the suburb. I tell you, you can't get away from it. If you stay there, you'll get—I mean it'll get you"

WINTON SIX Model 21 — Now Ready

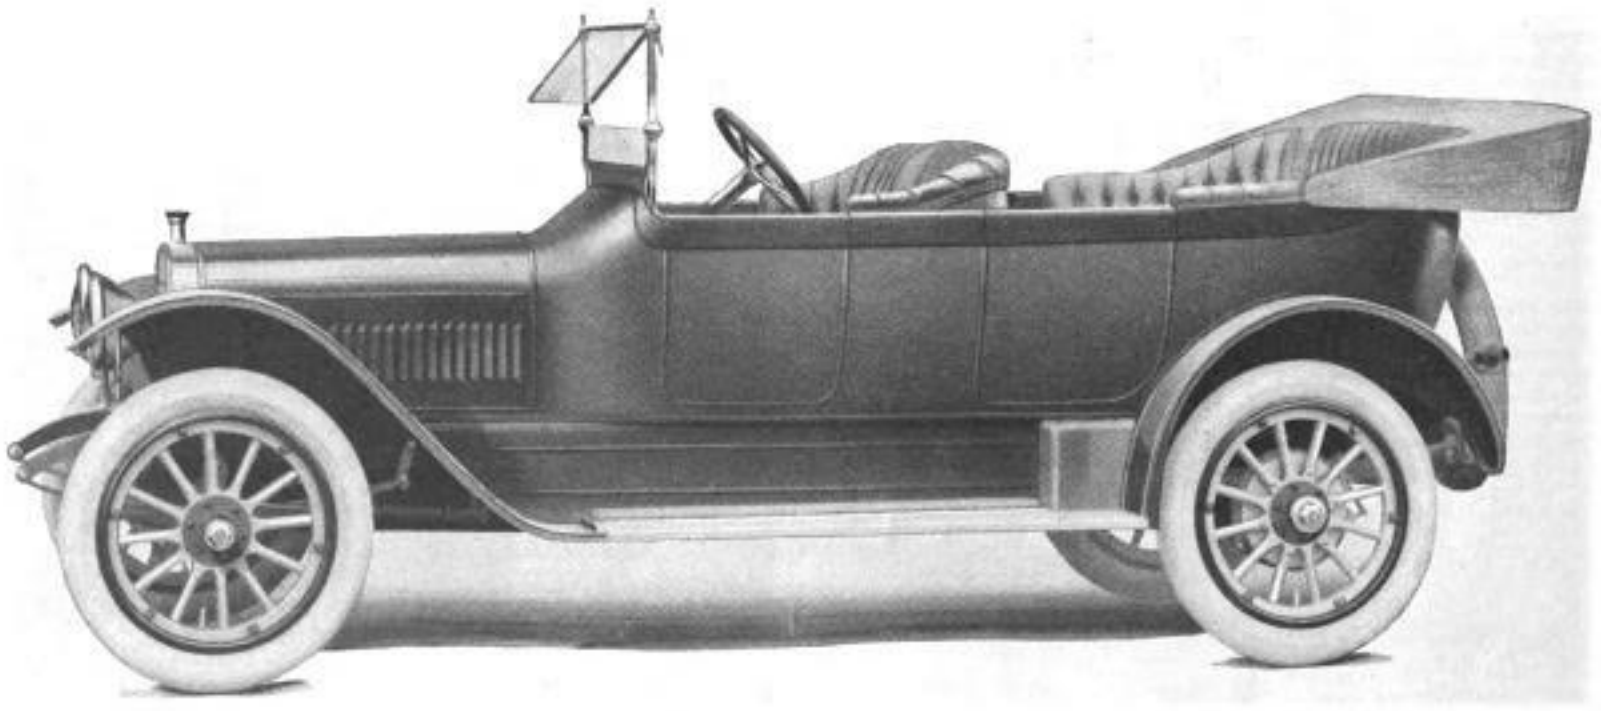
A New Beauty for 1915

With Distinctive Individuality for You Personally

THE rare beauty of this car challenges admiration. Best of all, we give *your personal* car a special individuality to meet your own good taste and to distinguish *your* car from every other owner's car. But that's a matter we prefer to take up with you personally.

All the sterling features of Winton construction are retained in Model 21. The enlarged radiator and bonnet blend into a pleasing unit with the new body, which is of singularly attractive design. The raised streamline panel has been seen heretofore on limousines only. Doors are wider and swing on concealed hinges. No outside handles. Seats are roomier. The cowl board arrangement is new. A tonneau light is provided. Springs are always automatically oiled by Dann cushion inserts. Wheel base 136 inches (on four-passenger and runabout cars, 130 inches). Especial provision has been made for the most satisfying comfort.

NOTE THE EQUIPMENT:



Electric starter, or Air starter. You may have your choice *without* extra charge.
Complete electric lighting system.
One-man top of finest mohair; has easily handled curtains.
New-design rain-vision glass front.
Klaxon electric horn, concealed under bonnet.
Waltham eight-day clock, with highest-grade watch movement.
First-grade Warner speedometer.
Improved tire carriers at rear.
Demountable rims.
Tires—37 x 5-inch, all around.
Power-driven tire pump.
Full set of tools.
The price of the five-passenger car is $3250 fully equipped, and—
You may write your own guarantee.

Write for 1915 catalog; now ready. Ask us about the exclusive feature of individuality for your own car.

The Winton Motor Car Company

101 Berea Road, Cleveland, Ohio, U. S. A.

Direct Factory Branch Houses in 20 Leading Automobile Centers.

Bealby

(Continued from page 14)

He sat up where he had been put, trying to look as Orphan Dick as possible after all that had occurred.

"DO you know the wind on the heath—have you lived the gypsy life? Have you spoken, wanderers yourselves, with 'Romany chi and Romany chal' on the wind-swept moors at home or abroad? Have you tramped the broad highways, and, at close of day, pitched your tent near a running stream and cooked your supper by starlight over a fire of pinewood? Do you know the dreamless sleep of the wanderer at peace with himself and all the world?" For most of us the answer to these questions of the Amateur Camping Club is in the negative.

Yet every year the call of the road, the Borrovian glamour, draws away a certain small number of the imaginative from the grosser comforts of a complex civilization, takes them out into tents and caravans and intimate communion with nature and, incidentally, with various ingenious appliances designed to meet the needs of cooking in a breeze. It is an adventure to which high spirits and great expectations must be brought. It is an experience in proximity which few friendships survive—and altogether very great fun. The life of breezy freedom resolves itself in practice chiefly into washing up and an anxious search for permission to camp. One learns how rich and fruitful our world can be in bystanders, and how easy it is to forget essential groceries. . . .

The heart of the joy of it lies in its perfect detachment. There you are in the morning sunlight under the trees that overhang the road going whither you will. Everything you need you have. Your van creaks along at your side. You are outside inns, outside houses, a home, a community, an *imperium in imperio*. At any moment you may draw out of the traffic upon the wayside grass and say: "Here—until the owner catches us at it—is home!" At any time—subject to the complaisance of William and your being able to find him—you may unpan and go onward. The world is all before you. You taste the complete yet leisurely insouciance of the snail.

And two of those three ladies had other satisfactions to supplement their pleasures. They both adored Madeleine Phillips. She was not only perfectly sweet and lovely, but she was known to be so: she had that most potent charm for women, prestige. They had got her all to themselves. They could show how false is the old idea that there is no friendship nor conversation among women. They were full of wit and pretty things for one another and snatches of song in between. And they were free too from their "menfolk." They were doing without them. Dr. Bowles, the husband of the lady in the deerstalker, was away in Ireland and Mr. Geedge, the lord of the inconspicuous woman, was golfing at Sandwich. And Madeleine Phillips, it was understood, was only too glad to shake herself free from the crowd of admirers that hovered about her like wasps about honey. . . .

YET after three days each one had thoughts about the need of helpfulness, and more particularly about washing up, that were better left unspoken, that were indeed conspicuously unspoken beneath their merry give and take, like a black and silent river flowing beneath a bridge of ivory. And each of them had a curious feeling in the midst of all this fresh free behavior, as though the others were not listening sufficiently, as though something of the effect of them was being wasted. Madeleine's smiles became rarer; at times she was almost impassive, and Judy preserved nearly all her wit and verbal fireworks for the times when they passed through villages. . . . Mrs. Geedge was less visibly affected. She had thoughts of writing a book about it all, telling in the gayest, most provocative way, full of the quietest, quaintest humor, just how jolly they had been. Menfolk would read it. This kept a little thin smile upon her lips. . . .

As an audience, William was tough stuff. He pretended deafness; he never looked. He did not want to look. He seemed always to be holding his nose in front of his face to prevent his observation—as men pray into their hats at church. But once Judy Bowles overheard a phrase or so in his private soliloquy. "Pack o' wimmin," William was saying. "Dratted petticoats. *Dang* 'em. That's what I say to 'em. *Dang* 'em!" As a matter of fact, he just fell short of saying it to them. But his manner said it. . . .

You begin to see how acceptable an addition was young Bealby to this company. He was not only helpful, immensely helpful, in things material, a vigorous and at first a careful washer up, an energetic boot polisher, a most serviceable cleaner and tidier of things, but he was also belief and support. Undisguisedly he thought the caravan the loveliest thing going, and its three mistresses the most wonderful of people. His alert eyes followed them about full of an unstinted admiration and interest, he pricked his ears when Judy opened her mouth, he handed things to Mrs. Geedge. He made no secret about Madeleine. When she spoke to him, he lost his breath, he reddened and was embarrassed. . . .

They went across the fields saying that he was the luckiest of finds. It was fortunate his people had been so ready to spare him. Judy said boys were a race very cruelly maligned; see how *willing* he was! Mrs. Geedge said there was something elfin about Bealby's little face; Madeleine smiled at the thought of his quaint artlessness. She knew quite clearly that he'd die for her. . . .

THERE was a little pause as the ladies moved away.

Then William spat and spoke in a note of irrational bitterness. "Brasted Vooley," said William and then loudly and fiercely: "Cam up, y'ole Runt, you."

At these words the white horse started into a convulsive irregular redistribution of its feet, the caravan strained and quivered into motion, and Bealby's wanderings as a caravanner began.

For a time William spoke no more and Bealby scarcely regarded him. The light of strange fortunes and deep enthusiasm was in Bealby's eyes. . . .

"One Thing," said William, "they don't 'ave the Sense to lock anythink up—Whatever." Bealby's attention was recalled to the existence of his companion.

William's face was one of those faces that give one at first the impression of a solitary and very conceited nose. The other features are entirely subordinated to that salient effect. One sees them later. His eyes were small and uneven, his mouth apparently toothless, thin lipped, and crumpled, with the upper lip falling over the other in a manner suggestive of a meager firmness mixed with appetite. When he spoke he made a faint slobbering sound. "Everyfink," he said, "behind there."

He became confidential. "I been in there. I larked about wiv their Flings."

"They got some choc'late," he said, lusciously. "Oo Fine!" . . .

"All sorts of Flings." He did not seem to expect any reply from Bealby.

"We going far before we meet 'em?" asked Bealby.

William's deafness became apparent.

His mind was preoccupied by other ideas. One wicked eye came close to Bealby's face. "We going to 'ave a bit of choc'late," he said in a wet, desirous voice.

He pointed his thumb over his shoulder at the door. "*You* get it," said William with reassuring nods and the mouth much pursed and very oblique.

Bealby shook his head.

"It's in a little dror, under 'er place where she sleeps."

BEALBY'S headshake became more emphatic.

"*Yus*, I tell you," said William.

"No," said Bealby.

"Choc'late I tell you," said William, and ran the tongue of appetite round the rim of his toothless mouth.

"Don't want choc'late," said Bealby, thinking of a large lump of it.

"Go on," said William. "Nobody won't see you. . . ."

"*Go* it!" said William. . . .

"You're afraid," said William. . . .

"Here, *I'll* go," said William, losing self-control. "You just 'old these reins."

Bealby took the reins. William got up and opened the door of the caravan. Then Bealby realized his moral responsibility—and, leaving the reins, clutched William firmly by his baggy nether garments. They were elderly garments, much sat upon. "Don't be a Vool," said William, struggling. "Leago my slack."

Something partially gave way and William's head came round to deal with Bealby. "What you mean pullin' my cloes orf me?" . . .

Mr. and Mrs. Consumer

Advertising as it affects the consumer is a subject in which you should be interested, for it is not a tax that increases the cost of advertised articles to you.

The following quotation is the first of a series which we will publish to show you how advertising benefits you directly.

H. C. F. Hamerstrom.

Advertising Manager Collier's Weekly

Corn Flakes Cheaper and Better

by R. O. EASTMAN
of the Kellogg Toasted Corn Flake Co.

We can give definite evidence proving both:

1. That prices of our goods have been reduced as a result of the larger output secured through advertising.
2. Quality and intrinsic value of goods have been increased.

As to No. 1, when our product then known as Sanitas Toasted Corn Flakes, was first placed on the market, the package was one-third smaller and sold for 15 cents. With the increased distribution resulting from national advertising, we have increased the size of the package 50 per cent and decreased the price to the consumer 33⅓ per cent, so that the consumer today receives more than twice as much for his money as he did of the unadvertised product.

Quality and intrinsic value have both been greatly increased. More than $50,000 a year is spent in our factory in maintaining inspection and in safeguarding devices which are scarcely in evidence to the casual observer, and which in all likelihood would not be missed by the consumer. Only raw material of the highest standard is used in making our products. For example, there is only a very small amount of sugar used in the flavoring of the flakes in a single package. The proportion of sweetening is so infinitesimal that saccharine could be used with perfect results, and could only be detected by expert chemical analysis. The use of saccharine in place of granulated sugar would save our company $50,000 a year, but instead of reducing the quality even to this extent, we prefer to pay the $50,000 a year additional, and use the highest grade white sugar obtainable.

Another feature: This year we are spending $100,000 to place an absolutely moisture-proof seal on our packages so as to carry the goods to the consumer in identically the same condition as when they leave our ovens.

*PRINTERS' INK, January 22, 1914.

"That,"—he investigated. "Take me a Nour to sew up."

"I ain't going to steal," shouted Bealby into the ear of William.

"Nobody arst you to steal—"

"Nor you neither," said Bealby.

The caravan bumped heavily against a low garden wall, skidded a little and came to rest. William sat down suddenly. The white horse, after a period of confusion with its legs, tried the flavor of some overhanging lilac branches and was content.

"Gimme those reins," said William. "You be the Brastedest Young Vool. . . ."

"Sittin' 'ere," said William presently, "chewnin' our teeth, when we might be eatin' choc'late. . . ."

"I 'ent got no use for *you*," said William; "blowed if I 'ave. . . ." Then the thought of his injuries returned to him. "I'd make you sew 'em up yourself, darned if I wount—on'y you'd go running the brasted needle into me. . . . Nour's work there is—by the feel of it. . . . Mor'n nour. . . . Goddobe done, too. . . . All I got. . . .

"I'll give you Sumpdin, you little Beace, 'fore I done wi' you."

"I wouldn't steal 'er choc'lates," said young Bealby. "Not if I was starving."

"Eh?" shouted William.

"*Steal!*" shouted Bealby.

"I'll steal ye, 'fore I done with *ye*," said William. "Tearin' my cloes for me. . . . Oh! Cam *up*, y'old Runt. We don't want *you* to stop and listen. Cam *up*, I tell you!"

(*To be continued next week*)

The Loot and the Lieutenant

(*Continued from page 12*)

anybody who went near her would have his head chopped off. All-fired funny thing! It seemed that what pleased 'em all so was that her comin' this way was the fulfillment of some heathen prophecy or other that had been made about a hundred years ago. As near as I could make out from what he said, the prophecy was that a white woman would come out of the sea with hair like gold, that she was to be given the eye of dawn (God knows what *that* means!), that she was to marry the chief, and the people would live happy ever after, or some such rot. Anyway we're out to bust the last part of that. She *isn't* to marry that son of a gun and they *won't* live happy ever after—not if we can help it. They all seemed to know about it and kept noddin' their heads all the time he was spielin' it over for their benefit.

"THERE are high cliffs slopin' up to a pretty sheer mountainside to the north and west of the barrio. It's in a slopin' place, sort of horseshoe-shaped, with the hills and cliffs makin' about half the shoe and the jungle the rest. The beach and sea make the line between the heel points. The vice president suddenly pointed to the mountain and cliff and said somethin' about the eye of dawn again—I couldn't just make out what—and then they all made a rush to the little shack and brought out your sister—Gad! I was sorry for her; she didn't know what was comin', but she's pure grit; she'd found herself and she looked 'em right in the eye. I'd have given anythin' to be able to tell her she wouldn't be touched for quite a while, but if I had yelled out it would have spoiled all our chances; I was determined to get at her some way before they hurt her, and I never say die till the last ditch. Look at you people turnin' up like this! They led her up the cliff and up the trail to a cave in the mountainside—I could see through my field glasses—good job I had 'em. First the vice president went with her, and then he came out and sent in women with chow and mats and things, and when they came out he put guards at the cave mouth. You see, they've cached her there for safe keepin' till the chief gets back. From what I heard he won't be back till sunset this evenin'. I made sure of that before I went off to get some sleep—God knows I needed it—but I wouldn't have done it at all if I hadn't been sure."

"You left her!" cried Hilary. "Left her all alone up there."

"I'd have been a fool if I hadn't. I *knew* they wouldn't touch her, and I had to be fresh to help her at all. I went as far away as I could so no one would find me sleepin' and finish me—and her, too. They're not after me, of course, 'cause they don't know there *is* any me. And that's another good thing; this sortie will take 'em by surprise all right. They don't dream of any soldados on their precious old island."

"Not so much of a surprise," said Stone, "They've probably sighted our launch long before now. I ordered her to lie out along the north coast to wait signal."

"Humph!" said Shorty, ruminating. "That's good business. We *might* be able to make a get-away down the back slope of the mountain there. Anyway, the Gu-gus don't know anyone's landed from her, I guess."

They soon reached the edge of the jungle, Hilary urging them feverishly, and in view of the circumstances Shorty forbore to mention that such was not a corporal's duty. The Captain led them to the very spot whence he had watched the barrio and seen Madge Hilary led up the mountainside into the cave. "There," he whispered, pointing. They cautiously parted the rich foliage and looked out from between the young bamboos. There was the barrio, the hills, and the mountain ridge behind. They were relieved to see through their field glasses that guards still stood in front of the cave.

"Thank God," said Hilary, almost sobbing. "I was so afraid the chief had come back!"

"Isn't that just like Shorty?" thought Stone to himself. "Gee, isn't he the limit, goin' off calmly and sleepin' that way? He couldn't help her tired out the way he could rested, but I'd have hung round and tried and watched and probably got captured and been no good to her. As things turned out he did the right thing exactly; but it takes nerve to be a Shorty."

"Here's the plan of battle, hombre. We'll circle to the left, try and flank those guards, and come down on 'em from the top. We may be able to overpower 'em without shootin'—there's only four of 'em, and the folks below would never know, bein' so occupied gettin' ready for the merry-merry, as you see." Shorty pointed to the cluster of shacks where there was certainly great bustle of preparation, and many public and unblushing ablutions and toilets with no mystery about them were under way.

"Then," continued Shorty, "we can get in and get Miss Hilary and signal to your launch from somewhere, and try and make a clean get-away before they wake up to the fact that we've been here at all. We can do it if we're lucky. Let's try it anyway, unless anyone has a better scheme."

NO one had, so cautiously they backed away and, making a wide circle to the left, began to climb gradually rising ground, thickly wooded, until suddenly they came to an abrupt slope towering up for almost two hundred feet at a dangerous angle.

"Gee!" said Stone. "Can we make it?"

"Got to make it," said Shorty. "It runs too far to the left to waste time tryin' to outflank 'em by goin' around it, and I don't dare inch up any further on the right."

Battle-Ax Bob sized up the ascent with a practiced eye. "We can make it all right, sir. My whole troop did worse in Mindanao. There's plenty of footholts and handholts, only we'll have to leave some of the extree stuff behind."

"Won't need half of it anyway," said Shorty. "You people are outfitted like a traveling circus. Must have expected to supply a whole ship's crew. Just keep chow enough for one ration apiece—count in Miss Hilary—canteens, rifles, .45's, and ammunition. Chuck all the rest. We'll gamble on gettin' away before breakfast to-morrow—and if we don't it's good-by Dolly Gray anyway, and we won't be in a position to need 'em."

"If you've got anythin' done on that map, Hilary," said Stone, "just stuff the paper in your pocket. Leave the transit and case."

Lightened of unnecessary equipment, they managed by dint of much exertion and hard work and many breathing spells to reach the top. But when they won to that elevation and looked down they could hardly realize that they had come up that difficult slope. They had made it in fairly quick time, too, led, exhorted, and sworn at by the indefatigable Shorty, who now at this stage of the game began to get excited over the operations, and, sentiment aside, was as usual glorying over the actual operations of war—he never let anything stop him once he got into action. His beady

Digitized by Google

eyes were snapping with excitement, and his hearing reminded one of a small electric generator developing more than enough current for its work and charging the air all about it with excess waves. Shorty's sparks of enthusiasm were certainly catching. The men, of course, were more than ready and full of eagerness to rescue Miss Hilary ("Do you think we'd let those blankety-blank Gu-gus have her?"), but when Shorty began to "feel" his coming fight he put something extra into them. Stone felt himself beginning to tingle all over with excitement, and the men, instead of lying down to die, as they might have done had Stone led them up that terrific ascent alone, simply took a deep breath and professed themselves instantly willing and ready to follow Shorty without resting.

"What *is* it?" thought Stone. "What makes him like that? Is it just some sort of chemical mixture, or is it soul, or both? Never saw a man yet that didn't feel waves comin' out of Shorty at one time or another. He's a wonder!"

The wonder led them first impetuously, then cautiously, to the right. Hilary was trembling and his knees were shaking as with ague.

"Poor yap!" thought Stone. "Thank God it's not my sister who's captured!"

"We ought to be well above those guards now," whispered Shorty to Stone, stopping suddenly. "Have the men get somethin' ready to gag 'em with, and pass the word for each two to pick a man, fall on him, gag, and tie him up before he can raise the long yell. You and I'll take one between us, too. Easy—quiet there—less noise, men. We want to come down on 'em like a ton of rock."

Imbued with Shorty's spirit, that was exactly what they did, and the surprised guards in front of the cave were quickly gagged with rather dirty handkerchiefs and bound up with tough creepers.

"Now set 'em up again," said Shorty. "One or two propped against the rock, so if the simple villagers look up all will seem to be in order. Drag the others inside the cave mouth." They entered the cave; dark and narrow was the passage.

"Got a light?" asked Shorty.

"Pocket lamp," said Stone.

"Better flash it."

The passage began to lead up steeply and precipitously. Bowlders and smaller stones had been arranged to help the ascent, but still it was quite a stiff climb, and ended more than a hundred feet above the level on which it began. Keyed up and full of expectation as they were, the men thought it would never end. Stone caught his breath. "This must have been a devil of a stiff climb for your sister," he said to Hilary.

Hilary assented in a hopeless manner. "And I'm afraid, too," he said, "we'll have worse trouble getting her down if we have to fight in a place like this!"

"Cheer up, hombre!" said Stone. "There may be another way out on the ocean side. It would be better in lots of ways."

"It would," grunted Shorty. "Close up. For'd!" and plunged into the passage ahead. Even this passage wasn't dead level, but sloped up at about a three per cent grade.

"We'll come out at the top of the world soon," thought Stone as he followed next to Shorty.

THERE was a glimmering of daylight ahead, the corridor widened, they broke into a double-quick, and charged precipitously into a great circular room with walls of solid rock. In the middle of the domed rock ceiling a small, square opening showed blue sky and shed light. The walls were daubed with crude drawings at intervals, and immediately opposite to them on the far side was a long altar—that Shorty afterward remarked only needed a foot rail to look exactly like a bar—with a rudely carved and painted image of some hideous heathen god squatting in the middle and holding in his hands a gilded sphere. At the right-hand end of the room, on a raised platform, was a huge, badly carved chair of heavy teak. But of Miss Hilary or of door or entrance to the room other than that by which they had entered there was no sign.

"Where the deuce *is* she?" cried Shorty.

At the sound of his voice a figure crept from behind the throne, then flashed across the space between them.

"Captain Campbell! Soldiers! Oh, *Fred!*"

(To be concluded next week)

The Price Knife and the Law

(Concluded from page 16)

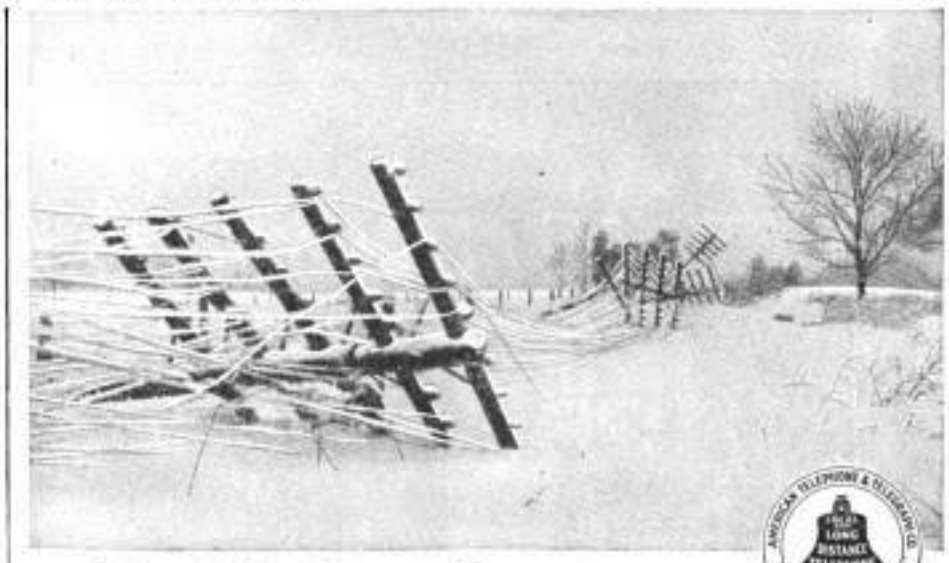
sumer's point of view than the consumer himself. This he evidences by paying the particular price for the particular thing; if he is not satisfied with the thing, he will not buy it; if he is not satisfied with the price, he will not pay it. Other articles of the same kind are offered to him at other prices.

The consumer wants more than anything else a continuance of the American manufacturer's practice of attaching name or brand to products as a real token of good faith. He wants branded products kept up to standard so that he may know what he is buying when he buys in a competitive market. He does *not* want to penalize the manufacturer who meets those wishes, by allowing the big department store, the mail-order house, or the chain of stores to cut an honest trade to pieces by the piracy of "cut-price sales of well-known makers' products," and he does *not* want large retailers to use the price-knife weapon to kill off small retailers. Just now the consumers' point of view and the law's point of view are not in accord.

Three recent decisions of our courts on price cutting have achieved large importance. Two of these decisions were handed down by the Supreme Court of the United States. In the so-called "Sanatogen" case it was decided that a manufacturer of a *patented* article cannot fix the resale price of his article by notice. In the so-called "Isotor Miles' Remedy" case the court, to all intents and purposes, decided that the maker of a *trade-marked* article cannot fix the resale price of his product by a *valid contract*.

The third decision was on the other side and was given by the Supreme Court of the State of Washington in the case known as the "Fisher Flouring Mills" case. It sustained a contract fixing the reselling price of a branded article. Among other things the court said:

"The true competition is between rival articles, a competition in excellence, which can never be maintained if, through the perfidy of the retailer who cuts prices for his own ulterior purposes, the manufacturer is forced to compete in prices with goods of his own production, while the retailer recoups his losses on the cut price by the sale of other articles at, or above, their reasonable price. It is a fallacy to assume that the price cutter pockets the loss. The public makes it up on other purchases. The manufacturer alone is injured, except as the public is also injured through the manufacturer's inability, in the face of cut prices, to maintain the excellence of his product. Fixing the price on all brands of high-grade flour is a very different thing from fixing the price on one brand of high-grade flour. The one means destruction of all competition and of all incentive to increased excellence. The other means heightened competition and intensified incentive to increased excellence. It will not do to say that the manufacturer has not interests to protect by contract in the goods after he has sold them. They are personally identified and morally guaranteed by his mark and his advertisement."



It is this decision that best represents the interest of sound business methods, the interest of that vague domain which the courts call "public policy," and the interests of the consumers of the United States.

The Telephone Emergency

THE stoutest telephone line cannot stand against such a storm as that which swept the Middle Atlantic coast early in the year. Poles were broken off like wooden toothpicks, and wires were left useless in a tangled skein.

It cost the telephone company over a million dollars to repair that damage, an item to be remembered when we talk about how cheaply telephone service may be given.

More than half of the wire mileage of the Bell System is underground out of the way of storms. The expense of underground conduits and cables is warranted for the important trunk lines with numerous wires and for the lines in the congested districts which serve a large number of people.

But for the suburban and rural lines reaching a scattered population and doing a small business in a large area, it is impracticable to dig trenches, build conduits and lay cables in order that each individual wire may be underground.

More important is the problem of service. Overhead wires are necessary for talking a very long distance. It is impossible to talk more than a limited distance underground, although Bell engineers are making a world's record for underground communication.

Parallel to the underground there must also be overhead wires for the long haul, in order that the Bell System may give service universally between distant parts of the country.

"Acousticon"
Covers 48 Degrees of
DEAFNESS

This is the most remarkable result ever achieved. The "Acousticon" has fitted over 100,000 deaf persons. No matter what caused your deafness, unless "stone" deaf or born deaf, you must use the Famous "Acousticon" sooner or later to

HEAR DISTINCTLY

Regulates to suit your condition—remarkable patented exclusive feature transmits sound to the deaf ear, near or distant, indoors or outdoors, under varying conditions.

Magnifies Sound 400%

The "Acousticon" is different from all others—not a simple, unguaranteed microphone—nothing to insert in the ear. Don't confuse it! Endorsed by world's great ear specialists. Delicately exercises and livens inactive muscles of deaf ear and checks progress of deafness.

Over 100,000 Users This is three times more than all other devices combined—proof of "Acousticon" superiority. Will last a lifetime—it is the ONLY DEVICE LEGALLY GUARANTEED that protects you fully against loss.

NO MONEY In Advance

TEN DAYS FREE TRIAL. We send you an "Acousticon" without deposit—you risk nothing. We prove at OUR RISK the wonderful cheer bearing the "Acousticon" gives—we prove you must see an "Acousticon" if you wish to hear distinctly. No other instrument is sent out on a no-deposit plan. Use

EASY TERMS enable everybody to own an "Acousticon." WRITE NOW about SPECIAL FREE TRIAL OFFER AND EASY TERMS. Don't delay because other devices have failed to help you, test the "Acousticon" like them. Make our great FREE TEST before you judge it. Write now for proof.

"A Man Would Die in the First Alcove"

"There are 850,000 volumes in the Imperial Library at Paris," said Emerson. "If a man were to read industriously from dawn to dark for sixty years, he would die in the first alcove."

And he would not die a *well-read man.*

But if a man could know what few great books are enduringly worth while and could read those few—Histories, Biographies, Dramas, works of Travel, Fiction, Philosophy, and Poetry—he would become well read, even though he could devote to them but a few pleasure moments a day.

Expert Advice on Your Reading—FREE

For years Dr. Charles W. Eliot, President Emeritus of Harvard, has maintained that the books really essential to the Twentieth Century idea of a cultivated man could be contained in a Five-Foot Shelf, and during his sixty years of reading, studying and teaching—forty of which were spent at the head of one of the world's great Universities—he put aside, from time to time, those few books that he considered most worth while.

He has read and reread these books, having in mind the Twentieth Century American—has consulted and advised with sixty-six other great educators concerning them.

Over $100,000 was spent in compiling and indexing the set, arranging footnotes and reading Guides, and the result was finally presented, at an immense cost, as

THE FAMOUS FIVE-FOOT SHELF OF BOOKS

Be Guided by This FREE Booklet

Some Tire Troubles

And How Goodyear Met Them

Tires Too Costly

That is today's most common tire trouble. Sixteen makes cost more than Goodyear prices. A number cost one-third more. Unless *three* such tires outlast *four* Goodyears, that means an over-tax. And few will believe that any tire excels No-Rim-Cuts that far.

We met this price trouble through multiplied output, new machinery, new efficiency. And by paring down our profits. No-Rim-Cut tires cost half what they used to cost. Their prices dropped 28 per cent last year. Yet they embody, as always, the best we know.

* * * * * *

Tires That Rim-Cut

Our statistics on such tires show that 31.8 per cent are discarded for rim-cuts only. That means that this one trouble, where it exists, adds nearly one-third to one's tire bills.

No-Rim-Cut tires never rim-cut—that we guarantee. And the time-tested method we use to prevent it is employed in no other tire.

* * * * * *

Tires That Blow-Out

Most blow-outs are due to wrinkled fabric, buckled in the cure. This can be remedied by final-curing on air-filled fabric tubes. But the method is expensive.

No-Rim-Cuts are the only tires which get this exclusive "On-Air" cure. It adds to our cost $450,000 per year, but it prevents these needless blow-outs.

Treads That Loosen

That's a very common cause of tire ruin. There is now a method to lessen this danger—to reduce it by 60 per cent. Hundreds of large rubber rivets are formed in the tire during vulcanization. We paid $50,000 for control of this method, so Goodyears are the only tires which employ it.

* * * * * *

Costly Anti-Skids

Many anti-skids have proved costly. Some soon wore down. Some caused vibration. Some centered strains at small points in the fabric. And some, when most needed, proved inefficient.

On Goodyears alone you find the All-Weather tread. It is tough, double-thick and enduring. It is flat and smooth-riding and regular. It spreads the strains like a plain tread. It grasps wet roads with deep, sharp, resistless grips.

* * * * * *

High Cost Per Mile

We have kept scores of experts working for years to attain lowest cost per mile. Their efforts have cost us $100,000 per year. They have built thousands of tires in thousands of ways to compare in metered road tests. Now they all agree that No-Rim-Cut tires mark the present-day limit in this respect.

* * * * * *

Those are the reasons why Goodyears rule Tiredom—why they outsell any other tire. And why, every month, they are winning legions from other tires to Goodyears.

If you suffer these troubles, and wish to combat them, Goodyear tires will do it. Any dealer will supply you. Just say you must have Goodyears.

May We Send You a "Guide Booklet" to Books—Free?

To every reader of Collier's we want to send free by mail a copy of a wonderful "guide booklet" to books. It was printed to give away to Collier patrons; no obligation is involved; merely clip the coupon.

This little book guide is invaluable to any man or woman who owns books or ever expects to own them. It tells how Dr. Eliot of Harvard, from his sixty years of reading, study and experience—forty years of it at the head of one of the World's greatest Universities—has put aside the few books that he considers most worth while—the few that have permanent value and real usefulness to the modern Twentieth Century American.

"How can the average man select a Library that will help him to become really well-read in a short time and without wasting a dollar or a minute on useless books?" That is the question which this book guide answers. It tells the story of the 418 great works that Dr. Eliot chose—

The Famous Five-Foot Shelf of Books

Now yours at only a few cents a day

Every well-informed man or woman should at least know something about this famous library.

The free booklet tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," and so arranged it that even "fifteen minutes a day" is enough.

To Get This Book Guide Free—

merely clip this coupon. It will be sent by mail without obligation. It tells the whole fascinating story of the Five-Foot Shelf of Books; it contains Dr. Eliot's own best advice on what books to accept, just how and what to read. No obligation; merely use the coupon.

HUDSON Six-40 For 1915

$1550 This Year

The Model Car

The HUDSON Six-40 for 1915 comes, we believe, pretty close to your model car. It reveals all the latest refinements. In big things and little, you will find it the typical modern car.

Most of you, for ten years, have watched Howard E. Coffin develop new standards in motor car designing. And his every innovation has led closer to your ideals.

The new-model HUDSON is the fruition. He and his 47 engineers have devoted four years to it. Men recognized it instantly as the coming type of car, and they ordered last year 3,000 more than we could build. Premiums as high as $200 were offered to obtain

Now comes the 1915 model with 31 refinements. We have trebled our output to cope with demands, and that lessens our cost $200 per car. **So last year's price of $1,750 is this year reduced to $1,550.**

Men's Changed Desires

Once the ideal was an oversize car, big, impressive and powerful. Now modest size is wanted. This HUDSON Six shows 47 horsepower—enough for any requirement. The 123-inch wheel-base gives ample room for the two extra tonneau seats.

Once the finest cars were heavy. But men knew less then about proper materials, and less about designing. Here is a car, as staunch as heavy old-timers, but weighing 2,890 pounds. By better materials and greater skill, we have saved you the weight of a car-full of people. Yet we have even added strength.

Once, in the best cars, operative cost was extravagant. Few men could stand the tax. Here, by matchless lightness and a new-type motor, we have made it very small.

Once the desirable cars were costly—way beyond the reach of the many. Today, this Six costs you but $1,550. Three years ago, not a Six was built to sell at less than twice that.

New Artistic Features

We have gained as much in luxury and art. Compare this exquisite HUDSON Six-40 with the cars of two years back. Note the flowing, unbroken lines, the excellent body finish, the hand-buffed upholstery, the invisible hinges—the countless touches which show infinite pains.

This car looks the thoroughbred. You will find none handsomer, none better equipped, none with more comforts and conveniences than this.

The Highest Type

The new HUDSON Six-40 in no way whatever sacrifices ideals to price. It is what we regard—what Mr. Coffin regards—as the highest type of a modern car.

In quality, beauty and equipment there is no way to excel it. In size and power it accords with present demands. Its lightness shows the finest materials and the highest skill in designing.

This is our masterpiece. The price is all the best need cost when built in enormous lots. If your tastes and your tendencies accord with the times, this is the car you'll want. For there is not, on these lines, a single rival in sight of it.

Phaeton, seating up to 7 passengers, $1,550 f. o. b. Detroit. Standard Roadster, same price.

Some 1915 Features

Two disappearing tonneau seats.
Gasoline tank in dash.
Extra tires ahead of front door.
"One-Man" top, with quick-adjusting curtains attached.
Dimming searchlights.
All wiring in metal conduits.
Both lights and ignition lock.
Even better carburetion.
Automatic spark advance.
Tubular propeller shaft.
Speedometer drives from transmission.
Simplified Delco starting, lighting and ignition system.
Wider seats—higher backs.

New Hudson Six-54

We build this same model with a larger engine and a 135-inch wheelbase. It is for men who still want big, impressive cars, and who want the HUDSON features in them. The HUDSON Six-54 sells for $2,350.

Hudson dealers everywhere have these new models on show. Go see them. New catalog on request.

THE sleepiest town on the map was Winburg. Year after year the same old horse cars jangled their lazy way down Main Street, the same old city officials were reelected, and the same old stores sold the same old goods to the same old customers. On Saturday nights, from June to September, there was a band concert in Hero Square! People in Winburg grew up and became well to do in their several stations, and waxed fat around the belly, and died and were buried in the same old cemetery. It was a nice town, with its mossy gray stone buildings, and its modest spires, and its wide, straight streets shaded by tall elms and oaks; but it, too, seemed to have waxed fat as it grayed with the years; and in the fullness of time it might be expected to fold its plump hands on its plump stomach and placidly close its eyes and be decently interred as became its wealth and rank. One bright summer day something happened to Winburg. Sam and Ruth Arnold came home on a visit! For two weeks they reveled in the blissful peace and the picturesque beauty of the place, and then the habit of intense activity began to reassert itself.

THERE came an accidental hour when there were no relatives or neighbors at hand, and Sam found his best friend sitting on the back porch settee with her hands folded in her lap, gazing somberly down the hill at Winburg.

"Well, Ginger, what's the verdict on the old home town?" he asked, bending over her with that cordial familiarity which spoke of unmarred companionship.

"Guilty," Ruth flashed up at him, the dimples springing into her velvety cheeks, and she made room for him on the settee, where the sun glinted with apparent delight on their hair. Both were frankly red-headed. The difference was that he was blue-eyed and she black-eyed, and that Sam had freckles on his nose. "There's no place to go except the cemetery," she added; "and the only excitement they've had this year was a cat fight."

"It's a beautiful burg." Sam looked down over the lazy city its quaint old houses almost hidden in the green, and the shining river curving round it. At the bend the arches of the old gray stone bridge cast their long, white ovals on the water. "All it needs to make it perfect is about everything from a wave of crime to practical streets."

"Can't we give it a jolt and wake it up?" Ruth suggested, selecting a perfectly good red hair to pull out. The home visit was getting on her nerves. "The angel Gabriel will need a megaphone to wake Winburg. The town has the sleeping sickness."

"I wonder why. It's the richest city in the State."

"Yes; but every citizen carries the exact change for a two-cent newspaper. Winburg needs a smash in the ear."

"Let's do it." Ruth suddenly cocked her head on one side, and her lips parted in a smile of joy. "I smell cookies!" and she was gone in a flash.

When she returned, twenty minutes later, with some of the hot cookies on a cherished old cracked plate, Sam was standing at the edge of the porch, gripping the rail with his freckled hands and looking down over the city in deep thought.

"Well, Ginger, what's the verdict on the old home town?" he asked

"Guilty," Ruth flashed up at him

"Ginger, we've done a lot of traveling in four years," he observed, drawing her to him and taking a cookie. "We've been every place where they kept the lights burning, and always looking for opportunities." He bit off half a cookie. "Well, you found them," and she glanced up at him with admiration. "There's money in the bank."

"I'm going to shock you stiff." He ate the balance of his cookie with deliberation. "How would you like to settle down in Winburg?"

Ruth nearly lost her breath, but she was calm in all emergencies. She studied her husband soberly. He had an extraordinary scent for profit, a genius for promotion, a talent for quick operation. "Why?" she asked.

"To restore the old town to the face of nature! We can make it stay up until after midnight! We can give it dress suits, and gowns cut lower than the chin! We can force it to exercise its money! Ginger, the town's full of opportunities!" He tilted back her head and gazed into the depths of her black eyes. "Suppose we stay and start Winburg up an alley with an alarm clock tied to its tail?"

"WHY, it's Sam Arnold!" President Frazier of the Merchants and Manufacturers' Bank looked up with a puckered smile of welcome on his lips. There were a hundred tiny wrinkles on his face, and each wrinkle seemed to pinch in at the ends. "Back for a visit with the home folks?"

"No, I think I'll stay and promote a little," cheerfully announced Sam. "Winburg is fat with opportunities."

Henry Frazier put on his spectacles. The young man was not joking!

"Opportunities for what?" he wanted to know, and there was almost a snarl in the question.

"To make money," returned Sam, with a grin which somehow seemed to belong to his red hair and blue eyes. Even the freckles on his nose took part in the grin. "I want some of that money before a stranger comes along and peels it loose."

"Winburg is mighty conservative," boasted Frazier, rubbing his bald spot with the palm of his incurving hand.

"We'll cure that disease," said Sam briskly. "We'll have to make a spendthrift of the town. I want to circle the city with an auto speedway lined with flowers and fountains and monuments, so that the local joy riders can flit from park to park, from dusky eve to dewy morn, with electric lights blazing all the way! We'll—"

"Sam, what are you talking about?" and President Frazier reached hastily for his spectacles again. "Why, do you know how much that would cost this city?"

"Four or five million."

"Four or five million!" The spectacles were shut nervously in their case, as if they could be of no further use. "Why in the name of common sense do you want to do that?"

"To scare the town awake! Winburg hasn't a cent of bonded indebtedness, and when a town gets to that point, it's ready for the coroner. Put five million dollars in circulation and everybody will have money. Real estate will experience a boom, and that's why I'm here talking to you."

"Oh!" Banker Frazier leaned back comfortably in his swivel chair and folded his hands together.

"Before the City Council passes the appropriation we'll float a million-dollar company to control the real estate along the speedway," went on Sam, glowing with enthusiasm. "We'll tie up every foot of the land in a neat little knot, and

Digitized by Google

when the boom comes we'll make a million or so for ourselves. I want you to head the stock-subscription list with a hundred thousand dollars. Your name is the solidest one in town, and I have to have it before—"

A queer gurgle interrupted Sam. President Frazier had thrown back his head, and now he suddenly began to laugh. The more he thought of it the more he laughed, and that was all Sam could get out of him; just laughter. Occasionally Winburg's solidest man stopped to get his breath, but at the first word relating to the five-million-dollar speedway he burst into fresh peals of cackling. Finally Sam left him, gasping for air, red in the face, and with every tiny wrinkle puckered into him like a staple. Ruth was at the gate to meet the promoter when he came home, and she was quivering with anxiety to ask him all about it; but when he took off his hat, and she saw the peculiar kink of his stiff, red hair, she knew the worst.

"Won't somebody else do?" she helpfully suggested.

THERE was a redhead amid the green leaves of the big apple tree back of the house, and there was a redhead in the hammock just below the tree. Ruth Arnold, in a white linen frock, was swinging contentedly and embroidering daisies on a scarf. Sam, smoking a savage-looking pipe up among the boughs, was spending the morning in profound cogitation; for he had seen six other local capitalists since his interview with Henry Frazier, and they had all been amused. Now it was time to think. He liked to have his wife near him while he "tussled."

As a boy Sam Arnold had been one of those for whom wire puzzles and jig-saw pictures are invented. As a man, he believed that the ninety-seventh or ninety-eighth failure was one of the necessary steps to success. Along about lunch time he dropped from the tree and sat beside Ruth in the hammock.

"Well, Ginger, there isn't a man in this town with an imagination which will stretch further than one thousand dollars," he told her. "I see I'll have to fall back on oratory."

The dimples flashed into her cheeks and she giggled. That was all; she just giggled.

"You never heard me make a fancy speech," he indignantly declared. "When I talk about money, I'm eloquent! If I can't get these investors to organize before the City Council agrees to spend that five million, I'll have to go after the City Council."

Ruth picked up her scarf and studied a petal in one of the daisies. "Do I know any members of the present City Council?"

"Same old trustles," and Sam's brows knitted. "Held in office because they're honest, and the way they keep from making mistakes is never to do anything. Mayor Whiffer still drives his team of plucked grays to the City Hall at 10.30 a. m. every other Thursday, and the City Council consists of old Doug Bare"—Ruth stuck her needle in the scarf—"C. J. Edwards"—Ruth rolled up the scarf and dropped it in her lap—"Otto Schonberg, Martin Stillup, Jim Robertson—" Ruth pulled out a gleaming red hair.

"Don't, Sam," she interrupted. "I see all the drivers of Winburg's funeral. About what could you make a speech to them?"

"Civic progress!" announced Sam defiantly.

There was a shriek from Ruth. She threw back her head and laughed almost as heartily as Henry Frazier had done, and the more she thought about it the more she laughed. She could see the dried-up little Mayor, and blocklike Alderman Bare, and leathery C. J. Edwards, and round-headed Otto Schonberg, and the rest of Winburg's most conspicuous conservatives listening to Sam's rousing speech on civic progress, and the sight was too much for human gravity. Sam kissed her dutifully when he started downtown.

WHEN he returned he kissed her apologetically. "Well, Ginger, I made that speech to-night," he informed her, with deceptive cheerfulness. She suppressed her giggle, while he led her around the house to the hammock. The moon was shining brightly over the placid city of Winburg and striking sapphire glints from the winding river. "Beautiful evening," he nonchalantly observed.

The giggle began to break loose.

"Have it out," he cordially invited her. "Have a good laugh. Everybody does."

Still laughing, she snuggled close to him in the hammock. "Now I guess they get the smash in the ear," she judged.

"A crook could make them beg for this speedway," he savagely declared, reaching for his pipe.

"Crooks are smart, aren't they, Sam?" mused Ruth. "Why can't their methods be applied to honest schemes?"

"By George, that's an idea!" and Sam was cheerful again. His eyes sparkled in the light of his match. "Ginger, suppose we think."

For twenty minutes they sat silently, gazing down at unsuspecting Winburg.

"Have you an idea, Sam?"

"No. Have you?"

"No."

Twenty minutes more. The frogs in Hilger's pond and the near-by tree toads and the katydids in the orchard sang their strident odes to the moon. Far away a mournful owl hooted, and then Ruth suddenly jumped from the hammock.

"I know how to start enthusiasm!" she excitedly told him.

"Shake, pal," he said, coming out of deep thought. "I have the smash."

"Why, hello, old chap!" hailed Sam with all the effusive cordiality of a confidence man. "I've been hunting for you everywhere." Charley Tinbury smiled with pea-eyed gratification. It was something to be hunted for everywhere!

JOHN FERRET was a long, lean farmer, with a high forehead and a thin nose and self-focusing eyes. There were three men at work in his fields, but John himself was astride one of the harrows when Sam Arnold added his red hair to the landscape.

"Would you like to sell your river-road land, Mr. Ferret?" called Sam, waiting for the harrow to make the turn near the fence.

"Whoa!" yelled the farmer, and, tossing the lines over the backs of his thick-rumped horses, he strode over and leaned his sinewy arms on the rail.

"What did you say?"

"Would you like to sell your river-road land?"

There was a snap in the self-focusing eyes.

"Would you like to buy it?"

"No," promptly returned Sam, with that laugh which displayed his even, white teeth and rounded his cheeks and set the freckles on his nose into acute prominence. "I'm incubating a buyer for it."

Ferret studied the young man shrewdly.

"Real-estate agent, eh?"

"No, I'm Sam Arnold; son of Gil Arnold."

"Oh, yes! Why, hello Sammy! Funny I'd forgot that hair, but I didn't know you since you've grown up," and then and there John Ferret gave a demonstration of why no stranger would ever waken Winburg. He looked into the clear eyes of Sam, and saw there the same blueness of Gil's; and Gil Arnold was a trustworthy man! Ferret shook hands with a grip like a hay hook. "Now, Sammy, why do you want my river-road land?"

Leaning on the fence, and talking as friend to friend, Sam explained his entire speedway project with glowing enthusiasm, even admitting that he hoped to make a large profit from it for himself.

JOHN FERRET stroked the big crease in each of his leathery, bronzed cheeks with a calloused thumb and middle finger, and looked speculatively down at the shining river. His was the high, rolling farm at the beautiful bend, but the land along the bank was not of much use for farming purposes.

"What's your proposition?"

"What's your land worth?"

"Five hundred an acre."

"I'll get you six if you'll give me an exclusive six months' contract to sell it for you on five per cent commission." Ferret put a clay-laden boot on the second rail of the fence, and, with a stiff thumb, pushed small pieces of bark from the top rail.

"Reckon I'd better stay out till the speedway's built," he considered.

"No, you don't, John!" laughed Sam. He knew the exact moment to clap a man on the shoulder. "I'm too old a bird in the promoting game to put my foot in the lime. If all you fellows don't come in, there'll be no speedway. Six hundred's a big price for the land, and you know it. You're getting part of the boom in advance. You have everything to gain and nothing to lose. Now sign this contract."

AGAIN Sam Arnold followed his shining freckles into the president's office of the Merchants and Manufacturers' Bank. Henry Frazier took off his spectacles at the sight of him and leaned back his head to laugh. Sam slammed his hat on the old, carved desk, and his red hair seemed to fairly spring up as if angry with confinement.

"I'll have them digging on that speedway before next spring," he declared, a flush creeping up in his cheeks and making his eyes particularly blue. He tossed a thick bundle of documents in front of Frazier.

"All right, Sam, all right," returned Frazier, still chuckling. "Mayor Whiffer was telling me about the speech you made before the City Council," and he threw back his head again.

"It was a highly humorous occasion," said Sam dryly. "One day I'm going to hold another session with those caked officials and do all the laughing myself. Frazier, here is control of 90 per cent of the property along the speedway. It represents real-estate commissions for me of over fifty thousand dollars as soon as you help me organize the Speedway Improvement Company."

President Frazier's wrinkles immediately relaxed. He sat up, wiped his eyes, put on his spectacles, and reached for the papers.

It was Sam's turn to smile. "I thought the mention of money would sober you," he said.

FRAZIER paid no attention to him. He examined three or four of the contracts, and estimated the weight of the balance. "You've been remarkably energetic," he conceded. "But what do you expect me to do with these contracts?"

"Be impressed," answered Sam. He had entirely regained his good humor, and the wave in his red hair was distinctly triumphant. "I brought these in to make a dent in your intellect, and I've succeeded. Frazier, you can make my work just twice as quick and half as hard if you'll head my subscription list now, in place of later on. If you'll come in immediately, I'll let you have your stock at seventy-five. If you wait, you'll pay par."

President Frazier rubbed his bald spot in vexation. Sam had disturbed him. He was becoming interested in this fool project in spite of himself.

"I don't intend to come in," he asserted, with a firmness inspired by fear. "Why, you're not any nearer than you were! You have this real estate tied up so that you can make a profit out of the boom if there is one; but to make the boom you must have the speedway, and the city won't give you that. Why do you pester me?"

"Because yours is the best name in town to head a subscription list," grinned Sam, rising, and shutting in his red hair. "I'm sorry for you, Frazier; you'll have to pay par."

"Well," considered Frazier, polishing his spectacles nervously, "I'd rather pay par for a sure thing than seventy-five for a speculation."

"That's why Winburg still has horse cars," commented Sam, picking up his contracts. "You won't be interested in anything until it's too late."

"I won't say I wouldn't be interested in an enterprise which was solid and substantial," and Frazier still polished. He was like a small boy at the edge of a cold creek. "But I never do let myself be coaxed into anything too quick."

"I don't intend to coax you in," grinned Sam; "I intend to push you in."

A RED streak flashed out from the house to meet Sam at the gate. The black eyes of Ruth were snapping as Sam swung her from the ground and set her down again.

"You have just kissed a president," she gayly told him, as, arm in arm, they made for the back porch.

"President Ginger of the Winburg Civic Art League!" he laughed. "Immense!"

"Hasty work, wasn't it, Sam?" she exulted. "It has only been three weeks since I proposed the idea of an art league to Mollie Stanton, and we organized this afternoon. We've started a campaign against the hitching posts in Main Street."

"What did they think of the speedway?" inquired Sam anxiously.

"Why, I kept that as my most precious secret," and there was infantile blandness in her round, black eyes.

Digitized by Google

Sam studied her a moment in surprise, and then he grinned. "The smash in the ear don't work with the ladies, eh?" he guessed, as he fixed the cushions in her end of the porch settee.

"Indeed no," she dimpled. "Winburg's women have been kept from wanting anything for so long that their nerve must be developed gradually. I think it will take me about two weeks to make them dare to imagine the speedway."

"Then that's off my mind," and Sam, with a stretch of his tall body and long arms, dragged down his bulldog pipe from under a porch rafter. "Ginger, who is there in this town that has five thousand dollars and is a hopeless fool?"

"Charlie Tinbury!" The answer was explosive, it came so promptly, and it ended in a giggle.

"Good-by," and Sam reached for his hat.

"What are you going to do to Charlie?"

"Make him lucky. I've come to the point now where I need money for incorporating, advertising, and a red-carpeted office with a mahogany desk and two brass cuspidors; and it's against the rule, in this country, to use anything but sucker money for promotion."

"I can't understand that," puzzled Ruth.

"It's because you can't hand a wise man as big a profit as you can a womp," grinned Sam, and kissed her good-by.

HE FOUND Charlie Tinbury in the billiard room of the Hotel Winburg solemnly playing billiards with himself and keeping the score on alternate strings. He was a phenomenally thin young man, with a fuzzy mustache and a long nose and small eyes, and just now he was much distressed because his black string was fifteen points ahead of his white one; and he was betting with himself on the white!

"Why, hello, old chap!" hailed Sam with all the effusive cordiality of a confidence man. "I've been hunting for you everywhere."

Charlie Tinbury smiled with pea-eyed gratification. It was something to be hunted for everywhere!

"Thanks, old chap," he returned in an astounding bass voice considering his thin chest. "Have a drink?"

"I'm too busy, Charlie," refused Sam, and taking Mr. Tinbury by the wrist, he led him four feet from where they were then standing, as if the new spot were more secretive. "Charlie, I'm organizing the most progressive company which was ever floated in Winburg. Now, you're a live young business man!"

Charlie blinked and pulled at his fuzzy mustache. He seemed to have an eternal hope that if he pulled persistently enough he might stretch that mustache into flamboyant luxuriousness.

"Yes," he granted. His sole business in life was to evade the tannery his father had left him.

"That's the reason I came to you! You'll appreciate a good sporting proposition! This company is for a million dollars! If you'll take twenty-five thousand dollars' worth of stock in advance of incorporation, I'll let you have it for twenty per cent; five thousand dollars!"

Charlie knitted his brows in severe thought, and plucked at both sides of his fuzz.

"Suppose the company falls through?"

"Then you'll lose like a good little sport!" and Sam slapped him on the shoulder. "But you won't lose, Charlie. I've told you the conditions; now I'll tell you the scheme. You run your own car, don't you?"

CHARLIE smiled until his eyes themselves seemed to pucker. "I have the only six-cylinder automobile in this county!"

"And no place to run it!" Sam took off his hat and thrust his fingers through his red pompadour. He drew Charlie impulsively to a chair beside him. "Oh, you'll like this!" and then and there he painted that auto speedway, every inch. He not only painted it; he built it, with all its wide, smooth macadam, and all its flowers and monuments and fountains, its summer hotel at Hilger's Lake, and its numerous roadhouses. When he finished, Charlie Tinbury, his pale hair streaming, was riding on it at fifty-seven miles an hour, taking the curves on one wheel and passing everything on the road!

"And you may be one of the incorporators, my boy!" concluded Sam, gripping the wrist of Charlie with enthusiasm. "Understand, one of the incorporators!"

"When—when would you want the money?" gasped Charlie. The speed had made him breathless.

"Now!" and Sam jumped up. "You bank at the Winburg National, don't you? I have one of their check blanks in my pocket if you haven't your book with you. Here's a fountain pen."

Half an hour later Sam was uncovering his red hair in Frazier's office and illuminating the dingy old room with his cheerful grin. Frazier began polishing his spectacles as soon as he saw Sam.

"I suppose you've brought your stock subscription list," he observed with an attempt at banter.

"Not for your signature. You're too late to get in on the ground floor. I've another proposition for you. Next week we open the books of the Speedway Improvement Company to popular subscription, in ten-dollar shares. Will the Merchants and Manufacturers' Bank become the custodian of the funds received for the stock, these funds to remain on deposit, at interest, until the company is completed and the speedway appropriation is voted?"

President Frazier put on his spectacles and pondered deeply, and, as he pondered, his thin lips puckered into a wrinkled smile.

"There seems to be no flaw in that proposition," he admitted.

"Flaw?" and Sam caged his hair with his hat. "If it was an apple, you'd eat it!"

THE new speedway! Placid old Winburg awoke with a shock to the consideration of that mighty project, and the awakening was distressing. Winburg did not want anything. It did not want to want anything. It had dwelt in fat content for a hundred years amid its gray stones and its moss, its oaks and its elms. Young Winburg had been active, ambitious, aggressive; middle-aged Winburg had been prosperous, thrifty, proud; old Winburg, heavy with its goods and chattels, and sleek with its honors, wished for nothing but to sit in the sun. Now, all at once, it was asked to get up and dance and be young again; to start life all over!

Who wanted the new speedway? And what was it? A broad, macadamized roadway to stretch straight out Maple Avenue, with expensive electric lights blazing, ten miles into the country. Why, it was proposed to have those big, pearl-like globes glow all night long! Who'd use them after nine o'clock? Who!

THAT matter of the electric lights was the one thing which Winburg could not comprehend; but it was the one thing which kept the topic alive to agitated discussion. The flowered and shrubberied parkway, the monuments, the fountains, the beautiful views, all these fell within the reach of the imagination, though in an unreal sort of way; but Winburg could not grasp the amazing thought of those thousands of electric lights blazing all night away out there in the country! Alas for the peace of Winburg! She had within her citizenry one class of malcontents of whose existence she had never been aware. All Winburg's bright and ambitious young men had moved away shortly after they began to shave; but Winburg's bright and ambitious young women had been compelled to stay at home. It was these whom Ruth Arnold, with fully as much sympathy as calculation, gathered into the Winburg Civic Art League; and it was these who saw immediately, and with almost tearful gratitude, the joy of those thousands of electric lights burning all through the night away out in the country. They saw at once that the retiring hour of Winburg would change from 9 p. m. to 1 a. m.

WITH the eye of romance they fashioned new programs for the evenings which were now so dull—a smooth spin in the cool night air, over roads so even that it was like being wafted in a swift aeroplane; a stop at a gleaming roadhouse, with its broad piazzas overhanging the water; music, life, gayety, pretty frocks, and a place to wear them! Suddenly the Winburg Civic Art League became a vociferous power! Armed with the desperate resolves which come with sudden emancipation, it clamored so vehemently for the speedway that its voice was heard from park to park and from river to pond.

It appropriated the public print for its forum, and the newspapers, which had long neglected the ladies, except to mention them in a casual and patronizing way, now found some mysterious force impelling them to give the ladies and their wants serious consideration and generous space. The newspapers, too, sober and content and placid, like the bearded city fathers, were dazed by the revolution and found themselves, without quite knowing why, bristling with adjectives about the new speedway.

President Frazier sat up, wiped his eyes, put on his spectacles, and reached for the papers. It was Sam's turn to smile. "I thought the mention of money would sober you," he said

IMMEDIATELY after the Winburg Civic Art League had exploited its enthusiastic feelings, Sam Arnold went to the five newspapers with an extremely rare and precious five hundred dollars for each of them, and bought advertising space to that amount.

By George, the ladies had been right! The speedway was an improvement which would do more to quicken the commercial activity of Winburg than all the combined factors of the past hundred years! Had it not already turned five hundred dollars of solid cash into the coffers of each newspaper? Was not this a direct, tangible evidence of commercial progress? Hurrah for the speedway! Hurrah for Winburg's Civic Art League! Hurrah for Sam Arnold! Hurrah for everything! There had not been so much hurrahing in the public print since the days of the Civil War!

The solid and well-to-do investors of the city paid no attention to all this chimerical gush. Their cash was comfortably located in 3 per cent bonds, or 5 per cent mortgages, according to a man's fears or his activities. But the five hundred dollars' worth of advertising in each of the five papers was not designed to appeal to the solid, conservative investors. It appealed, in large black type, to the people, for this was essentially a people's movement! A man could invest as low as ten dollars in a share of Speedway Improvement stock, and as high as a hundred; and for his stock he could secure a hold on a home site in the North Road subdivision. Safe, too; perfectly safe! The Merchants and Manufacturers' Bank, over the signature of President Frazier, guaranteed the security of every dollar! Either the company was completed, the money invested in positive profit-bearing real estate and the speedway built, or else the money was to be returned at the end of six months by the Merchants and Manufacturers' Bank, plus 4 per cent interest. And the stock could be bought at the bank! It was like a savings account, with a beautiful big gamble attached. Everything to gain and nothing to lose!

PRESIDENT FRAZIER looked up in surprise at the man who came in with Sam Arnold. He was a broad-jawed, mottle-faced old Irishman who for years had been the forlorn leader of the distressed and discredited minority party, but in whom the years of disappointment had left no bitterness. Hope sprang anew in him every spring and fall. "Good morning, Tim," said Frazier with scant cordiality, and he looked wonderingly at Sam.

"Morning, Governor," husked Tim Cassidy, and sat down diffidently in the chair furthest from the desk, where he ran his stubby fingers through and through the fringe of crisply curly gray hair at the back of his neck.

"What can I do for you, Sam?" asked Frazier, polishing his spectacles and smiling his puckered smile. If Sam had done nothing else, he had brought to the bank a host of small investors, most of whom would remain as depositors.

"Hand me a bouquet and my share of the profits," and Sam's red hair seemed to have an extra wriggle in it as he laid his hat on the desk. The freckles on his nose were unusually in evidence to-day. "I want you to agree to vote me, at the first stockholders' meeting of the Speedway Improvement Company, 10 per cent of the stock for my services in promotion."

Old Tim Cassidy nodded his head and smiled admiringly at Sam, while President Frazier put on his spectacles.

"I don't see what I have to do with it," he said.

"You will have," rejoined Sam. "I'm ready for you to come in to the company"

Where the Story Begins

By George Weston

ILLUSTRATED BY MAY WILSON PRESTON

THANK God we have no class distinctions in America! And having rejoiced accordingly, let us consider the Savarin-Splendide Hotel.

Your car stops at the entrance. An attendant, disguised as an Admiral of Horse Marines, helps you to descend. You cross the sidewalk under a canopy and a page in buttons revolves a squirrel door to make your entrance dignified.

You enter the foyer. Another attendant, liveried like a Cubist impression of a royal footman, bows with grace and leads you to the desk. You register, or your secretary does it for you, while two human beings deploy in the distance with your hand baggage and try to appear unconscious of their plum-colored shorts.

Presently you prepare yourself for dinner. If you have left your body servants at home, a liveried maid or valet will help you to dress. You dine—a magnificent ceremony—and when you have dined you saunter along the Splendide's promenade and look bored at the other bored products of democracy who have given the promenade its name of the billion-dollar parade.

Past the Louis Quatorze drawing room you saunter, past the Arabian room, past the entrance to that labyrinth which leads to the café, past the music room, past the afternoon tea room, and then as you draw near to the crush in the grand lobby you pass the little shop where literature and theatre tickets are sold at the usual Splendide premium. And in that little shop, surrounded with plate glass like the business floor of a lighthouse we will dally a while and concern ourselves, for that's where the story ends.

LIKE a lighthouse overlooking the promenade—there's a happy thought. And the lamps in the little shop were kept burning by two wise virgins, rather more haughty than Catherine de' Medici would have been if she had been twins and had spent her life in charging nickels for one-cent evening papers.

The first virgin was named Lizzie. Wherefore she called herself Beatrice. In her professional character she talked with a drawl which incited old ladies to murder. In her hours of ease, however, she returned to the language of childhood with that same blessed sense of relaxation which is generally associated with old slippers, old corsets, and old friends.

The second virgin was named Edna, and though she might just as well have called herself Heloise, or Alyss, or Jardinière, or some other pretty name, she stuck to the call of Edna. This marks her at once as an unusual character, but we will return to that later. For the present we will content ourselves with listening to the conversation of Beatrice and Edna, who are all alone in the little shop and quite unconscious of the fact that history is taking notes.

"GEE, I'm tired!" said Beatrice, yawning widely behind Caruso's lithograph. "Say, Edna, look at that fat old dame in the evening dress. Wouldn't that jar you?"

"S'long as nothing jars *her*," said Edna, looking. "I should worry— Say, you're giving me the gapes, too. Quit it."

"Looks like a butcher shop togged up for Christmas; don't she? Huh?"

"Wasser-matter, Bea?"

"I was justa thinking."

"Does it hoit?"

"My, but you're witty! Honest, though, I was thinking how I felt when I first come here. I thought it was going to be romantic. What d'you thinka that?"

"Romantic! Rats!"

"Well, didn't you think so yourself?"

"Sure I did. Cheese it— I beg your pardon, sir. Two orchestra seats for the Herald Square to-morrow night? Here are two very good seats—eighth row, center aisle. Five dollars. Thank you."

She watched Beatrice sell two popular novels to a woman in black and yellow velvet, and again the glass doors closed upon the little shop.

"She's some chicken in the black and yellow; believe me!" murmured Beatrice.

"Ye—eh," said Edna. "Trying to look like a tiger. Got romantic notions the same as we used to have. But she has to take it out in novels, and little Willy has to take it out in theatre tickets, because there's nothing doing in real life. Whatcher staring at? Got a mash?"

"Mash nothing. It's that goil again."

"What goil?"

"The goil that looks like you."

"Is she rubbering at me again?"

"Yep. Peeking through the palm. That's three nights running she's done it. Dressed in sables, too, if I know what sables is; and just comes into rubber and then chases off again. Gee whiz, Edna; she's coming in! Don't look!"

The glass doors opened and a girl in furs walked slowly to the counter behind which Edna was making up her daily accounts.

THEY were indeed remarkably alike in figure and features. But the girl in furs looked uncomfortable while Edna was the acme of aristocratic assurance.

"I beg your pardon," said the girl in furs, "but you leave at half past eight; don't you?"

In her subconscious mind, Edna replied: "Huh huh." But aloud she answered: "At eight-thirty. Yes, madam."

"Then could you—would you mind—er—having a cup of tea or something with me? I—I want very much to talk to you."

Edna looked at her with more surprise than haughtiness.

"Sure," she said. "I'll be outside on the corner in just about five minutes."

The girl in furs drew a long breath which sounded like relief.

"You're very kind," she murmured. "I'll be waiting there—in a car."

She hurried, almost ran from the little shop, and the two wise virgins faced each other, flabbergasted quite.

"Now what d'you thinka that?" muttered Bea.

"I beg your pardon," said the girl in furs, "but you leave at half past eight; don't you?"

EDNA left the employees' entrance and made her way toward the limousine which was standing near the corner. In her ears Beatrice's warning was still echoing with an ominous crescendo: "You never can tell, Edna. Look out for white slavers and 'essile fem's. Maybe it's just a trick to get you in a car and chloroform you. A goil can't be too careful nowadays."

As Edna approached the car the door opened and the girl in furs looked out.

"Oh, I'm so glad you're here," she said. "Come in."

"If it's all the same to you," said Edna, "I'd rather walk. I don't feel like riding to-night."

"But, my dear, I have such a lot to say to you. And I don't want anybody to overhear it."

"That's all right. We can go over to the Cheltenham and get something to eat. There won't be many in the dining room." They crossed the street to the Savarin-Splendide's great rival, and after Edna had ordered a Welsh rabbit, a pot of chocolate, and a charlotte russe, she nodded to her hostess. "All right," she said, "any time."

"Dear me, I hardly know where to begin—"

"Why don't you try the beginning?" asked Edna. "It's as good a place as any."

"Very well, my dear, I will. But please try to give me a little sympathy, because I'm in a dreadfully awkward position."

"Sure," thought Edna. "I've got no call to give her the frozen face. She never did nothing to me." And so she smiled a little. "I'm ready," she said.

"Well, to begin at the beginning," said the other, looking down at the cloth. "I spent last summer at North East Harbor and there I made the acquaintance of a young man. I did this under very—er—unconventional circumstances—"

"What d'you mean?" asked Edna. "He picked you up?"

"PICKED me up?" repeated the girl with furs. "What an odd expression! What do you mean?"

"Did he say it was a nice night and ask if you were going for a walk?"

"Oh, I see! No; not quite like that. I dropped my handkerchief and he picked it up and then he walked along with me."

"Sure," said Edna with a wise look at her Welsh rabbit. "They always walk along with you."

"But, you understand, it was really an accident; my dropping the handkerchief."

"Sure," said Edna with a wiser look than before. "It's always an accident."

"And then I met him again—oh, by the purest accident!—and after that we seemed to meet rather frequently. In fact—er—"

"In fact, all the time," remarked Edna.

"My dear, we did; yes. And, somehow, you know, I thought I liked him."

"Ye-eh," said Edna reflectively. "You've got to be careful or that sometimes happens, too."

"But, you understand, all our meetings were—were—"

"On the quiet?"

"My dear, you have such a way of putting things! But he lived in a very cheap boarding house, while

Edna nodded to her hostess. "All right, any time." "Dear me, I hardly know where to begin—" "Why don't you try the beginning?" asked Edna

We have our cottage there. And, in fact, he had no clothes, so we simply couldn't meet socially."

"Not if he had no clothes," said Edna, pouring out another cup of chocolate. "It might have made talk."

"Exactly. And meeting him that way, it seemed so romantic. It was preposterously silly, of course. We exchanged photographs and wrote each other poetry, and there was some silly talk about a ring."

"Did you get the ring?"

"My dear, yes."

"Huh! He meant business all right; didn't he! Most of these Johnnies talk love till they're hoarse, but they never say 'Peep' about a ring. But maybe it's a five and ten. Got it with you?"

THE other girl searched her handbag and found a small gold ring set with a modest diamond.

"No," said Edna, examining it. "Woolworth's never saw that."

"Does it fit you?"

"Fine," said Edna, slipping it on.

"All right, wear it," said the other. "Now let me see. Where was I?"

"You were saying he gave you this ring."

"Oh, yes. And the next week we returned to the city, and I began to see how silly—how perfectly silly—I had been! Of course he thinks we're engaged. But I—I—"

"You want to shake him?"

"I would hardly put it that way. But I think you know what I mean."

"Why don't you send him his ring, then, and tell him to go chase himself?"

"Oh, my dear! I'm sure he wouldn't take it. I'm sure he wouldn't go. He's the most persistent sort of person: you've no idea. And, to make it worse, he's in the theatrical profession, and I'm just as sure as anything that it isn't myself he loves. It—it's my money."

"You've got a lot of money?" asked Edna.

"A horrible lot. I'm Miss Florence Kies, you know."

Edna made a gesture of deep interest with a spoonful of charlotte russe. "Are you the hundred million-dollar deb-you-tant?" she asked.

"ISN'T it ridiculous!" nodded Miss Kies. "Of course it's a frightful exaggeration, but they call me that in some of the papers. I came out last month and—and you know it's simply tragic—the way this other thing's hanging over me. And besides I've—I've met a—"

"You've met a feller you like better?" asked Edna, her cool eyes on the other's embarrassed face.

The hundred-million-dollar débutante nodded again and looked more embarrassed than ever.

"And you think I can help you?" asked Edna.

"Yes, and I would make it most tremendously worth your while. The moment I saw you in the Savarin Splendide— Do you know, my dear," she broke off, "that you look an awful lot like me?"

Edna nodded this time. "Funny; isn't it," she said. "Like looking in a mirror."

"Exactly. And that's my plan. You see, Ronald never met me except when I was alone—"

"Is his name Ronald?"

"Yes."

"Some floss."

"And for all he knows, I might have been Miss Kies's maid, using her name and her stationery and everything like that."

"And stringing him along; sure."

"Well, a few days ago I got a letter from him that he's coming to see me. He'll be in New York the day after to-morrow, and I want to know if you'll meet him instead."

EDNA thought this over.

"Ronald's nothing to me," she said at last. "No; I don't want to meet him."

"But wait till I tell you," pleaded the other. "I want you to be my maid for a few days—I'll pay you anything you wish. And when he comes to the house I want you to meet him in the servants' sitting room and tell him you were deceiving him in North East Harbor and that you're only

The Loot and the Lieutenant

By Will Adams—Part II

ILLUSTRATED BY GAYLE PORTER HOSKINS

AFTERWARD, when Stone tried to analyze those next few moments, he could get nothing clearly. It was all a jumble—a lump in the throat, a dazzle in the eyes, a song in the heart, a vision of a girl in blue, with golden hair, hugging Hilary—that rotter—hugging desperately, convulsively. The sound of a voice—a sweet voice that trembled with suppressed feeling—that put all the relief and happiness and joy of the world into the two oft-repeated words: "Oh, I am so glad! So glad! So glad!"

Stone was glad, too—a great upsurge of feeling brought the blood to his brain and a singing in his ears. And he had been pitying Hilary in a remote, untouched way which he had thought sympathetic enough at the time! Now this rescue was suddenly alive, vital. Was there anything else in the world to do but to get the girl away from this cursed place? Suppose they hadn't come! His soul turned sick. Suddenly he was aware of the girl's eyes staring straight into his and of Shorty's voice, a thousand miles off, saying: "This is Mr. Stone, your brother's lieutenant."

He must have made some sort of salutation, for the next thing he was aware of was the girl's voice.

". . . I had given up hope; I had given up praying. It seems that I have been here years and years, only I know it can't be on account of the sky up there. There's only been one night."

"And we'll have to light out of here quick before there's another," said Shorty.

"Wait one minute," said Miss Hilary. She went to the right, into the shadow near the wall, where there was a basket of food, a jug of water, and a sleeping mat. From under the mat she took something and came back to them.

Just as he reached the hole, from which came savage cries of rage, a hideous black head emerged. Gripping his rifle by the barrel, Stone brought the butt crashing down with all the energy of his strong young arms

"THE head man gave me this," she said. "He tried to make me understand something, but I couldn't. I was so frightened, but just before he left he opened the ball in the idol's hand there, took this out, and hung it around my neck." In her hand was a small woven-grass case hung on a string of small fresh-water pearls.

"Pearls!" cried Shorty.

"But see inside!" She opened the case, unwrapping something from a covering of soft fiber, and there, on her outstretched palm, lay an enormous, oval, delicately pink pearl. A roseate glow, a faint flush, seemed to lie in all the atmosphere that encircled it.

"By golly!" cried Shorty, "the Eye of Dawn!"

The men were crowding around to look, and many were the exclamations and sharp-drawn breaths.

"I don't know what it is," said Miss Hilary, giving a little shiver, "but there's something about this thing that frightens me just to look at it. I can't bear it: the very sight of it turns me sick." She turned her face away. "I've heard how some jewels exert influences over people, and I know this is—it must be—one of the great jewels of the world, but—oh! I couldn't bear to keep it on me."

"It's some jewel all right," said Shorty. "It's just about the most perfect specimen of the *Strombus gigas* ever seen—but how it could have got *here!* And how they could have kept it there in that idol's ball so long, so living, so *well!*" He came out of his meditations suddenly and gave a keen glance around. With the exception of Madge Hilary, who's gaze was still averted, and Stone, who was looking intently at her face, everyone's eyes were centered on the rosy oval that still lay in her outstretched palm, and on every face but that of Bob, who looked with interest only, was written greed and acquisitiveness. Hilary's lips were curled back at one corner in a little canine snarl, while the eyes of one of the privates were dilated until the black pupil almost covered the iris.

"Good Lord!" thought Shorty. "Looks like more trouble. I always heard that these big jewels got some folks' goat completely and raised Cain all along the line, and now I'm goin' to see somethin' of it or I'm much mistaken. Cover it up and hang it round your neck, Miss Hilary," he said abruptly.

"But I don't want it, Captain; let me put it back. It's a shame to loot it."

"Loot!" cried Shorty. "Loot nothin'! They gave it to you, didn't they? Don't you put it back. Not on your life! Don't you know what that will mean to you after we get out of this? Slip the thing down under your blouse if you don't want to see it. Now tell me quick, 'cause we don't want to waste any more time, is there any other way out of here except the way we came in?"

MADGE HILARY obediently hung the pearl chain around her neck and slipped the case inside her blouse as Shorty suggested. ("Safest place in the world for it to stop immediate trouble," thought he.) "No," she answered. "Oh, I am sure there isn't! Haven't I searched and searched?"

"All right, then," quoth Shorty crisply. "Corporal Hilary, take a man and watch the doorway; we mustn't be surprised. Stone and you, Sergeant, and you men get this throne down off the platform and drag it over under the hole in the ceiling."

"Going out that way?" said Stone.

"It's the one best bet," said Shorty.

They lifted the heavy throne off the dais and dragged it to the center, then began on the dais itself. The men worked well: they knew they were in peril and wanted to be away.

"If only they hadn't seen that damn pearl!" thought Shorty. "*Hoare!*" he called aloud as they all lifted at one edge of the dais. It came up and stood on edge, and they all but fell into a shallow sort of pit beneath—a pit that was full almost to the brim with fresh-water pearls. Hundreds and thousands—*bushels* of them there were: the gatherings and hoardings of centuries!

"GOOD Lord!" gasped Shorty, pulling out his foot that had slipped in ankle deep and shaking it as a cat does after walking in the wet. "For God's sake, where did all these come from?"

"Rivers?" asked Stone.

"No, there wasn't a sign, for I looked. Never mind; here, men," with a quick thought, "fill your pockets. You're entitled to *some* loot, only be quick about it." He thought: "This'll take their minds off the Eye—"

"The Major—" began Stone.

"To hell with the Major! Excuse me, Miss Hilary. I rank you, don't I? I'm responsible for the order. Take some yourself."

Digitized by Google

"No, thank you," said Stone.

"Time to quit now, men," warned Shorty, and reluctantly they rose from their knees and dragged themselves away, spilling pearls from gorged pockets at every step. The dais was placed under the hole, the throne with the high carved back upon it, but there still remained about five feet of space unbridged.

"That's all right," said Shorty. "Sergeant, you go up first, you're big enough to make it easily. We'll hold your feet steady on the top part of the back while you get a handhold."

Up went Battle-Ax Bob. "All right," he called back. "And I can see the launch. Hurray!"

"Stand by to help up Miss Hilary," said Shorty. "Then wigwag 'em to send a boat inshore immediately."

BUT Miss Hilary had happened to be poking in the pearl pit and now gave a startled exclamation. "There's something here," she called; "under the pearls. It looks like rope."

"Fine!" exclaimed Shorty, rushing over with Stone. They dragged it out, and it was indeed a rope of heavily twined hemp—what was more, it had something like a huge hook of some fossilized substance fixed firmly at one end of it.

"Why!" cried Stone, "this couldn't be better if it was made to order for getting out of this hole. I say, I wonder if that's what the little yaps used it for?"

"Five—ten—fifteen feet," measured Shorty. "Golly, hombre, you've hit it! Now you go hand Miss Hilary up to the Sergeant while I get the kinks out of this, so the rest of us can get up quicker than by wiggling."

They stood together in the spacious seat of the great throne under the opening that let a flood of light down upon her golden hair. She smiled into Stone's face as he put his arms around her and lifted her up to Bob, who was waiting above. It took but a moment, but the nearness of her and the dearness of her turned him giddy.

"You next," said she, looking down, but Shorty came up with the rope and clambered into the throne, too.

"Hi, Sergeant!" he called.

THE head of Battle-Ax Bob appeared in the opening. "It's all right, Captain. They answered my first wag. I'll signal for the boat, but God knows how we'll get down to it, the cliff's sheer drop."

"Umph!" grunted Shorty, reaching up. "Here, take this thing and hook it in something strong."

Bob reached down a scarred arm. "Gee! Why, here's the very thing; sort of a bar thing. Might have been made for it."

"It was," grunted Shorty. "Now, everybody up! You men from the door there, come!"

BOB had the field glasses. "I see a native boat comin' from the south," he announced. "Probably the chief comin' home. We'll have to hustle." Miss Hilary gave a movement of uneasiness and most unaccountably drew closer to Lieutenant Stone instead of to her brother.

"Good job they can't see the launch from the lay of the land," said Shorty. "Haul up that rope. We don't want any trailers, and, besides, we'll need it."

They found themselves on a level plateau between three and four hundred yards square, towering high above the rest of the island. Upon every side the cliff fell sheer.

"By golly!" said Shorty, slapping his thigh, "I believe we've bunkoed 'em. Looks to me like we came the only way up. That place to the other side there, where we fell from onto the guards, is the highest you can get except through the hole."

"Only way up, all right," said Stone rather ruefully. "Only way down, too. How are we ever goin' to get Miss Hilary out of this awful mess?"

"Keep your shirt on, hombre—excuse me, Miss Hilary, not used to ladies about. Just you trust to Little Willie. Now it's me for a reconnoissance. And say, everybody flop down; they might be able to see the tops of our heads from the barrio. I don't say they can for sure, but they *might* pick us up—Gu-gus have eyes like hawks. I'll be back pronto," and off went Shorty, bent almost double on his hasty reconnoissance.

STONE lay by Miss Hilary in the rank grass. The plateau was covered with lush green growth and occasional small, clumpy bushes whose name they did not know, but never a large tree or even a tall sapling reared itself upward through the verdure save one lone, wide-girthed sentinel that on the sea edge stood gaunt and firm. So there was no shade and the sun was very hot up there on the mountain's crown. To the north lay the glittering sea, and Bob pointed. "There's the launch, miss." He peered through his field glasses. "The boat's overside and comin' in, but God knows how we're goin' to get to her. This rope we've got ain't near long enough. It's almost a three-hundred-foot drop—sheer."

"Some one else knows, too," said Stone, loyal as ever. "Captain Campbell does. He says so, and that's final. If *he* says it, it's so. But I must say I surely would like to know what he's got up his sleeve."

Bob moved nearer the sea edge and left the two separated from the rest. Stone turned to Madge Hilary reassuringly. "Don't you worry. The Captain'll get us on the launch all right. This sun is too much for you, Miss Hilary, without a hat. You must take mine."

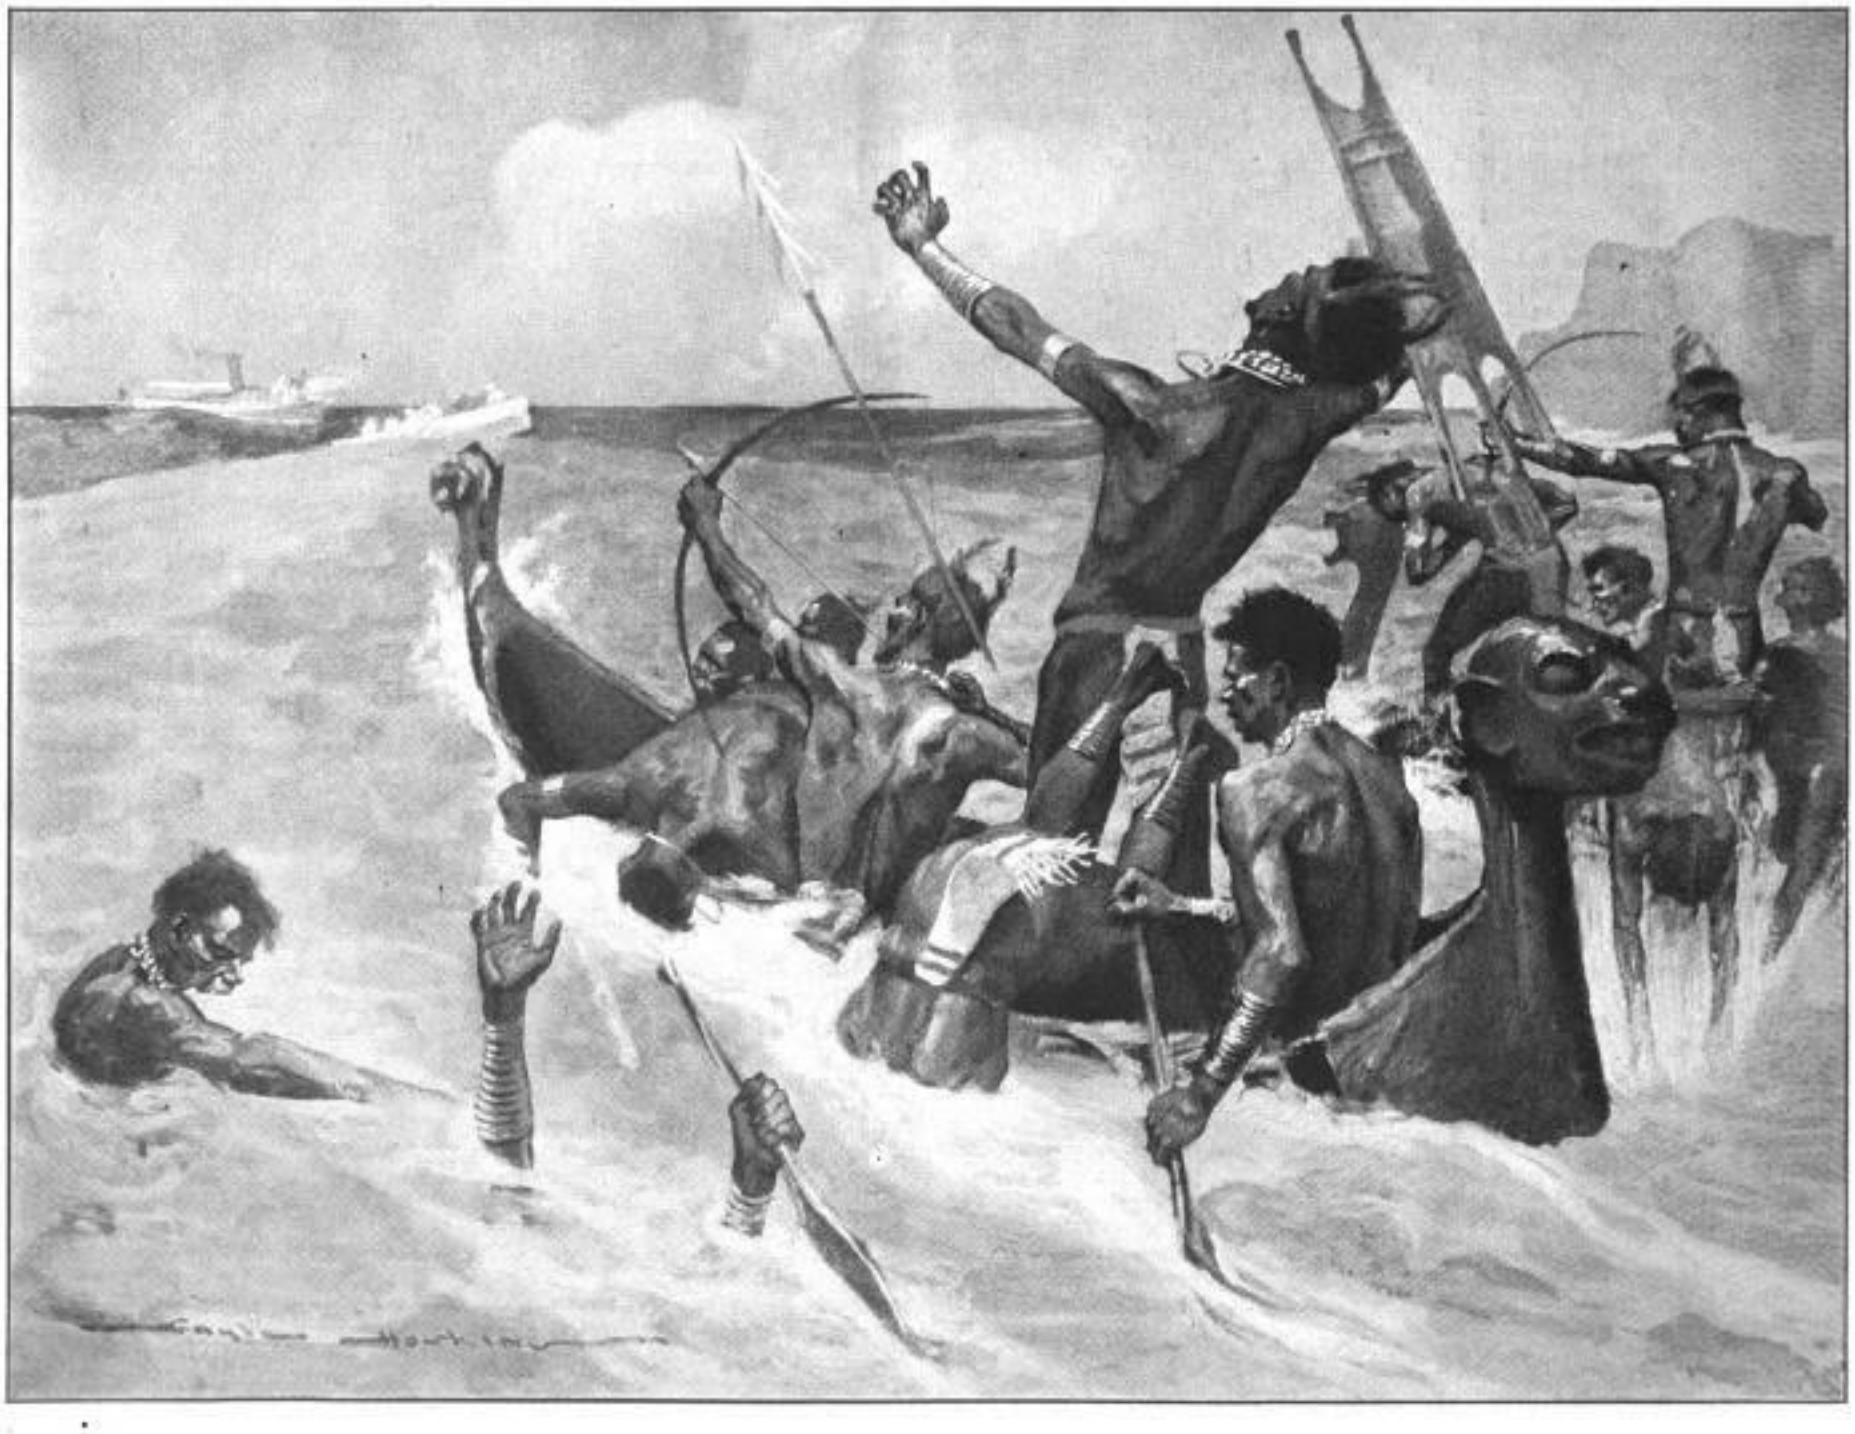
"Nonsense, Mr. Stone, I've twice as much hair on top of my head as you have."

"You'll take it," he insisted quietly. "You've got to do what I say."

SOME fine chord between them vibrated. She obeyed him. "We're in a tight place, but you mustn't worry. Shorty'll get us out. We're goin' to get out all right. Your troubles will soon be over," he repeated soothingly.

"All but one. This—this *dreadful* pearl. I can't stand it on me." She pulled at the pearl string about her neck and up came the Eye of Dawn in its little case. "Take it—please take it," she begged.

Stone took it slowly. "I'll carry it for you, of course. When we get to the post I'll give it back. It's yours. But, I say, hadn't you better let your brother carry it? Won't he think it funny that you give it to me?"



"No," she said slowly; "he won't think it funny."

"Why?" said Stone, but he rose to his knees and stowed the jewel safely in an inside pocket.

"He knows," she answered gravely, "that while I never acted to him as the rest of the family have, I don't trust him. He's all right in most things, but once—" There came a faint sound behind them.

"Gee!" exclaimed Stone, springing to his feet. "Bob Hilary, *quick!*" He grabbed a rifle and sprang toward the hole up which they had come. "Timmins, go get the Captain," he called as he raced back.

JUST as he reached the hole, from which came savage cries of rage, a hideous black head emerged. Gripping his rifle by the barrel, Stone brought the butt crashing down with *(Continued on page 24)*

"That's the chief in the lead," said Shorty. "Never saw him before." They let out a cloud of arrows, but we weren't in range for those yet

Bealby

Beauty in Distress—Chapter IV

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

THEY (William and Bealby) found the ladies rather, it seemed, by accident than design waiting upon a sandy common rich with purple heather and bordered by woods of fir and spruce. They had been waiting some time and it was clear that the sight of the yellow caravan relieved an accumulated anxiety. Bealby rejoiced to see them. His soul glowed with the pride of chocolate resisted and William overcome. He resolved to distinguish himself over the preparation of the midday meal. It was a pleasant little island of green they chose for their midday pitch, a little patch of emerald turf amid the purple—a patch already doomed to removal, as a bare oblong and a pile of rolled-up turfs witnessed. This pile and a little bank of heather and bramble promised shelter from the breeze, and down the hill a hundred yards away was a spring and a built-up pool. This spot lay perhaps fifty yards away from the highroad and one reached it along a rutty track which had been made by the turf cutters. And overhead was the glorious sky of an English summer, with great clouds like sunlit, white-sailed ships, the Constable sky. The white horse was hobbled and turned out to pasture among the heather and William was sent off to get congenial provender at the nearest public house. "William!" shouted Mrs. Bowles as he departed—shouting confidentially into his ear: "Get your clothes mended?"

"Eh?" said William.

"Mend your clothes?"

"Yah! 'E did that," said William viciously, with a movement of self-protection, and so went.

Nobody watched him go. Almost sternly they set to work upon the luncheon preparation as William receded. "William," Mrs. Bowles remarked, as she bustled with the patent cooker, putting it up wrong way round so that afterward it collapsed—"William—takes offense. Sometimes I think he takes offense almost too often. . . . Did you have any difficulty with him, Dick?"

"It wasn't anything, miss," said Bealby meekly.

Bealby was wonderful with the fire lighting and, except that he cracked a plate in warming it, quite admirable as a cook. He burned his fingers twice—and liked doing it; he ate his portion with instinctive modesty on the other side of the caravan, and he washed up—as Mr. Mergleson had always instructed him to do. Mrs. Bowles showed him how to clean knives and forks by sticking them into the turf. A little to his surprise, these ladies lit and smoked cigarettes. They sat about and talked perplexingly. Clever stuff. Then he had to get water from the neighboring brook and boil the kettle for an early tea. Madeleine produced a charmingly bound little book and read in it, the other two professed themselves anxious for the view from a neighboring hill. They produced their sensible spiked walking sticks such as one does not see in England; they seemed full of energy. "You go," Madeleine had said, "while I and Bealby stay here and make tea. I've walked enough to-day." . . .

SO BEALBY, happy to the pitch of ecstasy, first explored the wonderful interior of the caravan: there was a dresser, a stove, let-down chairs and tables, and all manner of things, and then nursed the kettle to the singing stage on the patent cooker, while the beautiful lady reclined close at hand on a rug.

"Dick!" she said.

He had forgotten he was Dick.

"Dick!"

He remembered his personality with a start. "Yes, miss!" He knelt up, with a handful of twigs in his hand and regarded her.

"*Well*, Dick," she said.

He remained flushed adoration. There was a little pause and the lady smiled at him an unaffected smile.

"What are you going to be, Dick, when you grow up?"

"I don't know, miss. I've wondered."

"What would you like to be?"

"Something abroad. Something—so that you could see things."

"A soldier?"

"Or a sailor, miss."

"A sailor sees nothing but the sea."

"I'd rather be a sailor than a common soldier, miss."

"You'd like to be an officer?"

"Yes, miss—only—"

"One of my very best friends is an officer," she said, a little irrelevantly it seemed to Bealby.

"I'd be a norficer like a shot," said Bealby, "if I 'ad 'arf a chance, miss."

"Officers nowadays," she said, "have to be very brave, able men."

"I know, miss," said Bealby modestly. . .

The fire required attention for a little while. . . .

The lady turned over on her elbow. "What do you think you are *likely* to be, Dick?" she asked.

He didn't know.

"What sort of man is your stepfather?"

Bealby looked at her. "He isn't much," he said.

"What is he?"

Bealby hadn't the slightest intention of being the son of a gardener. "'E's a law writer."

"What! in that village?"

"'E 'as to stay there for 'is 'ealth, miss," he said. "Every summer. 'Is 'ealth is very pre-precocious, miss." . . .

HE FED his fire with a few judiciously administered twigs.

"What was your own father, Dick?"

With that she opened a secret door in Bealby's imagination. All stepchildren have those dreams. With him they were so frequent and vivid that they had long since become a kind of second truth. He colored a little and answered with scarcely an interval for reflection. "'E passed as Mal-travers," he said.

"Wasn't that his name?"

"I don't rightly know, miss. There was always something kep' from me. My mother used to say: 'Artie,' she used to say, 'there's things that some day you must know—things that concern you. Things about your farver. But poor as we are now and struggling. . . . Not yet. . . . Some day you shall know truly—*who you are*.' That was 'ow she said it, miss."

"And she died before she told you?"

He had almost forgotten that he had killed his mother that very morning. "Yes, miss," he said.

She smiled at him, and something in her smile made him blush hotly. For a moment he could have believed she understood. And indeed she did understand, and it amused her to find this boy doing—what she herself had done at times—what indeed she felt it was still in her to do. She felt that most delicate of sympathies, the sympathy of one rather overimaginative person for another. But her next question dispelled his doubt of her, though it left him red and hot. She asked it with a convincing simplicity:

"Have you any idea, Dick, have you any guess or suspicion, I mean, who it is you really are?"

"I wish I had, miss," he said. "I suppose it doesn't matter, really—but one can't help wondering. . . ."

How often he had wondered in his lonely wanderings through that dear city of daydreams, where all the people one knows look out of windows as one passes and the roads are paved with pride! How often had he decided and changed and decided again!

NOW suddenly a realization of intrusion shattered this conversation. A third person stood over the little encampment, smiling mysteriously and waving a cleek in a slow, hieratic manner through the air.

"De-licious lill 'corn,'" said the newcomer in tones of benediction.

He met their inquiring eyes with a luxurious smile. "Licious," he said, and remained swaying insecurely and failing to express some imperfectly apprehended deep meaning by short peculiar movements of the cleek.

He was obviously a golfer astray from some adjacent course—and he had lunched.

"Mighty Join you," he said, and then very distinctly, in a full, large voice: "Miss Malleleine Philps." There are the penalties of a public and popular life.

"He's *drunk*," the lady whispered. "Get him to go away, Dick. I can't endure drunken men."

But he was no longer a trivial Bealby—his soul was purged, he was a strong and silent man, ready to explode into generous repartee or nerve himself for high endeavor

She stood up and Bealby stood up. He advanced in front of her, slowly with his nose in the air, extraordinarily like a small terrier smelling at a strange dog.

"I said Mighty Join you," the golfer repeated. His voice was richly excessive. He was a big, heavy man with a short-cropped mustache, a great deal of neck and dewlap, and a solemn expression.

"Frup. Be'r. Introzuze m'self," he remarked. He tried to indicate himself by waving his hand toward himself, but finally abandoned the attempt as impossible. "Ma Goo' Soch't Poshishun," he said.

BEALBY had a disconcerting sense of retreating footsteps behind him. He glanced over his shoulder and saw Miss Philips standing at the foot of the steps that led up to the fastnesses of the caravan. "Dick," she cried with a sharp note of alarm in her voice, "get rid of that man."

A moment after Bealby heard the door shut and a sound of a key in its lock. He concealed his true feelings by putting his arms akimbo, sticking his legs wider apart, and contemplating the task before him with his head a little on one side. He was upheld by the thought that the yellow caravan had a window looking upon him. . . .

The newcomer seemed to consider the ceremony of introduction completed. "*I* done care for *goff*," he said, almost vainglorously.

He waved his cleek to express his preference. "*Natua*," he said with a satisfaction that bordered on fatuity.

He prepared to come down from the little turfy crest on which he stood to the encampment.

"'Ere!" said Bealby. "This is private."

The golfer indicated by solemn movements of the cleek that this was understood but that other considerations overrode it.

"You—you got to go!" cried Bealby in a breathless squeak. "You get out of here."

The golfer waved an arm as who should say: "You do not understand but I forgive you," and continued to advance toward the fire. And then Bealby, at the end of his tact, commenced hostilities.

He did so because he felt he had to do something and he did not know what else to do.

"Wan' nothin' but frenly conversation sushus cus-

Digitized by Google

tu'ry wehavel peel," the golfer was saying, and then a large fragment of turf hit him in the neck, burst all about him, and stopped him abruptly.

He remained for some lengthy moments too astonished for words. He was not only greatly surprised but he chose to appear even more surprised than he was. In spite of the brown-black mold upon his cheek and brow and a slight displacement of his cap, he achieved a sort of dignity. He came slowly to a focus upon Bealby, who stood by the turf pile grasping a second missile. The cheek was extended scepterwise.

"Replace the—Divot."

"You go orf," said Bealby. "I'll chuck it if you don't. I tell you fair."

"Replace the—*Divot*," roared the golfer again in a voice of extraordinary power.

"You—you go!" said Bealby.

"Am I t'ask you—third time? Reshpect—Ross. . . . Replace the Divot."

It struck him fully in the face.

He seemed to emerge through the mold. He was blinking but still dignified. "Tha'—was intentional," he said.

He seemed to gather himself together. . . .

THEN suddenly and with a surprising nimbleness he discharged himself at Bealby. He came with astonishing swiftness. He got within a foot of him. Well it was for Bealby that he had learned to dodge in the village playground. He went down under the golfer's arm and away round the end of the stack, and the golfer with his force spent in concussion remained for a time clinging to the turf pile and apparently trying to remember how he got there. Then he was reminded of recent occurrences by a shrill, small voice from the other side of the stack.

"You gow away!" said the voice. "Can't you see you're annoying a lady? You gow away."

"Nowish — 'noy anyone. Pease wall wirl."

But this was subterfuge. He meant to catch that boy. Suddenly and rather brilliantly he turned the flank of the turf pile, and only a couple of loose turfs at the foot of the heap upset his calculations. He found himself on all fours on ground from which it was difficult to rise. But he did not lose heart. "Boy—hic—scow," he said, and became for a second rush a nimble quadruped.

Again he got quite astonishingly near to Bealby, and then in an instant was on his feet and running across the encampment after him. He succeeded in kicking over the kettle and the patent cooker without any injury to himself or loss of pace, and succumbed only to the sharp turn behind the end of the caravan and the steps. He hadn't somehow thought of the steps. So he went down rather heavily. But now the spirit of a fine man was roused. Regardless of the scream from inside that had followed his collapse, he was up and in pursuit almost instantly. Bealby only escaped the swiftness of his rush by jumping the shafts and going away across the front of the caravan to the turf pile again. The golfer tried to jump the shafts too, but he was not equal to that. He did in a manner jump. But it was almost as much diving as jumping. And there was something in it almost like the cavorting of a Great Horse. . . .

When Bealby turned at the crash, the golfer was already on all fours again and trying very busily to crawl out between the shaft and the front wheel. He would have been more successful in doing this if he had not begun by putting his arm through the wheel. As it was, he was trying to do too much; he was trying to crawl out at two points at once and getting very rapidly annoyed at his inability to do so. The caravan was shifting slowly forward. . . .

IT WAS manifest to Bealby that getting this man to go was likely to be a much more lengthy business than he had supposed.

He surveyed the situation for a moment, and then, realizing the entanglement of his opponent, he seized a camp stool by one leg, went round by the steps and attacked the prostrate enemy from the rear with effectual but inconclusive fury. He hammered. . . .

"Steady on, young man," said a voice, and he was seized from behind. He turned—to discover himself in the grip of a second golfer. . . .

Another? Bealby fought in a fury of fear. . . .

He bit an arm—rather too tweedy to feel much—and got in a couple of shinners—alas! that they were only slippered shinners!—before he was overpowered. . . .

CUFFED, crumpled, disarmed, and panting Bealby found himself watching the careful extraction of the first golfer from the front wheel. Two friends assisted that gentleman with a reproachful gentleness, and his repeated statements that he was all right seemed to reassure them greatly. Altogether there were now four golfers in the field, counting the pioneer.

"He was after this devil of a boy," said the one who held Bealby.

"Yes, but how did he get here?" asked the man who was gripping Bealby.

"Feel better now?" said the third, helping the first-comer to his uncertain feet. "Let me have your cleek o' man. . . . You won't want your cleek. . . ."

Across the heather, lifting their heads a little, came Mrs. Bowles and Mrs. Gestige, returning from their walk. They were wondering whoever their visitors could be.

And then, like music after a dispute, came Madeleine Philips, a beautiful blue-robed thing, coming slowly with a kind of wonder on her face, out of the caravan and down the steps. Instinctively everybody turned to her. The drunkard with a gesture released himself from his supporter and stood erect. His cap was replaced upon him—obliquely. His cleek had been secured.

"I heard a noise," said Madeleine, lifting her pretty chin and speaking in her sweetest tones.

Bealby advanced in front of her, slowly with his nose in the air, extraordinarily like a small terrier smelling at a strange dog. "I said Mighty Join you," the golfer repeated

She looked her inquiries. . . .

She surveyed the three sober men with a practiced eye. She chose the tallest, a fair, serious-looking young man standing conveniently at the drunkard's elbow.

"Will you please take your friend away?" she said, indicating the offender with her beautiful white hand.

"Simly," he said in a slightly subdued voice. "Simly coring."

EVERYBODY tried for a moment to understand him.

"Look here, old man, you've got no business here," said the fair young man. "You'd better come back to the clubhouse."

The drunken man stuck to his statement. "Simly coring," he said a little louder.

"I *think*," said a little bright-eyed man with a very cheerful yellow vest—"I *think* he's apologizing. I *hope* so."

The drunken man nodded his head. That among other matters.

The tall young man took his arm, but he insisted on his point. "Simly coring," he said with emphasis. "If—if—done*eran*' me to cor. Notome. Nottot. . . . Mean' say. Nottot tat-tome. Nottotome. Orny way—sayin' not-ome. No wish 'trude. No wish 'all."

"Well, then, you see, you'd better come away."

"I *ax*' you—are you *tome?* Miss—Miss Pips." He appealed to Miss Philips.

"If you'd answer him—" said the tall young man.

"No, sir," she said with great dignity and the pretty chin higher than ever. "I am *not* at home."

"Nuthin' more t'say then," said the drunken man, and with a sudden stoicism he turned away.

"Come," he said, submitting to support.

"Simly orny arfnoon cor," he said generally and permitted himself to be led off.

"Orny freely cor . . ."

For some time he was audible as he receded, explaining, in a rather condescending voice, the extreme social correctness of his behavior. Just for a moment or so there was a slight tussle, due to his desire to return and leave cards. . . .

He was afterward seen to be distributing a small handful of visiting cards amid the heather with his free arm, rather in the manner of a paper chase—but much more gracefully. . . .

Then decently and in order he was taken out of sight. . . .

BEALBY had been unostentatiously released by his captor as soon as Miss Philips appeared, and the two remaining golfers now addressed themselves to the three ladies in regret and explanation.

The man who had held Bealby was an aquiline, gray-clad person with a cascade mustache and wrinkled eyes, and for some obscure reason he seemed to be amused; the little man in the yellow vest, however, was quite earnest and serious enough to make up for him. He was one of those little fresh-colored men whose faces stick forward openly. He had open, projecting eyes, an open mouth, his cheeks were frank to the pitch of ostentation, his cap was thrust back from his exceptionally open forehead. He had a chest and a stomach. There, too, he held out. He would have held out anything. His legs leaned forward from the feet. It was evidently impossible for a man of his nature to be anything but clean-shaved. . . .

"Our fault entirely," he said. "Ought to have looked after him. Can't say how sorry and ashamed we are. Can't say how sorry we are he caused you any inconvenience."

"Of course," said Mrs. Bowles, "our boy servant ought not to have pelted him."

"He didn't exactly *pelt* him, dear," said Madeleine. . .

"Well, anyhow our friend ought not to have been off his chain. It was our affair to look after him and we didn't. . . .

"You see," the open young man went on, with the air of lucid explanation, "he's our worst player. And he got round in a hundred and twenty-seven. And beat—somebody. And—it's upset him. It's not a bit of good disguising that we've been letting him drink. . . . We have. To begin with, we encouraged him. . . . We oughtn't to have let him go. But we thought a walk alone might do him good. And some of us were a bit off him. Fed up rather. You see, he'd been singing—would go on singing . . ."

He went on to propitiations. "Anything the club can do to show how we regret. . . . If you would like to pitch—later on in our rough beyond the pinewoods. . . . You'd find it safe and secluded. . . . Custodian—most civil man. Get you water or anything you wanted. Especially after all that has happened. . . ."

Bealby took no further part in these concluding politenesses. He had a curious feeling in his mind that perhaps he had not managed this affair quite so well as he might have done. He ought to have been more tactful-like, more persuasive. He was a fool to have started chucking. . . . Well, well. He picked up the overturned kettle and went off down the hill to get water. . . .

What had she thought of him? . . .

In the meantime one can at least boil kettles.

ONE consequence of this little incident of the rejoicing golfer was that the three ladies were no longer content to dismiss William and Bealby at nightfall and sleep unprotected in the caravan. And this time their pitch was a lonely one with only the golf clubhouse within call. They were inclined even to distrust the golf club. So it was decided, to his great satisfaction, that Bealby should have a certain sleeping sack Mrs. Bowles had brought with her and that he should sleep

The Fleet Stands By

By James B. Connolly

Photographs by JAMES H. HARE, Collier's Staff Photographer

IT HAS been night, but in a moment the red sun rolls up from the oily, undulating tropic Gulf, and it is day. Landward, the yellow night lights grow dim; there is a moment of haze and vapor and then the city—a pink and white city, with here and there a touch of cream and blue—emerges from above the breakwater and the harbor front. A quartermaster of the watch steps up to the officer of the deck and, saluting, says: "Two bells, sir."

"Strike two!" says the officer of the deck; and the quartermaster strikes them; and, striking them, seems also to strike a sharp double stroke from every other ship in the harbor; for what is happening on one ship is happening also on every other ship in the harbor. The double strokes echo all about us.

A quartermaster of the watch steps up and, saluting, says: "Quarter past five, sir." And the officer, saluting, says: "Tell the bugler to sound reveille."

And the seagoing bugler sends the morning call echoing up and down the passageways and across the quiet waters; and presently from out of hammocks, from off gratings, from under the bilges of triced-up boats, of the overhangs of turrets—from a blanket or hammock, or wherever a curled-up body could fit, they come rolling out—the slumberers of a battleship's crew; and from other battleships, colliers, cruisers, gunboats, supply ships, repair ships, destroyers, and what not, the same insistent call is ringing and the reluctant sleepers also turning out to greet the tropical morning sun.

The Top of the Day

BETWEEN decks the morning coffee is being served, and soon up topside the stimulated watch is washing down decks. Before the torrential charge of the hose division the last lingering deck slumberer is routed out; before, not one, but half a dozen big hose; and in rear of the hose division come a battalion of scrub brushes and squeegees, the same manned by barefooted lads with white trousers rolled to the knee.

The market boat, which is the second steamer, is cleared away and brought to gangway, a half dozen Filipino stewards take position in the stern sheets, and away she goes to bring back what they may gather from the early morning market in Vera Cruz.

The washed-down, scrubbed, and squeegeed planking is drying out, white and beautiful under the mounting sun. Mess gear sounds, and the breakfast call. Joyous sounds! Below rush the men, every soul that is not on watch; and by and by reappear, and, leaning comfortably over for'ard and 'midship, leisurely pick their teeth or smoke while they descant on the fortunes of the city before them.

It is ten minutes to eight. The marine band takes station on the afterdeck. Two bluejackets come aft and make fast the ensign to the jack-staff halyards. "Eight bells!" says a messenger; the officer of the deck says "Make it so" to him and "Colors!" to the band. The four double strokes ring out, and with the first stroke of them the band begins the immemorial two bars of our national hymn, and the two bluejackets slowly hoist the ensign to the truck of the jack staff.

An absent-minded, and possibly a lonesome, young recruit is staring lackadaisically toward the city. "Colors!" snaps a shipmate at him, and the young recruit also suddenly freezes to attention—head up, arms at side, and eyes on the mounting emblem. With the last note the flag comes into place, officers and men salute, and once more resume the loose, half-lounging bearing of the man-o'-war's man.

The band plays on. There are half a dozen foreign warships in the harbor. The band plays the national hymn of each. Some of them—as "God Save the King," "The Marseillaise," "Die Wacht am Rhein"—they play well; some others not so well.

Mail from Home—65 Bags Full

GUN crews appear and begin to polish up their charges; the big 14-inch turrets begin to revolve; signal boys are wigwagging with their little square flags; a squad of marines begin their morning heliograph practice. Some of them seem to be making hard work of it—probably raw recruits; a hydroplane sails serenely by over our heads. The business of the day is on.

A staff officer steps out from the Admiral's cabin and says a word to the officer of the deck, who salutes, says "Aye, aye, sir," and gives the order which casts loose the Admiral's steam barge, with the two gold stars on its bow, from the 'midship boom, the marine band to the quarter-deck, six side boys and a chief bosun's mate to the gangway. The Admiral appears, and as he nears the rail the brasses fanfare and the drums roll—three ruffles for an admiral—the bosun pipes—three long, curling, corkscrew pipes—the side boys salute, the officer of the deck salutes, and the admiral, two of his staff preceding, goes ceremoniously over the side. He is off, as the regulations provide, to call on other admirals of the fleet.

A quartermaster on the bridge has been balancing a long glass across the rail before him. "A steamer standing down from the north, sir," he suddenly hails. The officer of the deck is interested. He brings his own long glass into play.

"She's raisin' fast. Looks like a destroyer, sir," hails the lookout again.

She is a destroyer, the officer sees, and raising fast, with a ridge of sea water showing bone-white before her. "Maybe the mail runner from Galveston," says the watch officer hopefully.

And so she turns out to be, as her signal flags inform us in good time—from Galveston with sixty-five bags of mail from home. Mail from home? Thousands of eyes look kindly on her as she whips her way through the fleet to her anchorage. She wigwags a signal before yet the ripples are gone from where her anchor is dropped. "No ice aboard—can you let us have some?" To which the chief engineer, somewhere down in the bottom of the ship, upon being questioned, barks up: "For the mail destroyer? Sure we can! How much she want?"

Whereupon the mail destroyer answers: "A hundred pounds. Thanks. Will send our boat at once."

Coaling—an Ancient and Dirty Institution

THE sun is straight overhead, the sky clear of clouds, the air motionless. Ensigns, blue peters, and signal flags droop on jack staffs and halyards. From out of the stacks the black smoke comes straight up and then—drops in soot and ashes on the nice clean decks. The shining brasses are blinding to look at; even the gray-blue war paint seems to glare in the sunlight. Men on watch seek the shade of the small boats, of the turrets, of deck houses. Men in bare feet step lively where their business calls for a traversing of metallic surfaces. A wonderful number seek to see their duty under the fore-'s'le awning and to do it there.

Three brutes of colliers of the new 12,000-ton type, looking, with their great cranes topside, more like so many Brooklyn Bridges than like the steamers of tradition, are tied up to as many battleships. We are glad it is not we who are coaling ship this day in the tropics. It is fifty feet from the coamings to the bottoms of those collier hatches, and down there in those black pits the sun is pouring, while men from whom the sweat is pouring in black streams are trimming away, while the big dippers are scooping down and hoisting up and dropping a ton at a filling on to the ship's deck.

And on the ships, officers and men in dungarees are having the problem of stowing that coal, shoveling it through near and far-away holes in the deck, down to where other men and officers in dungarees will be crowding it into bunkers; and the air above and below will be full of black dust, and clothes and shoes, and eyes and ears—yes, they will be eating it, officers and men alike, before the bare boards, where they knock off for lunch.

An ancient and honorable and necessary, but should be an obsolete, institution—that of coaling ship. Twenty-four hours before they will show clean decks again. We know, because only two days ago we filled our own ship up to the mark—2,850 tons.

Lunch comes and goes with half a glass of iced tea all round in the wardroom, and the doctor warning everybody in the mess not to be free with tropical fruits and vegetables from shore.

Lunch comes and goes. Everything comes and goes—everything but the heat: signals, steam barges, a native boat with a cargo of watermelons and what look like refugees from some port to the south. The British Admiral comes and goes. We admire the way he does it. No steam barge for him. No, sir; but a pulling barge—a shapely, shining, mahoganylike gig, with six boys to the oars. There are two masts, unshipped in the bottom of the boat and the sail to go with them. Were there any wind stirring he would be sailing her up, but there is no wind stirring—not an infant's breathful—no, sir. And so his pulling boat comes alongside and the officer of the deck has the band ready and the side boys ready and the bosun standing by; and he climbs up the wide port ladder from his pulling boat, he gets his three fanfares and his ruffles and his long, melancholy piping from the bosun.

Sir Christopher Cradock is his name—a dignified name, no doubt, and surely a highly honorable one—but the side boys call him "Chris" when he is beyond hearing. The men in the navy call almost every topside officer something. Sir Christopher is treated very honorably in his nickname.

Too Many Mascots

THE hot sun works slowly to the westward. Ships' boats come and go; ships also. A transport signals for permission to sail. It is granted. Her passengers, mostly refugees from the interior of Mexico, crowd her rail to wave, and some perhaps to weep, as she passes slowly out of the harbor.

A liberty boat, which in this case is the ship's fifty-foot sailing launch with a gas engine in her, returns with eighty lads aboard. Most of them are happy in their returning. It has been the first visit for most of them to a foreign city, and it is a wonderful, strange city; but home is home—they are glad to get back to the ship.

They bring souvenirs and the promise of even greater things.

One clutches a bunch of ripe red bananas with one hand and a pineapple in the other. He has difficulty in making the transfer from the liberty boat to the ladder platform, but he refuses to loosen his grip of his pineapple or bananas. A lady in a blue dress sold him the pineapple.

One with a bird of glorious plumage announces himself when he makes the deck: "Four pesos," and holds up his prize.

"But what's he good for—besides his looks?"

"Him? Wait till dark comes and hear him sing. He only sings in the dark."

"Too bad you didn't wait till dark came before you bought him."

One brings the offer of two more mascots for the ship. A chum ashore from off a gunboat says he can get him two fine billy goats. D'y' s'pose the executive officer'd let 'em come aboard?

The executive, overhearing, considers the matter for about one-fifth of a second.

"We have ten dogs now," says the executive—"not to mention four parrakeets and an owl, and some kind of a creature that shrieks like a lost soul every time anybody comes within ten feet of him. Tell that gunboat chum of yours to take back his goats."

The Spirit of "Standing By"

NO MATTER. They have had their liberty; and it was the lad who could have secured the billy goats who so proclaimed, and went on to say when they had answered the roll call and were free of the ship again: "An' you fellows ain't been ashore

Digitized by Google

yet, I say you want to go and take a peek at the place. More cantinas" (that's where you get a drink) "than you can count, and the streets full of the full-sized spigotties walkin' round barefoot. And the little spigotty donkeys, 'bout the size of a good big dog, with a spigotty weighing 200 pounds with seven or eight eight-quart cans o' milk and a deckload o' vegetables atop of him. And see the Plaza where all the trees and little plants are, with the benches, and you sittin' down and ordering your drink and your meal like any officer—and payin' just as much for it. And watch the people pass and hear the band play. And take a walk around the city and see where our fellows shot the Navy College to pieces—and the rifle holes punched in the spigotty doors and the plaster chipped off the 'dobe walls where our fellows cleared the streets with their rifles and machine guns. Wouldn't you like to been in that landin' party?"

"Never mind, how d'y' know we won't be in the next one?" It was the lad with the bunch of bananas and the pineapple.

"And how d'y' know it won't be somebody besides Mexico with her little spigotty navy? And when it comes, will we be standin' by? Will we? Lemme tell you something, son—"

They had been sitting down under the overhang of the afterturret, but now the lad of the goats stood up on the clear deck where he might have action for his arms while he explained:

"Take this one we're on right now. If we was to anchor off the Battery—"

"But where's the Battery?"

"Wherever'd you ship from? Where's the Battery? The next thing you'll be askin' what city the Giants hail from? Well, this turret right here carries a gun—two of 'em, yes—and she could anchor off the Battery and point one of 'em straight up Broadway and let her go. And fourteen or maybe fifteen miles away—say, up the other side of the Harlem River—the shell from that gun'd blow up a building twenty stories high—if they build 'em that high up Harlem way. A 14-inch, 1,400-pound shell, son—and she's got ten of 'em aboard here, and twenty-one 5-inch boys on the side. And they're building battleship No. 39, son, right now. And she'll be bigger again than this one—twelve 14's. Only they won't any of 'em ever be pointed, straight or crooked, up Broadway."

"And will they be pointed straight up any other street—somewhere else?"

"I dunno, son, but you put this away in a corner o' your ditty-box for quiet night readin'. If she does, there's 1,400 aboard this ship, and we're not the only ship in the navy—officers and men, bluejackets and marines—and there's the khaki boys ashore—and when the time comes we'll be standin' by."

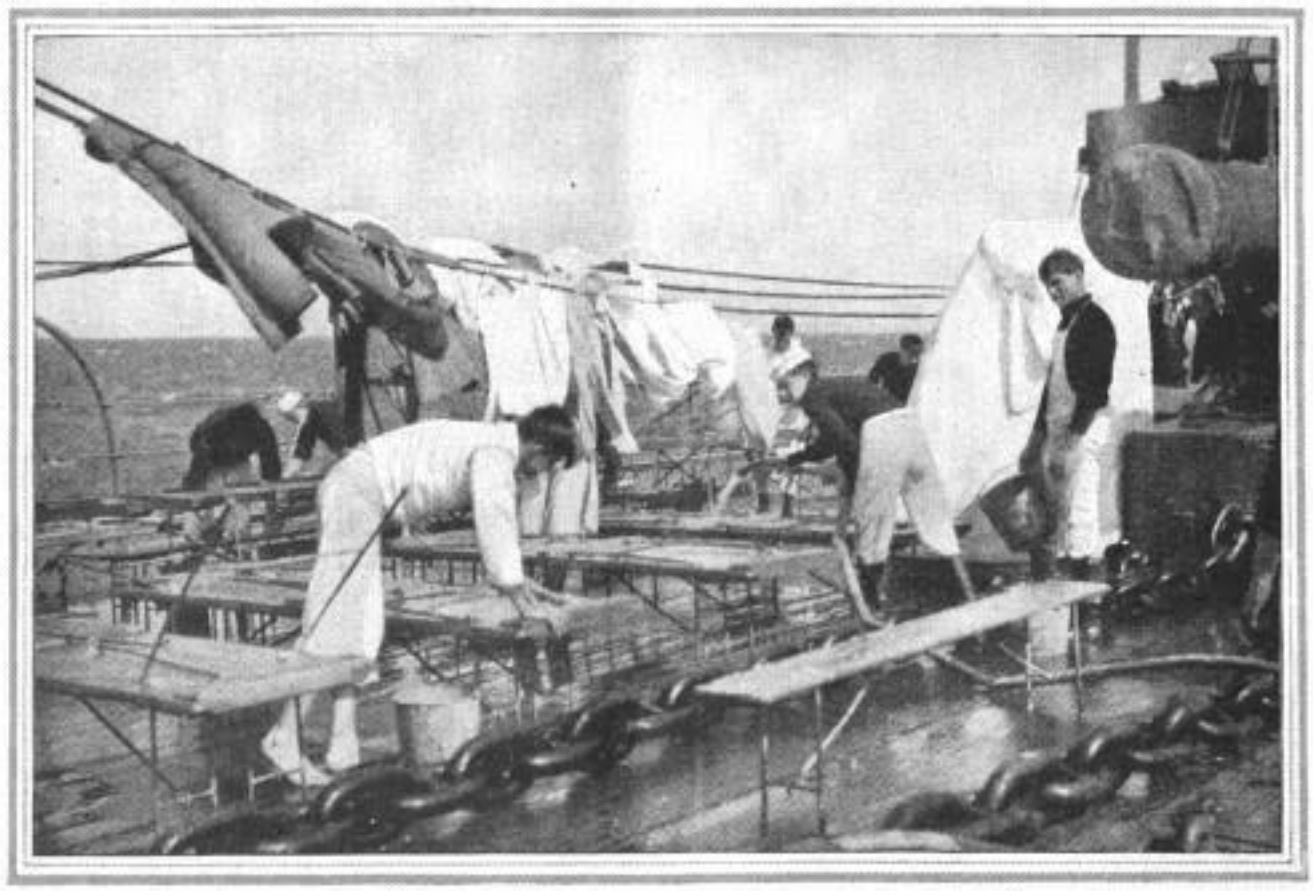
"You betcher we'll be standin' by—every cross-eyed son of us, officers and men. Let topside pass the word and see whether we'll be standin' by or not!"

That Last Desire

AND what kind was he that spoke?

Oh, pretty nearly an average specimen, twenty-one years of age perhaps, five feet eight and well made; by no means the dullest and something short of the brightest; more boastful than most, and not quite the man that would be picked by his division officer to carry through a last desperate chance; a fair average in his entirety—just now wishful to shine in the eyes of his mates and even more wishful to have the people back home hear good words of him. And that last desire would be what would finally carry him through.

And that last desire is what will carry a lot of them through; that and the discipline of the service. And while we are on the subject, they are nearly all young, these bluejackets and marines on the warships—average age, about twenty-one years; and they come from anywhere and everywhere—from the farms, the prairies, the corners of city streets; and they have been many things—farm hands, carpenters, mechanics, barbers, trolley-car men, clerks, street loafers, high-school boys, and just plain boys who wish to see the world. Some are terribly sophisticated in worldly ways and some so green, of course, that the wags have frequent chances to keep their wits on edge. Some have come with the plain notion that the navy offers many fine chances for a good, industrious fellow to earn a good living, and some, indisputably, have come with the bright hope of some day pointing a 14-inch gun and sending a relay



They are nearly all young, these bluejackets on the warships—average age about twenty-one years; and they come from anywhere and everywhere—from the farms, the prairies, and the corners of city streets

of 1,400-pound shells where they will blow something foreign and opposing, ship or building, whatever it may be, as high as the flying clouds.

They Took Their Shells Standing

BUT no matter, all that. When the "show-down" comes but few of them will turn their backs on the fighting. Blowing up ships and people may have seemed a terrible idea at first, but a few weeks in the community of a warship with its matter-of-fact, professional manner of discussing such subjects soon brings them around to common, seagoing notions of the matter. Ashore at Vera Cruz, during that first and second day's fighting, standing in solid columns there for a while, not knowing just what was going to happen, but feeling to a certainty that something was going to happen, and that something stirring had to happen soon, they stood there grinning widely and waiting for the ball to open. It may have been their

In the rear of the hose division come scrub brushes and squeegees, the same manned by barefooted lads with white trousers rolled to the knee

childish innocence, it may have been their untutored ignorance, but when that sheet of flame, the rifle fire of a compactly crowded foe, first burst from the roof of the Naval College, and a solid squad or two of them went down, and following that the snipers began to get them in ones and twos and threes—when that happened there was no distressing confusion in their ranks. When, later, it became necessary for the *Prairie* and *Chester* to fire just over their heads to batter the walls of that same War College, it made no difference. The ships' gunnery was rapid and excellent—they knew it would be—and when the shells went whistling through the walls of the second story, the marines and bluejackets stood under the first story and let them whistle. Plaster and bricks from the shaken walls came tumbling down upon them. They ducked beneath the falling mortar, some of them, but they all took their shells standing.

They are not the sailors of classic tradition, these battleship lads of the twentieth century. Every man to the age he lives in—it must be so. The old phrase, "Drunk as a sailor," meant, in most men's minds, drunk as a man-o'-war's man. I was born and brought up in a great seaport—Boston—and my earliest memories are of loafing days along the harbor front and the husky-voiced, roaring fellows coming ashore in the pulling boats from the men-o'-war: fine, rolling-gaited fellows, in from long cruises and flamingly eager to make the most of their short liberty. Great-hearted men, who gave truth to the phrase—"and spending his money like a drunken sailor"—and knowing, usually, but two inescapable obligations—to do his duty aboard ship and to stand by a shipmate in trouble ashore. Almost any of the old-time policemen of the large seaports can tell you many fine tales of the riotous hours along the water front in the old days.

Such is the passing tradition. The present lad of the navy is creating a new one. For one thing, he no longer gets drunk—that is, he does not get drunk by divisions. To illustrate:

During that greatest steaming stunt in all maritime history—the cruise of our sixteen battleships with their auxiliaries around the world—all naval records were broken in the number of enlisted men allowed ashore. Every day in large foreign ports saw 4,000 of our bluejackets and marines allowed shore liberty. Now consider the case of the first foreign port where liberty was granted, Rio de Janeiro in South America; and what happened in Rio was what happened in other ports.

It was five weeks or more since leaving home, and during that five weeks they had been for twelve days steaming along one of the hottest coasts (Brazil) in all the world—the tropics—and it was summertime once they were south of the line; and in all that time no chance for an enlisted man to get a drink of any kind of liquor—no beer or light wine even—no matter what the intensity of the thirst which may have possessed him.

Now he is suddenly thrown ashore with his pockets full of money. He has only to go to the paymaster and draw pretty much all he pleases. By actual figures the men of the battle fleet—about 13,000—drew $200,000 in gold to spend ashore in Rio—about $16 a man. For five or six weeks not a drop to drink, and all at once 4,000 of them thrown daily to roam into the midst of 500 grog shops with their pockets full of money, and no restrictions placed upon them, except one: they must be back to their ship that same night!

An Observation

I WAS a passenger with that battle fleet, and night after night I stood on the great stone quay in Rio and watched them returning to their ships. On no night did I see more than forty or fifty who might be said to be "soused"; on no night did I see more than a dozen or fifteen who had to be thrown into the accommodation barge with the "dead ones," the helpless ones who were so far gone that they had to be carried up the sides of their ships from the barge which made the last rounds of the fleet.

Now I would like to make an observation; it is purely gratuitous and has little to do with the story, but it may be of human interest right here: I think if we took 4,000 lawyers or doctors or authors or car drivers or clerks—4,000 of almost any sort from civil life—and locked them up so that for five or six weeks in a warm or a cold climate they could not get a drink of any kind of (*Concluded on page 32*)

Passing the "Pork"

Getting Votes with Federal Cash

"THE people will some day know about the pork barrel. All the golden gags distributed throughout the land cannot much longer keep the barrel afloat."

The quotation is from a speech recently delivered in the House by Congressman James A. Frear of Wisconsin on the present River and Harbor Bill. Mr. Frear is making a determined fight against the squandering of millions from the National Treasury on questionable Government projects. Whether his prophecy is true remains to be seen. Its fulfillment will depend to a considerable extent upon the Wisconsin man's own pluck. Other men have gone to Congress fully determined to fight the pork barrel to the last ditch, and have lost their ardor under the frowns of influential members in the tacit conspiracy against the Treasury.

"Golden gags" is a good metaphor. It gives you the key to the pork-barrel idea. The logic of it was explained by Senator Tillman when, in a debate on a former appropriation measure, he said:

"The whole scheme of river improvements is a humbug and a steal. But, if you are going to steal, let us divide it out and not go to complaining."

A Congressman once characterized the usual River and Harbor Bill as "a generous campaign fund drafted from the public treasury under another name to reelect members of Congress." And this description fits most of the other appropriation bills. The post-office grabs used to be the most openly scandalous of all the pork-barrel schemes. It has not been long since Senator Warren put through the Senate an appropriation of $75,000 for a post-office building in a village of 381 population, and he had close rivals in Smoot of Utah, Gamble of South Dakota, Briggs of New Jersey, and Watson of West Virginia in the Senate, and Cannon of Illinois in the House. The Republicans are famous for their raids on the Treasury, and now the Democrats are going them one better.

"The Most Vicious and Vulnerable"

WARREN'S performance probably could not be repeated now, but some of the projects financed by the 1914 River and Harbor Bill are every bit as objectionable. Senator Burton of Ohio, for ten years chairman of the House Committee on Rivers and Harbors, and a recognized authority on waterways, says the 1914 bill is "the most vicious and vulnerable" of all such measures in the history of our Government. It is scientifically drawn, with particular regard to distributing a given sum over the largest possible number of Congressional districts. Politics dominates its every page. The bill proper, as passed by the House, carried in appropriations and definite authorizations $43,330,404. The Senate polished it up a little, dropped some of the most obviously fraudulent schemes, and increased it to $53,683,004.

With $6,900,000 in river appropriations in the Sundry Civil Bill and $32,897,871, which Mr. Frear says will be required to complete new projects begun, the River and Harbor Bill runs the Government's obligations up to $93,570,875. One-third, if not one-half, of the money spent by the Government for river and harbor improvements is either wasted on useless projects or invested in conveniences which benefit only private interests and not the general public, so it is easy to estimate how much of the pork-barrel fund is squandered.

In all, the Government has spent approximately $800,000,000 on rivers and harbors, and it is pretty generally agreed that one-third of that amount has been wasted.

So much for the general indictment. Now let us get down to particulars. A brief without concrete facts gets a poor hearing, and we propose to produce some specific evidence to clinch our argument.

Fetching the Gulf to Dallas

AN INTERESTING exhibit in the 1914 catalogue of follies is the Trinity River in Texas. The plan is to make Dallas, 512 miles (by water) from the river's mouth, a seaport. The politicians and misguided business men behind the project propose to drown the deep baritone of bullfrogs on the Trinity's banks with the roar of steamboat whistles in midstream. But it is likely the frogs will be croaking for many years to come. The Trinity is being "improved" by canalization—by open channel work and a system of locks and dams—in order to secure a six-foot stage from Dallas to its mouth. In 1902 Congress appropriated $125,000 to start the work, and to June 30, 1913, $1,952,287 was appropriated for the job. It is estimated that $581,622 more will be required to complete the project. The present bill carries $175,000. Last year only 60,677 tons of freight was carried on the Trinity, and 44,867 tons of that was saw logs and cordwood.

Texas furnishes another illustrious example in the Brazos from Old Washington to Waco, a distance of 170 miles. We have spent $950,000 to date and the present bill carries $275,000. Official reports say "no commerce has yet developed," and that the amount necessary to complete the work is "indefinite."

This cartoon was printed in the Seattle (Wash.) "Post-Intelligencer" two years ago when the local Congressman, W. E. Humphrey, was running for reelection on a pork-barrel record. Mr. Humphrey is still in Congress. The cartoon represents the common attitude of Members of Congress toward the pork barrel. They use success at the pork barrel as an argument for reelection

Where Each Ton Costs Uncle Sam $6.56

AND then there is the Tombigbee in Alabama. It is known in its upper reaches, first, as the Warrior, and then as the Black Warrior. In the early days the proponents of that section of Alabama went before Congress and told glowing stories of how the expenditure of a reasonable sum of money would unlock wonderful mineral and agricultural resources. The Government undertook the project, and to date $9,151,295 has been appropriated for locks and dams along the Tombigbee and the two Warriors. During the last fiscal year $704,188 was expended. Official reports indicate that the traffic last year was 163,110 tons, all but 37,540 tons of which was logs and timber products.

From a computation based upon the expenditure for last year, plus 4 per cent interest on the total investment, we find that it cost the Government $6.56 for every ton of freight carried on this river. Excluding the timber products, which can be floated without locks and dams, the cost was $28.50 a ton. Yet despite this showing an appropriation of $750,000 was put into the 1914 bill. We have expended $3,107,784 on the Arkansas River, and last year the transportation of freight, exclusive of timber, cost the Government $19.51 per ton. And not very far away is the Red River. On this stream below Fulton, Ark., Congress has appropriated $2,768,377. The House did not have the face to recommend an appropriation for next year, but the Senate Committee was less timorous and inserted an item of $100,000. Practically all of this good money might as well be used to make a bonfire.

The upper Tennessee stands as one of the most notable monuments to our political river and harbor system. In 1890 the Mussel Shoals Canal, eighteen miles long, having eleven locks and paralleling the rapids in the river, was completed at a cost of $3,191,726. Last year $46,393 was expended for upkeep, and the total traffic was 5,520 tons. The traffic amounted to 26,878 tons in 1906 and has declined steadily.

Seven locks and dams have already been built on the Cumberland River above Nashville, Tenn., at a cost of $2,944,000, and it is now proposed to construct ten more locks and dams at an estimated cost of $4,500,000 and spend $50,000 annually for upkeep. In 1912 Major Burgess of the Engineer Corps made a study of this project and reported against it. Major Harts had reported against it two years before. They both said the quantity of freight and the population in the territory traversed did not justify the expenditure of so much money.

How the Plate Is Passed

IN the meantime local interests and political fortunes combined to keep alive the agitation for the improvement, and a Nashville organization known as "The Boosters' Club" conducted a campaign to secure its adoption.

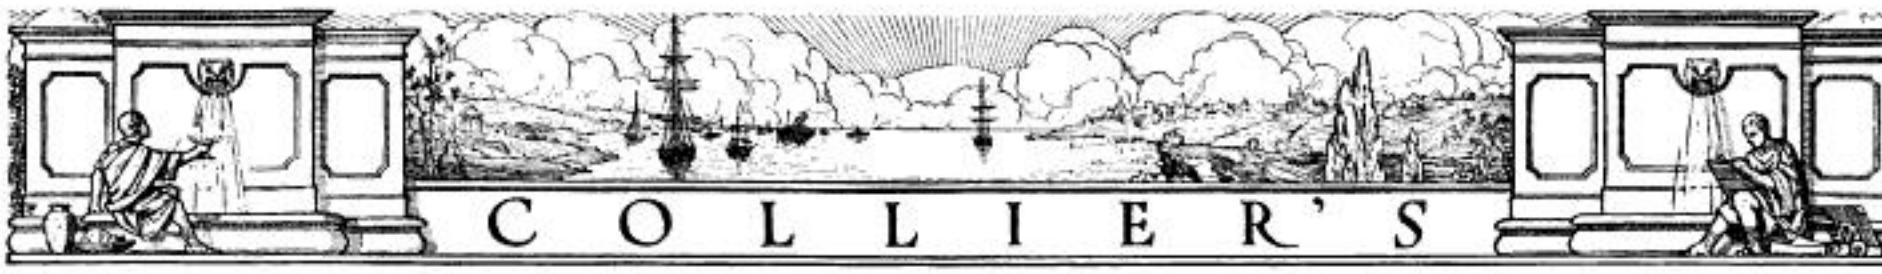
In December, 1913, Major Burgess reversed himself. The division engineer modified Major Burgess's report and recommended that if the work be undertaken, the States of Kentucky and Tennessee should be required to foot one-half of the bill. Then in January of this year the Board of Engineers for Rivers and Harbors at Washington held a hearing on the project.

Among many Senators and Representatives from Kentucky and Tennessee who appeared before the board was Congressman Cordell Hull of Tennessee. Mr. Hull presented a typical pork-barrel argument.

"A hundred and fifty thousand people," he said, "are in this section, and they have never received anything from the Government. I think that no section of people have more fully performed their duties to the Government, not only in time of peace but in time of war. . . . They have contributed a large amount of internal revenue from whisky and tobacco. . . . Now this great section of country, comprising 3,000,000 acres, presents this uncompleted section of the river."

This plea was as fair and logical as any plea for "pork," and Mr. Hull deserves no more criticism than most of the political beneficiaries of such appropriations.

His activities were typical. He was spokesman for people back home who wanted the upper Cumberland improved. And doubtless he, like a majority of the members of Congress who get their hands into the pork barrel, did not know for certain whether or not the project would be a good investment. A majority of the Hulls are silenced by the golden gags that Mr. Frear talks about. They are not sure that their own demands are justifiable, but they are encouraged by the backing they receive from home. And opposition to the other fellow's schemes is out of the question when a Congressman's or Senator's own project is not above suspicion.



The Cost of the Hennepin Link

THIS story of our waterway policy would be incomplete if the famous Hennepin Canal, technically known as the Illinois and Mississippi Canal, were left out.

This canal was built to provide a link in a navigable waterway from Lake Michigan to the Mississippi at the mouth of Rock River in Illinois. It was begun in 1892 and opened to navigation in 1907. General T. J. Henderson, a resident of the district which includes the canal, was chairman of the House Committee on Rivers and Harbors at that time, and he and other proponents of the project declared that this artificial

Our Next President

HERE IS A PORTION of an interview with WILLIAM RANDOLPH HEARST—translated from the Berlin "Vossische Zeitung":

The next President of the United States will be a man and an American, a worthy successor of WASHINGTON and JEFFERSON, of MADISON and MONROE, of JACKSON and LINCOLN. The people . . . have had enough of pusillanimous pedagogues and vainglorious visionaries. They have had enough of unpatriotic and impractical theorists, whose idea of courtesy to foreign peoples is disloyalty to our own. They have had enough of anemic students of the outgrown past and unbalanced idealists of an impossible future.

You are exceedingly personal, Mr. HEARST. Pardon us, therefore, if we, too, are personal. Are we mistaken in supposing that you are thinking of yourself as a possible "next President" even as you libel the man who is President at this time? No? Well, you haven't a chance, Mr. HEARST. The American nation is a fairly intelligent nation, you see. You are, to be sure, neither a student nor an idealist; but, in spite of all that, you haven't a chance. Stick to muddy journalism, Mr. HEARST; you haven't a chance in politics.

Is Hearst Really Wilson's Friend?

HOW MANY EDITORS are there who, in criticizing WILSON on his Mexican policy—the one point on which COLLIER'S has expressed disagreement with him—are made uncomfortable by finding themselves in company with HEARST?

"Independence" and Journalism

TO MOST FOLKS an independent paper is one that supports their side; the one that supports the other side is partisan. Also, there seems to be something in human nature which reacts against the idea of a really independent paper—a paper, that is to say, which supports the better acts of a man or a party and condemns the less desirable ones. Perhaps it is mixed up with the universal human liking for the quality of loyalty. To interrupt a course of praise seems, of course, like the unpleasing trait of disloyalty. But is there anything else for a really independent paper to do? Many a paper which regards itself as independent merely contents itself with keeping silent about the things it cannot conscientiously praise. In the nature of things, a really independent paper cannot inspire universal affection. It is on the fence, and it is going to get the bricks from both sides. In spite of all the talk about an independent press, in spite of the great growth of the independent vote, the only really independent papers in this country continue to be the ones that have held to that rule for more than a generation, such as the New York "Evening Post" and the Springfield (Mass.) "Republican." The editorial page of the New York "World," which has been for more than thirty years a remarkably able and virile critic of public affairs, has been, of intention, prevailingly Democratic. It has not been independent in the sense of detached regard, or disregard, of all parties and all leaders alike.

The High Cost of Congressmen

"PASSING THE 'PORK'" is the title of an article in this week's COLLIER'S. "Messing Things" is the caption below F. G. COOPER'S cartoon on the opposite page. It's the same idea: politics, old style. Incidentally, it's your pork that the politicians fry in their pan. Eight hundred millions have been spent by the Government on rivers and harbors already—and this expenditure doesn't serve to reduce taxes. Shall we go on standing for the Congressional merry-go-round just because "it always has been done"—or shall we teach Congressmen, once for all, that we expect them to spend money as intelligently as if they were directors in a private corporation?

A Precedent for Mexico

AN OLD AND FALSE ARGUMENT for privilege is the carelessness of the poor. Men say that justice cannot settle the Mexican land problem because the peon will either gamble away his few acres or lose them for debt. But homestead exemption is a very good American principle. Lord KITCHENER applied it in Egypt, where the money lenders may seize crops but not the land, farming implements, hut, or necessary cattle. The same thing can be done in Mexico if order is at length brought out of chaos. The way to protect the poor is to give them justice. DIAZ had the lawyers on his side, and they used the law to rob the peons in favor of the "cientificos." This must never be done again, and homestead exemption is one of the precedents needed for the future.

Double-Dummy Lorimer

THE REPORTS so far given out as to the Munday-Lorimer banking failure in Chicago seem to reveal the state of affairs that is always found where crooked politics and sharp banking practice are joined together for unholy profit. The savings of many poor people are got hold of by means of a chain (so-called) of "savings institutions"; these funds are juggled from one to another, with the insiders drawing off the cream and making a few choice loans to themselves just before the final spill. It is the open season for some of these wise birds. LORIMER'S ability to weep, shake hands, kiss the babies, bare his warm heart, and embrace all humanity must have come in very handy for the work of this syndicate. What do those who voted to seat him in the Senate of the United States think of him now? What does his coworker, Editor HINMAN (now president of Marietta College) think of him? LORIMER seems to have been a dummy in business as well as in politics. There is no room for such any longer.

Looking Backward

NOW COMES the Committee on Franchises of the National Municipal League pointing out that public utilities—i. e., street railways, telephones, and electric and gas plants—are

. . . primarily urban in character, and that, on general principles, the control of public functions should be localized as much as possible, in order to secure the interest and effective cooperation of citizens.

This is the darkening of counsel that we must apparently expect from our "experts." The solid instances of successful utility regulation in this country are afforded by the work of commissions organized and supported by the State Governments—e. g., the Railroad Commission of Wisconsin. To handle these matters by cities acting separately is merely to pile up confusion and multiply interminable lawsuits. This is the one fundamental exception to the admirable and necessary doctrine of home rule for our cities. These means of transportation and communication must be used so as to better living conditions over the widest possible areas. We must broaden the bases of our community life. The report quoted above was put out by a group of city men only. It is time we heard from the other side.

Illustrations That Illustrate

SOMETIMES ONE GETS FOOLED, but generally the joy of work tells. Take the matter of pictures; one is sure not only that GEORGE DU MAURIER understood the people he was drawing when he illustrated his own novels, "Peter Ibbetson" and "Trilby"—one feels sure, too, that he enjoyed visualizing them and presenting them to his readers. One is sure that CRUIKSHANK enjoyed his Dickens, or he could never have made Little NELL and DAVID and Mr. PICKWICK half so humorous or half so heart-grabbing. But speaking of DICKENS reminds us that the real subject of this paragraph is the illustrations drawn for H. G. WELLS'S "Bealby." There is something Dickensian about these pictures too—the tousled boy and the pompous upper servants, the Lord Chancellor (most pompous Englishman of all), the jaunting ladies, the rejoicing golfer. We have seldom seen illustrations, always excepting DU MAURIER'S, which so naturally and artfully express those things which the author expresses in his different media. HENRY RALEIGH evidently believes in Mr. WELLS and in Mr. WELLS'S characters. And this brings us back to the starting point—the joy of work. For Mr. RALEIGH tells us that "Bealby" is the best story he ever illustrated. That, of course, is a matter of opinion, but it is certain that it has something to do with his making such good pictures.

The Difference

THAT YALE(BY INCHES)-HARVARD boat race stirred up again fanatical American worship of the result itself. For the first time in seven years Harvard was gloriously defeated after a glorious struggle, but the headlines read as if the crimson crew had flunked out and proved unequal to the occasion. From FROISSART to the unknown Western chronicler who declared that "life ain't so much in holding a good hand, but in playing a poor hand well," men of chivalry have always held that the contest was the proof of worth and valor, no matter how the victory went. The gamblers have always stuck by the result—that the six-spot turned up, that Faro's nose got under the wire ahead of Roulette's, is the sum of their simple wisdom. That is the difference between chivalry and gambling. Any Harvard graduate can tell you how consoling this philosophy is! But the truth stands nevertheless.

The Bible as a Newspaper Serial

FOR A NEWSPAPER to reprint a "best seller," a chapter or two to the issue, is no journalistic novelty. Yet, oddly enough, the idea of publishing in serial form the best seller of all best sellers is an experiment so unusual that it is attracting wide publicity. If you haven't happened to notice the statistics, you may not know that the book which leads all others in sales is the Bible. Editor W. W. FOLSOM of Hope, Ark., is reprinting this Best of Books in his "Gazette," a chapter a week. To date he has completed the publication of the Four Gospels, and the feature has proved so popular that the other day he notified the Little Rock Board of Trade that if he lives long enough (he is now seventy-six) to reprint the New Testament in its entirety he will then begin to reprint it a second time. Not so very long ago the library table in an American farmhouse sitting room used to display only a patent-medicine almanac, a copy of the "Weekly Tribune," and a family Bible. In recent years the R. F. D. has weighted down the red tablecloth with a variety of other reading matter. Has it befallen that, to make room for numerous magazines, dailies, and novels, the bulky, brass-bound Bible has been relegated to the table's lower shelf, where a thin layer of dust is settling on its cover? If so, Editor FOLSOM is restoring in Hope the old order of life celebrated in an ode to "Kansas, 1897":

When the cares o' day is done
On the plains o' Kansas
An' the kids begin to yawn,
Sleepy like, in Kansas,
Farmer wipes his glasses blurred;
Reads a chapter o' the Word;
Then kneels down and thanks the Lord
That he lives in Kansas.

The Humor of the Very Rich

SOME LITTLE WHILE AGO the country was agitated by a report that MORTON F. PLANT, a multimillionaire (a railroad, steamboat, etc., magnate), was to marry the divorced wife of a restaurant manager. An interview was secured and this statement given out by the great one: "Yes, I am going to be married, and it's my own business." Within three days thereafter the following item appeared in the press reports of the New Haven investigation:

Chief Counsel FOLK read an affidavit from DR. FRANK W. HUGHLETT of Groton, Conn., to the effect that MORTON F. PLANT is suffering from heart complications and high blood pressure, and that his health would not permit his coming to Washington to testify.

We have been waiting ever since for the "Financial Chronicle" or some other of those papers to tell us how exquisitely funny this is.

That "American Novel"

WAS IT CHATEAUBRIAND who said that no one could be a fair judge of foreign literature? If it wasn't, it was somebody else as good or better than CHATEAUBRIAND, and his point was well taken. One is reminded of this by GEORG BRANDES's visit to America and his remarks upon our literature. It appears that, of living American novelists, JACK LONDON takes first place because he is so typically "American." Fairly near him stand UPTON SINCLAIR and the late FRANK NORRIS. At this stage the learned editor of the "Nation" reminds us of MR. ARNOLD BENNETT, who, in his flying visit to our sleeping cars, named THEODORE DREISER and Professor ROBERT HERRICK as our leading novelists. Why is it that we stand for being told things that are not true about our books, on condition that they be told by people who haven't had a chance to learn the facts in the case? And who are our leading writers anyway, and what makes them "American" in style or spirit? We hope some of our readers will regard this as a referendum and will send us in their ballots. Also their reasons.

Messing Things

Cartoon by F. G. Cooper

The Man Who Made Money Out of It

ONE NOVEMBER NIGHT JOHN NANCE went to Spokane from his home in the outskirts and bought three one-gallon jugs, one of whisky and two of alcohol. He consumed all the whisky on the way home (all he didn't spill), and once there set to work with his brother MITCH on the two gallons of alcohol. In the drunken quarrel which soon broke out JOHN was instantly killed, and his brother MITCH was placed on trial for the crime. Here is part of a letter about it which we have received from JOHN A. HOUSTON of Spokane:

Yesterday I sat in the court where MITCH NANCE is on trial for murder. By his side sits his wife, bowed with grief, while in his arms coos and plays his infant son, born since its father's arrest. Only one more victim of this hellish traffic, but to my last day I will remember that little family—the father on trial for killing his brother, the wife and mother crushed and numbed with grief, the baby wondering why its daddy is so solemn—and whisky did it all. But why not make the man who manufactured the whisky and the man who sold it also suffer for the murder of JOHN NANCE?

The liquor was purchased from a saloon keeper in Spokane who blatantly advertises: "If your children need shoes don't buy booze." And yet we do not feel as bitter against this saloon keeper as toward the man who supplies him with bad whisky. Probably he is some highly respected citizen whose wife is one of our best people and whose check book is at the service of so-called charity. The law may better conditions in some respects, but whether it is bad "booze" or poisonous patent medicines that are dispensed, the only way really to accomplish anything is to bring shame into partnership with the man who makes money out of it.

For Some Painter

HAVE YOU EVER SEEN a wrecking gang at work repairing damage done by a washout? Have you ever seen the train moving forward through the curtain of black night, a flat car first, followed by an engine whose headlight throws into boldest relief the silhouette of a trainman perched on the flat car, flag in hand, ready to warn the engineer when he must stop his train on the chasm's brink? Perhaps not; certainly the painter has not. Yet where could he find a more actual or more impressive subject?

Flowers and Feminism

A HOME is not really a home unless it has growing flowers about it. It may be an uncommonly good house, but it stops right there. We have precious little use for folks who have grounds round about them which they keep through all the warm weather innocent of any touch of color. They may not lie, steal, cheat, or abuse their children, but just the same there is something lacking in that sort of person. We like to recall the days when our grandmothers thought it as essential to have a plot filled with snapdragon, sweet William, and mignonette as to have a spare room with wall mottoes. They understood the part flowers can play in life. Fortunately that race of women has not wholly died out. There are still dooryards which flame with color. There is still twining honeysuckle enriching the air. There are still roses running riot—white, yellow, red—the one never-to-be-supplanted blossom. And, best of all, there are still women tending this family with loving care; tirelessly stooping to plant and transplant, to weed, to prune, to train, to pluck. The world cannot spare them. Their sisters who find no zest in life except in clamoring for a ballot and a private latchkey might well pause sometimes to consider the lilies. The woman who does not love to fuss with flowers will never be the best sort to plan model tenements. Far sounder in fundamental instincts is the little slum girl whose searing day in the sweatshop is a shade more bearable once she has watered the geranium in the tin can at the window of her dingy room.

President Detroit Free Press Company, Detroit Journal Company and Stair & Havelin.
Director Detroit Trust Company.
Director First and Old Detroit National Bank.

The Story of the Ten Associates

Three and a half years ago Ten Men of great affairs organized the Paige-Detroit Motor Car Company.

They were ten men of character and standing in the community—Men whom you can readily look up through your Banker or any Mercantile Records.

Each in his respective line was a leader and many had won national reputations.

Each had builded solidly and enduringly upon the firm foundation of business integrity and fair profits.

They said, "Let us pool our resources; our manufacturing, merchandising and general business experience."

They said, "Let us pool our capital—$20,000,000 if it is needed."

They said, "Let us be content for a period with no profits, and, at best, small profits."

They said, "Let us combine with our own experience the best engineering talent—the most expert knowledge—that the automobile field has developed."

They said, "Let us build a motor car and a company that will outlive each and all of us."

They said, "Let us build slowly and well—let us build the highest quality at the lowest price."

The PAIGE of Yesterday

The Ten Associates made 300 Paiges three years ago.
This year they will build 13,000.
Paige sales have increased 167.9 per cent in the last two years.

This is the greatest growth in the history of the automobile industry for the past two years.

In three years Paige employes have grown from a mere handful of workmen to a veritable army.

In three years Paige dealers have increased from 39 to 1026.

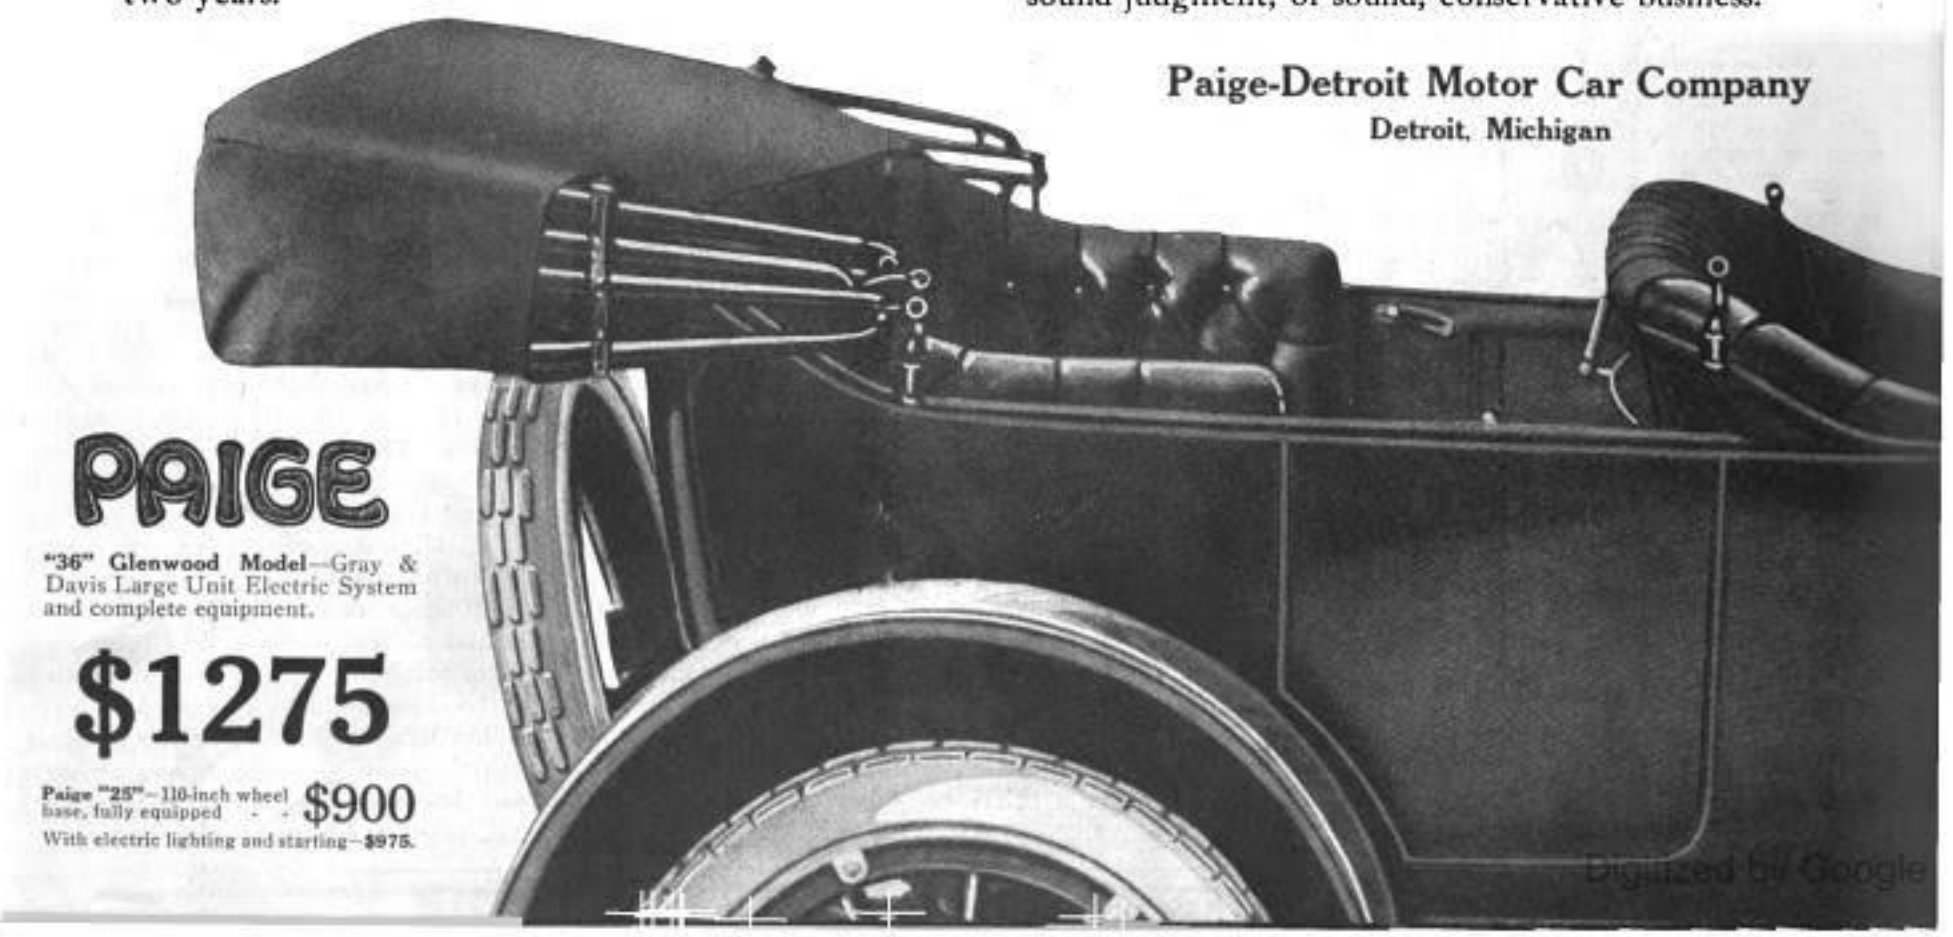
In three years the Paige has grown from a small leased plant to the present mammoth factory with a capacity of 25,000 Paige cars a year.

In three years Paige sales have grown from $44,000 to $1,250,000 a month.

Today the Paige-Detroit is operating (as it always has operated) on ample capital backed dollar for dollar by tangible assets.

There is no issue of "good-will" or preferred stock on which dividends must be earned.

There is not a dollar's worth of bonded indebtedness upon which interest must be paid.



The Ten Associates are putting Paige dividends back into the Paige car.

The astounding growth of the Paige undisputably proves Paige *quality*. The Public does the buying. The Public, alone, must determine whether sales shall increase or decrease.

So the story of the Ten Associates—the story of the Paige—is more than the victory of ten men.

It is the triumph of a great principle—the principle of sound judgment, of sound, conservative business.

President Jewett, Bigelow & Brooks, J. B. B. Collieries Company.
President Iroquois Collieries Co.

The PAIGE of 1915

The Paige "36" is, in many ways, a contradiction of so-called "Price Class" standards. In and on the Paige are mechanical principles and equipment found in no other cars below the $3000 mark.

"The **best** of automobile engineering practice—regardless of cost"—that has been the keynote of Paige construction. And—by rigidly adhering to this principle—Paige cars have been developed to a point of excellence that has earned them a reputation of being "unusual" motor car values.

The Paige of 1915 is a Paige of still greater refinement—still greater development—yet, the price remains unchanged.

Consider the following features carefully. You will find that they measure up to the Paige standard—"The **best** of automobile engineering practice—regardless of cost."

The Ten Cardinal Points of PAIGE Supremacy

Paige Motor

Paige motors have earned a reputation that is absolutely unassailable. To appreciate this power plant you must ride behind it—up hill, down dale, through heavy, clinging sand roads and over smooth, oiled boulevards. **Under all conditions,** the Paige motor runs smoothly, silently and willingly. This motor is the crowning achievement of the Paige engineers—the result of years of development and experiment.

Rear Axle

Our axle is built with excess strength; and the experience of Paige owners proves that it has been remarkably free from trouble. It is the floating type. There is no noise of gears—no hum when the car is running 20 miles per hour—no roar when it is going 40.

Noiseless Chain Drive

The noiseless chain drive for magneto, cam and pump shafts of the Paige motor is the greatest single factor in the elimination of mechanical noise. Engineers assert the noiseless chain is 15% more efficient than gears and maintains a mechanical efficiency of 98%. It costs **twice** as much as timing gears; and this principle is almost exclusively confined to the high priced field.

Cork Insert Multiple Disc Clutch

This type is admittedly the most expensive and most efficient. It is found almost invariably on highest priced cars. The Paige clutch runs in oil, and its velvety action relieves transmission, universal, axle and bearings from sudden and excessive strains.

Gray & Davis Large Unit Electric System

Paige is the only car below $3000 standardly equipped with the **large unit** Gray & Davis system. The smaller unit system is designed for cars in the Paige "price class," but we adopted the large and more expensive unit because it charges quicker—has a larger storage battery capacity—and, in its application on the Paige, uses less current in starting. This is a distinct "over value."

Oiling System

The Paige oiling system is automatic, requires no watching or adjustment, and is designed to make the motor as free as possible from carbonization. With this system it is absolutely **impossible for a Paige motor to smoke.**

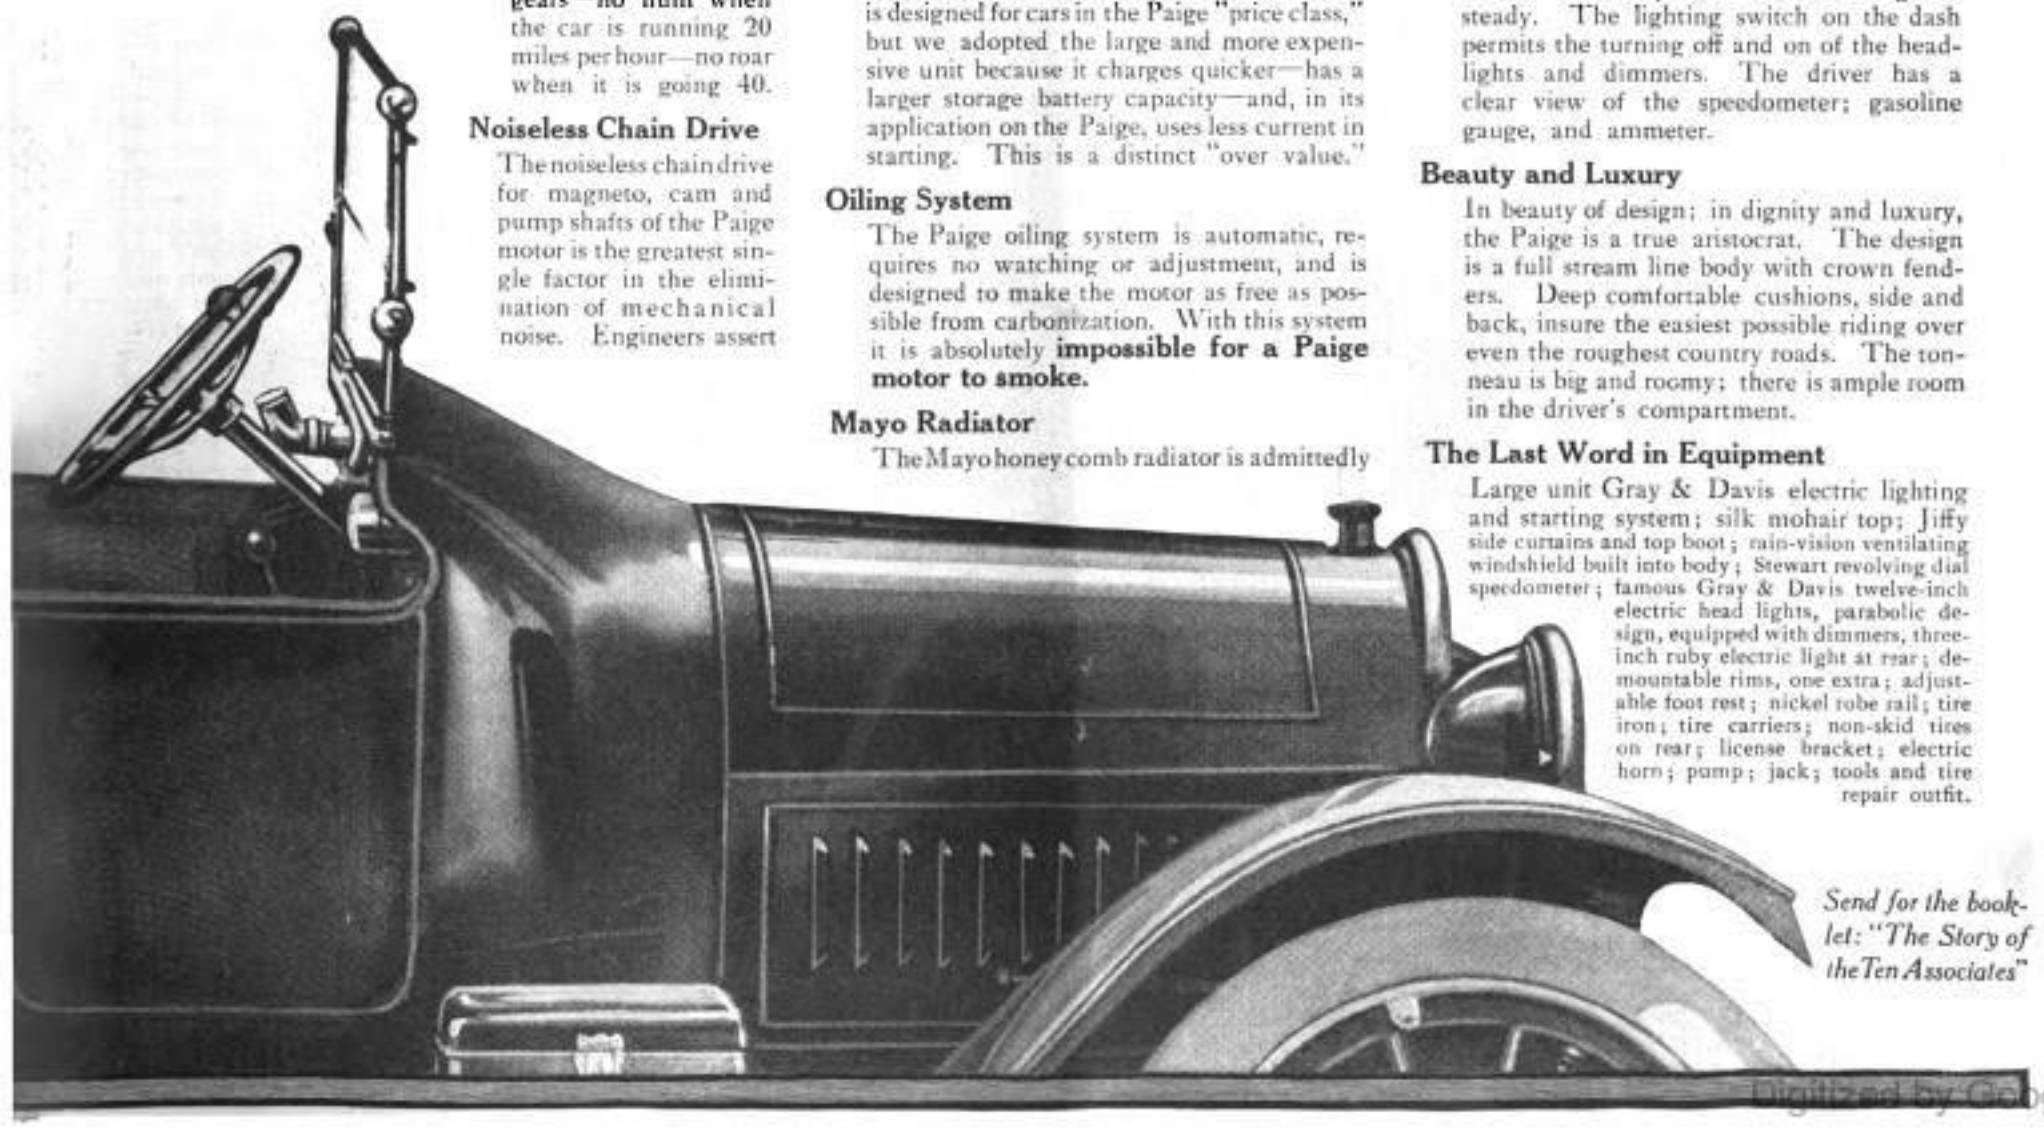
Mayo Radiator

The Mayo honeycomb radiator is admittedly the most expensive and efficient built. It positively eliminates over-heating and it is established that this radiator requires less re-filling than any other. The highest Priced Cars—Pierce-Arrows—Fiats and Locomobiles—equip with the Mayo.

Stewart Carburetor

We believe the Stewart Carburetor the most efficient obtainable. It is simplicity itself in construction—noiseless and positive in action under all weather conditions. There is but one adjustment—a lever on the dash. This adjustment facilitates the strictest economy in gasoline.

Ease of Operation



The accelerator pedal is smooth acting and steady. The lighting switch on the dash permits the turning off and on of the headlights and dimmers. The driver has a clear view of the speedometer; gasoline gauge, and ammeter.

Beauty and Luxury

In beauty of design; in dignity and luxury, the Paige is a true aristocrat. The design is a full stream line body with crown fenders. Deep comfortable cushions, side and back, insure the easiest possible riding over even the roughest country roads. The tonneau is big and roomy; there is ample room in the driver's compartment.

The Last Word in Equipment

Large unit Gray & Davis electric lighting and starting system; silk mohair top; Jiffy side curtains and top boot; rain-vision ventilating windshield built into body; Stewart revolving dial speedometer; famous Gray & Davis twelve-inch electric head lights, parabolic design, equipped with dimmers, three-inch ruby electric light at rear; demountable rims, one extra; adjustable foot rest; nickel robe rail; tire iron; tire carriers; non-skid tires on rear; license bracket; electric horn; pump; jack; tools and tire repair outfit.

Pickups

By Grantland Rice

Illustrated by F. C. Cooper

In Behalf of the Eagle

FAR be it from us to maintain a vindictive or a malignant spirit. But a threat with us is the same as a promise not to be broken.

Hence it is that in behalf of these exuberant dispatches we have challenged Hurlingham for a return polo battle next June. Our picked line-up stands without the chance for a change—viz.: No. 1, Tyrus Raymond Cobb; No. 2, James Thorpe; No. 3, John Franklin Baker; No. 4, Charles Edward Brickley.

If this line-up fails us we may send over another—i. e.: No. 1, Cornelius McGillicuddy; No. 2, the I. W. W.; No. 3, Gunboat Smith; No. 4, John J. McGraw.

In any event England is fairly warned.

Awarding Comfort

("Do not fear criticism. Shakespeare, Keats, Milton, Byron, Burns and others were ridiculed in their day, denounced as doggerel writers and tiresome persons. Greene called Shakespeare an upstart crow; Jeffrey called Wordsworth hopeless; Keats was killed by criticism."—Ella Wheeler Wilcox)

SHADE of each immortal bard,
You who roam dim glades of pain,
Dreaming still the way is hard,
Thinking that you wrote in vain—
Shed your sable coat of grief,
Take the sleep that you have earned;
For I bring to your relief
Respite for the stings that burned.

Take your rest—forget it now;
Stalk no more the Anguished Way;
Back upon your troubled brow
Let the laurel hold its sway;
You should worry—you should fret—
Let the carping critics be—
Think of what I've penned—and yet
They have even roasted ME!

The International Lesson

"IT ISN'T raining rain to me," sang a certain diminutive watcher at the windowpane; "it's raining roses down." That, at least, is one way to view a day of shadows. The international carnival so far has done something more than rain defeats—it has rained us at the same time a much-needed lesson. As a sportive commonwealth we were becoming entirely too self-satisfied and chesty. We couldn't lamp the next contender in sight with a Lick Telescope. We were beginning to exude egotism from every open pore. Too much victory is as bad for an individual or a clan as an overdose of defeat. It is inclined to breed carelessness, overconfidence, arrogance, and other kindred ills.

Now we have discovered that there are other entries in the field. We have discovered that after all we are not the whole show, including the menagerie, the pink lemonade, the peanuts, the hard blue seats, the three-ringed circus, and the concert after the same.

All of which has brought on exactly the shaking up that was needed. It was not our bad luck but our good fortune that England was at last able to rise and give us something to fight for that required an expansion of our skill and courage. We were on the verge of taking a long, slothful sleep. But the reveille of defeat has lifted us again and sent us back to the battle. In behalf of which England deserves our heartfelt and extended thanks.

Forewarned

IF ENGLAND persists in her reckless policy of lifting all our cups, we'll dispatch the Colonel over next summer with a set of golf clubs and a polo mallet. In addition to this we may enter him as a relay team against Oxford and let him plunge into the ocean disguised as a yacht. There's nothing like having an ace in the hole when it's set to round out a royal flush.

The Cry of Uncle Sam

(In the wake of the Oxford relay team, the golf invasion, and the Albionic return of the Polo Cup)

RISE, Revere, from your grave of glory!
Come, O Washington, from your dust!
My eye is black and my beak is gory,
Left by those whom I gave my trust.
Once I was there with the crown eternal,
King at large of the Ruling Push,
But thrown at last from the clan supernal,
Back I drift to the waiting Rush.

Come, Old Hickory, to the clover!
Rise, O phantom of John Paul Jones!
Show 'em the way that you put it over
Back in the years which the dead past owns;
Show 'em the old-time combination,
Stuff that made us the Only Bet;
Come to me in my degradation,
Lift me out of this Class B set.

Take me back to the old-time legion,
Back to the days of a Batting Eye;
Far away from this morbid region,
Frittered up with the Alibi;
Was Concord staged in a vanished border?
Was Bunker Hill but a myth and dream?
Arise, ye ghosts of the ancient order!
I ain't used to a Losing Team.

The Lion Returns

APPARENTLY there are certain concrete limits that must be observed in goading a harassed Lion. The Eagle, enjoying a picnic, wasn't satisfied to play it safe. England absorbed her sportive rebuffs passively enough until America sent a young amateur golfer joy riding over the prostrate forms of Vardon and Ray. This last blow might be mixed metaphored as the ultimate straw. That unexpected stroke hit the Lion in a highly vulnerable spot and effectually ended his siesta. He has been quite a different beast ever since.

Since Ouimet's victory last fall America's long string of conquests has sagged badly. Save the lone triumph of Jay Gould over Hovey, the Eagle has known no manna in the wilderness save the husks of defeat.

Oxford took home our star relay trophy. Our golfers were driven headlong into the sea. And on top of this a discouraged English polo team came over and replevined the polo cup. Shelves that were once silver-shining with the trophies of the chase are now beginning to assume the bleak, bare aspect of dust-covered cedar planks. In no case has there been even the slightest opening for an alibi. Of the three events, two were contested here upon our native soil.

The polo triumph was decisive. At the start the Big Four lagged and were overwhelmed. At the finish they rose and fought gloriously—fought with all the skill and magic and courage of their best days—and yet were beaten. The Lion was no longer a skulker in the jungle. He was again King of Beasts. Three crushing defeats in a row frame something between heaven and earth that Uncle Sam's philosophy had never dreamed of. The home realm of the Eagle is up above—not down below. Second place is no spot for the Stars and Stripes. But the answer is written in the records of to-day—not yesterday. No wonder our Uncle Samuel is waiting with feverish interest for Mr. McLoughlin to pick up a tennis racket and for a certain white-winged boat to ride surf and winds. It is all he can do to restrain himself until the next dish arrives. He isn't accustomed to his enforced diet of early summer, and he never will be.

The Lean Epoch

THE Feds picked a lean, gaunt year to launch a new enterprise. It has been a depressing epoch for all varieties of turnstiles that are oiled by the kale. So they have suffered heavily with organized baseball, and with everything else. There has been but one immune division of humanity. Seven thousand six hundred and fifty-four years ago the Poet's Union became acclimated to Hard Times and two meals a week, so one year is the same as another.

Poetry may not pay, but it's one grand little conditioner against the assaults of Old Doc Trouble.

Ouimet's Status

"JUST what is Mr. Ouimet's golfing status now?" queries a reader. A trifle blurred as to once prevalent heroics, but it is still the status of a first-class amateur who took a week off and ventured far beyond his class, only to return at the first opening to his own set.

From the start Ouimet was sent on a hopeless quest. He was outclassed before he set foot upon Sandwich and Prestwick. Lifted to such dizzy heights by one week of inspiration, his corresponding fall seemed greater than it really was.

But while shorn of most of his glory, no one can take away from him the fact that for six rounds, 108 holes, he set the pace for a Vardon and a Ray; that as a twenty-one-year-old amateur he repulsed a British attack to which his country's best professional talent had made but feeble resistance. And that's still something.

On Cruelty to Animals

OH, children, do not ever swat
The Rhino on the snout;
Oh, do not kick the Tiger's shins
Or pull his whiskers out.

Bad Johnny Harvard went and slapped
The Bulldog on the wrist;
And then his Uncle Sammy gave
The Lion's tail a twist.

And now with patches on their pants
They're roosting up a tree,
And both are just as sorry as
They both know how to be.

So, children, when you start to give
The elephant a slam,
Just look at Johnny Harvard, dears,
And lump your Uncle Sam.

Greed and the Game

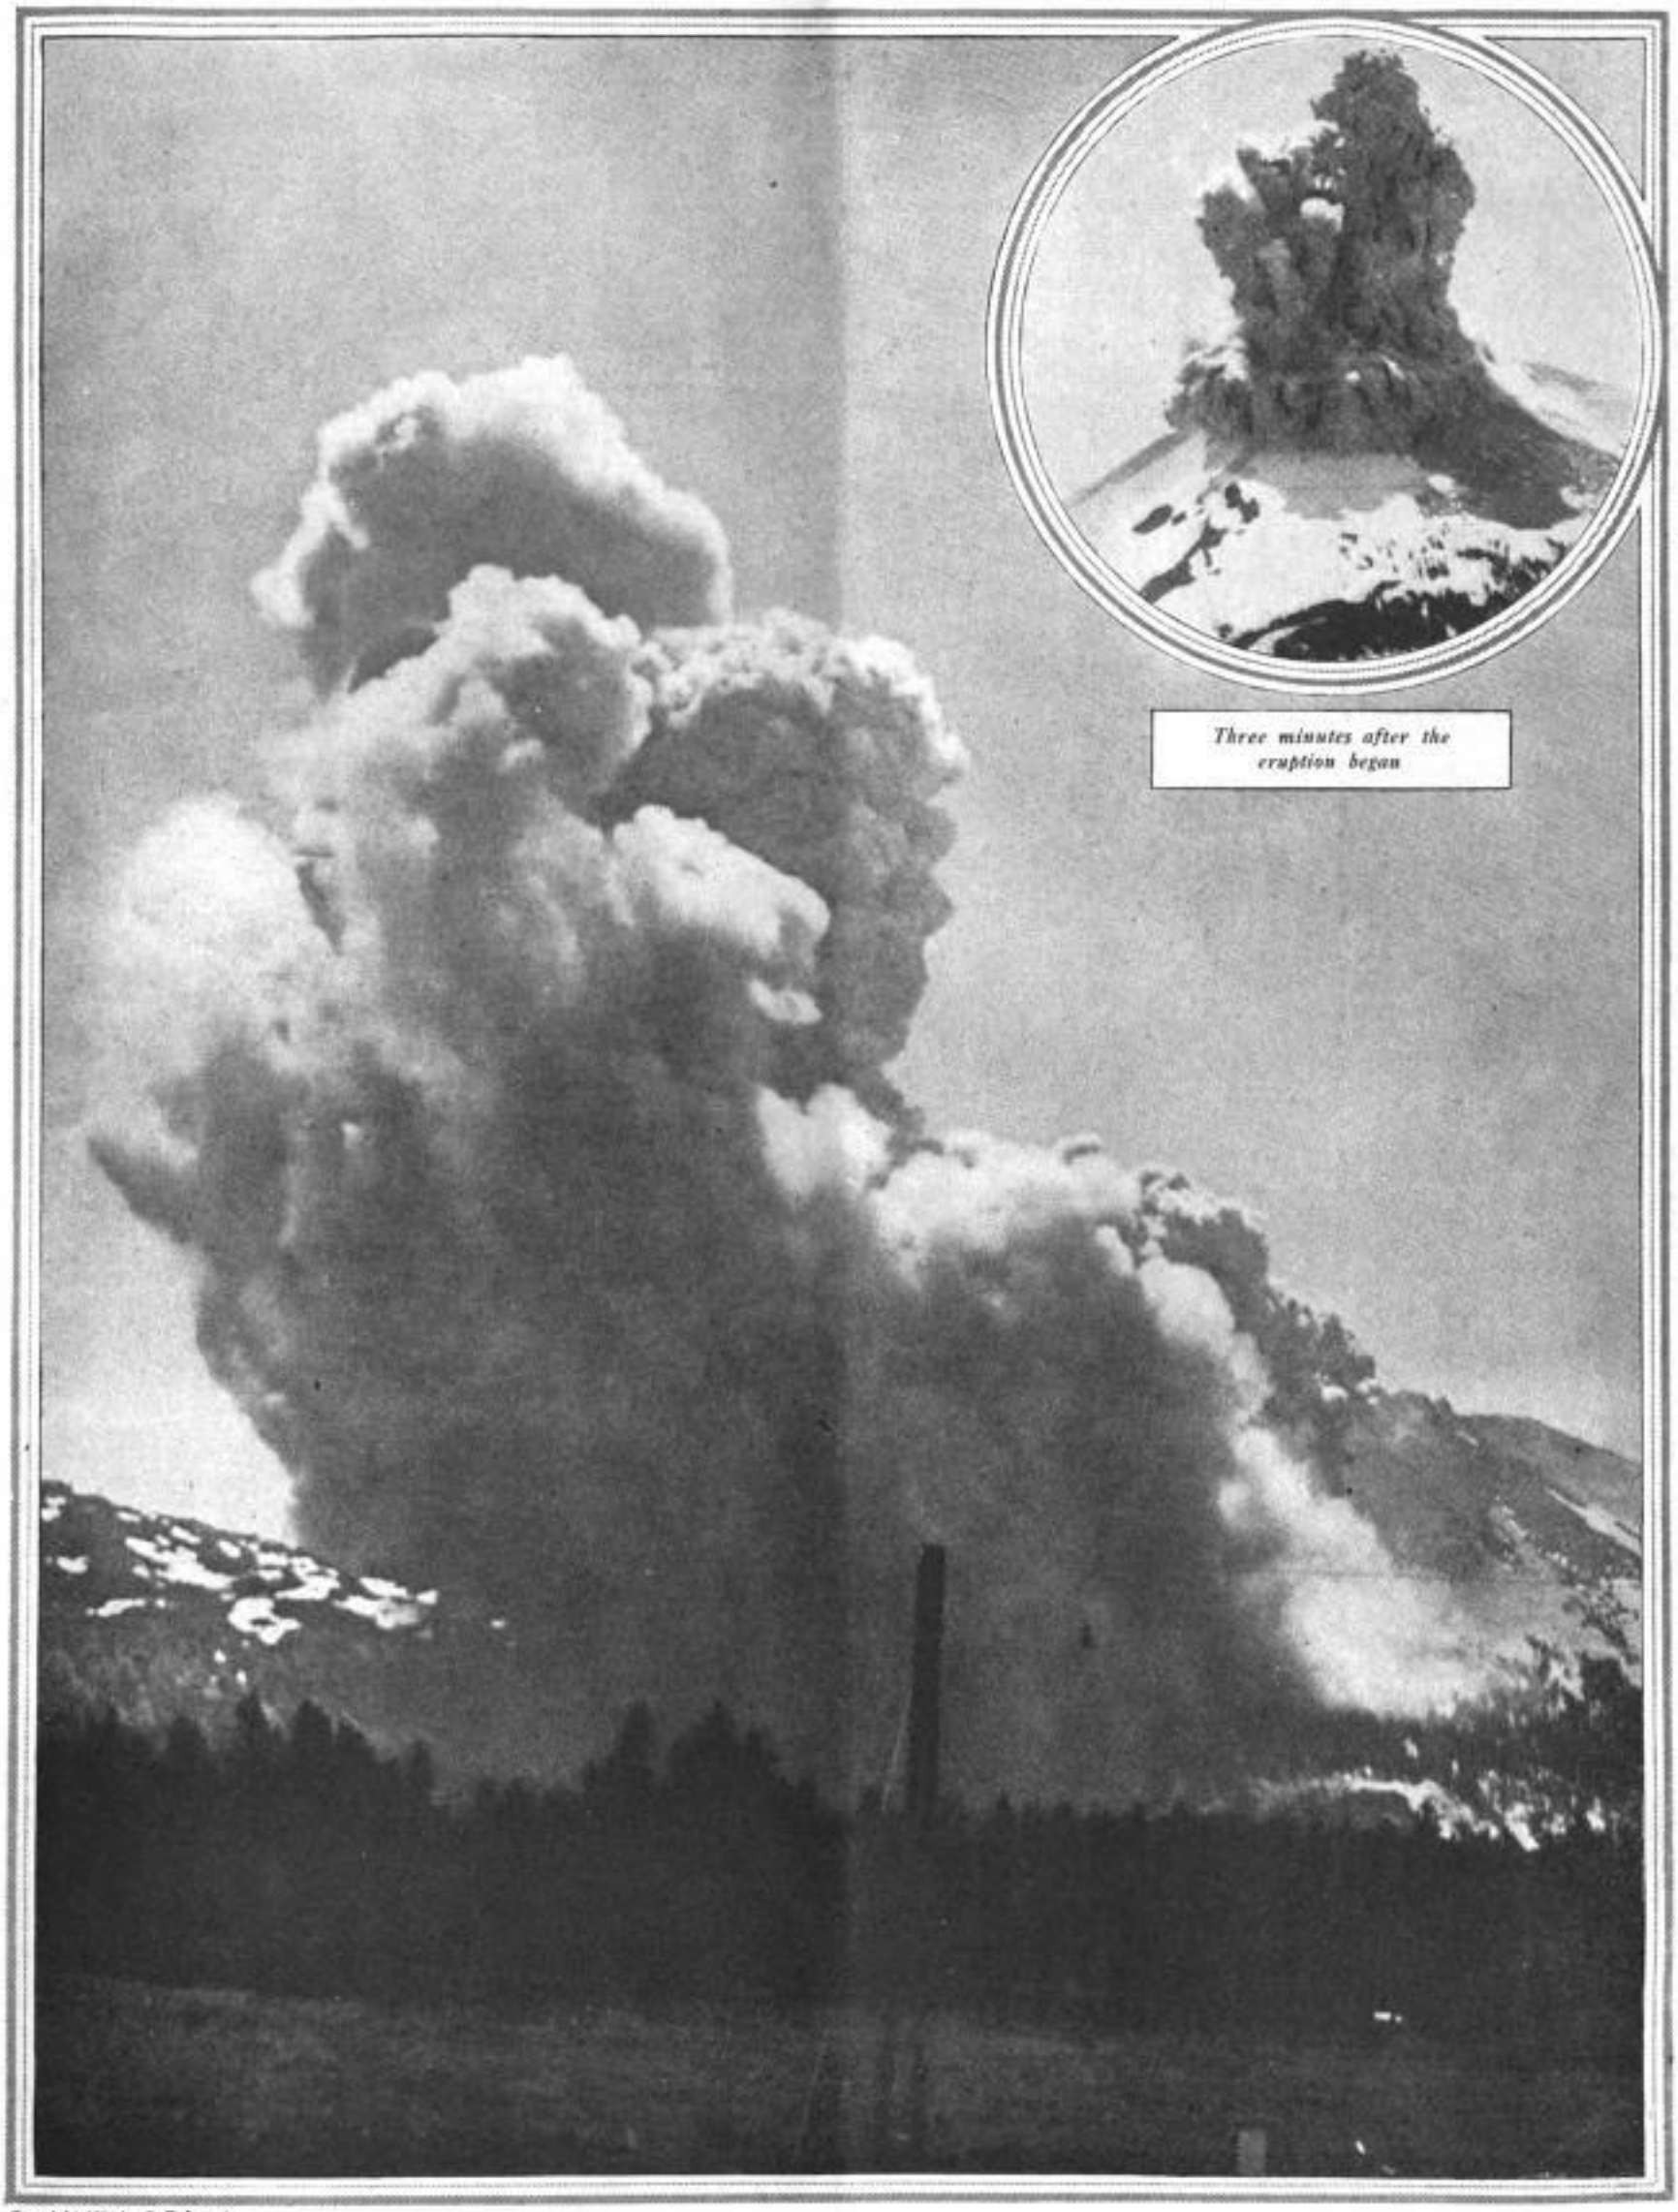
"THE greed of ball players," says Ban Johnson, "is wrecking the game." This is partly true.

But joined with the greed of the player is the greed of certain magnates, and the combination certainly isn't doing the game any good.

With so much money pouring in it was easy enough to see the tangle ahead. It was inevitable that the cupidity of all involved would some day be aroused. Sport is sport after all. When it gets to be 75 per cent business it is no longer sport. The arrival of the Feds for the time being has helped the player—but not the game. The Feds entered the field not as sportsmen but as business men with visions some day of absorbing their share of the kale.

Unless conditions are changed, both magnate and player will wake up some fine morning and find everything in wonderful order—barring the turnstiles, which will be coated with rust through lack of use.

Looking Forward



OCTOBER is still several gray and dusty leagues on beyond us, but even this far away it still seems to present a familiar, well-remembered make-up. We seem even here to have a hazy impression of a Mr. Mathewson, a Mr. Tesreau, and a Mr. Marquard throwing baseballs at a Mr. Collins, a Mr. Baker, and a Mr. McInnis.

And there is already the advance detonation of something large and round meeting a baseball squarely on the trade-mark.

There may be something new beneath the sun, but not in the vicinity of our world-series enterprises.

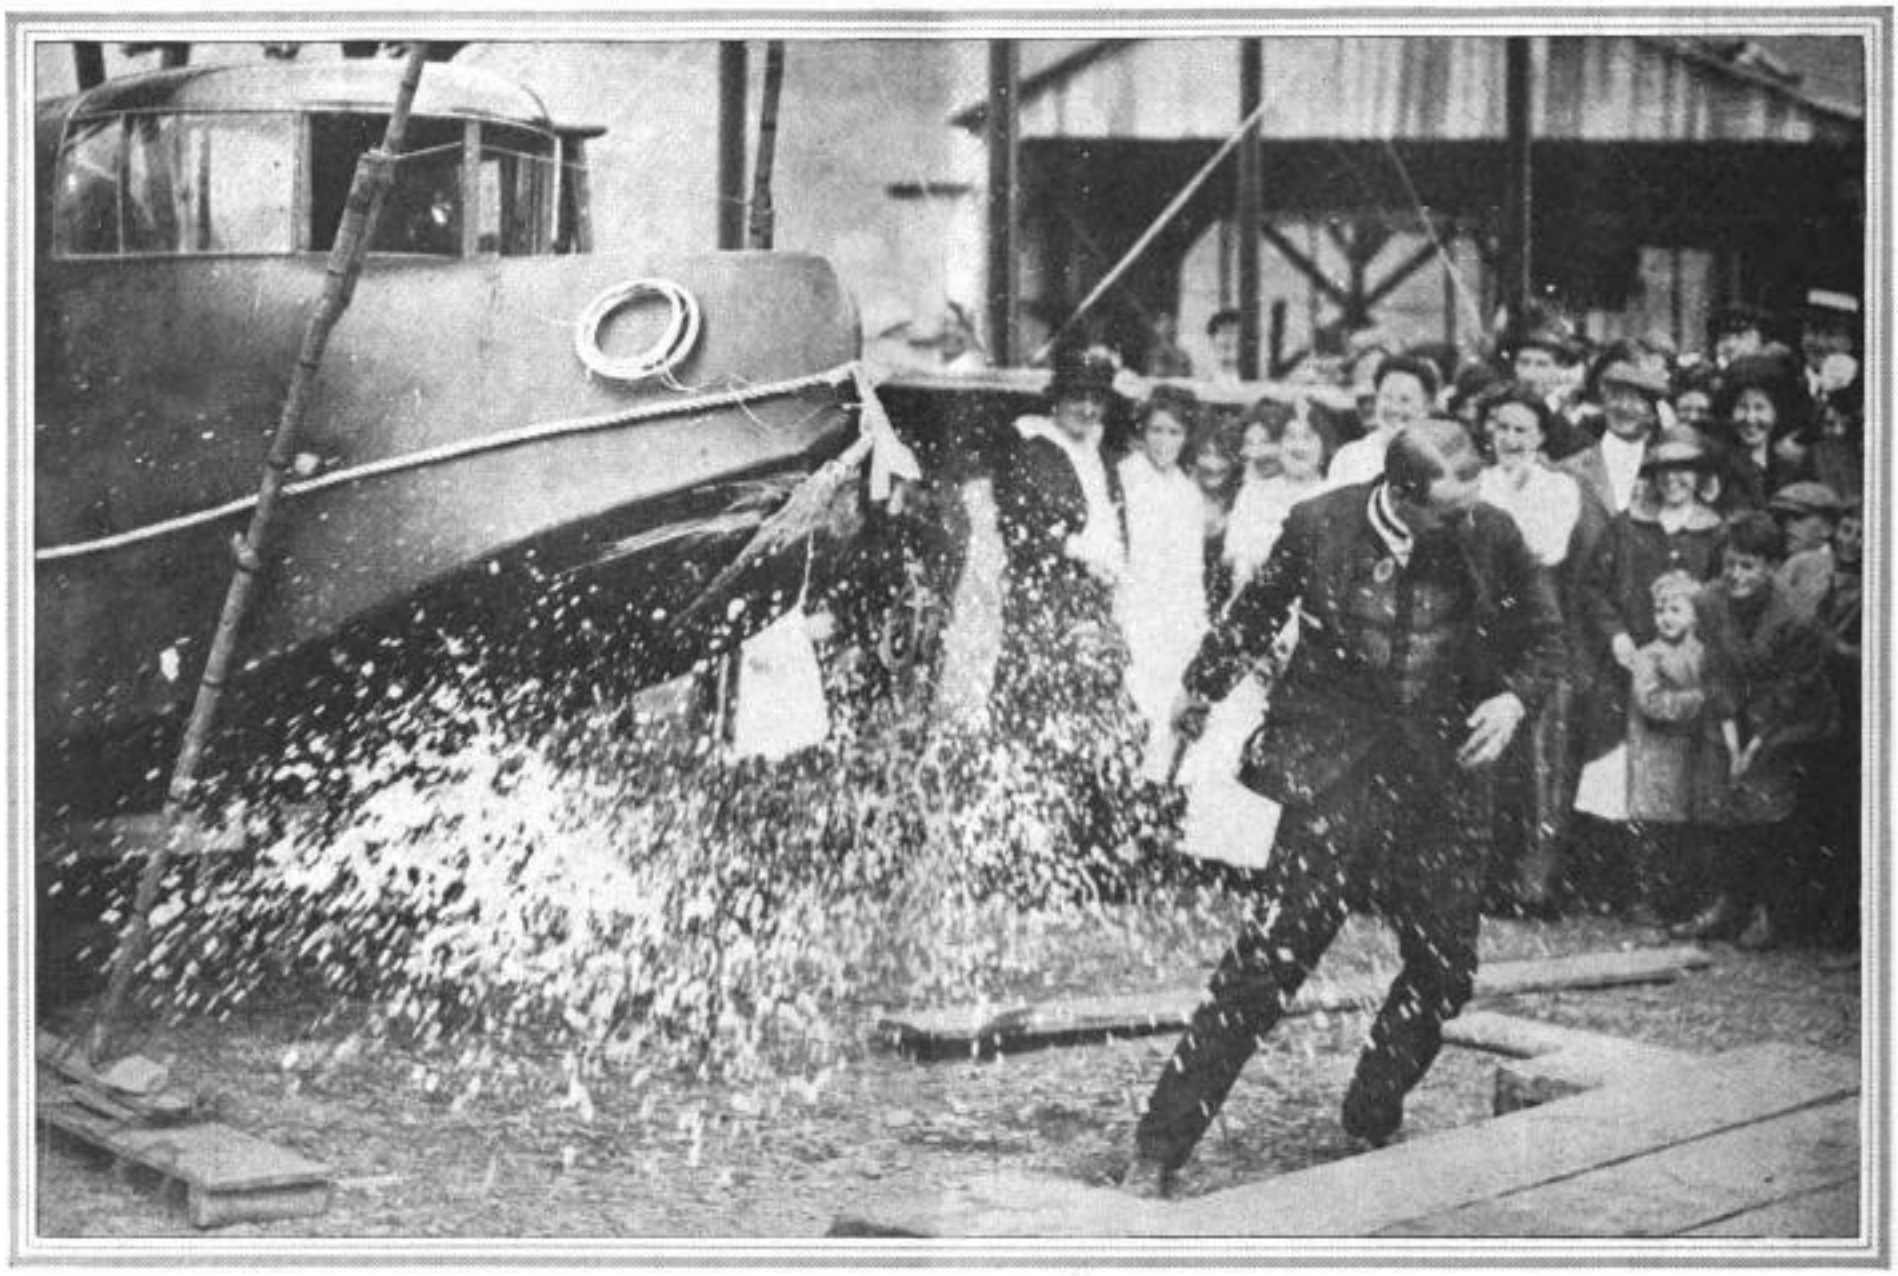
Three minutes after the eruption began

Copyright 1914 by E. F. Loomis



California's Volcano in Action

LASSEN PEAK of the Sierra Nevada Range in northern California is here shown in one of her most violent eruptions since the recent awakening of the ancient crater. The photograph in the circle was snapped three minutes after the cloud of smoke began to show, and the large one was taken ten minutes later. The suddenness of this outburst, typical of many, is supposed to have been due to a caving in of the sides, which plugged up the crater and confined the gases until enough pressure was generated to blow the plug out. The thunderheadlike column of smoke rose to a height of something like 5,000 feet and a shower of ash and stones fell from it.

A mountaineer named Lance Graham, a member of a party of eight on the peak at the time, was severely injured by falling cinders, and another mountaineer was driven temporarily insane. Two new craters, a mile from the main hole, opened on the same day, June 14.

Miss Katherine Masson, sponsor for the America, could not break the champagne bottle, so Lieut. Porte used a hammer on it

An Airboat Built to Flit Across the Atlantic

THE greatest achievement dreamed of by flying men will be realized if the plans of Lieutenant J. C. Porte do not fail. Porte, with the financial backing of Rodman Wanamaker, is going to attempt to fly across the Atlantic in an airboat, the *America*, the christening of which is seen in the photograph above. The machine is the most remarkable seaplane ever built. It weighs 5,000 pounds, is 72 feet from tip to tip, and will carry supplies for the entire journey. It can alight and rise at sea. The hull is fish-shaped and its cockpit contains a bed on which the pilots can rest. Porte expects to fly from Newfoundland to Ireland in 24 hours. His companion will be George Hallett.

Miss Forward starts upward

Symbolizing the Wisconsin Spirit on the New Madison Statehouse

IT is not difficult to guess the name of the tilted bronze lady in the circle when you hear that she symbolizes the Badger spirit and that she is being hoisted to a pedestal on the dome of Wisconsin's new Capitol, which is shown in the photograph above. "Forward" is about the only name that could have been given her. The placing of the statue on the dome was one of the finishing touches given the building, which is to be completed in the next few weeks. The statue is a little over fifteen feet in height, and is large enough to appear life size when viewed from the park below. It is the work of Daniel Chester French. The dome is 287 feet high, the fourth highest in the world, being overtopped by St. Peter's in Rome, the Duomo of Florence, and the National Capitol at Washington. The building will cost $6,000,000. It is by no means the costliest State capitol in the country, but it rivals the best of them in beauty. It makes Madison a conspicuous spot on the architectural map.

Mexico and Wilson

Comebacks and Compliments

COLLIER'S doesn't like the President's Mexican policy. Will COLLIER'S please enlighten us as to what the President's Mexican policy is?—Portland (Me.) *Express.*

✚

The President has had no stronger, no more consistent, and no more disinterested supporter than COLLIER'S WEEKLY. We believe that COLLIER'S has been of greater service to the Administration than all the so-called Administration organs in the United States combined. Every policy of the President has received its approval, but of late it has come to believe that his methods are unwise and that some of his ideals are impractical.—Phoenix (Ariz.) *Republican.*

✚

Mark Sullivan tells us that "a man in public life, who is probably the most intelligent and powerful friend of the Administration in the country, spoke the other day, in confidence, of Wilson's Mexican course as a tragedy of errors." A man capable of taking advice, as Mr. Wilson apparently is not, would never have come into this great tragedy.—Waco (Tex.) *Times-Herald.*

✚

It must be pretty hard to find arguments in support of his party when an editor is ready to use such unworthy stuff in his effort to discredit the President. It is a pretty cheap grade of partisanship.—Milwaukee (Wis.) *Journal.*

✚

"Huerta's house of sand is crumbling," says COLLIER'S WEEKLY. Well, the old man seems to have absorbed some of it into his constitution.—Washington (D. C.) *Post.*

✚

President Wilson's friendliest and most sympathetic critic in all American journalism is probably Mark Sullivan, editor of COLLIER'S WEEKLY. Sullivan has fought the President's battles in season and out. Therefore what Sullivan says may be considered the word of an Administration partisan. If he has prejudices—and, Heaven knows, he has—they are prejudices *favorable* to Mr. Wilson —Grand Rapids (Mich.) *Herald.*

✚

One of the most ardent worshipers at the Wilson shrine has been COLLIER'S WEEKLY. . . . But it has at last been forced to abandon its servile attitude.—Lawrence (Mass.) *Telegram.*

✚

And now COLLIER'S finds fault with the President's Mexican policy. That isn't fair. Wait until we can all learn what the policy is.—Boston (Mass.) *Journal.*

✚

Mark Sullivan in his "Comment on Politics" in COLLIER'S WEEKLY curiously reflects the marked change public sentiment has been undergoing. From an idolatrous worshiper at the feet of the National Administration, Editor Sullivan has become a study in half-suppressed criticism.—Salt Lake City (Utah) *Republican.*

✚

That most interesting political magazine of the country, COLLIER'S WEEKLY, has assumed an attitude toward the Wilson Administration that is entirely hypercritical, not to say hypocritical, and very far away from the usually just and independent position assumed by the editor, Colonel Mark Sullivan.—Shreveport (La.) *Journal.*

✚

We cannot resist further reference to the continued phenomenon of COLLIER'S hostility to the Wilson Mexican program. . . . COLLIER'S continues to put the clear white calcium on contemporary history. —Grand Rapids (Mich.) *Herald.*

✚

COLLIER'S WEEKLY comes out this week with a flat-footed position that Wilson's Mexican policy is wrong. The policy is devious and "wobbly," according to many critics, but it remains for COLLIER'S to appeal to Southern Democrats to heed! In Wilson's practical encouragement to Villa a situation similar to an uprising of the negroes in the South for a partition of the plantations.—Wichita (Kas.) *Eagle.*

✚

For a periodical which has shown itself a friend of liberal causes, COLLIER'S WEEKLY is strangely illiberal in its treatment of Villa and the agrarian revolt now going on in Mexico. It might even be accused of insincerity and a desire, which no Progressive ought to feel, to discredit President Wilson's Administration, right or wrong.—San Francisco (Cal.) *Bulletin.*

✚

RALEIGH, N. C.

"It is undoubtedly true," to use your mild statement of the case, "that the land tenure in Mexico constitutes a grave economic wrong, which ought to be remedied." But pray tell us, dear Sapiency, if it would have involved any the less "A Tragedy of Errors" to have aided the Huerta way of perpetuating that grave "economic wrong" than "to help the Villa way of changing it"?

J. M. PICKEL.

✚

COLLIER'S WEEKLY, which has never refrained from giving President Wilson full meed of praise, has furnished one of the severest criticisms of the Administration for its handling of the Mexican imbroglio. . . . The Democrats have a defensive campaign before them that may well cause them to worry, and they may be very much mistaken if they think they are going to meet a divided foe everywhere. They have very little to point with pride to, and they have much to apologize for.—Portland (Me.) *Press.*

✚

The incessant and tiresome harping of Mark Sullivan in COLLIER'S on the villanies of Villa, with the aim of discrediting President Wilson's Mexican policy, scarcely does credit to Mr. Sullivan's journalistic candor. Mr. Sullivan ignores the plain truth that the United States is not concerned with Villa's "past."—Columbia (S. C.) *State.*

✚

We think COLLIER'S is right in insisting that the President's refusal to recognize Huerta was not, as many believe, a negative act, or keeping hands off, but an affirmative act. To refuse to recognize is really interference, entailing much more responsibility than recognition.—B. L. T. in Chicago *Tribune.*

✚

From the day Woodrow Wilson received the Democratic nomination for the Presidency he had no abler, more vigorous supporter than COLLIER'S WEEKLY. But lately COLLIER'S has seen a great light. —Herkimer (N. Y.) *Telegram-Record.*

✚

Mark Sullivan in COLLIER'S represents that President Wilson has made a horrible mess of the Mexican business, that his acts have been one long series of blunders, and that the President is getting deeper and deeper into difficulty. We are a little surprised that Mark should thus berate the President whom he helped elect. . . .

We can recall how this writer condemned former Presidents, and sometimes we have wished that he were in the Presidential chair to show the rest of the country just how things should be run.—Galesburg (Ill.) *Republican.*

✚

COLLIER'S WEEKLY remarks that it is grotesque that President Wilson, after revolting at Huerta, should be giving aid and comfort to a leader like Villa. The answer is, of course, that Wilson thought Mr. Villa was a nice young man.—Toronto (Canada) *Mail and Empire.*

As easy as offering a cup of tea

And far more wholesome and nourishing.

Wouldn't *your* afternoon guests appreciate a cup of tomato bouillon prepared from

Campbell's Tomato Soup

Try it and see.

Serve it topped with a tablespoonful of stiffly whipped cream. You'll find this combination attractive both to the eye and the taste. Either for an informal occasion or for the most elaborate affair, there could be nothing more acceptable and satisfying.

Why not order a dozen of this delicious Campbell kind today?

21 kinds **10c a can**

Asparagus	Mock Turtle
Beef	Mulligatawny
Bouillon	Mutton Broth
Celery	Ox Tail
Chicken	Pea

Bank Records
must be permanent.
Yours ought to be

Banks, great and small from one end of the country to the other use Baker-Vawter Loose Leaf Ledgers, Standard Forms and Accounting Systems because they are permanent, durable, and time saving.

They realize the superiority of Baker-Vawter products and have found the methods we advocate are simple, complete, and best adapted for each requirement.

Baker-Vawter Ledgers and Loose Leaf Forms are adapted to the systems at present in operation in your office. They will simplify your routine work—make your records permanent and tell you facts about the various departments of your business you should know. Enjoy the satisfaction of greater efficiency in your record keeping, at less cost.

Baker-Vawter products are not sold by stores—but direct from factory to user. Our 125 trained system representatives in your locality, and our service and practical help are yours for the asking.

Tell us your problems and profit from our 38 years' experience.

The Loot and the Lieutenant

(Continued from page 10)

all the energy of his strong young arms. The head disappeared, and there were more cries from below. A pair of dusky hands reached up, catching at either side of the opening. Bob ground one hand under his heel and bumped the other under his rifle butt. "This is easy," he grinned, "but I hope Captain Campbell gets a hustle on with his get-away scheme before they get back to the barrio to give the alarm, or they'll be comin' round in canoes and things and cuttin' us off from the launch. Here, you men, roll over that big stone here. We can plug this hole up."

UP hurried Shorty and the private sent for him, laden with coils of rope and hooks. "What! By golly, they've flushed us! That's right, cork 'em up!" He dropped his burden and lent eager hand and shoulder to the great bowlder that they were pushing into place. "Sling her round this way; she fits better. There! All right! See here, Stone, look what I found! I knew they were somewhere about—diving tackle. Now hustle, everybody; don't worry over anything but making quick time. We've got to make the launch before they can get down and get the canoes." He set everybody to work furiously knotting ropes. "They're good and strong, thank God! they're made to hold men."

"But," said Stone as he pulled at a knot, "is there no other way they can get up here after us before we can all get down?"

"We've just corked up the only way," grunted Shorty as he tested his knot. "This place is sheer cliff all around. Is the boat in and ready? Corporal, signal the boat to stand under. Now, Sergeant, help me take a good hitch around this providential tree. Take the other end, Stone, and two of you men; run and pull as hard as you can to make sure of it. All right. Stone, make loops for Miss Hilary's arms. We'll lower her first; the rest of us can slide for it."

The cliff dropped for at least three hundred feet to the ocean. Its side was smooth, with hardly even enough projections to allow the sea birds to build their nests. It sloped but little; almost a pure perpendicular. The boat had come up and was almost directly beneath them. Stone had taken off his khaki blouse and was arranging it around Madge Hilary and under her arms.

"This will keep the rope from cuttin' Don't be afraid, dear, we'll lower you very gently. If you *should* happen to bump against the wall, push out with your feet, not your hands."

THE strain of the moment was great, and that tender, protective word slipped out unconsciously. Yet Stone knew when something in her eyes answered it. Answered in a way to bind these two faster than any verbal vows. Life takes short cuts in such hours and words have little to do with deepest sanctities.

All Miss Hilary said was: "But *I* am afraid. But, of course, I must do it. Oh, suppose this rope breaks?"

"This rope?" cried Shorty, who had just come near. "Why, I could rope and tie a mammoth with this cord," quoth the diminutive officer.

"Go ahead," said Madge, stoutly. She gave Stone a long, steady look, and Stone's eyes bent to hers. Then he and Shorty gently lowered her over the edge, and the men behind on the rope took up her weight. They lowered her as quickly, but as carefully as they could. But Shorty's mind was in a turmoil. What was this thing that had just happened right under his nose? Why did he think anything had happened? But he knew something had and he knew what. What was all this rot about love at first sight? Had the thing really hit his precious and best-loved protégé, Stone? He had considered him above such rot. There was a sharp pang of jealousy at his heart, for there was no one whom Shorty cherished as he did his one-time First Sergeant. "He won't ever be the same for me again. And I was goin' to have such a visit with him!" He liked Miss Hilary, she was all right—for a girl, but no girl was good enough for a thoroughbred hombre like Stone. He conceived a violent grudge against her for "breakin' all records in ropin' him." Shorty panted with the exertion. "Good job she isn't a three-hundred-pounder like our Colonel's wife," he grunted, "or we'd have stood no show at all—been dragged right over. Easy! *Hold!*" He dug his little heels into the ground. "Let her go; they've got her. *Slack up!*" Stone and he peered over and watched Miss Hilary, helped by the two men in the boat, slip the rope from off her arms. "Hold the rope. Hold it as fast as you can," he shouted through his hands to the men below.

FIRST Bob, then Hilary and the other men, then Stone slid down the rope, each with his rifle slung around his back well out of the way.

"By-by, Don Juan," said Shorty grimly as Stone alertly slipped over the edge.

Stone grinned. He knew just what was the matter with Shorty.

Just as Shorty was letting himself down, the launch in the offing began to signal. From the tail of his eye Shorty caught enough to realize that the natives were coming, and let himself zip down the rope, careless of knots. "Look out below!" he yelled. He came down so quickly he bumped Stone in the head, and the two rolled in the bottom of the boat, pulling the rope from the hands of the men who held it and knocking down two or three men who fell on top of them.

"Pull away!" gasped Shorty from where he lay with a private across his chest. "*Pull!* The chief must have got back early. Where are they comin' from, Sergeant?"

"Canoes from around the northeast point, sir."

"Pull like thunder. Get your rifles ready, men." They pulled. They pulled as Shorty bade them, and the boat fairly shot through the water. Soon they saw quite a fleet of native-made and native-filled canoes rounding the corner of the island. "That's the chief in the lead," said Shorty. "Never saw *him* before."

THERE were not enough oars for all to be pulling, so Stone sat and held the girl's hand in one of his and in the other his rifle.

"They let out the most awful yells when they saw us," said he afterward; "dreadful yawps and hoots, and the paddlers worked like mad. No wonder! We'd got their prophesied woman with the gold hair (thank God for that!), a good bunch of their small pearls, and their sacred ancestral jewel, or whatever the dence it really was. They let out a cloud of arrows, but we weren't in range for those yet. They had no firearms.

"'See that one,' says Shorty, pointing out a rabid fanatic. 'That's the vice president. I guess it's up to him to make good or lose his job—and his head too.'

"We pulled like life and death, but the boat was overloaded and too bloomin' heavy to do any quick-dash work with, and I could see that the next flock of arrows they were gettin' ready to send would arrive all right. We were still all of a hundred yards from the launch with the Gu-gus gainin' every stroke.

"'Don't shoot unless we have to,' says Shorty. 'But why doesn't the slick-jointed mechanical fool in that qualified launch wake up and come get us?'

"'Too shallow; he'd ground,' said one of the crew.

"'But,' said I, 'why the dence that yap doesn't get action'— But I never finished my speech for just then he did it—without orders, which was just what we wanted. Got the little 1.65 in the bow going like the dence and began turning the crank industrious as an organ man while the little quick-firer began pi-r-rut pi-r-ruttin' and the shells jumped and skipped out into the hopper. I tell you she cut a swath. He had the range down fine, Gee! The front two canoes were the chief's and the vice president's and inside of two minutes nearly every man in them was hit and the boats riddled up like sieves. They began to sink and the Gu-gus spilled out into the ocean. Old MacNab, the launch's engineer who was workin' the little spitter, never stopped a minute. He had plenty of ammunition that he kept crowdin' into the belt and she just rained bullets. Such a screechin' they made! You could hardly hear the Gu-gus yellin', but we could see from the way those red cavities of mouths opened in those black faces that they were doin' some tall hollerin'. They turned and beat it around the point and "back to Baltimore." That wasn't really the name of their barrio I guess. They were game enough, but they saw they had no chance, and what with the chief and vice president gone, I reckon they felt the need of reorganization. But it must have been an awful bump to them

Whip Ready Rolled Tobacco

"In 'Whip' I have completed the work begun by my father seventy years ago."

I found Mr. M. C. Patterson, president of the Patterson Bros. Tobacco Co., Inc., in his factory, sleeves rolled up—the busiest man in sight. He was blending "Whip" Tobacco. To safeguard the secret of its blend, I thought. But this was the wrong assumption.

Mr. Patterson blends "Whip" himself because he can't teach anyone else to blend it to his liking.

What Mr. Patterson has learned from his father, who made fine smoking tobaccos all his life, and what he has learned from his own 30 years' experience in making smoking tobaccos, cannot be imparted to others.

Mr. Patterson says: "In 'Whip' I have completed the work begun by my father 70 years ago. We have always sought for a satisfying, fragrant blend that would at the same time be mild and soothing. There's not a bite in a carload of 'Whip.'

"'Whip' is so good that I could sell it at double the price once I could get smokers to smoke a pipeful. But I'd rather sell 'Whip' by millions of cans at a small profit than sell less at a big profit. I ask only five cents an ounce for 'Whip,' ten cents for two ounces."

"Whip" is put up in one-ounce tins at 5c., two-ounce tins at 10c.; also in handsome Pottery Patented Self-Moistening Pound Humidors.

OUNCE TIN FREE

Mr. Patterson is proud of "Whip." And to prove his good faith, he will gladly send you a one-ounce can free if you will write him a postal.

Patterson Bros. Tobacco Co., Inc.
Richmond, Va.

Also makers of "Quared"—the big 2½ oz. 10c. tin—a little stronger than "Whip" and, we believe, a little better than many 2oz.-10c. tobaccos.

Dry Feet without Rubbers

In addition to the increase in comfort and health, which comes from wearing Essex Rubber Soles and Heels on your shoes, they also afford you thorough foot protection from the rain and snow. A sudden storm usually results in wet feet. Rubbers are unsightly, heavy and hurt your feet, and usually are not to be found when needed or if at hand are worn and leaky.

ESSEX SOLE AND HEEL

FOR GENERAL WEAR

Essex Rubber Soles and Heels are Dependable

The leading Shoe Manufacturers will tell you that the reason most all the rubber soled shoes worn in the United States are equipped with Essex Rubber Soles is because they have *proved by test that they are best* in quality of material, excellence of workmanship, and in style.

Specify Essex whenever you buy rubber soled shoes if you want lasting satisfaction.

to lose chief, headman, Eye of Dawn and prophesied lady, to say nothing of all that bunch of fresh-water pearls that Shorty had the roughnecks loot. I couldn't get a line on those; where they came from nor where Shorty got the diving tackle from, so later when we were all aboard the launch headin' for home I poked him up to tell me.'

"'Why,' says he grinnin', 'that was easy. The answer's the same for both. I suspected as much when Miss Hilary found the first rope in the pearl pit. Then when we got on top I scouted to make sure, and 'twas a good thing I did or we wouldn't have had the rope to make the get-away. I was almost dead sure I should find it, though.'

"'But what was it?'

"'A fresh-water lake, hombre, that took up the best part of the west end of the plateau; those two little streams start from it. It was clear as good Scotch though not so yellow and I could see it was just chock full of *Unio margaritiferus* and *Anodonta japonica*; they're the things you get the pearls from. I suppose those Gu-gus have been workin' that lake with care for centuries and that pit under the throne was the principal storehouse. Funny the padres didn't get on to it while they were there—maybe they did though and that's why they were run out. Trust *them* to try and annex the pearls. The Gu-gus must have kept it secret all right; just the chief's and heathen priests' bunch that knew about it. That hole's the only way up to the plateau and I reckon they kept it pretty well guarded. I found the ropes with a big litter of diving stuff—baskets, belts, and lines at the side of the lake. They must go down like the Malays—with just a basket strapped on and a rope to be pulled up by in case of trouble. Golly! I tell you Stone that's some lake there and they've conserved it mighty well.'

"'But the Eye of Dawn?' I said. 'Where did that come from? That's never a fresh-water pearl, is it?'

"'Fresh-water your grandmother! Good Lord! Why man there's only one place in the world a perfect pink pearl of that class could have come from—and that's way around on the other side of the world. Pink pearls come in the Eastern Hemisphere of course, but one with a skin and orient like that never came out of anythin' but the fountain shell, the big conch of the West Indies, *Strombus gigas*—' and he went on spatterin' out for quite a while such things as *gastropod* and *pectinibranchia* and God knows what all! It sure had some name—that pearl, but then it deserved somethin' of a handle; look what it was! It got me though to think of Shorty interested enough in anythin' but the army to go 'lootin'' up stuff like that and I couldn't help grinnin'.

"'Gastropod! would make a corkin' good swear wouldn't it?'

"'Tame, hombre, tame!' says Shorty. 'When I really want to swear I'll use a man's word and make sure that there are no ladies present.'

"'But,' I said, goin' back to the Eye of Dawn, 'how the deuce do you suppose a West Indian pearl got up here in the handball of a Gu-gu idol?'

"'Well,' said Shorty. 'The way I dope it out is this: what's the only connection between the two places—Philippines and West Indies? The Spaniards, isn't it? Doesn't it strike you that the padres might have brought it along and had it stolen from them by these pearl-crazy Gu-gus as they themselves probably swiped it from the original owners? Makes me think of the old Moonstone somehow. Hope those Gu-gus won't trail after it through all the generations like those Brahmins did.'

"'Didn't know you read Wilkie Collins.'

"'Didn't till I began studyin' pearls; then I read everythin' about jewels I could find in the post. It wasn't much, either. Do you know I'm almost sorry I made Miss Hilary put it on. It was all right while we were there, but now we're safely on the way home I'm kind of leery of all the bunch that saw it. You seem to be so hard smitten in that quarter you'd better take it over for her. I'd trust you with it even if you *have* gone crazy. Oh, hombre, hombre, how could you do it?'

"'Do what?' I said, pretendin' ignorance.

"'Fall into the barrel of mush like that,' and gee! he was reproachful. 'I was almost as sure of you as I was of myself.'

"'Couldn't help it. Neither will you be able to when your turn comes.'

"'My turn! Curse your impudence, Stone!' Shorty was on his ear at that insinuation. 'For the Lord's sake, what do you think I am? Just quit on that idea or I won't be any friend of yours. You're lost to me enough as it is. And to think that he goes love over a skirt that he hardly knows, forgettin' the friend of his youth and troubles!'

"'Now, El Capitan, you know I'll be just the same to you as ever.'

"'Yes, you will, Teniente—like nothin'! They all say that rot, but it doesn't fool me any more; I've seen too much of this givin' in marriage game. You mean well, but you don't know how soon you'll be trained to sit up and beg, and lie down and play dead. We'll be good friends, of course, but you won't be able to give me what you gave before. Shut up! Go now and get that pearl like I told you.'

"'Don't worry; I have it already. She made me take it just before we went over the edge—said she couldn't stand it on her. I'm the one they'll have to garrote to get it.'

"'Well that's comfortin' to hear any-

"Go ahead," said Madge, stoutly. She gave Stone a long, steady look, and Stone's eyes bent to hers. Then he and Shorty gently lowered her over the edge, and the men behind on the rope took up her weight

Hiram Percy Maxim

Has Silenced the Noise of the FORD Motor

The inventor of the famous Maxim Gun Silencer and the Maxim Motor Boat Silencer has now perfected a Silencer which absolutely eliminates the exhaust noise of the Ford.

This latest invention of his makes the Ford as quiet-running as the highest-priced cars. It puts an end to that "chug-chugging" which detracts so much from the pleasure of motoring. You cannot hear the exhaust noise at all.

Your car runs quietly—smoothly—*silently*.

MAXIM SILENCER For FORD Cars

How the Silencer Stops the Noise

The Maxim Silencer for Ford cars operates on a totally different principle than the muffler.

Unlike the muffler, the Silencer dissipates the exhaust gases in an *indirect* manner. The exhaust gases are given a whirling or spinning motion in a series of endless canals or whirling chambers where the gas energy is dissipated by friction and the *puff noise* thereby eliminated.

The *secondary noise* is also silenced by means of the peculiar inlet and outlet arrangement of the chambers. These split up the noise wave gradually in an endless circuit so that, when the outlet is reached, the exhaust is absolutely mute.

Write for Catalog describing the operation of the Silencer in detail.

Decreases Back Pressure—The Silencer creates approximately one-third less back pressure than the regular muffler. Back pressure causes carbon—and carbon lowers the motor's efficiency.

Saves Gasoline—By decreasing the back pressure the Maxim Silencer gives more power with a saving of gasoline. It makes your Ford *quicker-starting, a better hill climber and more efficient in every way.*

Now on Sale

Maxim Silencers for Ford cars are now being placed on sale everywhere. Ask your nearest automobile supply dealer; if he hasn't them, ask him to obtain one through his regular jobber or from us. Or if more convenient, write direct to us (giving your dealer's name) and we will see that you are supplied.

Easily and quickly attached by anyone. Takes the place of the regular muffler. Price, $6.00.

Write today for Advance Catalog

Silencers for all makes of cars may soon be had. Silencers for Fords are now ready.

way,' said Shorty. 'But look here, hombre, you want to be almighty careful. If they know you've got it, you'll have to be on your guard every minute. Your lady love's brother now—I don't like his looks at that a little bit. He's the black sheep of the family, you know. She told me a few things about him. Has she said anything to you? What do you know?'

"'She started the tale, but just then the Gu-gus poked up through the hole and it became a serial. I haven't got the continuation yet.'

"'Well, I don't like his looks a little bit,' he repeated. 'Goin' up for his commission is goin' to be no drawback to him if he's really after this thing. What's a commission beside it—to most? Think what it's worth! Of course with you and me it's different. Our commissions mean more to us than money—thank God—there's no thought even of temptation. But that hombre belongs to the swift bunch all right—and by golly I bet he'd rob his sister of that pearl first crack out of the box. Particularly since he's wise about you two. He thinks he won't get a look in now, though he might have before. His chin's weak, too. You keep pickets posted!'

"'All right,' I said; 'I'll give this to the Major and get it locked up the instant I hit the post. It's in my inSidest Inside pocket and the yap that gets it out will have some slick work to do.'

"'Very well, hombre,' said Shorty, 'but remember the hombre in that old song who had fifteen dollars in the same place one Saturday night and 'not a divilish cent had I on Sunday mornin'.'"

STONE had finished his circumstantial account to the Major.

"I guess a lot of this wouldn't go well in an official report, would it, sir? Suppose I just report the finding of Captain Campbell and Miss Hilary while we were out on a mapping trip, and on that account the trip had to be abandoned. I guess I'll have to report pursuit by natives though, won't I, on account of leavin' all that stuff?"

"And ammunition," said the Major. "Make it clear that the gun was fired by an employee of the Q. M.'s not acting under your orders and that your men didn't fire a shot. We've got to conserve Gu-gus. It would never do to shoot at them."

"Yes, sir. And now let me hand over this old pearl. It'll get on my nerves if I have to carry it round very much longer."

He opened his blouse and put his hand within.

After some groping he grasped the object and drew it out carefully. He opened the little grass case and disclosed to the Major's eager gaze—a common pebble!

For a minute Stone stood stunned, then he went absolutely deathly white; in an instant the blood surged up again and he crimsoned to the very roots of his hair. He gave a queer, strangled cry.

Just then Shorty entered the room. With lightning rapidity his glance traveled to the table where the rifled case lay.

"By golly!" he exploded. "So Hilary frisked you after all! Quick, hombre, round up your detail and make sure."

WITH one leap Stone was out of the room and racing to the barracks, Shorty pounding and puffing after him, for while Stone ran well and lithely at any time, now he seemed, under stress, to have on Mercury's shoes. The detail was rounded up.

Hilary alone was missing. Scouts sent about the post could not find him. His sister had not seen him. As soon as the detail sensed what was in the wind one of the privates squealed.

"Hilary! He's gone! He's got the pearl all right!"

"How do you know?" demanded Shorty instantly, down on him at once.

In his utter rage the man threw caution to the winds. "'Cause I seen him take it! That time you and the Lieutenant tumbled into the boat down the rope together, we was all mixed up in the bottom of her and he done some slick work."

"But for God's sake, man, why didn't you tell us?"

"Why?" he cursed plaintively. "I wanted it myself! I was goin' to take it from him to-night and make a get-away. There's a liner passin' by to-night and I was goin' to take a boat and row out to her. But he bunkoed me!" The foul, ill-sounding curses filled the place.

"Hades!" said Shorty—only he said it shorter. "Fine words butter no parsnips. Put this man under arrest, Sergeant. Come, Stone, hustle!"

AS they loped along at the double Shorty pantingly explained: "We may get him yet. If he's rowin' out to catch the liner that's goin' by to-night as that man said, no reason why we shouldn't get a boat and go after him."

"The launch has got steam up yet," said Stone. "The Major was holding it in case any word should come in by wireless from the other boats of the *Mary Lee*."

"Good business! We'll take her."

Just as they raced down the landing stage Stone stopped with an exclamation. "*Look!*" he pointed. There was the liner at least ten hours ahead of schedule time and she was very evidently preparing to stop in a place she was never known to stop before.

"Bunkoed again, by golly!" swore Shorty. "Why should they stop and take him on?"

"He may have yelled he was shipwrecked off the *Mary Lee* or conned them by throwin' himself in the water and pretendin' he was drownin.'" And indeed that last was exactly what the astute Hilary had done, being able to swim like a Kanaka.

THEY stared at the big liner, but were too far away to see what was happening.

"Lieutenant Stone," said one of the launch's crew coming up, "Corporal Hilary just now went out in one of the boats; he said it was on an errand for you; was it all right?"

"*All right! Gee!* Was he in uniform?"

"No, sir, not exactly. Just an old pair of khaki trousers and a blue shirt."

"Most anybody could wear that," said Shorty. "I guess it's adios, Corporal Hilary, all right. No, it isn't either; *there's the wireless.* We'll get him!" he started to run.

"Where are you goin'?" cried Stone, running after him.

"To the wireless station!" tossed Shorty over his shoulder.

"No!" cried Stone. "Wait till I see Madge—his sister. Don't you see what such a message would mean to her!"

Shorty stopped short. "All right, hombre, there'll be plenty of time to nail him before they make the next port—if she wants to. But oh, Teniente, I wish you'd renig on this sentimental mush. Can't you retire in good order before actually gettin' into the mêlée? You've only engaged skirmishers yet. Fall back while there's time!"

BUT Stone only shook his head and quoted the regimental motto of Shorty's own eighteenth. "No retreat!" he said.

"I'm glad it's gone," said Madge Hilary. "Glad, glad, glad. Poor Fred, he always had a habit of taking what was not his, if the temptation proved strong enough. That's what got him into trouble. The only thing I'm sorry about is the easy times it would have meant for *you;* now you'll have all the usual expenses of marrying and the additional one of having to provide a trousseau for the bride. Every rag I owned went down on the *Mary Lee*."

"Don't worry, girl. We'll get along all right. I've got a bit saved: not much, but enough to give you a dress or two, and what with perks and all we'll make out splendidly."

"And you never even got any of those fresh-water pearls that some of your own men are going to get a small fortune out of."

"Well, you know the Major said 'No loot,' and though of course Shorty took all the blame of that part of it, I can see he doesn't like it. The Major's a mighty good sort and I like to obey him, but"—Stone's eyes began to twinkle.

"Well, what?"

"I'm thinkin' I got—in spite of orders—the biggest piece of loot of all!"

THE END

The Smash in the Ear

(Concluded from page 7)

now. With your name at the head of the list for a hundred thousand dollars' worth of stock, you and I can close the balance of the subscription in two days."

FRAZIER turned grave. The wrinkles in his lips puckered forward, but his tone was not unkindly as he swung squarely in his swivel chair toward young Arnold. "I'm sorry to see you take this thing so seriously, Sam. You've been advertising a month, and you've sold something less than a hundred and fifty thousand dollars' worth of stock. There is still seven hundred and fifty thousand to place besides yours. And you won't complete your subscription list! The stock purchases have been dropping off during the past week, and I think you've sold all you can."

The banker was surprised that this report did not seem to discourage Sam in the least. Instead, the young man beamed, and in his smile was the hearty cooperation of his white teeth, his blue eyes, his orange freckles, and his red hair.

"I've passed out all the stock the small investors are to get," stated the promoter. "I only set aside a hundred and fifty thousand for them. Frazier, you once said that if I got the City Council to pass the speedway-appropriation ordinances you'd help me organize this company."

"Yes," admitted Frazier. "I'd see a splendid investment in it. But the City Council won't pass the ordinances. I've talked with them. They're not misled by this enthusiasm. They are solid, conservative, honest citizens, which is why they are reelected every year. They've run this city cheaper than any city of its size in the United States, and there is positively no chance that they would spoil that record by committing a five-million-dollar extravagance."

SAM glanced at the pleased expression on the face of old Tim Cassidy.

"How many investors are represented in your sale of the speedway stock?" he asked of Frazier.

"A raft of them," answered the banker, and consulted a memorandum card in his daily file. "Between four and five thousand."

"Is that enough, Tim?"

"God bless you, boy, it's aplenty!" and old Tim beamed on the young redhead. "Every mother's son that owns a share of that stock will vote for the candidates that's pledged to build the speedway; them and all their fathers and their sons and their cousins and their uncles and their pals. What do you think of me slate, Mr. Frazier?" and, hitching his chair forward, old Tim displayed a list of names, scrawled on a crumpled and soiled legal envelope. "They're good men, every one!"

The puckered smile came on Frazier's lips, and every tiny wrinkle on his face seemed to puncture him at both ends.

"Sam," he observed as he reached for the subscription list, "you have every qualification for a crook—except dishonesty."

THE new-born Winburg lay swathed in a mantel of white, even to the fleecily tufted branches of her tall old elms and oaks.

The only spots of color in all the landscape were the flaming red hair which waved around the face of Ruth Arnold beneath her saucy little bonnet, and the flaming red hair of Sam Arnold where it gleamed below his cap. They stood on the back porch looking steadily down toward the city.

Presently there came a new spot of color. It rose against the sky just over the City Hall: a gay American flag, jerking swiftly to the top of the flagstaff, where it suddenly flaunted out in the winter breeze.

"Old Tim's signal!" shouted Sam. "Ginger, the new City Council has passed the speedway appropriation!"

They spread their arms wide and threw them around each other, and did an ecstatic dance up and down the porch. Breathless, they stopped to look at the flag again. It represented the consummation of all their ardent hopes.

"At last the speedway's off our minds!" exulted Ruth.

"Until we get pinched for speeding on it," grinned Sam. "A promoter is through the minute the money is up."

Mr. Chester's next story
FUNDAMENTAL JUSTICE
will appear in the issue of July 25

"The Dummy"

By HENRY J. FORMAN

EVERY now and again there comes to New York a play that by all the cut-and-dried standards must and should fail, and experts of the theatre prove in advance quite conclusively that it cannot do anything else. "The Dummy," still running at this writing, is one such play. The playbill describes it as "a detective comedy"; it is in reality a melodrama on a theme that the nickel novel has long since exhausted in endless and numerous "boy detective series." No recognized producer would touch it, and those who saw it in rehearsal hastily stood from under.

Some comparatively inexperienced producers, however, had faith enough to back it with their money last spring, and now it is one of the hot-weather-proof attractions in New York. It is the old story of an outworn form revitalized by a new talent, just as one day a writer will appear who will bring to life again the dead form of the romantic and the historical novel.

Readers of COLLIER'S will recall the Barney stories by Harvey J. O'Higgins—Barney the little street Arab of Greenwich Village, who yearned to be a "detectuv." Together with Miss Harriet Ford, Mr. O'Higgins has put together a play upon Barney's small frame that fits him like the disguises his "detectuv's" heart delighted in. Human nature and natural genial humor mingle into a story that rejoices old and young much as does Tom Sawyer.

Barney (Ernest Truex) as the "detectuv" and Beryl (Joyce Fair), the kidnaped child, in "The Dummy"

To outwit a set of clever crooks, Barney's task in the play, seems literally child's play to that astute youngster. It is by his speech, by the free and flexible use of a beautiful vernacular, that he endears himself to audiences. The late O. Henry was fond of saying jocularly that "Shakespeare was the O. Henry of his time," and proved it by Shakespeare's love for the slang of that day. If there is truth in O. Henry's words, then Mr. O'Higgins had better take the vacant seat at the Mermaid Tavern, for he has put one over on the bard. In Shakespeare's gallery there is not a single boy "detectuv."

"The Story of Nancy Gay"

It throws a brilliant light on a burning question of consuming interest.

A limited edition has been printed and you can have your copy sent you **free** by writing at once. Write today. A postal will do.

HAVOLINE OIL

"It Makes a Difference"

There's a *Havoline* Station Wherever You Go!

HERE'S a Motor Oil that is sold from Coast to Coast and from the Gulf to the Great Lakes. Motorists are assured of the same high-quality lubricating oil regardless of where or when it is purchased, because:

It is made only *from one uniform base crude oil* of tested quality.

It is manufactured by our "special process," which leaves the individual *molecules of the oil intact*, thereby conserving its vitality.

It is entirely devoid of floating carbon and impurities and burns up so cleanly that it leaves minimum carbon deposits.

Hence it forms a live, lubricating "cushion" of equal thickness between the moving metals of the motor, vastly decreasing the frictional loss and increasing its efficiency.

Buy the Oil in the Blue Can. 2 Five-Gal. Cans to the Case.

Tell Us Your Make and We'll Tell You Your Grade

Sold Wherever Motors Turn

Ask your garageman or write us direct for testimonials of *Havoline* users who own your make of car.

Write for the "Lubrican," our booklet on Lubrication.

Louisville College of Dentistry, Louisville, Ky.
offers exceptional advantages in its theoretical and practical courses. Strong faculty, splendid corps of demonstrators. Building, equipment and appliances modern in every detail, ensuring thorough practical application of the principles of dentistry to the student. Subscription ($100) required. Write W. E. GRANT, M. D., D. D. S., Dean, 133 E. Broadway.

The Associated Press

EDITOR COLLIER'S:

I HAVE read with interest the editorial upon the Associated Press which appeared in your issue of June 6th. While I recognize an evident purpose to be just, it seems clear to me that your suggestion that "the information sent over the Associated Press wires is likely to have a slight official bias," lacks force. The dispatches of the association are very widely published. If there is the sort of bias you intimate, it should be easy to furnish some illustration. Such evidence would certainly be convincing. In truth there is no basis for the idea, as can be demonstrated, I am confident, in any specific case that may be presented.

In respect of your other contention, "that the Associated Press ought to be required to give its service, under proper restrictions and conditions, to any newspaper which asks for it," there are several things to say. First, your attempt to find analogy between this business and that of a railroad must fall utterly. The railroad is, in the very nature of the case, a common carrier. Not only does it fall under the proper legal rule which applied to the coach, the cab, and the ferry, long before the railroad existed, but it enjoys certain peculiar privileges, such as the right of eminent domain, etc., which gives the public a distinct claim upon it. On the other hand the Associated Press enjoys no exceptional right of any sort. It is simply a voluntary union of a number of gentlemen for the employment of a certain staff of news reporters to serve them jointly. For its work it derives no advantage from the Government, from any State or municipality, from any corporation, or from any person. Its service is a purely personal one, and never, except under the long since abolished slave laws, has any government sought to compel personal service, save in cases of voluntarily assumed contracts, or of adjudgments for crime. The output of the Associated Press is not the news; it is its own story of the news. There can be no monopoly in news. At the point of origin, Havana, the destruction of the *Maine* was known by every man, woman, and child. Any one could have written a story of it. The Associated Press men did. It was their own story. Who shall say that they, or those who employed them, were not entitled to its exclusive use? And is this not equally true, whether the employer be one man, or ten men, or nine hundred men acting in cooperation?

YOU say: "Where a city has only one morning paper and where that morning paper, possessing the Associated Press franchise is able to keep the franchise exclusively and prevent any other paper from getting it, there arise all the mischiefs which attend monopoly." To this let me say that there is no such case, nor has there been in the life of the Associated Press of which you speak. If there were, Mr. Noyes's remark that "a competitor has as much right to demand and receive the same news service as he would to demand and receive the use of the other's press, composing room, editors, and reporters," would unanswerably apply. But as to the facts: The existing Associated Press began business on September 29, 1900, with 612 members publishing daily newspapers in 265 cities and towns. In the thirteen years and nine months which have elapsed since that date, 627 new members, publishing daily newspapers in 434 cities and towns, have been admitted. As you will observe, this means an average of about one new member elected each week. Meanwhile members have resigned, newspapers have failed or ceased publication, so that the 627 elected do not represent an increase of that number on the membership roll. The present membership is 891.

As to the exclusive right, my answer is that there is no exclusive right. There is what is called a "right of protest," which is simply the right of a member to say that the Board of Directors cannot elect a new member in his field, but must leave the question of election to the membership at large. And even this "right of protest" is held by less than one-fourth of the members. No such right has been granted to any member in over thirteen years, and, since it requires a vote of seven-eighths of the total membership of the association to grant it, none is likely to be granted within your lifetime or mine, to say the least.

SOME applicants have failed of election, it is true. But in the great majority of such cases they have failed for other reasons, and not because of the exercise of any protest right. Since the association is a cooperative one, making no profit, there is no fund out of which to provide for the delinquency of one who may be unable to pay for the service. And as contracts for leased wires run over a considerable period, the failure of a member to pay his share of the expenses may become a serious thing. If the Associated Press were a money-making venture, it would be justified in taking the risks which merchants are accustomed to reckon on in making credits.

This is one of the difficulties which would be involved in any attempt to compel the organization to give its service to all applicants. An increased charge would necessarily be paid by the thrifty, solvent members to provide for the improvident or untrustworthy.

Anyone may withdraw from the Associated Press. What holds it together? The confidence of the members and of the public in its integrity. The only property it has is its good will. Is this a thing in which an applicant may claim a legal right to share?

IN the case of the New York "Sun," it should be said that the proprietors of that paper have never sought admission to membership in the association. On February 19, 1897, when the paper was under the control of Charles A. Dana and William M. Laffan, there appeared in italics at the top of its editorial columns an announcement that the paper would not join the Associated Press, but would collect the news for itself. This policy was pursued until the death of both of the men named. And thereafter the present manager declined to make application for membership, but instead presented a petition to the Attorney General of the United States asking that he institute proceedings against the Associated Press as an unlawful organization. This was not an appeal for aid; it was an effort to destroy a competitor. For it must be borne in mind that the New York "Sun" has a news collecting and distributing agency of its own, and has had such an agency for over twenty years.

But you say "the time will come when newspapers will be recognized as having the qualities of a public utility, and will be subject to inquiry and regulation by commissions similar to those which have arisen in many States during the past few years to supervise railroads, telephone, and lighting corporations." Well, then we shall have turned back the clock 300 years, and John Milton and his "Plea for Unlicensed Printing" were all in vain. The first Amendment to the Federal Constitution will be accounted a mistake, and we shall be face to face with a method of governmental administration once delighted in by the Stationers' Company and the Star Chamber.

AS long ago as March, 1807, a writer in "Harper's Magazine" said: "The American public are a little superstitious about the Associated Press, and the feeling results from that common and natural cause of all superstition—ignorance." That such ignorance exists now, as it did then, is undeniably true. But it would be altogether unfair to suspect that this lack of knowledge on the part of the public is due to any effort by the association, or its management, to veil in secrecy either its scheme of organization or its method of operation. Any one who is anxious or even willing to investigate it will find no obstacle. Neither the membership nor the management has any apology to offer for the work. Instead it is believed that the association is engaged in a distinctly meritorious endeavor.

BOYS

Randolph-Macon Academy
For Boys and Young Men — Front Royal, Va.

A branch of the Randolph-Macon System. Liberal endowment affords unusual advantages. Equipment cost $100,000. Prepares for College or Scientific Schools. Gymnasium, physical culture and outdoor sports. Terms, $250. 53d session opens September 16th, 1914. For catalogue and illustrated pamphlet, address
CHARLES L. MELTON, A. M., Principal
Box 409, Front Royal, Va.

Racine College School
"The School for Manly Boys."
—Chief Justice Winslow.
Character building is our serious work. Modified military system. Location convenient to Chicago. Special provision for younger boys, supervised athletics, gymnasium, swimming pool. Diploma accepted by leading institutions. Catalogue. Rev. William Francis Shero, A. M., Ph. D., Warden and Headmaster, Racine, Wis.

University School FOR BOYS
Now entering upon its 21st year in splendid home in college community. Select day and boarding school. Preparatory. Patronized by Chicago's best families for 20 years. Fully accredited. Individual instruction. Teacher for every nine boys. Modern buildings and equipment. 4.3 acre campus. Limit—number of boarding pupils under personal supervision of Headmaster. Near Lincoln Park and world famous Lake Shore Drive. Music and Art courses easily accessible. Catalog.
W. Rhodes Kohr, 1130 N. Dearborn St., Chicago, Ill.

Peddie Institute
Hightstown, N. J., 9 miles from Princeton
An endowed school for 250 boys, offering thorough preparation for all colleges and for business. Modern buildings. 60-acre Campus. Gymnasium, Swimming Pool and Athletic Field. Musical Clubs and instruction. Lower school for boys 11 to 14 years. Rates $400 to $550. 49th year opens September 23rd. For catalog address
R. W. SWETLAND, A. M., Box 7-M.

KISKIMINETAS SPRINGS SCHOOL for BOYS Each boy studied and his work adapted to his needs. Character developed along positive lines. Known and indorsed by every American University. Broad business courses for boys not going to college. Two beautiful new dormitories and 146 acres of land have just been added to equipment. Opens 25th year, under same management, September 22, 1914. Write for catalog.
KISKIMINETAS SPRINGS SCHOOL
Department 4 Saltsburg, Pa.

Notre Dame "World Famed"
The University includes the Colleges of Classics, Letters, History, Economics, Journalism, Architecture, Law, Biology, Chemistry, Pharmacy, and Engineering (Civil, Mechanical, Electrical, Mining, and Chemical). Board and Tuition, $400.00 a year.
Preparatory School for boys over thirteen, $400.00
Primary School for boys under thirteen, $250.00
For Catalogue address (specifying department).
DEPARTMENT C., Notre Dame, Indiana

CO-EDUCATION

Unusual Opportunity for Young Men and Women to Equip Themselves to Teach
Public School Special Subjects
A one-year course in Music, Drawing, Domestic Art, Domestic Science, Physical Training, Manual Training. Devoted exclusively to the training of teachers for special branches. For 24 years we have been placing graduates in paying positions. For information, address The Secretary
Thomas Normal Training School, 4503 Cass Boulevard, Detroit, Mich.

Peirce School develops a proper mental attitude in the student toward the problems of life. In its commercial and secretarial courses the student is trained to concentrate on the task at hand. He acquires self-confidence by performing practical work and advances gradually toward the bigger problems that are met in actual business. Both sexes. Send for 50th Year Book. Address
The Registrar, Record Building, Philadelphia

DEFIANCE COLLEGE Defiance, O. High grade. Co-educational. A select student body; strong faculty. New buildings thoroughly equipped. Collegiate, Domestic Science, Academic, Teachers', Commercial, Music, Art, Elocution, and Physical Training Departments. Rich for board, equipment and tuition. Catalogue. P. W. McKEYNOLDS, Pres't.

American College of Physical Education
Includes schools for Physical Directors, Playground Workers and Teachers of Esprite. (Co-Educational). Fall term opens September 16. Faculty of Experts. Unequalled record of successful graduates. We own our $250,000 building, fully equipped. Address Secretary, Box 103, 3048 Grand Blvd., Chicago, Illinois.

GIRLS

Mary Baldwin Seminary For Young Ladies Staunton, Va.
Term begins Sept. 16th, 1914. Located in the Shenandoah Valley of Virginia. Preeminent climate. Modern appointments. Students the past session from 35 States. Terms moderate. Pupils enter any time. Send for catalogue.
Miss E. C. WEIMAR, Principal.

Does the Associated Press receive or distribute to its members all of the news of the day? By no means. Nor is it intended that it shall. There are news fields which, however important, it is forbidden to enter. These are the fields which by the proprieties are left for exploration to the enterprise of the individual newspapers. What may it do and what may it not do? It may and should report the consequential events fairly, or as nearly as is possible for human beings to do so. It may not go further. And herein lies in large measure the misunderstanding of the well-intentioned public.

AS an illustration: If a "pogrom" occurs in a Russian town, the Associated Press should tell dispassionately the story of the event. But it is not permitted to even say whether the thing is right or wrong. If President Wilson goes to the Capitol and urges a repeal of the statute exempting American coastwise vessels from the payment of the Panama Canal tolls, and if Senator O'Gorman or Republican House Leader Mann, or Democratic House Leader Underwood takes issue with President Wilson, the Associated Press calmly reports both sides and must give no hint that either side is right or wrong.

But, says some one, this sort of negative work has no value. It sees a great wrong and makes no sign of disapproval. It sees a movement for the betterment of mankind which is of the highest moment and does not lend a hand to help the thing along. Let us see. There is an underlying belief that the American people are capable of self-government. If so, they must needs be able to form a judgment. And we conceive it to be of very great importance that the people be given the facts, free from the slightest bias, leaving to them the business of forming their own judgment. Let us see what any other method of dealing with the news of the day must mean. If a news agency is to present somebody's view of the right or wrong of the world's happenings, whose view is it to be? And what assurance are we to have that this somebody's view is the right view? And if it is the wrong view, what then?

It was out of all this that there grew a cooperative Associated Press. The business of news gathering in a dominant way was in the hands of three men. They were responsible to no one. They could send out to the newspapers anything they chose and no one could call them to account. A large number of newspaper proprietors revolted. They felt that, far beyond their own interests, there was a great public question involved. They set about the development of a plan which should insure an honest, truthful, and impartial reporting of events. After deliberation, they concluded that the safest way was to organize a cooperative association of newspaper proprietors, representing diverse interests and thus put the institution under pledge to report the truth, and, to guarantee impartiality, the news service was to be subjected to the scrutiny and the censorship of the varied views of its membership.

THUS the business started. It took four years of hard struggle to wrest the business from private control; and then it succeeded. The cooperative association was accepted by enough publishers to make it a success. The very underlying principle was that it, its method of organization, and its news service should be subject to criticism. With an appreciation of their responsibility, and a full recognition of their duty to the American people, they sought to work out the problem before them in the best possible fashion. If they did not succeed, then the effort of as patriotic and well-minded a set of men as this country has ever known is a failure. At one stage of the contest they pledged themselves for hundreds of thousands of dollars as a guaranty fund to break the chains which at the moment bound the American press to enslavement by the three men to whom I have referred.

I HAVE no thought of saying the Associated Press is perfect. The frailties of human nature attach to it. But of this I am certain: If in its form of organization, or its method of operation, it is in violation of any law, divine or human, it is the very last institution in this country to seek to avoid its responsibility. If anyone can devise or suggest a better way to do the work it is seeking to do, it will be glad to adopt it, or to permit some one else to put it in operation. The thing it is striving for is a truthful, unbiased report of the world's happenings, under forms that are legal, and not only conformable to statutes, but ethical in the highest degree.

MELVILLE E. STONE.

Passing the "Pork"

(Concluded from page 15)

waterway would save the people of the United States at least $20,000,000 annually in cheaper foodstuffs. There was not a widespread demand for the canal: it was built to serve the political fortunes of General Henderson. To date it has cost the Government $7,612,795 for construction and $173,585 for maintenance and operation. Last year the total freight carried on the Hennepin Canal was 11,982 tons, which cost the Government $41.46 a ton.

The private owners of the Chesapeake & Delaware Canal, which connects the Delaware River with Chesapeake Bay, found the property to be a white elephant and a scheme was set on foot to have Congress buy it. The House appropriated $1,500,000 for the purpose, and the Senate raised the figures to $2,250,000. Stockholders in the company, interested shippers, and large dredging companies backed the movement. The dredgers are interested because some $15,000,000 worth of work will have to be done on the canal before it can be made really useful.

Scores of harbors, inlets, and little rivers on both coasts have been improved at the people's expense and steamship companies and factory owners have been the chief beneficiaries. For many years the steamship companies owned or controlled by the New York, New Haven & Hartford Railroad have been almost the sole beneficiaries of the improvements along the New England coast.

We might continue indefinitely the enumeration of wasteful projects.

Senator F. M. Simmons and Congressman J. H. Small of North Carolina have long fingers when it comes to reaching for "pork." These two Tarheels were chiefly instrumental in putting twenty-six North Carolina schemes into the 1914 bill. And Congressman Stephen M. Sparkman of Florida, chairman of the Committee on Rivers and Harbors, is at the front of the line when the head of the barrel is removed. Among the other notable "pork" getters are Senators Ransdell of Louisiana, Fletcher of Florida, Clarke of Arkansas, and Bankhead of Alabama, and Congressmen George W. Taylor of Alabama, B. G. Humphreys of Mississippi, W. E. Humphrey of Washington, George F. Burgess of Texas, and J. Hampton Moore of Pennsylvania.

But it would be unfair to say that individuals are personally responsible for all the evils of the pork-barrel system or that there is no merit in some of the projects that are being badly handled. Most Senators and Congressmen take their home obligations very seriously, especially their political obligations, and whenever there is a pork barrel to be opened they feel it their duty to get as much as they can for their own States or districts. Few of them take the time and trouble to investigate thoroughly the demands of their constituents for Federal cash. So it would be anything but fair to put down as a criminal every member of Congress who gets an appropriation for a project that will not bear careful scrutiny.

The pork-barrel system is to blame for most of the evils in connection with Government projects. When the improvement of our waterways is placed in the hands of a board appointed by the President and removed as far as possible from the influence of Congressmen and Senators, most of the money will be well spent. Then the meritorious projects will receive all the attention they deserve and the iniquitous ones will be ignored. And, what is more, Congress will be relieved of a demoralizing influence that has existed ever since the Government was organized.

Valparaiso University

(ACCREDITED)

VALPARAISO, INDIANA

FOUNDED 1873

One of the Largest Institutions of Learning in the United States

Thorough Instruction at the Lowest Expense

Group of Valparaiso University Buildings, Including the Departments of Medicine and Dentistry Located in Chicago.

THIS INSTITUTION was founded with the idea of giving to every person, whether rich or poor, a chance to obtain a thorough practical education at an expense within his reach. That it is performing this mission is indicated by the numbers who avail themselves of the advantages offered.

Valparaiso University was founded with 3 departments, 4 instructors, and an annual enrollment of 210 different students. Now there are 29 departments, 209 instructors and an annual enrollment of more than 5000 different students.

The reason for this growth is in the fact that this University constantly increases its facilities, strengthens its courses of study and offers additional advantages without making the expense to the student any greater. The University is well equipped with buildings, libraries and laboratories for giving instruction in the following

Departments Preparatory, High School, Education, Kindergarten, Primary Methods, Domestic Science, Agriculture, Scientific, Higher English, German, French, Italian, Spanish, Sciences, Classic, Engineering, Architecture, Manual Training, Expression and Public Speaking, Music, Fine Art, Law, Pharmacy, Medicine, Dentistry, Commerce, Phonography and Typewriting, Penmanship, and Review.

Dentistry The Department of Dentistry of the University is the well-known Chicago College of Dental Surgery, one of the oldest and best equipped dental colleges in the country. Dr. Truman W. Brophy, Dean, Chicago, Illinois.

Medicine Valparaiso University owns its college and hospital buildings in both Valparaiso and Chicago. The Chicago buildings are just across the street from the Cook County Hospital, in one of the greatest Medical centers in the world. Two years of the work may be done in Valparaiso, thus greatly reducing the expenses, or the entire four years may be done in Chicago.

Engineering The Department of Engineering provides such training in the class room, laboratory and field as to fit the student for the exacting duties of the modern Civil Engineer.

Law The Department of Law meets the demands of those who desire efficient training for this profession.

Music A thoroughly equipped department housed in a new building. An opportunity is offered the student to combine such work in the other departments of the University as may be desired with work in the Conservatory, at no extra expense.

Domestic Science and Agriculture The new Domestic Science and Agriculture Building will now enable the University to accommodate all who wish work in these departments.

Students enter the Departments of Law, Medicine and Dentistry at the beginning of the year only. All other departments at any time.

While the expense in all the Departments is exceedingly low it has not been made at the sacrifice of a high grade of instruction, but by applying business principles to

"The Cost of Living" so that the most satisfactory accommodations for board and room may be had at from $1.80 to $3.00 per week. Tuition $20.00 per quarter of twelve weeks, or $65.00, if paid in advance, for a year of forty-eight weeks. If the entire tuition is paid in advance for the year it includes all the departments, excepting Medical, Dental and private lessons in Music.

The total expense of board, tuition and furnished room for the regular school year (thirty-six weeks), need not exceed $119.80; or for forty-eight weeks $151.40.

"You May Pick Up My Pipe

And Dust under It, When You Tidy My Room, but Don't Move the Pipe."

These were the words of a certain pipe lover who always wants his pipe where he can lay his hand on it when he is ready. This man smokes Edgeworth tobacco.

Among the true pipe smokers—the kind of men who train and educate a pipe—men who are not ashamed of their pipes in clubs and smoking rooms—Edgeworth is a pronounced favorite.

We believe Edgeworth would be appreciated by any true pipe lover and to back up our confidence we want to send a liberal sample free to any one who asks for it and mentions his dealer's name. We hope you will ask us for this sample. Of course we are not anxious to give away a quantity of valuable tobacco. There is method in our madness. We frankly believe that out of every 100 men who smoke a few pipefuls of Edgeworth for the known purpose of trying it out—at least 90 will want to smoke it again and again. Will you try this on with us? Edgeworth comes in two forms, the Sliced Plug and the Ready-Rubbed. Edgeworth Ready-Rubbed, the kind we want to send you, is sold in 10c and 50c tins everywhere and in handsome $1.00 humidors. Edgeworth Sliced Plug, 15c, 25c, 50c and $1.00. Mailed prepaid if your dealer has none.

If you are already one of the many Edgeworth smokers, suggest to some friend that he accept our offer of a package free. Every package of Edgeworth is guaranteed. Dealers everywhere have Edgeworth. The tin is blue.

If you want the sample package write to Larus & Brother Co., 3 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well known Qboid—granulated plug—a great favorite with smokers for many years.

To Retail Tobacco Merchants—If your jobber cannot supply Edgeworth, Larus & Bro. Co. will gladly send you a one or two dozen (10c size) carton by prepaid parcel post at same price you would pay jobber.

Bealby

(*Concluded from page 12*)

therein between the wheels. This sleeping sack was to have been a great feature of the expedition, but when it came to the test Judy could not use it. She had not anticipated that feeling of extreme publicity the open air gives one at first. It was like having all the world in one's bedroom. Every night she had relapsed into the caravan.

Bealby did not mind what they did with him so long as it meant sleeping. He had had a long day of it. He undressed sketchily and wriggled into the nice woolly bag and lay for a moment listening to the soft bumpings that were going on overhead. *She* was there. He had the instinctive confidence of our sex in women, and here were three of them. He had a vague idea of getting out of his bag again and kissing the underside of the van that held this dear, beautiful creature. . . .

He didn't. . . .

Such a lot of things had happened that day—and the day before. He had been going without intermission, it seemed now, for endless hours. He thought of trees, roads, dew-wet grass, frying pans, pursuing packs of gigantic butlers hopelessly at fault—no doubt they were hunting now—chinks and crannies, tactless missiles flying, bursting, missiles it was vain to recall. He stared for a few seconds through the wheel spokes at the dancing, crackling fire of pine cones which it had been his last duty to replenish, stared and blinked much as a little dog might do, and then he had slipped away altogether into the world of dreams. . . .

In the morning he was extraordinarily hard to wake. . . .

"Is it after sleeping all day ye'd be?" cried Judy Bowles, who was always at her most Irish about breakfast time.

MONDAY was a happy day for Bealby.

The caravan did seventeen miles and came to rest at last in a sloping field outside a cheerful little village set about a green on which was a long tent professing to be a theatre. . . .

At the first stopping place that possessed a general shop Mrs. Bowles bought Bealby a pair of boots. Then she had a bright idea. "Got any pocket money, Dick?" she asked.

She gave him a half crown—that is to say, she gave him two shillings and sixpence, or five sixpences or thirty pennies—according as you choose to look at it—in one large undivided shining coin.

Even if he had not been in love here surely was incentive to a generous nature to help and do distinguished services. He dashed about doing things. The little accident on Sunday had warned him to be careful of the plates, and the only flaw upon a perfect day's service was the dropping of an egg on its way to the frying pan for supper. It remained where it fell, and there presently he gave it a quiet burial. There was nothing else to be done with it. . . .

All day long at intervals Miss Philips smiled at him and made him do little services for her. And in the evening, after the custom of her great profession when it keeps holiday, she insisted on going to the play. She said it would be the loveliest fun. She went with Mrs. Bowles because Mrs. Geedge wanted to sit quietly in the caravan and write down a few little things while they were still fresh in her mind. And it wasn't in the part of Madeleine Philips not to insist that both William and Bealby must go too; she gave them each a shilling—though the prices were sixpence, threepence, twopence, and a penny—and Bealby saw his first real play.

IT was called "Brothers in Blood or the Gentleman Ranker." There was a poster—which was only very slightly justified by the performance—of a man in khaki with a bandaged head proposing to sell his life dearly over a fallen comrade. One went to the play through an open and damaged field gate and across trampled turf. Outside the tent were two paraffin flares illuminating the poster and a small cluster of the impecunious young. Within on grass that was worn and bleached were benches, a gathering audience, a piano played by an offhand lady, and a drop scene displaying the Grand Canal, Venice. The Grand Canal was infested by a crowded multitude of zealous and excessive reflections of the palaces above and by peculiar crescentic black boats floating entirely out of water and having no reflections at all. The offhand lady gave a broad impression of the Wedding March in "Lohengrin," and the back seats assisted by a sort of gastric vocalization called humming and by whistling between the teeth. Madeleine Philips evidently found it tremendous fun, even before the curtain rose.

And then—illusion. . . .

THE scenery was ridiculous, it waved about, the actors and actresses were surely the most pitiful of their tribe and every invention in the play impossible, but the imagination of Bealby, like the loving kindness of God, made no difficulties: it rose up and met and embraced and gave life to all these things. It was a confused story in the play, everybody was more or less somebody else all the way through, and it got more confused in Bealby's mind, but it was clear from the outset that there was vile work afoot, nets spread, and sweet, simple people wronged. And never were sweet and simple people quite so sweet and simple. There was the wrongful brother, who was weak and wicked, and the rightful brother, who was vindictively, almost viciously, good, and there was an ingrained villain who was a baronet, a man who wore a frock coat and a silk hat and carried gloves and a stick in every scene and upon all occasions—that sort of man. He looked askance always. There was a dear, simple girl, with a vast, sweet smile who was loved, according to their natures, by the wrongful and the rightful brother, and a large, wicked, red-clad, lip-biting woman, whose passions made the crazy little stage quiver. There was a comic butler—very different stuff from old Mergleson—who wore an evening coat and plaid trousers and nearly choked Bealby. Why weren't all butlers like that? Funny. And there were constant denunciations. Always there were denunciations going on or denunciations impending. That took Bealby particularly. Never surely in all the world were bad people so steadily and thoroughly scolded and told what. Everybody hissed them; Bealby hissed them. And when they were told what, he applauded. And yet they kept on with their wickedness to the very curtain. They retired—askance to the end. Foiled but pursuing. "A time will come," they said.

THERE was a moment in the distresses of the heroine when Bealby dashed aside a tear. And then at last most wonderfully it all came right. The company lined up and hoped that Bealby was satisfied. Bealby wished he had more hands. His heart seemed to fill his body. Oh, *prime! prime!* . . .

And out he came into the sympathetic night. But he was no longer a trivial Bealby: his soul was purged, he was a strong and silent man, ready to explode into generous repartee or nerve himself for high endeavor. He slipped off in the opposite direction from the caravan because he wanted to be alone for a time and *feel*. He did not want to jar upon a sphere of glorious illusion that had blown up in his mind like a bubble. . . .

He was quite sure that he had been wronged. Not to be wronged is to forego the first privilege of goodness. He had been deeply wronged by a plot—all those butlers were in the plot, or why should they have chased him?—he was much older than he really was, it had been kept from him, and in truth he was a rightful earl. "Earl Shonts," he whispered: and indeed, why not? And Madeleine, too, had been wronged: she had been reduced to wander in this uncomfortable caravan: this gypsy queen: she had been brought to it by villains, the same villains who had wronged Bealby. . . .

Out he went into the night, the kindly consenting summer night, where there is nothing to be seen or heard that will contradict these delicious, wonderful persuasions.

HE was so full of these dreams that he strayed far away along the dark country lanes and had at last the utmost difficulty in finding his way back to the caravan. And when ultimately he got back, after hours and hours of heroic existence, it did not even seem that they had missed him. It did not seem that he had been away half an hour.

(*To be continued next week*)

Some day you may drive into a tight place where you will want to

Set Your Car on Its Haunches

That isn't an ideal service stop; but we are talking about the stop that means STOP! that means safety or smashup! that perhaps means Life or Death!

Thermoid HYDRAULIC COMPRESSED Brake Lining—100%

has absolute gripping efficiency at any stage of wear because it's the same clear through as it is on the surface. It has more uniformity of grip, wears longer than the ordinary brake-linings and is not affected by oil, water, gasoline, heat or dirt.

Order it on your new car—have your repair men put it on the car you're running now.

Our Guarantee: Thermoid will make good—or *WE* will.

Colorado Coal Dust

WITH its usual speed, COLLIER'S is now out with an article, vicious in its untruthfulness, covering the coal strike. . . . Nobody has ever had any faith in COLLIER'S, and, therefore, this story is doing far less harm than those in other journals.—Pueblo (Colo.) *Chieftain.*

✦

For the benefit of some of our friends who seem to have heard but one side of the Colorado labor war, we reprint an editorial from COLLIER'S.—Jamestown (N. Y.) *Post.*

✦

DENVER, COLO.

It is a difficult and thankless task to ferret out the falsehoods continually told about the Colorado coal strike. We are getting mighty tired of these apparently deliberate and malicious falsehoods.

Mr. Macfarlane says that "for a long stretch of time the Colorado mines have killed twice as many workers as all the other coal mines in all the rest of the United States combined." If this statement were true it surely would be "something to think about"; but it is not true. Colorado mines do not kill over one-forty-sixth of the number charged by Mr. Macfarlane. . . . It is true that more men per thousand employees are killed in Colorado than is the average in the entire country. Colorado is comparatively new as a coal-producing State, and the badly broken-up condition of the coal measures increases liability of accident in all the Rocky Mountain States.

The Colorado record from 1806 to 1908 of 5.71 deaths per thousand is much better than that of her sister States of New Mexico (7.23), Utah (11.67), and Wyoming (11.60).

In 1911 the average number killed per thousand employees in the United States was 3.73, and in Colorado it was 6.85 with 14,315 men employed. The C. F. & I. the Victor American (the next largest company in the State), and the Rocky Mountain Fuel Company employ 8,848 men, and the number killed was but 3.31 per thousand as against an average for the United States of 3.73.

I am no apologist for the coal companies, but Macfarlane's attack is not simply upon the C. F. & I. or Rockefeller, but upon the State of Colorado, where I have lived for twenty-five years.

Colorado is the fairest and sweetest of the sisterhood of States. It is estimated that she has ten times more coal than Pennsylvania ever had. Her factories produce 50 per cent more per wage earner than the average of the United States. Such a State ought not to be marred by the horrid hand of armed rebellion. C. W. VARNUM, Lawyer.

✦

CHATTANOOGA, TENN.

Your editorial on the strike in Colorado is right up to the minute; you have the whole thing condensed, and if you were to write a book on the subject you could not give the situation any clearer. Please continue to send me COLLIER'S for the next two years. ARTHUR F. RICE.

✦

FOWLER, COLO.

You have for years been a chief prophet against yellow journalism, but nothing has ever approached in that regard the article by Macfarlane. The article is so saturated with mendacity it is impossible to answer it. Take one statement: that "twice as many workers (in mines) have been killed as in all the rest of the United States!"

We also resent his statement that these strikers are "of like passions with ourselves." He refutes this statement when he says "many of the strikers are veterans from the Balkans." You have doubtless read the report of the international committee, investigating the late Balkan cruelties. Yet these are the brutes who are here in Colorado, bringing their rifles and soft-nosed bullets to tear the tender flesh of our young militia soldiers.

The cause of the strike was the insatiate greed of the leaders of mine workers to control the mines absolutely. Of the ten original demands, eight were met by laws on our statute books. The ninth, 10 per cent increase of wages, was so absurd that it was soon dropped. The tenth demand, recognition of the union, will not, cannot, be met.

It was the "poor little Greek" who commenced his carnival of riot and massacre immediately after Hayes called the strike, with rifle and ammunition on hand. It was this "poor little Greek," heavily armed, who was observed reading a proclamation of the President in Trinidad, and was overheard to say "it looks like the United States is trying to run this country." It was one of these "poor little Greeks" who shot Dr. Lester, a physician of Walsenburg, who was acting surgeon to the militia—killing him instantly—while the doctor was treating a wounded man on the field and wearing a Red Cross badge. It was this "poor little Greek," five hundred of him, who treacherously attacked a handful of militia (thirty-four of *him*) at Ludlow. It was "poor little Greeks" who, when the tents caught fire from unknown cause, and when the militia boys dropped their guns to rush into the burning tents and rescue the women and children of the strikers, these Greeks, I say, it was who continued to fire into the soldier boys while carrying their wives and children into safety. And it is this "poor little Greek," who is still down in the southern coal fields of Colorado, his rifles, most of them, cached in the arroyos and cañons, instead of turning them over to the Federal officers, as all the private citizens and mine owners did. When the Federal soldiers leave we expect the "poor little Greek" to again emerge on his career of carnage and riot.

Ah, COLLIER'S, COLLIER'S, what have you done? All this I have written, and a hundred times as much more, was at the disposal of Macfarlane if he had wanted it. Any decent citizen could have given Macfarlane the facts. Colorado can take care of herself if she is let alone, but the East gives us more than we can carry. God pity Colorado! J. L. WOODBRIDGE.

✦

Special correspondents of the New York "Evening Post," the New York "Independent," COLLIER'S WEEKLY, and "Everybody's Magazine" agree in laying the heaviest burden of responsibility for the anarchy and rebellion in Colorado upon the operators rather than upon the men. It is doubtful, therefore, whether John D. Rockefeller the younger is well informed. He has taken his information from biased sources. . . . It is impossible for an ignorant Greek or Italian or Hungarian miner, scarcely able to speak English, imported because of his initial cheapness by the operators, to bargain with the representative of the Rockefellers.—Topeka (Kas.) *Capital.*

✦

According to COLLIER'S WEEKLY, John D. Rockefeller, Jr., committed most of the lawlessness in Colorado himself.—Parkersburg (W. Va.) *Dispatch-News.*

✦

STREATOR, ILL.

Macfarlane's article is the clearest, justest, most graphic and convincing presentation I have seen.

J. E. WILLIAMS.

✦

If the younger Rockefeller has a sense of humor he should indulge it by reading Peter Clark Macfarlane's article on the Colorado mining troubles in COLLIER'S. . . . If the irony of the whole situation does not dawn upon the young magnate after reading this incisive location of "the nigger in the woodpile," his sense of humor is atrophied.—Milwaukee (Wis.) *Journal.*

✦

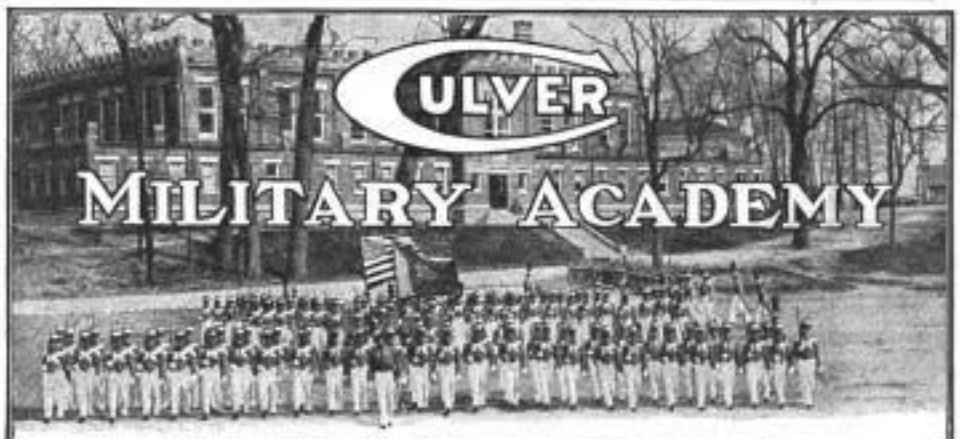
DENVER, COLO.

In a surprisingly large number of particulars Macfarlane got right to the root of the matter. His analysis will be of much value in bringing before the public the underlying differences of viewpoint between miners and operators. E. S. C.

✦

None show such utter disregard for truth as the latest story in COLLIER'S . . . written by Peter Clark Macfarlane . . . the most infamous falsehood ever printed in a paper or magazine pretending to contain a spark of honesty or decency.—Pueblo (Colo.) *Chieftain.*

NABISCO
Sugar Wafers



THESE incomparable sweets are the most universally popular of all dessert confections. Whether served at dinner, afternoon tea or any social gathering, Nabisco Sugar Wafers are equally delightful and appropriate. In ten-cent tins; also in twenty-five-cent tins.

ADORA

Another dessert delight. Wafers of pleasing size and form with a bountiful confectionery filling. Another help to the hostess. In ten-cent tins.

NATIONAL BISCUIT COMPANY

Scientific Training *vs.* Guesswork

Your own schooling may have been splendid—for the purpose—but your son will meet keener competition of brains than anything you have known. Military training at Culver has its eyes on the future. It is the first and only school in this country to employ a consulting psychologist to remove the guesswork in handling individual students. Every boy is scientifically classified and scientifically trained in efficient methods of study and the formation of correct habits. His mind is kept at attention. Moreover, his physique becomes vigorous and he gains a sense of honor and fair play. All of these make him capable of doing big things tomorrow. Vice-President Marshall says: "I consider the Culver Military Academy the finest boys' school in America." Address, for a catalogue of vital interest to every parent,

The Dean's Office, CULVER MILITARY ACADEMY, Culver, Ind. (*On Lake Maxinkuckee*)

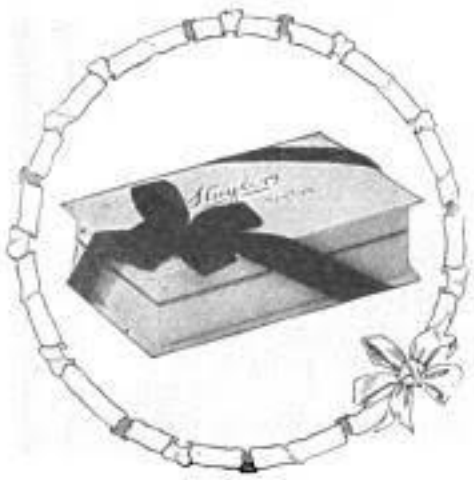
ST. JOHN'S MILITARY ACADEMY (Episcopal)

The American Rugby. Situated on high, well drained land.

Trains the boy for life. Educational fads are avoided and stress is laid on old-fashioned ideals. The result is an improved body, a trained mind, and strengthened moral fibre. The boy is prepared to take his proper place in the world—and "make good." The School appeals to the wide-awake boy and satisfies the most exacting parent. It is rated by the United States Government as a "Distinguished Institution." Address

ST. JOHN'S MILITARY ACADEMY
Box 13, Delafield, Waukesha Co., Wis.

TENNESSEE MILITARY INSTITUTE
Sweetwater, Tenn.



AN ALL-AMERICAN SCHOOL. Students from forty states. Mountain location. Climate the most healthful in the United States. Convenient location, accessible to all parts of the country. Military Department under supervision of United States Government. Modern equipment. High standards in all departments. Students admitted to all colleges and universities. Large campus. All forms of athletics and healthful recreation. Terms $350. Catalogue free. Address

Gun crews appear and begin to polish up their charges; the big 14-inch turrets begin to revolve

The Fleet Stands By

(Concluded from page 14)

liquor, no matter how great their fancied or real need; and at the end of that five or six weeks took the whole 4,000 of them, with their pockets full of money, and suddenly threw them into the middle of all the grog shops of a great city—I do think that more than forty—that is, 1 per cent of them—would be found "soused"—that is, if we had means of locating them all at the end of the day.

What is the point in this discursive tract? What of the day's work we started out to describe?

Why, this is all part of the talk of the men on the job. The heroic sailor of tradition has passed—a sailor of another kind, but just as efficient in another way—the way of his day—is rapidly creating another tradition. The lad who in the lusty days of his youth can thus hold himself in check is a pretty good product of American navy development, too. He pretty generally passes up the grog shop, but he visits the art galleries, the museums, the cathedrals, the Y. M. C. A.'s ashore, takes books from the library on shipboard, buys post cards and mails them home to let his friends know of the great things in the world. On that memorable world cruise the men cleaned Rio de Janeiro out of 250,000 of them. I doubt if many of them, on the first try, could lay out on a topsail yard in a gale of wind without immediately falling overboard; but they don't have to lay out on topsail yards nowadays. They do have to shoot, however; and they can shoot. Lay a gun's crew of them behind a big turret gun and watch them make lacework of the target at 11,000 yards, which is six and a half miles as we measure it ashore. Aboard the particular ship where I am writing this they think they can do things at fourteen miles—if they have to—with their 14-inch guns; and nobody around here doubts they can do them. They are not going ashore 4,000 at a time here. Vera Cruz is not big enough to take care of that many; but such as are allowed to go ashore are behaving pretty well, after making all the little human allowances, and they will continue to behave pretty well.

The fleet is standing by in Vera Cruz. They were on the spot when wanted on that first and second and third and fourth day, and they will be on the spot when again they are wanted.

Where the Story Begins

(Continued from page 9)

my maid. Don't you see? And then he'll be so mortified that he'll never bother again."

"Some scheme, all right," said Edna thoughtfully. "Honest, though, I don't like it much. Doesn't sound straight goods."

"But listen, my dear. He's only a fortune hunter. Doesn't that make a difference?"

"Sure?" said Edna slowly. "But how do you know I won't make a break and give the whole snap away?"

"I've thought of that, too. But you can read his letters, and I'll tell you what I wrote him, and all about everything that happened. And you can whisper so he won't know your voice. And anyhow—when he finds you're the maid—"

"But why don't you dress up as a maid yourself?" objected Edna, "and meet him in the servants' room?"

"Oh, I couldn't do that. You see, it's my mother's house. And the servants would know. And besides—" She looked at Edna appealingly.

"Yuh haven't got the nolve?" suggested Edna. "Well," she reflected, "I don't think much of it, but—"

"I'll give you a thousand dollars if you can get my letters back!" burst in the other breathlessly.

"Some coin," thought Edna, looking up at the ceiling. "Take me ten years to save as much as that. And it'll be kinda fun to try—" Suddenly she dropped her gaze into the other's worried eyes. "All right," she said. "If anything goes wrong it'll be your funeral. And I guess I can get off for a coupla days."

"Oh, thank you! Thank you!" cried the other. "Thank you ever so much! Oh—" And there in her thanks we will leave Miss Kies, because we're getting close to the place where the story begins.

RONALD MACKENZIE—he of the flossy name—rang the basement bell of the Kies Fifth Avenue residence. His letter from Florence had said: "Ring basement bell. Servants' door."

"Doesn't she think I'm good enough to use the front door?" thought Mackenzie, not unproudly. "If I was good enough for her to get engaged to, by Jingo, I guess I'm good enough to walk up the front steps."

THE basement door opened, interrupting his moody meditations, and a pretty little face under a pretty little cap looked out at him with a very pretty little affectation of guilt.

"Why, Florence—!" he gasped.

"Sh!" whispered Florence the False, finger on lip. "Don't say a word."

She dragged him into the vestibule under the stone steps leading him by the lapel of his coat as one would lead a mesmerized horse by the halter.

"You've caught me on a busy day," she whispered, "but I guess they won't want me upstairs for half an hour or so—and—I got an awful lot of things to explain to you, Ronald." Still in his dazed condition she led him into the kitchen.

"Cook," she said. "This is my steady—Mr. Mackenzie."

"Pleased to meet you," said the cook, looking up from her pastry board. "You any relation to Harry Mackenzie, the butcher over at Liebmeyer's?"

Ronald managed to make a gesture indicating negation.

"You've got his mouth and nose That's why I ast."

"No, cooky dear," said the pseudo-Florence. "Mr. Mackenzie's a stranger in the city and I'm going to take him into the sitting room for a few minutes. If Miss Florence rings the bell, let somebody run up and tell her I've gone out to mail her letters."

She led the round-eyed Mr. Mackenzie into the servants' sitting room and closed the door behind them. In the kitchen the cook looked askance at Katie the laundress.

Protect Your Family and Yourself

THE Public Health Service has a number of bulletins available for free distribution. These cover such subjects as "Sewage-Polluted Water Supplies in Relation to Infant Mortality;" "Sanitary Advice for Summer Tourists;" "Whooping Cough—Its Nature and Prevention;" "Antimalarial Measures for Farm Houses and Plantations;" "Country Schools and Rural Sanitation;" "Pellagra;" "The Relation of Climate to Treatment of Pulmonary Tuberculosis;" "Tuberculosis—Its Nature and Prevention;" "Rules to be Observed by Tuberculous Patients;" "Open-Air Schools for the Cure and Prevention of Tuberculosis;" "The Citizen and Public Health;" "The Classification of Market Milk;" "Pasteurization;" "Certified Milk and Infant Milk Depots;" "Milk and Its Relation to Public Health;" "Infant Feeding;" "The Chemistry of Milk;" "Disinfectants—Their Use and Application in the Prevention of Communicable Disease," and kindred matters. Many of these should prove interesting to laymen as well as to physicians and trained nurses.

A full list of these bulletins (not the bulletins themselves) and information on how to obtain them will be sent to all those who will write to COLLIER'S WASHINGTON BUREAU, 901 Munsey Building, Washington, D. C. Our service is entirely without charge.

Digitized by Google

"Bless us!" said the cook. "But she don't lose no time nor nothing. But isn't she the spit of Miss Florence, though? I said so the minute I clapped eyes on her."

"Spit or no spit," said Katie philosophically. "If she gets caught entertaining her steady down here, she'll wonder what's struck her."

But in the meantime, if Katie could have seen them, she would have known that it was Mr. Mackenzie who was marveling at the missile.

"FLORENCE—!" he stammered.

"I—I'm not Florence," she miserably whispered, hiding her face in her handkerchief.

"Not Florence?" he gasped.

"No, Chubbsy; no," she sobbed in a muffled voice, but nevertheless most careful of her speech. "I'm not Miss Florence and I never was. I—I'm just a wicked girl."

"What do you mean: a wicked girl?" asked the astonished Mr. Mackenzie.

"Because I've de—d e c e i v e d you. Oh, dear! When I met you in front of the p o s t office at North East Harbor and dropped s e t my h a n d k e r chief, you—you thought I was a young lady. But—but I'm not. I'm only a young lady's maid! Oh, Ronny - Wonny, what a wicked girl I've been!"

"But your letters—"

"I wrote them on her stationery—and t h a t poem I wrote you—Prince of the R a v e n H a i r, Waft Me a Kiss—aw!—I copied it o u t of a book!"

"But my letters—" objected t h e erstwhile wafting prince of the raven hair. "The letters I wrote her—"

"I hung on to them when I went for the mail. I—I couldn't help it, Chubbsy. I loved you s—s—s—s—s—s—so!"

She leaned her arm against the wall, and leaned her forehead against her arm, and shook and quivered and trembled like an exceedingly shapely mold of pink blancmange.

"Well, I'll be damned!" said Ronald, alias Chubbsy, speaking for the first time in a natural voice. And having arrived at this interesting determination, he put his arm around the other's waist and would have kissed her if, so to speak, the blancmange hadn't slipped off the spoon.

"No, Ronald," she said. "That's all over now. We'll give each other our letters back and then I'll give you back your ring, and—"

"Not on your life, kiddo," said Ronald. "I got something to say about that!"

A pretty little face under a pretty little cap looked out at him with a very pretty little affectation of guilt. "Why, Florence—!" he gasped

HE walked to the other end of the room, shooting his cuffs once, twice, and again, like a young man getting his steam up. "What did you say your right name was?" he suddenly asked.

"Edna."

"Well, listen to this, Edna. When I picked up your handkerchief I thought you was a school-teacher or something like that. And it even scared me to think you were a school-teacher. It wasn't till after we were engaged that I found out you were rich—that is, I mean, that Miss Kies was rich—"

"Say!" gasped Edna to herself. "What's he going to spring!"

"I nearly got cold feet right there," continued Ronald earnestly, "because it's all I can do to pay my board bill. But my old man's in the moving-picture business up in Maine and he'd been talking about taking me into partnership. So I thought that maybe I could hold my end up somehow. Of course I didn't know then how much money you'd got—I mean Miss Kies had got—"

"Sure," said Edna, dabbing her nose and staring at this earnest young man.

"But last week," he went on, "I saw a big piece about her in the Sunday paper—calling her the hundred-million-dollar deb—deb—deb—"

"Deb-you-tant," Edna told him.

"Ye—eh; that's it. And right then and there I knew it was no place for little Ronald to hang his hat. Maybe it didn't break me all up! All the same there was nothing else to it: I had to come down here and tell her it was all off. But now—" Again his nervous arm went around her, and again he found she was trickier than the eels.

"LISTEN," she said. "You're all to the good. But I don't like the way this thing began—"

"I don't care a hang how it began as long as it ends all right," interrupted the persistent Mr. Mackenzie.

"But it makes a lot of difference to the gall," said Edna, unconsciously making a total reversion to F i r s t P r i n c i p l e s of Speech. "A gall doesn't want it thrown up at her that she fooled a feller into marrying her. So if your feet ain't chilly just because I'm walking here, we've got to start all o v e r a g a i n. What's past has never happened, so far as I'm concerned. See? So send back my letters and my picture—"

"I've got them with me. I was g o i n g to give them to you."

"All r i g h t. Now wait a minute and I'll get yours."

She soon reappeared, carrying a bundle of letters almost as large as two loaves of bread.

"There," she said, handing him this nourishing food of love. "Now we're even. Good-by."

"NOT on your life: 'Good-by!'" he indignantly replied. "Listen, Floss—I mean Edna. My old man says just as soon as I've saved a thousand dollars, to show him I can, he'll take me into partnership in his moving-picture shows. So as soon as I find a steady job we'll get married and start saving. That is, if you think you wouldn't mind keeping house and frying hash for me—"

"Maybe I wouldn't mind at that," she said, looking at him with one of her even glances. "But you've got to beat it now. Good-by—Chubbsy." She started up the stairs.

"But when'll I see you again?" he asked, running up after her.

"I dunno," she said. "I'm leaving here."

"Where are you going?"

She looked down at him seriously, reflectively, and especially into his eyes.

"Mr. Mackenzie," she said at last in her best aristocratic manner. "My permanent address is—er—the Savarin-Splendide! Au revoir!"

Eel-like again she vanished through the door above, thinking "That'll hold him!" He heard the door click after her.

THE two wise virgins were using their lamps again in the little shop, watching through the curtains the bored procession in the billion-dollar parade.

"Look, Edna," said Beatrice. "There he is, sitting opposite."

"Who is?" asked Edna with a start which almost left her blushing.

"Billy Van Houten, the guy whose engagement to Florence Kies was announced yesterday. Say, ain't he a bum!"

The young gentleman thus succinctly described was inhaling a gold-tipped cigarette and tapping his patent-leather pumps with a cane.

"Fresh wind, free wind blowing from the sea,
Pour forth thy vials like streams from airy fountains.
Draughts of life to me."
—Dinah Maria Mulock

DUTY oft' chains us to sultry plain when our desires cry for cooling winds of the sea.

Be cheered, tho' becalmed—for whate'er the clime a G-E FAN will pour forth airy fountains for you.

The G-E ELECTRIC FAN sums up 20 years of experience in the study of the summer comfort problem—experience that has thought out and worked out, one by one, the points of perfection in this most popular of all electric fans. Oscillating, to give effective and agreeable air motion—readily controllable as to speed—so superbly balanced as noiselessly to avoid all wearing vibration and insure a lifetime of faithful service.

And as to economy—be it known that this silent, comforting servitor works from *three to four hours for one cent.*

Look always for the big G-E trade mark on the face of the fan. See it at the nearest electrical dealer or at your lighting company.

The advertising of Grape Juice did that for you and me.

A. C. G. Hammesfahr.

Advertising Manager Collier's Weekly

*Significant Price-History of Grape Juice

By E. T. WELCH, Sec. and Treas., The Welch Grape Juice Company

SEVERAL years ago the writer wrote an article for *Welch's Magazine*, showing that how, through the increased output of Welch's, made possible by advertising, the cost to the dealer and to the consumer had been reduced, notwithstanding very material advances in the cost of grapes.

What we have to say now is a repetition of some of the same statements which appeared in that article, brought down to date by a reference to the recent change in our selling plan, and a mention of the extremely high prices which prevailed for grapes this last fall.

In the early days, when our output was very small, the cost to the trade on the two largest selling sizes of Welch's was $9 and $10 per case. As our output increased prices were reduced from time to time until the trade list in 1897 was $4.75 and $5 for the same two sizes. In the year 1897 we paid $10 per ton for our grapes. In 1898 we paid about $12 per ton for grapes. Our output in each of the years of 1897 and 1898 was about 50,000 gallons, and, notwithstanding the fact that the business was conducted at a small loss in 1898, we reduced the trade list 25 cents per case early in 1899.

Since 1898 our output has steadily increased each year, and the price of grapes increased so that up to and including the year 1910 we had paid $40 per ton for our grapes in each of two years and $43.50 a ton in 1910. During this period the trade list on two of the five sizes in which Welch's is bottled was reduced 25 cents per case, and larger quantity discounts were allowed on all sizes. The average cost of our grapes for a number of years preceding 1913 was about $35 per ton.

Last fall the Concord grape crop showed less than 50 per cent of a yield, not only in the Chautauqua grape belt, but in all other sections in which Concord grapes are raised. In the early part of the season we paid $50 per ton for our grapes, and the price gradually increased until the last few days of the season, when we paid $60 per ton.

Some months ago, before we knew that the 1913 crop would be so small, and therefore were not expecting prices to be anything like the figures just mentioned, we decided to eliminate quantity discounts, reduce our trade list, making the price the same to large and small dealers. When we faced the unusual grape conditions of last fall we thought at first that it would be impossible to put a one-price plan into effect, but it was necessary that we revise our selling terms. One of the most serious things connected with the unusual situation was the fact that even at the high prices paid we were unable to secure a large enough quantity of grapes to give us the increased business in 1914 that we would ordinarily expect.

After thorough consideration we decided to put the one-price plan into effect by reducing the trade list 25 cents per case and eliminating all quantity discounts, and this is the proposition which we offer to the trade for 1914. The trade prices on the two sizes that many years ago sold for $9 and $10 per case are now $4 and $4.50.

For ten years or so the usual retail price of Welch's has been 25 cents for pints and 50 cents for quarts. In deciding upon any change in our selling terms to the retail trade, we wanted to make terms that would insure the continuance of these retail prices. The plan which we decided upon makes it possible for these prices to be continued—in fact, our new terms are a reduction to all dealers who heretofore handled in five-case lots or less, and such dealers handle a very large proportion of the grape juice sold.

Grape juice, or unfermented wine, as it was first called, was unknown when Dr. Welch put up the first dozen bottles in 1869. There was no demand for the product: most temperance people opposed it, and those who favored fermented wines of course opposed it. The demand had to be created. The public had to be educated—and because of the fact that there was very little money available for advertising and salesmen, the growth was very small during the first twenty or twenty-five years. During the past fifteen years the growth in the popularity of grape juice has been quite rapid—a growth made possible by advertising. We believe that in making Welch's Grape Juice popular we have contributed to the health and the sobriety of the nation.

* From *Printers' Ink*, January 22, 1914.

"I always hated a feller who looks as if he'd swallowed his chin," continued the fastidious Beatrice. "What's he rubbering over here for, anyhow? Is he going to buy a coupla tickets to take his girl to a show?"

As a matter of fact, the last hope of a long line of Knickerbockers was frying a larger fish, that is to say he was helping to prove the immortal theory that murder will out. "Billy," Miss Kies had said to him, "there's a pretty girl at the paper stand on the promenade in the Splendide, and they say she looks like me. The next time you're around there, take a look and see what *you* think."

So Billy Van Houten was taking a look and seeing what he thought.

"Let's nudge up closer," was the sum total of his reflections. "She doesn't look bad to me."

He made a coquettish flourish with his cane and entered the little shop.

"Good evening," he said to Edna.

NOW the counter in the little shop sloped at an angle in order to make the best possible display of current fiction. The front of the counter, where the customers stood, was about waist high. But the back of the counter where the two wise virgins were stationed, was almost breast high. They were further fortified by a row of popular novels, so that when the Misses Edna and Beatrice sat down behind their sloping counter, they were entirely lost to the view of the people.

"Good evening," repeated Mr. Van Houten, with a smile like very old jam.

Beatrice sat down and lightly kicked Edna's foot in an eloquent pantomime which said: "Didn't I tell you he was a bum?"

"I beg your pardon," said Edna, looking over his head.

"Have you any books," he smirked, "on love?"

"All the latest fiction," answered Edna, still gazing over his head.

"I should think," he continued, warming to his task, "that when it comes right down to love, you could write a peach of a book yourself. Eh, little one?"

"You're very fresh," said Edna, and she dropped out of sight by the simple expedient of sitting down by Beatrice. In their chaste seclusion the two wise virgins winked at each other.

"I SAY! I say!" complained Mr. Van Houten, rapping on the counter with his cane. "I want to buy something."

Edna arose, a stony-faced Jill-in-the-box, and as her chin lifted to its aristocratic tilt, a fatal fascination took possession of that part of Mr. Van Houten which metaphysicians would have designated as his soul. With a killing smile he leaned forward and tried to chuck Edna under her chin with the silver handle of his cane.

Simultaneously the door opened, but neither of the combatants noticed this. Edna was busy dodging her head north to escape the cane's caress. Mr. Van Houten was gently swinging his stick forward to catch that north-bound chin. But in the excitement of the moment he swung too hard and the cane caught Edna shrewdly just above her pearly ear.

"Oh, I say—!" he began. He never said it, though. An eager fist sought the center of his features and Willy went down on the marble floor, his nose nobly spouting like a fountain.

"It's Ronald!" breathed Edna, as the little shop began to fill with an excited crowd. She thought of the headlines that would surely appear in the morrow's papers—"Miss Kies's Fiancé Knocked on Nose for Mashing." "Serves her right, too!" thought Edna. "She ought to have had more sense! Why, my Ronald's worth a dozen of her fool dub!"

The "my" was unconscious; so was the toss of her head; and, literally speaking, we're getting very close indeed to where the story begins.

THE little shop was cleared at last; the reporters hurried away; Miss Edna was excused for the night on the plea of nerves; and gently but firmly she led Ronald to Central Park.

"I'm glad there's a moon," she thought. And strangely she added: "I always wished there'd be a moon."

At Fortieth Street, Ronald had her by the arm. At Fiftieth Street he had her by the hand. And at Sixtieth Street, in the discreet shadows of the park, he would have had her by the waist, but Edna wouldn't. "Cheese it," she said, "I got something to tell you foist."

They sat on a bench, unconscious of the cold, unconscious of everything but each other, and Edna told him all about the adventure of Miss Kies.

"And she paid you a thousand to get those letters?" he muttered.

"Yep. Didn't have you sized up right at all; did she!"

"Say!" Ronald's voice was shaky with excitement. "Was it you who sent me that thousand with a typewritten note pinned to it, 'This is to start you in business?'"

Edna made a gesture of despair.

"That's the woist of telling everything," she sighed. "What else could I do? Think I'd want to make any money outa you, when you'd showed how square you were? Hur! I guess nit! Did you do what I said with the money?"

"Sure I did. That's what kept me from hunting you up before. Making over fifty a week now, and getting better all the time. But say! To think it was you, when all the time I thought it was the old man, trying to find out if I'd spend the money!" He looked at her with a tenderness which had something almost voracious about it. "D'you have to have a license to get married in this State?" he suddenly demanded.

"Yep," she nodded, and in a voice so faint that he hardly heard her, she murmured: "But if you take the ferry—over to Joisey—"

HE seized her hand and almost ran to the entrance of the park where he hailed a taxi.

"The ferry! Over to Joisey!" shouted Ronald as the door shut behind them.

And that's where the story begins.

Weigh Tires By This Scale

These are the troubles you wish to cure. These are the services you seek. But a tire can't render what it lacks. What the maker fails to give it can't be given you.

Let us avoid generalities and get down to specific facts. These are the ways in which Goodyears excel. These are the reasons why they hold top place. These are the advantages they offer you over any rival tire.

No-Rim-Cut Tires
Are the Only Tires Which Weigh Up to These Requirements

Rim-Cutting is made impossible in them. And the feature which makes it impossible is a feature which we control.

Blow-outs—the countless blow-outs due to wrinkled fabric—are eliminated by our "On-Air" cure. This extra process—this final-curing on elastic air—costs us $450,000 yearly. No other maker employs it.

Loose treads are combated by a patent method which reduces the danger by 60 per cent. Hundreds of large rubber rivets are created during the vulcanization. This is done in no other tire.

All-Weather treads are used on Goodyears only. These are tough and double-thick. They are flat and smooth, so they run like a plain tread. They grasp wet roads with deep, sharp, resistless grips.

Popularity

After 15 years of comparison—after millions of mileage tests—Goodyear tires rule Tiredom. They outsell any other.

That shows the verdict of users—hundreds of thousands of them. And this year users are changing to Goodyears faster than ever before.

That is due to less trouble—to lower cost per mile—to just the savings that you seek.

16 Extra Prices

Yet, despite these features, there are 16 makes which cost more than Goodyear prices. Some are one-third higher. The price of some buys a half-inch larger Goodyear. And some charge for three tires what Goodyear asks for four.

This is due to our rapid reductions. Multiplied output has brought Goodyear prices down. New equipment and new efficiency have helped.

Don't judge tires by prices. Those are arbitrary facts. Weigh them by the scale we picture. Weigh them by their worth.

When you do this you'll want Goodyears. And any dealer will supply them to you.

MASTER CRAFTSMEN HAVE A PROFOUND RESPECT FOR WORK DONE THOROUGHLY; THEY DELIGHT IN A TASK FOR ITS OWN SAKE.

To make things free from error or defect is their purpose; and to this end they create tools to overcome man's limitations.

Scientifically hardened and accurately ground parts are essential for long life and absence of friction in an automobile. Every part must fit just so—neither too tight nor too loose. The "shades of dimensions" necessary to obtain this exactness of fit can only be attained by careful grinding of the various parts.

In the Hyatt Factories whole floors are filled with batteries of the special grinding machines, and the component parts of Hyatt Quiet Bearings are each subjected to different grinding operations before they are finally inspected and assembled into a complete bearing.

This extreme accuracy in manufacturing, results in the long service and quiet operation of Hyatt Roller Bearings.

Studebaker ECONOMICAL LIGHT WEIGHT SIX

$1575

More Than One Hundred Heat Treating Processes Perfect Studebaker Steels

Studebaker roadability goes clear back to the sampling and testing and heat treating of Studebaker steels—long before the car is built.

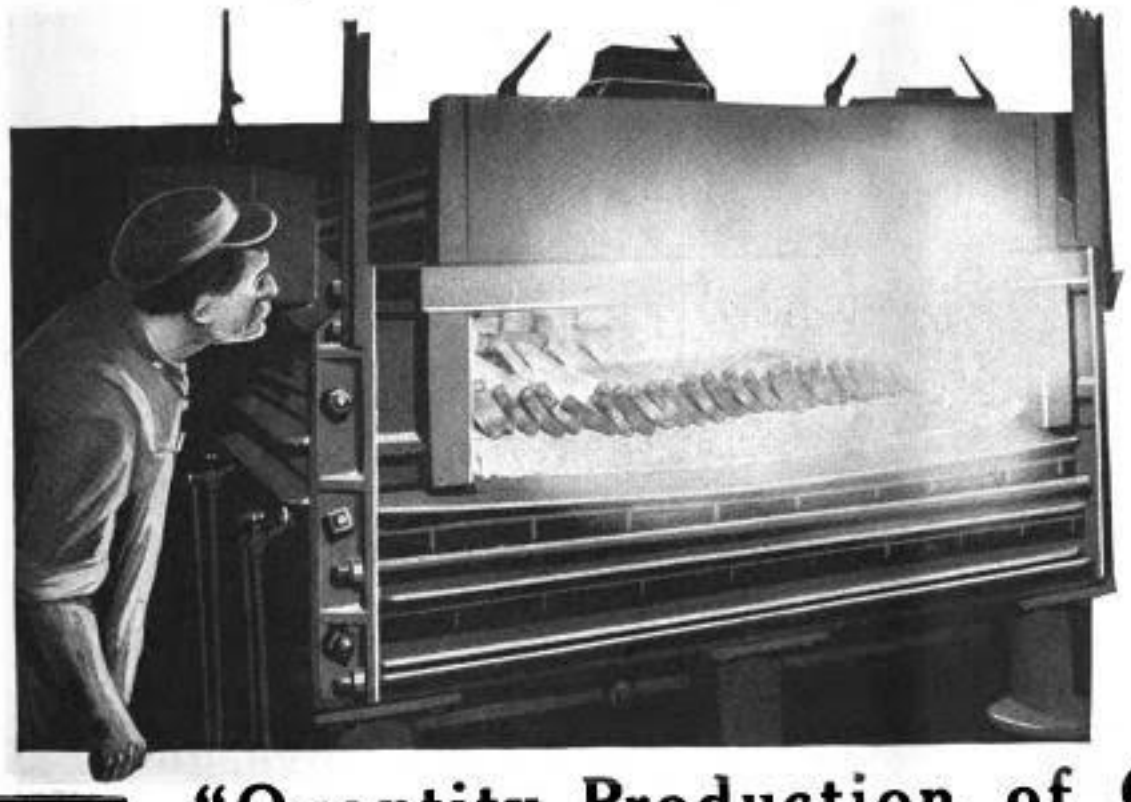
But the result is made perfectly plain the first time you take a ride, in the wonderful way it holds the road.

You realize in that very first ride that the Studebaker laboratory has not labored in vain.

As the beautiful balance of the car reveals itself, you know that the chemical, metallurgical, and physical tests, have accomplished their purpose.

And, in due time, the longer life and the lesser cost demonstrate beyond a doubt, that more than a hundred Studebaker heat treating processes have increased the value of its steels, far beyond the ordinary standards.

Studebaker is committed to the principle of a "Six" manufactured by themselves in all essential parts, except a few patented specialties and some equipment.



Studebaker believes that the ease, the long life, the balance, the roadability of a motor car is in direct relation to the proportion of closely manufactured parts produced by the maker of the car himself.

Studebaker believes that every buyer should investigate the proportion of such parts in every "Six" he considers.

In such a test the weight of evidence will be overwhelmingly in favor of the Studebaker SIX.

The Studebaker Proof Book describes and pictures the scientific manufacturing operation of Studebaker. Send for it.

"Quantity Production of Quality Cars"

Digitized by Google

HUDSON Six-40 For 1915

New Price
$1550

The New Criterion

In the HUDSON Six-40 for 1915 we present a new standard for quality cars.

Go see how other cars measure up to it.

Here are new attainments in lightness, in beauty, in utter refinement. Here are new comforts, new conveniences. Here is new economy in operative cost.

And here, above all, is a new quality price. Howard E. Coffin's finest production—the finished model of his ideal Six—is sold for $1,550.

It will force revision in the ideas of what high-grade cars should cost.

Every detail of this car conforms with HUDSON standards. And no man thinks those standards would be compromised for price.

Our 48 engineers, including Mr. Coffin, have devoted four years to this model. They have given one year—the year just passed—to nothing but final refinements. It is hardly probable that other men in other cars excel them. If not, our price is the proper cost today for motor car perfection.

It will alter old-time ideas of what stanch cars need to weigh.

Good engineers never sacrifice strength to lightness. They use Aluminum in place of iron. They use drop forgings in place of castings. They use finer grades of steel. They employ better designing. One example in the HUDSON is our tubular propeller shaft.

The new HUDSON Six-40 weighs 2,890 pounds. You used to expect at least 4,000 pounds in a 7-passenger car. We have saved that difference — the weight of seven adults—by sheer good engineering. It means immense saving in fuel and tire cost. And the thousands of light cars we sent out last year proved the ample strength of every part.

It fixes new economy standards.

In the HUDSON Six-40 we adapt from Europe a new-type small-bore motor. It immensely reduces operative cost. That motor in this light-weight car has increased miles-per-gallon about 30 per cent for cars of this capacity.

It establishes a new ideal of a handsome, distinguished and well-equipped car.

The HUDSON Six-40 looks the jewel among cars. Its lines are artistic, its finish superb. Our whole engineering corps spent all last year on just the final touches. Every detail shows a master hand. And, in some respects, no other car on the market is so perfectly equipped.

How We Saved You $200

The last HUDSON Six-40 sold for $1,750—a record for this-class car. The new model brings out 31 improvements—some costly, all important. Yet this year's price is $200 less.

That is due to the car's popularity. Last season men over-bought our out-put by 3,000 cars. For 1915 we have trebled our capacity, and the saving is deducted from our price.

HUDSON cars are not built to a price. Could we build better in any respect we would do so. But we don't quote an over-price just to prove class.

New Measures

These are some of the new measures of an up-to-date car.

Artistic streamline body.
Disappearing tonneau seats.
Invisible hinges.
Gasoline tank in dash.
Extra tires carried ahead of front door.
Finest body finish.
Hand-buffed leather upholstery.
"One-Man" top with quick-adjusting curtains attached.
Dimming searchlights.
Simplified Delco starting, lighting and ignition system.
Wires in metal conduits.
Locked ignition and lights.
Speedometer drive on transmission.
Automatic spark advance.
New-method carburetion.
Trunk rack on back.
Horn button in wheel.
Weight, 2,890 pounds.

Go measure up this model. We consider it America's representative car—the model for coming types. And we are sure that most men will agree with us.

Phaeton, seating up to 7 passengers, $1,550 f. o. b. Detroit. Standard Roadster, same price.

New Hudson Six-54

We build this same new model with a larger motor and a 135-inch wheelbase. It is a big, impressive and powerful car, and the price is $2,350.

Hudson dealers everywhere now show these latest models. Our new catalog on request.

A Cure for Lumbago

By Charles E. Van Loan

ILLUSTRATED BY R. M. BRINKERHOFF

COLONEL JIMMY threatens to resign from the club. He says it was sharp practice. Archie MacBride says it wasn't half as sharp as the lumbago trick which the Colonel worked on him as well as several of the other young members. Colonel Jimmy Norman is one of the charter members of our golf club. He is about as old as Methuselah and he looks it. That is what fools people. It doesn't fool the handicap committee, though. They've got the Colonel down to 8 now and he hasn't entered a club competition since for fear they'll cut him to 6. Respect for age is a fine thing, I admit, but anybody who can step out and tear off 79's and 80's on the Meadowmead course—72 par and a tough 72 at that—isn't entitled to much the best of it because he can remember the Civil War and cast his first vote for Tilden.

Mind you, I don't say that Colonel Jimmy shoots 79's every day, but he shoots 'em when he needs 79's to win, and that's the mark of a real golfer. And bet? The old pirate will bet anything from a repainted golf ball to a government bond. He has never been known to take his clubs out of the locker without a gamble of some sort. The new members pay all the expenses of Colonel Jimmy's golfing, as well as the upkeep of his limousine—the old members are shy of him—and the way he can nurse a victim along for months without letting him win a single bet is nothing short of miraculous. I ought to know, for I am one of Colonel Jimmy's graduates, and, while I never beat him in my life, he always left me with the impression that I would surely rook him the next time—if I had any luck. Somehow I never had the luck.

Colonel Jimmy has the gentle art of coin separation down to an exact science. Perhaps this is because he made his money in Wall Street and applies Wall Street methods to his golf. After every match he waits around until he collects. He always apologizes for taking the money and says that he hopes you'll be on your game the next time.

THE Colonel is a shrewd judge of how far he can go in shearing a lamb, and when he sees signs that the victim is getting bare in spots and is about ready to stop betting with him, he cleans up all the spare fleece with the lumbago trick. I'll never forget how he worked it on me. I had been betting him five and ten dollars a match and winning nothing but sympathy and advice and I was about ready to quit the Colonel as a poor investment.

The next time I went out to the club I found Colonel Jimmy sitting on the porch in the sun and I heard him groan even before I saw him. Naturally I asked what was the matter.

"Oh, it's this cursed lumbago again! I must have caught cold after my shower the other night and—ouch! —just when I'd been looking forward to a nice little game this afternoon, too! It's a real pleasure to play with a young man like you who—ouch! O-o-o!"

After a while he began to wonder whether light exercise would do him any good. I thought it might and he let me persuade him. If I would give him my arm as far as his locker—ouch!

All the time he was dressing he grunted and groaned and rubbed his back and cursed the lumbago bitterly. He said it was the one thing the devil didn't try on Job because it would have fetched him if he had. He worried some because he would have to drive with an iron, not being able to take a full swing with a wooden club. Then when he had me all ribbed up properly, he dropped a hint where I couldn't help but stumble over it.

"You have always named the bet," said Colonel Jimmy. "Don't take advantage of my condition to raise it beyond reason."

Up to that time the idea of making a bet with a cripple hadn't occurred to me. It wouldn't have seemed fair. I got to thinking about the fives and the tens that the old rascal had taken away from me when the advantage was all on his side and—

"I suppose I shouldn't expect mercy," said Colonel Jimmy, fitting his remarks to my thought like a mind reader. "I have been quite fortunate in winning from you, William, when you were not playing your best. This seems an excellent opportunity for you to take revenge. This cursed lumbago—"

The match was finally made at five dollars a hole, and if I hadn't been ashamed of taking advantage of a cripple I would have said ten.

Colonel Jimmy whined a little and said that in his condition it was almost a shame for me to raise the bet to five dollars a hole and that he couldn't possibly allow me any more than five strokes where before he had been giving me eight and ten. He said he probably wouldn't get any distance off the tees on account of not being able to take a full swing, and I agreed on the basis of five strokes, one each on the five longest holes.

I went out to the professional's shop to buy some new balls. David Cameron is a good club maker, but a disappointing conversationalist. He says just so much, and then he stops and rubs his left ear. I told David that I had caught Colonel Jimmy out of line at last and would bring him home at least six or seven down.

"Ay," said David. "He'll be havin' one of his attacks of the lumba-ago again, I'm thinkin'. Ye've raised the bet?"

I ADMITTED that the bet had been pressed a little.

"Ye're not gettin' as many str-rokes as usual?"

I explained about the Colonel's not being able to take a full swing with his wooden clubs.

"Ay," said David, beginning to polish his left ear.

"I wish you'd tell me what you think," said I.

"I'm thinkin'," said David, "that ye'll not have noticed that the climate hereabouts is varra benefeecial to certain for-rms o' disease. I've known it to cure the worst case o' lumba-ago between the clubhouse an' the fir-rst tee. The day o' meeracles is not past by any means," concluded David, rubbing his ear hard.

I suspected then that I had a bad bet. I was sure of it when I saw Colonel Jimmy pulling his driver out of the bag on the first tee.

"I thought you said you'd have to drive with an iron." I reminded him of it anyway.

"I might as well try the wood," said Colonel Jimmy. "I'll have to shorten up my swing some and I suppose I'll top the ball."

He groaned and he grunted when he took his practice swing, and said that he was really afraid he'd have to call the bet off, but when he hit the ball he followed through like a sixteen-year-old, and it went sailing down the middle of the course, a good 200 yards—which is as far as Colonel Jimmy ever drives.

"Well, I'll declare!" he crowed. "Look at that ball go! I had no idea I could do it! And with this lumbago too!"

There's no use in prolonging the agony with a detailed account of the match. The old shark was out for the fag end of the fleece crop so far as I was concerned, and he surely gave me a close clip. He made a 79 that day and I had to hand him my check for forty dollars. It might not have been so much, only on every tee the Colonel whined about his lumbago and got me in such a state of mind that I couldn't keep my eye on the ball to save my life.

When we got back to the clubhouse, David Cameron was sitting in the door of his shop, rubbing his left ear thoughtfully. He knew it wouldn't have been safe for him to ask about the match. Colonel Jimmy, confound him, blatted right along, apologizing to me for playing "better than he knew how" and all that sort

"Yeh," said Small, "and while I'm resting I think I'll learn this fool game of golf." Colonel Jimmy was sitting over by the reading table and I saw him prick up his ears at this remark

Digitized by Google

of rot. He said he hoped we could have another match soon, and perhaps I was a little crusty with him. At any rate he was satisfied that my forty-dollar check was the last contribution he would ever get from me, and he took up with Archie MacBride, who had just joined the club and was learning the game.

Archie hails from out West somewhere and he has the Eastern agency for a lot of stuff manufactured in Chicago. In the beginning he didn't know any of the younger members at Meadowmend and that made it easy for the Colonel to take him under his wing. The old rascal has rather a pleasant manner—in the clubhouse at least—and he talked Chicago to Archie—what a wonderful city it is and all that stuff. He talked the same way to me about Cincinnati.

I WATCHED the shearing proceed to the lumbago stage, but I didn't interfere. In the first place, it wasn't any of my business. In the second, I hadn't been introduced to MacBride. And, besides, I had a sort of curiosity to know how he would act when he was stung. He looked more like a goat than a lamb to me.

One day I was sitting on the porch and MacBride came out of the locker room and sat down beside me. Colonel Jimmy was over on the extra green, practicing sidehill putts. Somehow we drifted into conversation.

"Did you ever play with that old fellow over there?" said he.

"A few times."

"Ever beat him?"

"No-o. Nor anybody else. His methods are—well, peculiar."

"Darned peculiar! I don't know but that the grand jury ought to investigate 'em. If you shoot 110 at him, he's just good enough to win. If you make a 90, he's still good enough to win. He's always good enough to win. The other day I came out here and found him all doubled up with—"

"Lumbago, wasn't it?"

MacBride held out his hand immediately.

"Both members of the same lodge!" said he. "I feel better now. He nicked me for an even hundred. What did he get you for?"

Nothing cements a friendship like a common grievance. We had both been rooked by the lumbago trick and we fell to discussing the Colonel and his petty larceny system of picking on the new members.

"Far be it that I should squeal," said Archie. "I hope I'm a good loser as far as the money goes, but I hate to be bunkoed. I handed over one hundred big iron dollars to that hoary old pirate—and I smiled when I did it. It hurt me worse to smile than it did to part with the frog skins, but I wanted the Colonel to think that I didn't suspect him. I want him to regard me as a soft proposition and an easy mark because some day I am going to leave a chunk of bait lying around where that old coyote can see it. If he gobbles it—good night. Yes, sir, I'm going to slip one over on him that he'll remember even when they begin giving him the oxygen."

"He'll never be trimmed on a golf course," said I.

"He'll never be trimmed anywhere else. It's the only game he plays. If he sticks around this club, I'll introduce him to the Chicago method of taking the bristles off a hog. I'm not sure, but I think it's done with a hoe."

"It can't be done with a set of golf clubs," said I.

"Don't be too sure of that. By the way, my name's MacBride. What's yours? . . . If you don't mind, I'll call you Bill for short. We will now visit the nineteenth tee and pour a libation on the altar of friendship. We will drink success to the Chicago method of shearing a hog. Simple, effective, and oh, so painful!"

COLONEL JIMMY picked up a new pupil after Archie quit him and Archie paired off with me. We played two or three times a week and often ran into the Colonel on the porch or in the locker room. The old reprobate was always cordial in his cat-and-canary way—infernally cordial. I couldn't resist the temptation to inquire after his lumbago occasionally, but it was next to impossible to hurt his feelings. The old fellow's hide was bullet proof and even the broadest sort of hint was lost on him. Archie was more tactful. He used to joke the Colonel about a return match, but he was never able to fix a date. The Colonel was busy anyway. His latest victim was a chinless youth from Poughkeepsie with money to burn and no fear of matches.

One afternoon Archie brought a friend out to the club with him—an immense big chap with hands and feet like hams. Everything about him was beyond the limit. He was too beefy to begin with, though I suppose that wasn't his fault. He wore a red tie and a yellow vest. He talked too much and too loud. Archie introduced him to me as Mr. Small of Chicago.

"Small but not little!" said Small. "Haw!"

"Mr. Small is an old friend of mine," said Archie. "He is taking a short vacation and I am putting him up at the club for a week or ten days. He doesn't look it, but his doctor says he needs exercise."

"Yeh," said Small, "and while I'm resting I think I'll learn this fool game of golf. Think of a big fellow like me, whaling a poor little pill all over the country! I suppose all there is to it is to hit the blamed thing."

COLONEL JIMMY was sitting over by the reading table and I saw him prick up his ears at this remark. He always manages to scrape an acquaintance with all the beginners.

Small went booming along.

"I can remember," said he, "when people who played golf were supposed to be a little queer upstairs. Cow-pasture pool, we used to call it. It's a good deal like shinny-on-your-own-side, ain't it?"

Archie took him out to David to get him outfitted with clubs and things, left Small in the shop, and came back to explain matters to me.

"You mustn't mind Small's manner," said he. "He's really one of the best fellows in the world, but he's—well, a trifle crude in spots. He's never had time to acquire a polish; he's been too busy making money."

"Excuse me"—Colonel Jimmy had been listening—"but is he in any way related to the Caspar Smalls of Chicago and Denver?"

"Not that I know of, Colonel," said Archie.

"You spoke of money," said I. "Has he so much of it, then?"

"Barrels, my dear boy, barrels. Crude oil is his line at present. And only thirty-five years of age too. He's a self-made man, Small is."

I couldn't think of anything to say except that he must have had a deuce of a lot of raw material to start with—and if I put the accent on the raw it was unintentional.

"Well," said Archie, "his heart is in the right place anyway."

When you can't think of anything else to say for a man, you can always say that his heart is in the right place. It sounds well, but it doesn't mean anything. Archie proposed that we should let Small go around with us that afternoon. I didn't like the idea, but, of course, I kept mum; the man was Archie's guest.

SMALL got in bad on the first tee. I knew he would when I saw who was ahead of us—Colonel Jimmy and the chinless boy. Like most elderly mechanical golfers, the Colonel is a stickler for the etiquette of the game—absolute silence and all that sort of thing.

Archie introduced Small to the Colonel and the Colonel introduced us to the chinless boy, who said he was charmed, stepped up on the tee and whacked his ball into the rough.

While the Colonel was teeing up, Small kept moving around and talking in that megaphone voice of his. Colonel Jimmy looked at him rather eloquently a couple of times and finally Small hushed up. The Colonel took his stance, tramped around awhile to get a firm footing, addressed the ball three times, and drew his club back for the swing. Just as it started downward, Small sneezed—one of those sneezes with an Indian war whoop on the end of it—"Aa-chew!" Naturally Colonel Jimmy jumped, took his eye off the ball and topped it into the long grass in front of the tee.

"Take it over," said the chinless boy, who was a sport if nothing else.

"I certainly intend to!" snapped the Colonel, glaring at Small. "You—you spoiled my swing, sir!"

"Quit your kidding, Colonel!" said Small. "How could I spoil your swing?"

"You sneezed behind me!"

SMALL laughed at the top of his voice. "Haw! Haw! That's rich! Why, I've seen Heinie Zimmerman hit a baseball a mile with thirty thousand people yelling their heads off at him!"

"Yes," said Archie, "but that was baseball. This is golf. There's a difference."

"You bet there is!" said Small. "A baseball player has to hit at a pill that's moving like a streak and not moving in a straight line either. Noise don't bother him a particle. In this game you jam a ball down onto a pile of sand where it can't possibly get away and bust it right on the nose. If somebody makes a noise you can have the shot over again. You bet there's a difference!"

"Gentlemen," said the Colonel, "when you are through with your discussion, I would really like to drive."

I PLAYED with Small all the afternoon without yielding to an impulse to slay him with a niblick, which speaks volumes for my good disposition. It was a harrowing experience. Small proceeded on the usual theory of the beginner, which is to hit the ball as hard as possible and trust to luck. The most I can say for his day's play is that I never expect to see golf balls hit any harder. His wooden club shots hooked and sliced into the woods on either side of the course—he bought a dozen balls to begin with and was borrowing from us at the finish—he dug up great patches of turf on the fair greens, he nearly destroyed three bunkers and after every shot he yelled like a Comanche.

We caught up with Colonel Jimmy at the eighteenth tee. The Colonel was in a better humor and was offering to give the chinless boy a stroke and play him double or quits on the last hole—sure proof that he had him badly licked. The chinless boy took him up.

"Now, there's some sense to that!" said Small. "I never could play any game for fun. Make it worth while, that's what I say! Archie, I'll bet you a hundred that I beat you this hole!"

Colonel Jimmy was picking up a handful of sand for a tee. He dropped it and began to clean his ball.

"I'd be ashamed to take the money," said Archie. "You wouldn't have a chance."

"You mean you're afraid to take one. Be a sport!"

"I *am* a sport. That's why I won't bet on a cinch."

They had quite a jawing match and finally Archie said that he would bet Small ten dollars.

"Huh!" said Small. "I wouldn't exert myself for a measly ten spot. Make it twenty-five!"

"Well, if you insist," said Archie, "and I'll give you two strokes."

"You'll give me nothing!" said Small. "What do you think I am? I'll play you even and lick you." And he was so nasty about it that Archie had to agree.

THE Colonel turned around after he played his second shot to watch us drive. Small took a tremendous swing and hooked the ball over the fence and out of bounds. He borrowed another and sliced that one into the woods. When he finally sunk his putt—he took 17 for the hole and that wasn't counting the ones he missed—he dug up a wallet stuffed with currency and insisted on paying Archie on the spot.

"I don't feel right about taking this," said Archie.

"You won it, didn't you?" said Small. "If you had lost, would you have paid?"

"Ye-es," said Archie, "but—"

"But nothing! Take it and shut up!"

Colonel Jimmy, waiting on the porch, was an interested witness. In less than five minutes by the watch the chinless boy was sitting over in a corner, alone with a lemonade, and the Colonel had Small by the buttonhole, talking Chicago to him. I have always claimed that Colonel Jimmy has all the instincts of a wolf, but perhaps it is only his Wall Street training that makes him so keen when a lamb is in sight.

(*Continued on page 22*)

"You — you spoiled my swing, sir!" snapped the Colonel, glaring at Small. . . . Small laughed at the top of his voice

Michigan Meanderings

Chapter V of "Abroad at Home"

American Ramblings, Observations, and Adventures

By Julian Street

Illustrated by Wallace Morgan

IT WAS on a chilly morning, not much after eight o'clock, that we left Detroit. I recall that, driving trainward, I closed the window of the taxicab; that the marble waiting room of the new station looked uncomfortably half awake, like a sleeper who has kicked the bedclothes off, and that the concrete platform outside was a playground for cold, boisterous gusts of wind.

Our train had come from somewhere else. Entering the Pullman car, we found it in its nighttime aspect. The narrow aisle, made narrower by its shroud of long green curtains, and by shoes and suit cases standing beside the berths, looked cavernous and gloomy, reminding me of a great rock fissure, the entrance to a cave I had once seen. Like a cave, too, it was cold with a musty and oppressive cold; a cold which embalmed the mingling smells of sleep and sleeping car—an odor of Russia leather and banana peel ground into a damp pulp.

Morning in a Sleeper

SILENTLY, gloomily, without removing our overcoats or gloves, we seated ourselves, gingerly, upon the bright green plush of the section nearest to the door, and tried to read our morning papers. Presently the train started. A thin, sick-looking Pullman conductor came and took our tickets, saying as few words as possible. A porter, in his sooty canvas coat, sagged miserably down the aisle. Also a waiter from the dining car, announcing breakfast in a cheerless tone. . . . Breakfast! Who could think of breakfast in a place like that? . . . So, for a long time, we sat in somber silence, without interest in each other or in life.

To appreciate the full horror of a Pullman sleeping car it is not necessary to pass the night upon it; indeed, it is necessary *not* to. If you have slept in the car, or tried to sleep, you arise with blunted faculties—the night has mercifully anesthetized you against the scenes and smells of morning. But if you board the car as we did, coming into it awake and fresh from out of doors, while it is yet asleep—then, and then only, do you realize its enormous ghastliness.

Our first diversion came with a slight stirring of the curtains of the berth across the way. That gave us the faintest shadow of a speculative interest. For even in the most dismal sleeping car there is always the bare chance, when those green curtains stir, that the Queen of Sheba is all radiant within, and that she will presently appear, like sunrise.

The Hope That Springs Eternal

OVER our newspapers we watched, and every now and then our curiosity was piqued by further gentle stirrings of the curtain. And, of course, the longer we were forced to wait, the more hopeful we became. In a low voice I murmured to my companion the story of the glorious creature I had seen in a Pullman one morning long ago: how the curtains had stirred at first, even as these were stirring now; how they had at last been parted by a pair of rosy finger tips; how I had seen a lovely face emerge; how her two braids were wrapped about her classic head; how she had floated forth into the aisle, transforming the whole car; how she had wafted past me, a soft, sweet cloud of pink; how she— Then, just as I was getting to the interesting part of it, I stopped and caught my breath. The curtains were in final, violent commotion! . . . They were parting at the bottom! . . . Ah! Slowly, from between the long green folds, there appeared a foot. No filmy silken stocking covered it. It was a foot. There was an ankle, too—a small ankle. Indeed, it was so small as to be a misfit, for the foot was of stupendous size, and very knobby. Also it was cold; I knew that it was cold, just as I knew that it was attached to the body of a man, and that I did not wish to see the rest of him. I turned my head and, gazing from the window, tried to concentrate my thoughts upon the larger aspects of the world outside, but the picture of that foot remained with me, dwarfing all other things.

"Can that stuff," admonished Miss Buck in her easy, offhand manner

I did not mean to look again; I was determined not to look. But at the sound of more activity across the way, my head was turned as by some outside force, and I did look, as one looks, against one's will, at some horror which has happened in the street.

He had come out. He was sitting upon the edge of his berth, bending over and snorting as he fumbled for his shoes upon the floor. Having secured them, he pulled them on with great contortions, emitting stertorous sounds. Then, in all the glory of his brown balbriggan undershirt, he stood up in the aisle. His face was fat and heavy, his eyes half closed, his hair in towsled disarray. His trousers sagged dismally about his hips, and his suspenders dangled down behind him like two feeble and insensate tails. After rolling his collar, necktie, shirt, and waistcoat into a mournful little bundle, he produced from inner recesses a few unpleasant toilet articles, and made off down the car—a spectacle compared with which a homely woman, her face anointed with cold cream, her hair done in kid curlers, her robe a Canton-flannel nightgown, would appear alluring!

Never, since then, have I heard men jeering over women as they look in dishabille, without wondering if those same men have ever seen themselves clearly in the mirrored wash room of a sleeping car.

Small Cities with Large Reputations

ON THE railroad journey between Detroit and Battle Creek we passed two towns which have attained a fame entirely disproportionate to their size: Ann Arbor, with about fifteen thousand inhabitants, celebrated as a seat of learning; and Ypsilanti, with about six thousand, celebrated, so to speak, as a seat of underwear.

One expects an important college town to be well known, but a manufacturing town with but six thousand inhabitants must have done something in particular to have acquired national reputation. In the case of Ypsilanti it has been done by magazine advertising—the advertising of underwear. If you don't think so, look over the list of towns in the World Almanac. Have you, for example, ever heard of Anniston, Ala.? Or Argenta, Ark.? Either town is about twice the size of Ypsilanti. Have you ever heard of Cranston, R. I.; Butler, Pa., or Belleville, Ill.? Each is about as large as Ypsilanti and Ann Arbor put together.

Then there is Battle Creek. Think of the amount of advertising that town has had! As Miss Daisy Buck, the lady who runs the news stand in the Battle Creek railroad station, said to us: "It's the best advertised little old town of its size in the whole United States." And now it is about to get some more.

In Battle Creek

WE WERE total strangers. We knew nothing of the place save that we had heard that it was full of health cranks and factories where breakfast foods, coffee substitutes, and kindred edibles and drinkables were made. How to see the town and what to see we did not know. We hesitated in the depot waiting room. Then fortune guided our footsteps to the station news stand and its genial and vivacious hostess. Yes, hostess is the word; Miss Buck is anything but a mere girl behind the counter. She is a reception committee, an information bureau, a guide, philosopher, and friend. Her kindly interest in the wayfarer seems to waft forth from the precincts of the news stand and permeate the station. All the boys know Miss Daisy Buck.

After purchasing some stamps and post cards as a means of getting into conversation with her, we asked about the town.

"How many people are there here?" I ventured.

"Thirty-five," replied Miss Buck.

"*Thirty-five?*" I repeated, astonished.

Though Miss Buck was momentarily engaged in selling chewing gum (to some one else), she found time to give me a mildly pitying look.

"Thousand," she added.

Past the Portals Into Main Street

THE World Almanac gives Battle Creek but twenty-five thousand population. That, however, is no reproach to Miss Buck; it is, upon the contrary, a reproach to the cold-hearted statisticians who compiled that book. And had they met Miss Buck I think they would have been more liberal.

"What is the best way for us to see the town?" I asked the lady.

She indicated a man who was sitting on a station bench near by, saying:

"He's a driver. He'll take you. He likes to ride around."

"Thanks," I replied, gallantly. "Any friend of yours—"

"Can that stuff," admonished Miss Buck in her easy, offhand manner.

I canned it, and engaged the driver. His vehicle was a typical town hack—a mud-colored chariot, having C springs, sunken cushions, and a strong smell of the stable. Riding in it, I could not rid myself of the idea that I was being driven to a country burial, and that hence, if I wished to smoke, I ought to do it surreptitiously.

Presently we swung into Main Street. I did not

She was saying to herself (and to us through the window): "If I had played that hand, I never should have done it that way!"

ask the name of the street, but I am reasonably certain that is it. There was a policeman on the corner. Also, a building bearing the sign "Old National Bank." . . . Old! What a pleasant, mellow ring the word has! How fine, and philosophical, and prosperous, and hospitable it sounds. I stopped the carriage. Just out of sentiment I thought I would go in and have a check cashed. But they did not act hospitable at all. They refused to cash my check because they did not know me. Well, it was their loss! I had a little treat prepared for them. I meant to surprise them by making them realize suddenly that, in cashing the check, they were not merely obliging an obscure stranger but a famous literary man. I was going to pass the check through the window, saying modestly: "It may interest you to know whose check you have the honor of handling." Then they would read the name, and I could picture their excitement as they exclaimed and showed the check around the bank so that the clerks could see it. The only trouble I foresaw, on that score, was that probably they had not ever heard of me. But I was going to obviate that. I intended to sign the check "Rudyard Kipling." That would have given them something to think about! But, as I have said, the transaction never got that far.

Drink Kaffir Tea — the Flavor Lasts!

THE principal street of Battle Creek may be without amazing architectural beauty, but it is at least well lighted. On either curb is a row of "boulevard lights," the posts set fifty feet apart. They are good-looking posts, too, of simple, graceful design, each surmounted by a cluster of five white globes. This admirable system of lighting is in very general use throughout all parts of the country excepting the East. It is used in all the Michigan cities I visited. I have been told that it was first installed in Minneapolis, but wherever it originated, it is one of a long list of things the East may learn from the West.

After driving about for a time we drew up. Looking out, I came to the conclusion that we had returned again to the railway station.

It was a station, but not the same one.

"This is the Grand Trunk Deepo," said the driver, opening the carriage door.

"I don't believe we'll bother to get out," I said.

But the driver wanted us to.

"You ought to look at it," he insisted. "It's a very pretty station."

So we got out and looked at it, and were glad we did, for the driver was quite right. It was an unusually pretty station—a station superior to the other in all respects but one: it contained no Miss Daisy Buck.

After some further driving, we returned to the station where she was.

"I suppose we had better go to the Sanitarium for lunch?" I asked her.

"Not on your life," she replied. "If *you* go to the 'San,' you won't feel like you'd had anything to eat—that is, not if you're good feelers."

"Where else is there to go?" I asked.

"The Tavern," she advised. "You'll get a first-class dinner there. You might have larger hotels in New York, but you haven't got any that's more homelike. At least, that's what I hear. I never was in New York myself, but I get the dope from the traveling men."

However, not for epicurean reasons, but because of curiosity, we wished to try a meal at the Sanitarium

Thither we drove in the hack, passing on our way the office of the "Good Health Publishing Company" and a small building bearing the sign, "The Coffee Parlor"—which may signify a Battle Creek substitute for a saloon.

I do not know how coffee drinkers are regarded in that town, but I do know that, while there, I got neither tea nor coffee—unless "Postum" be coffee and "Kaffir Tea" be tea. It was at the Sanitarium that I drank Kaffir Tea. I had it with my lunch. It looks like tea, and would probably taste like it, too, if they didn't let the Kaffirs steep so long. But they should use only fresh, young, tender Kaffirs; the old ones get too strong; they have too much bouquet. The one they used in my tea may have been slightly spoiled. I tasted him all afternoon.

A Busy Day at the "San"

THE "San" is an enormous brick building like a vast summer hotel. It has an office which is utterly hotellike, too, even to the chairs, scattered about, and the people sitting in them. Many of the people look perfectly well. Indeed, I saw one young woman who looked so well that I couldn't take my eyes off from her while she remained in view. She was in the elevator when we went up to lunch. She looked at me with a speculative eye—a most engaging eye, it was—as though saying to herself: "Now there's a promising young man. I might make it interesting for him if he would stay here for a while. But of course he'd have to show me a physician's certificate stating that he was not subject to fits." My companion said that she looked at him a long while, too, but I doubt that. He was always claiming that they looked at him.

The people who run the Sanitarium are Seventh-Day Adventists, and as we arrived on Saturday it was the Sabbath there—a rather busy day, I take it, from the bulletin which was printed upon the backs of the dinner menu:

7.20 a. m. Morning Worship in the Parlor.
7.40 to 8.40 a. m. BREAKFAST.
9.45 a. m. Sabbath School in the Chapel.
11 a. m. Preaching Service in the Chapel.
12.30 to 2 p. m. DINNER.
3.30 p. m. Missionary talk.
5.30 to 6 p. m. Cashier's office open.
6 to 6.45 p. m. SUPPER.
6.45 p. m. March for guests and patients only.
8 p. m. In the Gymnasium. Basket Ball Game. Admission 25 cents.

No food to be taken from the Dining Room.

Dallying with the Nuttolene

THE last injunction was not disobeyed by us. We ate enough to satisfy our curiosity, and what we did not eat we left.

The menu at the Sanitarium is a curious thing. After each item are figures showing the proportion of Proteins, Fats, and Carbohydrates contained in that article of food. Everything is weighed out exactly. There was no meat on the bill of fare, but substitutes were provided in the list of entrees: "Protose with Mayonnaise Dressing," "Nuttolene with Cranberry Sauce," and "Walnut Roast."

Suppose you had to decide between those three. which would you take?

My companion took "Protose," while I elected for some reason to dally with the "Nuttolene." Then, neither of us liking what we got, we both tried "Walnut Roast." Even then we would not give up. I ordered a little "Malt Honey," while my companion called for a baked potato, saying: "I know what a *potato* is, anyhow!"

After that we had a little "Toasted Granose" and "Good Health Biscuit," washed down in my case by a gulp or two of "Kaffir Tea," and in his by "Hot Malted Nuts." I tried to get him to take "Kaffir Tea" with me, but, being to leeward of my cup, he declined. As nearly as we could figure it out afterward, he was far ahead of me in Proteins and Fats, but I was infinitely richer in Carbohydrates. In our indigestions we stood absolutely even.

There are some very striking things about the Sanitarium. It is a great headquarters for Health Congresses, Race Betterment Congresses, etc., and at these congresses strange theories are frequently put forth. At one of them, recently held, Dr. J. H. Kellogg, head of the Sanitarium, read a paper in which, according to newspaper reports, he advocated "human stock shows," with blue ribbons for the most perfectly developed men and women. At the same meeting a Mrs. Holcome charged that: "Cigarette-smoking heroes in the modern magazine are, I believe, inserted into the stories by the editors of publications controlled by the big interests."

To this Mr. S. S. McClure, the publisher, replied: "I have never inserted cigarettes in heroes' mouths. I have taken them out lots of times. But generally the authors use a pipe for their heroes."

There was talk, too, about "eugenic weddings." And a sensation was caused when a Southern college professor made a charge that graduates of modern women's colleges are unfitted for motherhood. This statement, it may be added, was vigorously denied by the heads of several leading women's colleges.

Rather wild, some of this, it seems to me. But when people gather together in one place, intent on some one subject, wildness is almost certain to develop. One feels, in visiting the Sanitarium, that, though many people may be restored to health there, there is yet an air of mild fanaticism over all. Health fanaticism. The passionate light of the health hunt flashes in the stranger's eye as he looks at you and wonders what is wrong with you. And whatever may be wrong with you, or with him, you are both there to shake it off. That is your sole business in life. You are going to get over it, even if you have to live for weeks on "Nuttolene" or other products of the diet kitchen.

Nuttolene as a Diet of Penance

"NUTTOLENE!" . . . It is always an experience for the sophisticated palate to meet a brand-new taste. In "Nuttolene" my palate encountered one, and before dinner was over it met several more.

"Nuttolene" is served in a slab, resembling, as nearly as anything I can think of, a good-sized piece of shoemaker's wax. In flavor it is confusing. Some faint taste about it hinted that it was intended to resemble turkey; an impression furthered by the fact that cranberry sauce was served on the same plate. But what it was made of I could not detect. It was not unpleasant to the taste, nor yet did I find it appetizing. Rather, I should classify it in the broad category of uninteresting food. However, after such a statement, it is but fair to add that the food I find most interesting is almost always rich and indigestible. Perhaps, therefore, I shall be obliged to go to Battle Creek some day, to subsist on "Nuttolene" and kindred substances as penance for my gastronomic indiscretions. Better men than I have done that thing—men and women from all over the globe. And Battle Creek has benefited them. Nevertheless, I hope that I shall never have to go there. My feeling about the place, quite without regard to the cures which it effects, is much like that of my companion:

At luncheon I asked him to save his menu for me, so that I might have the data for this article. He put it in his pocket. But he kept pulling it out again, every little while, throughout the afternoon, and suggesting that I copy it all off into my notebook.

Finally I said to him:

"What is the use in my copying all that stuff when you have it right there in print? Just keep it for me. Then, when I get to writing, I will take it and use what I want."

"But I'd rather not keep it," he insisted.

"Why not?"

"Well, there might be a railroad wreck. I don't want this thing to be found on me. When they went through my clothes and ran across this they'd say: 'Oh, this doesn't matter. It's all right. He's just some poor boob that's been to Battle Creek.'"

Never, since then, have I heard men jeering over women as they look in dishabille, without wondering if those same men have ever seen themselves clearly in the mirrored wash room of a sleeping car

When we got out of the hack at the station before leaving Battle Creek, I asked the hackman how the town got its name. He didn't know. So, after buying the tickets, I went and

"They'll eat 'em all. I know they'll eat 'em all"

Bealby

Startling News—Chapter V

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

TUESDAY was not so happy a day for Bealby as Monday. Its shadows began when Mrs. Bowles asked him in a friendly tone when it was clean-collar day. He was unready with his answer.

"And don't you ever use a hairbrush, Dick?" she asked. "I'm sure now there's one in your parcel."

"I do use it *sometimes*, mum," he admitted.

"And I've never detected you with a toothbrush yet. Though that perhaps is extreme. And Dick—soap? I think you'd better be letting me give you a cake of soap."

"I'd be very much obliged, mum."

"I hardly dare hint, Dick, at a clean handkerchief. Such things are known."

"If you wouldn't mind—when I've got the breakfast things done, mum. . . ."

The thing worried him all through breakfast. He had not expected personalities from Mrs. Bowles. More particularly personalities of this kind. He felt he had to think hard.

HE AFFECTED modesty after he had cleared away breakfast and carried off his little bundle to a point in the stream which was masked from the encampment by willows. With him he also brought that cake of soap. He began by washing his handkerchief, which was bad policy because that left him no dry towel but his jacket. He ought, he perceived, to have secured a dishcloth or a newspaper. (This he must remember on the next occasion.) He did over his hands and the more exposed parts of his face with soap and jacket. Then he took off and examined his collar. It certainly was pretty bad. . . .

"Why!" cried Mrs. Bowles when he returned, "that's still the same collar."

"They all seem to've got crumpled, 'm," said Bealby.

"But are they all as dirty?"

"I 'ad some blacking in my parcel," said Bealby, "and it got loose, mum. I'll have to get another collar when we come to a shop."

It was a financial sacrifice, but it was the only way, and when they came to the shop Bealby secured a very nice collar indeed, high with pointed turn-down corners, so that it cut his neck all round, jabbed him under the chin and gave him a proud upcast carriage of the head that led to his treading upon and very completely destroying a stray plate while preparing lunch. But it was more of a man's collar, he felt, than anything he had ever worn before. And it cost sixpence halfpenny, six dee and a half.

(I should have mentioned that while washing up the breakfast things he had already broken the handle off one of the breakfast cups. Both these accidents deepened the cloud upon his day.)

And then there was the trouble of William. William having meditated upon the differences between them for a day had now invented an activity. As Bealby sat beside him behind the white horse he was suddenly and frightfully pinched. *Gee!* One wanted to yelp. "Chocolate," said William through his teeth and very, very savagely. "Now then."

After William had done that twice, Bealby preferred to walk beside the caravan. Thereupon William whipped up the white horse and broke records and made all the crockery sing together and forced the pace until he was spoken to by Mrs. Bowles. . . .

It was upon a Bealby thus depressed and worried that the rumor of impending "men folk" came. It began after the party had stopped for letters at a village post office; there were not only letters but a telegram, that Mrs. Bowles read with her spats far apart and her head on one side. "Ye'd like to know about it," she said waggishly to Miss Philips, "and you just shan't."

SHE then went into her letters.

"You've got some news," said Mrs. Geedge.

"I have that," said Mrs. Bowles, and not a word more could they get from her. . . .

"I'll keep my news no longer," said Mrs. Bowles, lighting her cigarette after lunch as Bealby hovered about clearing away the banana skins and such like vestiges of dessert. "To-morrow night as ever is, if so be we get to Winthorpe-Sutbury, there'll be Men among us."

"But Tom's not coming," said Mrs. Geedge.

"He asked Tim to tell me to tell you."

"And you've kept it these two hours, Judy."

"For your own good and peace of mind. But now the murther's out. Come they will, your Man and my Man, pretending to a pity because they can't do without us. But like the self-indulgent monsters they are, they must needs stop at some grand hotel, Reilake he calls it, the Royal, on the hill above Winthorpe-Sutbury. The Royal! The very name describes it. Can't you see the lounge, girls, with its white cane chairs? And saddlebacks! No other hotel, it seems, is good enough for them, and we, if you please, are asked to go in and have—what does the man call it?—the 'comforts of decency'—and let the caravan rest for a bit."

"Tim promised me I should run wild as long as I chose," said Mrs. Geedge, looking anything but wild.

"They're after thinking we've had enough of it," said Mrs. Bowles.

"It sounds like that."

"Sure I'd go on like this forever," said Judy. "'Tis the Man and the House and all of it that oppresses me. Vans for Women. . . ."

"Let's not go to Winthorpe-Sutbury," said Madeleine. (The first word of sense Bealby had heard.)

"Ah!" said Mrs. Bowles archly, "who knows but what there'll be a Man for you? Some sort of Man anyhow." (Bealby thought that a most improper remark.)

"I want no man."

"Ah!"

"Why do you say *Ah* like that?"

"Because I mean *Ah* like that."

"Meaning—?"

"Just that."

Miss Philips eyed Mrs. Bowles and Mrs. Bowles eyed Miss Philips. "Judy," she said, "you've got something up your sleeve."

"Where it's perfectly comfortable," said Mrs. Bowles.

And then quite maddeningly, she remarked: "Will you be after washing up presently, Dick?" and looked at him with a roguish quiet over her cigarette. It was necessary to disabuse her mind at once of the idea that he had been listening. He took up the last few plates and went off to the washing place by the stream. All the rest of that conversation *had* to be lost.

Except that as he came back for the soap he heard Miss Philips say: "Keep your old Men. I'll just console myself with Dick, my dears. Making such a Mystery!"

To which Mrs. Bowles replied darkly, "She *little* knows. . . ." A kind of consolation was to be got from that. . . . But what was it she little knew? . . .

THE men folk when they came were nothing so terrific to the sight as Bealby had expected. And, thank Heaven, there were only two of them and each assigned. Something he perceived was said about some one else, he couldn't quite catch what, but if there was to have been some one else, at any rate there now wasn't. Professor Bowles was animated and Mr. Geedge was gracefully cold, they kissed their wives but not offensively, and there was a chattering pause while Bealby walked on beside the caravan. They were on the bare road that runs along the high ridge above Winthorpe-Sutbury, and the men had walked to meet them from some hotel or other—Bealby wasn't clear about that—by the golf links. Judy was the life and soul of the encounter, and all for asking the men what they meant by intruding upon three independent women who, sure alive, could very well do without them. Professor Bowles took her pretty calmly and seemed on the whole to admire her.

Professor Bowles was a compact little man wearing spectacles with alternative glasses, partly curved, partly flat; he was hairy and dressed in that sort of soft tweedy stuff that ravels out—he seemed to have been sitting among thorns—and baggy knickerbockers with straps and very thick stockings and very sensible, open-air, in fact quite mountainous, boots. And yet, though he was short and stout and active, he had a kind of authority about him, and it was clear that for all her persuasiveness his wife merely ran over him like a creeper without making any great difference to him. "I've found," he said, "the perfect place for your encampment." She had been making suggestions. And presently he left the ladies and came hurrying after the caravan to take control.

Digitized by Google

He was evidently a very controlling person.

"Here, you get down," he said to William. "That poor beast's got enough to pull without *you*." And when William mumbled he said: "Hey?" in such a shout that William forever after held his peace.

"Where d'you come from, you boy, you?" he asked and Bealby looked to Mrs. Bowles to explain.

"Great silly collar you've got," said the Professor, interrupting her reply. "Boy like this ought to wear a wool shirt. Dirty too. Take it off, boy. It's choking you. Don't you *feel* it?"

THEN he went on to make trouble about the tackle William had rigged to contain the white horse.

"This harness makes me sick," said Professor Bowles. "It's worse than Italy. . . ."

"Ah!" he cried and suddenly darted off across the turf, going inelegantly and very rapidly, with peculiar motions of the head and neck as he brought first the flat and then the curved surface of his glasses into play. Finally he dived into the turf, remained scrabbling on all fours for a moment or so, became almost still for the fraction of a minute and then got up and returned to his wife, holding in an exquisite manner something that struggled between his finger and his thumb.

"That's the third to-day," he said, triumphantly. "They swarm here. It's a migration."

Then he resumed his penetrating criticism of the caravan outfit.

"That boy," he said suddenly with his glasses oblique, "hasn't taken off his collar yet."

Bealby revealed the modest secrets of his neck and pocketed the collar. . . .

Mr. Geedge did not appear to observe Bealby. He was a man of the superaquiline type with a nose like a rudder; he held his face as if it was a hatchet in a procession, and walked with the dignity of a man of honor. You could see at once he was a man of honor. Inflexibly, invincibly he was a man of honor. You felt that anywhen, in a fire, in an earthquake, in a railway accident when other people would be running about and doing things he would have remained—a man of honor. It was his pride rather than his vanity to be mistaken for Sir Edward Grey. He now walked along with Miss Philips and his wife behind the disputing Bowleses, and discoursed in deep sonorous tones about the healthiness of healthy places and the stifling feeling one had in towns when there was no air.

THE Professor was remarkably active when at last the point he had chosen for the encampment was reached. Bealby was told to "look alive" twice, and William was assigned to his genus and species. "The man's an absolute idiot," was the way the Professor put it. William just shot a glance at him over his nose.

THE place certainly commanded a wonderful view. It was a turfy bank protected from the north and south by bushes of yew and the beech-bordered edge of a chalk pit; it was close beside the road, a road which went steeply down the hill into Winthorpe-Sutbury with that intrepid decision peculiar to the hill roads of the south of England. It looked indeed as though you could throw the rinse of your teacups into the Winthorpe-Sutbury street; as if you could jump and impale yourself upon the church spire. The hills bellied out east and west and carried hangers, and then swept round to the west in a long level succession of projections, a perspective that merged at last with the general horizon of hilly bluenesses, amidst which Professor Bowles insisted upon a "sapphire glimpse" of sea. "The Channel," said Professor Bowles, as though that made it easier for them. Only Mr. Geedge refused to see even that mitigated version of the sea. There was something perhaps bluish and level, but he was evidently not going to admit it was sea until he had paddled in it and tested it in every way known to him. . . .

"Good *Lord!*" cried the Professor. "What's the man doing now?"

William stopped the struggles and confidential discouragements he was bestowing upon the white horse and waited for a more definite reproach.

"Putting the caravan alongside to the sun! Do you think it will ever get cool again? And think of the blaze of the sunset—through the glass of that door!"

William spluttered. "If I put'n t'other way—goo runnin' down t'hill like," said William.

"Imbecile!" cried the Professor. "Put something under the wheels. *Here!*" He careered about and produced great gray fragments of a perished yew tree. "Now then," he said. "Head up hill."

WILLIAM did his best.

"Oh! *not* like that! Here, *you!*"

Bealby assisted with obsequious enthusiasm.

It was some time before the caravan was adjusted to the complete satisfaction of the Professor. But at last it was done, and the end door gaped at the whole prospect of the Weald with the steps hanging out idiotically like a tongue. The hind wheels were stayed up very cleverly by lumps of chalk and chunks of yew, living and dead, and certainly the effect of it was altogether taller and better. And then the preparations for the midday cooking began. The Professor was full of acute ideas about camping and cooking, and gave Bealby a lively but instructive time. There was no stream handy, but William was sent off to the hotel to fetch a garden water cart that the Professor with infinite foresight had arranged should be ready.

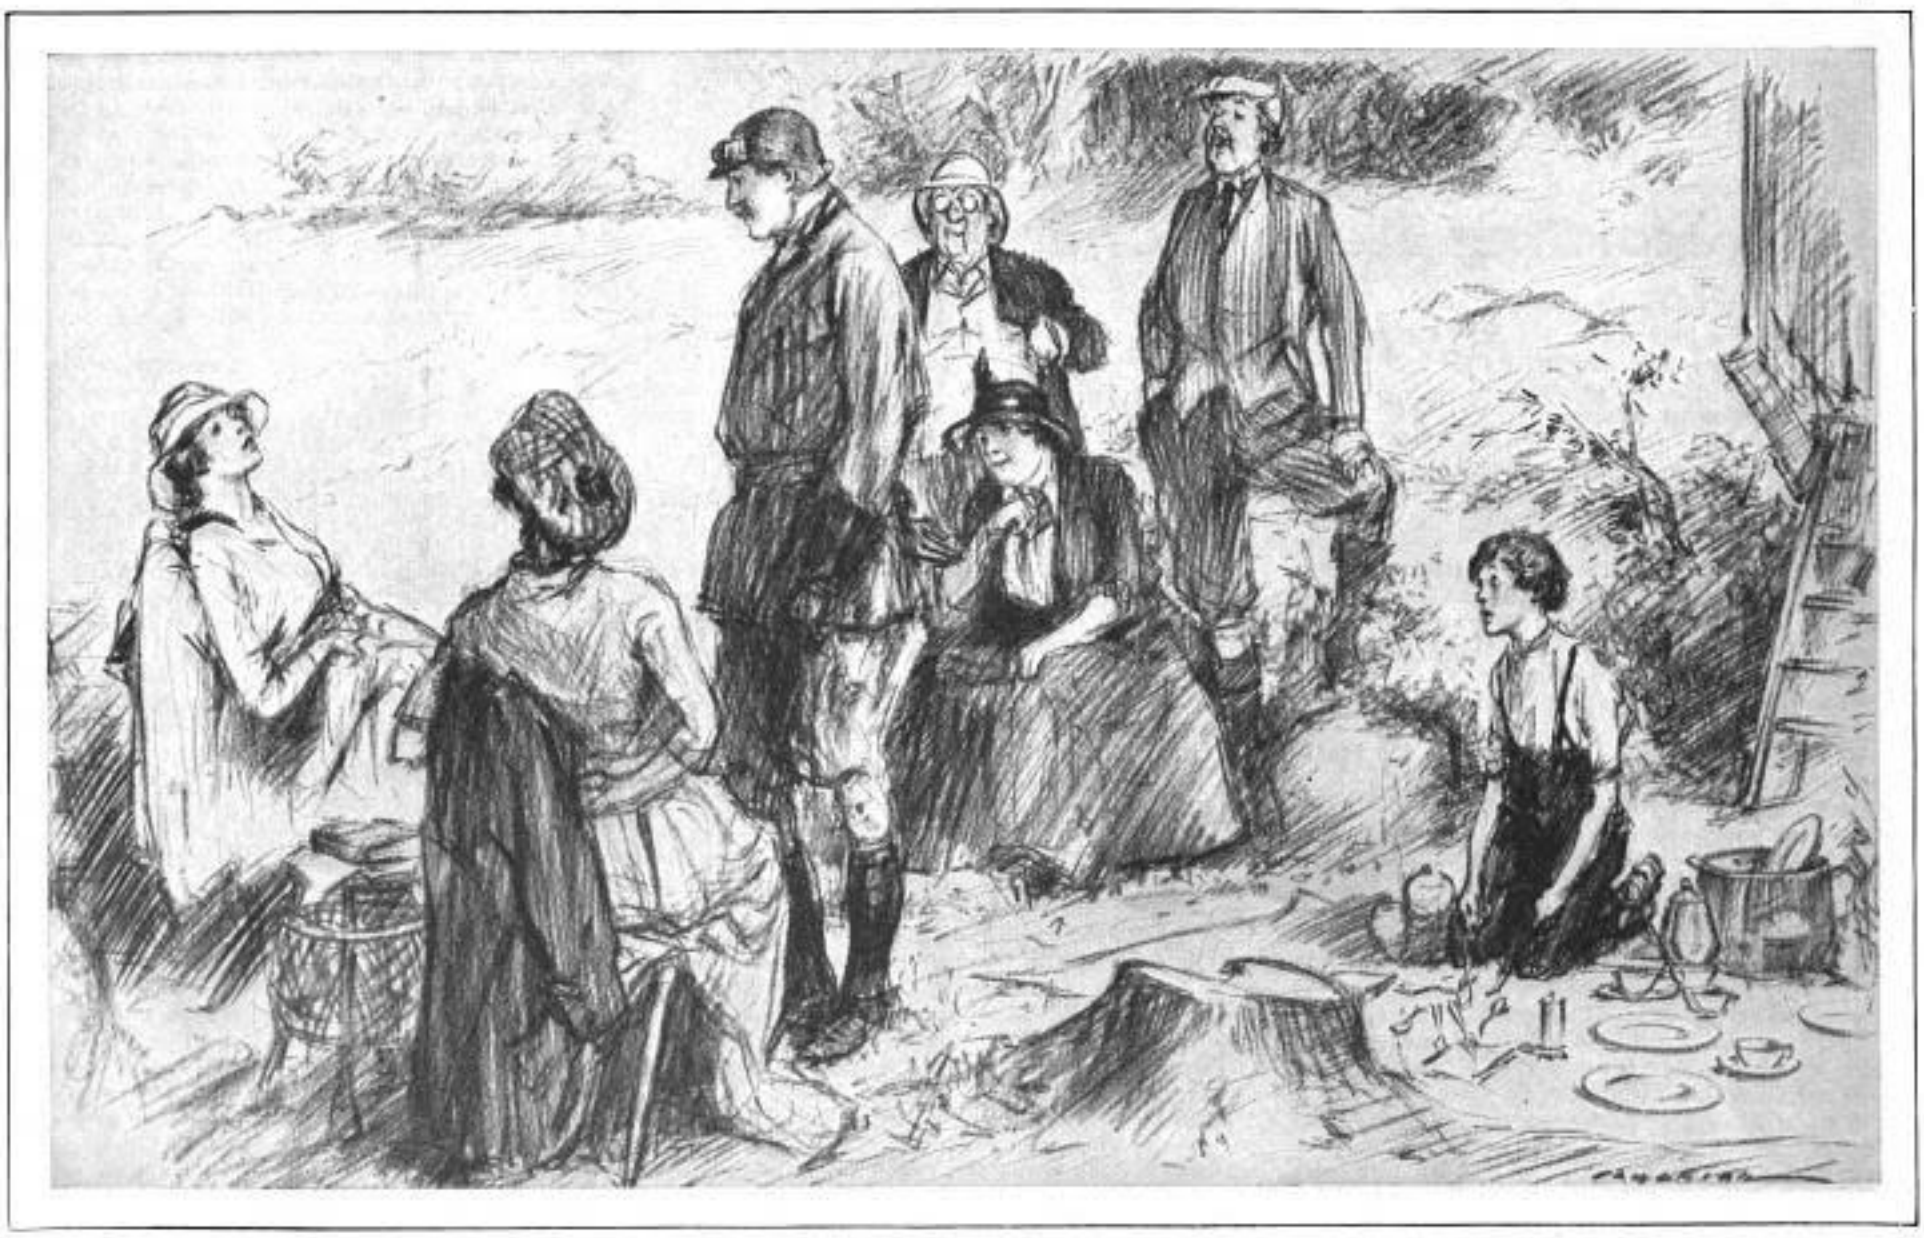
In that hour the ambition for mechanism, the passion for leather and oilskin was sown in Bealby's heart

The Geedges held aloof from these preparations, they were unassuming people: Miss Philips concentrated her attention upon the Weald—it seemed to Bealby a little discontentedly—as if it was unworthy of her—and Mrs. Bowles hovered, smoking cigarettes, over her husband's activities, acting great amusement. "You see it pleases me to get Himself busy," she said. "You'll end a Camper yet, darlint, and us in the hotel."

The Professor answered nothing, but seemed to plunge deeper into practicality.

UNDER the urgency of Professor Bowles, Bealby stumbled and broke a glass jar of marmalade over some fried potatoes, but otherwise did well as a cook's assistant. Once things were a little interrupted by the Professor going off to catch a cricket, but whether it was the right sort of cricket or not he failed to get it. And then with three loud reports—for a moment Bealby thought the mad butlers from Shouts were upon him with firearms—Captain Douglas arrived and got off his motor bicycle and left it by the roadside. His machine accounted for his delay, for those were the early days of motor bicycles. It also accounted for a black smudge under one of his bright little eyes. He was fair and flushed, dressed in oilskins and a helmet-shaped cap and great gauntlets that made him, in spite of the smudge, look strange and brave and handsome like a Crusader—only that he was clad in oilskin and not steel, and his mustache was smaller than those Crusaders wore—and when he came across the turf to the encampment Mrs. Bowles and Mrs. Geedge both set up a cry of "A-*Ah!*" and Miss Philips turned an accusing face upon those two ladies. Bealby knelt with a bunch of knives and forks in his hand laying the cloth for lunch, and when he saw Captain Douglas approaching Miss Philips, he perceived clearly that that lady had already forgotten her lowly adorer, and his little heart was smitten with desolation. This man was arrayed like a chivalrous god, and how was a poor Bealby, whose very collar, his one little circlet of manhood, had been reft from him, how was he to compete with this tremendousness? In that hour the ambition for mechanism, the passion for leather and oilskin was sown in Bealby's heart.

"I told you not to come near me for a month," said Madeleine, but her face was radiant.



"These motor bicycles—very difficult to control," said Captain Douglas, and all the little golden-white hairs upon his sunlit cheek glittered in the sun.

"And besides," said Mrs. Bowles, "it's all nonsense."

THE Professor was in a state of arrested administration; the three others were frankly audience to a clearly understood scene.

"You ought to be in France."

"I'm not in France." (*Continued on page 27*)

Money and the Movies

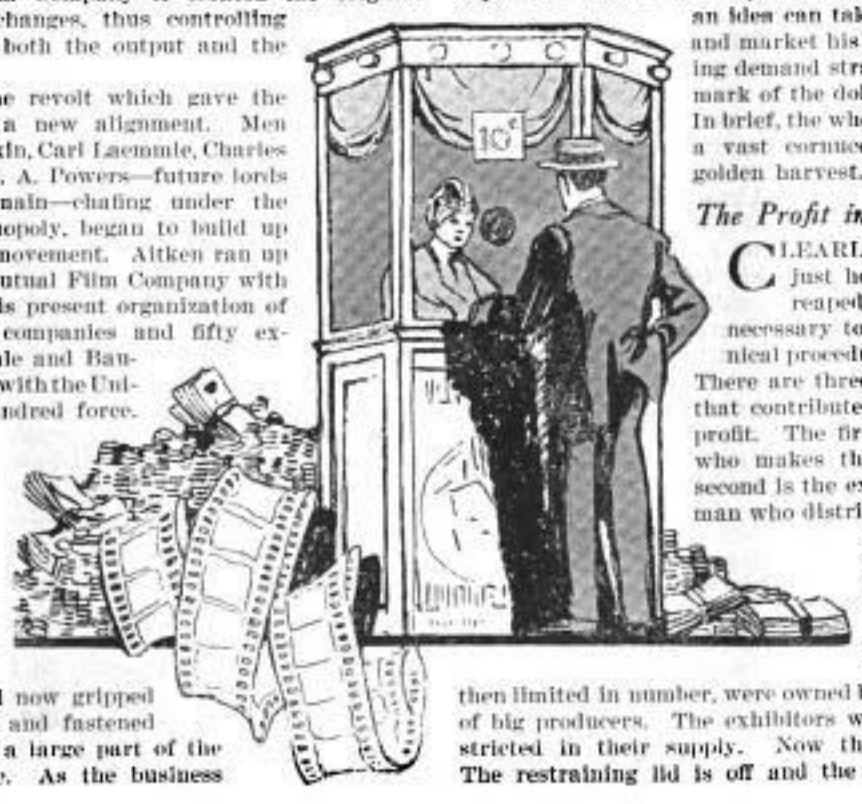
By Isaac F. Marcosson

ILLUSTRATED BY C. B. FALLS

WHEN you shove your dime through the box-office window of your favorite movie theatre, it joins a current of coin that registers a total daily admission fee—in the United States alone—of $1,000,000. The theatre you enter is a link in a chain of "picture houses" that, placed side by side, would stretch from New York to Hartford. The film that flashes its thrill and romance on the screen before you is part of a far-flung belt of animated celluloid that in the course of a year would girdle the globe nearly three times over.

Five millions of people, more than all the residents of Paris and Chicago combined, see the movies every day in the week; over $500,000,000, or well-nigh twice the amount of "greenbacks" in circulation, are invested in the business; a force of men and women equal to the population of Kansas City is engaged in creating and exploiting it. Such is the extent and scope of the motion picture which in a decade has risen from toy to amusement necessity.

So quickly and naturally has the photoplay entered into the pursuit of diversion that we have scarcely paused to measure its amazing financial side. We have been told a good deal about the picturesqueness of its production; how it has become the economic life saver of the legitimate actor; the vivid historian of progress; the first aid to education; how time, literature, and history from the Crucifixion down through "Les Misérables" to the fall of Torreon have been ransacked to feed the mighty reel of 72,000 miles of film that comprises our annual output.



But these are the obvious and external features. Behind all the tumult and clash of this sensational advance, which vies with the growth of the automobile in swiftness of evolution, and where the historian of motion-picture progress seldom delves, is the real bulwark of its now recognized stability—the domain of its dollars.

Probe its many millioned depths and you get a narrative of men and money no less romantic or stirring in some of its details than the story of steel and copper. It is the record of the obscure and even the lowly, recruited from shop and store, and projected into wealth and power on the high tide of an amazing expansion. What, then, is the finance of the film? What is the real commercial status of the activity that is emerging from the gilded disorder such as attends a huge mining "strike" into the legitimate proportions of a standardized industry?

The Line-Up of the Business

SO EPOCHAL are the changes that have crowded thick and fast upon this business that practically its whole map has been transformed in so brief a period as the last five or six years. In 1908, for example, the Motion Picture Patents Company (the so-called trust, built around the original Edison camera patents and on whose standard floated such pioneer brands as Lubin, Vitagraph, Biograph, Edison, Selig, Kalem, and Essanay) ruled the reel world. With the General Film Company it created the original monopoly of exchanges, thus controlling for the moment both the output and the distribution.

This led to the revolt which gave the whole industry a new alignment. Men such as H. E. Aitkin, Carl Laemmle, Charles Baumann, and P. A. Powers—future lords of the film domain—chafing under the restraint of monopoly, began to build up an independent movement. Aitken ran up the flag of the Mutual Film Company with the nucleus of his present organization of nine producing companies and fifty exchanges; Laemmle and Baumann struck out with the Universal with a kindred force.

Here were three great competing film-making organizations, each equipped with complete machinery to make and distribute the photoplays that had now gripped the imagination and fastened on the purse of a large part of the American people. As the business grew these people became more fastidious. The original 1,000-foot reel was inadequate for a story. They wanted a more sustained thrill—a longer tug at the heartstrings. Hence came the fourth big producing agency dedicated to the so-called "feature" with its three- to five-reel narrative based on famous play, filmized novel or memorable event. This feature movement not only widened the field of the industry, providing a whole evening's entertainment with a single screen picture, but gave to the whole enterprise its first artistic and dramatic distinction because it lured to the ranks of producing directors such men as Daniel Frohman and Augustus Thomas.

Movie Money in Action

WITH it, too, came the first era of sky prices for material and service. You find Sarah Bernhardt getting $30,000 to appear in "Queen Elizabeth"; Rex Beach selling the film right for "The Spoilers" for $10,000; John Bunny being graduated from $30 a week (his first wage as movie actor) to a salary of $15,000 a year; Mary Pickford taking a flying spurt on the way to her yearly compensation of $25,000. Producing developed into a fine art, and men like David W. Griffith and Edwin S. Porter—the Belascos of the camera—leaped to annual incomes that, with royalties and interest, are to-day near the six-figure mark. In a word, movie money—other than production and exchange profits—leaped to the realm of big figures and it has remained there ever since.

Equally significant as showing the expansion of the business was the fact that a photoplay could be booked for "big" time, that is for a week or more at a regular theatre and on a percentage basis. Thus the motion picture came into direct competition with the legitimate, and the boards of such standard theatres as the Broadway, the Herald Square, and the Savoy in New York and McVicker's in Chicago yielded to the silent actors of the film. To-day with a hundred native sources of supply (this is the estimate of studios), to say nothing of the considerable importation of foreign films, the business is a bristling battle ground, alive with competition; vibrant with many-sided energy. So fast is the pace that it is almost impossible to prepare statistics. The records of yesterday are wiped out to-day. The field is wide open. A man with cash and an idea can take a flyer in a film and market his product. Increasing demand strains at supply, the mark of the dollar is everywhere. In brief, the whole industry is like a vast cornucopia disgorging a golden harvest.

The Profit in Production

CLEARLY to understand just how this harvest is reaped it will first be necessary to explain the technical procedure of the business. There are three distinct agencies that contribute to motion-picture profit. The first is the producer who makes the film plays; the second is the exchange or middleman who distributes the product; the third is the exhibitor who shows it to the public.

Under the old monopolistic order the exchanges, then limited in number, were owned by the united group of big producers. The exhibitors were arbitrarily restricted in their supply. Now things are changed. The restraining lid is off and the owner of a small theatre can throw on his screen the products of General, Universal, and Mutual, and, in addition, if he is willing to pay the price, an added "feature." So much for the emancipation of the business.

What then are the film profits? Of course, all figures in such an instance as this are estimates, but with certain facts we can arrive at some conclusions. Let us begin at the bottom and see just how the structure of motion-picture income is reared. Take the producer first and follow the film on its road from factory to screen. The American picture makers consume approximately 72,000 miles of film a year. Of this, 60,000 is made in this country and the rest is imported. This unused film costs an average of 2¾ cents a foot delivered to the studios. Roughly speaking, the outlay for raw material is $10,000,000 a year.

To this must be added not less than $40,000,000, which is the conservative estimate of the cost of producing photoplays in this country every twelve months. The gross total outlay then is $50,000,000.

Right here you encounter one of the startling evidences of change in the business. A few years ago the average cost per foot of finished film ranged from 50 cents to $1. This was for the ordinary story told on a 1,000-foot reel. But that was when the scenario of such a tale cost $25 and before the high cost of production began to march shoulder to shoulder with the high cost of living.

With the advent of "stars," big and expensive literary material, gorgeous accessories, elaborate equipment, and all the rest of the trimmings that the sophisticated movie fan now demands, the price has gone to $5 a foot, and in many instances, notably in such productions as "The Prisoner of Zenda," which had a costly cast, and "Judith of Bethulia," it is even higher.

Los Angeles Has a Movie Empire

TO GO into specific details of the production end would mean to embark on a long and complicated narrative—a separate article in itself. A few facts will give a hint of the expensive expansion. The original flimsy Edison studio called the "Black Maria," which was moved about on a track so as to keep up with the sun (it was the type of the early kind), has given way to the million-dollar steel-and-glass plant with accessories like complete zoos, ranches, and regular staffs of scores of actors and actresses. More than a dozen companies have establishments that represent more than $1,000,000 each. Out near Los Angeles, in the heart of the outdoor motion-picture empire, there are concerns with weekly salary lists of over $15,000. One owner has a park of 20,000 acres, and another huge combination, the Universal, has a city all its own.

Salaries have soared. There was a time when the motion-picture actor was glad to get $5 a day. Now many get from $20 to $30 a day, while such favorites as Costello, Bagsott, Kerrigan, and various others, draw down $10,000 a year. Costly scenario departments must be maintained; authors get royalty instead of lump sums; the world is racked for striking and stirring features. It is no infrequent thing for a manager to spend from $10,000 to $15,000 on a production and make no bones of it. Yet a few years ago this would have been a sensational performance. Now you begin to see why the camera crank must be kept turning, for the longer the reel the fatter the bank roll.

The Way the Profits Come

THE profit in motion-picture production, like the profit in ordinary photography, depends upon the number of prints you sell. The original film—the so-called negative—is seldom, if ever, sold outright. It remains in stock as a constant income producer. The owner bends his energies to sell as many positives—as the reproductions are called—as possible.

The average number of positives made from a commercial film in the United States is thirty. This is a very low estimate because many of the larger con-

Digitized by Google

cerns print fifty and some even turn out eighty or ninety. The foreign demand helps to swell the number. One concern makes 43,000 feet of negatives a week. From this figure you get some idea of the number of positives it can let loose. A single company—part of the Motion Picture Patents Company—used 17,000,000 feet of film last year!

The standard price that the producer gets from the exchange on regular film stories is 10 cents a foot. This means $100 for every 1,000-foot reel. The manufacturer counts himself fortunate if he can average a net profit of 4 cents a foot.

Even in film merchandising a change is creeping over the business. Until a comparatively recent time the manufacturer flatly said: "How many prints can I sell?" as a measure of his profit. To-day in the case of the big and costly reels it is a question of "What is this film worth?" It is quality and not only the numerical prints that helps to make the measure of earning. For feature films a fixed sum is paid for daily rent. In the early days of "The Prisoner of Zenda" in which James K. Hackett was starred (the first of the popular American actors to be featured in this way), the owners received $50 a day for the use of the film. It is tribute to the advance that this kind of film represents to say that after a year it is still commanding practically the same figure.

108 Releases a Week

THE life of the film—that is, its earning period—is usually about six months. One of the best-known motion-picture magnates in the United States told me that each copy of the ordinary 1,000-foot subject would bring in not less than $300 during this time. The life of the feature film is considerably longer. A first-class big feature will return at least $50,000 to its owner during the first twelve months. Such films are sometimes subleased for five years and from present indications they will be producing some sort of income during all this time.

It is impossible to get at the exact motion-picture gross and net income figures for the United States. It is estimated, however, that there are 108 film "releases" in this country every week. By "release" is meant a film play let loose for exhibition. This piles up a weekly film literature of 108 negatives from each of which thirty to eighty positives are printed and sold. Each production has its own scale of price cost; its own particular expense of distribution. Hence the difficulty in hazarding a statement about returns.

But competent and conservative producers will tell you that the total gross revenue to the American film producers is not less than $80,000,000 a year. Since we calculated the outlay to be $50,000,000 the profit would be in the neighborhood of $30,000,000. To this must be added the profit that comes to the producers who own, control, or have some sort of interest in the various exchanges.

The film manufacturers are very canny individuals. Most of them have clung to the exchange golden egg. The General Film Company, for instance, has a string of ninety exchanges in this country and Canada. They get the middleman's profit out of them just as if they had nothing to do with the manufacture. You get some idea of the profit in this particular end of the business when I say that it is a tradition in the business that for one week, during the heyday of monopoly, the General Film exchanges cleared exactly $65,000. This represented a high-water mark and could not be duplicated to-day.

What Feature Films Did

WITH the introduction of the big feature films the exchange method of operation suffered a setback; first, because some of the big stories, as "Traffic in Souls," were sent out to the public over the heads of the conventional middleman and like a regular theatrical attraction; and, second, because special feature exchanges have been established. The Famous Players' Film Company, for instance, the pioneers in dramatic-feature films in this country, has its own string of nineteen exchanges which book not only the films bearing the company's brands but the output of the various other big feature-producing concerns. These feature films are sold in two ways—through disposal to an individual or firm who takes the right to produce in a specified territory (this is called State rights), and through the exchange which books them on a cash-price basis or on a percentage of the receipts.

There was a time when the motion picture actor was glad to get $5 a day. Now many of the favorites draw down $10,000 a year

Reels That Tour as "Stars" Do

A SENSATIONAL film, such as "Traffic in Souls," or a big thrilling spectacle, such as "Quo Vadis," is put on tour just like a traveling theatrical company, with a manager, a press agent, trained operator, and plenty of paper. It plays on a royalty basis.

There is no doubt but that the feature film of the kind I have just mentioned has weakened the hold that the exchange has had upon the exhibitor. The purveyors of the old-line shorter photoplay maintain that it is the craze of the moment and that the motion-picture goer wants variety of subject. But the fact remains that the stirring, scenic, so-called star features are gaining rather than losing in box-office value and are luring millions of capital into this newest phase of the business.

Some Fortunes in Films

THIS seems an opportune place to inject some of the hitherto untold romance of the reels and to show the pranks that fortune has played with notable films. From these annals you will find that the cherished commercial traditions of the speaking stage, the money-making records rolled up by such perennials as "The Old Homestead," "Way Down East," "Uncle Tom's Cabin," and "Hazel Kirke" are likely to have lesser prototypes in the biographies of some of the picture plays that during the brief period of a year have come to the attention of at least a fourth of the people of the United States.

The case furnished by "Quo Vadis" is one in point. This film was made in Italy at a cost of about $45,000 in Italian money. Over here, with the higher cost of labor, it would have meant an outlay of nearly $60,000.

The way it came to America is interesting. George Kleine, one of the pioneer producers—the man who put the K into the name of the Kalem Company—had retired from the business at fifty with a fine competency. He had originally drifted into motion pictures because he was one of the best lens makers in the country. While on a trip to Italy he saw the "Quo Vadis" film. It appealed to him as an immense proposition, but he realized also that up to that time there was no market for such features in the United States. Nevertheless he took a chance—and the film.

He knew that the only way to produce it was in a big New York theatre first and at prices higher than those usually charged. After some negotiating with other theatres he booked it at the Astor Theatre for four weeks. It was the first time that a going Broadway house had been turned over to a feature film put in as a regular matinée and night attraction. Previously Sarah Bernhardt in "Queen Elizabeth" had been shown at the Broadway, but that had already become a picture playhouse.

The success of "Quo Vadis" was sensational. At prices of 25 and 50 cents it filled the theatre twice a day and ran for fifteen weeks. At McVicker's in Chicago it almost duplicated this record. Then began an amazing career. Theatres all over the country pleaded to have the film. It ran all summer in Boston, two months in Philadelphia, five weeks in Baltimore, and so on from coast to coast. During some weeks it played to $5,000 a week in New York alone. During the first eight months of its appearance in the United States it brought in $250,000 and it is still doing business. Such are the possibilities of the feature film.

There are real adventures in films too, as the case of "Traffic in Souls" will show. The beginning was picturesque. Up in the scenario department of the Universal Film Company was a young editor named Walter McNamara who had an ambition to become a director. He had been a newspaper man and he had a good nose for the timely. The New York papers blazed with white slavery; the Grand Jury reeked with investigation of the "underworld." McNamara saw his chance, for he said to himself:

"Here is the opportunity for a great film story and it will make me a director."

So he wrote the story, which he called "Traffic in Souls," and put it up to his chiefs. They were inclined to be skeptical on account of the rawness of the subject, but it went to the studios and was produced. When the "Death Watch," as the producing critics are called, sat in judgment on its first unfolding they were even more skeptical. But having put good money into the proposition they decided to take a flyer. The only Broadway theatre that seemed accessible was Weber's, once the haunt of the nimble-footed and the golden-throated. When they sought to make a dicker with Weber on shares he declined.

"Pay me $500 a week rent and make it fifty-fifty," he said. This meant that he wanted half of the receipts.

"Traffic in Souls"

THE play was put on and the title strung up on the outside in red lights, fitting herald of what lurked within.

The unexpected happened. The theatre was packed four times a day for weeks. So tremendous was its success that it was planted in four other New York theatres at the same time. Thus it enjoyed the distinction of playing to five different audiences at the same moment within a comparatively small radius. And every house did a capacity business. In one week it played to a gross business of $50,000.

Fifty positives were made and the country was invaded. Every film went out with all the accessories of a regular theatrical organization. The Shuberts bought a third interest in the film and booked it in their own theatres. It was a better paying attraction than many of the expensive companies they had out. Such was the record of a film that was at first despised and well-nigh rejected. It is fitting to add that since Mr. McNamara had turned out this scenario in the regular performance of his work he got no royalty. But at Christmas time his employers presented him with a check for $10,000 in appreciation of his work.

This incident illustrates the swiftness with which a sensational movie success can be capitalized. All that was necessary to secure fifty sources of income was to print fifty positives and turn them loose on an expectant public everywhere with trivial cost. Now if "Traffic in Souls" had been a regular play it would have been necessary to hire a cast for each road company and rehearse at least two weeks, and the expense would have been heavy even before a dollar came in.

Then, too, there was the incident of the Rainey African pictures. Paul Rainey, a venturesome young millionaire, thought it would be a good thing to have a motion-picture record of his adventures in the jungle. So he took along J. C. Hemment, an admirable photographer. The thought of profit never entered his mind. When he returned with some very wonderful pictures he was advised to show them at high prices at the Lyceum Theatre. Unsuccessful there (only because of the price) he had about washed his hands of them. Carl Laemmle and his associates heard of the films, took them off Rainey's hands outright for $15,000 cash and then plastered the country with the films, cleaning up a fortune on them.

Such incidents as I have just described—and I could cite more—have naturally attracted the regular theatrical managers to the picture game. The net result is that Charles Frohman, Klaw & Erlanger, the Shuberts, W. A. Brady, Henry W. Savage, Cohan & Harris, and the Liebler are making alliances with movie producers to present their plays—many of them long discarded—on the screens. Thus a whole new range of attraction from the hectic heart throbs of a Theodore Kremer thriller to the highly sensitized emotions of a Clyde Fitch society drama are in line for pictures.

The Vast Growth of the Theatres

NOW let us turn to the third or exhibiting wing of the business—to the vast chain of picture houses now so essential to the average man's pleasure that they vie with the freight car as the outposts of civilization. Nearly 18,000 theatres, from the stuffy ten-by-fifty "store (*Continued on page 24*)

First Love

By Mary Lanier Magruder

ILLUSTRATED BY W. T. BENDA

BESIDE the window, old-fashioned and set with many a tiny pane, Lucy Ames sat sewing her wedding gown. Her forehead was cleft by a deep wrinkle, for the delicate thread had snarled; her fingers set to work patiently to unravel the tangle; her little mouth drew itself into a very stubborn, very scarlet line. The ardor of her vexation sent a vivid rose to a cheek usually pale and cool.

The house was very quiet. Emmy was lying down in the room above. Gringo, the cat, slept purringly on the hearthrug at Lucy's feet. The ponderous ticking of the old hall clock but intensified the silence.

With a little indrawn breath of victory and satisfaction, Lucy drew the thread, straightened now, between thumb and finger. She lifted her eyes from her work; the window looked out past rose bush and daffodil and columbine to the yellow pike. A car came whirring down the long hill and then across the bridge and up the steep slope.

"It is Philip Darrell," she thought. "How recklessly he drives!"

She leaned her face nearer the pane, meaning to bow to him. Since her childhood, all during the years of his life's sordid story, Lucy had always insisted upon speaking to Philip Darrell.

THE little smile on her lips faded suddenly; Lucy's heart gave an ungentle bound in her breast. The car was turning in at the square of lawn, it was slowing down at the gate, Philip Darrell was opening the gate! He was coming up the walk!

Lucy's first impulse was flight. Her second thoughts—which were best—assured her that it was unnecessary to disturb Emmy. She could meet Philip Darrell at the door herself and inquire his errand. In timid, sheltered maidens like Lucy Ames there is often some strange and secret longing for adventure. Any meeting with Philip Darrell must be an adventure.

She spread the breadths of satin over a rosewood chair and laid her needle in the case. But she kept the little silver thimble on her finger. Smoothing her tiny, embroidered apron, Lucy went trippingly across the room. The outer door stood open and Darrell was at the threshold.

"Good day, Miss Lucy; may I come in?"

"Cer—certainly," faltered Lucy, taken aback. She herself was slender and tall, but he was much taller, and she found she must look up into his eyes—dark, restless eyes. And that upward glance of her blue eyes revealed her thought. Darrell smiled grimly. He was not a welcome guest in homes like this.

SHE led the way into the sitting room, warm with sunlight, fragrant with white hyacinths, all arrayed on the window sill.

"Please have a chair," Lucy said. "I will call Emmy."

"No," he said, "my errand is with you."

"With me?"

"Lucy," Darrell said, leaning down to touch the breadths of satin, "what is this?"

"Satin," she breathed. "My—my—" she faltered, her dimpled chin lowered to the lace at her bosom.

"Your wedding gown?" He spoke with a strange gentleness.

She flashed a little reproachful smile at him. Was it that the word was too sweet to be said?

"Suppose I were to tell you you would not need this gown."

"Not need—my wedding gown?"

He turned to her fully then.

"Lucy, have you any reason to believe I would come to you with a lie?"

She shook her head hesitantly; her eyes were dilated, her lips apart and paling.

"For no other soul in all the world would I go through the like of this business. The man you loved and trusted, Lucy, is not true to you; he never was true! To-day he went across the State line with Janet Blair to marry her."

THERE was absolute silence for a breathless moment. Then Lucy spoke clearly, finally:

"That is a lie."

Darrell's face flushed a slow, dark red.

"I only wish it were," he said.

"I tell you," she reiterated, passion breaking her words into vehemence, "it is a lie!"

"There is but one way to prove it," he said. "Either wait for their return, or else go yourself across the line to Hollow Dawns."

Lucy put a sudden hand to her throat. The thimble fell tinkling upon the floor. Darrell picked it up and fingered it upon his palm, looking curiously at the small, intimate, housewifely thing.

"I will not go!" she said. But a note of wildness was in her voice. "I have all faith in Jim Maxwell. Why do you come here with such tales of him? What has he ever done to you, Philip Darrell, that you should—"

"You do not understand, Lucy. I only want to help you face the world and all the gossip. I come to forewarn you. I think, as yet, no one knows they went, but by this afternoon everyone will know that you—that he—"

"That he jilted me? That remains to be proven!"

"You will—"

"Perhaps you will tell me why you know this—you alone?" Her voice, though fluttering, had not lost its dignity.

"I was fishing under the cypresses by the Black Drift. Janet and Maxwell were rowing in the backwater. I heard their plans, got it all. Perhaps I should not have listened. But I owe them nothing, no silence, no mercy. They—and the rest—have shown me none."

"Have you deserved it?" said Lucy unexpectedly.

HE LOOKED at her a long moment, then his gaze fell to the floor, brooding, bitter.

"No, I have not deserved it, no matter how I may have longed for it." He set the thimble on the table there beside the wedding gown that never would be worn.

"Lucy, according to the judgment of the elders, I am not fit to take your hand, much less to offer you what may seem an impertinent assurance. But when Jim Maxwell broke faith with you to-day, you escaped a bondage that would have worn your soul to tatters long before God let you die. Thank Him for what you have escaped. Hold your head high, Lucy, and brave it out."

A little twitching of his lips was all that betrayed emotion under the gray mask of his face. Lucy stood looking at him. The walls of her faith were horribly shaken. Her knees crumpled under her.

"Sit here," he said—and she felt his hand supportingly on her shoulder. She sank into the chair, always looking with her hurt, young eyes up at him who had cast down the altar of her trust and loyalty.

"Believe me," Darrell said, "if I could have spared you I would. If I could have given you happiness, I would have caned him and sent him back to you."

"What need," she said slowly, "have I of a whipped hound?"

Again he looked at her with a glance that measured her with astonishment. She was so slender, so white, so cool with her innocent eyes, her dimpled chin, he had feared to see her sink like a crushed flower. But for all that her lips were trembling; she looked back at him with eyes where a flame had suddenly kindled.

"I think you meant this for a kindness. But you must pardon me if I refuse to accept, utterly, what you have told me. I must have something else."

"Besides my word?"

She inclined her head.

"If I were anyone else, I should ask you to let me drive you across the line to Hollow Dawns. I can offer no better, no more convincing proof than the clerk's record there."

"Why do you not offer then?"

He laughed. "Why?"

HE TURNED his shoulder to her, under pretext of fingering the hyacinths in the window.

"Lucy," he said presently, "do nothing you might regret. It could do you no good to be seen with me at this time."

"Are you so unwilling as all that? But you owe me something."

He wheeled, the color stealing back into his face. "Your sister—she might—"

"Emmy, when she thinks at all, thinks as I do," Lucy said, calmly stating an incontrovertible fact. "I shall be ready as soon as I put on my coat and veil."

He awaited her, walking the floor restlessly. He had been long under the harrow of his country world's code, a code sometimes hypocritical, always self-righteous; this room seemed to heal him of much that tormented him like a bodily curse. All about was so sweetly intimate of her—the little sewing table, the hyacinths' fragrance, the lustrous satin lying in long, lovely folds across the chair. How many unnumbered times in his black days had he dreamed of all that lay behind the high window and its little glittering panes! How many times had she braved disapproval and sent her greeting to him. He could claim that in sheer honesty of nature he had lost a standing no man imperiled by the veriest vices so long as they were ever so scantily, albeit conventionally, veiled—but what did this girl know of all that? She had stood by him as far as in her lay when he must have been to her as the worst man in the country.

SHE came in, a long veil over her close-fitting velvet hood, and her blue broadcloth coat wrapping her slenderness from the north wind of late March. Darrell put her into the car, and as he cranked his engine his face flushed in the center of each gaunt cheek. He sprang in beside her and the car hummed, sang, and leaped forward down the long, straight slope.

They had a silent journey. Darrell gave all his attention to driving the machine, while Lucy sat, unspeaking, beside him. Once her veil blew across his face, bringing a thrill of some lavender sweetness too quickly lost, when Lucy, with an exclamation, recaptured the truant gauze. Hollow Dawns, across the State line, was but twenty miles away, and the roads, red pavements of gravel pike, were whipped dry by the March winds.

The little country town, in its girdle of green hills, nestled about the public square. The country courthouse, presenting its four gray walls to the four points of the compass, towered above a wide green plot, and, under the great maples and oaks, crocuses were blooming in the sward and a fountain was sending a chill spray upon the March air.

As Darrell drove the car into the square the clock, intoning the chant of the hours, marked twelve—high noon. A midday quiet lay all about. The rhythm of their footsteps echoed sleepily down the courthouse corridor. In the clerk's office the stenographer was pinning on her hat. She turned wise and expectant eyes upon them.

"Anything for you to-day?" Then smiling: "I am deputy county court clerk."

A SUDDEN flush overran Darrell's throat and face. He did not look at Lucy.

"We wish to know if you have issued a marriage license to-day to James Maxwell and Janet Blair."

"Mr. Singleton wrote the paper an hour ago. Friends of yours?"

"Thank you so much," Darrell said. The extreme

Digitized by Google

courtesy of his words and manner covered the fact that he ignored her question.

"Would you mind showing us the record?" Lucy said unexpectedly.

THE girl's eyes snapped a little. "If you please," Darrell said, and the snap vanished in a flash of white teeth and dimples.

She brought the ledger and laid it before them, indicating the entry with a well-manicured finger. The ink seemed scarcely dry. Lucy read it slowly; she lifted her eyes and the girl thought she had never seen eyes so blue.

"You are very kind," Lucy said. "Please pardon our giving you so much trouble."

"Trouble is what we are here for," the girl said cheerfully, replacing her book. But she looked after them curiously as she drew on her gloves.

Darrell opened the door of the car. Neither of them had spoken a word. But Lucy, with a little gesture, turned and, retracing her steps, passed on to the green-slat seat beside the fountain. She sat down and Darrell came and stood beside her. "Sit down," Lucy said. "Forgive me for doubting your word."

"There is no question of forgiveness. I honored your faith, Lucy, though you put it in that cur. I could wish I had not brought you the ill tidings."

"No, I am glad. It gives me more time to think, to consider, although all the thinking on earth will not alter the fact that from now on forever I must always be the Lucy Ames that Jim Maxwell jilted in two weeks of her wedding day."

"Why always Lucy Ames? Some good man and true will come into your life some day."

"What man wants a woman another man has cast away?"

"I know one man too well—" he began. The words had slipped out, but he caught at them, and ceased speaking, his eyelids drooping, his hand tight on the iron rail of the seat.

Lucy looked at him with narrowing eyelids. "I have had no sweetheart since I was a child but Jim Maxwell."

"For a year or two that man has passed your window, hoping for nothing more than a glimpse of your face, the barest courtesy of your eyes and lips, such as in your kindness you might give to the sorriest wayfarer along the road. This man in an evil hour—he could have gone away perhaps and made a fresh start elsewhere. But I tell you pride forbade that, Lucy, so a blight settled down on him. One day at your window you looked up and smiled at him—smiled with innocence and kindness, with a mercy not tempered by justice. Then something awoke in his soul—not hope, Lucy, but light."

HER lips moved, but she did not speak. She sat staring steadfastly into the blue waters of the pool.

"Well?" she said at last.

"That smile—he worshiped you. There was no sin in that, just as there was no hope in the love he had for you."

Her eyes met his own. They had grown darker than rain-drenched violets.

"Philip, I do not understand all you are saying. But most of all I know you are trying to give me back something of my pride, my self-respect."

He was silent for a moment. Then he came round the seat and sat down beside her.

"What self-respect could you lose in losing Jim Maxwell? This is my one opportunity. When I leave you again at your own door, Lucy, you and I will not likely see each other again except as passers-by."

"Unless—"

"Lucy!"

"You did not tell me the man's name, Philip."

"It is not necessary!"

"But if he pitied me so much he might be willing to exchange—"

"Lucy, you do not want to hear me speak of love, I understand. You are very young and—I think you do not know what you are saying, but all I ask is to serve you."

"If a man lived so hopelessly, he would not expect too much if a woman agreed to marry him, would he?"

Darrell caught her hand. His eyes held fright—and fascination. "Lucy, you would not marry me?"

She looked at the pool again—and laughed. "I might under certain conditions."

"And those?"

"First, that you asked me."

"And—"

"That we be married at once—to-day—*now*."

HE TOOK her face between his hands, regardless of the hour, the place.

"Lucy, I shall leave you here a little while. Think well, but remember that now—with this first love of yours bleeding—I cannot, I must not tell you all I feel. I will marry (*Continued on page* 33)

The Boy's Politics

They sat down on the curb and appeared absorbed in deep admiration of a very much soiled picture card

By Ceylon Hollingsworth

ILLUSTRATED BY B. CORY KILVERT

ONE warm, breezy, summer night Dudley Shedd, aged twelve, sat on the curb and gazed disconsolately across the avenue at a large house showing dimly behind tall maples. His father and mother lived in that house; but except in freezing or drowning weather, Dudley did his best to limit his living there strictly to eating and sleeping within it. That's about all the use a boy can find for a house, anyway, except when he has the measles or scarlet fever. This morning Dudley and his father had held an executive session behind closed doors in the furnace room to devise ways and means for mowing the lawn.

And so Dudley, lonely and forlorn, sat on the curb and contemplated the long years of hardship he must yet endure if he continued to reside in the house across the street. His eyes grew damp with self-pity as he brooded over the lacerating, overlapping troubles which had this day beset him. That vast lawn, over which he had labored in agony of soul and body, was in plain view and gnawed at his vitality with its dumb but positive assurance that it would need another clipping in a few days. His melancholy reflections created a torturing appetite for elevating excitement.

He had just begun to consider, once more, his favorite project of secretly building a long, snug canoe and escaping down the river to parts unknown, there to drift along and fish, hunt, eat and sleep, and live a free life of continued ease and peace, when a boy came trotting across the street.

DUDLEY shot erect like a jack-in-the-box and his face lost its despondency.

"Hello, Pete, where's the kids?"

"Dunno," said Pete, "jus' got through supper. Pa and I wuz out in the country and got back a little while ago. They'll be comin' along pretty soon. What'll we do?"

"I dunno," said Dudley; and then, beginning to whistle, he stood on one foot, shoved his hands in his trousers pockets, and began to shuffle himself with a heel-and-toe movement across the asphalt. He thought more clearly under such exercise.

On the corner lot in front of which he had been sitting stood the synagogue of the Jews. Dudley suddenly ceased his antics and gazed at the structure.

"Say, Pete, t'night's Thursday night, ain't it, and t'morrow night's when they hold meetin'? Wonder if old Liberman's 'round?"

"W'y?"

"W'y, he's always 'round Thursday night cleanin' up. Mebby we could have some fun with him."

"Gosh, I dunno. Hope he is! Let's watch. What'll we do?"

"I dunno. Let's see if there's any light in the back." They forthwith trotted down the cross street and found all the windows black.

"He ain't come yet," said Dudley as they walked

The janitor hissed "Ah! ha!" as he jumped. He ran like a duck, but his running was deceptive

Digitized by Google

back to the corner. "He'll be here, though. Always fixes things up Thursday night. Gosh! He's comin' now. See 'is bowlegs! Let's set down and p'tend to be lookin' at somethin'."

They sat down on the curb and, with heads bent over close together, appeared absorbed in deep admiration of a very much soiled picture card that Dudley had snatched from his pocket.

In a few moments a short, elderly man, whose knees had never touched each other since infancy, came rapidly along with flat-footed steps, jerky and diminutive. His smoothly shaven face was broad, fat, brown, and as Hebraic as the Old Testament. As he passed the boys he twisted his head sidewise and rolled his large, white-rimmed eyes toward them in a suspicious glance. He jerked open the gate of the low iron fence and, unlocking the synagogue doors, disappeared with a bang. Then the boys got up.

"He's liable to be in there for an hour now," said Dudley; "we'll play some trick on 'im when he comes out, huh?"

"Bet yer life!" affirmed Pete. "What'll it be?"

DUDLEY studied the doors of the synagogue and danced a slow clog.

"Say, look here," he said in a whisper as he stood still, "he acts as if he wuz in an awful hurry, don't he? And when he comes out he'll be in a bigger hurry and yank the gate open and hustle out 'thout lookin', I bet. Say, I've got it! Come on over with me till I get a piece of old clothesline." Dudley's miseries had fled. Trouble will stay with a boy just as long as a cottontail will when the boy has dragged it by the hind leg out of its burrow. If he lets go, it's gone.

Fifteen minutes later that synagogue gate was loaded with several feet of old, thin rope and two boys were crouching down behind a thick clump of snowball bushes that grew just beyond the synagogue fence. The old, thin rope, in a loop about two feet long, hung down against the outside of the latch juncture of gate and fence. The ends of the rope were neatly and tightly tied to the top cross rod, about three feet from the ground, one end to the jam of the fence, the other near the edge of the gate. And if that little janitor, eager to get back into the bosom of his family, should come hurrying down the dark walk, push the gate partly open and whirl through without scouting for trouble, why, as the boys reasoned, he and their clothesline and gate, fence and sidewalk, like angleworms in a can, would tangle themselves up into a bunch of trouble right away. Pete bet if the old man went through the gate sidewise the quick way he did last week he'd loosen the fence and wreck the gate, and he bet what the old man would do to the sidewalk, when he got through with the fence and gate, would be aplenty. Dudley said naw, he wouldn't loosen the fence, but he bet, if the rope didn't break, he'd loosen hisself, tho', pretty much all over.

THE boys continued for some time to poke up their squirming anticipations by "betting" back and forth at each other on their ideas about what that rope could do to a man.

At last there came the rasping of one of the big doors, followed by the faint click of the key against the lock. "Here he comes!" Pete gasped in exultation. He scrambled stealthily to one side of the bushes while Dudley went to the other, and so, on hands and knees, they watched with unimpeded view. The next moment, with a loud clearing of his throat, the janitor backed out on to the stone landing, pulled the door shut and locked and shook it. Then he stood still with his hand on the key.

"Tear! Tear!" they heard him exclaim. "Now, if I hafn't fergot t' durn dot lide in t' sullar oud!"

He unlocked the door, went in and slammed it. The boys caught the jingle of keys. Dudley jumped up with a lively "Gee!" leaped the fence, and ran up to the doors. Pete heard again the jingle of keys, and his companion came bounding back, flung himself over the fence and upon the ground behind the bushes. He was laughing through his hand and his shoulders were twitching with merriment.

"What did you do, anyway, Dud?" demanded Pete.

"He left all 'is keys hangin' in the door—oh, gosh!—and I've locked 'im in!"

"Oh, ho ho!" began Pete, and they both swayed themselves about in chuckling delight.

"But," exclaimed Pete suddenly, "he'll unlock the little side door and come out."

"No, he can't; how can he? All 'is keys are hangin' on a ring on the big key! He'll haf to come out a window."

"Oh, ho ho!" broke out Pete, and again the boys hugged themselves and swung their bodies about in surpressed glee.

They were startled into rigidity by the vigorous shaking of the big doors. They stood up and stared the way boys at a circus stare when a bunch of clowns engage in a mêlée with bladders and stuffed clubs. For one moment silence ensued, sticky with possibilities. Then the doors sounded out as if trying to tear loose and walk off.

Liberman yelled in fierce joy as he started cutting great scollops up toward Mullen, who was gathering himself together

"Hey!" came an angry, muffled shout. "Poys, *poys, poys!* Unlock dis toor immejetly, juh hear!"

Another moment of silence and another spasm with the doors. "Poys! You young scountrels you, open tis toor righd avay at vunce! You Shett poy, I know you, you vild limb, gome righd avay here and open tis door immejetly!"

THE janitor's voice suggested knotted fists wildly shaking above an apoplectic head; and his voice gave suggestion only of the truth. With his fists he was frantically trying, as he gave his commands, to punch holes through the high vault of the vestibule. On receiving no response, he switched from ceiling to doors and his resounding thumps could have been heard half a block. But the street, in that immediate vicinity, happened to be deserted.

"Jeeruselam!" ejaculated Dudley, "he's hot!"

"Rats!" jeeringly shouted Pete, losing control of his feelings.

"Shut up," snapped Dudley, "ain't you got no sense at all?"

At Pete's shout the janitor ceased action, with one fist against a door and the other raised ready for a blow. "Ah, ha! Ah, ha!" he breathed through his nose. "Tare you are, ad lasd! Tare you are, ad lasd! Now I slib out a back window and gatch you, and I trash you, and I trash you! Ah, ha!" And then he rapidly tiptoed through the darkness toward the rear of the Sunday-school room.

The boys in gaping expectation stood for five minutes, awaiting another demonstration upon the doors.

"Bet he's gettin' out a back window," said Dudley. "Come on and see," and they glided down beside the fence toward the rear. As they obtained a view of the back of the synagogue, the janitor, about to jump, was discovered sitting on the ledge of an open window. He caught sight of the dim silhouettes of the boys at the same instant.

"Ah, ha!" he hissed as he jumped. "Tare you are! Now I ged you!"

HE RAN like a duck, but his running was deceptive. If you have ever had a bear start to run you down you can appreciate the surprise of the boys. A bear standing or walking doesn't look as if it could run faster than an aged cripple. But when a bear begins to run in earnest, it looks and travels like a bear hitched by a long chain to the hind end of a limited express making up time.

The boys ran into the dark shadow back of a near-by house and began trotting in a cross-lot direction down the block. For about two seconds they didn't worry any about the Jew's ability to gain on them at their present rate of retreat. Then Dudley casually glanced over his shoulder. "Great gosh, skip!" he cried, and, followed by Pete, dashed off at the top of his speed, dodged around the second house and toward the street. A man with legs six feet long could never catch two boys at night, with residences, outhouses, shrubbery, and black shadows in such profusion.

SO, when the irate and wheezing janitor arrived in front of the house around which the boys had vanished, not a sign of a boy could he find, although he hopped about in boiling excitement and scanned every direction. The impenetrable shadows, enshrouding that clump of snowball bushes, a couple of hundred feet away, allured his suspicions, and, keeping within the darkest spots, he cautiously advanced until he reached a large elm growing by the driveway that passed between the two houses nearest the synagogue. Sheltered behind its trunk, he first tried to pierce the gloom of the bushes. Then hearing a slight noise down in the darkness of the driveway, he imagined he saw two slight, vague forms slowly edging toward the street and he became oblivious to everything else. About the moment when the old gentleman crawled through the window, Martin Mullen, the night policeman on that beat, stopped on the synagogue corner just long enough to hold his watch to the light. Martin was no comic-weekly officer. He performed his duties conscientiously and kept his eyes and ears keenly alert. Consequently, as he put away his watch, he eyed the synagogue and caught the weak glint from the bunch of keys. The edifice was dark. Without hesitating an instant, therefore, he vaulted the fence and, twirling his club, walked up to the doors and tried them.

"Hughee!" he said in undertone as he tested several doors with the keys and found them locked from the outside. "Liberman or some one must be losing his mind."

He took out the keys and remarked to himself that he'd stop and leave them with the rabbi. Then, very contented in his mind, he sauntered down the walk, carelessly opened the gate and took a long stride through the aperture. The rope instantly showed one of the things it could do to a man. Martin's club rapped and clattered upon the flagging, his helmet bounced and rolled away, and as his outspread hands gave the big stone two mighty smacks, and his knees bumped it with two dull bumps, he said: 'D—n it all! What did that?" And he said it with the deepest of feeling.

THE noise of Mullen's fall sent the janitor bouncing in huge hops out to the sidewalk; and when he saw the bulk of the policeman on hands and knees he never doubted that it was the boys caught by some mishap. "Ah, ha!" he yelled in fierce joy as he started cutting great scollops up toward Mullen, who was gathering himself together. "Ah, ha! you tam scountrel you! Now I haf you at lasd! Now I haf you! Now I figx you!"

"Haf me! Figx me!" snorted the amazed and furious Mullen as he disentangled himself from rope and gate and rose to his feet. "What d'ye mean, you hoop-legged idiot, by roping yer gate and callin' me a 'tam scoundrel,' when I d—n near killed myself with it?" And then Mullen stooped his shoulders, thrust out his head and roared forth a "*Hey!*" that meant business.

"Mein Gott, vat is tis! Vat is tis! Vat 'as happened!" gulped the janitor. His frantic exertions to become stationary resembled a perpendicular fit, and the shocking transformation of two boys into one tall, angry man almost gave him one. His momentum propelled him to within three feet of Mullen, who remained motionless in his belligerent posture.

"Mister Mullen, is id you?" he cried in a horrified voice, flinging up his hands in consternation. "Mein Gott, vat is ter madder? Vat 'as happened?"

"Look at that gate, blast it!" groaned out Mullen. The other swung the gate wide open.

"Oh, tose poys. *Tose poys!* (*Continued on page 31*)

COLLIER'S

Bad Dreams of Conspiracy

WILSON'S HARANGUE against business men who write letters to Congressmen was clearly childish. This form of appeal has been used by reformers for years. It was used in the fight on CANNON, in the passage of the income-tax amendment, in urging temperance legislation. This method of influencing Representatives was more responsible than any other one element in forcing WILSON'S nomination at Baltimore. Our recollection of the number is not exact, but we think that upward of one hundred thousand telegrams came to delegates asking them to vote for WILSON. Here is a familiar, frank, and wholly proper way of exerting influence. To talk about it in terms of conspiracy is childish. As WILSON'S acts and utterances continue under scrutiny, his intellectual and temperamental traits become apparent. A very marked one is the disposition to prevail by mere weight of will, by assertion, without willingness to argue or meet argument.

Wilson and Mexico

FROM SAN ANTONIO, TEX., MR. WILLARD L. SIMPSON writes a very reasonable letter about Mexico, among other things asking:

What would you have advocated and what do you now advocate?

What we would have advocated a year ago doesn't much matter after so much water has gone over the dam. We would have kept out of the mess. WILSON quite deliberately projected himself into it, and his course ever since has been partly stubborn pride in sticking by his position, partly a hurried opportunism to avoid the consequences of that position. If WILSON really had intended at the beginning to go out of his way to introduce agrarian reform in Mexico (we think he did not have this intention in the beginning and that it came to him later as a justification of the mess he found himself in), he could have made recognition of HUERTA contingent upon agrarian reform. What we advocate now is the sanitation of publicity and discussion, and anything that will save us from what we think WILSON, against his will, is headed for eventually—military occupation and a foreign war.

Democratic Bombast

SECRETARY MCADOO informs us that the total ordinary expenditures of our National Government for the fiscal year that ended on June 30 will probably amount to $703,000,000. This exceeds by some twenty millions the total for the preceding fiscal year. The increase of only about 3 per cent seems unimportant until we notice the contrast with this plank in the Baltimore platform:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. *We demand a return to the simplicity and economy which befits a democratic government.*

To increase "profligate waste" by 3 per cent is *not* returning to "simplicity and economy"!

Brother Amos

PENNSYLVANIA FRIENDS tell us that some folks in that State are opposing GIFFORD PINCHOT because the public prints have associated him with some rather extreme reformers. We hasten to inform these Pennsylvanians that they are confusing GIFFORD with his brother AMOS. GIFFORD PINCHOT is a great idealist. He is one of the large figures of his generation. Because of his identification with all that is implied by the term "conservation" the future historian will have a good deal to say about him. AMOS PINCHOT, as PERLMUTTER would put it, "is something else again." He is a young man who has acquired a great deal of money by the easiest known form of acquisition. The leisure which comes from that and the possession of a famous brother account for such participation as he has in public affairs. AMOS is a Cubist in politics. He belongs to the Futurist fringe of reform. He is for most of the "isms" identified with current agitation, not omitting pessimism. What he isn't for he's against. We certainly hope the Pennsylvania voters won't confuse him with GIFFORD.

The Fundamental of Prosperity

SUCCESSFUL MEN fix their minds on the important things (however small, remote, or obscure) and refuse to be diverted therefrom. That is why they succeed. So in this season of cross currents, with Wall Street in mourning over the decay of speculation, with the railroads bluffing the facts to the limit of their ability, with the obsolete type of newspaper economist sweating blood over fantastic balances of trade, we find Mr. E. C. SIMMONS, a successful hardware dealer of St. Louis, Mo., sending out this letter to his salesmen:

Don't worry. War or no war, freight rates or no freight rates, tariff or no tariff, baseball or no baseball, grape juice or champagne—the farmer is still on the job. Don't forget him.

MR. SIMMONS knows these United States.

What Does Wealth Mean to You?

IT MAKES US STOP AND THINK to see an item like this:

HAMMOND, IND.—Receiving a letter from Greece that he is heir to a $7,000,000 estate, MATHIAS CONSTANTE, a steel worker here, has hired five close friends at $5,000 a year apiece to help him spend his money. That is all they will have to do.

This man has the same view of riches that the Huns and Goths had fifteen hundred years ago: lots to eat and drink, money to spend! The power that wealth gives, the room for living and serving, the long reach of it toward the future under the fostering of science—to all these things MATHIAS CONSTANTE is blind. What does wealth mean to you? What dream of yours would come true if you had $7,000,000 at your command to-morrow?

A Railway That Knows How

ON A SMOOTHLY RUNNING EXPRESS TRAIN between Washington and New York we found an illustrated circular called "Information," issued by the Pennsylvania Railroad system. This issue tells what Italians are doing for the railroad, and says that of 140,000 employees on the lines east of Pittsburgh and Erie, 11,000 are of that nation. Twenty years ago there were very few, all of them "laborers"; to-day

Italy is represented in practically every department of the railroad, and each day these men are making their impression. . . . Many of them hold positions of trust and responsibility, due possibly to a great extent to their learning the English language. . . . Promotion is always open to the man who works hard and improves himself.

We are glad to believe that this is true. We are glad to read of "the Italian-English correspondence course which the railroad gives to all who apply for it." The Pennsylvania is exceptionally fortunate as a corporation and employer of labor if its employees really believe promotion "always open to the man who works hard"—and the public will share the benefit. The spirit of loyalty, confidence of receiving justice; no dollar-and-cent value can be placed upon these matters, but their absence is none the less fatal to successful organization. The men who have made the Pennsylvania Railroad have not always measured up in all regards (civic virtue, for instance) to SAINT LOUIS and GEORGE WASHINGTON—but somehow they have managed to instill a notable morale into their men, and the traveling public knows their conductors and brakemen for courtesy and intelligence and a general air of self-respect. Some of the railroads realize that they are public-service corporations, and act accordingly in those human relations where this service is apparent. But cheerful, hopeful employees are essential to creating really cordial relations between the public and the corporation. The Pennsylvania was one of the first railroad systems to apply this fundamental truth.

"David Describeth a Citizen of Zion"

IN THIS TIME OF AFFIDAVITS, doctors' certificates, squabbles over immunity, and wholesale indictments of dead men, it is worth remembering that the Psalmist, in talking about the good citizen, used this sentence: "He that sweareth to his own hurt and changeth not." Very few of this sort have been investigated.

A Sad Case

FOR SWEET CHARITY'S SAKE, what kind of thing is this Parkersburg (W. Va.) "State Journal," and what on earth is the matter with it? We find this allusion to us in a recent issue:

LAST ONE DECENT

The last COLLIER'S WEEKLY is decent, and it is certainly a relief to see the dirty vulture left out of it, and to have it talk sane, even if it should begin gyrating with its ears again, and have a breath like a garbage wagon, and its eyes get red and gallons and gallons of filth cover it!

Won't some of our friends down there tell us about the "Journal"?

Telling What You Don't Know

MANY YOUNGSTERS have lately endured the pangs of entrance examinations for college. STEVENSON was right in speaking of these tests as "exanimations"; that's why we pity the subfreshman. His sensations frequently resemble those sketched in "Verdant Green." Mr. BOUNCER, "Giglamps," and "Four-in-hand" FOSBROOKE, you remember, got hold of a youth who was searching for the entrance

Digitized by Google

THE NATIONAL WEEKLY

examination authorities, told him *they* were those authorities, and set him to work on the following "phony" test in "History, Euclid, Arithmetic, and Algebra":

1. Draw a historical parallel (after the manner of Plutarch) between Hannibal and Annie Laurie.

2. Show the probability of the College Hornpipe having been used by the students of the Academia, and give passages from Thucydides and Tennyson in support of your answer.

3. Give a brief account of the Roman emperors who visited the United States, and state what they did there.

4. Draw a parallel between the Children in the Wood and Achilles in the Styx.

5. Name the prima donnas who have appeared in the operas of Virgil and Horace since the "Virgilii Opera" and "Horatii Opera" were composed.

6. If one side of a triangle be produced, what is there to prevent the other two sides being brought forward?

7. In equal circles, equal figures from various squares will stand upon the same footing.

8. If two parts of a circle fall out, the one part will cut the other.

9. If seven horses eat twenty-five acres of grass in three days, what will be their condition on the fourth day? Prove by practice.

10. If an Austrian florin is worth 5.61 francs, what will be the value of Pennsylvania bonds? Prove by rule-of-three inverse.

11. If a coach wheel, 6 5-39 in diameter and 5 9-47 in circumference, makes 240 4-19 revolutions in a second, how many men will it take to do the same piece of work in ten days?

Is there anyone in whom that last question does not awaken poignant memories? And yet, to live those days over again, you'd be willing to undergo more than a few examination papers.

Common Sense in Canada

AUTOMOBILE regulations in the Province of Quebec impose a fine of $100 for the first offense and $200 for the second, with imprisonment for one or two months, for any person who, while intoxicated, drives an automobile. It is understood that the Canadians enforce this provision. The bells, horns, and other signaling devices must not be used in Quebec except as a warning of danger, and then not in such a way as to make a "harsh, objectionable, or unreasonable noise" except in the case of fire or police vehicles or ambulances. Even these, we suspect, are not expected to make "unreasonable" noises. The Quebec laws provide that every motor vehicle shall carry a muffler and that it shall not be cut out "in any public park or public highway." The muffler cut-out used to be recognized as the stigma of the cheap car, but since the cheap cars have been so perfected, it now merely advertises the cheap driver. The intoxicated driver is entitled to no leniency. The noisy horn is an excuseless nuisance. Altogether, one sometimes yearns to see the United States annexed to Canada.

A Free Ad

IF ANYONE were to rush up to us and ask what high-brow periodical comes nearest now to filling the place of the old "Atlantic Monthly" in its palmy days, we should promptly reply: "The Yale Review."

"Smiling Images"

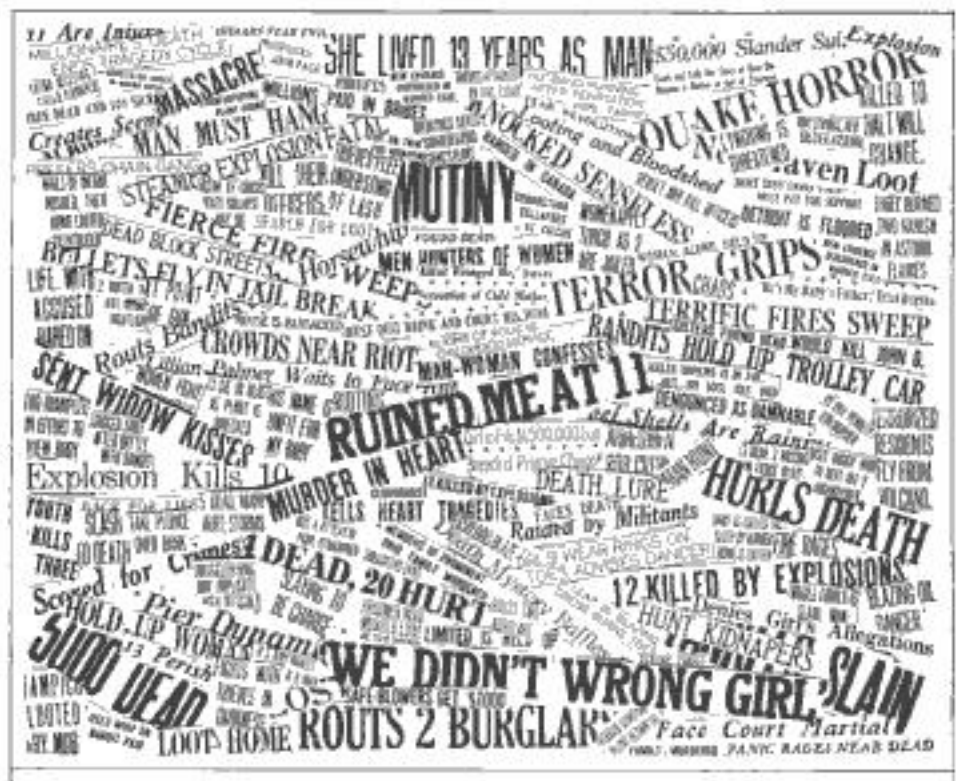
WE FLAYED—in a recent paragraph—the man who is nothing. But, even with the aid of ROLLAND'S "Jean-Christophe," we made no more complete job of it than STEVENSON once did in four sentences:

> It is better to be a fool than to be dead. It is better to emit a scream . . . than to be entirely insensible to the jars and incongruities of life, and take everything as it comes in a forlorn stupidity. Some people swallow the universe like a pill, they travel on through the world, like smiling images pushed from behind. For God's sake, give me the young man who has brains enough to make a fool of himself!

Here is one of the most tremendous indictments ever penned against the human zero. Remember this: a corpse is the only absolutely blameless thing in the world—and the least effective. DANTE dedicated a special circle of his Inferno to such as these. The one unforgivable sin is—not to sin—but to lead a posthumous life.

The Saloon, 2000 B. C.

THE REPUTATION of the saloon is by no means modern. In the Code of Hammurabi, promulgated nearly four thousand years ago, appears this decree:



> If outlaws collect in the house of a wine seller, and he do not arrest these outlaws and bring them to the palace, that wine seller shall be put to death.

Newspapers Then and Now

NOW, of the headlines reproduced on this page, **all were clipped from newspapers published at Los Angeles, Cal.,** within a period of five days. They represent almost every form of violence, crime, scandal, and sex degeneracy. The question is asked: Can this showing be matched by other cities, or is Los Angeles worse served than other American towns? The question is addressed to us by MARY RECKER CASE, who adds:

> LOS ANGELES used to have self-respecting newspapers. When Mr. HEARST entered the afternoon field with his "Herald" and began to fight for circulation by ultrasensational methods, the other papers seemed to lose their heads. Present conditions are due to competition of the editors not to be outdone by Mr. HEARST.
>
> Mr. Editor, Colorado may need soldiers, but Los Angeles needs a brigade of fumigators and a regiment of evangelists.

Undoubtedly HEARST has done more to cheapen journalism and degrade the public than any other newspaper man ever born into this country of ours. Now and again his editorials are on the right side of some great question (as when they attack the drink curse), but in general his great wealth and the intelligences and energies which it buys work for demoralization rather than uplift. Traitorous to truth and to individuals, mud-slinging and muck-spreading, HEARST'S fingers are busy in corrupt political bargains, in demagogy, in jingoistic imperialism, in fomenting wars and the war spirit. HEARST, in the twentieth century, befriends those who war on inoculation against smallpox and typhoid fever; he fights that medical experimentation which is conquering disease and sparing human life. He plays upon ignorance and prejudice, and prints, alongside news reports of human nature at its lowest and foulest, advertisements of harmful patent medicines such as cheat his readers out of money and health, or hope of health. But HEARST'S baleful influence has not been confined to the public that reads his muddy newspapers; it has reached a greater public through that part of the press which has imitated his methods in madly seeking to compete with HEARST in degradation. Fortunately for America, the best, the most effective, portion of the contemporary press finds it possible to maintain higher ideals and to practice purer ethics without forfeiting either vigor or success. JAMES KEELEY, the cockney boy who has made the Chicago "Tribune" what it is, and who has now fused HINMAN'S bankrupt "Inter Ocean" and the "Record-Herald," and is making them over into a great journal destined perhaps to be this country's most influential newspaper—JAMES KEELEY sees farther than HEARST, and has in his field a greater triumph and a more real influence. And KEELEY is only one newspaper man. The Hearst formula is waning. The man, the issue, for which HEARST stands is, generally speaking, foredoomed to fail. CHAMP CLARK and the Panama Canal subsidy are the latest examples of this tendency, but the examples are infinitely various. Men distrust HEARST and his hirelings. And American journalism will be an increasingly constructive force for righteousness and justice as time goes on; already it has rising standards of honesty and decency and service. DR. WASHINGTON GLADDEN has told the Lawrence (KAS.) Newspaper Conference that the newspaper profession is "as sacred" as the minister's. But journalism, too, is a ministry; and DR. GLADDEN is looking (as always) not behind, but ahead.

The Headlines Los Angeles Can't Miss

All these were clipped from five days' issues of Los Angeles newspapers — most of them from the first page

Summer Days are Overland Days

IF there ever was one particular time of the year when you actually are in need of one of these big, comfortable, powerful cars it certainly is right now when the red hot sun bakes you into a state of extreme and excessive perspiration, pessimism and discontent.

Suppose you wanted to get to the seashore quick—or the country club, woods, mountains, lake, river or wherever that favorite cool spot is—do you know of a better way for instant relief, rest recreation?

Trolleys and trains are crowded, s tedious, tiresome and unhealthy. —how different with an Overland! the family in—smoothly spin along breeze-creating rate of from fifte twenty miles an hour, and you inst become an optimist in the most p ful sense of the word. All the seems changed!

Handsome Catalogue on Request—Please Address Department 6

The Willys-Overland Company, Toledo, Ohio **$950** Complet Prices f.

THE WILLYS-OVERLAND OF CANADA, Limited, Hamilton, Ont.

COLES PHILLIPS

A few minutes in an Overland cools, refreshes, stimulates and invigorates. What is more it takes you in comfort, style and safety, without any loss of time or annoying inconveniences. Your temperature and temper slip back to normal in a jiffy.

Cost?

Not anything like you imagine. Here's the way to figure it out. An Overland lasts for years. Spreading the cost over a period of years makes the cost per year less than the expense of your present annual and probably commonplace vacation. Yet see how much more you get!

As the Overland costs 30% less than any other car of similar specifications it is the most logical and economical car for you to buy. Dealers everywhere. Suppose you step in and talk with one today.

Brief Specifications:

Electric head, side, tail and dash lights
Storage battery
35 horsepower motor
33 x 4 Q. D. tires
114-inch wheelbase
Mohair top, curtains and boot
High-grade speedometer
Clear-vision, rain vision, windshield
Electric horn

Toledo **$1075** With Electric Starter and Generator

CANADIAN PRICES f. o. b. Hamilton, Ont. **$1250** Completely Equipped **$1425** With Electric Starter and Generator

Norris—and His Type

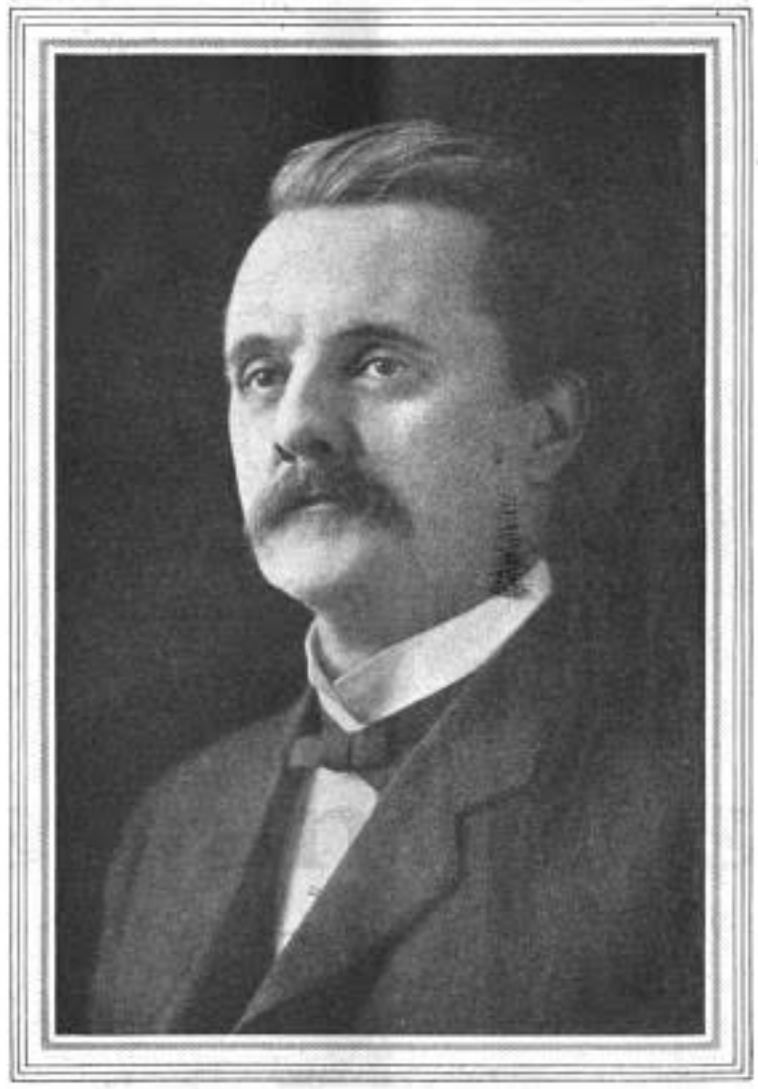
By E. G. Lowry

THIS is a Congress of average men. It is lacking in intellectual promontories, jutting headlands, or towering peaks. Like the simple annals of the poor, or the mean average rainfall or the least common multiple or the greatest common divisor, it tends toward monotony of effect. To put it in cloudier phrase, some of the members of Congress are better equipped than others, but few of them are less well equipped than the average of their colleagues. There is not a single striking intellectual leader in either branch; no man who by common consent stands out from the crowd, unless it be Oscar Underwood, in the House.

Old Demos the Leveler

THIS condition has come about through a natural process of evolution. It is a result of the change that has taken place in the political life of the United States in the past dozen years. It has come about naturally. Ever since I have known anything about Congress from a personal daily contact with its members and its proceedings, the House has been truly representative of the political life of the United States. Even in the days of the Cannon régime the House was a faithful reflection in miniature of the political conditions and of the state of political morality that obtained throughout the United States. Now the Senate has become representative. Half a dozen years ago there was a marked difference between the House and the Senate. The two bodies were controlled by different principles and different motives. Now they are virtually alike.

George William Norris, junior Senator from Nebraska, is a typical member of the present Congress. I choose to put a piece in the paper about him because I know him better and know more about him than I do about some of the others who might serve equally well for present purposes of illustration. If his interests and his springs of action can be set forth with any degree of definiteness, they will provide a key for the understanding of the present membership of the two branches of Congress. Norris is not only a typical member of Congress, but he might also be called a typical average American citizen.



Under the Pure Food Law red wine made in California can no longer be called Burgundy, but must be labeled "Burgundy type." In a way of speaking, the endeavor here is not so much to make a sketch of Norris as to describe the Norris type.

Perhaps before going any further it may be necessary to identify Norris by associating him with his principal achievement in Congress. By virtue of the fact that he received twenty-two more votes than his Democratic opponent he sat in the Sixty-first Congress as the Representative from the Fifth District of Nebraska. On a Saturday in March, in the second session of that Congress, he carried a resolution causing the rules of the House to be changed in an important and essential particular. He pulled down Cannon and the Cannon régime. He diverted from the office of the Speaker a great share of his power and he shook and humbled and defeated Mr. Cannon after a series of dramatic and exciting scenes such as are not witnessed in the House once in a generation.

The Type's Strong Characteristics

GET on any train in the corn and hog States anywhere between Chicago and Lincoln, Neb., and you will find a dozen men like Norris. They are church members, don't drink, probably have a Sunday-school class at home, and smoke five-cent cigars with a relish which is the truest and surest visible manifestation among adult males of real leaders of the simple life. They have a fair first-hand grasp of the simple elements of public affairs and a rough working knowledge of national governmental machinery and procedure. They do not know the subtleties and chicanery and wheels within wheels of politics as it is played in the East.

There aren't many men like Norris in the large Eastern cities—at least not in politics. But in the Middle West they have become in recent years the dominant type. They are plain, simple people, who have worked hard all their lives, and who have known what it is to be poor, but not the squalid, sordid poverty of the congested East, that kills hope and crushes the life and strength and self-respect out of men. I should say that the strongest characteristics of men of the Norris type (it seems impossible to differentiate him in any way from the type) is a strong and active feeling of fellowship. They are marked by a notable desire to be helpful to those who have not been so fortunate. As nearly as possible they want everyone to share and share alike the common privi-

In the hog States you will find a dozen of the type: Church members who don't drink but do smoke five-cent cigars and carry horse sense into politics

leges of human society. They are good, useful citizens; there is no getting around that. Not "prominent citizens," but useful citizens. There is a world of difference between the two kinds.

Norris has had a career that has become almost conventional in the United States. He was born on a farm in Sandusky County, Ohio, in 1861, and spent all of his early life on the farm where he was born. He learned what real, honest, grubbing work was at an age when more carefully nurtured "modern" children are being taught to cut out paper flowers and truncated cones in kindergartens. His father died when he was a small child, his only brother was killed in the Civil War, and his mother was left in straitened circumstances. Young Norris "worked out" among the neighboring farmers by the day and month during the summer and attended district school during the winter. He acquired enough of an education to become a schoolteacher and moved West. He lived in several of the Far Western and Northwestern States, and taught school in abandoned barns and chicken houses and other queer shacks that he had to fit up with his own hands to make suitable for schoolrooms.

By what wizardry of finance this young itinerant school-teacher saved enough money to come back to Ohio and pay his way through Baldwin University at Berea, Ohio, and the Northern Indiana Normal School at Valparaiso, Ind., even he cannot now explain. But he did, and later studied law while teaching and was admitted to the bar in 1883. Two years later he went to Nebraska and settled at McCook. He was three times prosecuting attorney of his county, and twice elected a district judge for a four-year term. He was on the bench when he was nominated to the Fifty-eighth Congress in 1899. He has been continuously in Congress, in the House and Senate, since that time.

He Is Plain and Unspoiled

IN HIS manner, in his processes of mind, and in his mode of living, he is as simple, as plain, as direct, and as unassuming as when he was teaching the three R's in Idaho. He knows more, of course, than he did then. His mind is more mature and has broadened. His convictions, however, for the main part, are based on what he has personally known and seen, and not on deductions from wide reading. He is not afraid to think and do for himself, because he has never known anything else.

He became an "insurgent" as soon as such a movement as "insurgency" became known in the House of Representatives. He did not rebel against the authority of the Cannon group because of sentiment in his home district. Indeed, it was the other way about. He had to educate his constituency to accept his views. It must be said to his credit that he never sought publicity or notoriety in connection with the movement in the House even after it reached its highest tide and accomplished its first actual important achievements under his leadership. Norris did not aspire to limelight and "leadership." One of the aims of insurgency was to eliminate such "leadership" as it was then practiced, and as the term was then understood.

The Decent Average

NORRIS is of average size, well-muscled and wiry. He is very quiet in his manner, with an open, frank, friendly face. His hair is beginning to gray. When one comes to try to describe him one sees that there isn't an extraordinary thing about him. He is the average American, born of clean stock in a farming country, who has lived all of his life upon a plane of perfect equality and upon terms of absolute democracy with his neighbors. One of the interesting things about the "insurgency" movement was that its propulsive force and motive power came from average men. It was an average man's movement. Though nobody phrased it so, it became more and more impressive as a groping after an equitable diffusion of responsibility in self-government. Within its own natural limitations it was a sort of reaching out for the old town-meeting plan applied to national affairs.

Norris was in no hurry to reorganize the House overnight. He bided his time. The resolution which he introduced enlarging the Rules Committee had been carried about in his pocket for months while he awaited an opportune chance that seemed to spell success. Let him tell again, and in his own words, what he and his fellows were driving at:

"The insurgents in the House of Representatives were fighting a system, and not individuals. 'Cannonism' was no individual, but a machine. It went deeper and far beyond any personality. The Speaker was the head of a political organization of which he was only the instrument—the means—by which its will was carried out. The Speaker derived all his power from the rules of the House. The particular source of that power which gave him influence in controlling legislation greater than was possessed by any other person, excepting alone the President, was that rule which authorized him to select the standing committees of the House.

"A member cares more for a good committee appointment than for anything else connected with his political life. To get the desired place under the old order he had to have the favor of the Speaker, and to retain it had to obey the commands of the Speaker's machine. By this power the Speaker could reward those who were faithful, and at the same time punish those who refused to obey. This rule gave him the key to the pie counter and placed him in control of the political guillotine. In the palm of his mighty hand he held the political destiny of practically every member."

"George Made Good"

NORRIS came in for much praise for his modesty and for the skill with which he conducted the parliamentary fight when he succeeded in having the Rules Committee enlarged in March, 1910. As soon as the fight was won, he promptly and expressly disavowed any desire for a place on the enlarged committee. The whole House recognized that he was not fighting for personal preferment.

Norris represents the best type of man in the present Congress. No personal animus has been disclosed in anything that he has said or done. Whether right or wrong, to all appearances he is disinterested and striving for what he conceives to be the general welfare. Certainly that is about all we can ask of our public servants in this imperfect world. Norris could not by any use of the imagination be called, as the common phrase runs, a "big man." He lacks the broad vision, the thoroughly trained mind, and the controlled imagination that characterizes political giants, but he is honest and sincere and well-meaning; that is something.

At any rate, he has done what he set out to do, and made a clean job of it. His plan to depose Cannon was conceived in the public interest. As they said of him in his own town: "George made good on his proposition." Well, we all admire that in a man, don't we?

A Camera Reveals Some Wonders on the Floor of the Ocean

The first photograph of a deep-sea diver at work. It was taken at a depth of 50 feet

PHOTOGRAPHY is turning from its conquest of the air to search out the mysteries of the sea, and the subterranean wonders dreamed of by Jules Verne are the latest targets of pioneering camera men. The story of the first notable achievement in this work is told in the snapshots on this page. Captain C. Williamson of Norfolk, Va., invented a glass-windowed operating chamber in which photographers could be let down in the sea, and recently the device was put into practical use by his sons, J. E. and G. M. Williamson. The Williamson brothers went to the Bahama Islands and took 20,000 of film showing divers at work, some wonderful rock and vegetable formations, and a great variety of fish in their natural element. In the photograph above the motion-picture man is going down in a collapsible, flexible metal tube connecting the boat with the submerged chamber. Standing over him are J. E. Williamson (left) and G. M. Williamson.

A West Indian negro shark fighter, the most daring and skillful in the Bahamas, killing a big man-eater before the camera 30 feet under the water. He seized the fish by the fin with one hand and ripped it open with a knife in the other. Shark fighting is a popular sport in the West Indies and Central America

A Cure for Lumbago

(Continued from page 6)

"Yes, Chicago is a live town all right," said Small, "but about this golf proposition, now: I'm getting the hang of the thing, Colonel. If I didn't lose so many balls—"

"You have a fine, natural swing," said the Colonel in a tone soft as corn silk. "A trifle less power, my friend, and you will get better direction."

WELL, it was too much for me. I didn't care much for Small, but I hated to see him walk into ambush with his eyes open. I left him and the Colonel hobnobbing over their highballs, and went into the locker room, where I found Archie.

"Look here!" I said. "That old pirate is after your friend. Colonel Jimmy heard Small make that fool bet on the eighteenth tee, and you know what a leech he is when soft money is in sight. He's after him."

"So soon?" said Archie. "Quick work."

"Well, don't you think Small ought to be warned?"

Archie laughed.

"Warned about what?"

"Don't be more of an ass than usual, Archie. The Colonel has got him out there, telling him about Chicago. You know what that means, and a fellow that bets as recklessly as Small does—"

"I can't do anything," said Archie. "Small is of age."

"But you wouldn't let him go up against a cinch?"

"Small has been up against cinches all his life. That's how he made his money."

"That's how he'll lose it, too. I'll put a flea in his ear if you don't."

"Bill," said Archie, "I've made it a rule never to open my mouth in any gambling game unless my money was on the table. Understand? Then, whatever happens, there's no comeback at me. Think it over."

"But the man is your guest!"

"Exactly. He's my guest. If you see fit to warn him—" Archie shrugged his shoulders.

WELL, what could I say after that? I took my shower bath and dressed. Then I went into the lounging room. Small was, if anything, a trifle noisier than ever.

"Any game that I can bet on is the game for me," said he, "but I hate a piker. Don't you hate a piker, Colonel?"

"A man," said Colonel Jimmy, "should never bet more than he can afford to lose—cheerfully."

"Cheerfully. That's the ticket! You're a sport, Colonel. I can see it in your eye. You don't holler when you lose. Now, Colonel, what would you consider a good stiff bet, eh? How high would you go? This kindergarten business wouldn't appeal to either one of us, would it? You wait till I go around this course a few times and I'll make you a *real* bet—one that will be worth playing for, eh? What's the most you ever played for, Colonel?" It was like casting pearls before swine and he wasn't my guest, but I did what I could for him.

"Mr. Small," said I, "if you're going in to town there's room in my car for you."

"Thanks. I'm stopping here at the club. Archie fixed me up with a room. The Colonel is going to stay and have dinner with me, ain't you, Colonel? Surest thing you know! He's met a lot of friends of mine out West. Small world, ain't it? Going, eh? Well, behave yourself! . . . Now then, Colonel, gimme a few more days of this cow-pasture pool and I'll show you what a real bet looks like!"

I LEFT the wolf and the lamb together, and I don't mind admitting that I liked one as well as the other.

Business took me out of town for ten days, and when I returned home I was told that Archie had been telephoning me all the morning. I rang him at his office.

"Oh, hello, Bill! You're back just in time for the big show. . . . Eh? Oh, Colonel Jimmy is due for another attack of lumbago this afternoon. . . . Small telephoned me last night that he was complaining a little. . . . The goat? Why, Small, of course! The clumsiest boy is playing alone these days; better pickings elsewhere. . . . Yes, you oughtn't to miss it. See you later. 'Bye."

NOW, very little happens at Meadowmead, in the clubhouse or on the links, without David Cameron's knowledge. The waiters talk, the steward gossips, the locker-room boys repeat conversations which they overhear, and the caddies are worse than magpies. David, listening patiently and rubbing his ear, comes by a great deal of interesting information. I felt certain that he would have a true line on the wool market. I found him sitting in front of his shop. He was wearing a collar and tie, which is always a sign that he is at liberty for the afternoon. "You're dressed up today, David," said I.

"Ay," said he, "I'm thinkin' I'll be a gallery."

"Is there a match?"

"I'll make you a business proposition, Colonel. Double or quits on the last hole?"

"Ay, a money match. The ter-rms were agreed on at eleven this mornin'. The Cur-rnel is gruntin' an' groanin' with the lumba-ago again. Muster Small has taken a cruel advantage of the auld man. A cruel advantage."

"What are they playing for?" I asked.

David rolled his eyes full upon me and regarded me steadily without blinking.

"A thousan' dollars a side," said he quietly.

"*What?*"

"Ay. Posted in the safe. Muster Small wanted to make it for two. It was a compr-romise."

"But, man, it's highway robbery! One thousand dollars!"

David continued to look at me fixedly.

"Do ye ken, Muster Bell," said he at last, "that's precisely what I'm thinkin' it is mysel'—juist highway robbery."

"What handicap is he giving Small?"

"None. Muster Small wouldna listen to it. He said the Cur-rnel was a'ready handicapped wi' auld age, lumba-ago, an' cauld feet. His remarks were quite personal, ye'll understand, an' he counted down the notes on the table an' bletherred an' howled an' reminded the Cur-rnel that he had lost three hunder to him the last week. The auld gentleman was fair be-damned an' bullied into makin' the match, an' he was in such a towerin' rage he could scarce write a check. . . . Ay, I'm thinkin' it will be a divertin' match to watch."

ARCHIE arrived just as Small and Colonel Jimmy started for the first tee. We formed the gallery, with David Cameron trailing along unobtrusively in the rear, sucking reflectively on a briar pipe. The Colonel gave us one look, which said very plainly that he hoped we would choke, but thought better of it and dropped back to shake hands and explain his position in the matter.

"Pretty stiff money match, isn't it, Colonel?" asked Archie.

"And surely you're not playing him even!" said I. "No handicap?"

Colonel Jimmy had the grace to blush; I wouldn't have believed he knew how. I suppose if you should catch a wolf in a sheepfold the wolf would blush too—not because he felt that he was doing anything wrong by his own standards, but because of the inferences that might be drawn from the wool in his teeth. The Colonel didn't in the least mind preying on lambs, but he hated to have a gallery catch him at it. He hastened to explain that it was all the lamb's fault.

He said that he found himself in an unfortunate situation because he had allowed his temper to get away from him and had "answered a fool according to his folly." He blamed Small for forcing him into a position where he might falsely be accused of taking an unfair advantage. He whined pitifully about his lumbago—the worst attack he remembered—and earnestly hoped that "the facts would not be misrepresented in any way." He also said that he regretted the entire incident and had offered to call off the match, but had been grossly insulted and accused of having cold feet.

"It isn't that I want the man's money," said he, "but I feel that he should have a lesson in politeness!"

ON the whole, it was a very poor face for a wolf to wear. He groaned some more about his lumbago, which he said was killing him by inches, and went forward to join Small on the tee.

"The old pirate!" said Archie. "He wasn't counting on any witnesses, and our being here is going to complicate matters. Did you get what he said about hoping the facts would not be misrepresented? He's wondering what we'll tell the other members, and for the looks of the thing he won't dare rook Small too badly. Our being here will force him to make the match as close as he can."

"Yes," said I, "there ought to be some pretty fair comedy."

Small came over to us while the Colonel was teeing his ball. He looked bigger and rawer than ever in white flannel, and he didn't seem in the least worried about his bet. He was just as offensive as ever, and I could appreciate the Colonel's point about giving him a lesson in politeness.

AS early as the first hole it became evident—painfully so—that Colonel Jimmy was out to make the match a close one at any cost. It would never do to give Small the impression that his pockets had been picked. In order to make him think that he had had a run for his money, the Colonel had to play as bad golf as Small—and he did it, shades of Tom Morris and other departed golfers, he did it!

Bad golf is a depressing spectacle to watch, but deliberately bad golf, cold-blooded, premeditated and studied out in advance, is a crime, and that is the only word which fits Colonel Jimmy's shameless exhibition. His only excuse was that it needed criminally bad golf to make the match seem close. The old fellow's driving was atrocious, he stopped and flubbed his iron shots in a disgusting manner, and his putting would have disgraced a blind man. Lumbago was his alibi, and he worked it overtime for our benefit. After every shot he would drop his club, clap his hands on his back, and groan like an entire hospital ward.

The only noticeable improvement in Small's playing was that he managed somehow or other to keep his ball on the course, though the lopsided, thumb-handed, clubfooted way he went at his shots was enough to make angels weep. Then, too, he didn't have so much to say and didn't yell after he hit the ball.

THIRTEEN holes they played, and I venture the statement that nothing like that match has ever been seen since the time when golf balls were stuffed with feathers. By playing just as badly as he knew how, getting into all the bunkers, and putting everywhere but

The Men Who Flirt With Death

Racing automobile drivers take their lives in their hands every time they enter a race—and the greatest risk they run is that of friction.

Think of the tremendous strain put on every bearing, the enormous heat generated. Let one little bearing get dry and—Zing!—Mr. Driver keeps right on going to the Pearly Gates.

What is the safeguard?

DIXON'S Graphite Lubricants

Every well-informed racing driver lubricates his car with Dixon's Graphite Lubricants. He knows that the bearings, when so lubricated, are safe.

One of the foremost racing drivers in America was offered $500 in cash to use a certain lubricant, and the reply was, "No, I would rather pay $5 per pound for Dixon's Graphite Lubricants than use any other as a gift."

Dixon's Graphite Lubricants have as a basis Dixon's selected flake graphite, the only form of flake graphite that will successfully lubricate an automobile without packing or balling up the bearings. The Joseph Dixon Company are the only producers in the world of this peculiar form of flake graphite. Try out

DIXON'S Graphite Grease 677 for Transmissions and Differentials

on your own car and see for yourself what a difference it makes in mileage and smoothness of running. Dealers who sell real service know and recommend Dixon's Graphite Greases. Equally good for motor cars and motor boats.

Write for "Words of Wisdom from the Speed Kings" and the Dixon Lubricating Chart.

The Joseph Dixon Crucible Company

Jersey City, N. J.

Established in 1827

straight at the cup, Colonel Jimmy arrived on the fourteenth tee all square with Small. They had each won two holes; the others had been halved in scandalous figures.

I COULD tell by the way the Colonel messed the fourteenth hole that he wanted to halve that too. He certainly didn't try to win it. Small's fifth shot was in the long grass just off the edge and to the right of the putting green. Colonel Jimmy laid his sixth within three feet of the cup.

"Boy, give me that shovel!" said Small, and the caddie handed him a niblick. It wasn't really a bad lie, but the ball had to be chopped out of three inches of grass.

"In a case of this kind," said Small, "I guess you trust to luck, what?" He played a short chop shot and the ball went hopping toward the pin, hit the back of the cup with a plunk, and dropped for a six. Of course it was a pure accident.

"Fluke!" said Colonel Jimmy, rather annoyed.

"Sure!" said Small. "But it wins the hole just the same!"

I knew then that the comedy was over for the day. Four holes remained to be played, and the Colonel was one down. It was never his policy to leave anything to chance. He would run the string out at top speed. David Cameron came up from the rear.

"They'll play golf from here in," he whispered.

"They!" said I. "One of 'em will!"

"Do ye really think so?" said David.

OUR Number Fifteen is 278 yards long, over perfectly level ground. There are bunkers to the right and left of the putting green and a deep sand trap behind it. It is a short hole, but the sort of one which needs straight shooting and an accurate pitch. Of all the holes on the course, I think it is the Colonel's favorite.

"My honor, eh?" said Small. "That being the case, I guess I'll just rap it out of the lot!"

He didn't bother to measure the distance or take a practice swing. He didn't even address the ball. He walked up to it and swung his driver exactly as a man would swing a baseball bat—tremendous power but no form whatever—and the wonder is that he hit it clean. A white speck went sailing up the course, rising higher and higher in the air. When the ball stopped rolling it was 200 yards from the tee and on a direct line with the pin.

"Beat that!" said Small.

Colonel Jimmy didn't say anything, but he grunted whole volumes. It takes more than a long drive to rattle that old reprobate. He whipped his ball 200 yards down the course and stepped off the tee so well satisfied with himself that he forgot to groan and put his hands on his back. Small laughed.

"Lumbago not so bad now, eh?" said he.

"I—I may be limbering up a bit," said the Colonel. "The long drive isn't everything, you know; it's the second shot that counts!"

"All right," said Small. "Let's see one!"

COLONEL JIMMY studied his lie for some time and went through all the motions, but when the shot came it was a beauty—a mashie pitch which landed his ball five feet from the cup.

"Beat that one!" said he.

"I'll just do that thing!" said Small. And he did. Of course he had a short approach, as approaches go, but even so I was not prepared to see him play a push shot and rim the cup, leaving his ball stone dead for a three. Colonel Jimmy was not prepared to see it either, and I have reason to believe that the push shot jarred the old rascal from his rubber heels upward. He went about the sinking of that five-foot putt with as much deliberation as if his thousand dollars depended on it. He sucked in his breath and got down on all fours—a man with lumbago couldn't have done it on a bet—and he studied the roll of the turf for a full minute—studied it to some purpose, for when he tapped the ball it ran straight and true into the cup, halving the hole.

"You're getting better every minute!" said Small. "I'm some little lumbago specialist, believe me!"

Colonel Jimmy didn't answer, but he looked thoughtful and just the least mite worried. One down and three to go for a thousand dollars—it's a situation that will worry the best of 'em.

Number Sixteen was where the light dawned on me. It is a long, tricky hole—bogey 6, par 5—and if the Colonel hadn't made another phenomenal approach, laying his ball dead from fifty yards off the green, Small would have won that too. They halved in fives, but it was Small's second shot that opened my eyes. He used a cleek where most players would try a brassie, and he sent the ball screaming toward the flag—220 yards—and at no time was it more than ten feet from the ground. I was behind him when he played, and I can swear that there wasn't an inch of hook or slice on that ball. The cleek is no club for a novice. I remembered the niblick shot on the fourteenth. That was surely a fluke, but how about the push shot on fifteen? English professionals have written whole books about the push shot, but mighty few men have ever learned to play it. Putting that and the cleek shot together, the light broke in on me—and my first impulse was to kick Archie MacBride.

I DON'T know who Colonel Jimmy wanted to kick, but he looked as if he would relish kicking somebody. He had been performing sums in mental addition, too, and he got the answer about the same time that I did.

"It's queer about that lumbago," said Small again.

"Yes," snapped the old man, "but it's a lot queerer the way you've picked up this game in the last two holes!"

"Well," and Small laughed, "you remember that I warned you I never could play for piker money, Colonel—that is, not very *well*."

Colonel Jimmy gave him a look that was all wolf—and cornered wolf at that. He answered Small with a nasty sneer.

"So you can't play well unless big money is bet, eh? That is exactly what I'm beginning to think, sir!"

"At any rate," said Small, "I've cured your lumbago for you, Colonel. You can charge that thousand to doctor bills!"

Colonel Jimmy gulped a few times, his neck swelled and his face turned purple. There wasn't a single thing he could find to say in answer to that remark. He started for the seventeenth tee, snarling to himself. I couldn't stand it any longer. I drew Archie aside.

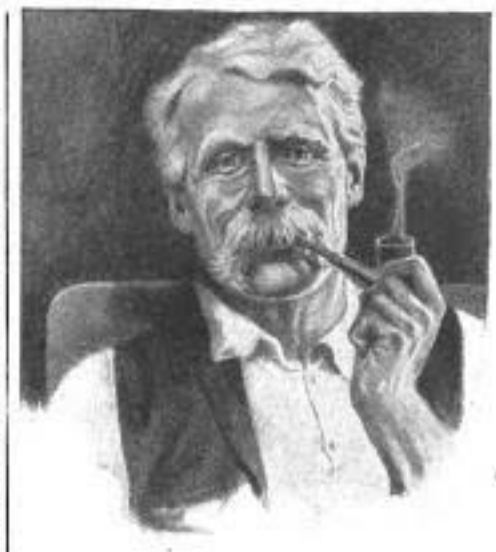
"I think you might have told me," I said.

"Told you what?"

"Why, about Small—if that's his name. What have you done? Rung in a professional on the old man?"

"Professional, your grandmother!" said Archie. "Small is an amateur in good standing. Darned good standing. If the Colonel knew as much about the Middle West as he pretends to know, he'd have heard of Small. Wonder how the old boy likes the Chicago method of shearing a pig?"

THE old boy didn't like it at all, but the seventeenth hole put the crown on his rage and mortification. Small drove another long straight ball, and after the Colonel had got through sneering about that he topped his own drive, slopped his second into a bunker, and reached the green in five when he should have been there in two. I thought the agony was over, but I didn't give Small credit for cat-and-mouse tendencies.



"In order to get all the good out of this lumbago treatment," said he, "it ought to go the full eighteen holes." Then, with a deliberation that was actually insulting, he played his second shot straight into a deep sand trap. I heard a queer clucking, choking noise behind me, but it was only David Cameron doing his best to keep from laughing out loud.

"Muster Small is puttin' the shoe on the other foot!" said David. "Ay, it's his turn to waste a few now."

"Cheer up, Colonel!" said Small. "You fooled away a lot of shots early in the match—on account of your lumbago, of course. I'm just as generous as you are when it comes to halving holes with an easy mark." To prove it Small missed a niblick shot a foot, but pitched out on his fourth, and, by putting all over the green, finally halved the hole.

WHEN Small stood up on the eighteenth tee for his last drive he looked over at the Colonel and nodded his head. "Colonel?" said he.

Colonel Jimmy grunted—rather a profane grunt, I thought.

THE AFTER-SUPPER PIPE

Thar's a hour in th' evenin'
That seems to crown th' day,
Sorter smoothes out all th' wrinkles
An' chases care away,
An' lets in glad contentment
Wharever shadders lay—
It's th' hour of the after-supper pipe.

It's a time when soldiers gather
'Round th' far camp fires bright,
An' th' soldiers in life's battle,
Weary with a hard day's fight,
Join th' million other fellers
That are settin' down tonight,
To a restful, peaceful after-supper pipe.

Velvet Joe

WHEN you light *your* after supper pipe tonight, think of the thousands of men who are finding rest and peace after a good day's work, and are joining you in the free-masonry of a pipe of VELVET. Flash these other good fellows a "Luck to you, old man"—via VELVET wireless!

VELVET is the Smoothest Smoking Tobacco. Taste the aged-in-the-wood mellowness of VELVET, the Kentucky *Burley de Luxe*, cured by more than 2 years' ageing.

The Van Camp Way

We *Don't* Bake Beans Like Mother's

Pies "like mother used to bake" may be the ideal pies. But not her Beans.

Mother's Beans were almost indigestible.

Some were hard and some mushy, some crisped and some soggy. For mother lacked all of the modern facilities.

Contrast them with Van Camp's Beans, in the year 1914. A famous food expert selects the materials. Chemists test them by analysis. Then master chefs prepare them.

Tomatoes are specially grown for the sauce, and picked when ruddy red. Modern steam ovens bake the sauce and the beans together.

Note the result. Beans mellow and whole, uncrisped and unbroken. A zest that's irresistible. The old commonplace dish—the old once-a-week dish—has become the daily delicacy. And Science, for the first time, gives this dish its approval.

VAN CAMP'S
PORK & BEANS BAKED WITH TOMATO SAUCE
Also Baked Without the Sauce

10, 15 and 20 Cents Per Can

Come to modern cookery. We know things now, in every line, undreamed of in the old days. Cucumbers are as much like melons as Van Camp's are like old-time Beans.

Experts, scientists, chefs and inventors have been working 20 years on Van Camp's Pork and Beans. And no other kitchen in all the world produces an equal dish.

It comes to you ready-baked. Heat it in the can and it comes to your table with all the fresh oven flavor. Keep the pantry shelf filled with it, and dinners and luncheons are ready any time.

And you buy this perfection—all this skill and this quality—for only three cents per serving. Go and compare it with the Beans you know. Let your own good sense—your own good taste—prove the wisdom of Van Camp's.

You'll never find anything like it.

Buy a can of Van Camp's Beans to try. If you do not find them the best you ever ate, your grocer will refund your money.

(357)

"Dormie!" said Small.

"Confound it, sir! You talk too much!"

"So I've heard," said Small. "I'll make you a business proposition, Colonel. Double or quits on the last hole? I understand that's what you do when you're sure you can win. Two thousand or nothing? . . . No? Oh, all right! No harm done, I suppose?"

COLONEL JIMMY had a burglar's chance to halve the match by winning the last hole, and he fought for it like a cornered wolf. They were both on the green in threes, Small ten feet from the cup and the Colonel at least fifteen. If he could sink his putt and Small should miss his, the match would be square again.

The old man examined every blade of grass between his ball and the hole. Three times he set himself to make the putt, and then got down to take another look at the roll of the green—proof that his nerve was breaking at last. When he finally hit the ball it was a weak, fluttering stroke, and though the ball rolled true enough, it stopped four feet short of the cup.

"Never up, never in!" said Small. "Well, here goes for the thousand-dollar doctor bill! Lumbago is a very painful ailment, Colonel. It's worth something to be cured of it." Colonel Jimmy didn't say a word. He looked at Small and then he turned and looked at MacBride. All his smooth and oily politeness had deserted him; his little tricks and hypocrisies had dropped away and left the wolf exposed—snarling and showing his teeth. I thought that he was going to throw his putter at Archie, but he turned and threw it into the lake instead—into the middle, where the water is deep. Then he marched into the clubhouse, stiff as a ramrod, and so he missed seeing Small sink his ten-foot putt.

"An' ye were really surprised?" said David Cameron to me.

"I was," said I. "When did you find it out, David?"

"Come out to the shop," said the professional. He showed me a list of the players rated by the Western Golf Association. A man by the name of Small was very close to the top—very close indeed.

WE don't know whether the Colonel is going to lay the case before the committee or not. If he does, we shall have to explain why he has not had an attack of lumbago since.

Money and the Movies

(*Continued from page 12*)

show" at the cross-roads hamlet to the $1,000,000 Broadway palace, unfold the wonders of the films every day. No phase of a living industry replete with startling change is more packed with human interest than this one.

The original exhibitors were a motley lot—peddlers, artisans, showmen, and amusement soldiers of fortune—all drawn to what seemed to be a new way to turn a quick dollar. But that dollar, in many instances, sprouted into a fortune because the soil on which it fell proved to be a miracle field. Likewise some of these early exploiters, as you shall now see, have become monarchs of the movies. Two cases, a one-time clothing clerk who became a producing magnate and an erstwhile vender of slot-machine diversion who emerged as king of exhibitors, will illustrate a romantic evolution almost without precedent in modern business. One day back in the eighties a poor German lad landed from the steerage in New York. After being stranded for weeks he got in touch with a brother in Chicago; joined him there and worked as messenger, wrapper, and finally clerk in various stores. Then he became manager of a retail clothing establishment in Oshkosh and rendered such a good account of himself that he was given a share of the profits. He saved up a few thousand dollars and decided to start a 5 and 10 cent store somewhere. With his money in his pocket he went to Chicago to look over the field.

John Bunny

On a rainy afternoon he thought he would seek some diversion. Walking down State Street near the Palmer House he saw a lurid sign advertising a motion-picture show whose admission fee was 5 cents. Anything with the nickel label interested him at that moment, so he went inside and thus for the first time Carl Laemmle looked upon the marvel of the animated picture. He remained all the afternoon and was deeply impressed. As he went out he said to himself: "This is the biggest nickel's worth I ever got."

Somehow the proposition appealed to him. Here might be just the chance his savings were clamoring for. Then he did a characteristic thing, for he said:

"I'll just see how many people pay money to go into this show." So he stationed himself on the curb and with a pencil kept record on the back of an envelope of the number of patrons that streamed in between six and nine o'clock. He was amazed at the stream of nickels that poured in.

"Here is the business for me," he declared. Early the next morning he went around to see his only friend in Chicago, R. H. Cochran, who was then conducting the advertising agency that had handled some business for the Oshkosh firm. In great excitement Laemmle rushed up to him and said:

"I've struck a great business. There are millions in it!" Then he told about the picture show. Of course Cochran laughed at him, but Laemmle persisted. That very day he hired a small store over on Milwaukee Avenue, started a picture show, and the profits for the first week were $150. This was the basis of one of the great fortunes of the motion-picture business of to-day. Two weeks after he had set up shop Laemmle had a second show in operation. Soon he turned to the establishment of an exchange, and in a year had a whole string of them. When the trust put a stop to his supply he started to produce, and out of his revolt grew part of the whole independent movement, of which the Universal Film Company was one concrete expression. He is now head of this huge enterprise.

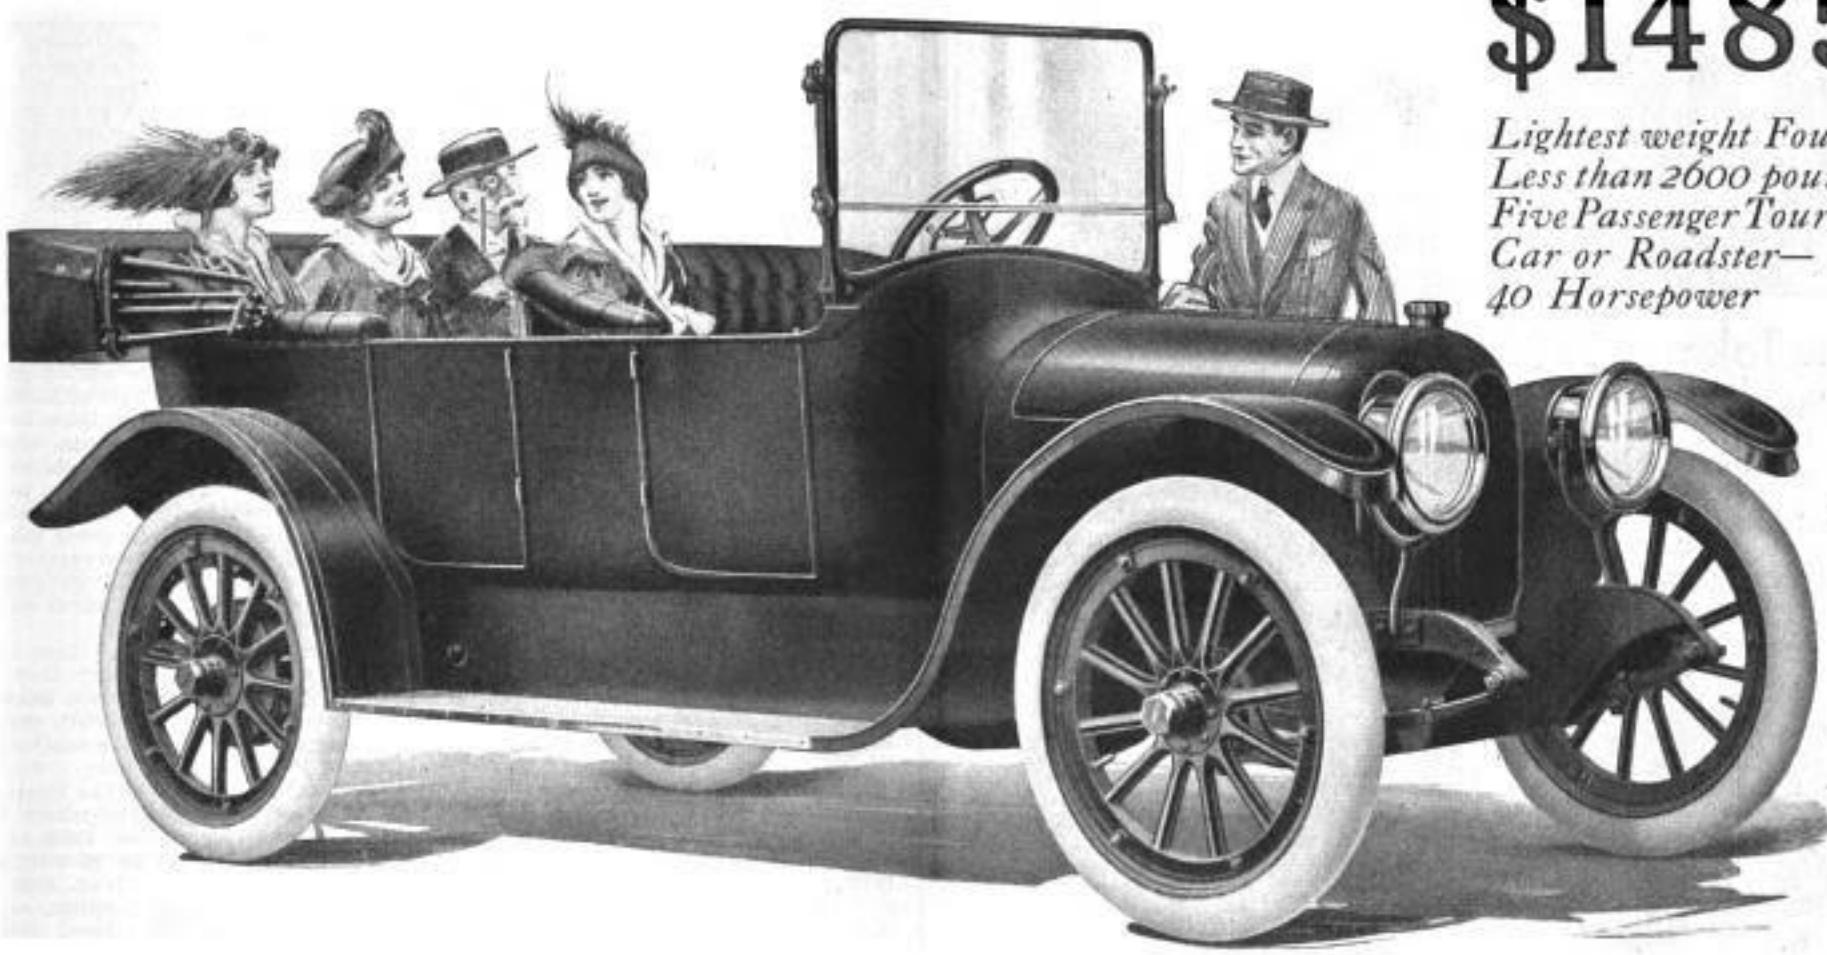
Cochran, it is worth while adding, who was so skeptical at first, was soon impressed by the swift course of events that was projecting Laemmle on to fortune. With all his savings, which represented exactly $2,500, he bought a tenth interest in Laemmle's exchange enterprise. To-day he is vice president of the Universal and an accredited nation-wide force in the business.

Just about the time that Laemmle was getting his first hard knocks, an energetic gamin—Marcus Loew by name—was playing around the streets of the East Side in New York. At six he was selling newspapers; at eight he peddled lemons; at twelve he had started a little periodical called the "East Side Advertiser," for which he solicited advertisements and did all the mechanical work except the actual typesetting.

When he was fourteen he got a job in a fur shop and learned the trade. In three years he was foreman, and before he attained his majority he had put by enough capital to start a modest furriery.

Chance started him on the way to become a movie baron. A friend, starting a penny arcade—the original poor man's theatre—where the first slot machines showing motion pictures were exhibited, persuaded him to join the enterprise. One of his fellow investors, by the way, was David Warfield.

Loew now saw his opportunity. He quit furs for films. In a few years he controlled a chain of picture arcades extending from New York to Ohio. One of his houses was in Fountain Square, Cincinnati. Here began the incident which, probably, more than any other, helped to shape motion-picture theatre destiny in this country.



On a hot afternoon his carpenter ap-

Elmer Apperson's Greatest Triumph

$1485

Lightest weight Four—
Less than 2600 pounds
Five Passenger Touring
Car or Roadster—
40 Horsepower

His New Economical Four at Lowest Price

Five years ago, Elmer Apperson determined to build a *low priced* Apperson Four that would shatter records for low upkeep cost. He has achieved all he hoped for in the new Apperson Light Four. This car expresses his undisputed inventive genius. His priceless experience of 22 years' actual motor car manufacture is embodied in it. He has designed and built the parts in his own factories. He has superintended the construction. He now offers you the *lightest weight Four at $1485—the car economical.*

Once Apperson cars were sold at $11,000! *Now*, the new Four is yours for $1485! The new car is more perfect than the old. This year, there has been added a body of rarest beauty of stream line design with a wealth of "luxury appointments."

Thousands Demanded This Apperson

Thousands have said: "Apperson is my choice, but I can't pay the price." They knew that the cars were mechanically correct and economical in upkeep. The price barrier has been removed. The low maintenance cost has been further reduced, new beauty added. All this value is possible because Elmer Apperson's cars are—

Manufactured—Not Simply Assembled

July 4, 1894, Elmer and Edgar Apperson tested their first motor car. They realized that the "perfect unit" car could only be obtained when they themselves built the vital parts. That is why 95% of the Apperson parts are designed by them and then built under their supervision in their factories. Thus, they were able five years ago to begin to build this 1915 car.

Makers O. K. Every Car

Elmer and Edgar Apperson will personally superintend the construction of every car made this year, despite the increased production. No car will leave the factory until it is O. K'd. personally by either one of these great engineers. That is an assurance of motor car perfection no other maker offers you.

A Six Marvel

The new Apperson Light Six is part of Elmer Apperson's 1915 triumph. It, too, was determined on five years ago. It is the lightest weight Six per horsepower made. Its 50 horsepower motor will conquer steepest hill or roughest road. It offers ample room for seven passengers. It is just the sort of Six careful buyers will select—beautiful, economical in upkeep, sturdy and dependable—striking values for the price—$1785.

Cars like this Four and Six cannot be designed in a season. Nor can such results be gained when parts are simply assembled. Hence, these cars will have no real competition.

Latest Apperson Features

Sloping stream-line body.
Beautiful V-shaped radiator.
Tapering hood.
Left hand drive, center control.
Separate unit starting and lighting system.
Magneto ignition.
Tire rim on rear.
Rain vision windshield.
Dimmer on searchlights.
Especially economical carburetor.
Finest Turkish upholstery.
Ultra brilliant finish.
One-man top.
Switches handy to driver.
Wheel base of Four, 116 inches.
Wheel base of Six, 126 inches.
Surplus power in all models.
Lightest weight cars per horsepower.

Write for Advance Catalog

Your copy of our advanced catalog, containing complete specifications of the New Light Four and Six and of other new Appersons, is ready. Send for it today. It is full of motor car surprises and is beautifully illustrated. Visit the Apperson dealer near you and go over these cars point by point.

Apperson Bros. Automobile Co., Kokomo, Ind.

DEALERS:

This is 1915's greatest business opportunity. Our dealers must be able to give the kind of service Apperson owners are entitled to. Write or wire at once stating qualifications and asking for our attractive dealer's proposition. Maybe the territory in which you live is still open.

The Joke—He Never Thought of B. V. D.

FANNING, mopping and grimacing, "Phew! how hot," *won't* keep you cool, when the sun grills. B. V. D. *will.* It lifts a burden from your body and weight from your mind. You forget the heat, because you're too busy "enjoying life"—lounging, dancing, a game of golf, a bout at tennis, watching a baseball game. Remember that *not all* "Athletic" Underwear is B. V. D.

For your own welfare, fix the B. V. D. Red Woven Label in your mind and make the salesman *show* it to you. That positively safeguards you. On every B. V. D. garment is sewed

This Red Woven Label

MADE FOR THE B.V.D. BEST RETAIL TRADE

(Trade Mark Reg. U. S. Pat. Off. and Foreign Countries)

B. V. D. Coat Cut Undershirts and Knee Length Drawers, 50c., 75c., $1.00 and $1.50 the Garment.

B. V. D. Union Suits (Pat. U. S. A. 4-10-07) $1.00, $1.50, $2.00, $3.00 and $5.00 the Suit.

The B. V. D. Company,
NEW YORK.

London Selling Agency: 66, Aldermanbury, E. C.

Here is a small, high-grade, high-speed, Reflecting Camera that will make the kind of pictures you have always wanted.

The Auto Graflex Junior

2¼ x 3¼

With f. 4.5 lens (B. & L.-Zeiss Tessar Series Ic or Cooke Series II) $66.00

With f. 6.3 lens (Zeiss Kodak Anastigmat) 53.50

With this camera you can make snap shots on dark or cloudy days, or even indoors. On bright days, when the sun is shining, you can make exposures as short as 1-1000 of a second, if you wish. And there is no uncertainty. When you look in the focusing hood you see the image right side up, the size it will appear in the finished picture, up to the instant of exposure. There is neither focusing scale nor finder.

Our 64-page illustrated catalog shows the way to better pictures. May we send you a copy?

FOLMER & SCHWING DIVISION
EASTMAN KODAK CO.
ROCHESTER, N. Y.

proached Loew and told him that a man had started a motion-picture theatre over in Covington, which is just across the river. This interested the New Yorker, so he visited the place. He found the show rigged up in a private house; the front hall was the lobby; the parlors served as auditorium; the proprietor sold admissions. As soon as he assembled a handful of people he closed the "box office," which was a dry-goods case, acted as doorkeeper, and when the "crowd" was seated—on camp stools—he locked the front door and started the entertainment. He operated the machine, and as he turned the crank he gave an impromptu lecture. At the conclusion he made this announcement:

"Ladies and Gentlemen: I have a colored porter here who can do a monologue or a contortion act to wind up the performance. Which do you prefer?"

I cite this incident, first, to show the crudeness of the start of the independent motion-picture theatre in this country; second, because it impressed Loew so deeply that he hurried back to Cincinnati, turned his arcade into a picture house, and thus helped to inaugurate the great chain of "store shows"—literally stores converted into places of amusement—where the general public in seats got its initial glimpse of the wonders of the film.

At the present time Loew's name gleams in electric lights on twenty-eight picture theatres—including two big ones on Broadway—in Greater New York alone, while more than two hundred others, many combining vaudeville with the films, stretching from ocean to ocean, call him master. As a matter of fact, he owns or controls more playhouses than any other individual in the world. This one-time East Side newsboy is a multimillionaire, and the nickels of the average man made him one.

One more episode will serve to show in another way the extraordinary advance in the picture theatre. Exactly six years ago a live young insurance agent, S. L. Rothapfel, settled down in Forest City, Pa., because he happened to marry a girl whose father lived there. It was in the center of the hard-coal-mining district; there was little opportunity for writing policies there, so he started a picture show over a saloon in a side street. He rented 250 undertaker's chairs on which to his seat his audience. The admission fee was 10 cents. Rothapfel operated the projecting machine, kept the phonograph going (it was the only music), and, when the occasion demanded, acted as bouncer when some drink-laden Slav got boisterous. To-day he is manager of the Strand Theatre on Broadway in New York, which represents an investment of over $1,000,000, which seats 3,500 people, and which is the newest and most elaborate house dedicated to the silent drama in the United States. Such is the swift evolution of some of the men connected with picture showing.

Mary Pickford

Millions in Nickels

THE admission to the movie theatre has steadily risen. Only a few years ago 10 cents was the standard. Now some of the finer houses get 50 cents. At the Vitagraph Theatre in New York—once the Criterion and the home of many famous dramatic productions—you can get $1 seats. This is the first instance where a big producing company shows its films in its own theatre.

Here, as elsewhere in the business, it is difficult to get at actual financial facts. The theatres themselves cover a wide range (rents vary from $500 a year and less for the store show up to $50,000 a year for the converted Broadway Theatre), and the price of film service has a long range. A man with a small theatre can get a weekly service of three or four reels a day for as low as $40 or $50 a week. Of course these are a long way from being first runs, but they meet the requirements of a not too discriminating neighborhood. The bigger houses have to pay from $150 to $300 a week for films and in the case of exceptional films the cost is even greater.

The small theatres sometimes play to as much as $900 a week. One house of this kind that I happen to know about in New York clears not less than $300 every week and sometimes more. A fine new theatre such as the Regent in Harlem, New York, has had a week's gross business of $3,000. It may be set down that the average motion-picture-theatre owner can usually count on a profit of not less than 25 per cent and many clean up more.

The well-established picture theatre is a gold mine, for the interesting reason that it has a really loyal following. This is not true of the regular speaking playhouse. The legitimate theatre keeps its clientele only so long as it has a successful show. Put in a poor offering and the seats that groaned the week before under a delighted humanity are bare. Hence the movie manager can count on a definite income seven days in the week and fifty-two weeks in the year. Here is where he has all the advantage over his theatrical brother.

Figures That Dazzle

THE statistics about the motion-picture theatre are little short of dazzling, especially when you reduce them to popular terms that everyone can comprehend at a glance. Take, for instance, the mere item of the daily admission fees of $1,000,000. Reduce this sum to nickels and pile them up and you get a shaft of metal higher than the Woolworth Building (the tallest commercial structure in the world) with Trinity Church of New York as a capstone.

Consider the attendance. More people go to see the movies every day now than lived in the whole United States at the beginning of the nineteenth century. In a year they represent the entire population of the world!

The total investment in the theatres—estimated at $500,000,000 of which $100,000,000 are in Greater New York alone—is greater than the value of our whole boot and shoe output, or five times the net earnings of the United States Steel Corporation last year.

And to give a final evidence of the far-reaching scope of the screens in these institutions I have only to add that a single reel, shown on its regular journey throughout the country and not duplicated anywhere, will reach 15,000,000 people, or more persons than a legitimate company would play to if it traveled twenty years and gave a performance every day of the year.

Thus startling facts fairly tread on each other in the revelation of the inner side of this most remarkable of all commercial enterprises.

The Men Behind the Films

YOU have now seen the unfolding of the gilded film of movie finance; what of the personality of the men behind the glittering record? Here you find a galaxy of rough-hewn millionaires whose rise to fortune is as striking in its way as that of Carnegie, Frick, or Rogers. Who, then, are these captains of our newest industry?

A few years ago you could compress the gallery into a comparatively small space; now you have a long list in which self-made history has constantly repeated itself. So scant is the remaining space that it will only be possible to take a hasty glimpse at it.

Take the first big group of stalwarts who blazed the triumphant path of film fortune. Everyone stepped from overalls to silk. Nowhere can you uncover a more moving narrative of achievement, for you have such examples as Siegmund Lubin, the penniless German lad who was graduated from optician's bench to movie monarch; J. Stuart Blackton, the vaudeville crayon artist, his side partner Albert Smith, a magician, and William Rock, the one-time circus side-show manager, who formed the triumvirate that registered an epoch in the business; William N. Selig, who went from making lantern slides to making millions; George Spoor, who ran a country opera house in Illinois and who now has interests that stretch from sea to sea; J. J. Kennedy—the Francis Lynde Stetson of the game—who gridirons the West with the conquering Harriman rails and then built up a whole new picture empire, and all the rest of their associates.

Turn to the independent wing and you find a no less amazing transformation. You have already seen something of its

Digitized by Google

caliber in the story of Carl Laemmle, and his is simply typical of his colleagues, who include men like P. A. Powers, once a blacksmith and now a factor in the feature domain.

Nor must we forget Adolph Zukor, the Hungarian immigrant who became brother furrier to Loew and with him rose to wealth. His discerning eye first beheld the vision of famous star in famous play on the film. He brought about an artistic era in the business, for he persuaded Daniel Frohman to join the picture host.

Youngest but one of the ablest of the magnates, and representing a large cycle of independence in the movement, is H. E. Aitken, who maintains the most picturesque traditions of movie progress. He is farm-born and college-bred, clean-cut and upstanding. At twenty-two he helped to start a life insurance company; two years later he was colonizing a part of Wisconsin. Here he made what was probably the first practical use of the motion picture. He saw how people were beginning to flock to the screens.

"If these films can sell entertainment, they can sell land," he said.

So he introduced films that proclaimed the desirability of the land he was exploiting and they attracted settlers. This naturally led him into the picture business. He opened an exchange in Milwaukee; soon he had a chain that extended to Missouri. When the trust froze him out he helped to head the insurgents and then when his plans became too big for them he did some insurging on his own account and formed the Mutual Film Company, of which he is president and the dominating force. At thirty-six he is one of the dictators in the industry.

Bealby

(*Continued from page 10*)

"I sent you into exile for a month," and she held out a hand for the Captain to kiss. He kissed it.

Some day, somewhere, it was written in the book of destiny Bealby should also kiss hands. It was a lovely thing to do.

"Month! It's been years," said the Captain. "Years and years."

"Then you ought to have come back before," she replied and the Captain had no answer ready. . . .

WHEN William arrived with the water cart, he brought also further proofs of the Professor's organizing ability.

He brought various bottles of wine, red Burgundy and sparkling hock, two bottles of cider, and peculiar and meritorious waters; he brought tinned things for hors d'œuvres; he brought some luscious pears.

When he had a moment with Bealby behind the caravan he repeated thrice in tones of hopeless sorrow, "They'll eat um all. I *knows* they'll eat um all." And then plumbing a deeper deep of woe, "Ef they *don't* they'll count um. Ode Goggles'll bag um. . . . 'E's a *bagger*, 'e is."

It was the brightest of luncheons that was eaten that day in the sunshine and spaciousness above Winthorpe-Sutbury. Everyone was gay, and even the love-torn Bealby who might well have sunk into an activity that was almost cheerful by flashes from the Professor's glasses.

They talked of this and that; Bealby hadn't much time to attend, though the laughter that followed various sallies from Judy Bowles was very tantalizing, and it had come to the pears before his attention wasn't so much caught as felled by the word "Shonts. . . ."

IT was as if the sky had suddenly changed to vermillion. *All these people were talking of Shonts!* . . .

"Went there," said Captain Douglas, "in perfect good faith. Wanted to fill up Lucy's little party. One doesn't go to Shonts nowadays for idle pleasure. And then—I get ordered out of the house, absolutely Told to Go."

(This man had been at Shonts!)

"That was on Sunday morning?" said Mrs. Geedge.

"On Sunday morning," said Mrs. Bowles suddenly, "we were almost within sight of Shonts."

(This man had been at Shonts even at the time when Bealby was there!)

"Early on Sunday morning. Told to go. I was fairly flabbergasted. What the deuce is a man to do! Where's he to go Sunday? One doesn't go to places Sunday morning. There I'd been sleeping like a lamb all night and suddenly in came Laxton and said: 'Look here, you know,' he said, 'you've got to oblige me and pack your bag and go now.' 'Why?' said I. 'Because you've driven the Lord Chancellor stark staring mad!'"

"But how?" asked the Professor almost angrily, "how? I don't see it. Why should he ask you to go?"

"*I* don't know!" cried Captain Douglas.

"Yes, but—!" said the Professor, protesting against the unreasonableness of mankind.

"I'd had a word or two with him in the train. Nothing to speak of. About occupying two corner seats—always strikes me as a cad's trick—but on my honor I didn't rub it in. And then he got it into his head we were laughing at him at dinner—we were a bit, but only the sort of thing one says about anyone—way he works his eyebrows and all that—and then he thought I was ragging him. . . . I *don't* rag people. Got it so strongly he made a row that night. Said I'd made a ghost slap him on his back. Hang it!—what *can* you say to a thing like that? In my room all the time."

"You suffer for the sins of your brother," said Mrs. Bowles.

"Heavens!" cried the Captain, "I never thought of that! Perhaps he mistook me. . . ."

HE reflected for a moment and continued his narrative. "Then in the night, you know, he heard noises."

"They always do," said the Professor nodding confirmation.

"Couldn't sleep."

"A sure sign," said the Professor.

"And finally he sallied out in the early morning, caught the butler in one of the secret passages—"

"How did the butler get into the secret passage?"

"Going round, I suppose. Part of his duties. . . . Anyhow he gave the poor beggar an awful doing—awful—*brutal*—black eye—all that sort of thing; man much too respectful to hit back. Finally declared I'd been getting up a kind of rag—squaring the servants to help and so forth. . . . Laxton, I fancy, half believed it. . . . Awkward thing, you know, having it said about that you ragged the Lord Chancellor. Makes a man seem a sort of mischievous idiot. Injures a man. Then going away, you see, seems a kind of admission. . . ."

"Why did you go?"

"Lucy," said the Captain compactly. "Hysterics."

"Shonts would have burst," he added, "if I hadn't gone."

MADELEINE was helpful. "But you'll have to do *something* further," she said.

"What is one to *do*?" squealed the Captain.

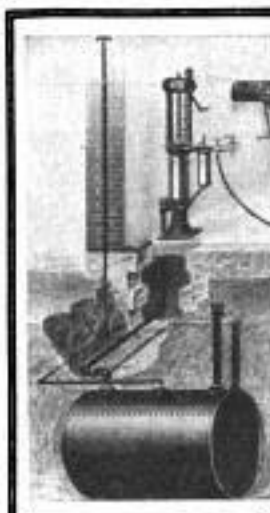
"The sooner you get the Lord Chancellor certified a lunatic," said the Professor soundly, "the better for your professional prospects."

"He went on pretty bad after I'd gone."

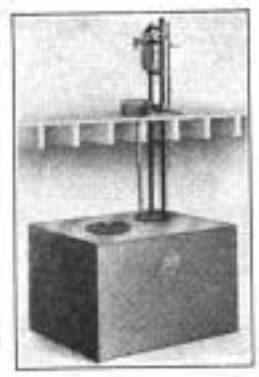
"You've heard?"

"Two letters. I picked 'em up at Wheatley post office this morning. You know he hadn't done with that butler. Actually got out of his place and scruffed the poor devil at lunch. Shook him like a rat, she says. Said the man wasn't giving him anything to drink—nice story, eh? Anyhow he scruffed him until things got broken. . . .

"I had it all from Minnie Timbre—you know, used to be Minnie Flax." He shot a propitiating glance at Madeleine. "Used to be neighbors of ours you know, in the old time. Half the people, she says, didn't know what was happening. Thought the butler was apoplectic and that old Moggeridge was helping him stand up. Taking off his collar. It was Laxton thought of saying it was a fit. Told everybody, she says. Had to tell 'em Something, I suppose. But she saw better and she thinks a good many others did. Laxton ran 'em both out of the room. Nice scene for Shonts, eh? Thundering awkward for poor Lucy. Not the sort of thing the county ex-



A New Casement Operator



The bronze metal handle is all that is seen. Turning it opens or closes the casement window with ease and holds it firmly locked at any point. There is no interference with curtains or shades, or with window screens placed on the inside.

This device makes casements easy to govern and eliminates many objections to this very desirable form of window. Any dealer in Corbin hardware can tell you all about it. Or we will send you descriptive matter upon request. Let us hear from you.

"Bowserize" Your Garage, Store, Factory

Make Gasolene, Lubricating and Paint Oils Pay

Twenty-nine years ago S. F. Bowser invented the Self-Measuring Oil Pump. Its success was so instantaneous that Bowser sold seven pumps on the strength of the idea alone—long before a single one was made. That was but the beginning of the great Bowser idea in oil storage and conservation. Today over 500 different Bowser systems attest to the success of the idea. A million users today are saving oil, time, money and *life* the Bowser way.

BOWSER ESTABLISHED 1885

Safe Oil Storage Systems

In the Garage Bowser tanks are keeping the "gas" in gasolene. Here dirt and changeable weather conditions cannot reach it. Every drop of gasolene is used and accounted for. And when it is pumped any distance to the garage by means of the Bowser pump it goes into the engine with all its original life and vitality—every drop there to do full service. If you've been using gasolene from above-ground "tanks" you'll notice the added power, vim and *mileage* from Bowserized gasolene—convince yourself by a test. And the gasolene is safe from fire and protected against loss, spillage, leakage and theft. Installation easy and economical. The cost soon comes back.

In Stores Bowser Systems are keeping kerosene and paint oil products away from other merchandise, yet always within "hand" reach. Self-measuring Pumps. No loss. No oil odors. No mussy floors. No overcharges or undercharges—the computer accurately computes large or small quantities sold. Always safe. Always clean. Always profitable.

In Factories and Power Plants Bowser Systems are making oil usable over and over again. Keep it clean. No waste. Every man made responsible. Every drop of oil accounted for. Aggregate saving millions yearly.

Your System For your Public, Private or Commercial Garage, Store, or Power Plant, learn of the particular Bowser System. Costs nothing to find out. Use the coupon. Some interesting facts await you. Send it today—NOW.

To Salesmen

Modern painters always use

Zinc

in their paints. That is what makes them modern painters. A modern painter is a man who always does the best he can—whose painting looks well and wears well and advertises him as a successful painter.

If your painter is not a modern painter, and if you have a job of painting to be done that is important to you, get and read the book, "Your Move," and what you then say to the painter will make him a modern painter.

The New Jersey Zinc Company, 55 Wall Street, New York

How Many Hides Has a Cow?

This may seem a foolish question.
Yet the area of automobile upholstery made from one cow's hide is about three times that of the whole hide.
How?
By splitting the hide into three sheets, and coating and embossing the "splits" in imitation of grain leather.
Coated split leather is therefore artificial leather much inferior to

DU PONT FABRIKOID

MOTOR QUALITY

which is scientifically made artificial leather based on a fabric much stronger and more uniform than the fleshy split, but coated and embossed in the same way.
The difference is all in favor of Fabrikoid, which is guaranteed superior to any coated split. Not affected by water, heat or cold. Several leading makers have adopted it. Any maker can furnish on your car if you order it so.

Send 50c for sample 18 x 25 inches. Enough to cover a chair seat. Mention this weekly and specify Black Motor Quality Fabrikoid.

DU PONT FABRIKOID COMPANY

peeted. Has her both ways. Can't go to a house where the Lord Chancellor goes mad. One alternative. Can't go to a house where the butler has fits. That's the other. See the dilemma? . . ."

"I've got a letter from Lucy too. It's here" — he struggled — "See? Eight sheets—pencil. No joke for a man to read that. And she writes worse than any decent, self-respecting, illiterate woman has a right to do. Quivers. Like writing in a train. Can't read half of it. But *she's* got something about a boy on her mind. Mad about a boy. Have I taken away a boy? They've lost a boy. Took him in my luggage I suppose. She'd better write to the Lord Chancellor. Likely as not he met him in some odd corner and flew at him. Smashed him to atoms. Dispersed him. Anyhow they've lost a boy."

He protested to the world. "*I* can't go hunting lost boys for Lucy. I've done enough coming away as I did. . . ."

MRS. BOWLES held out an arresting cigarette.

"What sort of boy was lost?" she asked.

"*I* don't know. Some little beast of a boy. I daresay she'd only imagined it. Whole thing been too much for her."

"Read that over again," said Mrs. Bowles, "about losing a boy. We've found one."

"That *little* chap?"

"We found that boy"—she glanced over her shoulder, but Bealby was nowhere to be seen—"on Sunday morning near Shonts. He strayed into us like a lost kitten."

"But I thought you said you knew his father, Judy," objected the Professor.

"Didn't verify," said Mrs. Bowles shortly, and then to Captain Douglas. "Read over again what Lady Laxton says about him. . . ."

To be Continued Next Week

Michigan Meanderings

(Continued from page 8)

asked Miss Daisy Buck: "I suppose," I said, "there was some battle here, beside some creek, wasn't there?"

But for once Miss Buck failed me.

"You can search *me*," she replied. Then: "Did you lunch at the 'San'?"

We admitted it.

"How did you like it?"

We informed her.

"What town are you making next?" she asked.

"Kalamazoo," I said.

"Oh, Ka'zoo, eh? What line are you gen'l'men traveling in?"

"I'm a writer," I replied, "and my friend here is an artist. We're going around the country doing articles for COLLIER'S WEEKLY."

In answer to this truthful statement, Miss Buck simply winked one eye as one who would say: "You're some little liar, Kid!"

"It's true," I said.

"Oh, sure!" said Miss Buck, and let one eyelid fall again.

"When the article appears in COLLIER'S," I continued, "you will find that it contains an interview with you."

"Also a picture of you and the news stand," my companion added.

Then we heard the train.

Taking up our suit cases, we thanked Miss Buck for the assistance she had rendered us.

"I'm sure you're quite welcome," she replied. "I meet all kinds here—including kidders."

That was some months ago. No doubt Miss Buck may have forgotten us by now. But when she sees this—as, being a news-stand lady, I have reason to hope she will—I trust she may remember, and admit that truth has triumphed in the end.

A Name with a Kick in It

I HAD but one reason for visiting Kalamazoo: the name has always fascinated me with its zoological suggestion and even more with its rich, rhythmic measure. Indian names containing "K's" are almost always striking: Kenosha, Kewanee, Kokomo, Keokuk, Kankakee. Of these, the last two, having the most "K's" are most effective. Next comes Kokomo with two "K's." But Kalamazoo, though it has but one "K," seems to me to take first place among them all, phonetically, because of the finely assorted sound contained in its four syllables. There is a kick in its "K," a ring in its "L," a buzz in its "Z," and a glorious hoot in its two final "O's."

I wish here to protest against the abbreviated title frequently bestowed upon the town by newspapers in Detroit and other neighboring cities. They call it "Ka'zoo."

Ka'zoo, indeed! For shame! How can men take so fine a name and treat it lightly? True, it is a little long for easy handling in a headline, but that does not justify indignity. If headline writers cannot handle it conveniently they should not change the name, but rather change their type, or make-up. If I owned a newspaper, and there arose a question of making space for this majestic name, I should cheerfully drop out a baseball story, or the love letters in some divorce case, or even an advertisement, in order to display it as it deserves to be displayed.

Kalamazoo (I love to write it out!), Kalamazoo, I say, is also sometimes known familiarly as "Celery Town"—the growing of this vegetable being a large local industry. Also, I was informed, more paper is made there than in any other city in the world. I do not know if that is true. I only know that if there is not more *something* in Kalamazoo than there is in any other city, the place is unique in my experience.

Calm Literary Domesticity

FROM my own observations, made during an evening walk through the agreeable, tree-bordered streets of Kalamazoo, I should have said that it led in quite a different field. I have never been in any town where so many people failed to pull their window shades, or owned green reading lamps, or sat by those green-shaded lamps and read. I looked into almost every house I passed, and in all but two, I think, I saw the selfsame picture of calm, literary domesticity.

One family, living in a large and rather new-looking house on Main Street, did not seem to be at home. The shades were up but no one was sitting by the lamp. And, more, the lamp itself was different. Instead of a plain green shade it had a shade with pictures in the glass, and red bead fringe. Later I found out where the people were. They were playing bridge across the street. They must have been the people from that house, because there were two in all the other houses, whereas there were four in the house where bridge was being played.

I stood and watched them. The woman from across the street—being the guest, she was in evening dress—was dummy. She was sitting back stiffly, her mouth pursed, her eyes staring at the cards her partner played. And she was saying to herself (and to us, through the window): "If *I* had played that hand, I never should have done it *that* way!"

"The Lure of Kalamazoo"

KALAMAZOO has a Commercial Club. What place hasn't? And the Commercial Club has issued a booklet. What Commercial Club hasn't? This one bears the somewhat fanciful title "The Lure of Kalamazoo."

"The Lure of Kalamazoo" is written in that peculiarly chaste style characteristic of Chamber of Commerce "literature"—a style comparable only with that of railway folders and summer hotel booklets. It is the "Here-all-nature-seems-to-be-rejoicing" school. Let me present an extract:

> *Kalamazoo is peculiarly a city of homes—homes varying in cost from the modest cottage of the laborer to the palatial house of the wealthy manufacturer.*

The only place in which the man who wrote that slipped up, was in referring to the wealthy manufacturer's "house." Obviously the word called for there is "mansion." However, in justice to this man, and to Kalamazoo, I ought to add that the town seemed to be rather free from "mansions." That is one of the pleasantest things about it. It is just a pretty, unpretentious place. Perhaps this man actually meant to say "house," but I doubt it. I think he missed a trick. I think he failed to get the right word, just as if he had been writing about brooks, and had forgotten to say "purling."

I saw but one building in Kalamazoo

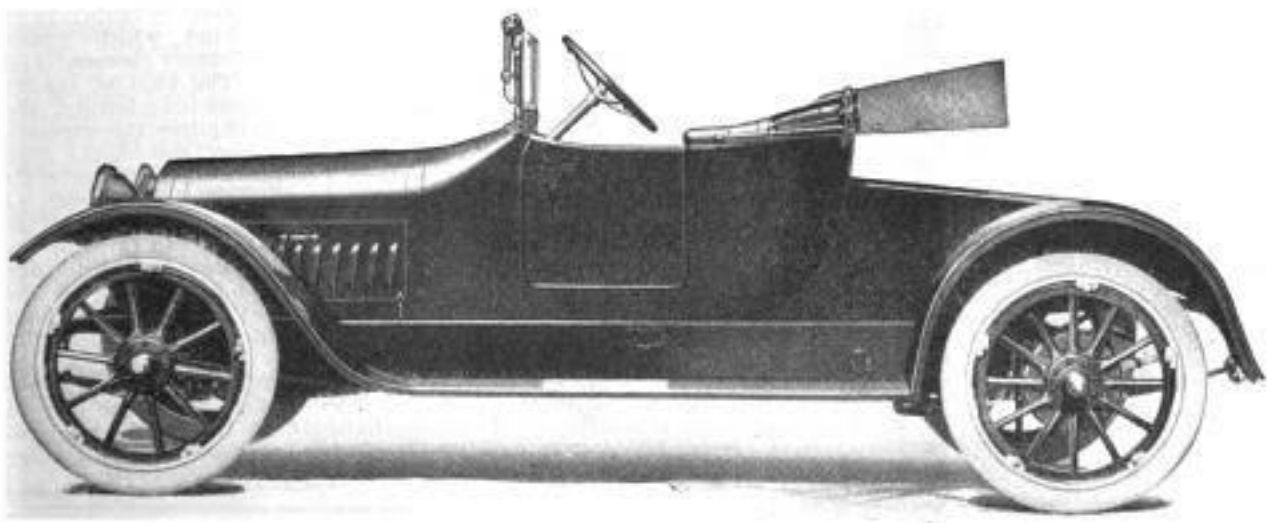
The New Regal A Great Reception

Here's an average example of what men who know cars thoroughly are telling us



"I'M PROUD to drive such a car." That's what one of the first owners of the new Regal said. And in one form or another, hundreds have already echoed his opinion.

"I never before dreamed" said he, "that I could get a car with a motor developing 39 h. p. on brake test, with lots of room for five people, with so much beauty, and with every convenience, at such a price."

"The design has European smartness in every detail. There's not a break in the smooth lines. The useless side lights have been eliminated—even the radiator cap has been tucked away under the hood."

"I took four friends of mine out in the car—big fellows every one. They're still talking about the room in that big 48-inch tonneau seat, the ample floor space and the driving room in front. They could hardly believe such a big, easy riding car tipped the scales at under 2400 lbs. That special spring suspension is certainly great."

"I'm a rooter for the new Regal, from the one-man top, to the sturdy motor, with the removable head that lets me get at valves and cylinders without a surgical operation. And it's a lot of satisfaction to have a starter that acts directly on the fly-wheel without any intermediate gears to make trouble."

A New Regal Ride Makes a New Regal Rooter

It's impossible not to be enthusiastic about this car. Regal owners are Regal rooters every time. Low up-keep, simplified mechanical construction, a powerful, hill-climbing motor—and all the little conveniences. Look over the specifications. Take them along with you and compare the new Regal with any popular-priced car you ever saw or ever rode in.

The new Regal is an overhung car—a one-chassis car—a big-production car, made in tens of thousands. It is produced by a $3,000,000 company with a fully equipped ten acre factory.

Get a demonstration as quickly as possible from the nearest Regal dealer. Meantime send for the Regal catalog and learn all about both the $1085 Regals, Touring Car and Roadster.

What You Get

Direct Electric Starter	Left Side Drive
Electric Lights, with "Dimmer"	Center Control
Electric Horn	300 to 500 lbs. Less Weight
Simplified Electric Wiring	112-inch Wheel Base
Removable Motor Head	Unusual Foreign Design
Gasoline Saver Valves	23-inch Tonneau Doors
Extra Size Brakes—12 inches	48-inch Rear Seat
Invisible Radiator Cap	Adjustable Wind Shield
One-Man Top	Inside Curtains.

TO DEALERS—The public demand following the announcement of the new Regal exceeded our most sanguine expectations. We must strengthen our organization in every locality to take care of this demand.

Write, wire or come in to the factory and talk it over.

Actual X-ray of a child's foot deformed by narrow toed shoe.

Actual X-ray of a child's foot in the natural-shaped Educator.

The Future of Your Boy's Feet

What will it be?

IF he wears pointed shoes, it will be bent bones—corns, bunions, ingrowing nails, flat feet, agony and ache.

But in good-looking, nature-shaped Educators, it will be straight-boned, athletic feet, like those of Thorpe the Olympic hero, or Brickley the great Harvard half-back. Send for

"Bent Bones Make Frantic Feet"

a new book in which two New York orthopaedic specialists tell how to have straight-boned feet. Free.

Get your whole family (men, women, children) into Educators. $1.35 to $5.50. See that EDUCATOR is branded on the sole. That guarantees you the *correct orthopaedic shape* which allows your feet to grow as nature intended.

Good shoe stores everywhere sell Educators. If you have any trouble finding them, write us.

the architecture of which was distinguished. That was the building of the Western Michigan Normal School—a long, low structure of classical design, with three fine porticos.

Having a Commercial Club, Kalamazoo quite naturally has a "slogan," too. (A "slogan," by the way, is the war cry or gathering cry of a Highland clan—but that makes no difference to a Commercial Club.) It is: "*In Kalamazoo We Do.*"

This battle cry "did" very well up to less than a year ago; then it suddenly began to languish. There was a company in Kalamazoo called the Michigan Buggy Company, and this company had a very sour failure last year, their figures varying from fact to the extent of about a million and a half dollars. Not satisfied with dummy accounts and padded statements, this company had, also, what was called a "velvet pay roll." And, when it all blew up, the whole of Michigan was shaken by the shock. Since that time, I am informed, the slogan "*In Kalamazoo We Do*" has not been in high favor.

Checking Up the Almanac

AMONG the "lures" presented in the booklet are four hundred and fifty-six lakes within a radius of fifty miles of the city. I didn't count the lakes myself, I didn't count the people either—not all of them.

The World Almanac gives the population of the place as just under forty thousand, but some one in Kalamazoo—and I think he was a member of the Commercial Club—told me that fifty thousand was the correct figure.

Now, I ask you, is it not reasonable to suppose that the Commercial Club, being right *in* Kalamazoo, where it can count the people every day, should be more accurate in its figures than the Almanac, which is published in far-away New York? Errors like this on the part of the Almanac might be excused, once or twice, on the ground of human fallibility or occasional misprint, but when the Almanac keeps on cutting down the figures given by the Commercial Clubs and Chambers of Commerce of town after town, it begins to look like willful misrepresentation if not actual spitework.

That, to tell the truth, was the reason I walked around and looked in all the windows. I decided to get at the bottom of this matter—to find out the cause for these discrepancies, and if I caught the Almanac in what appeared to be a deliberate lie, to expose it, here. With this in view I started to count the people myself. Unfortunately, however, I did not start early enough in the evening. When I had only a little more than half of them counted, they began to put out their lights and go upstairs to bed. And, oddly enough, though they leave their parlor shades up, they have a way of drawing those in their bedrooms. I was, therefore, forced to stop counting.

I do not attempt to explain this Kalamazoo custom with regard to window shades. All I can say is that, for whatever reason they follow it, their custom is not cosmopolitan. New Yorkers do things just the other way around. They pull down their parlor shades, but leave their bedroom shades up. Anyone who has lived in a New York apartment house in summer can testify to that. Probably it is all accounted for by the fact that in a relatively small city, like Kalamazoo, the census takers go around and count the people in the early evening, whereas in New York it is necessary for those who make the reckoning to work all night in order to—as one might say—get all the figures.

Grand Rapids the Homelike

I KNOW a man whose wife is famous for her cooking. That is a strange thing for a prosperous and charming woman to be famous for to-day, but it is true. When they wish to give their friends an especial treat, the wife prepares the dinner; and it *is* a treat, from "pigs in blankets" to strawberry shortcake.

The husband is proud of his wife's cooking, but I have often noticed, and not without a mild amusement, that when we praise it past a certain point he begins to protest that there are lots of other things that she can do. You might think then, if you did not understand him, that he was belittling her talent as a cook.

"Oh, yes," he says, in what he intends to be a casual tone, "she can cook very well. But that's not all. She's the best mother I ever saw—sees right into the children, just as though she was one of them. She makes most of their clothes, too. And in spite of all that, she keeps up her playing—both piano and harp. We'll get her to play the harp after dinner."

People are like that about the cities that they live in. They are like that in Detroit. They are afraid that in considering the vastness of the automobile industry, you'll overlook the fact that Detroit has a lot of other business. And in Grand Rapids they're the same; only there, of course, it's furniture.

"Yes," they say almost with reluctance, "we do make a good deal of furniture, but we also have big printing

plants and plaster mills, and a large business in automobile accessories, and the metal trades."

They talked that way to me. But I kept right on asking about furniture, just as when the young husband talks to me about his wife's harp playing, I keep right on eating shortcake. That is no reflection on her music (or her arms!); it is simply a tribute to her cooking.

Grand Rapids is one of those exceedingly agreeable, homelike American cities, which has not yet grown to the unwieldy size. It is the kind of city of which they say: "Everyone here knows everyone else"—meaning, of course, that members of the older and more prosperous families enjoy all the advantages and disadvantages of a considerable intimacy.

To the visitor—especially the visitor from New York, where a close friend may be bedridden a month without one's knowing it—this sort of thing makes a strong appeal at first. You feel that these people see one another every day; that they know all about one another, and like one another in spite of that. It is nice to see them troop down to the station, fifteen strong, to see somebody off. It must be nice to be seen off like that. It makes you sure that you have friends—a point upon which the New Yorker has in his heart the gravest doubts.

New York in Contrast

CONSIDER, for example, my own case. In the course of my residence in New York, I have lived in four different apartment houses. In only two of these have I had even the slightest acquaintance with any of the other tenants. Once I called upon some disagreeable people on the floor below who had complained about the noise; once I summoned a doctor who lived on the ground floor. In the other two buildings I knew absolutely no one. I used to see occasionally, in the elevator of one building, a man with whom I was acquainted years ago, but he had either forgotten me in the interim, or he elected to do as I did; that is, to pretend he had forgotten. I had nothing against him; he had nothing against me. We were simply bored at the idea of talking with each other because we had nothing in common of which to talk.

Any New Yorker who is honest will admit to you that he has had that same experience. He passes people on the street—and sometimes they are people he has known quite well in times gone by—yet he refrains from bowing to them, and they refrain from bowing to him, by a sort of tacit understanding that bowing, even, is a bore.

That is a sad sort of situation. But sadder yet is the fact that in New York we lose sight of so many people whom we should like to see—friends of whom we are genuinely fond, but whose revolutions in the whirlpool of the city's life are such that we don't chance to come in contact with them. At first we try. We paddle toward them now and then. But the very act of paddling is fatiguing, so by and by we give it up, and either never see them any more, or, running across them, once in a year or two, on the street or in a shop, lament at the broken intimacy, and make new resolves only to see them melt away again in the flux and flow of New York life.

Thinking Ponderous Thoughts

I THOUGHT of all this at a Sunday evening supper party in Grand Rapids—a neighborhood supper party at which a dozen or more people of assorted ages sat around a hospitable table, arguing, explaining, laughing, and chaffing each other like members of one great glorious family. It made me want to go and live there, too. Then I began to wonder how long I'd really want to live there. Would I always want to? Or would I grow tired of that, just as I grow tired of the contrasting coldness of New York? In short, I wondered to myself which is the worst: To know your neighbors with a wonderful, terrible, all-revealing intimacy, or—not to know them at all. I have thought about it often, and still I am not sure.

The Grand Rapids "Press" fearing that I might fail to notice certain underlying features of Grand Rapids life, printed an editorial at the time of my visit, in which attention was called to certain things. Said the "Press":

"It isn't immediately revealed to the stranger that this is one of the clearest-thinking communities in the country. The records of the public library show the local demand for books on sociology, on political economy, on the relations of labor and capital, on taxation, on art, on the literature that has some chance of permanency. The topics discussed in the lecture halls, in the social centers, and in the Sunday gatherings, which are so pronounced a feature of church life here, add to the testimony. Ida M. Tarbell noticed that on her first visit. Her impression deepened on her second. . . . Without tossing any bouquets at ourselves it can be said that we are thinking some thoughts which only the elect in other cities dream of thinking."

A Growth of Good Taste

I SHOULD like to make some intelligent comment on this. I feel, indeed, that something very ponderous, and solemn, and authoritative, and learned, and wise, and owlish, and erudite, ought to be said.

But the trouble is that I am utterly unqualified to speak in that way. I am not one of the elect. If some one called me that, I would knock him down if I could, and kick him full of holes. That is because I think that the elect almost invariably elect themselves. They are intellectual Huertas, and as such I generally detest them. . . . I merely print the "Press's" statement because I think it is interesting, sometimes, to see what a city thinks about itself. For my own part, I should think more of Grand Rapids if, instead of sitting tight and thinking these extraordinary thoughts, it had done more to carry out the plan it had for its own beautification.

That is not to say that it is not a pretty city. It is. But its beauty is of that unconscious kind which comes from hills, and pleasant homes, and lawns, and trees. The kind of beauty that it lacks is conscious beauty, the creation of which requires the expenditure of thought, money, and effort. And, if it does nothing else to indicate its intellectual and esthetic soarings, I should say that it might do well to discard the reading lamp in favor of the crowbar, if only for long enough to take the latter instrument, go down to the park and see what can be done about that chimney which rises so absurdly there.

The lack of coherent municipal taste—or the evidence of it—is all the more a reproach to Grand Rapids for the reason that taste, perhaps above all other

Digitized by Google

qualities, is the essential characteristic of the city's leading industry.

I used to have an idea that "cheap" furniture came from Grand Rapids. Perhaps it did. Perhaps it still does. I do not know. But I do know that the tour I made through the five acres, more or less, of rooms which make up the show house of Berkey & Gay, afforded me the best single bit of concrete proof I met, in all my travels, of the positive growth of good taste in this country.

Just as the whole face of things has changed architecturally in the last ten or fifteen years, furnishings have also changed. The improved appreciation which makes people build sightly homes makes them fill those homes with furniture of respectable design. People are beginning to know about the history of furniture, to recognize the characteristics of the great English furniture designers and to appreciate the beauty which they handed down.

We went through the warerooms with Mr. Gay, and as I feasted my eyes upon piece after piece, set after set, of Chippendale, Sheraton, Heppelwhite, and Adam, I asked Mr. Gay about the renaissance which is upon us. One thing I was particularly curious about: I wanted to know whether the improvement in furniture sprang from popular demand or whether it had been in some measure forced upon the public by the manufacturers.

Mr. Gay told me that the change was something which originated with the people. "We have always wanted to make beautiful furniture," he said, "and we have helped all we could, but a manufacturer of furniture cannot force either good taste or bad taste upon the people. He has to offer them what they are willing to buy, for they will not buy anything else. "I know that, because sometimes we have tried to press matters a little. Now and then we have indulged ourselves to the extent of turning out some fine pieces of one design or another, a little in advance of public appreciation, but there has never been any considerable sale for such things." He indicated a fine Jacobean library table of oak. "Take that piece for instance. We made some furniture like that twenty or twenty-five years ago, but could sell very little of it. People weren't ready for it then. Or this Adam set—as recently as five years ago we couldn't have hoped for anything more than a few nibbles on that kind of thing, but there's a big market for it now."

I asked Mr. Gay if he had any theories as to what had caused the development in popular appreciation.

Two Furniture Shows a Year

"IT is a great big subject," he said. "I think the magazines have done some of it. There have been quantities of publications on house furnishing. And the manufacturers' catalogues have helped, too. And as wealth and leisure have increased, people have had more time to give to the study of such things."

On the train going to Chicago I fell into conversation with a man whom I presently discerned to be a furniture manufacturer. I don't know who he was, but he told me about the furniture exposition which is held in Grand Rapids in January and July each year. There are large buildings with many acres of floor space which stand idle and empty all the year around, excepting at the time of these great shows. Last year more than two hundred and fifty separate manufacturers had exhibitions, a large number of them being manufacturers whose plants were not located in Grand Rapids, but who nevertheless found it profitable to ship samples there and rent space in the exhibition buildings in order to place their wares before the buyers who gather there from all over the country. As my informant seemed to know a great deal about furniture matters in general, I became curious as to who he might be. So I began to insert some leading questions.

"Do you live in Grand Rapids?" I inquired.—"Oh, yes."—"I understood you to say you had a factory?"—"Yes."—"How many men are working in your factory?" The man gave a sigh before he answered. Then: "Oh, about two-thirds of them," he said.

"CHICAGO," the next adventure of Mr. Street, is to appear in the issue of August 1

The Boy's Politics

(*Continued from page 35*)

Oh, tat limb! Tat Shett poy! Mister Mullen, I know nutting abowd tis gate. Tose poys vill *trive* me *grazy!*" He threw out his hands despairingly. Then, as Mullen picked up his club and helmet, Liberman began to gesticulate passionately, and, in a voice fluctuating with seething indignation, followed the good old advice of "Go tell your troubles to a policeman."

AS he began the relation of his evening's tribulations, those snowball bushes were giving friendly aid to the two boys. They had been hilariously riding that gate at a frenzied gallop down a broad course of fun, but at the words, "Mister Mullen," it had bucked straight up into the air, like a locoed broncho, and they now felt as if they had just landed in another county. And they didn't know what county it was either or how to get out.

"And I vill haf 'im arrestet t'morrow," Liberman concluded. "Mister Mullen, I vill haf 'im arrestet t'morrow mitoud vail! I vill stob tese tisgrazeful broceedings in t' only vay. I vill brosecute 'im to ter vullest extend of ter law!"

"Come on up to the corner where it's light," said Mullen; "we can go over this matter better there." Mullen handed over the keys and they talked in low tones for some time. Then the boys heard Liberman say: "All righd! Good nighd!" and he started for home. Mullen crossed the avenue, and the boys soon saw him standing against the light that streamed through the screen doors of the Shedd home. Dudley's father responded to the bell, and the policeman walked in. Their cruel disappearance, with its withering devastating suggestions, gave to the inside of Dudley's head the sensation of an oozing away. And this oozing seemed to be trickling down within him with a cold-hot feeling like peppermint without any taste. He stood in silence and blankly stared at the unobstructed doors, and Pete stood in silence and did the same thing. Minutes moved by with the speed and dignity of hours. Pete heaved a great sigh.

"Say, Dud," he said in a low voice like an undertaker's at a funeral, "what you goin' to do?" Dudley maintained his stare and paid no heed to the question. Another minute dragged away.

"Gosh," said Pete with a long sigh of relief, "I'm glad I didn't lock that door! Jimminy, Dud, I bet you wisht *you* didn't!" Dudley made no answer, and another minute crawled into the past.

"Say, Dud"—this came out like a sudden idea—"wonder what time they'll 'rest you t'morrow?" Then, after a moment: "Wisht I knowed when, I'd come down and see you get 'rested." Dudley said nothing.

Pete was now fidgeting. He was trying to comfort Dudley and sympathize with him and cheer him up, and Dudley's unexpected taciturnity made him uneasy. "Say, Dud, I guess your pa'll bail you out, though; what do you think, huh?" No reply.

"I bet mine would 'f I got 'rested—but I 'spect there's lots of pa's that wouldn't—"

"Gosh! Say, Dud, I bet that cop in your house is mad as blazes about failin'. I bet he's got your pa good and mad by this time; what do you think, huh?" Silence still. Pete was embarrassed.

"Say, Dud, wonder if your dad'll lick you t'night or wait till t'morrow morning; what do you think, huh?"

"A-a-ah, shut your mouth, will you?" suddenly and loudly snarled Dudley. And, although under other circumstances this retort would have led to something, they now resumed their staring in silence. At last the policeman and Mr. Shedd came to the door. "Good nights" were

"Is your father going, Dudley?" asked the Mayor, with something like a brighter light in his face

exchanged, and Mullen, smoking a cigar, came away and walked down the other side of the avenue. When Dudley's mother came out on the veranda and called him, he cried back a tremulous "All right," and, walking as if finishing an all-day tramp, proceeded slowly and wearily across the street.

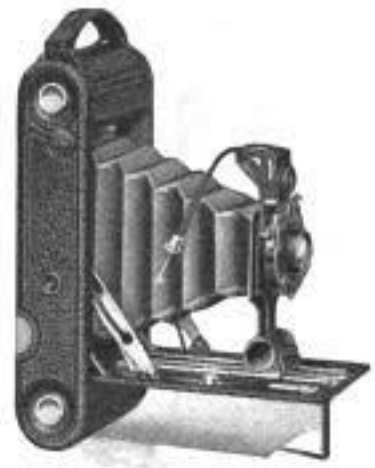
"Say, Dud," was Pete's low and anxious call from the bushes, "don't you give *me* away, will you? I'll come down and see you after you get locked up, if you don't."

Dudley's feet grew gradually heavier and his pace slackened as he drew near the veranda where his mother awaited him. He paused at the steps, and, looking up with a face that was greenish white around the mouth, said in feeble accents: "Where's pa?"

"He's gone to bed," replied his mother in a low, sad voice. "Come in."

"Gone to bed?" This was the last feather. If he had been ordered to go at once to his father in the library or dining room, there would have been hope of escaping the vengeance of the law by a barrel-stave engagement and the purchase thereby of his father's protection. Had the policeman's tale of grievance and the coming arrest made his father sick? Had he gone to bed, heartbroken, or had he ruthlessly deserted and disowned him, and in contemptuous disgust retired for the night to avoid his presence?

LIMP and dazed, he mounted the steps and followed his mother into the hall. "Are you hungry?" she quietly asked, eying him in critical charity.



That was just the way, he thought, she spoke to tramps and looked at them when they applied at the house for something to eat. His throat commenced to swell and ache. "I'm not hungry, ma," he wailed.

"Go right up to bed, then, Dudley," she said, and turned and passed into the sitting room. With his throat almost bursting, with his eyes blinking, and his lips trembling, Dudley ascended the stairs.

Between six and seven o'clock the next morning the sun was shining brightly into the cozy room at the back of the house where Dudley lay sleeping. He opened his eyes, stretched himself, and looked vacantly for a moment as people do on first awaking. Then he kicked the covering away, sprang out of bed, and stood pawing his hair. His face shone with the animal delight in living.

"Gee, t'day's Friday," he said aloud to himself. "Got to go after grubworms t'day and get a slather uv 'm, too, fur if it's like this t'morrow the fishin' 'ill be out uv sight. My, I'm hungry! I'll get ma to put up a bustin' big lunch, and if pa goes 'long we'll have a—O Lord a Moses!" he groaned, and, tossing himself face downward upon the bed, flung his arms around the pillows and lay motionless and mute. The happenings and anguish of the night, in sudden and tumultuous stampede, had swept across his memory. After a bit he sat up on the edge of the bed.

"Wonder if ma don't like me much no more," he soliloquized. "I didn't do nuthin' to her. I've done lots worse things than lock a janitor in and she didn't act like las' night. She never acted like that before. Always talked and scolded—a person ud think she wuz 'is mother 'stead of mine. Wonder if pa's up—s'pose so. Wonder what he's goin' to do?

The New No. 1A
KODAK JR.

A thin, compact, convenient camera of high efficiency. The shape of the pictures is rectangular (2½ x 4¼ inches), and pleasingly suited to landscapes and home portraits.

Choice of meniscus achromatic or Rapid Rectilinear lens; has new Kodak Ball Bearing shutter with cable release, for time and bulb exposures, and speeds of 1/25, 1/50 and 1/100 of a second; improved back for quick reloading; automatic focusing lock; collapsible reversible finder and two tripod sockets. Uses Kodak Film cartridges of six and twelve exposures, loading and unloading in daylight.

Price, with meniscus achromatic lens, $ 9.00
Ditto, with Rapid Rectilinear lens, 11.00

Lee PUNCTURE-PROOF OR MONEY BACK
Pneumatic Tires

100%
Puncture-Proof

Did the dealer who sold you your last pneumatic tires give you this guarantee?

Not unless the tires he sold you were **Lee Puncture-Proof Pneumatics.**

You never heard of such a guarantee on any other pneumatic tires, did you?

If we merely *claimed* this added service you might say: "I'll take that with a grain of salt."

But you can't—in fairness to yourself—be skeptical when we back our statement with the guarantee: "Puncture-proof or you get every extra penny you paid."

That guarantee is detailed in Leaflet "D" free for the asking.

Meanwhile, look up "Lee Tires" in your 'phone book and tell our local man what size you want. Also whether regular tread or "Zig-Zag" Non-Skid.

LEE TIRE & RUBBER CO.
Conshohocken, Pa.

Wonder if they feel as tough 'bout me as las' night? Bet if I had a kid there wouldn't no old janitor 'rest him. Y'ud think pa never did nuthin', the way he acts, and he stole a horse once when he wuz a kid like me, too—if he 'ud been out West he'd av got hung. Wisht some un ud tell him 'bout it. If I did, he'd lick me. Wisht I could eat my breakfast alone. Look at the pull pa has with the Mayor, too; he could stop my gettin' 'rested if he wanted to. Gosh!"

DUDLEY ceased complaining with this exclamation and thoughtfully began scratching his back. He had just discovered a nebulous idea and was thinking. Having scratched his way into some conclusion, he washed and dressed, stole downstairs and out into the back yard.

About seven o'clock Dudley's mother entered his room to call him. "The poor, dear boy couldn't sleep," she thought, looking at the tumbled-up bed. She returned to her bedroom where her husband was dressing.

"How does the young scamp act this morning?" he asked.

"He isn't in his room, and the bed looks as if a whirlwind had struck it," she replied. "I knew he couldn't sleep. I wonder if he heard Mr. Liberman swear to arrest him?"

"Haven't the slightest doubt of it—glad he did," he said as he tugged at his tie. "Don't suppose a boy would set a confab like that going and not be where he could hear it all? I'm glad of it. Whipping doesn't seem to do any good and we'll see what scaring him half to death will do."

"Well," she answered, "there's no doubt but that he saw Mullen come here and that he *is* frightened half to death. It almost made me cry to send him to bed the way I did."

"Mustn't be so soft-hearted in the training of boys, Mary. Glad he went up to bed like a lost soul. But I'm glad Mullen remembered all my kindness to him and argued that wire-strung lunatic out of the idea of arresting Dudley—I'd have made him sweat blood if he had gone that far!" he growled with a fierce flash in his eyes.

At breakfast Dudley felt like a stranger—some hungry, homeless orphan who had been invited to come in and eat breakfast with the charitable family of the house.

The pleasant, rambling conversation which usually enlivened meals was forebodingly absent, and Dudley ate his breakfast hastily without raising his eyes from his plate.

A short time later, on another street a few blocks away, Dudley lagged along in front of a modest house that stood back in a large yard. The Mayor lived in that house. The Mayor and Dudley's father were close friends and, with their wives, belonged to the same clannish little pedro club; and the Mayor issued warrants. It was a nebulous idea that brought Dudley into this locality, and that idea had whirled off from the word "jail" in his soliloquy.

HE loitered back and forth for several minutes, and looked over house and premises with the close interest of an intending purchaser. A boy about his own age, whittling at a stick, came out of the distant barn and Dudley whistled. The boy trotted out to the street.

"Hello, Dud," said the boy as he brought up on the sidewalk and resumed his whittling, "where you been?"

"Oh, nowhere," said Dudley. "What you makin'?"

"Makin' a bowie knife. The kids is goin' to play Indian t'morrow—didn't you know it?"

"'Course, but *I* ain't. *I'm* goin' fishin'. Fishin' 's out uv sight. Gee!" bursting into enthusiasm, "you ought uv seen the string uv shiners and chubs and sunfish Noodle Perkins caught yesterday in no time, and he wuz only below the dam. We're goin' at 'bout daylight and drive clean up to Fuller's and stay till dark where there's riffles and rocks and black bass and rock bass and perch— Gee! I bet we have a dandy ol' time—broil beefsteak and make coffee and have a big lunch— Gee!"

"Gee!" said the boy, forgetting to whittle, "wisht I wuz goin' 'long; bet we'd have an out uv sight time. Who's goin'?"

"Just me and pa. Pete wuz goin' to go, but he and I's mad and he ain't goin'. We're goin' in the surrey. Want to go 'long?"

"Goshyneels, guess I do. Wonder if pa'll let me? Come on, let's go back and see. He's in the barn. You ask 'im."

"Naw, you'd better ask 'im."

AWAY they jogged back to the barn and found the Mayor in old clothes, currying his horse. He was a tall, thin man with the shrewd, pleasant politician's face.

"Hello, Dudley," said the Mayor, knocking the currycomb against the stall.

"Say, pa," broke forth his son in high animation, "can I go fishin' up to Fuller's t'morrow with Dud? Oh, the 'fishin' is out uv sight, and you ought to see the fish they're ketchin' here in town, and hardly nobody fishes up there. Can I go, huh? Dudley and his pa are goin' to drive up 'bout five o'clock in their surrey and stay till dark, and are goin' to take a dandy big lunch and cook steak and coffee and have a dandy time, and they want me to go along. Can I go, huh?"

"Is your father going, Dudley?" asked the Mayor with something like a brighter light in his face.

"Yes, sir," piped up Dudley eagerly, not waiting for the Mayor to finish, "and he wants to know if you can't get off and go, too. He says you like fishin' awful and he wants you to go awful bad, because he sez you'll have a bully time, and he and you haven't been out fishin' since you went to Mich'gan and had all the fun he talks 'bout. Can't you go, Mr. Moore? He wants you to go the worst kind uv a way; yes, sir."

"Why," began the Mayor as he knocked the currycomb, "to-morrow is usually a very busy day at the office—very busy—but I certainly should enjoy a day's fishing; I certainly should. Is your father going without fail, Dudley?"

"Yes, *sir;* you bet he is! He's excited over goin'. He's goin' unless it rains pitchforks. Me and him and ma drove up the other evenin' before dark past Fuller's, and you ought to seen the bass jumpin'. One big one went kerflop up into the air that pa said he bet weighed five or six poun's. Oh, pa's excited. And you can get soft-shell crabs and minnies and helgamites and frogs and all kind uv bait there in no time at all jus' like nuthin'. And—"

"By George! I should like to go," interrupted the Mayor, the great, burdensome cloak of manhood rapidly slipping from his shoulders and revealing the boy underneath. "I certainly need a day's outing. I haven't had one for a long while, and I haven't been after bass in two years—ha, hum—Dudley, you tell your father I'll go—delighted to go—tell him I'll be over to see him to-day to make arrangements. And, Dudley" —the Mayor's enthusiasm was now taking the bit between its teeth—"ask your father what's the matter with taking your mother along and having a regular picnic?"

DUDLEY'S heart flopped about like a live fish in the grass as he stood on the veranda steps of his home and dug at the corners of his mouth for inspiration. He didn't know how to break this news about to-morrow. And while he stood there his father, smoking a cigar, opened the screen doors and, without any especial notice of his son, started down the steps on his way to town. Dudley's hair almost stood on end and desperation inspired him.

"Say, pa," he blurted out in a would-be matter-of-fact voice, "can I drive up to Berger's woods this afternoon and get a lot uv grubs for t'morrow? The fishin's goin' to be out uv sight and we want to start early."

Mr. Shedd took his cigar from his mouth and opened wide his eyes at him.

"Fishing? *Fishing?*" he said in assumed amazement. "Have you lost your mind? I'm afraid, young man, you won't feel much like fishing by to-morrow or be able to go if you do. I'm afraid, young man, you will be up before the Mayor by this time to-morrow. And, as for digging grubs this afternoon, I'm very much alarmed, Dudley, for fear it will be beyond my power to let you do anything whatever."

THIS speech was slowly delivered with impressive solemnity, darkened by subdued grief. But it did not shake the clutching determination with which Dudley's eyes were searching his father's face. "But say, pa," he faltered, "Mr. Moore, he's—"

"Certainly! Yes!" broke in his father austerely. "Mr. Moore's the Mayor and my friend. What has that got to do with helping you?"

Costs 25% Less To-day Than Four Years Ago

Advertising made possible the reduced cost of this food product.

H. G. Hamerstrom.
Advertising Manager Collier's Weekly

*Says His Goods Prove Contentions.

By W. J. LEONARD
Vice Pres. and Treas., Boraham & Morrill Co.

In our opinion it can be readily proven that advertising of food products lowers the prices to consumers.

B. & M. Fish Flakes is the product which we advertise most extensively. Our price to the wholesale grocery trade is 25 per cent less to-day than it was four years ago, advertising causing increased sales, and naturally increased production brought about this change.

The quality of this product has always been of the very best, and our natural policy, with or without advertising, is to increase quality, whenever possible.

Likewise, because of advertising, even when increased costs of raw material and workmanship at different times throughout the year cause us actually to sell the finished product at a loss, it is only because of advertising that we are enabled to do this. If there had been no advertising, and if we had not by this advertising fixed in the minds of consumers a price at which the product should be purchased, when these costs of raw material and workmanship advanced so considerably, there would be the same general advance in our own selling price.

"Printers' Ink.

Digitized by Google

"Mr. Moore," continued Dudley, "he's—he's crazy to go fishin' too, and he's goin' along and wants you to be sure and go and ma."

MR. SHEDD jerked his cigar down from his mouth, where he was in the act of replacing it, and looked at Dudley with amazement that was not assumed this time.

"What are you talking about, anyway?" he demanded, eying him like a hawk.

"W'y, Pete wuz goin' with us, you know," began Dudley, his face flushed with the strain of the crisis at hand; "but Pete, I'm mad at 'im, and he ain't goin', so I've jus' been down to Mr. Moore's to see Rodger 'bout goin' 'long—say, pa, Rodger's a nice fella, don't you think?—and we went and asked 'is pa—his pa sez he can go—and I told 'is pa you'd like to have 'im go 'long the worst kind uv way, too—'cause I knowed you would—and 'is pa said he ud jus' like to go the worst kind uv a way, too—and so we all got to talkin', and 'is pa got way up in the air 'bout goin' 'long and wants to take ma and Rodger's ma and start 'bout five and stay till night and have a reg'lar picnic—"

During this flood of information the outcrooked arm which held Mr. Shedd's cigar gradually sagged down until it hung limp beside him. His face was a study of stupefaction.

He began to work his chin up and down as was his wont before speaking when greatly puzzled or surprised, and Dudley, seeing the sign, sailed in again upon his glittering prospectus. He must gag him until all its fascinating inducements were displayed.

"And he's comin' over to-day to see you and fix all up about goin', and he sez he'll get a pile uv sirloin and we'll run sticks through and broil it over the camp fire fur dinner—and he's got a big coffeepot what he'll make a pile uv coffee in that's better than any you get in town, he sez—"

DUDLEY stopped to breathe and take weather signs. The study in stupefaction was being retouched. The chin was working again.

"And he sez he's goin' to wear old pants and old shoes and socks, so's he can wade all over and get at them bass what I told 'im about we saw floppin' the other night. He's goin' to have Rodger's ma see ma, and he sez it makes 'im hungry as a bear now to think about the eatin' t'morrow, and he sez our ma's 'ill haf to jus' work like niggers gettin' up the lunch, and he's goin' to buy a net so's we can get a lot uv min—"

"Hold up, young man. *Look a-here!*" roared Mr. Shedd, like a man "whoaing" at a runaway. "Do you mean to say you've had the impudence to—"

In spurred Dudley and rode right over him: "And he sez he's goin' to bet you a box uv cigars that he'll catch more pounds uv fish'n you could, and I told 'im you'd take 'im up, 'cause you were a cracknjack at bass fishin', and he said that wuz no joke. Say, pa, your goin' to go, ain't you, huh? Think 'ow awful he'll feel if you don't, and you ain't been well lately, and there's nuthin' like livin' outdoors, is there, when you ain't well? You're goin' to go, ain't you, pa, huh, huh?"

"But, great guns, young man, hold up here!" almost shouted Mr. Shedd. "You seem to forget that Liberman is going to have you arrested to-day. What about that? Does that look like going fishing to-morrow, hey?"

"W'y, pa," queried Dudley in sober, wide-eyed surprise, "don't you have to go to the Mayor to have folks 'rested?"

"Yes, sir, you do, as a rule."

"But you don't s'pose, do you, pa," continued Dudley, illuminated by the rays of what he believed his clincher, "that the Mayor ud let me be 'rested now and spoil all our fun t'morrow? Do you, huh?"

FOOTSTEPS coming up the walk caused father and son to dart a glance that way. It was the Mayor, striding toward them with elastic steps and beaming face.

"Hello, Moore," cried Mr. Shedd heartily; "come to bet that box of cigars, eh?"

"Yes, sir, that's what I have," returned the Mayor in jolly voice.

"Well, I'll bet you another box this kid of mine's going to be as slick a politician as you are yourself, but I won't tell how he's put one over on you till we're safe up the river to-morrow."

First Love

(Continued from page 14)

you on any conditions I can get you. I leave you, but all the time I am gone I shall be praying that you will not change your mind. I ask only that."

Her lids swept open suddenly, and her eyes, meeting his own, were the eyes of a woman, and behind their blueness the kindling flame was burning, burning.

He left her there beside the fountain. When he came back she had risen and one glove was carried in her bared hand. "I have thrown his ring into the pool," she said calmly — too calmly.

"Lucy, are you sure you want me?" he said. The strain of emotions repressed struggled under the wistfulness of his tone. "Yes," she said. "You are generous, but I make no promises. I ask none."

In the earliest twilight they two again entered the room where but a few hours before Lucy had sat sewing her wedding gown. A gush of warm air heavy with the sweet breath of hyacinths rushed out at the lifting of the curtains, and between the logs a bright fire glowed.

"How sweet it is in here!" Darrell said. "Lucy, the room looks like you."

She smiled at him a little warily. Her face had a sort of pale brightness, and her voice the veriest hint of strain.

The tears no longer veiled the tenderness of her eyes

"We must go tell Emmy," she said.

"The sooner the better," he rejoined.

Together they climbed the stair. Emmy, pretty but faded from long ill health, lay on the couch, her arms above her head.

"Home at last, Lucy?" she said plaintively. "Hello, Jim."

"It is not Jim Maxwell. It is Philip Darrell. He and I were married in Hollow Dawns this afternoon."

Emmy sat up slowly. "Married! To Philip Darrell! *Lucy!*"

"I do not wonder you are surprised," Darrell said gently. "I hope some day you may forgive me—us, I cannot ask it now." Emmy fell back with a little cry, turned her face to the wall and lay there quite still.

"Wait downstairs for me," Lucy said, turning to her husband.

WHEN she came to him, perhaps ten minutes later, she carried a small traveling bag in her hand; she had not removed her coat nor hood.

"I think I am quite ready," she said.

"Ready?" He put it blankly—to say the least.

"To go home."

He recovered himself quickly, if somewhat confusedly. "Of course, Lucy, I

Where's that Dioxogen?

Sunburn or insect bite—the apparently harmless scratch or the serious injury—when you reach for the Dioxogen bottle, *it should be there.* That empty space in the medicine closet may mean—blood poisoning or infection—regrets won't fill the space. With a bottle of

Dioxogen

on hand, you *know* you can do the best that can be done to prevent infection; to dress a cut or burn, to stop the pain and danger of an insect bite, to prevent the little hurt from getting big.

For face-relief after shaving or as a refreshing mouth-wash, Dioxogen is particularly effective during the hot weather.

Dioxogen does not contain acetanilid; that's why it will not change color, taste queer, turn rank or spoil, as do acetanilid-preserved peroxides. Always the same, ask for it by name—Dioxogen. Ask your druggist for a bottle of Dioxogen today.

A two-ounce sample bottle of Dioxogen will be sent postpaid on request if you have never tried it

am very stupid. I seem to think of you always as here in this room."

"I have done with this room." Her voice had a high, inflexible note. Her gaze seemed to fall suddenly upon the shimmering satin lying across the chair. With a swift and passionate gesture she stooped and gathered it into her arms, crumpling it into a gleaming mass. Upon the crimson and orange fire bed she thrust it, and the quivering heat began to curl and lick and leap upon the glimmering, exquisite folds. Up the chimney the shreds of it rolled in spark and red gold flame and blackening flake. Lucy stood looking down at the hearth until only gray ash was left of her wedding gown. She turned then to him with that soft, little, unreadable smile. "Let us go," she said.

And at her bidding he came and took her hand and led her from the door out through the windy night, to the roof that henceforward was to be her own and his together. But there was mutiny in his heart; it cried to go back for an hour with her to that sweet room; it cried to forget by what dark road she had come to him. If there could have been some such hour, some little space of time—some caress upon whose memory the heart could feed down the years they would live together, the shadow between!

At least there in the starlit darkness she sat beside him, not shrinking from him, as the car whirled them on toward home. And he felt suddenly the conviction she would not shrink even if his lips against her own burned a red-hot wound across her soul.

THE year was old. In the frozen fields Darrell, tramping after quail, set down his gun to chafe his numbed and reddened fingers. He whistled his dog to heel, and, crossing the branch, climbed to the top of the staked and ridered fence and sat there, a tall, still figure in his brown hunting clothes. Under the December sky the wild geese were flying southward; Darrell watched, idly, their persistent triangle cross the sky. The air prophesied snow; a west wind whipped the dry ragweed, and the clinging dampness made even more bitter the ever-increasing cold.

After a while Darrell pulled his cap closer over his ears and took up the homeward path through the stubble.

Entering the house he went upstairs to his own room slowly, fagged, soul and body. He knew Lucy was in the room below, sitting in her serene sweetness that no mood of his ever ruffled or disturbed. He had often, watching her with brooding and hungry eyes, wondered what lay under the stillness of her face and lips. He had never seen her off guard; always her foil struck sharply any attack of his; parried it, no matter how subtly, how skillfully he fenced with her.

WHEN he pushed the curtains of the living room apart, he saw her sitting on the low couch, her hands locked behind her head; she was staring at the wall. She turned her gaze slowly upon her husband. "What luck?" she said.

"None. Not a quail. They've gone to covert. After the snow it will be better shooting. Plenty of rabbits, but I had Leo out and I don't want to spoil him for hunting quail." He drew his chair to the table. His books, his papers, his pipe were all arranged for him, and beside them the vase Lucy kept filled with fresh flowers.

HIS involuntary groan startled his own ears; it was the first betrayal he had ever made of an inward disquiet he had set himself to conceal. At least in his weary introspection his guard had given way, and that faint sound focused a storm long brooding. "Philip," she said, "you did not deserve that evil star that shone at your birth—that at last set me between you and all possible happiness."

"Set you, Lucy? Your unhappiness—that is what poisons me. When you set me as a shield—"

"A shield! You think I was using you in mere cold blood! It was cruel to accept so much—but—oh, I must tell you. The truth is better than this tangle. You did not love me; you were generous, you were lonely; but nothing was clear to me that day. It was my hour of need, but most— Do you remember how I used to bow to you, to smile at you? You were mysterious, under a ban—for me that made you a hero. You cast a spell on me. My selfishness was no cold calculation. Philip, any day of my girlhood that you had come to me and held out your arms I would have gone straight into them and followed you unto the ends of the earth!"

SHE wrenched her hands from his, and, eluding him, stood tall and white before him, wild color on her lips and cheeks, her eyes reckless and beautiful.

"I am glad the truth must out. I am tired of masks; so are you. I challenge you to be honest as I am honest. Because I had no hope of you I meant to marry Jim Maxwell. I thought he loved me and I hoped I might forget you!"

Looking at him from over her shoulder, her gesture, the despair of it, was an incredible revelation of the folly of their long misunderstanding; swiftly as a miracle it dissolved at last. "Lucy!" he cried, but the curtains had fallen between them. Ecstasy began to stir, to rise, to beat in his breast. The stairway was unlighted; passing the turn of its steps, he felt rather than saw the presence of her, crouching and huddled there, sobbing and spent. He lifted her into his arms and, with the brief word "Come," drew her on up into the corridor above. Here the lamp, swinging from the ceiling, shed a yellow twilight over the long length of walls.

"Lucy," he said, "do you recall how I first told you I loved you? God knows His own truth was in my mouth then if never before. But you, you told me you would come to me asking and giving no promises. Child, I did not want you to repent that; still you came! The world's wonder was that I had you on any terms. There must be, I thought, something better in me than I myself knew. But now—Lucy, take me, make me new, make me in the least measure fit for you."

HE took her face between his palms and kissed her lips. Then gathered her up against his heart. Their pulses began to beat in intimate rhythm; and the tears no longer veiled the tenderness of her eyes.

A Goodyear No-Rim-Cut Tire With All-Weather Tread

Half-Inch Wider Tires—No Extra Price

Today's price situation means this:

Goodyear tires are underselling 16 rival makes. All because of mammoth output.

Some tires sell one-third higher.

Three tires of some makes cost as much as **four** No-Rim-Cut tires. Yet No-Rim-Cuts used to cost you one-fifth more than others.

Here is another comparison:

Some tires 36 x 4½ cost more than Goodyears in size 37 x 5.

Some tires 34 x 3½ cost more than Goodyears in size 35 x 4.

Some 30 x 3-inch tires cost more than Goodyears in size 31 x 3½.

So with many other sizes, both of which fit the same rim. You can get a half-inch larger Goodyear at no extra price.

Now, are these things believable?

Can you believe that three tires of any make will outlast four of Goodyears?

Can you think any tire so much better that a small size will serve you just as well as a half-inch larger Goodyear?

That is unthinkable. We put into Goodyears the best we know to get lowest cost per mile. We spend in our laboratory $100,000 yearly to find out ways to improve them.

No-Rim-Cut tires embody four great trouble-saving features found in no other tire. On sheer merit, at an equal price, they outsold any other. And these top-place tires are not today excelled.

There's No Tire Aristocracy

There are lines where high price has a value of its own. It may buy class—exclusiveness—pride of ownership.

Not so in tires—they are dead expense.

Here you seek mileage, freedom from trouble, lower cost of upkeep. And the desirable tire is the one that offers you most of them.

What Goodyear Offers

In No-Rim-Cuts we offer you tires that can't rim-cut. We do that in an ideal way—a way which never leads to trouble—a way which we control.

By an extra process—our "On-Air" cure—we save you all the blow-outs due to wrinkled fabric. This final cure, under actual road conditions, adds to our cost $450,000 per year. It saves our users many times that. No other maker employs it.

We combat loose treads by a patent method which reduces the danger by 60 per cent. In each tire we create, during vulcanization, hundreds of large rubber rivets. No other maker does that.

The All-Weather tread is on Goodyears alone. It is tough, double-thick and enduring. It is flat and smooth, so it runs like a plain tread. Yet it has deep, sharp projections which grasp with a bulldog grip.

Thus your four greatest tire troubles are combated here in costly, efficient, time-tried ways employed in no other plant. Yet the tire which so combats them is the tire which costs you less.

Goodyear prices are due to mammoth output, to perfect equipment, to new efficiency. And to a profit margin which last year averaged 6½ per cent.

Unless higher prices buy something better, it will pay you to get Goodyears. Any dealer will supply them.

"Watch Your Stroke!"

A good stroke at the right time will win in the race of life. This calls for an alert mind, a keen eye, strong muscle and steady nerve — and these come from rational exercise combined with a food that supplies the necessary tissue-building elements in a digestible form. Such a food is

Shredded Wheat

the food for athletes and invalids, for the indoor man and the outdoor man, for youngsters and grownups, for any meal in any season—a food to grow on, to row on, to work on. Read this voluntary tribute of a famous American rowing coach who has trained many champion scullers and crews on Shredded Wheat.

"MAKES MUSCULAR TISSUE; BETTER THAN MEAT"

The Shredded Wheat Co., Niagara Falls, N. Y. Syracuse, N. Y., July 15, 1913.

Gentlemen: In view of the splendid victory won by the Syracuse University Eight-oared Crew in the Intercollegiate Regatta at Poughkeepsie a few weeks ago, I have thought you might be interested to learn of the prominent part Shredded Wheat played in their training for that race.

As you are aware, I have long been a most enthusiastic advocate of Shredded Wheat, and I am pleased to say that I still consider it one of the finest foods on the market, not only for home use, but for the athlete. In fact, I have always made it a practice to have Shredded Wheat on the training table at every meal.

I find that Shredded Wheat is a better ration than meat when it comes to supply the muscle and strength that is needed for athletic feats that call for endurance, good wind and steady nerve. It makes muscular tissue without overtaxing the digestive organs. It has great sustaining power and fully satisfies hunger.

With kindest regards and best wishes, believe me, very truly yours, JAMES A. TEN EYCK.
Rowing Coach of Syracuse University Rowing Crew.

Shredded Wheat is on the training table of nearly every college and university in the United States and Canada. It is deliciously nourishing for breakfast with hot or cold milk or cream, or for any meal in combination with berries or fruits of any kind.

"It's All in the Shreds"

Buy Wider Tires

Get This Extra Service When You Pay an Extra Price

This is today's chief tire question: Can I get less trouble—longer service—by paying an extra price?

You can. But not by paying more than Goodyear prices for the same-size tire. You can't buy better than No-Rim-Cut tires.

But nearly every motorist can use a half-inch wider tire—and one inch larger. And it will perfectly fit his rim. For instance—

A 31 x 3½ will fit the rim using a 30 x 3.
A 33 x 4 will fit the rim using a 32 x 3½.
A 37 x 5 will fit the rim using a 36 x 4½.

So with many other sizes. Your dealer will inform you. It will pay you well to use the largest size that your wheel allows.

No Extra Price to Many

Many of you now pay for tires more than Goodyears cost. Sixteen makes are sold at extra prices. Some are one-third higher. And a half-inch wider Goodyear doesn't cost as much.

That extra price now buys you nothing, so far as our tests can show. No extra mileage—no less trouble—nothing tangible at all. For Goodyear is the utmost in a tire.

Let it buy a real advantage. Let it, if you pay it, buy a wider tire—more size, more air capacity. Then the extra will come back to you—perhaps over and over—in the added mileage.

All That Tires Should Cost

In our opinion, Goodyear tires cost all that tires should cost. If there are ways to make tires better, we have never found them out.

And we should know. We spend $100,000 yearly on research, tests and experiments—just to make sure that Goodyears are not anywhere excelled.

In four ways they excel all others—in the four great trouble-saving features listed at the right. So we see no reason why a same-size tire should cost $5 to $15 more.

Goodyear prices are simply due to Goodyear popularity. Our No-Rim-Cut tires once cost far more than other standard makes. But multiplied output and new efficiency brought those prices down.

They outsell any other tire. The sales this year are growing faster than ever. That after millions have been tested on some hundreds of thousands of cars. All of which argues that Goodyear prices buy the best that men can give. Any dealer can supply you.

Goodyear's Four Exclusive Features

These four great features are embodied in Goodyear tires alone:

No-Rim-Cut feature—the faultless way to end rim-cutting. It makes this trouble impossible—that we guarantee.

"On-Air" cure—an exclusive process conducted under actual road conditions. It costs us $1,500 daily, but it saves the countless blow-outs due to wrinkled fabric.

Rubber rivets—hundreds of which are formed in each tire to combat tread separation. They reduce the risk 60 per cent.

All-Weather treads—the tough, double-thick anti-skids. Flat and smooth, so they run like a plain tread; but with deep, sharp, resistless grips.

These are all costly features. They are saving tire users millions of dollars. But not one is found in any tire save the Goodyear No-Rim-Cut tire. Tell your dealer that you want this tire.

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

Quality is to Apparatus What Character is to a Man

It is the element in the man or the apparatus that meets the emergencies as unfailingly as it performs the routine of daily duties.

Quality is the fundamental of Delco manufacturing practice.

Quality that means not simply good enough to stand up under demonstration or factory tests, but that provides ample reserve in every part for the unexpected emergency.

Power enough to meet unusual conditions—strength enough to stand up under abnormal strain.

And with quality of this type it follows as a perfectly natural result that the grinding demands of everyday service are met with ease and certainty that are a source of constant gratification to the owner of a Delco-equipt car.

And it is this superquality—this extra margin of safety that has given to the Delco System its pre-eminence in the starting, lighting and ignition field.

Quality such as this is basic—it can be attained only as the result of an ideal that must permeate the entire factory organization.

It is built in quality—it cannot be purchased or priced in dollars and cents—it represents the integrity of every man in the organization.

And it is the kind of quality that cannot be built upon a price basis—price has always been secondary in the production of Delco apparatus.

That is why the Delco System has appealed most strongly to manufacturers of high quality cars—manufacturers who demand first of all efficiency, and who are willing to waive the price situation in order to obtain it.

Delco equipment is built to be put into a car and forgotten. To go along day after day, month after month, cranking the car unfailingly under all sorts of weather and operating conditions; furnishing ample current for lights, and providing an ignition that is instantly responsive to the demands of the motor, without a care or thought on the part of the owner as to the mechanism back of it all.

The Delco System was the pioneer in the electric cranking field.

Three years ago the first electrically cranked car appeared. It was a Delco equipt.

Delco quality was built into it—and it revolutionized an industry.

Today 130,000 automobile owners are driving Delco-equipt cars.

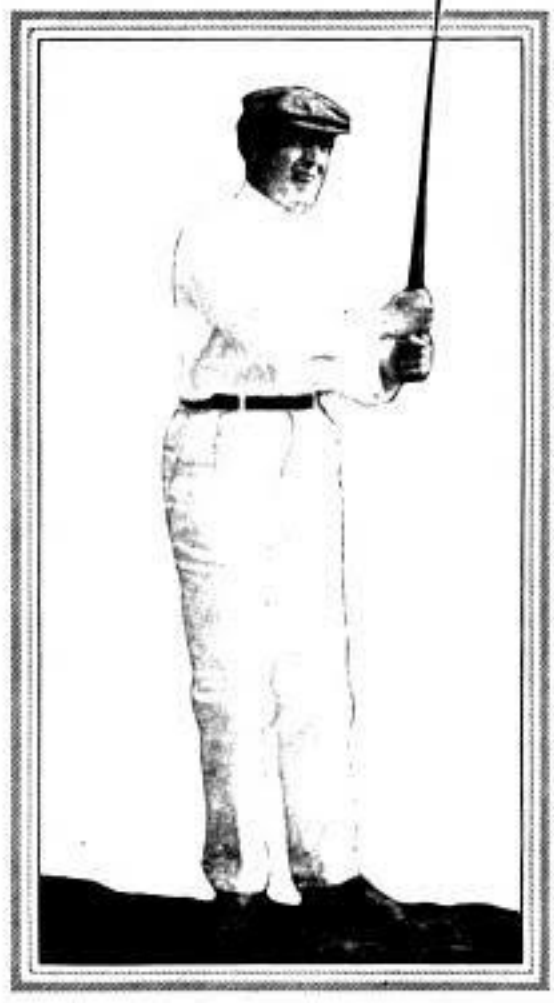
The Wilson Personality

By Edward G. Lowry

DECORATIONS BY RUDOLPH WETTERAU

He dislikes to wear a silk hat, and would no more appear in a frock coat, except upon formal ceremonial occasions, than he would don a fireman's helmet or a red shirt



SINCE he became the foremost man among us a great many persons after contact, casual or sustained, have tried to set Woodrow Wilson down on paper, with all of his dips, angles, spurs, and variations. None of these charts, so carefully made, resembles any of the others. Mr. Wilson himself pronounced them all faulty and, conscious of the public need and demand, himself assumed the task of describing his own personality. His expedition into the unknown hinterland of his own character was what the critics of the theatre call a *succès d'estime*. It was brilliantly done, but his report of his discoveries was not popularly accepted. It was honestly meant, but his findings flew in the face of established facts.

Divisions and disagreements and contradictory reports give fair basis for one conclusion: Wilson is a baffling personality. He is complex, subtle, not easily known or understood. The raw primary colors are easily distinguishable, but when they are blended into what the ladies call pastel shades, it takes an expert to name the color and to resolve it into its primary constituents. The color of Mr. Wilson's personality may be likened to one of these pastel shades. He is as full of intricacies as a Swiss watch and performs his appointed tasks just as competently. He is as exquisitely adjusted and, to the average man who comes in contact with him, as difficult to comprehend. You may be permitted to see the wheels go round, but you don't understand the mechanism.

Washington Describes Him as Cold and Aloof

IT IS possible to write down a list, more or less comprehensive—depending upon one's opportunities for contact and intelligent observation—of what may be called the assets and liabilities of Mr. Wilson's personality; the elements or qualities in him that have made for his undeniable success and the things that have held him back or counted against him in his steady, forward progress. But after they are all set down and contrasted they do not explain the man.

Take a flock of the little, one-design racing boats so familiar on Long Island Sound. They are made from the same model, from one set of drawings, sometimes they are all made in the same yard, yet one will be incomparably faster than all the others. Another will steer like a witch; another will slip along like a ghost in light airs, while the others scarcely move. These divergences in type cannot be explained; neither can Wilson. A relatively short list of his known qualities can be set down, but his uncharted and undetermined qualities, which are the more important ones, make him what he is; and that is—well, here we are again, just where we started. Broadly speaking, warm personal regard and admiration for Mr. Wilson increase with the square of the distance from him. This is true at Washington, with exceptions, and seems to have been true at Princeton. When Mr. Wilson made his attempt to paint his own portrait for the members of the National Press Club at Washington he seemed to have this in mind when he put himself right up with Abou Ben Adhem as one who loved his fellow man. That was one of his findings that did not meet with general acceptance. In his daily walk there is nothing to show that his nature is one that demands companionship. Virtually all of Washington has the impression of him that he is cold, aloof, detached, and that he does not like being with many people.

True, he plays golf, if a man with a handicap of 16 can be said to play golf, but it isn't because he is enamored of the game. It "keeps him out in the open air"

Easily "Devitalized"

HIS salient qualities as observed are austerity, reticence, and that other one that the Scotch call canniness. The only primitive quality he seems to possess is patience. But he possesses an inexhaustible store of that cool attribute. He can wait without fussing and fretting for his plans to mature; and he doesn't cry out under punishment. In that respect and in the daily routine of his life he is simple. He does not like the appanages and trappings of office. Indeed, he is so simple in his daily habit as to be almost bleak. He dislikes to wear a silk hat, and would no more appear in a frock coat, except upon formal ceremonial occasions, than he would don a fireman's helmet or a red shirt. He lives simply and plainly, but he thinks subtly. His ideals and his standards are exalted. He has undeniably "the large vision."

It has been said for him that contact with many persons "devitalizes" him. In his position he could establish relations with most of the interesting personalities in the world. He could attract to the White House every fine or exceptional mind that discloses itself in this country. But he does not. Mr. Wilson consistently sees as few persons as possible. His contact with the country, with Congress, with Washington, is what it has to be and no more. Mr. Wilson husbands and shelters himself from the hurly-burly of life. He, of course, has a right to. This is not making a criticism but recording a fact. He can be "devitalized" so easily; he has to guard himself against it because he is both mentally and physically a fine-grained, delicately adjusted organism. It is a simple enough case of necessity.

Persons who see him much or have opportunities for frequent, brief observation ask themselves: Has he simplicity and imagination? Is he one of the dreamers whose dreams come true? Are his visions constructive? When translated into actualities, do they stand foursquare on their own bottom? Are they real structures? Yes and no, your true conservative would reply; and that is the best answer that can be given now. Sometimes his dreams work out and sometimes they do not. At home he has done what is apparently solid, enduring work, but many of the critics at Washington think that to this juncture the Mexican policy, as revealed in his Mobile speech, has been and is visionary. If it works out, all the present criticism

Digitized by Google

of it falls to the ground and the query as to whether Mr. Wilson is really a big man would be answered.

Mr. Wilson has one strongly developed attribute or quality which official Washington, particularly, resents privately and finds hard to endure. He seems to be able, without consciously trying, to reduce his immediate associates to nothingness. He dominates his environment; he subordinates and dwarfs other figures. He makes them seem smaller than they are. One thing every observer of affairs at Washington has pointed out almost from the beginning of this Administration has been the complete dominance which Mr. Wilson enjoys over Congress. He has proved himself stronger than any man or any group of men in either or both branches. Congress has had to take its orders from him. It has passed the bills he desired to have passed and in the form he desired them to take. He has not only shared but has had the major share in the framing and making of all important legislation. The antitrust bills were referred to him time and again while they were being drafted and before they were introduced. Mr. Wilson sets apart Wednesday of each week for consultation with members of Congress about pending legislation. They now have the habit of coming to him for advice and suggestions.

And his Cabinet is just as submissive to his will. All of them think Wilson is a wonder. He regards them as departmental chiefs and lets them have a free rein in departmental matters; but they never forget that Mr. Wilson is the chief.

A Gallery of Mr. Wilson's Intimate Friends in Washington

E. M. HOUSE *is known colloquially as "the President's friend." Mind you, not "one of the President's friends," but "the President's friend." . . . Or, sometimes, as "the invisible Government"*

DR. CARY GRAYSON *is Mr. Wilson's physician. Probably no other person enjoys more of the President's companionship. Dr. Grayson is a playmate and companion, pure and simple*

JOE TUMULTY, *secretary, is believed to be the only man who sees the President and talks to him with absolute frankness without hesitating to find fault and make objections*

His Meekness a Profitable Asset

THE President achieves and holds his preeminence not by being domineering or dictatorial. Quite the contrary. In his manner he is one of the most deferential men that have ever been in the White House. He is even meek, but his meekness is that of one of those of whom it has been said that they shall inherit the earth. He does not lose anything by it. Many of those who have sat under it declare that no despotism is harsher, no tyranny so rigid as that exercised by a college or university president over his faculty. It would seem sometimes that Mr. Wilson had projected his experiences as a member of college faculties and as a university president into his present relationships with his Cabinet officers. So far as is known, nobody in his Cabinet has found occasion to stand up against him or to combat him without making ultimate surrender.

Mr. Wilson does not make friends easily. He would lead a more comfortable life and his way would be made easier for him if he did. It is rather curious that he doesn't attract more people to him. He can make himself very charming and agreeable when he wants to, but for the most part he chooses to erect an invisible barrier between himself and the world of men with whom he necessarily has to come in some contact. He has within himself the qualities to make and to hold friends, but he rarely exercises them. He gives nothing of himself. He does not honor the drafts and demands of friendship. To his work Mr. Wilson will give the last ounce of himself, but to the demands of friendship, to mere social intercourse, he apparently is willing to give nothing.

Hardly one of the Democrats in Congress, or out of it, either, feels that he really knows Mr. Wilson. It must be said, too, that they resent being held off. Mr. Wilson gives his full confidence reluctantly and sparingly. There is always a feeling among those who talk with him that in the back of his head are his real thoughts which he is not sharing. Therefore, it necessarily follows that he is not fully in the confidence of all of his party associates in Washington. They feel that he is holding back something and inevitably they keep back something themselves. At least twice irritation on this point has found vent in the chambers of Congress. When Mr. Wilson read his special tolls-repeal message to the two branches in joint session there was instant criticism that he had not revealed the true reasons for amending the Panama Canal Act as he desired it amended; that he was asking Congress to follow him blindly. This criticism was repeated when Mr. Wilson asked the legislators to justify him in using the armed forces of the United States against the Huerta Government in Mexico. The members complained openly on the floor of Congress that he had not given adequate reasons. They resented it, but in the end they did what he wished.

Even before this complaint was voiced in Congress Mr. Wilson apparently knew the feeling existed, for he told the members of the Press Club that if he could go out as "a free American citizen once more and have a jolly time, I might then meet some of you gentlemen and actually tell you what I really thought." He truly likes to think that he would. Yet he gives little of himself and expects to receive much and unreservedly from everyone else. This was one of the first of his traits that was clearly discerned after he was elected President and before he was inaugurated. Throngs of Democrats of high and low degree went over to Trenton to "get a line on him." He neatly and expeditiously absorbed all that they had to tell him and set them adrift. They went away from him empty-handed. He had emptied their intellectual containers. They returned to Washington not knowing what he thought or what he intended to do about a single thing.

Who are Mr. Wilson's intimate associates? Who are his win-lose-or-draw friends among his purely political associates? Who sees him daily on intimate terms in Washington? Who are the men sure to be invited to the White House to luncheon when they come to Washington? The brief list is at hand. E. M. House, Joe Tumulty, Dr. Cary Grayson. Does anybody else know another one who belongs on that list? Dudley Field Malone? If you like.

E. M. House of Texas and New York has the run of the White House. He is known colloquially as "the President's friend." Mind you, not "one of the President's friends," but "the President's friend." That characterization has some significance in itself.

He Has Few Close Friends in Washington

AT THE Capitol, by way of jest and without attaching any sinister meaning to the phrase, some of the Democrats have fallen into the way of calling Mr. House "the invisible Government." That is because he has no official status, but is reputed to have a share in shaping nearly all important Administration political transactions.

Dr. Cary Grayson of the navy is Mr. Wilson's physician. Probably no other person enjoys more of the President's companionship. Dr. Grayson is a playmate and companion, pure and simple. He plays golf with the President, takes automobile drives with him, and nearly always accompanies him to the theatre.

Since Mr. Wilson came to Washington Senator Ollie James of Kentucky has become a thick-and-thin adherent. He has made himself one of the chief administrator's spokesmen in the Senate. He is frequently at the White House and has become a devoted partisan. Perhaps he is the most notable acquisition among politicians that Wilson has made since he came to Washington. Yet it is not discoverable that Mr. Wilson seeks the advice of Mr. James in the conduct of public affairs. It's the other way about.

Joe Tumulty is loyalty and devotion personified. He would not admit that Mr. Wilson had a fault. Yet Tumulty is believed to be the only man who sees the President and talks to him with absolute frankness without hesitating to find fault and make objections.

This detachment, this impersonal attitude, has inevitably created a like feeling in those persons who come in contact with the President. Their attitude toward him is as impersonal and removed as their attitude toward the Tropic of Capricorn or the laws of gravitation. Any of the things in this life that are inexorable in their functions only become interesting and excite personal emotions when they fail to function. Mr. Wilson has come to be regarded as a sort of impersonal force. No legend has grown up about him. There are no illuminating anecdotes and stories about him. He never says or does anything "interesting"; that is, out of the ordinary. Yet people are intensely interested in him. They are always, as in the present instance, picking at him and scrutinizing him, trying to pluck the heart out of his mystery. Perhaps it is for the same reason that people stop every day on the street about noon to observe the time ball fall on the top of the Navy Department building. It falls every day precisely at noon. People set their watches by it. Once in a blue moon something goes wrong and it doesn't fall. Everybody that has the habit is always hoping that he may be there on the day that it performs irregularly or doesn't perform at all. But the time ball is not in itself interesting. It has only one function: to drop from the top of its staff every day precisely at noon. It takes on the quality of interest when it fails to do this.

The Effect of Impersonality

PEOPLE are always trying to find the human frailties in Mr. Wilson, the qualities that would make him akin to the world of men. One devoted writing man, seeking to accomplish this well-nigh impossible feat, built a four-thousand-word article around the simple circumstance that Mr. Wilson likes chicken and charlotte russe and has them on the table as often as possible. He has no fads or diversions. He does not collect stamps or kill big game or fish or do any of the things that men do to divert their minds from the real business of their lives. True, he plays golf, if a man with a handicap of sixteen can be said to play golf, but it isn't because he is enamored of the game. It "keeps him out in the open air."

It is because of these things and because we cannot find any kinship through the common human failings that there has come into being the Washington conception of Mr. Wilson as a thinking machine and not as a warm-blooded human being with faults and follies. He is always so everlastingly right. So far as anyone knows, he never loses his temper. If he does, he goes off and loses it privately, finds it again and then comes back, and everything is "all hunky-dory."

This impersonal relationship, unconsciously established and growing out of the cumulative effect of hundreds of little incidents, each trifling in itself, has had this curious effect: Because Mr. Wilson has come to be regarded so largely as an impersonal force, he has to "make good" on everything that he undertakes. Nothing short of perfection is expected

Fundamental Justice

By George Randolph Chester

ILLUSTRATED BY LUCIUS WOLCOTT HITCHCOCK

The second of a series of short stories. The first, "The Smash in the Ear," appeared in the issue of July 11.

THE presiding genius of Winburg's distress was a tall, red-headed young man with freckles on his nose—Sam Arnold! It was he who had forced the placid old town into the extravagance of a five-million-dollar speedway; it was he who had thereby strewn yellow mud from end to end of the city; who had thereby filled the place with swarthy, stocky foreign laborers that drank queer drinks and fought late of nights; who had brought sleek, smooth strangers to the Hotel Winburg, monument men, and fountain men, and sewer-pipe men, and conduit men, and supply men of all descriptions. Poor old Winburg! If it is painful to be born, as the first cry of all mankind attests, how much more painful to be born anew. As a stupid man aroused from slumber, Winburg, rudely punched awake for its rebirth, desired nothing so much as to snuggle its shoulder against the pillow and snore again; but Sam Arnold was implacable. Like a demon of unrest, he wished to start one hullabaloo right in the midst of another, and now he sat in the office of the Winburg Street Railway Company, with his hat on the desk and a wriggle of purpose in his red hair.

"Well, Milburn, the curfew is ringing for your rickety old horse cars," he said with a friendly grin.

President Ben Milburn was a heavy man, and so sluggish that the only exercise he took was with his eyes. He rolled them sidewise at Sam.

"Our service is all that the business justifies," he grunted.

"Your business is all that the service justifies," retorted Sam. "People walk twelve blocks rather than ride. Your rails are worn flat and crinkled like a hairpin. Your cars are held together by the paint. How can you expect business to be better?"

THE treasurer lounged in. He was a tight-buttoned man of considerable roundness, and his nose pointed straight up. Anything he said had the effect of a snarl.

"What's the matter with business?" he demanded.

"Young Arnold thinks we should cut our 7 per cent dividends and spend our money in equipment," jested Milburn, turning his eyes in the treasurer's direction.

"You're mistaken," corrected Sam. "I want you to recapitalize and electrify your system. Then the logical thing is to build a new line out Maple Avenue and parallel the speedway to Sekansett Park, Hilger's Lake, Paradise Grove, and back into the city."

"So your Speedway Improvement Company can have transportation for its subdivisions," guessed Hodge with a sarcastic smile. It was the only kind of which he was capable.

"Certainly," admitted Sam again with a friendly grin. "Also, it allows your trolleys to make money out of our subdivisions. It's a nice arrangement for all of us."

"But we furnish the capital." Milburn rolled his eye at the treasurer.

"It will cost you 25 per cent less now than later on," promptly replied Sam, full of logically assorted facts. "You can save that amount or more, if you will put in the line while the city is constructing the speedway."

"And wait five years for returns," suggested the treasurer, his nose drawing up that sarcastic smile.

"No. Endow Sekansett Park with band concerts, build a clubhouse to pay for them, buy Paradise Grove and put in some up-to-date amusement devices. Have some place for people to go on your cars."

"I guess you mean well, Sam, but you're young and impractical," finally decided Milburn. "We've run the street-car business in this town for twenty years, and we know all about it. There are just so many nickels to be had here and we get them."

"We owned Paradise Grove once," added the treasurer. "We lost five thousand dollars on it. People wouldn't go."

"Why should they?" demanded Sam rising. "All they could do was buy a bag of peanuts and come back. Will you let me address your stockholders on this matter?"

Milburn and Hodge looked at each other.

"It wouldn't be worth while," smiled Hodge. "At our last meeting we voted to make no improvements or extensions, and to make no expenditures outside of necessary repairs. We are in business for profit."

Sam studied the men with clear eyes. Milburn was as unimpressionable as a lump of putty. The unchangeability of Hodge was shown by his very hair, which was parted exactly in the center and varnished toward each ear. It seemed impossible that they should not realize the opportunity he was pointing out to them! But they did not; and would not.

"All right, gentlemen." Sam put on his hat. "You'll wake up when it's too late. Winburg is to be a young town again, and it's to have a new street-car system. You've had the first chance at it."

SAM laid his hat on President Henry Frazier's desk in the Merchants and Manufacturers' Bank.

"Well, Frazier, it's time for the next step in our campaign of rejuvenescence," he cheerfully observed. "I want to organize a million-dollar street car company."

Henry Frazier jerked on his spectacles and rubbed

You could tell they were born politicians by looking at their fists. They crowded round with every indication of pleasure, and drew their steins toward them

his bald spot. Every hairlike wrinkle on his face pinched in at the ends.

"For Heaven's sake, Sam!" he protested. "Why, boy, can't you be satisfied? You've committed this town, which didn't owe a penny, to a five-million-dollar bonded indebtedness; you've forced me and the other conservative business men into the forming of a million-dollar real-estate company to control the property along the speedway; you've—"

"Well, we control it, don't we?" grinned Sam. "When the speedway is completed, we'll make a fortune on that real estate."

"THEN let well enough alone," and Frazier wiped his spectacles impatiently. "You can't make me see the business advantage of building a street railway miles into the country where there are no passengers to carry."

"Can't you see the passengers who will be there when we give them transportation?"

Frazier shook his head and folded his hands on his desk.

"You'd better go away and rest a while, Sam," he advised. "Until this speedway is completed and our Improvement Company has begun to turn over its money, you can't raise another dollar in this town."

His blue eyes growing steadily bluer, his red hair growing steadily more kinky, and the three freckles on his nose growing steadily more prominent, Sam interviewed all the conservative investors in Winburg; but not one of them could find a serious thought in the organization of a million-dollar street car company to build lines along an unpopulated highway!

THE next day Frazier met Milburn at the Amen table in the dismal old Commercial Club, the corner where all the veterans congregated.

"Sam Arnold went East last night," he observed to Milburn as he nibbled at a stale cracker. "He's going to secure capital for a million-dollar traction company."

Milburn lifted his heavy eyes.

"Young Arnold's a damn fool," he grunted.

"Young Arnold may be a fool, but he gets what he wants," returned Frazier thoughtfully. "I don't know where he'll obtain money for his traction company, but he won't come back without it. Will he, Bellinger?"

A pink-faced old man with a white beard stopped at the table and took one of the stale crackers. He put it back.

"Will who what?"

"Young Arnold and his wife went East last night. Sam told me he was going to get capital for a new traction company."

"He'll get it, confound him," declared Bellinger. "Why doesn't Sam Arnold prove the success of one thing before he starts another?"

Lanky Charlie Tinbury had stopped just behind Bellinger. He was a painfully thin young man with a painfully long nose. "What's Sam doing now?" he asked.

"Gone East to get capital for a new traction company," explained Frazier.

"Why did he do that?" Charlie objected, pulling at his fuzzy mustache by way of encouragement. "We don't need strangers' money in Winburg. Say, I'll make a regular bet that he comes back with the capital."

THE president of the Winburg Street Railway Company raised his heavy-lidded eyes to Charlie Tinbury for a moment, then he excused himself and lumbered across to a side table, where a brisk, middle-aged man with the creases of a dyspeptic in his brow sat all alone. The man was Jim Linden, a member of the new city council and a stockholder in the street car company.

Three weeks later Sam Arnold returned with a tall, distinguished-looking stranger, who was anxious to invest in a new Winburg trolley company. The stranger went back on the night train. The Winburg Street Railway Company had just secured a blanket franchise covering every street in the city! Sam's outside capital was of no avail!

"ANYTHING yet, Ginger?" Twenty minutes had passed since the red-headed Arnolds had come out on the little back porch.

"No. Have you thought of anything?"

"No."

More solemn silence. The dusk began to fall. A lavender haze came up from the river and spread its softening veil over slothful Winburg. The lights on the old gray stone bridge flared up one by one, and cast yellow streaks beneath the arches on the water.

"Do they include your speedway, too?" asked Ruth coming out of a brown study.

"The franchises? They cover everything in the city. Milburn doesn't have to drive a spike for three years, and he won't. The street car system is tied up as tight as a drum."

"And there's no way to break the drum?"

Sam laughed and knocked the ashes out of his pipe.

Digitized by Google

"The only symbol my mind has conceived is a hammer," he acknowledged. "If old Tim Cassidy had been in town, those unconditional franchises never would have passed."

"That was a mean trick!" indignantly declared Ruth, pulling out her longest and strongest red hair, then slapping her fingers.

"Suppose we think again," suggested Sam, slipping his arm about Ruth's shoulders, and together they sat in solemn silence while the dusk deepened into darkness.

IT WAS nearly an hour before Sam jumped up with a laugh.

"I've found the hammer!" he exulted, and started for the telephone. "I wonder if Tim Cassidy is back."

Tim Cassidy was. In the shortest possible time, he stomped up on the porch, rang the bell with a vigorous thumb, hung his hat on the rack, and bowed over Ruth's hand with extravagant gallantry.

"You're bonnier every time I see you," he complimented her in his rich brogue. "Lord, Lord, what a thing it is to be young and beautiful! You're a lucky boy, Sam Arnold," and he accepted Ruth's thanks and Sam's banter with equal twinkles in his keen old eyes.

"How's your speedway construction coming on, Tim?' asked Sam when they had made themselves comfortable in the little den just off the sitting room.

"Oh, slow enough, Sammy," returned old Tim complacently. "Them dagoes is steady workers, but they don't pile up much by whistle time."

"If you were doing the contracting yourself, in place of managing it for the city, you'd get more work out of them, wouldn't you?"

There was a wheeze in Tim's throat, and he leaned closer. "I would," he admitted. "But it ain't the custom to drive men hard on city jobs. The longer you make it last, and the more money you spend, the more satisfactory the votin' is," and his face beamed. Sam Arnold, with his speedway, had made it possible for Tim's party to win a victory the first time in twenty years, and Tim meant to make the victory continuous.

"So that's why you're not putting in construction machines," laughed Sam. "Well, I wouldn't worry about city work, Tim. There'll be plenty of it, and the faster you get through with this the more there'll be."

"Do you say that now?" and old Tim shoved aside his glass and laid down his cigar to look Sam squarely in the eye. "Have you more up your sleeve?"

"PLENTY. I don't intend to stop until Winburg's the snappiest city without an ocean front in the United States."

"Then I'll drive them dagoes like the devil after a fiddler!" announced Tim, whose belief in Sam Arnold amounted to fanaticism. "But I don't like these construction machines, Sammy. They're not human. It costs a mint to run them and no voters get the money."

"They'd make a tremendous saving for the city," urged Sam. "Those enormous digging and leveling and surfacing machines will do more work than all the men you can pile on the job."

"But you've to build a track for them," persisted Tim; "and no little flimsy track, mind you. And then machines cost money."

"You can rent them." Sam stuffed his pipe thoughtfully and studied old Tim. "Let me go into the figures with you. I know these machines pretty well. I can tell you how many tons of dirt they'll dig and handle—"

"I'm so full of them figures that I feel like I was breakin' out with 'em now and then," interrupted Tim. "I know they'll save money and get the work done in half the time; even counting the labor of tearing up the track and resurfacing the side roadway."

"Then let's have them," urged Sam. "I'm very anxious to see them in use."

"Oh, ho!" and old Tim slowly poured himself another drink. "Is there some friend of yours mebby that rents these machines?"

"No," grinned Sam.

"Well, you've some reason; and if you don't want to tell me, it's none of my business. But there's one thing: I'll have them machines here as quick as freight can bring them; and will that satisfy you?"

POOR old Winburg! It's placid content was gone forever. Out along the river road huge, complicated engines dug and scraped, and lifted and set down, and shrieked demoniacally in their mad energy. A track had been pushed alongside the speedway as the construction progressed, and on this noisy little dump cars rattled and banged, drawn by electric engines which piped their shrill pneumatic whistles. A temporary track was even laid across Maple Avenue, connecting the north branch of the speedway with the south, and it was no unusual sight to see one of the gigantic construction machines shoving through historic old Maple Avenue itself, dragging at the branches of the trees and entangling telephone wires, and making itself a general blot on staid respectability.

Fall approached. Around the entire circle of the speedway ground was broken, and the construction track had joined its two ends at Hilger's Lake. The Speedway Improvement Company had kindly donated to the city a temporary wagon road through its possessions, and, on pleasant Sundays, it was the custom now for all who could to drive out as far as Sekansett Park and view the devastation en route. It was like looking at a wound to see where the hurt came from. At about this time a stranger came into town and made a bid for the steel rails of the track which was being used for the construction engines and the dump trains. He bought them in for something more than the price of scrap iron—a very good price indeed, the city thought—and paid for them in cash, under the obligation to remove them within sixty days after the speedway should be completed.

Kiddies' Day! That was another new-fangled idea of Ruth Arnold's Civic Art League. It was set for one of those wonderful Sundays in Indian summer, when there is warmth and sunshine with the tang of fall; and there were astounding preparations for Kiddies' Day! Every merchant had been invited to contribute. In Sekansett Park there was to be a magnificent band concert from morning until night. Why, all the musicians in the city were to take part; nearly a hundred of them! There were to be endless games with prizes, and free popcorn and peanuts, and lemonade and ice cream without stint, and a tremendous free lunch! Nothing was to be brought, for on this day there were to be no tired kiddies with bundles to lug and take care of. There was to be early Sunday school in all the churches, and, that over, the kiddies were to troop straight down to Hero Square, where conveyances would be provided for all; then away for a whole glorious day in Sekansett Park! Grown-ups were welcome, too, but they should arrive as best they might. A wonderful philanthropy it was, and every kiddie in town wore shining eyes about it for two weeks in advance. Would it rain on that Sunday? It did not rain! On Saturday night the sky was full of stars. On Sunday morning, just before daybreak, the stars were still there, glittering gems of promise, when more than one little mite pattered out of bed to look at the sky in place of asking for a drink. At sunup there was not a cloud! There were no children asleep at sunup, and the breakfast fires were booming in every home.

BUT what was that strange whizzing sound, audible at about six o'clock to all houses near Maple Avenue? Surely Tim Cassidy was not doing speedway construction work on the Sabbath! Tad Wilkes was the first youngster in Winburg to learn the impossible truth! He lived in the house farthest out on Maple Avenue, and he was the exact height of the gatepost. He came streaking back to the kitchen as fast as his short fat legs would carry him. He burst through the door like a football player and sprawled over a chair, but he did not know that he had sprawled.

"Street car! Street car! Street car!" he shrilled, and that was the only thing he said for half an hour after, screaming it hysterically to all who would listen, his face red and the tears in his eyes. Mrs. Wilkes came running to the door, flapjack turner in hand, then she dashed back into the house and went to the foot of the stairs.

"Street car!" she shrilled. "Look out of the window, John! Quick! Alice! Gertie! Get up! Quick! Street car!" She rushed to the telephone and called her sister, Mrs. Berger, upon the hill. "Mag!" she shrilled while the pandemonium broke loose upstairs. "There's a new street car line on Maple Avenue! Electric cars!" She tried to call her dearest friend, Mrs. Potter, but she got the busy wire. Some one else was telling Mrs. Potter about the new car line, and the switchboard girls up at the exchange were working both arms like punching-bag experts.

PRESIDENT BEN MILBURN of the Winburg Street Railway Company, who lived in the big gray stone house with the castellated tower at the other end of Maple Avenue, was out contemplating when his ear caught the strange whizzing sound which had so excited little Tad Wilkes. He turned his heavy eyes down the street, and then his jaw dropped and his eyes distended as they had not done for many years. He even ran out on the sidewalk to look as there approached him over the temporary construction tracks a huge shining yellow trolley car, a double-ender, with a hobble-skirt side entrance and a deck on top! A motorman in a bright blue uniform was in the front and on the doors was the legend "Have exact fare ready." Along the top was "Maple Avenue and Speedway." In the front window above the motorman was:

"Hero Square."
"Riverview Terrace."
"Sekansett Park."
"Hilger's Lake."
"Speedway Court."
"Paradise Grove."

Beneath the window was a big muslin streamer, "Kiddies' Day!"

President Ben Milburn, who had scarcely known an emotion since he held his first dollar bill in his hand, grasped his fence for support, and so far forgot himself as to climb on the bottom rail, while he

looked after that speeding yellow apparition. Two blocks above Milburn's house was a temporary pass switch. Here the car waited and presently another one just like it came whizzing along from the opposite direction, making the belt in reverse: Hero Square, Paradise Grove, Speedway Court, Hilger's Lake, Sekansett Park, Riverview Terrace!

BEN MILBURN hailed that second car as it came by his house. It ran up to the corner and stopped. Milburn, in his garden slippers and without his hat, ran up after it, while the conductor clutched an impatient hand on the bell rope. "Where did this car come from," he demanded as they started with a jerk.

"Car barn at Hilger's Lake," said the little fat conductor with a grin. He knew Milburn. He had once been conductor of a horse car. "Fare, please." Both his eyes and his lips were glistening.

"Who owns these cars?"

"Don't know. Fare, please."

"You'll be arrested for this!" declared Milburn. "This car has no right on these tracks! Everyone connected with running these cars is breaking the law!"

"That's none of my business," exulted the little fat conductor. "*Fare, please!*"

President Milburn, fuming with wrath, jammed his hand in his pocket. In his early Sunday morning clothes there was not even a penny!

"I've no change," he was compelled to admit.

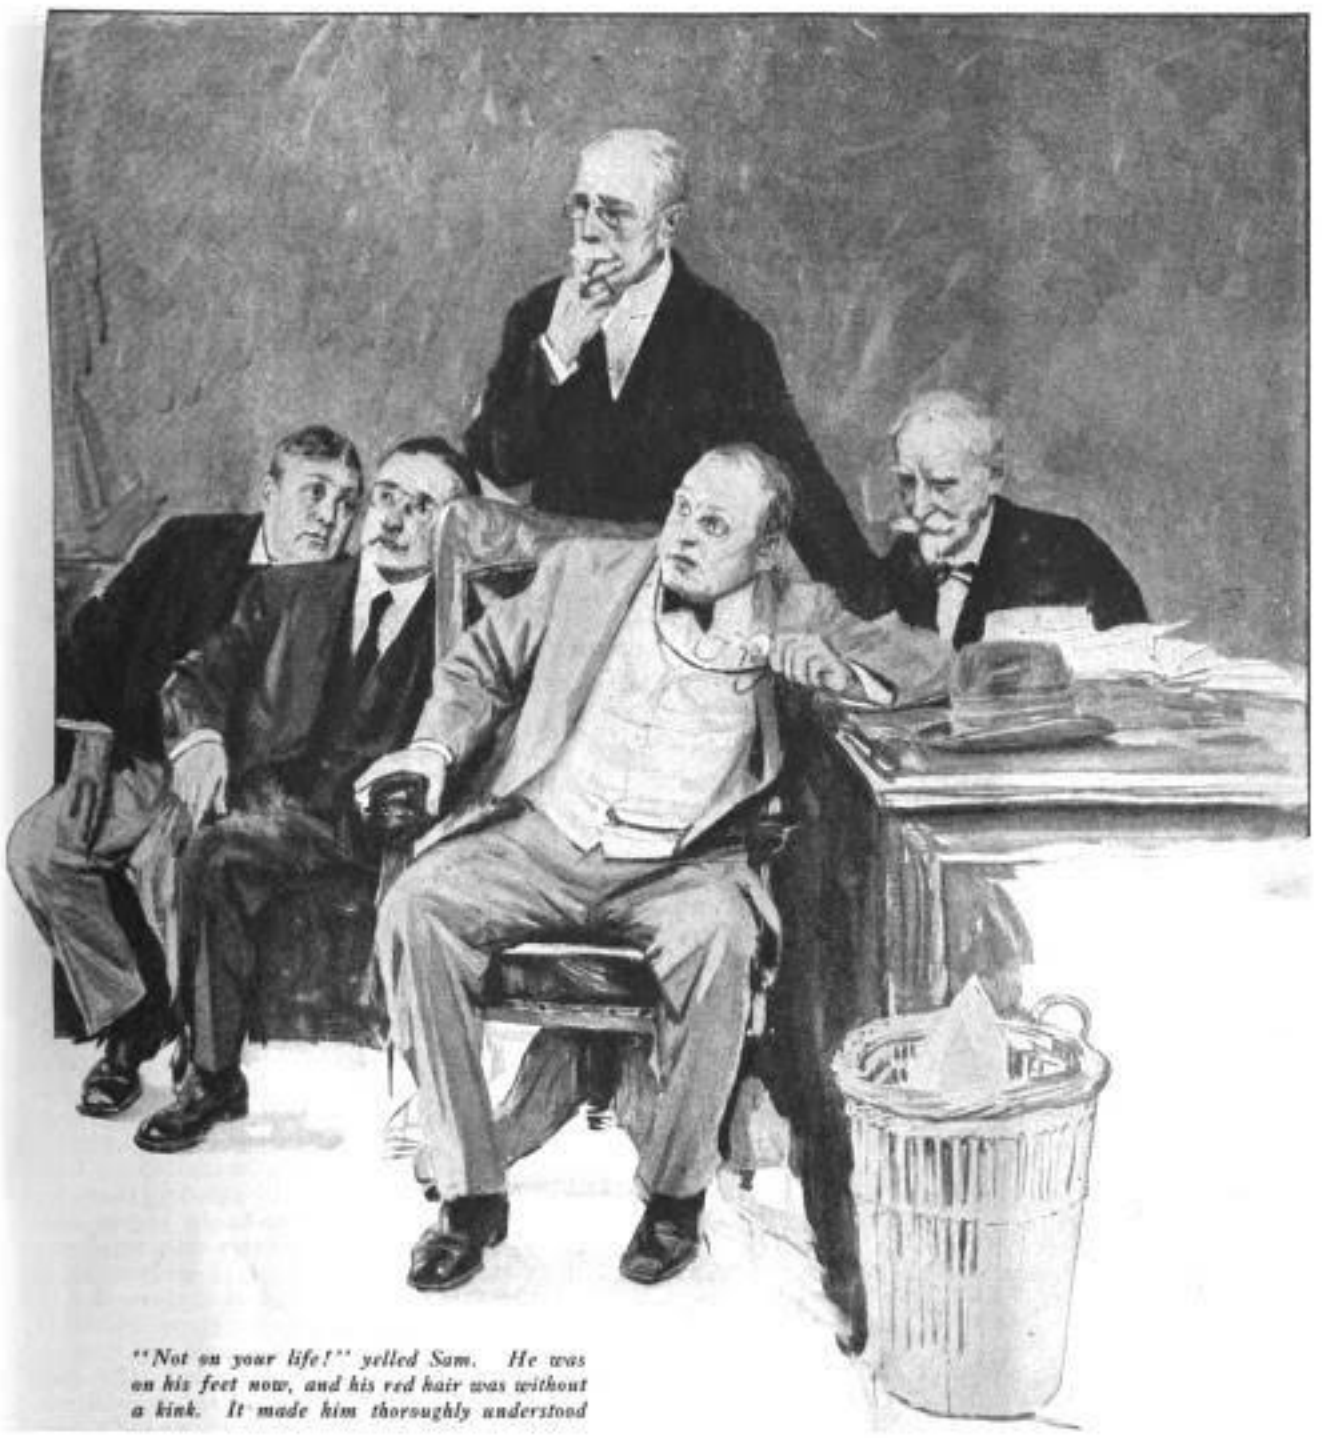
"Then you'll have to get off!" shouted the little fat conductor, his ears turning red with joy and grabbing

Digitized by Google

the bell rope he gave the motorman the quick stop, slammed open the doors, and put President Ben Milburn off in the mud!

THIS was at six-thirty. By seven o'clock the half-dozen new electric cars were thronged with passengers; eager-faced passengers; passengers alive with the ecstasy of a new experience. Out Maple Avenue they whizzed past the cemetery and along the speedway. Why, by George, Sam Arnold's boulevard began to look like something after all!

Here was a stretch of nearly a mile already asphalted, its broad surface smooth and shining, but wisely blocked off from possible traffic by boards and barrels and a quarter mile of mud. Here were the boulevard lamps going up—handsome things on their graceful cement pedestals and with their five huge pearl-like globes.



Riverview Terrace. Say! When the grass and the shrubbery grew over those yellow scars, that terrace would be great for a pleasant Sunday afternoon, with all its stone benches and its monuments and its fountains and its artificial waterfall tumbling down to the beautiful winding river. What was that big, tall thing shrouded in the canvas? That must be the statue of Chief Sekansett they've talked so much about. Jimminy Christmas! Look at that wonderful semicircular plaza cut into the hillside with its gleaming white stone balustrades and its imposing flights of steps leading down to the boat landing! Wait until that mud's covered up! Five million dollars the city is spending for the speedway and its trimmings! Well, it's worth it. I guess Winburg is a live town all right!

HERE'S one of those enormous construction machines. That's why they had to put down this track. How do you suppose they worked it to get these street cars on here? Why, Milburn's company has a franchise covering the town. Milburn? You bet Milburn didn't do it. Ask Fatty Scott there. He put Milburn off this car this morning. Didn't have a nickel! Fatty's the boy to do it all right. Well, there's a cute trick some place about this new street car line! Who do you suppose is back of it? What did you say, Bill? Sam Arnold! Well, you'll have to take off your hat to that redhead!

Terrace Villa? Oh, yes. That's the new restricted residence addition. You can't buy a lot unless you put up a house costing over five thousand dollars. And no business of any kind ever to be conducted here! A Speedway Improvement Company enterprise. Sam Arnold's back of that, too. Say, he's a humdinger.

Sekansett Park. Look at the new cement entrance! Ain't it a beauty! There must be thousands of electric lights on that.

Hilger's Lake. Oh, I guess we'll dance on that fussy big porch over the water! Say, Fatty, what's the shed off to the side there? Temporary car barn? Sam Arnold sneaked these cars in, all covered up, eh, and people thought they were more engines? Smart?

"Not on your life!" yelled Sam. He was on his feet now, and his red hair was without a kink. It made him thoroughly understood

Well, I guess! Swell-looking casino! Charlie Tinbury's back of it. What's that? Sam Arnold's back of Charlie Tinbury! What do you think! Well, we certainly need this car line to get out to Hilger's Lake! Would you believe it? That was a frog pond before Sam Arnold came back to town!

SPEEDWAY COURT. How would you like to live out here? All the houses facing circular parks, and a garden behind every house. Look at the signs! The Speedway Improvement Company'll build you a home, and you can pay for it like rent. What a sucker a man is to pay high rent in the city!

Oh, would you look at Paradise Grove! All painted up in a million colors and big roller coasters sticking up in the air like a hundred skyscrapers! I suppose they'll be working on this all winter. I wish it was spring!

Hero Square was a human bouquet at nine o'clock; no, a human garden with countless bright blossoms bobbing in every passing breeze; and from every street entering that historic square came bobbing other streams of blossoms from the various Sunday schools, their petals of red and blue and dazzling white filling the thoroughfares of staid old Winburg like a baptismal shower of morning-glories.

And here was the transportation! Hurray! All six of the big yellow street cars were lined up away down Maple Avenue; and behind each trolley car was a long stream of dump-car trailers, all gayly bedecked with bunting. Nobody but kiddies to be carried on these cars, and no kiddie to pay any fare! All free. Free! You could say what you please, Sam Arnold was a man with his heart in the right place! Everybody in town knew about Sam Arnold by this time. He was back of the new trolley line, and he had furnished the electric cars free for Kiddies' Day to the Civic Art League. And who was the president of the Civic Art League? Ruth Arnold! Red-headed Sam Arnold's pretty red-headed wife!

MONDAY morning. At six o'clock the yellow cars began to whizz along Maple Avenue in both directions, regardless of law and in defiance of franchise.

Certain early workers on the line were already waiting for those cars; and from that hour the patronage steadily increased. People walked two blocks out of their road at each end of the journey to take the clean, swift electric trolleys rather than ride on the rattling old Main Street horse cars.

At nine o'clock the courts opened. At nine-thirty an injunction was secured by wrathful Ben Milburn, who, shaken out of his years of motionless lethargy, was now as nervous and jerky as a rat terrier in an old barn. At ten o'clock all six of the shining yellow cars piled up in Maple Avenue and stopped dead, forlorn monuments to the futility of defying law. Could Sam Arnold or anybody else come along and use the methods of a brigand in Winburg?

The Winburg Street Railway Company was absolutely alone in the vociferation of that righteous principle. The ordinary citizens knew just this much: that the car line was there, that it was a great convenience, and that it had suddenly stopped. Why didn't it go?

Winburg found the answer to that in the evening papers. The horse car company owned franchises covering every street in the city. But Sam Arnold had bought up the old construction tracks from the stranger who had bought them from the city, and of course he thought he had a right to run cars on them. Suppose the stranger had been Sam's own lawyer from the East! The purchase was perfectly legal, wasn't it, and the city had accepted the cash? Now Milburn came along and stopped things! Who was Milburn? What was he doing to help the city that he should stop everybody else? He'd had his blanket franchise since spring. And was he giving the city new car lines? No!

BEFORE the evening papers were on the street, however, Sam Arnold, who had been waiting patiently in the offices of the Speedway Improvement Company ever since the serving of the injunction, received a telephone call.

"Is this Arnold?" came a heavy voice.

"Yes," and Sam's eyes began to snap, while his red hair seemed to respond to his grin. "Milburn?"

"Don't you go near him!" husked old Tim Cassidy, laying a mottled fist on each knee.

"I'd like to see you in my office," barked Milburn.

"If you want to see me, I'll be here until five o'clock."

"That's the stuff, Sammy!" Old Tim gave him a killing thump on the back.

"Then you'll take the consequences!" and Milburn's voice had a queer crack in it. At least one citizen of Winburg had been waked up. There was a sudden confusion of language in the telephone and then another familiar voice broke in. "This is Frazier, Sam. You'd better come over."

"Oh," the grin was now a 60-candlepower affair. "I'll be right there." He hung up the receiver. "It's Frazier."

"And don't you let him frame you either," warned the brigand's friend. "It's a bad sign that they're together."

"I'll find out," laughed Sam.

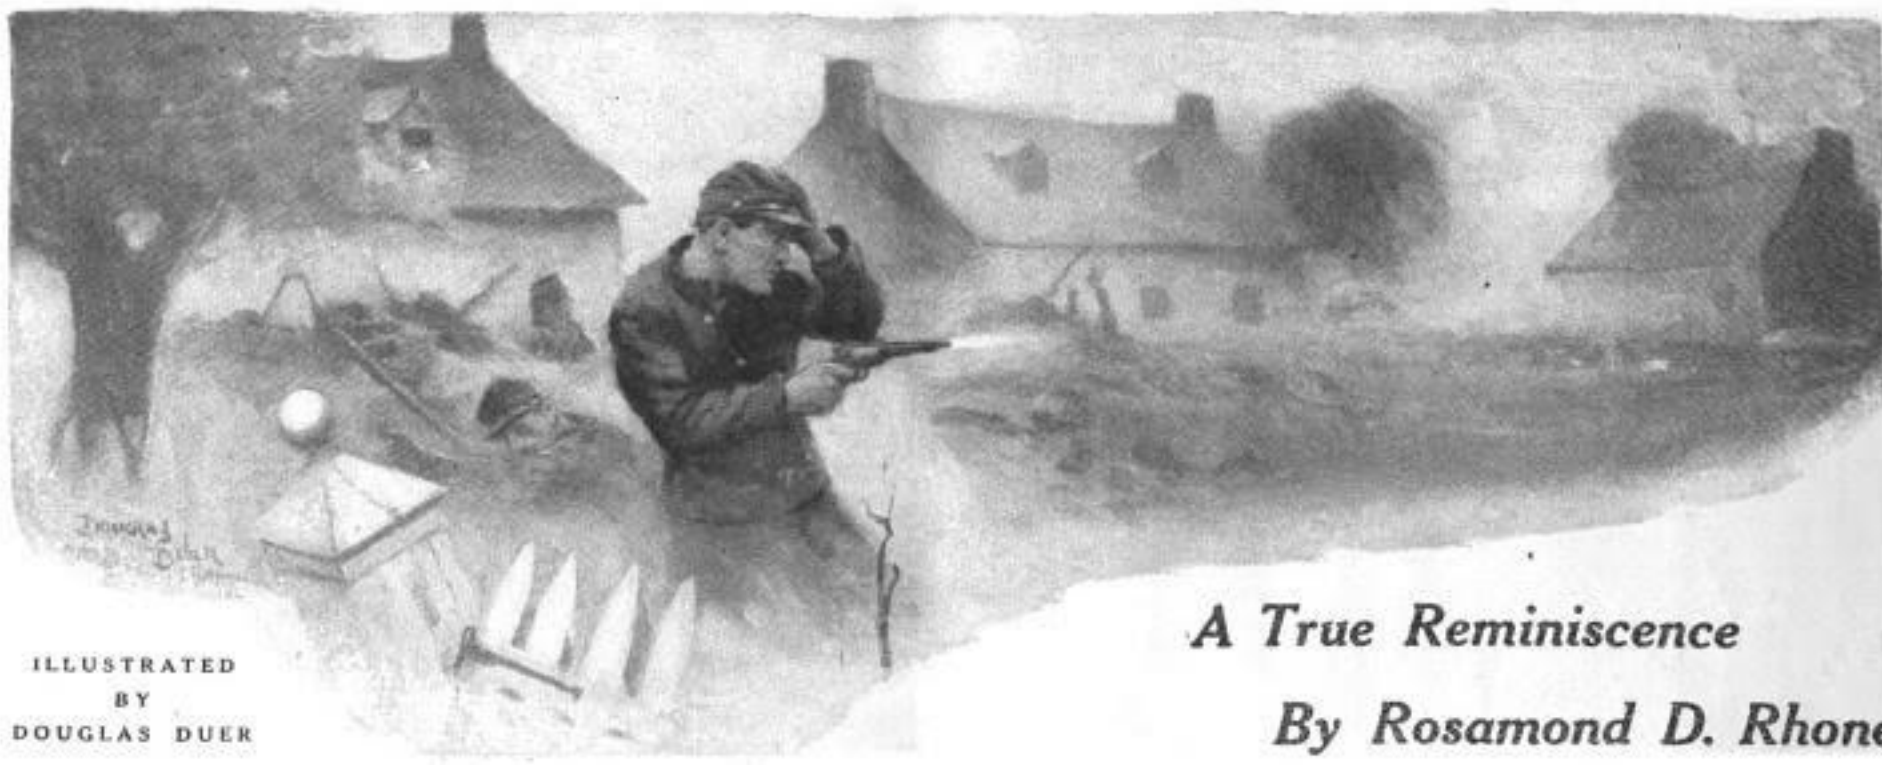
When he opened the door of Milburn's office, he paused a moment. The room was full of stale cigar smoke, and also full of substantial, prosperous-looking men: Frazier, Milburn, Hodge, Bellinger, and three others of the leading conservatives.

"We've been doing a little organizing, Sam," announced Frazier, smiling pleasantly as one who has done a good deed, and all his little wrinkles puckering in at the ends.

SAM took a chair and kept his mouth shut.

"You know you've laid yourself liable to the law," blurted Milburn, looking at the brigand out of the tops of his eyes. His heavy fingers, however, were thrumming on the arms of his chair.

"We were not to discuss that," Bellinger sharply reminded Milburn.



"The Winburg Street Railway Company is recapitalizing," went on Frazier, still smiling like a peacemaker. "Milburn is convinced, and we all are, in fact, that the public wants, and will support, a new traction system."

"We propose to put through a speedway belt line," said Treasurer Hodge, his nose so elevated that he looked as if he had his head thrown back. "We propose to take over your illegal equipment at a fair value in stock of the new company. You won't," and he smiled, "lose a cent."

Sam laid his hat on the desk. He could not consider properly with his hair shut in. (*Continued on page 24*)

At Gettysburg Battle

ILLUSTRATED BY DOUGLAS DUER

A True Reminiscence

By Rosamond D. Rhone

"THEY'RE coming! They're coming! The rebels are coming!"

It was my little brother Gustave who gave the alarm, dashing into the kitchen and making, unrebuked, dusty heel-and-toe prints on mother's freshly scrubbed floor.

I remember just how we all looked that morning: mother was kneading bread, wielding a mass of dough in the long kneading trough with capable white arms; she stood a moment with her floury hands pressed against her breast; she said afterward that her heart stood still for a couple of beats; then she slapped the dough upon the bread board and began cutting off pieces and deftly shaping them into loaves; her decision and energy put heart into us all.

Father sat in his chair by the window trembling and not saying a word. He looked up to mother as we all did; he had had a stroke the year before, one arm hung helpless and he limped about with a cane.

BERTHA stood in the doorway, very white, with a hand on each doorpost. Bertha was my married sister; she had been married the first of October, nine months to the day, and her husband was in the army fighting the Confederates. She had never seen him since he went away at the end of his furlough and her honeymoon. She was the fainty, scary kind, and I thought she was going to faint. I had heard that a fright was bad for a woman with child, and I saw mother look at her anxiously, but she sat down quietly and took out of her bosom a letter which I had brought from the post office the night before. I had recognized it by the envelope, which had on its face the flag and the first verse of "The Star-Spangled Banner" in red, white, and blue. She used to give me the envelopes for my scrapbook, but I did not even ask her for this; it was as if the end of the world had come and there was no use of making a collection of anything any more. She did not read her letter, but sat holding it to her lips.

Nowadays you would call our Bertha a *type*. She was just as blond as blond could be. She had always worn her flaxen hair in two braids down her back, but since her marriage she had wound the braids around her head. She was wearing one of her wedding dresses, a bright blue silk with a flat lace collar and flowing sleeves with lace undersleeves, and she had put some soft, white, frilly stuff in the front of the waist, for it would not come together. I thought she was a good deal dressed up for morning, but she had an idea that Walter—he was her husband—might come that day, for there were Union troops in town.

"Bertha," said mother, "go and lie down!"

Bertha shook her head.

"If I'm going to be killed, I may as well die here as anywhere," she said. This was what we all felt, that the gray-coats would kill us. I began to cry and I saw Gustave winking back the tears. He felt himself the man of the house because my older brothers were in the army.

"Gustave," said mother, "did you get the cows?"

HE HAD been sent to the pasture to bring in the cows and stable them, for we had heard how the Shenandoah Valley had been raided. We were thrifty and took proper precautions. Some of our neighbors had run away from the town several days before.

"The cows are all—" said Gustave, and he began to cry, rubbing his fists into his eyes and wiping his nose with his sleeve. We were Pennsylvania Dutch and spoke a language made up of German and French words and idioms mixed with English. Our ancestors came from the Alsace-Lorraine provinces where French and German have always mingled. When I came West I found that nobody knew what I meant when I said a thing was *all*. I say it yet sometimes when I forget myself, and I sometimes say: "*It makes rain*" or "*It makes snow*." The children laugh at me and say: "That's Pennsylvania Dutch all right." But I must get back to Gustave's story.

WHEN he reached the pasture the bars were down and the cows were gone, not only our three but all the others which were there, for we rented pasture to persons who had no grazing land, and he saw three men driving them down the pike. He ran across a field, climbed a fence, all hot and breathless, and headed them off at a bend in the road. All at once he realized that the men wore gray clothes, but he was too anxious about the cows to be as scared as he was afterward when he thought about it.

"Those are my cows!" he shouted, standing in the middle of the road and waving his arms.

"Are they all yours?" asked the leader.

"No, sir," said Gustave, and he pointed out those which belonged to us.

"I'll pay for them," said he, and pulled out a pocketbook stuffed with bills. "How much are they worth?"

Now a cow was worth about fifty dollars, and Gustave knew it, but he thought he would put the price so high that the man would return the cows rather than pay it, so he said:

"One hundred dollars apiece."

"That's cheap enough," said the man, and he counted out fifteen new, stiff, twenty-dollar bills and put them into Gustave's hand. My brother stood a moment dazed, then he stuffed the bills into his pocket and ran toward home, cutting across fields and slipping along hedgerows, for he saw Confederate soldiers everywhere and he was afraid of being robbed, for he had never even seen so much money before. He met a man who rented pasture of us and told him what had happened and what a price he had received for his cows.

"Let me see the money?" he said.

Gustave pulled out the bills.

"Read what they say!"

Gustave began to read: "The Confederate States of America will pay—"

"Mein Gott!" said the man, and he sat down and cried, for he was a poor man and the cows were all he had.

I could hear them walking overhead whenever the firing would cease for a little while, and I held it very still while it slept

WHEN Gustave told the story in the kitchen and gave the bills to mother, I think he expected to be punished, but mother put them in a cracked teapot and set the teapot in the cupboard.

"They look like real money," she said, and went on molding her loaves. I have one of those bills yet; I have given the others away as curiosities.

Nothing happened right after that. We all stayed in the kitchen; we felt somehow that whatever came we would take it together.

The next thing which I remember was the sound of shots in the street. Our house was on a corner—a big stone house with deep windows—and I climbed into a window sill and looked out. I saw a lot of men in blue uniforms running, and right in the street in front of the house lay one of them, all crumpled up with his gun under him. Then I saw that the gray soldiers were chasing the blue ones; they were not in order like a parade, like the regiments which we had watched march off to the front with the flags that the women had made for them flying in the breeze and the drums beating like mad, but every man was running on his own account, and the gray soldiers were firing upon the blue. I observed a curious thing; whenever a Union soldier came to our corner he stumbled and fell; sometimes he got up again and ran on down the street and sometimes he lay still and groaned; then I saw a gray soldier in a second-story window across the street shooting the men who ran under him. I was so mad that I leaned out and shouted to the next who came running:

"Look up there!" He heard and turned and ran another way. Years after at one of the G. A. R. reunions that very man came to our house to see the little girl who saved him. I did not have a chance to save any other lives, for mother came behind me and pulled me in and closed the window.

WE HAD closed all the windows and locked and bolted the doors, when there came a heavy knock at the garden door and voices called: "Open! For Heaven's sake, open!"

We looked at each other in dismay, then mother pulled back the bolt and two Union soldiers burst into the room.

"Hide us! Hide us!" they said in hoarse whispers. Without a word and without a moment's hesitation mother opened the

Digitized by Google

cellar door and they disappeared. A moment after three ragged Confederate soldiers burst in from the garden. Mother was opening the street door and they thought she was closing it.

"Did the Yankees go out that way?" they shouted.

"Yes," said mother, and they rushed out into the street. We all gasped; we did not know that mother knew how to lie. Then came a knock upon the street door, and mother opened it as calmly as if she thought it was one of the neighbors. An officer stood there with two men. He took off his cap politely.

"Madam, a drink of water and something to eat, if you please?" His eyes surveyed the kitchen and fell upon the brown loaves and the steaming pies. "Ah! This is just the thing! By your leave, madam!" He broke a loaf in two and began to eat; his men followed his example.

"Elizabeth," said mother, "get the gentlemen some fresh water."

THIS was a familiar formula and I was usually quick to respond. It meant going to the pump outside of the street door and pumping with long, steady strokes a brimming blickey from the deep, cold well; then I brought heavy green glasses from the cupboard in the chimney—we did not have thin glassware in those days—and set them on a japanned tray which had a swan arching its languishing neck in the center. I stood still with burning face. I do not know where I had heard the phrase, "To give aid and comfort to the enemy," but it came to me then. For weeks I had never knelt by my high postbed, with gayly flowered hangings, without adding to my nightly "Our Father which art in heaven" a prayer into which I put my whole soul: "O Lord! Please let our soldiers kill all the rebels!"

Mother thought my hesitancy came from fear, although the firing had ceased for some minutes. "Is it safe for her to go to the pump?" she asked anxiously. "Yes, madam. There will be no more street firing at present: the enemy are driven out."

The enemy! I was raging inside, but I opened the door and went out, carrying a blickey. I saw at once why the firing on our corner had ceased; the gray soldier hung half out of the window with a blood-clotted face; his gun had fallen to the pavement. While I stared fascinated I saw in the shadow of the room behind him the faces of the man of the house and his wife. There seemed to be a difference of opinion whether to take him in or to pitch him out. I saw the woman point downward and heard her voice across the narrow street: "Put him there with those he sent there."

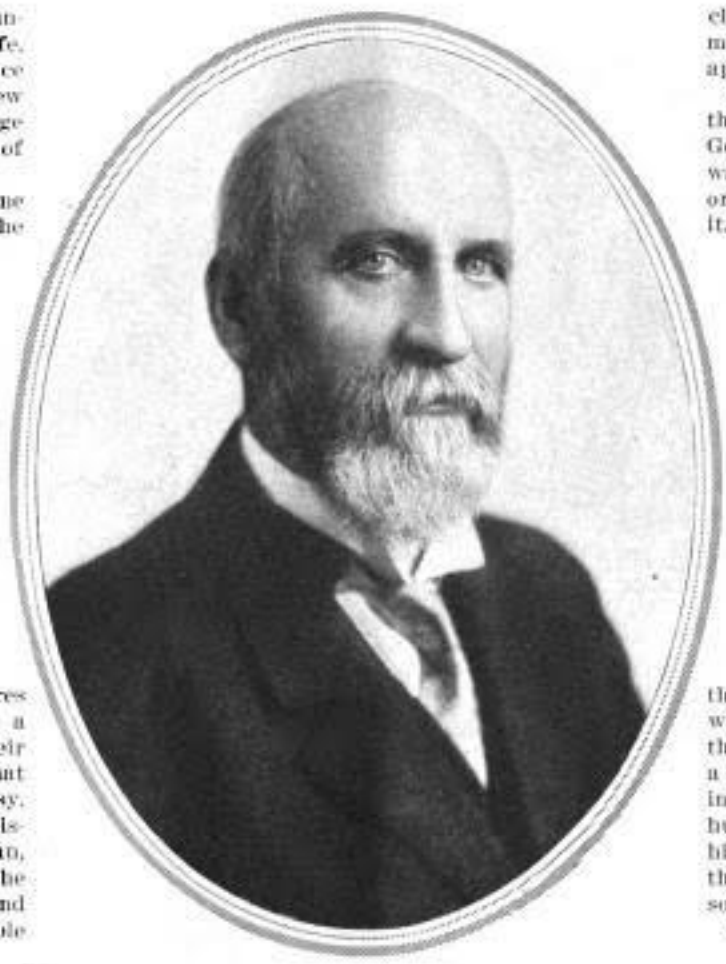
THEN I saw that where there had been four men lying there were seven; it seemed to me that one of them moved a little. I began to work the pump, staring all the while at the ghastly spectacle. The counsel of the woman prevailed: the body fell to the ground with a thump like the falling of a sack of wheat and lay there all awry. I was giving aid and comfort to the enemy while my neighbor was casting him out. A moment after she hastily washed the blood off the window sill and closed the window. She was a famous housekeeper; she seemed to think all was over and done with. She was to see her house shot through and through and her spotless floors reddened with blood. I carried the blickey into the kitchen and began to get the swan tray and glasses, but the officer took the blickey and drank directly from it.

"We are not used to such refinements as tumblers," he said, and he passed it along to his men. The cannon began to roar. The officer was speaking to mother in a gentle, reassuring tone:

"You have nothing to fear from us," he said, "but you will be in great danger from cannon balls and shells. Have you a cellar? Then get into it at once."

We all felt guilty when we remembered who were in our cellar; we thought he could see our guilt in our faces. Mother said with a gesture toward Bertha which was more eloquent than a page full of words:

"Can I take my daughter somewhere? Her husband is in the army."



THE officer looked at Bertha, who still held the letter to her lips, too conspicuously, I thought. I was afraid he would see the flag and "Oh, say, can you see—" He bowed to her with such respect and gravity as I had never seen and said gently:

"I pray he is not in Pennsylvania to-day. Madam, I have a young wife who was as is your daughter when last I heard from her. I know not at this moment whether I am a father or a widower. She has been in the midst of war's alarms, but she has never been disturbed by the enemy. I can promise that your daughter shall be equally well treated. Let me lead her at once to the cellar; it is not possible to seek any other refuge. Is this the door?"

"We will go," said mother hastily. She was afraid he would really go into the cellar and discover the soldiers. The officer bowed and went out, followed by his men. He laid a hand on my head as I stood in the doorway. "Little Hebe," he said kindly, "you have done an ungracious task graciously. I could see how it galled you. Good-by and thank you."

NOW I must confess to something which may sound ridiculous, but if I am to tell all I remember, I must tell this. Every girl at that time was making a collection of buttons: we did not have post cards and spoons then. The trick was to ask each of your acquaintances for a button and remember who gave it to you, and at each opportunity go over the string, naming each button you touched. I had the longest button string in town. *(Continued on page 31)*

A Professional Peacemaker

By Peter Clark Macfarlane

SOME whiskers, a Socratic brow; large, blue, unimpassioned eyes, and sixty years of this life, fifteen of which were spent beneath the surface of the ground in the mining of coal, are a few of the features of this interesting man, whose strange specialty is dynamiting labor troubles by the use of huge sticks of common sense.

Here is a situation that reveals his quality. On one side, the largest men's clothing manufacturers in the world; on the other, ten thousand striking garment workers. Each side has exhausted the resources of negotiation; they are deadlocked over the issue of the closed shop; they seek almost in vain for a mediator. At last they find him in this clear-eyed coal miner, whose face used to come out of the ground as black as soot, but whose mind remained unsmutted; who for twenty-seven years has been manager of a small town opera house, and is now a national director of the Drama League; who is president of the Illinois Unitarian Association, who has been manager of Chautauqua courses and writer upon philosophic themes; but with all his varying interests still retains his enthusiasm for the cause of the man who works with his hands.

A Mediator's Qualifications

THE work of the mediator is hard and requires infinite patience, a passion for rationality, a perspicacity that penetrates to the care of their common interest, and an open, obvious sincerity that wins the confidence of both parties to the controversy. Slowly at first, and then suddenly, the difficulties dissolve. Just with talk this man, who is not a union man, though he has been one, and not a capitalist, though he has some capital, brings agreement out of difference, and a long and bitter strike which had appeared inevitable is entirely averted. Or take another situation:

The Cherry Mine disaster is two weeks old. The bodies by the hundred are still in the mine. The widows mourn and wail in half a dozen languages, making nothing intelligible but their grief. Yet already the ambulance chasers have been able to get their signatures to contingent fee contracts; suits for damages totaling millions are in the air; but lo! it appears that the widows may get nothing, since the mine, operated for the Chicago, Milwaukee & St. Paul Railroad and morally and practically theirs, is actually owned by an independent corporation with no assets save the mine itself, which is a property of doubtful value to any but the railroad company. The railroad company, actually holding no dollar of stock in the mine company, can and does throw up its hands with a technical plea of no liability. Suits may be tried, judgments may be entered, the mine may be sold, but it will likely bring less than enough to pay court fees, in which event the widows will get nothing.

But comes our mild-eyed man of the whiskers and the Socratic brow, looking not oversophisticated, yet with a kind of air of moral force about him that makes men listen—comes this man and sits across the table from Mr. A. J. Earling, president of the Chicago, Milwaukee & St. Paul Railroad, and says to him:

"What are we going to do for these widows?"

A Delegate Without Credentials

THE railroad president, feeling very deeply the great burden of all this woe which has come upon the employees of one of the minor interests of the huge corporation of which he is the head, sighs deeply and says:

"You know we acknowledge only a moral responsibility in this sad affair."

"How much do you figure a moral responsibility amounts to per head, in the case of all these widows?" persists John I. Williams in that plain, practical way of his.

"By the way, whom do you represent?" counters President Earling, thinking of all the ambulance-chasing lawyers and of the foreign consuls and the many other conflicting interests which have already appeared. "Whom do you represent?"

Now, this question to John I. Williams was something of a poser. He could not say he represented God, for he doesn't believe in God—in the traditional way. He could not say he represented the widows and orphans, for he had never talked to one of them about it. He tried to tell President Earling that he represented humanity, just the spirit of fair play, that from long habit of thought he had come to represent the workingman's end of almost any issue that happened to rise within the sweep of his personal horizon, and that this had brought him here.

President Earling, being no blind man at all, looking this plain, fine soul of a man over rather carefully, pinned a small ribbon of faith and hope upon him and said:

"Go back to Cherry and see these widows and get them to authorize you to represent them before me."

Widows Voted Him Authority

NOW that was rather a momentous thing for President Earling to say and indicates rare powers of discernment and decision. To all the lawyers who were threatening the Milwaukee Road with legal assaults, President Earling turns an ear that is deaf and a face that is flinty cold; but when a man such as Williams comes, who represents nothing in the world but just the spirit of common sense and humanity, why, the president sighs deeply and grasps his hand and hangs on to it warmly. It shows something fine in Albert J. Earling which responds to something fine in John I. Williams.

Associated with Williams in his mission of humanity was Duncan McDonald, secretary of the Coal Miners' Union of the State of Illinois. When President Earling's suggestion was made, Williams turned to McDonald and said:

"Will you go down to Cherry with me to see if we can get this authority?"

"That I will," declared the Scotchman.

Off went the two to Cherry. The day was bitter cold. The snow lay heavy. The widows, with dishevelled hair, with dull, heavy eyes, almost put out with weeping, gathered to receive the two men in a hall on the second floor of the building.

Mr. Williams tried in vain to get their minds on money compensation for their losses and to tell them they were in danger of losing every prospect of such compensation. Their stolid minds refused to consider but one thing, to entertain but one idea—the bodies in the mine—why, oh why would not the company get the bodies from the mine?

Finally Duncan McDonald got up to talk. The women knew him better. He was one of the heroes of the disaster. He had descended into the mine while it still burned; he had breathed smoke and flames to save their loved ones for them, and they listened to

Digitized by Google

him. Besides, McDonald led them on cannily. He began with a speech calling for radical action by the company, which the women applauded. He proposed a resolution demanding that the company hasten the reinstallation of fans to clear the mine, and the women passed it with a will.

On top of this he had no difficulty in securing the indorsement of a resolution to make himself and John I. Williams plenipotentiary ambassadors to the throne of presidential grace in the office of the Chicago, Milwaukee & St. Paul Railroad.

With the passing of that resolution Williams took upon himself the burden of all these widows' woes and began a patient campaign of journeyings to and fro between the mourners in Cherry, the lawyers in Chicago, the administrators in various places, the foreign consuls from everywhere, and the office of President Earling. Week upon week and month after month his wise, persistent mediation continued until he actually got President Earling and his directors, who confessed no legal liability, to agree to settle with all these widows on the basis of the English compensation law of three years' wages for each life taken, or something like $1,800 apiece to these helpless widows.

And then, just between the pudding and the oven, when the Socratic coal miner was stroking his dappled whiskers with a sense of keen satisfaction, along comes an officious person and upsets the pudding into the fire.

Patience Won

PRESIDENT EARLING got angry and threw the whole case into the hands of his claim department, which assured him it could settle the cases on a much cheaper basis than $1,800 per widow. Again the husbandless and fatherless were at the mercy of the courts and lawyers and laws that were totally unable to work an equation in dollars and cents out of a mere moral responsibility. Only John Williams could do that, and for a few days even he was in despair. But once more he went to President Earling, again he talked about high moral grounds, and made one final appeal to the great executive to prove himself too big to let any offensive interference of meddlers spoil their beautiful plan of settlement upon the basis of human sympathy which was to demonstrate once for all that a corporation might not only have a soul but also a heart.

And President Earling sat for a time deep in thought, then, looking across once more at this blue-eyed, patient, sympathetic man of so much tact and so much sense, said:

"Mr. Williams, I'll do it."

Teaching His Fellows

WHEN the transactions had been completed and the Chicago, Milwaukee & St. Paul Railroad had disbursed nearly half a million dollars on behalf of the Cherry Mine victims, President Earling wrote a letter to Mr. Williams, in which he said:

". . . Nothing could have crystallized the details into a final result as did your patient, earnest, and disinterested mediation."

Mr. Williams was born in Wales. He went into the coal mines of Illinois at the age of thirteen. Along with his work he formed the habit of thinking. He mined ideas as well as coal. When, after the Jay Cooke panic of '73, wages were reduced in the coal mines, the miners with whom Williams worked declared a strike.

"Wait," protested Williams. "Let's send out a committee and investigate. Maybe the general conditions are forcing a reduction in wages and we are fighting against the inevitable."

Cries of "Throw him out!" and "Traitor!" greeted this mild, common-sense suggestion. Months afterward, when the strike had been lost, the hot-heads confessed that Williams had been right and they wrong. Young Williams seized the occasion to enforce upon his comrades the value of education and habits of thoughtfulness. "Miners need to know things," he urged. "Not only about mining coal, but about business and trade conditions; not only in Illinois, but in England and Australia; and not only conditions now, but a generation or a century ago. We ought to be able to do some thinking for ourselves, to know why things are the way they are, and be able to take a look ahead and make a reasonable guess at what they are going to be like."

This, as Williams put it, commended itself greatly to the smut-faced men of the mines. They accepted it for law and gospel, and they did a remarkable thing. Twenty-five miners formed a class in political economy. They met every Sunday for many years and John Williams was their teacher.

They went through Mill and Jevons and they thoroughly and patiently grounded themselves in the accepted political economics of the time; and then they turned about and studied other subjects; they went deep into geology and botany, and generally in the course of several years acquired an amount of cultural knowledge that was astounding.

The Change Machinery Wrought

HOWEVER, a great change has taken place in the character both of coal miners and coal mining since the day when that class was organized. Perhaps a free quotation from an address of Mr. Williams will put that more graphically than any words of mine. He said:

"In a life span I have been a witness of a remarkable change in a great industry. When a young man I worked for fifteen years at the trade of coal mining. In those days the miners were nearly all of British nativity—English, Irish, Scotch, or Welsh—and mining was a skilled trade. We dug the coal with our hands, our picks, and our brains. I well recall the pride of craftsmanship among us; how we used to sit in the evening and revel in exploits of coal mining; how the popular hero was the man who had done a prodigious day's work, who could shear the straightest rib, who could undercut the deepest mining, who was the deftest, cleverest with his tools, and who was the mightiest and most enduring in his strength and energy. I recall it was a disgrace to be thought lazy, to be a shirker of work, to be unfit to do a good job and turn out a workmanlike product; and I remember how I responded to that public opinion in my own reactions.

"But now what a change! With the coming of the machine drill and the machine coal cutter, mining as a skilled trade has passed out. To follow the machine needs only brawn, and so the brains betook themselves to other callings.

"With the passing of the pick and the hand tools passed also the British miner, and in his place came the immigrant hordes from eastern and southern Europe. Not only has this happened in mining but in other occupations where machinery has superseded skill."

How His Mind Works

THE speech from which I am quoting now swings about to a phase of the union question—a thing so well said and so well worth saying that I slip it in here because it gives a cross section of this ex-coal-miner's mind, and shows how sensible he is to some of the pitfalls that lie in the path of organized labor at the present time. Continuing the quotation:

"Now the point that concerns us is that these are the men who are to operate the unions of this country. It is to such as these that the power over industry is to be transferred. Is it any wonder that employers gasp? Indeed, trades-union leaders are hardly less disturbed. In the State of Illinois, this year, the miner's union presented a bill in the Legislature requiring that hereafter no one could obtain a miner's certificate unless he could pass an examination in the English language. It was passed as a safety measure, but no one can escape the question that must have been in the minds of the leaders: *How can democracy and self-government as represented in the union be carried on by people who cannot speak our language and who come from countries where both are unknown?*"

"A Policy of Ruin"

AND now, while I am on the subject, let us hear Mr. Williams on that greatest menace to industry which seems to lie in the program of unionism—the tendency to curtail production. He claims the workman learned this from the employer. Hear his indictment:

"The labor organizations of the last century were in the first and crude state of unionism. They gradually accepted as theirs the frank policy of their employers—give as little and get as much as you can. That policy is at the bottom of every endeavor of any union to curtail production—but it is a policy of ruin. That sort of unionism will ultimately destroy the union just as that sort of policy will ultimately destroy a business."

And here is his argument to prove this:

"Every cheapening in quality and every increase in cost of production falls back ultimately upon the worker—because the great mass of workers constitute the great mass of consumers. When for instance, the bread maker increases the cost of food by getting as much money

(*Concluded on page* 30)

Pierrot's Song

By SARA TEASDALE

Illustrated by Duncan Stewart Walker

LADY, light in the east hangs low.
Draw your veils of dream apart;
Under the casement stands Pierrot
Making a song to ease his heart.

(Yet do not break the song too soon—
I love to sing in the paling moon.)

The petals are falling, heavy with dew;
The stars have fainted out of the sky:
Come to me, come, or else I too,
Faint with the weight of love, will die.

(She comes—alas, I hoped to make
Another stanza for her sake!)

Digitized by Google

Off-Agin-on-Agin Finnegan

By Will Adams

ILLUSTRATED BY GAYLE PORTER HOSKINS

FINNEGAN was not prepossessing, and at first the recruiting sergeant hadn't cared to take him, but he prayed so earnestly for a chance to enter the army that the august bunch of buttons had finally yielded.

"All right, I'll hitch you up if the sawbones lets you by," he conceded. "The Eighteenth Cavalry's ordered to the islands and needs everything it can get, but I warn you, you'll be sayin' your prayers backward this time next month."

Overjoyed, Finnegan had reported to the doctor to be tapped, sounded, tested, and overhauled. He had to stretch himself till his bones cracked to make the required five feet four when he was being measured; but eventually, after much red tape, he was accepted and in due time shipped with the rest of the detachment from the recruiting depot to Fort Hotchkiss to join the third squadron of the Eighteenth Cavalry under orders for a tour of duty in the islands.

"Good Lord!" said Captain Campbell as he watched the newly arrived recruits tramping up from the station. "This is the worst bunch we've had soaked to us since the Spanish War. Old Keefe must have been hard up. Where did he ever light on these sweepin's?" he inquired of Sergeant Whitney, who was with him. "They *all* look like misfortunes, but that one"—singling out Finnegan with a stubby forefinger—"looks like an accident going somewhere to happen."

IMAGINE Captain Campbell's and J Troop's disgust when this same little dreg of a Finnegan was drafted into their midst—the newest, rawest, and rookiest rookie that J ever had. Others came with him, but while they naturally "got theirs," he was singled out to be the butt of every known and unknown hazing trick ever used in the army. The "club," the "keys to the parade," the "buckets of water," the "pan of steam," the "butter checks" were all used with huge success by his tormentors, besides others a bit rougher, and Finnegan found life a hard trail for a while. But Whitney, who had been made first sergeant after Stone had won his commission, after watching Finnegan narrowly for a while, confided to Shorty that it seemed to him now that of all the new men Finnegan appeared to have the best "makin's" in him. For one thing, he never drank.

"And the Lawd knows, Captain, if any hombre ever had an excuse for strong drink, he's the one. The troop's sho'ly badgered the life out of him—particularly McClusky."

"Humph!" said Shorty, grunting reflectively. Then suddenly—"Give 'em the high sign to quit on Finnegan. If I can pull even one real soldado out of this rotten bunch, I'll feel better. Not quit short off, you know," he qualified, "or he'll be no darn good to anyone. He *could* be half killed, you know, and 'twould do him good if it was done the right way. I guess I'll take a hand in this game myself. You just tell 'em to call off their hounds. I'll do what's needed."

THE troop was beginning to suffer from incipient brain fag through thinking up stunts to do to Finnegan.

"If Shorty wants to be the doctor," said Big Bill Sullivan, voicing the sentiments of the troop, "we'll let him all right. Finnegan won't need no other medicine—if I know Shorty."

McClusky was really the only man in the troop who wasn't ready to stay his hand. Finnegan had incurred his bitter enmity for two reasons. First, he would not drink with him (Mac had tried in vain to get the recruit drunk "for a joke" and failed, to his bitter disappointment), and, second, he was a hated "Orangeman," while the McCluskys had been "wearin' of the green" since the day of St. Patrick and Fin McCoul.

However, the date for sailing was so near now that neither Mac nor Shorty had much time to waste on Finnegan. It was packing, packing, checking up, and cleaning out, hammering and sawing boards for crates all day. Every minute that could be snatched by the sentimental ones was spent at the homes of "best girls," and nearly the whole troop became sentimental under the emotion of leave-taking for a far country and blossomed with rings and scarf-pins presented by heartbroken girls-I'm-going-to-leave behind-me, almost setting Shorty Campbell crazy.

"Here goes!" Finnegan muttered, and rushed forward, using his rifle as a club

"Golly!" he exploded, "are they all loco? Thank the Lord, we're leaving day after to-morrow or I'd have a married troop on my hands. Think of that! I do believe that rook Finnegan's about the only man in the troop who isn't girl-tagged one way or another—and that's another point in his favor."

"Don't worry, Captain," said Whitney, "it's just a modern development of Sir Knight goin' out yonder to the Holy Land wearin' the guerdon of his lady love." He grinned as he spoke, but nevertheless was fain to stick hurriedly into his pocket his good right hand, the little finger of which was adorned with a small gold ring which pinched horribly and almost arrested circulation.

"Holy Land!" snorted the Captain. "You've been through the insurrection and you ought to know better! What happens to soldados in the islands is more like the unholy land! Finnegan's the only sane man in the troop—except me. Needn't think I didn't salve your pinky. I've got one consolation anyway, these good-by affairs don't last. After a month or two in the islands none of you'll be answering her letters—sometimes won't even open 'em. I've seen it happen too often—thank God!"

MANY were the fond and sad good-bys said to loved horses, for they were to be left behind for the next garrison.

Many a J Trooper's heart ached at having to leave his dear old Crummy and get a fresh mount in the islands, and even Shorty was seen to give his Mulligrubs many lingering pats the last time J Troop went to stables.

The Eighteenth made a safe and sane passage to the Philippines without particular incident to speak of. They reached their station at last—Muymaras in Leyte—and settled down as the sole garrison of the post, the rest of their squadron being scattered far and wide over the island, and Shorty became, by virtue of his captaincy, post commander, sanitary officer, grand arbiter, and high cockalorum of that portion of the island.

AS SOON as things were fairly settled and started running in their tracks Shorty turned his immediate attention to Finnegan. When Shorty took up Finnegan's education his days were full of trial and labor and his nights all too short—for he slept hard—dog-tired.

McClusky, who had all along made life a burden to him, suddenly switched now, and, pretending to be his best friend, gave him solemn warnings concerning the brutality of the Captain in "breaking rooks."

"Why," romanced McClusky once, "didn't I see him in riding hall once tie a rook to his horse's tail and drag him round the hall nine times at a gallop, all because the rook, not havin' been used to horses none, was scared to do monkey-drill work! You better watch out!" This lie and others of its ilk were faked out of whole cloth.

NOW it was worse than mean of Mac to take this stand, for, left alone, Finnegan's natural common sense would have soon brought him to a realization of the other side of his Captain and the real reason that singled him out to be put through such special heckling, for Shorty never bothered himself personally with anyone he didn't consider worth while. Mac, though, was shameless, and never happy unless up to some devilment. Yet there abode in Mac's heart a surpassing admiration and love for his tough little troop commander. Shorty had licked him with bare fists man to man, Shorty had busted him times without number, Shorty had had him in the mill many times, Shorty had had him court-martialed and soaked six-sixty, following a certain mix-up with Corporal Morgan; but Shorty, besides, had been his friend as much as it was possible to be, and let many peccadillos go unpunished that he would have come down on hammer and tongs if committed by anyone else. Shorty had saved him from a "bobtail" many times, too—and that meant much to Mac, for the army was his life as much as it was Shorty's. He had given all kinds of trouble to his Captain when stationed at the Eastern post, and Shorty, for the sake of old days when they had been noncoms together in the "old regiment," had borne it all and kept him in the service, hoping for a chance of activity in the Philippines when Mac could again show what he was worth and justify all the allowances made for his barrack life.

ONE afternoon, some four months after the arrival of J Troop in Muymaras, Finnegan secured a pass and went to town—or what passed for "town"—a tiny native barrio with a vino shack or two. Trust vino shacks to get within hailing distance of the United States army. Finnegan seldom went to town, not caring for its squalid delights, but to-day there was that within him that compelled him to go and to take his first drink of vino. In the mail that the puffing little steamer had brought that morning was a letter for Finnegan that had made his heart beat high with hope, fear, and excitement that demanded some sort of an outlet, and the mysterious vino drink, hitherto unknown to him, was the only one obtainable. Had Shorty been at the post he would not have got the pass, for Shorty was refusing passes to everyone just then. There had been rumors of trouble, and Shorty considered that at present it was better not to

Digitized by Google

let his men go mixing up with vino and the Gu-gus. Shorty, however, was off, it was officially announced, on a visit to headquarters. In reality Shorty's striker had delivered to Lieutenant Burns a black-scrawled note at reveille one morning which read:

DEAR BURNS—*Think the Gu-gu row may be heading this way, so am off to have a lookee see. Don't expect me back till you see me.*

ALEXANDER CAMPBELL.

So Finnegan, having a good reputation as a man who didn't drink nor make trouble easily, got his pass.

Now it is a known fact that two real good out-and-out vino jags will send a man loco and ready to be shipped to Saint Lizzy's. Finnegan, though, not being a drinking man, never had the smallest chance to get even the smallest sort of a jag, for just one glassful finished him and he became deathly sick.

He woke on a grass mat in a native shack and looked out into the blinding sunlight through the open doorway. His dollar watch said three o'clock. It had been five or thereabout when he had taken his drink and the sun had scarcely begun to sink. "Why, this must be the afternoon of the next day. I sure have slept some," he muttered. He was desperately ashamed of himself and wanted to get back to barracks as soon as possible. Besides, he was much worried at having overstayed the time of his pass; here he was already about nine hours late. He groped about in the half light for his hat, found it, and shamelessly sneaked out and away without troubling to find out who his good Samaritan had been. His mind was now entirely bent on getting back to the post, and he kept thinking continually, with numberless variations, on the theme: "Gee! S'pose Shorty's got back! I see where I dismount to fight on foot. What he don't do for overstayin' passes ain't a thing! It's a month and a bust for me sure! And I need every *cent* of my money!"

BY BAD luck he found McClusky on the barrack porch.

"Hey!" said McClusky, scenting a chance for what he termed "fun," "so ye've decided to come back!"

"I was sick," faltered Finnegan, gripping the rail tightly, for he was still dizzy.

"Sick!" echoed McClusky wickedly. "Ah, tell that to the marines! You'll have to git some better excuse than that. Ye've been marked down 'Deserted.'"

"What!" gasped Finnegan.

"Sure," said Mac, enjoying himself exceedingly. "When a lad's been gone three days without leave, like you've been, he gits marked 'Deserted' and court-martialed if they ketch him. The Captain sure does hate deserters. He won't do a thing to you! And he's back now." Here were three lies. Finnegan had not overstayed his time three days, but only a few hours—Mac took a chance that he was hazy as to time, being learned in "morning-after" appearances; next, they do not immediately mark a man "deserted" for three days' absence without leave from the United States army; and, third, Shorty had not returned. Poor Finnegan, though, took all these positive statements for facts; fear and utter despair gripped him. "What'll I do?"

"Pack your trunk and go," advised Mac. "Git together some of your equipment, steal some chow, and hike it for the jungle."

"But—" began Finnegan.

"But nothin'. Beat it—and quick, too, before the Old Man sees you or it's six-sixty for yours."

THOROUGHLY frightened, Finnegan hiked without stopping for same thought and hastily did as he was bid, not forgetting to put a letter and a certain picture into his pocket. His saddlebags he stuffed full, intending to carry them: rifle and pistol were locked in the racks, and so there was no weapon left him but his saber, which he took from the head of his bunk. Then he sneaked out the back way, not caring to see Mac again. He was a queer little figure slinking into the jungle, a blanket roll slung across him, from which dangled his canteen and cup, and with his saddlebags over the free shoulder, steadied by one hand—the other gripping the heavy saber. As near as he could determine he steered northeast, for he had heard that there was quite a large village—almost a town—about twenty miles northeast of Muymaras and that sometimes a steamer touched there. He had no definite plan. At present his whole purpose was to get away from the wrath of Captain Campbell and the six-sixty—which, be it translated, means six months' imprisonment and sixty dollars fine.

WITH the tropical night it was suddenly very dark in the jungle. It was hard to see the stars to steer by for the interlacing coco palms, and Finnegan decided to quit and camp for the night. "If I can't see to git on, neither can no one see to look for me." So he camped in a small clearing and supped on hard-tack, water, and a small hunk of bacon. The supper revived his body but failed to refresh his spirits. He was deeply melancholy.

"Now I've done it! I'm in a nice mess. Even if I ketch the steamer and git away, what chance of a job has a deserter in these islands? And I got to git a job; I *got* to! Maybe I kin git across to Borneo or down to Karkaralong, or maybe git to Manila and work my passage to Hongkong. O Gawd, what a fool I am! What a sickly, no-'count fool, to have got myself into a mess like this just when I oughter been straightest!" He fell to brooding, every now and then slapping his knee and cursing himself or else clenching his hands in agony of spirit and crying: "O Lord, what'll I do?"

The saber slipped from his grasp. . . . "Don't shoot! Don't shoot!" begged Finnegan, sliding down

AFAR off came a faint crackling and crashing of twigs. Finnegan pricked up his ears; he was far off any trail, and at first he thought it must be some animal, but when the sound of a sneeze from the approaching creature reached his ears he started up in wild affright, for it was distinctly a human sneeze. Visions of Igorrote head-hunters, Pulijanes with kris and bolo, dashed through his mind, for the noise was not coming from the direction of the fort and so he didn't think it was anyone following him. He had heard of cases where the savages took men's brains out, stuffed the skull with grass, and buried them up to the neck, making a game of whacking at their heads with bolos. Stories of torture ran through his mind—all bloodcurdling deeds. Like Corporal Jacot Debett in the Bab Ballads, he wanted to die with "his brains reposing in peace in his skull," so the protective instinct sent him on the jump for the nearest tree. He yanked his saber from the scabbard, and, with it dangling from his wrist by the saber guard, started up the tree like a trained gymnast. It is wonderful what supple joints and strong muscles acute fear occasions. Arrived on a large limb with protecting leaves all about him, he lay and drew breath (it sounded to him like the panting of an enormous locomotive), waiting to see what it was that he had run from. The crashing stopped at the entrance to the clearing and the what-is-it came scuttling across, until right under Finnegan's tree it tripped over some of the stuff he had left on the ground—blanket roll or saddlebags probably—and came down with a clattery bang. Instantly rose up a cloud of good old United States cusswords, and the prostrate man fumbled about, lit a match, and disclosed to the astonished gaze of Finnegan the high cheek bones, squinty eyes, and stringy, droopy mustache of none other than Shorty. There was a rough, stubbly growth all over his little countenance—for Shorty hadn't shaved for days—and his face looked like the barrel of a music box. He rose up and promptly lit a small camp fire, by whose light he proceeded to explore. The first thing upon which his eyes lit was the scabbard. "Hell!" he ejaculated thoughtfully, popping out his eyes as was his custom when thinking. Next the saddlebags and blanket roll came in for his attention—he exploring their depths as earnestly and curiously as a fox terrier, grunting all the while. Last, the cup and canteen caught his eye—also the plainly stenciled legend on the canteen side—"J 18" on either side of crossed sabers and below the troop number of the owner—"81."

"Eighty-one!" said Shorty. "Why, that's Finnegan! What's he doin' around here scatterin' equipment?" for he knew each J Trooper's number as well as his name—nobody could fool Shorty on anything connected with his troop.

"Finnegan!" he shouted. "Hi, Finnegan, where are you?"

NO ANSWER—not even the shaking of the leaves overhead. Finnegan up there was very much afraid. There had been relief, of course, when Shorty flashed up instead of an Igorrote, but now the old fear of his Captain came back and he crouched close to the branch and held his breath. What did the T. C. do to deserters? McClusky had intimated fearful possibilities.

Shorty meanwhile was thinking hard. He reasoned that if Finnegan was within hailing distance he would answer or come if possible—therefore something must have happened to him, and it was his bounden duty as Finnegan's Captain and protector to go and find out. It never entered his head that Finnegan was deserting.

"He's got his saber anyhow," he thought, "though he can't hardly do more than Butt's Manual with it—still if any bunch of Gu-gus has got hold of him—good-by Finnegan—and it's up to me to find out."

He took his big six-shooter out, saw that the chambers were filled, and squinted along the barrel. In his chunky little fist the big Colt .45 seemed absurdly large. It just happened that the sight he took pointed directly at Finnegan in the tree. Not knowing what was in Shorty's mind and thinking he was discovered and going to be shot at, Finnegan gave an involuntary start, the saber, whose hilt he was gripping, slipped from his grasp and hung dangling from his wrist, flashing in the firelight. No one could have been more astonished than Shorty at this development, but he always had himself in hand.

"COME down or I shoot," he ordered instantly.

"Don't shoot! Don't shoot!" begged Finnegan, sliding abjectly down.

"Well!" exploded Shorty. "By golly! It's Finnegan himself! What the—"

"You can put up your gun, Captain. I'll go with you all right. I don't want to add nothin' more to a deserter's sentence."

"Deserter! What! Why, you D. F., where were you desertin' to?" Shorty gave a delighted chuckle. This was rich. He knew there was no place to desert to.

Bealby

Flight — Chapter VI

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

CAPTAIN DOUGLAS struggled with the difficulties of his cousin's handwriting. Everybody drew together over the fragments of the dessert with an eager curiosity, and helped to weigh Lady Laxton's rather dishevelled phrases. . . .

"WE'LL call the principal witness," said Mrs. Bowles at last, warming to the business. "Dick!"

"Di—ick!"

"*Dick!*"

The Professor got up and strolled round behind the caravan. Then he returned. "No boy there."

"He *heard!*" said Mrs. Bowles in a large whisper and making round wonder eyes.

"She *says*," said Douglas, "that the chances are he's got into the secret passages. . . ."

The Professor strolled out to the road and looked up it and then down upon the roofs of Winthorpe-Sutbury. "No," he said. "He's mizzled."

"He's only gone away for a bit," said Mrs. Geedge. "He does sometimes after lunch. He'll come back to wash up."

"He's probably taking a snooze among the yew bushes before facing the labors of washing up," said Mrs. Bowles. "He can't have mizzled. You see—in there— He can't by any chance have taken his luggage!" She got up and clambered—with a little difficulty because of its piled-up position—into the caravan. "It's all right," she called out of the door. "His little parsivel is still here." Her head disappeared again.

"I don't think he'd go away like this," said Madeleine. "After all, what is there for him to go to—even if he is Lady Laxton's missing boy. . . ."

"I don't believe he heard a word of it," said Mrs. Geedge. . . .

MRS. BOWLES reappeared, with a curious-looking brown-paper parcel in her hand. She descended carefully. She sat down by the fire and held the parcel on her knees. She regarded it and her companions waggishly and lit a fresh cigarette. "Our link with Dick," she said, with the cigarette in her mouth.

She felt the parcel, she poised the parcel, she looked at it more and more waggishly. "I *wonder*," she said.

Her expression became so waggish that her husband knew she was committed to behavior of the utmost ungentlemanliness. He had long ceased to attempt restraint in these moods. She put her head on one side and tore open the corner of the parcel just a little way. "A tin can," she said in a stage whisper. She enlarged the opening. "Blades of grass," she said.

The Professor tried to regard it humorously. "Even if you have ceased to be decent you can still be frank. . . . "I think, now, my dear, you might just straightforwardly undo the parcel."

She did. Twelve unsympathetic eyes surveyed the evidences of Bealby's utter poverty.

"He's coming," cried Madeleine suddenly.

Judy repacked hastily, but it was a false alarm.

"I said he'd mizzled," said the Professor.

"And without washing up!" wailed Madeleine. "I couldn't have thought it of him. . . ."

BUT Bealby had not "mizzled," although he was conspicuously not in evidence about the camp. There was neither sight nor sound of him for all the time they sat about the vestiges of their meal. They talked of him and of topics arising out of him, and whether the Captain should telegraph to Lady Laxton, "Boy practically found."

"I'd rather just find him," said the Captain, "and anyhow until we get hold of him we don't know it's her particular boy."

Then they talked of washing up and how detestable it was. And suddenly the two husbands, seeing their advantage, renewed their proposals that the caravanners should put up at the golf-links hotel, and have baths and the comforts of civilization for a night or so—and anyhow walk thither for tea. And as William had now returned—he was sitting on the turf afar off smoking a nasty looking short clay pipe—they rose up and departed. But Captain Douglas and Miss Phillips for some reason did not go off exactly with the others but strayed apart, straying away more and more into a kind of solitude. . . .

First the four married people and then the two lovers disappeared over the crest of the downs. . . .

The caravan was going down hill. . . . "Ca-arnt be that drink!" said William, aspread and aghast

FOR a time except for its distant sentinel the caravan seemed absolutely deserted, and then a clump of bramble against the wall of the old chalk pit became agitated and a small rueful disillusioned white-smeared little Bealby crept back into the visible universe again. His heart was very heavy.

The time had come to go.

And he did not want to go. He had loved the caravan. He had adored Madeleine.

He would go, but he would go beautifully—touchingly. He would wash up before he went, he would make everything tidy, he would leave behind him a sense of irreparable loss. . . .

With a mournful precision he set about this undertaking. If Mergleson could have seen, Mergleson would have been amazed. . . .

He made everything look wonderfully tidy.

Then in the place where she had sat, lying on her rug he found her favorite book, a small volume of Swinburne's poems very beautifully bound. Captain Douglas had given it to her.

Bealby handled it with a kind of reverence. So luxurious it was, so unlike the books in Bealby's world, so altogether of her quality. . . .

Strange forces prompted him. For a time he hesitated. Then decision came with a rush. He selected a page, drew the stump of a pencil from his pocket, wetted it very wet and, breathing hard, began to write that traditional message, "Farewell. Remember Art Bealby." To this he made an original addition: "I *wunsht* up before I went."

THEN he remembered that so far as this caravan went he was not Art Bealby at all. He renewed the wetness of his pencil and drew black lines athwart the name of "Art Bealby" until it was quite unreadable; then across this again and pressing still deeper so that the subsequent pages reechoed it he wrote these singular words: "Ed rightful Earl Shonts." Then he was ashamed, and largely obliterated this by still more forcible strokes. Finally above it all plainly and nakedly he wrote "Dick Maltravers. . . ."

He put down the book with a sigh and stood up.

Everything was beautifully in order. But could he not do something yet? There came to him the idea of wreathing the entire camping place with boughs of yew. It would look lovely—and significant. He set to work.

At first he toiled zealously, but yew is tough to get and soon his hands were painful. He cast about for some easier way, and saw beneath the hind wheels of the caravan great green boughs—one particularly a splendid long branch. . . . It seemed to him that it would be possible to withdraw this branch from the great heap of sticks and stones that stayed up the hind wheels of the caravan. It seemed to him that that was so. He was mistaken, but that was his idea.

HE SET to work to do it. It was rather more difficult to manage than he had supposed; there were unexpected ramifications, wider resistances. Indeed the thing seemed rooted.

Bealby was a resolute youngster at bottom.

He warmed to his task. . . . He tugged harder and harder. . . .

HOW various is the quality of humanity!

About Bealby there was ever an imaginative touch; he was capable of romance, of gallantries, of devotion.

William was of a grosser clay, slave of his appetites, a materialist. Such men as William drive one to believe in born inferiors, in the existence of a lower sort, in the natural inequality of men.

While Bealby was busy at his little gentle task of reparation—a task foolish perhaps and not too ably conceived, but at any rate morally gracious—William had no thought in the world but the satisfaction of those appetites that the consensus of all mankind has definitely relegated to the lower category, and which Heaven has relegated to the lower regions of our frame. He came now slinking toward the vestiges of the caravanners' picnic, and no one skilled in the interpretation of the human physiognomy could have failed to read the significance of the tongue tip that drifted over his thin oblique lips. He came so softly toward the encampment that Bealby did not note him. Partly William thought of remnants of food, but chiefly he was intent to drain the bottles. Bealby had stuck them all neatly in a row a little way up the hill. There was a cider bottle with some heel taps of cider, William drank that; then there was nearly half a bottle of hock, and William drank that; then there were the drainings of the Burgundy and Apollinaris. It was all drink to William.

And after he had drained each bottle William winked at the watching angels and licked his lips, and patted the lower centers of his being with a shameless base approval. Then fired by alcohol, robbed of his last vestiges of self-control, his thoughts turned to the delicious chocolates that were stored in a daintily beribboned box in the little drawers beneath the sleeping bunk of Miss Phillips. There was a new brightness in his eye, a spot of pink in either cheek. With an expression of the lowest cunning he reconnoitered Bealby.

BEALBY was busy about something at the back end of the caravan, tugging at something. With swift, stealthy movements of an entirely graceless sort William got up into the front of the caravan.

Just for a moment he hesitated before going in. He craned his neck to look round the side at the unconscious Bealby, wrinkled the vast nose into an unpleasant grimace and then—a crouching figure of appetite—he crept inside.

Here they were! He laid his hand in the drawer, halted listening. . . .

What was that? . . .

Suddenly the caravan swayed. He stumbled, and fear crept into his craven soul. The caravan lurched. It was moving. . . . Its hind wheels came to the ground with a crash. . . .

He took a step doorward and was pitched sideways and thrown upon his knees. . . . Then he was hurled against the dresser and hit by a falling plate. A cup fell and smashed, and the caravan seemed to leap and bound. . . .

Through the little window he had a glimpse of yew bushes hurrying upward. The caravan was going down hill. . . .

Digitized by Google

"Lummy!" said William, clutching at the bunks to hold himself upright. . . .

"Ca-arnt be that drink!" said William, aspread and aghast. He attempted the door.

"Crikey! Here! Hold in! My shin!" . . . "'Tis that Brasted Vool of a Boy!"

"...." said William. "... ——— .... ▬ ▬ ▬"

"▬"

"[illegible]"

"[illegible]"

THE caravan party soon came to its decision. They would stay the night in the hotel. And so as soon as they had had some tea they decided to go back and make William bring the caravan and all the ladies' things round to the hotel. With characteristic eagerness, Professor Bowles led the way.

And so it was Professor Bowles who first saw the release of the caravan. He barked. One short, sharp bark. "Whup!" he cried, and very quickly, "Whatstheboydoing?"

Then quite a different style of noise, with the mouth open, "Wha—hoop!"

Then he set off running very fast down toward the caravan, waving his arms and shouting as he ran: "Yaaps! You *Idiot*—Yaaps!"

The others were less promptly active.

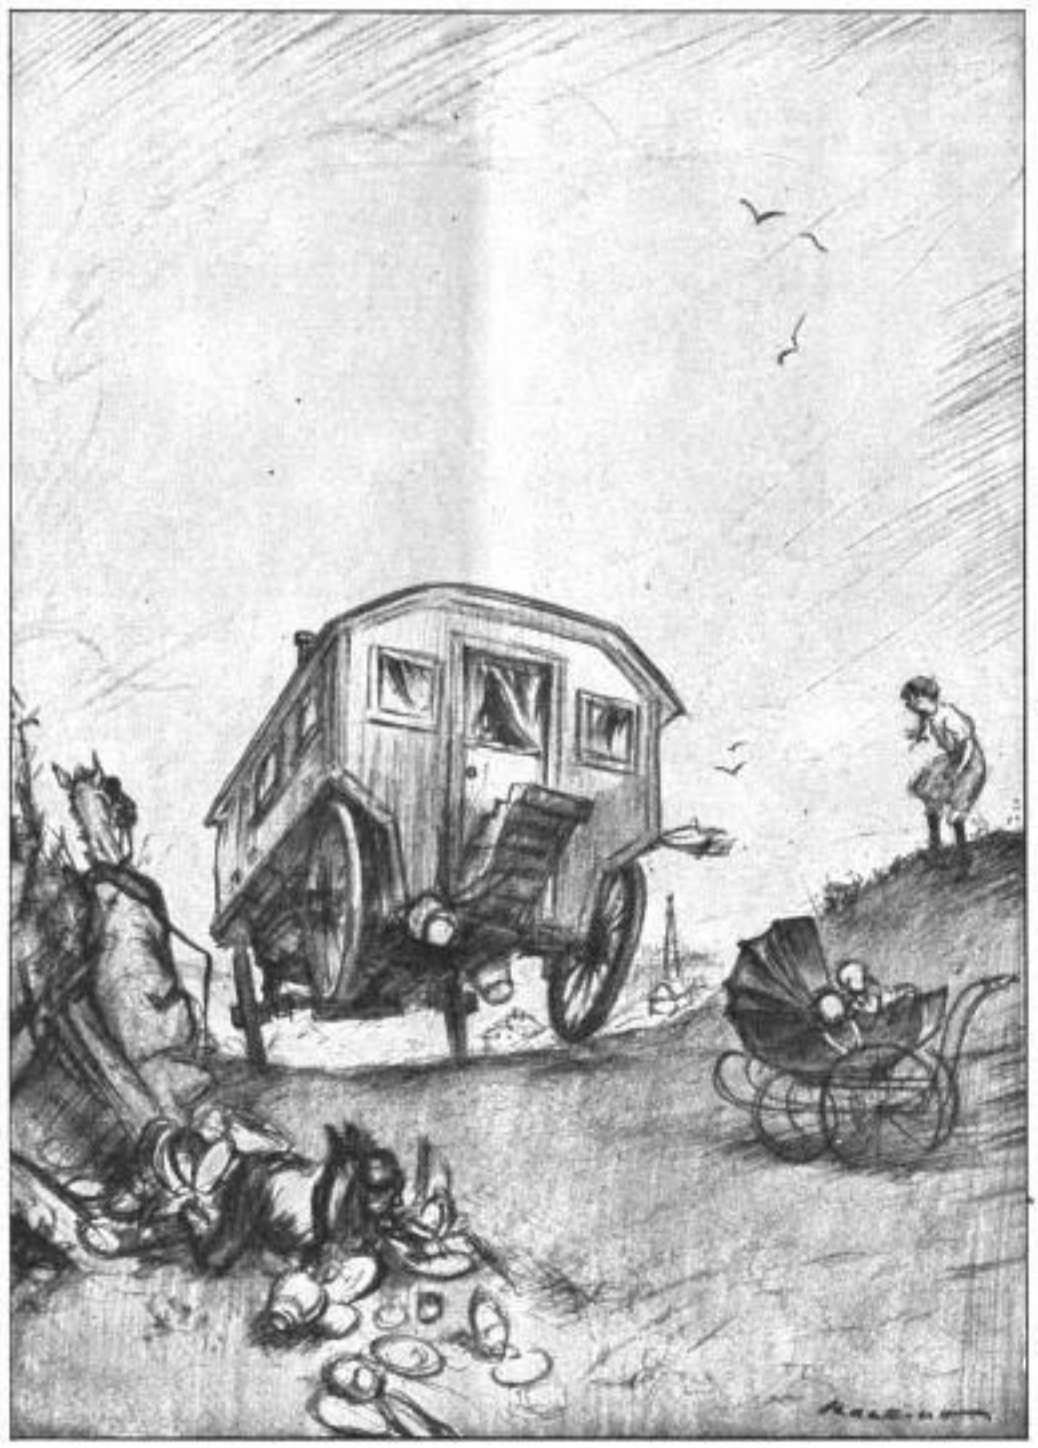
Down the slope they saw Bealby, a little struggling, active Bealby, tugging away at a yew branch until the caravan swayed with his efforts, and then—then there was a movement as though the thing tossed its head and reared, and a smash as the heap of stuff that stayed up its hind wheels collapsed. . . .

It plunged like a horse with a dog at its heels, it lurched sideways, and then with an air of quiet deliberation started down the grass slope to the road and Winthorpe Sutbury. . . .

PROFESSOR BOWLES sped in pursuit like the wind, and Mrs. Bowles after a gasping moment set off after her lord, her face round and resolute. Mr. Geedge followed at a more dignified pace, making the only really sound suggestion that was offered on the occasion. "Hue! Stop it!" cried Mr Geedge, for all the world like his great prototype at the Balkan Conference. And then like a large languid pair of scissors he began to run. Mrs. Geedge after some indefinite moments decided to see the humor of it all, and followed after her lord, in a fluttering rush, emitting careful little musical giggles as she ran, giggles that she had learnt long ago from a beloved schoolfellow. Captain Douglas and Miss Philips were some way behind the others, and the situation had already developed considerably before they grasped what was happening. Then obeying the instincts of a soldier the Captain came charging to support the others, and Miss Madeleine Philips, after some wasted gestures, realized that nobody was looking at her, and sat down quietly on the turf until this paralyzing state of affairs should cease.

THE caravan remained the center of interest. Without either indecent haste or any complete pause it pursued its way down the road toward the tranquil village below. Except for the rumbling of its wheels and an occasional concussion it made very little sound; once or twice there was a faint sound of breaking crockery from its interior, and once the phantom of an angry yell, but that was all.

There was an effect of discovered personality about the thing. This vehicle, which had hitherto been content to play a background part, a yellow patch amid the scenery, was now revealing an individuality. It was purposeful and touched with a suggestion of playfulness at once kindly and human: it had its thoughtful instants, its phases of quick decision, yet never once did it altogether lose a certain mellow dignity. There was nothing servile about it: never for a moment for example did it betray its blind obedience to gravitation. It was rather as if it and gravitation were going hand in hand. It came out into the road, butted into the bank, swept round, meditated for a full second, and then shafts foremost headed downhill, going quietly faster and faster and swaying from bank to bank. The shafts went before like arms held out. . . .



. . .

It had a quality—as if it were a favorite elephant running to a beloved master from whom it had been overlong separated. Or a slightly intoxicated and altogether happy yellow guinea pig making for some coveted food. . . .

At a considerable distance followed Professor Bowles, a miracle of compact energy, running so fast that he seemed only to touch the ground at very rare intervals. . . . And then, dispersedly, in their order and according to their natures the others. . . .

There was fortunately very little on the road.

There was a perambulator containing twins, whose little girl guardian was so fortunate as to be high up the bank gathering blackberries. A ditcher ditching. A hawker lost in thought. His cart, drawn by a poor

This vehicle, which had hitherto been content to play a background part, a yellow patch amid the scenery, was now revealing an individuality

little black screw of a pony, and loaded with the cheap flawed crockery that is so popular among the poor.

A dog asleep in the middle of the village street. . . .

Amid this choice of objects the caravan displayed a whimsical humanity. It reduced the children in the perambulator to tears, but passed. It might have reduced them to a sort of red-currant jelly. It lurched heavily toward the ditcher and spared him, it chased the hawker up the bank, it whipped off a wheel from the cart of crockery (which after an interval of astonishment fell like a vast objurgation), and then it directed its course with a grim intentness toward the dog.

It just missed the dog.

He woke up not a moment too soon. He fled with a yelp of dismay. And then the caravan careered on a dozen yards further, lost energy and—the only really undignified thing in its whole career—stood on its head in a wide, wet ditch. It did this with just the slightest lapse into emphasis. *There!* It was as if it gave a grunt—and perhaps there was the faintest suggestion of William in that grunt—and then it became quite still. . . .

FOR a time the caravan seemed finished and done. Its steps hung from its upper end like the tongue of a tired dog. Except for a few minute noises as though it was scratching itself inside, it was as inanimate as death itself.

But up the hill road the twins were weeping, the hawker and the ditcher were saying raucous things, the hawker's pony had backed into the ditch and was taking ill-advised steps, for which it was afterward to be sorry, amidst its stock-in-trade, and Professor Bowles, Mrs. Bowles, Mr. Geedge, Captain Douglas, and Mrs. Geedge were running—running—one heard the various patter of their feet.

And then came signs of life at the upward door of the caravan, a hand, an arm, an active investigating leg seeking a hold, a large nose, a small intent vicious eye; in fact—William. William maddened.

Professor Bowles had reached the caravan. With a startling agility he clambered up by the wheels and step and confronted the unfortunate driver. It was an occasion for mutual sympathy rather than anger, but the Professor was hasty, efficient and unsympathetic with the lower classes, and William's was an ill-regulated temperament.

"You consummate *ass!*" began Professor Bowles. . . .

WHEN William heard Professor Bowles say this, incontinently he smote him in the face, and when Professor Bowles was smitten in the face he grappled instantly and very bravely and resolutely with William.

For a moment they struggled fearfully, they seemed to be endowed instantaneously with innumerable legs, and then suddenly they fell through the door of the caravan into the interior, their limbs seemed to whirl for a wonderful instant and then they were swallowed up. . . .

The smash was tremendous. You would not have thought there was nearly so much in the caravan still left to get broken. . . .

A healing silence. . . .

At length smothered noises of still inadequate adjustment within. . . .

The village population in a state of scared delight appeared at a score of points and converged upon the catastrophe. Sounds of renewed dissension between William and the Professor inside that rearing yellow hulk promised further interest, and added an element of mystery to the manifest disaster.

AS BEALBY, still grasping his great branch of yew, watched these events, a sense of human futility invaded his youthful mind. For the first time he realized the gulf between intention and result. He had meant so well. . . .

He perceived it would be impossible to explain. . . .

The thought of even attempting to explain things to Professor Bowles was repellent to him. . . .

He looked about him with round, despairful eyes. He selected a direction which seemed to promise the maximum of concealment with the minimum of conversational possibility, and in that direction and without needless delay he set off, eager to turn over an entirely fresh page in his destiny as soon as possible. . . .

To get away—the idea possessed all his being.

From the crest of the downs a sweet voice floated after his retreating form and never overtook him.

"Di—ick!"

Then presently Miss Philips arose to her feet, gathered her skirts in her hand, and with her delicious chin raised and an expression of countenance that was almost businesslike descended toward the gathering audience below. She wore wide-flowing skirts and came down the hill in Artemisian strides.

It was high time that somebody looked at her.

ON THE same Monday evening that witnessed Bealby's first experience of the theatre, Mr. Mergleson, the house steward of Shouts, walked slowly and thoughtfully across the corner of the park between the laundry and the gardens. His face was much recovered from the accidents of his collision with the Lord Chancellor, resort to raw meat in the kitchen had checked the development of his injuries and only a few contusions in the side of his face were more than faintly traceable. And suffering had on the whole rather ennobled than depressed his bearing. He had a black eye, but it was not, he felt, a common black eye. It came from high quarters and through no fault of Mr. Mergleson's own. He carried it well. It was a fruit of duty rather than the outcome of wanton pleasure seeking or misdirected passion.

Talking Over To-Day

By George Fitch

ILLUSTRATED BY RODNEY THOMSON

Another Superlative

WE HAVE expressed in these pages the firm opinion that every American village, town, or city has something within its limits which is the greatest thing in the world of its kind. More evidence in proof of this comes from a disgusted Vermont citizen, who writes: "In the list of superlatives will you please make mention of Newport, Vt., which has the greatest percentage of office seekers in the world, being 99 per cent of the total population."

Seasonable Sonnets

THE YOUNG MAN ON THE AVENUE

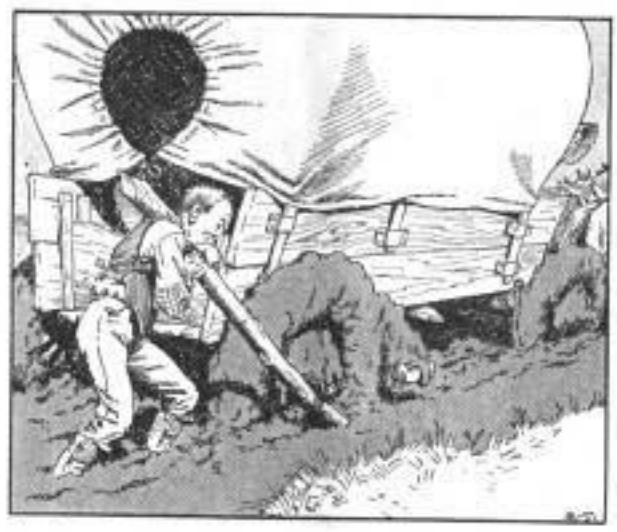
Slender and sleek, he strolls adown the street
On lissom legs whose covers are as tight
As that which hugs the baseball in its flight—
Mere stems from which depend his generous feet.
His coat caresses shoulders slant and sweet,
Then slinks away to perish in a tail.
His scarf, imported, is a cubist treat;
His cane, like him, immaculate and frail;
And on his head, huge as a milking pail
A straw hat sits, supported by his ears,
But all these wonders to impress us fail
When we survey the challenge of his years—
Nine lovely hairs which dare, with valor rash,
The razor's ruthless sweep—his first mustache.

Giving the Farmer a College Education

A FEATURE of the college commencements of this year is the vast number of college farmers that are being graduated.

A college farmer is a man who plows by means of trigonometry, plants his corn with a multiplication table, and raises cattle with a stethoscope and a book on heredity.

People used to laugh at college farmers, but they had a right to at one time. Years ago college men often bought farms and tried to raise crops by planting Greek and Latin roots. But the present brand of rah-rah agriculturalist is a different sort of chap. He may wear impertinent clothes and a flappy hat with the brim turned down; and he may have three frat pins on his vest and hair which stands up like the nap on a "welcome" mat. But those who desire to laugh at him are advised to do so before the crops are gathered. Afterward the college farmer usually does the laughing himself.



When the farmer boy goes to college now he does not spend much time exhuming dead languages. He may ramble a little way back into history in a casual manner and learn to talk the American brand of armless French. But he spends most of his time in other studies. He learns to detect race suicide in seed corn and to guess how many bushels of oats a field will go to the acre by tasting a sample—not of the oats but of the acre. He may have lost track of his own ancestors, but he learns to trace the parentage of the meek-eyed Jersey cow back into the dark ages and to tell by looking at a pig's tongue when to put him to bed and telegraph for the State Health Department. After he has put in four years at this sort of thing he goes home, rebuilds the old farm, puts the bottom layer of earth on top, runs the creeks the other way, junks the venerable crumple-horned cow and the spavined horse and begins business owing more money than an automobile factory. A few years later he retires from work and goes to Europe, while his neighbor, who laughed at him for a blamed college dude, still plods along planting corn on a field that sighs for clover and maintaining an old ladies' home for eggless and gutta-percha hens.

The college farmer runs his own college at home and educates his land in it. After a farmer has given his land a college education it will raise anything from alfalfa to mortgages with the aid of a few kind words and a carload of phosphate now and then.

The Battle of To-Morrow

IN THE g. o. ds. an invading army was preceded by scouts, skirmishers, and sometimes sappers and miners. Doubtless this is true to-day, but these no longer form the outposts of war. When the American army of invasion landed at Vera Cruz it was met by photographers, war correspondents, moving-picture men, and conductors of tourist parties and traveling salesmen who were looking over the territory which was pretty sure to want American goods before very long.

The revolution in Mexico has been sadly hampered right along by sight-seers and various forms of modern enterprise. It has been hard to get up a fight anywhere near the American border with any degree of success because of the clouds of spectators who have insisted, with a rare lack of consideration, in getting squarely between the opposing forces in order to secure a good view. While the American army has been entrenching Vera Cruz, American war correspondents have been getting themselves arrested in the City of Mexico and photographers have been securing

advance pictures of battle fields and snapshots of the Mexican army as it appears before taking a few doses of American lead. We can fancy the scene in the headquarters of the commanding general when the first big battle is pulled off—if this country should be compelled to indulge in that sort of mediation.

We have all seen these headquarters in paintings—the calm and magnificent general on horseback, with breathless couriers, messengers, and aids staggering up to him from the bloody front in various conditions of demolition. But next week or next month things are going to be somewhat different.

The general, seated in his automobile, will be receiving messages from the wireless operator:

"Second Brigade, Jones commanding: 'Am endeavoring to get around left flank.'"

"Polypicture Company, Smith commanding: 'For Heaven's sake, cut this scrap until afternoon. The light is horrible.'"

"First Brigade, Brown commanding: 'Enemy's fire is very heavy. Need battery to dislodge them.'"

Messenger from Jimmy Hare in rear of enemy: "Depress your battery fire a little. You've winged three of my assistants."

Wireless from Second Brigade: "Advance blocked. Sight-seeing auto stalled in road."

Wireless from Center: "Have ordered charge. 'Tribune' men were over ground this morning and report it free from obstructions."

Message from Pelig Picture Company: "Can't you move battery out of the woods? We aren't getting a thing out of this. Have gunners register ferocity."

Wireless from First Brigade: "Have had to stop firing. John McCutcheon is sketching Mexican battle front from center of field."

Message from Medill McCormick: "If you are going to take this town this afternoon, let me know. Have chance to engage good room in only hotel."

Wireless from Center: "Enemy has given way in confusion. 'Globe' photographers trying to rally them for picture of general staff."

Message from Kinometographiscope Company: "For Pete's sake stop chasing these fellows so hard. We can't catch up with them."

Message from "Post-Dispatch" correspondent: "Am trying to keep tourist automobiles back. They are running over the rearguard of the retreat."

Message from Pelig Picture Company: "Bully boy! Complete victory and splendid pictures. Will show for cut-outs at 6 p. m."

Signs of Hard Times

A CHICAGO country club has had to borrow half a million dollars in order to enlarge its quarters.

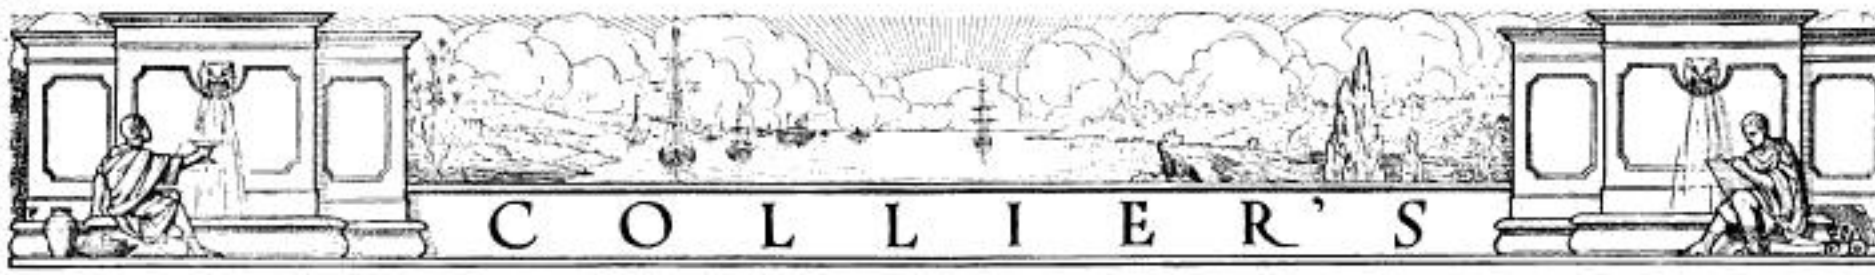
Scarcely any gold leaf will be used in the state-rooms of the new ocean liners this year.

Thousands of automobilists are buying self-starters because they are too poor to hire chauffeurs.

A number of New York brokers are compelling their Long Island farms to support themselves this year.

The marble slabs used in United States Government buildings will hereafter be polished only on the outside surface.

The Illinois Debt to Good Old Mud



ILLINOIS is making violent effort to improve its roads. After trying every other known method it now proposes to roof them over with concrete, thus allowing traffic to ride over them instead of through them.

This is a peculiarly ungrateful proceeding on the part of Illinois because she owes her early greatness to her famous mucilaginous mud highways. A century ago the tide of emigration set westward from Ohio and points East. It got as far as Illinois and then stopped—because it couldn't get any farther. Thousands of hardy pioneers tugged, dragged, pried, and otherwise coerced their moving wagons into the bosom of Illinois—the soft, yielding, gluey, gurgly bosom—then they gave up in despair and raised a crop. That settled it. When they found how useful the Illinois mud was except for road-making purposes they stayed on and became rich and prosperous.

Lincoln's folks struggled knee-deep through Illinois as far as Decatur and then settled down to wait for good roads. While they were waiting Lincoln grew up and became President. If Illinois roads had been navigable in the twenties of the last century, Lincoln might have been given to the nation by Iowa or Missouri—but the soil held on to him with such desperate energy that he never got west of Springfield.

However, not even history and early service can save the rare old three-dimension Illinois gumbo road. The State desires thoroughfares which will not climb affectionately into the foundered automobile and creep into the watch pocket of the traveler. More Americans are traveling by automobile now than ever journeyed by stagecoach in the brave old days, when a city on a good postroad became a metropolis because of the traffic which passed through it, and the State which meets these travelers at its borders with a chuck hole and a team of horses is not wise.

The Greatest Court on Earth

ATTENTION HAS BEEN CALLED from time to time this year to the vast importance and far-reaching constructive effect of several decisions rendered by the Supreme Court of the United States. Since last fall this court has given judgment in nearly six hundred cases and has now adjourned for the summer with less than 3 per cent of the argued cases undecided. Using, under the able and inspiring leadership of Chief Justice WHITE, the recently revised methods of procedure, this court has set a notable example of the administration of justice without fear or favor or fanaticism. Such action vindicates the majesty of the law and the worth of our institutions, and should be a cause of patriotic pride to every American citizen.

The Vote-Hunting Business

HARDLY ANYTHING that we have said about the shams and fakes of the Senate is as severe a reflection on that body as the treatment accorded Mr. WARBURG and Mr. JONES. These are men of ability, character, and standing. What they are is absolutely known and could be ascertained by any intelligent reporter in half an hour. Their fitness for the positions on the Federal Reserve Board at the head of the new banking system is altogether unquestionable, and their presence there is altogether desirable. But our politicians are essentially vote-getting animals, as some writer has put it, so these men must go down to Washington and be pawed over by a village-minded Senate committee which proceeded as if inquiring into a country church choir scandal. Mr. JONES endured it, but Mr. WARBURG refused, and the country risks losing his invaluable services so that a few Senators can go on the stump this fall and brag how they showed up that foreign plutocrat. Swinish methods in handling appropriations and asinine methods in handling appointments are two reasons why our country's business is so expensive and so badly done.

Two Leaders

JOSEPH CHAMBERLAIN, the famous English statesman, was a most electric personality, but his national policies were lost causes even before his death. In urging protection and empire, and in refusing home rule to Ireland, he was advocating policies of power rather than of justice. He who had made his fame as Mayor of Birmingham by abolishing slums, by building baths and schools and other public works, came under the spell of the ancient aristocratic doctrine. The fundamental soundness of English politics is proved when we note that LLOYD-GEORGE succeeds where this more brilliant man failed. Our modern world is turning toward power based on the health and happiness of the many, and away from the old dream of dominion founded in force and maintained by diplomatic scheming. This is the progress for which LLOYD-GEORGE stands, and that is why he belongs to the future while CHAMBERLAIN is of the past.

Gompers and Personal Rights

MR. SAMUEL GOMPERS does not like one of our editorials, and he writes to tell us so. This editorial, he declares, finds us lined up with all the forces and organizations for greed and labor exploitation which are resorting to every means to defeat legislation which American workers have declared necessary for the success of their organizations. More specifically, what Mr. GOMPERS does not like is what we had to say on the Bacon-Bartlett Anti-Injunction Bill. This bill seems to be dead, so that as a subject for an editorial it is no longer important. We are sorry, however, to differ with Mr. GOMPERS. We do not propose to line up with anybody in particular in labor-law matters. We are in sympathy with the aims and purposes of labor unions and entertain no prejudice against them. It is quite true, as Mr. GOMPERS intimates, that the manufacturers' organizations are highly organized in their publicity work. They are not only highly organized, but as associations they are not always broad-minded and assume far too complacently that the whole future of American industry depends upon the substantial demolition of labor unions—a proposition to which we most heartily dissent. We try not to belong either to the Montagues of capital or the Capulets of labor. It is impossible to please them both at the same time, and this seems to be one of the occasions when we do not please the Capulet party. Where COLLIER'S and Mr. GOMPERS seem to differ on this Anti-Injunction Bill is mainly in this particular: Mr. GOMPERS considers that the right of the employee to work or not to work is a *personal* right, and the right of an employer to conduct a business is also a *personal* right. From this premise his logic then bounds—and ours does not—to the conclusion that a court of equity should be made powerless to prevent any act, not unlawful in itself, if done by one individual alone, from being done by a combination of workers, by which the right of the employer to do business is crippled, his property rendered idle, and his business destroyed. In other words, Mr. GOMPERS believes that the law should permit the boycott, the secondary boycott, and, incidentally, the lockout. We do not. Mr. GOMPERS differs from us upon the important question of what sort of weapons should be permissible in industrial warfare, considered not only from the standpoint of the contending parties, but from that of the community, which also has rights which some one ought to respect. We do not think that these particular weapons would prove in the long run to be essential to labor or are even advantageous to it. We think the labor organizations can get along very well without the Bacon-Bartlett Bill, and Congress has apparently thought likewise, though it has adopted the much-talked-of amendment to the Clayton Anti-Trust Bill, which accomplishes some of the same ends.

The Changing Tides of Trade

THE CLAFLIN COMPANY'S failure marks the end of an era in the dry-goods business. This suspension was preceded in recent years by that of three other large firms and the discontinuance of a fourth, thus leaving only one big house in New York City to represent the general dry-goods distribution in which the metropolis was once the leader. One reason is that this jobbing trade has been won away by the active, aggressive interests of Chicago, St. Louis, and the great Central West. The tide had turned out, and no amount of technical organizing skill or patient financial labor could turn it back. The end was inevitable as soon as the burden of this unprofitable wholesale business became too great for the retail end to carry. That the blow should have fallen upon a house which had been deservedly respected for nearly a century makes the lesson all the plainer. The fundamental economic factors in any given situation will always be controlling. The tides of trade are changing year by year, and no politics or preferences can very much alter the obdurate set of these currents.

Sham Savings

GOVERNOR WALSH of Massachusetts has sent a message to the Legislature urging that the cost of running the State Public Service Commission be put upon the utilities (railroads, gas, telephone, and electric) which are regulated by the Commission. The proposal has some distinct merits, but it must be clearly understood that this change will not save any money. It will not save a cent. The effect will be that certain payments now met out of taxes will be met out of prices paid for railroad tickets, gas bills, etc. When such rates are regulated, these expenses will be included in the totals which the subscribers must pay to keep these utilities at the work of serving them. We pointed out some weeks ago that our communities are now paying heavy taxes through their public utilities. This is another example. It is concealed taxation, not saving.

Let Your Light So Shine!

THE WASHINGTON "STAR" radiates a timely beam in the remark that:

> In the course of time constituents will cease to admire the statesman who has been content to hide his light under a pork barrel.

We are willing to go further and hazard the observation that the pork in question has already greased the chute to oblivion for several runt-minded Congressmen.

The Omniscient One

WE HAVE ALWAYS FELT SAFE. If by any unhappy chance—Mexican invasion, smallpox, or act of God—we were cut off in our prime, there would be a man to step right in and fill our shoes to overflowing: the proofreader. Now, the careless reader might infer that this is irony; that we are trying to "get even" because the proofreader "queries" our colloquialisms on the galley proof; underlines the words when we write "Can you beat it?" or "low-brow," and, with gentle reproachfulness, writes "slang" in the margin. But it is not irony. The proofreader is an abler man than we. Whether he has read more books, we know not; he seems to remember more of them by name or to remember those names more correctly. Dates and figures are our plague, but the proofreader has them all cold. Once we came within an ace of making out CHARLOTTE BRONTË to be JANE

Digitized by Google

AUSTEN's contemporary; it was the proofreader who saved us from that disgraceful error. The proofreader is a superior grammarian; he carries round the rules for "should" and "would" in his head, whereas we must always consult A. S. HILL's "Principles of Rhetoric" in complicated cases. Either the proofreader is cleverer than we are with the "World Almanac" or he has a miraculous memory for Congressmen's middle names and the way to distribute French accents. The proofreader knows the score of yesterday's baseball game, the time the sun got up this morning, and the probable result of to-morrow's vote on the River and Harbor Bill. He knows the more essential facts of Assyriology, bacteriology, and ceramics; he is not ignorant of the xanthoptera, Yiddish, and zanyism. We have a high regard for the proofreader; it is he who saves us from making more breaks than we do. The proofreader is much more critical than any of our other friends; we are sure of one reader at least, and are duly grateful; thanks to him, we mind our postminimi and our quadrates.

For That H. C. of L.

A TAILOR in New York advertises:

LADIES' SUITS MADE,
WITH OR WITHOUT GOODS

No moralists, we, but, really, this is going too far!

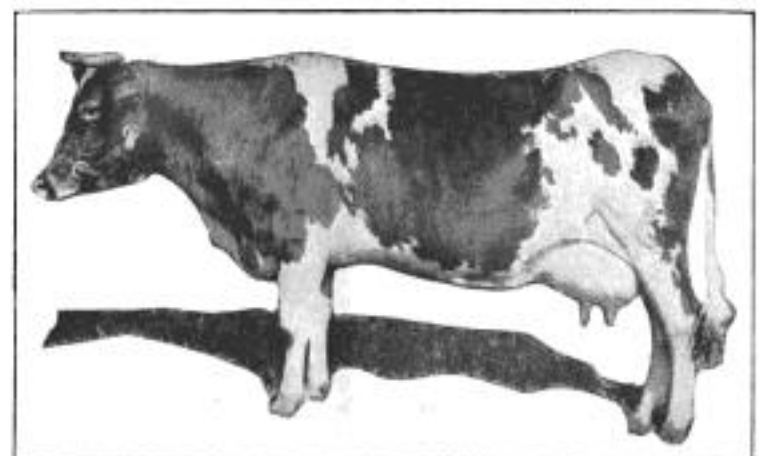
Summer Styles for Men

TWO somewhat conflicting bits of information are borne into this editorial office on the summer breeze. From Atlanta, Ga., comes news that sleeveless bathing suits are not to be tolerated at Piedmont Park—even on men; whereas Paris, France, reports that Gallic masculinity is freeing itself from the tyranny of the starched collar. ANATOLE FRANCE, who is a Socialist as well as an author, heads a league which declares for soft collars open at the neck. Poets have ever inclined toward rolling collars that leave free the throat: BYRON and SHELLEY and WALT WHITMAN were all alike in that. But which is the real tendency? The Atlanta policy of cruel repression or the Parisian ideal of increased latitude? We hope it is the latter. Paris for once sets a reasonable style. For a great while men have been moving more and more generally away from stiffness in shirts and hats and collars (to say nothing of manners); men who wear crash suits in summer are more numerous and less conspicuous than once. With erudite PHILIP HALE of the Boston "Herald" we vote for soft madras shirts with collars and cuffs attached—and may the laundress forget that starch exists to try hot-weather tempers. In all things temporal we are on freedom's side. Women's summer fashions are made for greater comfort than are men's—yet men fix women's fashions. Arise, ye Goths! And let us begin by defending the sleeveless bathing suit and donning the Anatolean soft-shirt.

The New Art

FOR CLEAN AND CUTTING CHARACTERIZATION of the so-called "new movement" that has now about screamed itself out in Europe and America, it is hard to surpass these lines from a recent sonnet, "Still Life," by LOUIS UNTERMEYER, in the "Forum":

> High-pitched, malignant, lusty, and perverse;
> Brutal with a triumphant restlessness
> And joy that cannot heal, but laughs and stabs.
>
> I never knew the man that did this thing,
> This bowl of fruit upon a piece of silk,
> And yet I know him better than I know my friends.



Some confessions are altogether too complete.

The Whisky Manufacturer

IN THE NEW YORK "TIMES" we find a dispatch under the heading "Posse Out to Avenge Girl." It concludes with these words:

> The physician restored the child to consciousness. According to her story a man who had been employed by her father, but had been discharged, approached her when she was picking raspberries. She said he was intoxicated and that . .

Somewhere in Baltimore or Louisville or Peoria, with his family protected by all the safeguards money can buy, lives the smug and respectable pillar of society who made money out of stimulating this crime.

A Cow That Pays Her Way

She is the champion at butter fat; address, Berwyn, Pa.

Think of a $25,000 Cow!

HERE IS ANOTHER EXAMPLE of efficiency and devotion. May Rilma, an American-bred Guernsey belonging to Major EDWARD B. CASSATT of Berwyn, Pa., has completed a year's test in which she has established a record for the production of butter fat—1,059.59 pounds, equivalent to 1,236.18 pounds of butter. The ex-champions are Holsteins—Colantha IV's Johanna, the property of W. J. GILETTE of Rosendale, Wis., and a cow owned by F. F. FIELD of Brockton, Mass. Owners' names are worth repeating, too, for the human factor counts even in cow championships. Nothing that experience or science can offer was neglected by the Pennsylvania cow's ambitious master. May Rilma has enjoyed absolute comfort: a roomy box stall kept clean; wide windows screened with muslin to prevent direct draft; a carefully groomed coat that any race horse might envy; an even temperature, as near 60 degrees as possible (no wasted effort in resisting cold or heat); a scientifically balanced ration of grain, vegetables, ensilage, and alfalfa—the last two always before her, but removed from the racks at the end of the day and replaced by fresh. Nothing has broken in upon her perfect peace. She has the absolute devotion of one attendant, who sleeps in an adjoining box stall fitted up as a cell-like room. Here stands the stove that regulates the evenness of the winter temperature. No cow likes to change milkers. This one is milked (always by the same man) at eight-hour intervals: 4 a. m., 12 m., 8 p. m. And over and above earning for herself this luxurious living and paying for a quarter of one man's wage, she nets her owner $716 annual profit. After all, though, it wasn't only Major CASSATT and Queen May Rilma who won out. Much credit belongs to ALBERT VAN TUINEN, first gentleman in waiting, who did the milking.

Horrible Homologous Holocaust

THE CUB REPORTER describing his first fire is a standard figure in the drama of our journalism, but few of his efforts are as good as this sentence from the Neenah (Wis.) "Times":

> The night itself: the time, the fire starting in homologous portions of the two buildings simultaneously are facts which envelop the conflagration in more or less mystery.

The above headline is suggested in a spirit of cooperation. The "city editor" neglected an opportunity.

Teaching Girls

A BOARDING-SCHOOL GIRL was speaking of the principal's whole theory of training girls: "She's all the time trying to make us feel grown up. She says we're old enough to realize we have responsibilities, and must stop doing what we enjoy." This specific accusation may have been unjust, but we know that way of teaching and have little use for it. How different is "the proper way to educate a young girl" as expressed by ANATOLE FRANCE's "Sylvestre Bonnard":

> It is only by amusing oneself that one can learn [I replied]. The whole art of teaching is only the art of awakening the natural curiosity of young minds for the purpose of satisfying it afterward; and curiosity itself can be vivid and wholesome only in proportion as the mind is contented and happy. Those arguments, crammed by force into the minds of children, simply clog and stifle intelligence. In order that knowledge be properly digested, it must have been swallowed with a good appetite. . . . I should make of her . . . a child full of bright intelligence and full of life, in whom everything beautiful in art or nature would awaken some gentle responsive thrill. I would teach her to live in sympathy with all that is beautiful—comely landscapes, the ideal scenes of poetry and history, the emotional charm of noble music. I would make lovable to her everything I would wish her to love. Even her needlework I would make pleasurable to her by a proper choice of the tissues, the style of embroideries, the designs of lace. I would give her a beautiful dog and a pony to teach her how to manage animals; I would give her birds to take care of, so that she could learn the value of even a drop of water and a crumb of bread. And, in order that she should have a still higher pleasure, I would train her to find delight in exercising charity. . . . That is my idea of the proper way to educate a young girl.

You may not agree with all this sentimentalism, nor approve the absence of any reference to travel. But where can you find a better formula of education for keeping a girl well poised and happy?

. . .

Pickups

By Grantland Rice

When Summer Days Were Long

"He'd nothing but his violin—I'd nothing but my song—
Yet we were wed when skies were blue—and summer days were long."

IN Love's Lost Garden through the years
Once more the Dreamers seek old ways
That lead through heartache and through tears
To Life's long vanished Yesterdays;
To Yesterdays when dreams came true,
And they, apart from all the throng,
Meet once again where skies are blue—
And summer days are long.

Once more he walks the old-time lanes,
And in the dream that follows there
Puts "blood of roses in her veins"—
Weaves "yellow sunshine for her hair";
Though coming darkness blurs the view,
He hears again an old-time song—
He only knows that skies are blue
And summer days are long.

In Love's dim Garden one by one
We seek again some vanished day
That calls us, when our youth is done,
Across the Fields of Far-Away;
Through drifting years when dreams came true
And hearts were bold and brave and strong—
When Love but knew that skies were blue—
And summer days were long.

Can We Hold This One?

AFTER all the weird and bizarre incidents that have transpired to date in the international embroglio between the United States and Great Britain it will take a hardy soul to offer any set guess as to the next resting place of the Davis Cup. The collapse of the United States entries in golf and polo was something of an upset. But it was nothing to the marrow-jolting shock which beset England when two United States crews took entire possession of the Grand Challenge Cup at Henley after rowing England's best off the watery map. Harvard's victory at Henley helped wonderfully to lift our Uncle Samuel out of the sportive rut. And the Eagle's indigestion will be well-nigh over for a while if Messrs. McLoughlin, Williams, Murray, or the ultimate American pick can retain the Davis Cup.

And this "if" is likely to be of considerable dimensions. Wilding and Brookes are at top form, two seasoned campaigners of rare skill and tournament courage. Both so far have beaten McLoughlin at every start, and the California Comet is supposed to be our most Eminent Bet. In any event when the challenge round is staged in early August tennis devotees can figure in advance upon the grandest court battles in the history of international sport. Wilding and Brookes are no longer youngsters, and if they fail this time the cup should be fairly safe for some time to come.

Yes, What?

HARVARD'S first eight was beaten by a Yale crew that was certainly not regarded as any wonderful affair compared to Columbia, Pennsylvania, and Cornell.

Harvard's second eight traveled 2,500 miles and nailed the chief rowing prize of the universe.

Whattayamean—Second eight?

The Controlling Power

WITH the old machine shot to pieces—with the old guard blown to the four winds—even the leader shifted to a forlorn hope in another hamlet—it remained in midseason for the Cubs to rise and give pennant battle to the Giants after the others had wilted and faded away. Kling from back of the bat—Brown, Pfeister, Overall, Lundgren, Reulbach—from the box; Chance, Evers, Tinker, and Steinfeldt from the infield, with Hofman and Sheckard added to the wanderers—only Schulte remained of the old order. Schulte and the tradition of pennant years—old force of habit still refusing to loosen its iron grip.

And one look at the Cubs shows what a controlling power old force of habit is.

"The College Try"

A HIGH foul whirled up and out far over the stands as a young catcher dashed madly to the screen with no chance to get within sixty yards of it.

"There he goes," remarked the manager, "giving it the old college try."

Yet we know of one catcher who stayed in the league two years on nothing else. He never batted over .180 and he couldn't throw, but the spectacle of this earnest athlete crashing daily into the stands pursuing impossible fouls was one of the features of each afternoon.

He often rebounded from the wall or screen bleeding at the nose or limping badly, but it won him the admiration of the fans, who forgot that he couldn't hit and throw in watching his heroic assaults upon wood or wire. For the fans will take a lot of bad playing from an athlete out there hustling and working, perspiring and bleeding, and taking a chance.

Unfortunately, concrete and steel supplanted wood, and his days in the league were numbered. He took one running shot, head on, against the steel and concrete and was revived with difficulty ten days later in a hospital.

After that when a high foul soared up and back, he watched it hungrily and with deep yearning, but one look at the steel and concrete barrier was enough.

He let said foul pursue the fluttering tenor of its way until the can rattled and he drifted back to the Bushes and Fan Palaces of wood, where he soon regained his blood-won popularity and where the "college try" had a softer field for exploitation.

Texas Leaguers

"ONLY *batting ability makes the Athletics a great ball club," states an exchange.*

What a droll coincidence. Only writing ability kept Shakespeare up in the race. And if it wasn't for $500,000,000, Carnegie would be a pauper.

To most fans a three-hit game is punk batting and a fourteen-hit affair is poor pitching.

The ratio is 8 to 1 of those who can show you how a game was lost—but never how it was won.

Pitchers and Throwers

THE word "pitcher" is a much abused expression. Baseball has a number of good pitchers aboard—but a good many more who are merely throwers.

Mere speed and curves never made a successful pitcher and never will. The prime essence is control. But almost equally important is the canny knack of "mixing them up" and thereby outguessing the batter. The true science of pitching consists in handing the batsman what he isn't looking for. This requires nerve, control, and judgment—combinations that a pitcher requires above any other member of the clan.

Most of the "promising youngsters" who come up in the spring with speed and curves and the rest of it are merely throwers—not pitchers in any sense.

At which point we hear a raucous voice from the outside chanting a parody on an old refrain—

"Great speed does not a pitcher
make?
Bah—what tommy rot;
It may not make the pitcher,
But it helps an awful lot."

Three Up on Ananias

A GROUP of golfers sat one day
Around the Nineteenth Hole,
Exchanging lies and alibis
Athwart the flowing bowl;
"Let's give a cup," said one of them,
A sparkle in his eye,
"For him among us who can tell
The most outrageous lie."

"Agreed"—they cried—and one by one
They played 'er under par,
With yarns of putts and brassie shots
That traveled true and far;
With stories of prodigious swipes—
Of holes they made in one—
Of niblick shots from yawning traps
As Vardon might have done.

And then they noticed, sitting by,
Apart from all the rest,
A stranger who had yet to join
The fabricating test;
"Get in the game," they said to him,
"Come on and shoot your bit"—
Whereat the stranger rose and spoke
As follows—or to wit:

"Although I've played some holes in one,
And other holes in two;
Although I've often beaten par,
I kindly beg of you
To let me off—for while I might
Show proof of well-earned fame,
I NEVER SPEAK ABOUT MY SCORES—
OR TALK ABOUT MY GAME."

They handed him the cup at once,
Their beaten banners furled;
Inscribing first below his name—
THE CHAMPION OF THE WORLD.

The Universal Boast

I'VE heard the boast of the cities—
The boast of hamlet and town;
The chant of their civic virtues
Deserving the olive crown;
Some for their manufactures—
Others for this or that,
From New York over to Denver,
From Boston to Medicine Hat.

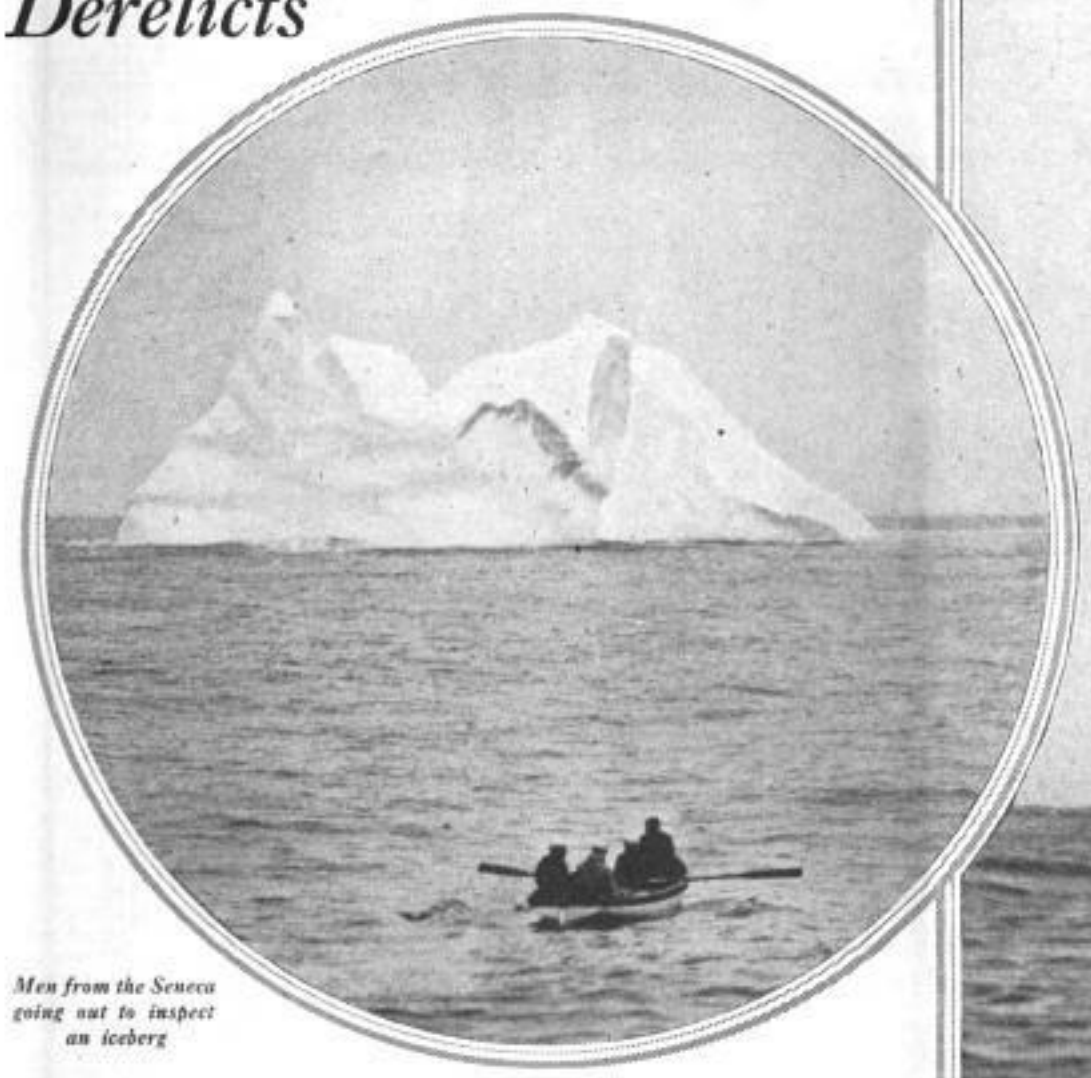
I've heard the boast of the cities,
But over the ringing call
One alone from the many
Echoes over them all;
Out of the medley chorus
Hark to the central theme—
"THIS IS A WONDERFUL BALL
TOWN—IF
THEY'LL GIVE US A WINNING
TEAM."

Fine Chance, Indeed

"IT WASN'T the forward pass which beat the Army eleven in the Notre Dame game last fall," says Captain Joe Beacham. "At least the forward pass wasn't all of it."

"It was a tale of two cities, as the late Mr. Dickens might have put it," continued Captain Joe. "On the morning of the game several of us who had been identified with West Point football were going to the Army-Notre Dame game. We were back in the smoking car when a stranger lurched in carrying quite a quantity of alcoholic moisture."

"I've got $500 to put on good old Notre Dame," he said. "Any takers?"



"Put your money away," we advised him. "The Army team will beat that Notre Dame bunch to death."

"Beat that bunch?" he came back with a leer. "They've got a fine chance—East St. Louis and South Chicago—$500 to $2.00 on Notre Dame then."

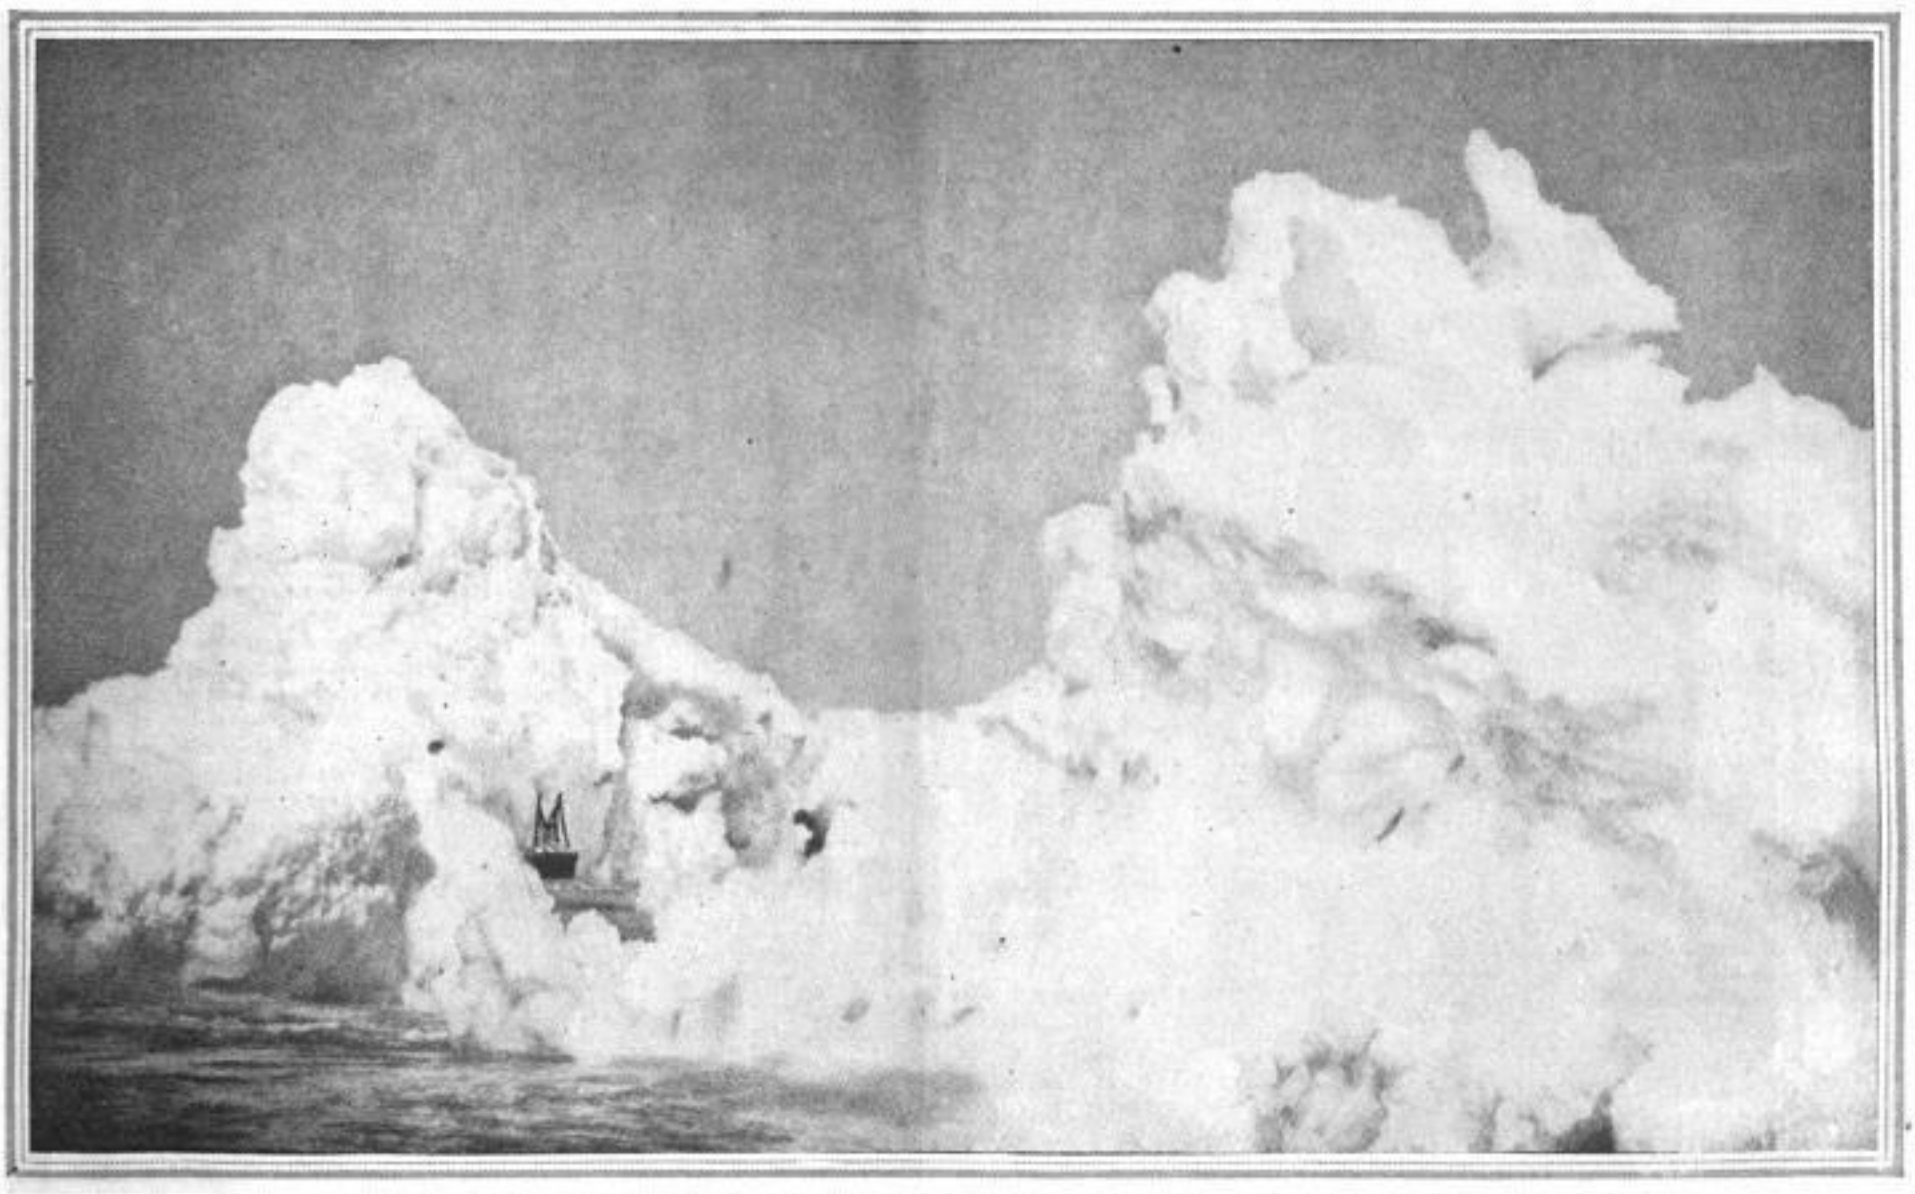
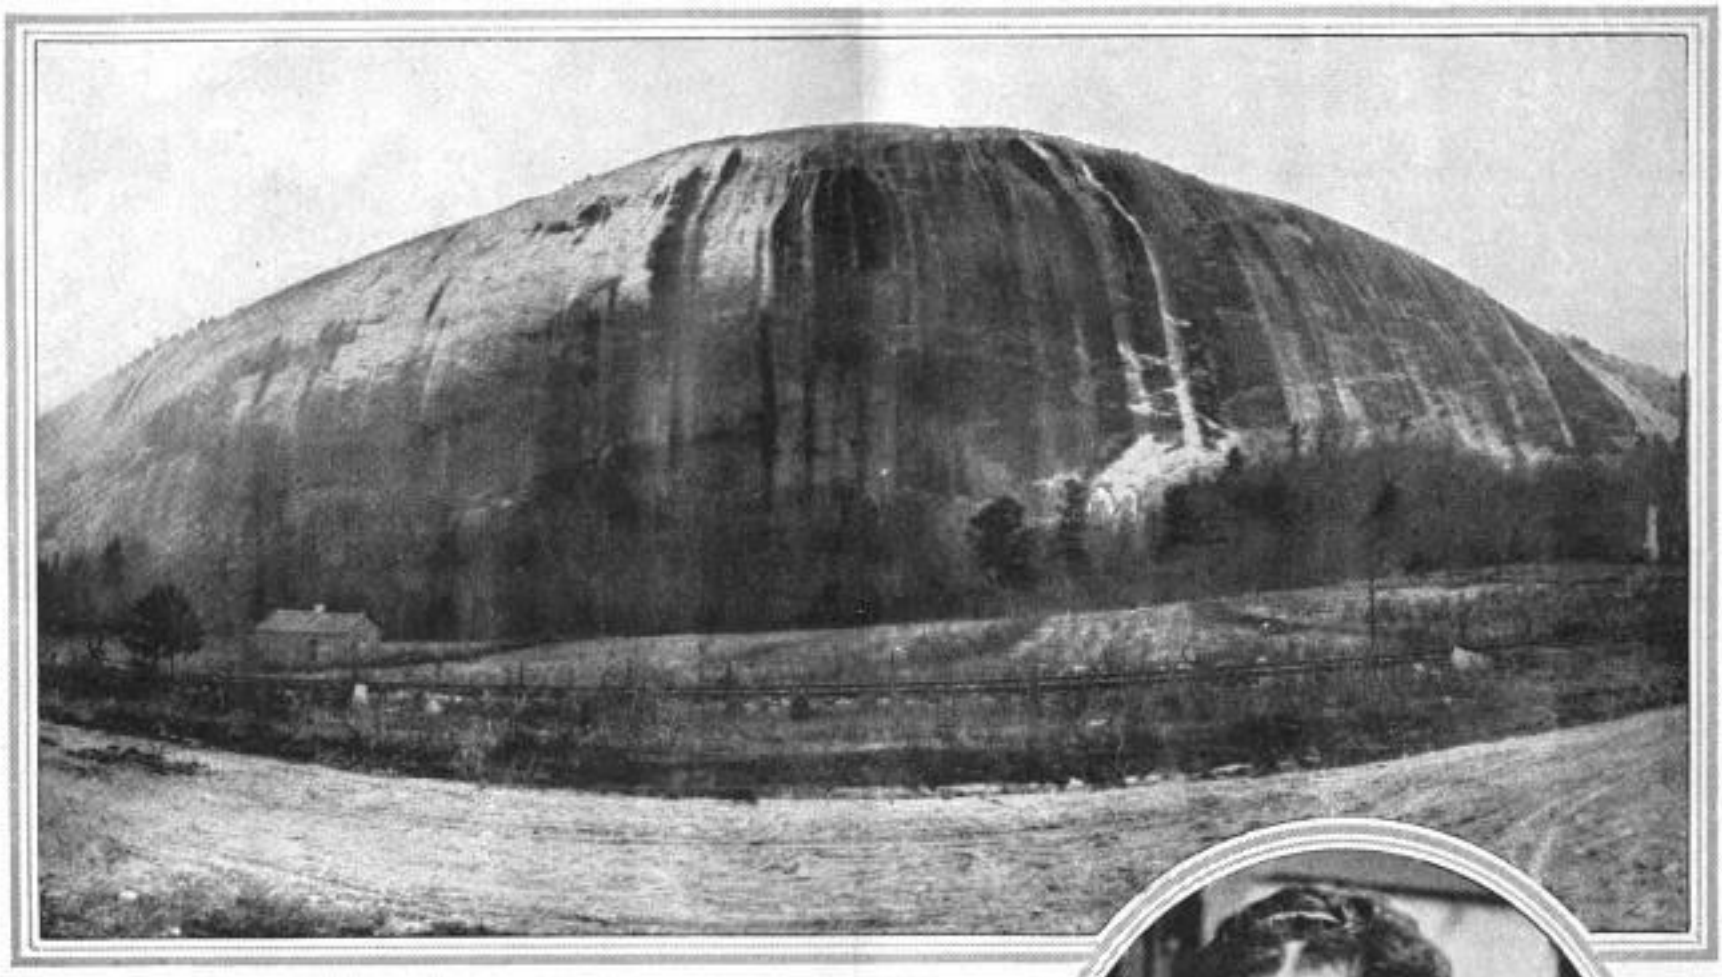
Scouting for Icebergs and Derelicts



Men from the Seneca going out to inspect an iceberg

THE menace of icebergs in the North Atlantic has been reduced to the minimum by an ice patrol, established this year by international agreement. The American revenue cutters *Seneca* and *Miami* left the Grand Banks of Newfoundland the other day, having completed the work of the season, which lasted three months. They observed hundreds of icebergs. Twice every day they sent wireless dispatches to transatlantic liners and to the Hydrographic Office at New York, telling the whereabouts of dangerous ice. The *Seneca* is now on a month's trip to the far north with a party of scientists, and the *Miami* has come south to destroy derelicts. The *Seneca*, on derelict duty last year, destroyed twenty-six.



Destroying a derelict wooden schooner. The crew of a patrol ship set off four 100-pound guncotton mines in the hulk. This snapshot shows the last explosion

The Seneca inside an ice-walled inclosure. The cutter steamed in through a hole. This iceberg was one of the largest to enter the Gulf Stream

A Mountain Block of Granite to Be the Base of a Huge Confederate Monument

IF THE United Daughters of the Confederacy have their way, the lost cause will have the largest and most picturesque monument in America, if not in the entire world. This memorial will be the summit of Stone Mountain, Ga., a solid piece of granite a thousand feet high, upon which will be erected a huge temple. The size of the enormous rock may be appreciated from the photograph above. Stone Mountain itself is one of the highest peaks of the Appalachian system. The idea for such a monument was advanced by W. H. Terrell, an Atlanta lawyer. The plan is to have the State of Georgia buy the mountain and to erect the temple with funds raised by public subscription

A Girl Who Ties Wedding Knots

A YOUNG couple with a marriage license went to the San Carlos Hotel in Pensacola the other day and asked the clerk to call in a minister. No minister could be found, and the clerk suggested that Miss Nellie Mills, the hotel's stenographer and notary (pictured above with her official pencil in its scabbard) be asked to officiate. Though Miss Mills was aware that the State law gave her authority to perform marriage ceremonies, she had never heard of a Florida woman acting in this capacity before. She was not afraid, however, to establish the precedent. She tied the knot in two minutes and received a fee of ten dollars.

Where a Bomb Killed Its Makers

"ANARCHY seems to have got its just deserts." That was Mayor Mitchel's comment on the killing of Arthur Caron, Charles Berg, and Carl Hanson on the top floor of a New York tenement house by the premature explosion of a bomb that they are believed to have been preparing to use on John D. Rockefeller, Jr. The bomb may or may not have been an instrument of accidental justice—but surely was powerful. The photograph (at the left) of the wrecked building is abundant proof that the anarchists meant serious business. Besides ending the lives of the three men, the explosion killed a woman and injured five other persons.

Lunch-Counter Dining Cars

By CHARLES PHELPS CUSHING

Illustrated by Herb Roth

DOWN at the bottom of their hearts the most bloodthirsty of French revolutionists must have cherished a certain sympathy with luxurious customs. Though these ardent republicans pelted cobblestones at the 14-karat gold-plated coaches then fashionable among the nobility, the bombarders must have regretted later that the institution of riding around in gold-plated coaches had to be suppressed. For, had Providence been willing, they themselves might have enjoyed taking a ride or two in just such glory of extravagance and pomp. In much the same light, now that it comes to a test at last, a good many Americans will regard the luxury of dining-car dinners.

After a successful trial on the Pacific Coast, an innovation called the "lunch-counter car" is now in service between New York and Philadelphia.

The Wayfaring Lobster Palace

THE idea has so strong an appeal to slim purses and democratic tastes that the aristocratic dining car may end by being permanently sidetracked. And most of us will be puzzled to know whether to feel glad or sorry. To eat in the "diner" was, to four purses out of five, an almost unpardonable extravagance. Few could escape from this wayfaring lobster palace without spending a dollar or more for even a midday meal.

Yet, costly though it was, the memory of good food enjoyed while a summer landscape went scooting past the plate-glass windows was something 14-karat precious, all the more carefully treasured because such experiences came at rare intervals. Look your last at linen cloths on little tables beside wide car windows! No more quail and champagne on your travels! No more so much as the comfort of a candlestick shade and a cut-glass water bottle! For the probable successor to the dining car is simply a "lunch-counter car"—not a buffet pantry in the corner of a Pullman, nor a half-hearted kitchenette affair in charge of the porter. Self-confessed, it approaches with ominous rumble—nothing but a "ham-and-egg" joint on railway trucks. The official descriptions suggest, even between the lines of the specifications, an atmosphere of fried onions and red, red hamburger steak:

The counter will stretch the length of the car along one side, with an aisle on the opposite, as in compartment sleepers, and stools in front of the counter. Meals will be served at all hours.

Though some of the obvious advantages of the idea may have a strong appeal, isn't it natural to feel a pang or two at seeing the opportunity to eat in luxury slip past the reach of your fingers?

"A counter and stools, meals at all hours"—what is this but a longer, wider, and higher variety of lunch wagon, iron-wheeled, but no whit more romantic than "Jack's Hamburger Car" or the "White House" or the "Owl"? Inevitably, we are led to wonder if this railway day-and-night lunch car will have colored windows like the "Owl's," with red, green, and yellow dominant and battle scenes painted on the dado. Or will a touch of refinement be added by making the windows of stained glass in appropriate designs? Pretty things could be done in art glass with ham-and-bean motifs. For the woodwork it might be well to modify the conventional egg-and-dart decoration into egg-and-butcher-knife.

The fact should not be lost sight of that a beanery on wheels is a progressive reform. We should appreciate saving the extra money and the tips. We should be thankful for the opportunity to eat whenever we are hungry. We should rejoice that the national luncheon of "ham san'wich, apple pie, an' a cup o' coffee" is now available between stations. Also, this system is patently nearer the ideal than the old-fashioned twenty-minute stop-over plan, with its bargain-counter rush—productive of little food and much dyspepsia. The fearful din of a Chinese gong was approved by custom, but surely was the worst possible music for such an occasion. It irritated the nerves rather than soothed them.

Also, in the great confusion of these crowded twenty moments of inglorious life some of the best of men have been known to yield to an irresistible temptation: and, while the waitress was punching the cash register, slip hot chicken pies under their coats and run, to consume them later on the train in peace.

Always, too, that horror of being left behind tortured the brain. Though no one ever did get left, many got back again on the wrong trains.

The new plan will remove these abuses, but its drawbacks are, none the less, rather serious. To instance one of the most important—who, when the lunch-counter car is attached, will have the courage to bring his own luncheon? Then recall some of the delicious grape-basket or shoe-box meals you have eaten on trains—taste again your mother's fried chicken, the lettuce sandwiches that no dog-wagon car could hope to imitate, the apples and oranges, the slice of chocolate cake, the half dozen little squares of fudge.

The lunch-counter car will mean the passing of these railway picnic parties.

Shuddering for the Future

IS this pessimism? Then woe is Babylon, for there is worse to come. Mark this: that the day is not far off when travelers will eat their luncheons in a railway mail car. Now that we have the lunch counter on wheels, it is only a matter of time until we will put trucks under the lunch counter's absurdum, the "Automat." This institution, which is rapidly establishing itself in all our larger cities, is a sort of food post office. Clerks sort out such ready-made sentetibles as sandwiches, pies, and crullers into mail boxes; and the consumer, with a nickel or a dime in lieu of a key, unlocks the box of his choice, draws forth a wedge of food, and, like a cave man, slinks away and devours it over a slab of cold marble.

The "Automat" deals in eatables, nothing more. It proffers no crumb of human sentiment, not even so much solace as a forlorn diner might find in conversation with a supercilious negro waiter.

The old-fashioned stop-over plan, with its bargain-counter rush—productive of little food and much dyspepsia

So Dainty

That You Start to Eat Them

One by One

Puffed Rice and Puffed Wheat are so dainty—so crisp, airy and fragile—that you treat them at first like confections. Instinctively one starts to eat them almost grain by grain.

Yet these are but kernels of staple grains. Nothing whatever is added. The almond taste—like toasted nuts—comes from terrific heat. And steam explosions—millions of them—make each grain like a bubble.

These are simply whole grains made wholly digestible. Beyond all their fascinations lies the fact that they are scientific foods.

The Only Perfect Cooking

Prof. Anderson's process is the only way known to fit every food granule for easy digestion. Other methods break part of the granules, but this method explodes every one of them.

There lies the main reason for Puffed Grains.

Other forms of these grains are delicious. But in no other form are all the atoms and elements fitted in this way for food. And that's the prime requirement.

Puffed Wheat, 10c
Puffed Rice, 15c
Except in Extreme West

CORN PUFFS 15¢

A Ceaseless Variety

These Puffed Grains with all the ways of serving offer you endless variety.

Each may be served with cream and sugar, each mixed with berries, and each served like crackers in bowls of milk.

Puffed Wheat makes ideal soup wafers.

Puffed Rice is used in candy making.

Either, doused with melted butter, is a delicious between-meal confection. And any of these grains, scattered over ice cream, tastes like porous nut meats.

Serve one in the morning, another at night—for the summer dairy supper. In one of these Puffed Grains each person will find his favorite cereal food.

Let Clicquot's Chilly Bubbles Cool Your Summer Thirst

When you swallow Clicquot Club Ginger Ale, thirst vanishes, your overheated body cools off, your tongue and throat feel wet instead of dry, your brain is cleared of hot-weather cobwebs and you are ready for more work, more play, or more ginger ale. It's there, too, if you want it.

Clicquot Club
Pronounced Klek-O
GINGER ALE

Drinks called ginger ale that are not ale and contain no ginger are not to be compared with Clicquot. Try Clicquot and you will agree.

At Good Grocers and Druggists

Two big glassfuls to the bottle. If one glass is enough for your thirst we will send —for 4c postage—a patent self-clamping stopper (clever device) that will hold the second glass fresh for 48 hours.

Other Clicquot flavors: Birch Beer, Root Beer, Sarsaparilla, Lemon Sour and Orange Phosphate.

THE CLICQUOT CLUB CO., Dept. B, Millis, Mass.
New York Office, The Clicquot Club Co., 100 Hudson St.
Chicago Office, 356 North Michigan Avenue
Western Office, Maritime Building, Seattle, Washington

REPUBLIC MILEAGE
PLAIN AND STAGGARD TREAD
TIRES

The name Republic on your tires is a guarantee of Service.

It means that your tires will take you "there and back again."

It means that every tire has had the individual attention that is absolutely essential to perfect performance.

Think thousands of miles ahead, figure cost per mile instead of cost per tire, and you will use Republic Quality Tires. They cost more to buy—but they cost less to use than any other tire made.

If you realize the true economy of buying the best, you will have Republics on your car this season.

THE REPUBLIC RUBBER CO.
Youngstown, O.
Branches and Agencies in all the Principal Cities

The Republic W M Tread Tire is designed especially for light cars. It, too, yields great mileage at low cost.

Prices:
30x3 $13.50
30x3½ 18.00
32x3½ 19.50

Republic Staggard Tread
Pat. Sept. 15-22 1908

Fundamental Justice

(*Continued from page 9*)

"Suppose I object to the terms," he quietly suggested.

"Then we'll order you to vacate the right of way covered by our franchises, build our own line and let you keep your cars until they rot!" thundered Milburn.

"NOT on your life!" yelled Sam. He was on his feet now, and his red hair was without a kink. It made him thoroughly understood. "That track belongs to me, and I don't have to remove it until two months after the speedway is absolutely finished! Before that time I'll smash your blanket franchise in the courts!"

"You can't do it!" boomed Milburn. "It's air-tight and copper riveted! I saw to it myself!"

"You'd better read your franchise," and Sam strode up to the edge of the desk. He wanted something on which to tap his knuckles. "It bears its own evidence of having been secured in bad faith. It contains the vague clause that you will use all possible expedition in the building of needed new lines, and you thought that gave you forever. I have shown an expedition which you refused to use in the building of a line which you have neknowledged is needed. Moreover, you only secured this franchise when you knew that some one else proposed to give the town the improvement you would not! Moreover again a blanket franchise is the easiest earthly thing to break, especially when granted without adequate consideration, forfeit, or time limit; and I'm going to bust this one!"

Bride: "*George, dear [boo-oo], what shall we do? A family moved in next door this morning with a lamp-shade just like ours!*"

"I believe he will, confound him," confided Bellinger to jovial old Jasper Stanton.

"Gentlemen," and Sam thumped the desk, "I am glad that you see the necessity of organizing a new traction company; but we will organize it in my office, not here!"

"Tut, tut, Sam, don't be unreasonable," interposed Frazier vigorously rubbing his bald spot.

"Unreasonable!" shouted Sam. "That's my car line! I had to fight every man here to give it to Winburg! The city constructed that traction roadbed, and would have thrown it away. I saved that waste with my own money. It's worth one-fourth of the stock in a million-dollar company, and I'm going to have it. I have on my side possession, the people, and fundamental justice!"

THERE was a long silence, broken only by the thrumming of Milburn's heavy fingers on the arm of his chair. Frazier leaned over to Milburn.

"Well, Ben," he suggested, taking off his spectacles and wiping them; "we'll have to modify the terms we were going to offer Sam."

"No!" exploded Milburn, his face flushing suddenly red. "I'll fight this case to the last ditch, if we never get a car line! Moreover, I'll see if the city can't remove your tracks from my right of way!"

"Very well," and Sam took his hat. "Gentlemen, I am sorry to see that we shall have delay. Winburg needs the Maple Avenue and Speedway belt, and I want you all to remember that when I first agitated it I did not ask for any share in the enterprise. I still hope to organize my million-dollar traction company." He started for the door.

"Wait a minute, Sam." It was pink-faced Bellinger, who rose.

"Which way, Ray?" asked Frazier, getting up to join him.

"I'm going to help Arnold organize," replied Bellinger, placing the hand of friendly admiration on Sam's shoulder. "Come on, boys."

Extra! Extra! Extra!

The first extras since the Spanish War were on the streets of Winburg! President Milburn had offered to recapitalize, take over the new Maple Avenue and Speedway line, and run it in conjunction with the Winburg Street Railway Company; but Sam Arnold had refused. He owned that track and he didn't have to remove it until sixty days after the speedway was completed; and he didn't propose to be squeezed out at cost price! He had organized a million-dollar company of his own, and he intended to break Milburn's franchises if it took the rest of his life!

BULLY for Sam! Fundamental Justice began to get in her work. All day long the citizens of Winburg had been indignant with whoever had stopped their new car service, and that person was Ben Milburn. Now Sam Arnold was stopping the car service; but that was different! Fundamental Justice rose in her place, and howled that she was willing to walk so long as Sam Arnold was holding up the car line in self-defense. "Who gave us the car line?" demanded Fundamental Justice, smacking her fist in her palm. "Sam Arnold!" "Who is entitled to the benefit?" Another smack. "Sam Arnold!" "Who's a marble-eyed old scoundrel, a contemptible thief, and a detriment to the city?" A louder smack than ever. "Ben Milburn!" and Fundamental Justice, tearing at her hair and rending her garments, ran shrieking into the night.

She was all over town in less than an hour. On her way she met sly-eyed old Tim Cassidy, but Tim only tipped her a wink and went on about his business. He was going from Jack O'Rourke's place in the second ward to Mike Brannigan's place in the first ward.

"It's a grand evenin', boys, and what'll you have?" said old Tim seating himself at the table near the bar.

THEY were fine, upstanding, broad-shouldered fellows in Brannigan's place, and you could tell they were born politicians by looking at their fists. They crowded round with every indication of pleasure, and drew their steins toward them. Old Tim had put over a winner this last election, and he was spending five million dollars for the city. No man in Winburg was more popular than Tim Cassidy!

"It's a shame about Sam Arnold," said he, running his stubby fingers through the fringe of curly gray hair at the back of his neck. "He's a fine lad with a fist in each hand, and a decent heart in him, and a brain in his head. Remember it's him that's responsible for this speedway money. You've all had a piece of it."

"What's the rights of this street car mix-up, Tim?" asked big Barney Fraley, the one that broke Mark Lefferty's jaw with one blow.

"What's the rights got to do with it?" demanded Tim, ordering the cigars. "He's a fine boy, and the citizens' friend, and Ben Milburn is stoppin' him!" He took his drink, and there was a trace of a grin on his broad, mottled face, as his twinkling blue eyes looked around upon his husky boys of the first ward. They had guarded many a polling booth, and persuaded feeble citizens not to vote. "Milburn had better keep both eyes awake, or he'll lose his ill-gotten franchises, and there'll be nothing in the way of Sammy Arnold's givin' us the best car system in the world. If for only one day Milburn don't run his old horse cars, he'll have no franchises to sue on. Some night," he poured himself another nip out of the long, dark bottle. Every upstanding boy was crowding

Digitized by Google

closer with strained attention. "Some night the good husky citizens of this town will have a lark; say at about one-thirty o'clock in the mornin'." He pushed back the bottle. "They'll gather some place on the quiet, say back of the ice plant." He picked up his glass, and twirled its contents round and round. "They'll have picks and crowbars with them, and then before anybody can stop them, they'll pull up the rails of the Main Street line and throw them in the river. Mind, I'm not sayin' that's what ought to be done, or that I myself would be glad if it was done; but I'm only predictin' what might happen to Milburn's old horse car line any Monday night this week. Well, Mike, what do I owe you? Take out for another drink all around, and spend the change. Pleasant weather we're havin'. Good evenin'."

FUNDAMENTAL JUSTICE, out raring and raging, saw sturdy old Tim Cassidy visit quite a number of places that night. She saw him go home at eleven-thirty, and ask the time of Patrolman Casey on the corner. She saw him go into the house and waken everybody in his particular desire to know the time of night.

At six o'clock the next morning the telephone brought Sam Arnold out of bed. "It's a grand mornin', Sammy!" cackled the voice of old Tim Cassidy. "Have you heard the news? Of course you've not! Milburn can't sue you for breach of franchise after to-day, because he'll have no franchise to breach!"

"No?" puzzled Sam, and Ruth, pattering down the stairs in a cloud of pink, caught the perplexity on his face and was immediately frightened.

"It is so!" exulted Tim. "You're most popular, Sammy, my boy. At one-thirty o'clock this mornin' it was, Patrolman Casey just told me, a mob of indignant citizens tore up the Main Street tracks, and threw them in the river! There'll be no horse cars runnin' to-day! You'll be gettin' a franchise and runnin' your own to-morrow!"

"You old reprobate!" gasped Sam.

"I can prove that I was inside my own house at eleven-thirty," chuckled Tim. "I'll talk no more with you," and he hung up.

"What was it?" demanded Ruth as Sam dropped in a chair to laugh. "What was it? What was it? What was it?"

Sam stopped and gathered his breath.

"That, Ginger," he told her, "was the voice of Fundamental Justice!"

Off-Agin-on-Agin Finnegan

(Continued from page 14)

"Well, I guess you knew what I was doin' when you followed me, didn't you?"

"Ass!" said Shorty. "I never followed you. I'm on my way in to the post."

"Way *in?* Did you say *in?*"

"I sure did. I-N In."

"But didn't McClusky put you wise?"

"Wise to what? Come now, Finnegan—out with it! What's up? You know I haven't seen McClusky since I left the post Friday. Five days alone on a jungle hike is enough and plenty for any man, so was beatin' it back when I stumbled over you—and your blanket roll."

"Gosh!" said Finnegan, and collapsed on the ground, holding his head in his hands. Then in the midst of the turmoil of his mind a thought struck him. "Five days you said—and you left Friday! Then this wouldn't be Saturday—it'd be Wednesday night?"

"Are you loco?" asked Shorty. "Sure it's Wednesday. Didn't the mail get in yesterday morning? It was due Tuesday, the 12th. That's another reason I wanted to get back—thought there might be some orders from headquarters."

Poor Finnegan was dumb with amazement. "McClusky—" he began; then a certain kindly spark in his Captain's eye made him blurt out: "Oh, please sit down, Captain, I'll make a clean breast of it."

So Shorty sat and heard him through in silence, immovable save for an occasional twitching of a muscle round the mouth. Finnegan told all, suppressing only his reason for drinking—for Whitney had passed on to him Shorty's remark about his being the only sane man in the troop and he didn't want to be blamed for getting letters from a lady. He finished, and for a long, long moment the silence was ominous, then:

"Golly! That skunk of a McClusky! Tryin' to lose me a good man! I *told* him to let you alone. He'll get a hell-fire callin' down to-morrow, all right. Why, there was nothin' in the world comin' to you! If I haven't more decency than to confine a boy for gettin' sick on his first drunk and not bein' able to come home, I'd not be fit to be a T. C." (This is the way Shorty felt now—other moods, other doctrines.) "Golly! If that was the sort of stuff I handed out, I wonder where Mac would be now? About twenty-seven thousand bobtails for his! Wait till I get at him to-morrow!"

Suddenly the veil dropped from Finnegan's eyes, and he saw his little, hard-riding, hard-cussing, hard-fisted Captain as Whitney and some of the others did. Hard as nails he was—in everything but heart—and that heart given wholly to his only loves, his "babes in barracks," the men of J Troop. And from that moment Shorty might have used Finnegan as his doormat, and he would have gloried in the service of keeping the stumpy little boots clean.

They camped where they were for the night, but were up long before reveille time next morning, and made a quick march for the post. It chanced that McClusky happened to be looking out of his squad-room window just as Shorty gave a little farewell jerk of the head as he turned off to his quarters, while Finnegan's hand came up to salute, and he made joyously for J Barracks with shining morning face.

"It's Friday the 13th for mine," muttered Mac. "Here's another one the Captain's put the comether on!"

IT was shortly after this that Shorty's striker displensed him—by shining his boots too often, so ran the word through the troop—and got fired from his job, and Shorty took on Finnegan to strike for him, which greatly pleased the lad, and his consuming energy would have led to his being fired, too, had not Shorty restrained his zeal.

"Quit on those puttees! Don't you dare to rub the buttons off that coat! Want to make me flash like a hello and have every damn Gugu in the country tryin' to put me out of business? Brush all you like, but—" Shorty condemned all polishes in theological terms.

"Finnegan's a blank sight better now than some of these mutts who've been in twice his time," said Captain Campbell to Top Sergeant Whitney one day. He spends his spare time studyin', too (I've lent him Wagner, Von der Goltz, and De Brack this past month), and he doesn't waste it writin' sentimental-mush letters full of homesick, lovesick rot to some worthless female." That was all the T. C. knew. Finnegan did study hard, it is true, for he wanted to be in line for promotion, but he also ingeniously juggled things about so that Shorty wouldn't be aware of the many and voluminous missives he wrote and sent away by every infrequent mail, for well he knew Shorty's ideas on the woman question.

Meredith Nicholson's *Opinion of* "Bealby"

From a letter—

. . . Congratulations on this bully tale of Wells's you are running. Strikes me as not only the best that any periodical has had for a long time but better than Wells's own best. People are talking about it here.

Yours sincerely
MEREDITH NICHOLSON
Indianapolis

The Joke—He Never Thought of B. V. D.

FANNING, mopping and grimacing, "Phew! how hot," *won't* keep you cool, when the sun grills. B. V. D. *will.* It lifts a burden from your body and weight from your mind. You forget the heat, because you're too busy "enjoying life"—lounging, dancing, a game of golf, a bout at tennis, watching a baseball game. Remember that *not all* "Athletic" Underwear is B. V. D.

For your own welfare, fix the B. V. D. Red Woven Label in your mind and make the salesman *show* it to you. That positively safeguards you. On every B. V. D. garment is sewed

This Red Woven Label

London Selling Agency: 65, Aldermanbury, E. C.

ARE YOU WILLING
to let one of these books tell you the *TRUTH* about advertising?

YOU'RE not afraid to hear the truth about your product.

You're not afraid to know how your salesmen spend their time—or what your dealers think of you.

Then it's time for some one to tell you what advertising really is and what it can do for your business.

To tell you why more money is being squandered on unwise advertising than in almost any other business enterprise.

To tell you how straight and plain and smooth is the right road for any man who is willing to follow it.

These books tell you the truth, and strip the mystery from advertising.

Check "A" on coupon if you're a non-advertiser, "B" if you are spending $25,000 or less on advertising, "C" if you are spending more. One book, whichever fits your need, will be sent free. If you want more than one, send 25c for each additional copy.

The Safest Breech-Loading Gun Built

Marlin

FOR ducks, geese, foxes, trap shooting and all long-range shooting, use our famous 12 ga. guns as illustrated.

For snipe, quail, partridge, woodcock, squirrels, rabbits, etc., our 16 and 20 gauge guns are smaller, lighter and quicker, and handle with great precision. You can use 2½ in. shells in the exquisite new 5-shot 20-gauge.

Hammerless Repeating Shotguns
12-16-20 Gauge

They have **Solid Top**—a thick steel wall of protection that also keeps out rain, snow, dirt, leaves, twigs and sand. **Solid Steel Breech**—the receiver absolutely solid steel at rear as well as on top. **Side Ejection** (away from face and eyes). **Matted Barrel**—a great convenience in quick sighting—costs extra on any other standard grade pump gun. **Press-Button Cartridge Release**—to remove loaded cartridges quickly from magazine. **Double Extractors**—they pull any shell. **Six quick shots**—5 in 20 gauge. **Take-Down Feature**—for convenient carrying and cleaning. **Trigger and Hammer Safety**—a double guard against accidental firing.

GRADE "A"—12 Ga., $22.60; 16 or 20 Ga., $24.00

You will like to shoot this handsomest, best designed, most efficient pump gun—it's **the safest breech-loading gun built.** Full details in catalog.

Send 3 cents postage for big catalog of our hammer and hammerless repeating shotguns and Marlin repeating rifles

The Marlin Firearms Co. **17 Willow Street, New Haven, Conn.**

If at all Particular Drink

MOXIE

"Oh, now," drawled Whitney, "I'd hate to think women are *all* worthless. Don't you reckon there's any exceptions?"

"Mothers maybe," quoth Shorty crisply. "Nothin' out of that class. Finnegan's got good sense."

"He acts to me," said Sergeant Whitney with a mischievous twinkle in his eye, "mo' like a married man than a single one. That might account for his indifference so long as you're so sho' he's not co'tin' some one."

"Married!" grunted Shorty disgustedly. "Married, rot! He's marked single on his enlistment card. A fat lot *you* know!"

"Sho'ly," grinned Whitney, "but you know as well as I do how many of 'em say they're single, and first thing you know—up turns a wife and a kid."

"*That's* so," agreed Shorty, "but it doesn't apply to Finnegan. If he said he was single, he *was*. I've kept my eye trained on him close, and I know him. Saddle that tale onto some one else. It cinches too loose on him."

TIME went on and on as it has a habit of doing, and the J Troopers learned what life in the tropics is. They learned something of the jungle and of the utter weariness and monotony of small-post duty in the islands; they learned to shake out their shoes for tarantulas in the mornings; they learned how to take unbelievable quantities of quinine in the rainy season; they learned to the last dregs of depression the bitterness, homesickness, and melancholia bred by inaction in a dampy hot tropical land. Like Jerome K. Jerome's young man reading the medical book, they developed almost every known ailment but housemaid's knee. Shorty tried hard to keep them hustling—he lay awake nights thinking up things for them to do that would put a little ginger into them; but they performed these stunts with no enthusiasm; the starch was all out of them. Several had to be sent up to Manila to be shipped to "Saint Lizzy's." Two "happies," a "melancholic," and three "vino locos." Mike McClusky came near going with the last, but while he had one or two very bad spells, the doctor managed to pull him through and save him for a better fate. Finnegan managed pretty well, for there was that within him that occupied his mind and thought and kept him busy weaving dreams when not otherwise employed by Shorty. Secretly he wrote voluminous letters, and whenever the mail steamer made its infrequent visits became the delighted recipient of many large fat envelopes that he studiously concealed from Shorty's eye. Yes, Finnegan managed to get on very well, though the continued climate will have its effect on anybody but a Shorty, and after about six months more or so Finnegan began to get very restless, a fact that Shorty quickly noted.

Rescuer (*To girl he has rescued three times in one day*): *If it's a husband ye're after, miss, 'twould pay ye to advertise. I've been a married man these five years yet.*

"Durn it again! Here's Finnegan goin' the way of all flesh. That kid was doin' so well, too. Now he's as grumpy and touchy as any of 'em. Oh, *Lord*, for a little action! That would clear the kinks out of 'em! If these natives don't get gay soon so that J can get on the warpath, I'll flop down on my marrowbones and pray—for a fight. We're festerin' and decayin' here like a bunch of green scum on a stagnant pool."

BUT Shorty was saved the unwonted exercise for his marrowbones, for very soon there was trouble enough and to spare. The natives suddenly went on the rampage all over the island, and well-organized bands of Pulijanes whirled into action, thereby causing joy in the hearts of Shorty, McClusky, and others of their ilk. Up started J Troop on the qui vive for orders, all listlessness and imaginary ills forgotten, a smart, snappy, eager bunch, while Shorty bustled about feeling like a hallelujah chorus. There was only one small fly in the ointment for Shorty, and that was that Finnegan, while undoubtedly interested, had not partaken of the general hilarity these last days. He seemed worried, preoccupied, and the news of action seemed to make him more restless than ever. To Shorty, who was as ignorant of Finnegan's inner life as we are of the why of the universe, this looked like only one thing.

"I hope to the Lord Finnegan's not goin' to turn out a coward. If a soldado's that, what else use is he? McClusky, for all my trouble, is worth more. I can depend on him *now*. He was worth keepin' for this. He wouldn't take a drink while this action's goin' for any money. Thank God, Jones" (the First Lieutenant) "is on D. S. He might have made a horrible example. I can trust Burns in any sort of tight place even if he *is* a kid." So soliloquized Shorty when J Troop was hourly expecting orders to hike out into the jungle to chase up Pulijanes.

Finnegan had been worse than usual that day, and had got his own and Shorty's field equipment in such a mess that Shorty had been forced with many blue-smoky oaths to whirl in and straighten things out for the two of them.

The dawning of the morrow saw the little mail steamer chugging up to the landing stage with the expected orders. It brought also the mail bag full of letters from home. Finnegan eagerly clutched his missives and retreated with them to his deserted squad room.

The troop was mounted and already formed into column of twos, ready to start at the nod of Shorty's head to the trumpeter, when the Captain discovered that of all on the roll of the expedition Finnegan alone was missing.

"Where's Finnegan?" he demanded of the troop at large.

THERE was no direct answer, for no one knew, but McClusky muttered: "Deserted again! 'Off-agin-on-agin Finnegan?'" Mack was in fine fettle at the idea of the approaching action, and so was Shorty, or he might have given him a sharp reprimand instead of grinning, but he quickly became anxious again, and asked louder:

"Anybody know anything about Finnegan?" But no one had seen him since breakfast, when he was sitting on his bunk.

"Humph!" grunted Shorty, sorely disappointed. "No need to scout after him. We won't wait." He nodded to the waiting trumpeter. "For'd—trot—*hay-r-r-r!*"

Out rang the trumpet clear and shrill, and out trotted, jingled, and clattered J Troop through the gate in the blazing sunshine and into the "splotchy-blotchy shadows" of the jungle trail.

"I'll give him blank and double blank when I get back," thought Shorty wrathfully of Finnegan. "He makes me sick, the little white-livered 'frabl-cat!'" He fumed and fretted for a while over his mistaken judgment, but soon more important things than Finnegan engaged his attention.

BUT Finnegan sat on the side of his bunk wide-eyed, oblivious to everything, dreaming daydreams, weaving romances, every now and then gripping and crumpling the sheets of one of his

Willys Utility Truck

3/4 TON

$1350

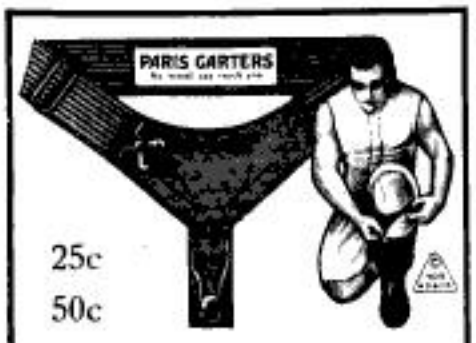
Price includes chassis and driver's seat. Body as shown $150 extra.

f. o. b. factory

WILLYS UTILITY TRUCKS are just as efficient and fresh at Six P.M. as at Six A.M. They need no sleep; they cannot die; cannot be overcome by heat; and do not eat up the profits you are fighting to conserve.

Horses are just the reverse. Often they are "all in" when you need them the most. In the summer they die by the thousands. Sometimes the greater portion of an entire horse investment is wiped out by the heat in a single day.

Willys Utility Trucks are good for 24 hours a day—any time of the year. Most important of all, they are *business getters.* One Willys Utility Truck can cover *300% more* territory than a team at *50% less cost.* Such ability to produce and develop new business must be reckoned with.



Your business needs such assistance.

Look up our dealer in your town. Descriptive and instructive literature on request.

letters, and smiling delighted and—it must be confessed—rather foolish smiles. For a long time he sat there speechless, until about half past ten a lonely little dog trotted in, laid an appealing head on his knee, and broke the spell.

"*Gosh!*" cried Finnegan, starting up and surveying the empty room. He rushed to the window; the corral was empty save for a few lone steeds, one of which he recognized as his own. He caught up his equipment, rushed down after his saddle—packed by the practiced hand of Shorty—caught up his horse, saddled, mounted in a frenzy of haste, and galloped after one of the guards, yelling madly: "Hi, you! Which way did they go?"

"What!" cried that astonished individual, turning. "Why, it's Finney! Say, you been in a dope dream? Yes, the troop went that way—north. Hike out and I guess you kin ketch it."

Out into the jungle trail crashed Finnegan, his mind one wild paradoxical turmoil of joyous pride, exultation, shame, regret, and determination.

NOW Shorty, though he did not know it—how he would have chortled if he *had!*—was up against one of the most pleasurable fights of his life. Some two hundred and fifty Pulijanes were ahead of him—the flower of the Pulijanes in Leyte. Moreover, they had scouts out, and, being fully advised of the movements of J Troop and its scant eighty-five men, had prepared an ambush for them just short of the place they felt sure that J would camp for the night—the men would be tired then and their own chances better. But Shorty's lucky star was in the ascendant, and he never got that far. Getting word from scouts that there was a large body of Pulijanes ahead, Shorty hiked and bucked J Troop along as fast as possible—particularly after they hit the Pulijane trail, about eleven o'clock. They rested here, had coffee and a bacon sandwich—their last rest and feed in a good long time, so Captain Campbell warned them: "For when we hike out now we don't stop till we get 'em." The next thing they struck was a swamp with a precarious, quaking trail through it, but they won through with only one casualty—Private Doran, the unlucky, fell in and sank waist deep, and it took the combined efforts of three men, under the energetic leadership of Shorty, to haul him out. After that they followed up the trail without halt, Shorty in front like an eager little bow-legged beagle, nose to ground, snuffing the warpath. At three-thirty they met a detachment of Boluntarios, which Shorty added to his column; they just dismounted long enough to rest the horses' backs and stretch their own legs, and were mounting again when there was a wild yell from the rear, and Finnegan rode up hatless and mud-bespattered, his horse blowing and winded. Astonished, Shorty and the troop turned and gaped at him.

"Oh, Captain," he gasped, "I thought I'd never ketch up! I never heard the troop go—and *whew!* I had to hustle!"

"Lose your hearin' temporarily?" demanded Shorty. "A boiler factory runnin' full blast wasn't in it with this troop when they left the post—they scared the game for miles! Where *were* you?"

"Settin' on my bunk."

"Sitting—good Lord, this is too much! Get back in your place. I'll attend to you later. Ten-*shun!* Prepare to mount—*mount!*"

Up swung the men and hiked along at command. Unfortunately for him, Finnegan's appointed place in the file was directly ahead of McClusky, and after Finnegan had been riding for a while in a semidaze he became aware of a constant reiterated utterance behind him. It came with a cadenced swing.

"Cold feet! Cold feet! C-o-l-d f-double e-t! Cold feet! Cold feet!" ran the chant; over and over and over, boring into his brain.

"Cold feet! Cold feet!" Suddenly the refrain touched him to the quick and aroused wild and sudden anger.

"Shut up, you big slob!" he roared, reining back his horse to shake his fist under McClusky's astonished nose. "I'll learn you to call that to me! Don't care if you're Jack Johnson," he added.

"Shut up there!" came Shorty's tense whisper down the file. "Can the chin! Everybody quiet now; I think we're gettin' up on 'em!"

IN silence J Troop crept forward, Shorty having sent a dismounted party ahead to reconnoiter. Rage foamed in the hearts of McClusky and Finnegan, but was forgotten at the sharp command: "Dismount to fight on foot. Number threes hold horses."

"Deploy as skirmishers! Quietly, men, quietly." They crept forward; the constabulary extended the line to the left. Suddenly, without warning, the reconnoitering party came tumbling in, gasping, and hot on their heels came a volley from the right front, knocking down several men.

"Close in on me!" called Shorty, seeing the gap in the line. Promptly they closed up, and none too soon, for like an apparition a column of the enemy began passing in front of the troop's right. They were moving in a narrow cross trail, in column of twos in a smart double-step, arms crossed in front of the breast, a bolo in the right hand and a long stick in the left. The riflemen who had fired were nowhere to be seen; this column was evidently unaware of them, and as they cleared the bush on the right, Shorty gave the command: "Fire!"

Weeks of painstaking work had made

Where We Come In?

By CHARLES L. EDSON

OH DRAT that everlasting hay;
Spear piled on spear.
We fight the stuff from day to day,
From year to year.

No matter if a thousand stacks
This harvest yields;
Next year we'll have to break our backs
In these same fields.

Who eats the hay? Not ma nor pa,
Not me nor you.
I ask again who eats it? Ha!
The horses do.

We raise the hay for horses' grub.
"Well, then," you say.
"Why keep the horses?" There's the rub—
To haul the hay!

The hay needs horses; horses, hay—
It is a sin.
Us farmer ginks will ask some day
Where *we* come in?

J Troop's volley perfect, and as the crash came the Pulijanes could be seen tumbling around in all directions. Some of the wounded veered to the left, where the Boluntarios got them in the flank; most of them fled along the trail, but one or two of the fiercest turned and tried to bolo some of J's wounded that had fallen at the first volley; but they were beaten off. Up jumped Shorty.

"We've got 'em now!" he yelled. "Forward! Follow me!" and started after the Pulijanes at a trot.

"Come back, Captain!" yelled Whitney, who had headed the scouting party. "There's a thousand men out there, and the detachment with rifles are thick down the trail yonder."

"Who's captain here?" demanded Shorty. "You or I? That's just what I'm after—to capture those rifles! They've got no business with 'em. Forward, men!" And forward went J, carrying their wounded and keeping as close as possible to Shorty's heels. Finnegan's heart was wildly thumping, but, as he noted curiously, it was not with fear but with excitement. His morning letter had required some outlet; had, after the first daze, keyed him up to just the right pitch for his first fight—this was better than vino. McClusky, never more himself than in the midst of an action, noted the boy keenly and admitted to himself that he seemed all right. "He's got the right look in his eye," conceded Mac. "Old Campbell ain't often fooled."

SOON they came to the open and halted in a comote patch. Shorty formed them in a circle with the wounded in the center and the constabulary on the right and left flanks, and details were set to work bandaging the wounded. Shorty looked about him. Ahead a comparatively open trail led to a small house perched on a slightly rising ground, and near it was a double line of Pulijanes.

"All with bolos," muttered Shorty, squinting through his field glasses. "Bet my grandmother's hat those riflemen are on the other side of that house." He swept the horizon with his glass. "No sign of them anywhere else," he remarked to Whitney.

"The hemp's pretty tall," answered the Sergeant. "They could be thick all around us and we not see them."

"I'll take a chance," replied Shorty. "I'll take out a few men myself, circle back of that house, and see if those rifles are there. I'm goin' to *get* 'em!"

"Send some one else; do, sir; we can't afford to lose you."

"Afford rot! I'm goin'. Here, McClusky—Terry—come with me!" His eye roamed over the troop. "I'll need one more."

"Take Finnegan, sir," prompted McClusky.

"What! I want some one I can *depend* on."

"Ye can depend on *him*," replied Mac. "He ain't off-agin-on-agin no more; he's on—ter stay! I seen his eye!"

"Wonders will never cease!" said Shorty. "Here, Finnegan!"

CREEPING on their stomachs, as General Grant said armies move, they cautiously advanced about a hundred yards beyond the clearing to a clump of hemp beside the trail. As they reached it two Pulijanes rose up and made for them. Shorty promptly fired at one and McClusky, who was immediately behind him, at the other, and down they came. With the shots the enemy rose up on all sides of them from the hemp as devils or ghosts do in a nightmare. Everywhere they turned there was a row of fierce, grinning heads. It was enough to affright even a Shorty, to say nothing of a Finnegan, only—he surprised himself again at not being terrified. The whole field, everywhere they looked, far and near, was alive with Pulijanes. Every one of the party was cool and collected; Shorty had chosen his men well. They knew the only thing to do to try to save their skins, and they proceeded to do it. They started for their own lines, walking backward and firing as they walked. From behind, on either side of them, came a murderous fire from J Troop, directed by Lieutenant Burns. The Pulijane riflemen that Shorty had rightly guessed to be on the other side of the house came kiting around the corner and joined in. Of a sudden Terry fell, dead in his tracks. Next, to the horror of the troop, a big hairy Pulijane pressed forward, caught hold of little Shorty's leg, downed him, and gave him a bolo thrust in the side, all like lightning. McClusky, running to the Captain's assistance, was downed and stabbed twice in the back by two more. The advance of the Pulijanes closed in on them.

Then occurred the glorification of Finnegan. He started to fire, but found

Digitized by Google

his rifle barrel pierced by a bullet. "Here goes!" he muttered, and rushed forward, using it as a club. It bent over a Pulijane's head, and as the man fell Finnegan jerked up Shorty and Mac and got them started to the rear. Very weak and tottery they were, but managed to hold together and win back with Finnegan behind them—as they supposed. As they reached the welcoming line Shorty turned, expecting to see Finnegan, but he was still many yards away, the center of a bunch of howling Pulijanes. And now J was afraid to fire for fear of killing him.

"Let me get back!" gasped Shorty. "Blank blank it, they've got the best man in the troop!"

McClusky was lying on the ground in the center of the formation with eyes closed and face very white against his vivid hair. Shorty hung on Whitney's restraining and supporting arm, struggling feebly, cursing and fuming.

"Let me back! What'd I ever leave him for?" But Whitney held on.

"We're goin' to keep you now we've got you. No one can live out there the way we're surrounded."

Finnegan was struggling to save himself. "I've *got* to," he told himself. Striking right and left with his rifle, he succeeded in backing along for some yards, followed by fifteen or twenty bowling Pulijanes slashing and jabbing at him with spears and bolos at every step. His right arm was suddenly ripped open; he gasped, staggered, and managed to stagger sideways and toward a flank enough to let J Troop have a clear line to advance.

"Fire!" yelled Shorty. Out crashed the volley and down went more than half of the pursuing party. Finnegan ran for his life as they checked, stumbling and swaying at every step.

"Fire!" yelled Shorty again, and the broken remnants turned and ran back to their lines while Finnegan fell and Lieutenant Burns jumped out and pulled him in. Then the Pulijane rifles chimed in again, but J Troop, having broken their center, sent them flying. Next morning two more troops of the Eighteenth from the north of the island appeared on the scene and followed up the enemy, as J Troop's loss was so great it was hardly in pursuing shape. The chase however, was almost needless, as it turned out later that every large band of Pulijanes in Leyte was in the fight and every important leader was killed.

In the largest room of the old house lay Shorty and Finnegan on blankets, and when the private's eyes opened he found himself looking straight into the thoughtful gaze of his Captain.

"Good mornin', sir," said Finnegan.

"Mornin'," responded Shorty.

Finnegan looked down at himself and found that he had been washed clean and his arm bandaged. "How are you, Captain? Did they get you bad?"

"Who? Me? Takes more than one bolo poke in the side to get *me* in bad. After the first wooziness it was no bother. I'll be all right in a day or two—thanks to you."

Messenger—*I'm going on me vacation next week.*

Newsboy—*I'm 'fraid I won't be able ter git away this year. That's the wuist o' bein' in biuness fer yerself.*

"Don't thank me—I had to," said Finnegan. "Where's McClusky?"

Shorty's face became grave. "Dead," he said. "Old Mac's dead. Those two thrusts in the back finished him. He died last night about nine o'clock."

"I did what I could," said Finnegan.

"God knows you did—and so did Mac. The last thing he said was: 'Tell the boy Finnegan I mistook him.' And I want to say right here and now, Finnegan, I was 'mistook' too—yesterday mornin' when you turned that stunt of hangin' behind—and I take back all I was goin' to say to you."

"Well, you never said it. What was it?"

"Oh, cussin' you out for stayin' behind. Whatever made you, you idiot? You might have been court-martialed."

"Why," stammered Finnegan. "Why, the letter—why, it—it come yesterday."

"What letter?" snapped Shorty. "Out with it! What was it?"

"A boy!" beamed Finnegan, radiating with parental glory. "Six weeks ago, and they're both doin' fine!"

"*A kid!*" Shorty fell back for the moment, speechless.

"I hope you ain't mad, Captain," said Finnegan. "I knew you never liked to hear about girls and wives and things, so I never told you. But I was afraid you'd git on to me. I was that restless waitin' to hear about it all."

"But—but—but," spluttered Shorty, "your enlistment card says 'single.'"

"That was right when 'twas made out, but I got married that night—two weeks before I come to Fort Hotchkiss."

For a moment Shorty was prostrated, then through his brain darted several thoughts. "Some women will take anything—he was a beaut then!" was the first, but the last one drew a conclusion that might have surprised some of Shorty's intimates. "Maybe a woman can see further. Maybe this intuition gag has got somethin' on us after all."

Finnegan mistook his silence for disapproval. "You ain't mad, are you?" he reiterated.

"Mad!" roared Shorty suddenly. "*No!* For God's sake! He saves my life and asks if I mind it because he happens to be married! Say did you say that kid was named yet?"

"No, she was waitin' to hear what I wanted."

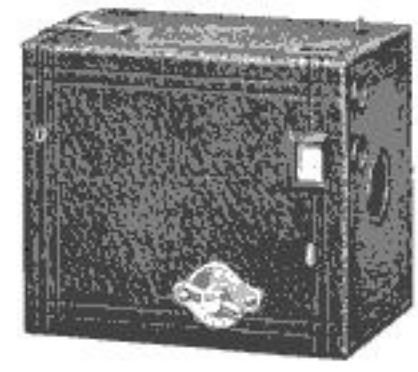
"Then tell her to call it Alexander Campbell Finnegan," said Shorty. "And I'll send it a gold toothbrush, or whatever it is you send kids—with yesterday's date on it."

That night, while Finnegan lay happily asleep, Shorty lay awake and thought of turbulent, brave, trouble-raising, difficult, hard-drinking, gallant, dead McClusky, who had been a noncom with him in the "old regiment."

"It was the best way—the only way he could have left the service without a bobtail. Now he'll have—

Three rounds blank, and follow me,
And thirteen rank, and follow me;
Oh, hark to the bugle callin',
Follow me, follow me home!"

No. 0 Brownie



Price, $1.25

Instantly ready for business without focusing—this little camera is so simple, and easy of operation, that anyone can secure good results. Durable, yet light and compact, it is practical in every detail.

The No. 0 Brownie uses Kodak Film Cartridges of eight exposures (size of pictures 1⅝ x 2½ inches), loading and unloading in daylight. Has automatic shutter for time and snap shot exposures, tested meniscus lens and two finders. It is neat, strong, attractive. You can do your own developing and printing (without a dark-room), or your dealer will do it, or have it done for you.

Ask your dealer to show you one, or write us for Kodak catalogue.

Bealby

(*Concluded from page 16*)

He found Mr. Darling in profound meditation over some peach trees against the wall. They were not doing so well as they ought to do and Mr. Darling was engaged in wondering why. "Good evening, Mr. Darling," said Mr. Mergleson.

MR. DARLING ceased rather slowly to wonder and turned to his friend. "Good evening, Mr. Mergleson," he said. "I don't quite like the look of these here peaches, *blowed* if I do."

Mr. Mergleson glanced at the peaches and then came to the matter that was nearest his heart. "You 'aven't, I suppose, seen anything of your stepson these last two days, Mr. Darling?"

"Naturally *not*," said Mr. Darling putting his head on one side and regarding his interlocutor. "Naturally not—I've left that to you, Mr. Mergleson."

"Well, that's what's awkward," said Mr. Mergleson and, then, with a forced easiness. "You see, I ain't seen 'Im either."

"No!"

"No. I lost sight of 'im—" Mr. Mergleson appeared to reflect—"late on Sattiday night."

"'Ow's that, Mr. Mergleson?"

MR. MERGLESON considered the difficulties of lucid explanation. "We missed 'im," said Mr. Mergleson, simply regarding the well-weeded garden path with a calculating expression and then lifting his eyes to Mr. Darling's with an air of great candor. "And we continue to miss 'im."

"*Well!*" said Mr. Darling. "That's rum!"

"Yes," said Mr. Mergleson.

"It's decidedly rum," said Mr. Darling. "We thought 'e might be 'iding from 'is work. Or cut off 'ome."

"You didn't send down to ask."

"We was too busy with the week-end people. On the 'ole we thought if 'e 'ad cut 'ome, on the 'ole 'e wasn't a very serious loss. 'E got in the way at times. . . . And there was one or two things 'appened. . . . Now that they're all gone and 'e 'asn't turned up— Well, I came down, Mr. Darling, to arst you. Where's 'e gone?"

"'E ain't come 'ere," said Mr. Darling surveying the garden.

"I 'arf expected 'e might and I 'arf expected 'e mightn't," said Mr. Mergleson with the air of one who had anticipated Mr. Darling's answer but hesitated to admit as much.

THE two gentlemen paused for some seconds and regarded each other searchingly.

"Where's 'e *got* to?" said Mr. Darling.

"Well," said Mr. Mergleson putting his hands where the tails of his short jacket would have been if it hadn't been short, and looking extraordinarily like a parrot in its more thoughtful moods, "to tell you the truth, Mr. Darling, I've 'ad a dream about 'im—and it worries me. I got a sort of ideer of 'im as being in one of them secret passages, 'Iding away. There was a guest, well, I say it with all respec', but *anyone* might 'ave 'id from 'im. . . . S'morning soon as the week-end 'ad cleared up and gone 'ome, me and Thomas went through them passages as well as we could. Not a trace of 'im. But I still got that ideer. 'E was a wriggling, climbing—enterprising sort of boy."

"I've checked 'im for it once or twice," said Mr. Darling, with the red light of fierce memories gleaming for a moment in his eyes.

"'E might *even*," said Mr. Mergleson, "well, very likely 'ave got 'imself jammed in one of them secret passages. . . ."

"Jammed," repeated Mr. Darling.

"Well—got 'imself somewhere where 'e can't get out. I've 'eard tell there's walled-up dungeons."

"They say," said Mr. Darling, "there's underground passages to the Abbey ruins—three good mile away."

"Orkward," said Mr. Mergleson. . . .

"Drat 'is eyes!" said Mr. Darling. "What does 'e mean by it?"

"We can't leave 'im there," said Mr. Mergleson.

"I knowed a young devil once what crawled up a culvert," said Mr. Darling. "'Is father 'ad to dig 'im out like a fox. . . . Lord! 'ow 'e walloped 'im for it."

"Mistake to 'ave a boy in so young," said Mr. Mergleson.

"It's all very awkward," said Mr. Darling surveying every aspect of the case. You see— 'Is mother sets a most estrordinary value on 'im. Most estrordinary."

"I don't know whether she oughtn't to be told," said Mr. Mergleson. "I was thinking of that."

MR. DARLING was not the sort of man to meet trouble halfway. He shook his head at that. "Not yet, Mr. Mergleson. I don't think yet. Not until everything's been tried. I don't think there's any need to give her needless distress—none whatever. If you don't mind I think I'll come up to-night—ninelsh say—and 'ave a talk to you and Thomas about it—a quiet talk. Best to begin with a *quiet* talk. It's a dashed rum go, and me and you we got to think it out a bit."

"That's what *I* think," said Mr. Mergleson with unconcealed relief at Mr. Darling's friendliness. "That's exactly the light, Mr. Darling, in which it appears to me. Because you see—if 'e's all right and in the 'ouse, why doesn't 'e come for 'is vittels?"

To be Continued Next Week

Don't Throw Away Your Old Tires

For over three years French and German motorists have been getting from 10,000 to 15,000 miles out of their tires by "half-soling" them with Steel Studded Treads.

In eight months over 20,000 American motorists have followed their example and are **saving $50.00 to $200.00 a year** in tire expense.

We Ship On Approval without a cent deposit **prepay express** and let you be the judge. **Durable Treads** double the life of your tires and are sold under a **signed guarantee for 5,000 miles without puncture.** Applied in your garage in 30 minutes.

Special Discount offered to motorists in new territory on first shipment **direct from factory.** A postal will get full information and sample within a week. **State size of tires. Don't wait—write today.**

THE COLORADO TIRE & LEATHER CO.
1129 Harpen Bldg., Chicago. 1320 Acoma St., Denver.

Special Educational Institutions

The College of Medicine of the University of Illinois

Minimum admission requirements for the Freshman year, fifteen units of work from an accredited high school or academy. Two years in a standard medical college including at least one year in college physics, biology, chemistry and six college hours in French or German.

Four years of Medical study, four grades are required.

Well equipped laboratories and good hospital facilities. Regular students will receive the degree of M. D. at the completion of the fourth year.

Graduates rank in the front of the State's medical record.

Collegiate year begins October 1st, 1914.

For full information concerning course of study, fees, etc., address Secretary, Box 17

COLLEGE OF MEDICINE of the UNIVERSITY OF ILLINOIS
Congress and Honore Streets, Chicago, Illinois

Study Dentistry at the INDIANA DENTAL COLLEGE

YOUNG men and women, here is an exceptional opportunity for you to study dentistry at an extremely low cost for tuition and living expenses. The course is three years. Thoroughly able and experienced Clinics in all lines conducted. Write for catalogue. Address

INDIANA DENTAL COLLEGE
5 W. North St.
Indianapolis, Ind.

Michigan College of Mines

A state institution offering engineering courses leading to the degree of Engineer of Mines. Located in the Lake Superior mining district. Mines and mills accessible for college work. For Year Book and Booklet of Views address President or Secretary.

HOUGHTON MICHIGAN

Detroit College of Law

Established 1891. Prepares for the Bar in all States. Two distinct schools—Day and Evening. Three years' course leads to the degree of LL. B. Students may witness 20 courts in daily session. Law Library 19,000 Vols. Catalog mailed free. Self-supporting students should write for pamphlet describing our efficient Bureau of Self-Help. Address MALCOLM McGREGOR, Sec'y, 540 Penobscot Building, Detroit, Mich.

Electrical men are always in demand. The Illinois Electrical School, with its well equipped shops and laboratories, is peculiarly qualified to give a condensed course in Electrical

Engineering

Every detail taught. Actual construction, installation, testing. Course, with diploma, complete

In One Year

21 years' reputation, with over 2000 prominent men trained. 32nd year opens September 23rd. Send for new catalogue. 110 Takoma Ave., Washington, D. C.

COLLEGE OF DENTISTRY, UNIVERSITY OF ILLINOIS

MINIMUM entrance requirements, fifteen units of work from an accredited high school or an academy. Full course of instruction leading up to the degree of D.D.S. The College occupies an entire building, 200 x 160 feet, six stories high, directly opposite Cook County Hospital, in the heart of Chicago's great medical center.

Infirmary unexcelled in point of equipment and operative facilities.

For detailed information, address Box 32—

THE SECRETARY
Corner Harrison and Honore Streets, Chicago

Dana's Musical Institute
WARREN, OHIO

Forty-sixth year opens Sept. 16th. Music taught in all its branches. Lessons daily and private. Fine dormitories for pupils. Pure water, beautiful city, and healthy. Superior faculty. Fine recital hall, with an orchestral concert and soloists every Wednesday night. Send for 64-page catalogue blue book and historical sketch to

WILLIAM H. DANA, R.A.M., President.

WINONA COLLEGE OF AGRICULTURE
LEARN SCIENTIFIC FARMING

4 year agricultural course prepares for all phases of farming. 13th Annual Session begins September 7. Experience in College Farm. Excellent Laboratory Equipment. Faculty of Experts. Limited number of students. Formerly formed 1st teachers of Agriculture. Comfortable living facilities. Athletics. Expenses reasonable. For catalog address

J. G. Brookenridge, D. D., Pres., Box H, Winona Lake, Ind.

Louisville College of Dentistry, Louisville, Ky.

offers exceptional advantages to the beginner and university graduate. Strong faculty. Efficient corps of demonstrators. Equipment and appointments modern in every detail. Opportunities for the clinical application of the principles of dentistry unsurpassed. Information gladly furnished. Write

W. E. GRANT, M. D., D. D. S., Dean, 133 E. Broadway.

Tri-State College of Engineering
100 L. St., Angola, Indiana

Make you a Civil, Mechanical, Electrical or Chemical Engineer in two years. 416 college credits. Board and furnished room $2.50 a week. Preparatory courses at same rate. Send for catalog and examination.

The New York State School of Agriculture at Morrisville, N. Y.

offers practical courses in Agriculture and Domestic Science. Free tuition to New York State boys and girls. Non-residents pay $40. Courses 2 years. Both sexes admitted. For Catalog and Particulars address

Director F. O. HILYAR, Drawer W, Morrisville, N. Y.

University School FOR BOYS

30 per cent a year (for 37 years) to schools known to college examiners. A select day and boarding school. Tri-quarterly. Patronage of Chicago's best families for 25 years. Fully accredited. Individual instruction. Teacher for every nine boys. Modern buildings and equipment. All examinations. Limited number of healthy pupils under personal supervision of Head master. Near Lincoln Park and world-famous Lake Shore Drive. Music and Art courses easily accessible. Catalog.

W. Rhodes Kohr, 1139 N. Dearborn St., Chicago, Ill.

KEEWATIN ACADEMY for BOYS

The Northern school with a winter home in Florida. Out-door life all the year. Fixed expense $500. Certificate admits to all colleges. Address, before June 15th, Box 32, Fox Point, Wis., or 1518 Masonic Temple, Chicago, Ill.

St. Matthew's School EPISCOPAL. Fifteen miles south of San Francisco—its atmosphere—its ideal home life. Accredited to colleges East and West. Established 1868. Boys taken from eight years of age. Send for catalog.

REV. WM. H. HOBART, RECTOR, Burlingame, California

A Professional Peacemaker

(Concluded from page 12)

for as little work as he can, the burden falls not upon the employer but upon the bread eaters; or when the garment makers by familiar processes increase the cost and depreciate the quality of the coats they make, they are throwing the burden not upon the garment manufacturers, but upon the garment consumers, who are the bakers, the butchers and the candlestick makers, and all the rest of the coat wearers of the community."

This effect, already perceived, Mr. Williams believes, by some far-seeing labor leaders, will by and by place intolerable burdens upon labor's own back. In consequence he looks for the day when out of the ranks of labor itself will develop a finer ethic which will scorn the merchants' "much for little" policy, and seek to get the maximum of production out of both time and effort with adequate compensation based upon results.

By this bit of clear analysis I believe Mr. Williams puts a blaze high on a tree at the exact spot where the forest of difficulties before organized labor begins to be trackless.

Even away back in his mining days Mr. Williams was a handy man on strike committees because he always kept his head above the smoke and could see on both sides of the fighting line. When settlement time came, his mind appeared to have a cat's-eye. He could peer into the dark of the future, and often his farsighted vision caused the operators on the other side of the table to exchange looks of amazement.

When the miners gained the right to have a check weighman at the company scales, it was but natural that their choice should fall upon shrewd John Williams, who thus became the first check weighman in Illinois.

However, Williams did not remain many years in this position. Society needed him, and he moved out into it, working a year as a reporter for a local newspaper, and then passing into a small insurance business and the management of the local opera house.

As an opera-house manager he considered not what attractions would make the most money for him, but what would make the most for character and culture in his townspeople. He also labored assiduously to improve the town taste, so that it would like what it should like.

It is pleasant to be able to write that this painstaking effort did not go without appreciation. When, recently, after twenty-seven years' service, Mr. Williams retired from the opera-house management, his townspeople presented him with a handsome gold watch bearing an inscription which expressed grateful recognition and conferred a new title—that of Minister of Public Amusements.

These twenty-seven years, by the way, were great years for John Williams. Culturing processes were widely at work inside of him. He read philosophy, science, and belles-lettres. He composed music and directed an orchestra. I am not sure but that he painted pictures. He became the local manager of a Chautauqua. He even helped at the organization of a church and was for years its president. He studied, thought, practiced; he made himself an all-around man. Above all, he practiced the art of conversation. John Williams is a good talker. He has a wide command of words that are apt and specific. His sentences are not top-heavy. They move in light marching order. He thinks things and then he talks them. He knows what he means when he speaks, and you know what he means when you hear him. He prints his views in newspaper articles and he makes speeches upon occasion.

And all the while he has been culturing his brain he has kept his sympathies broad. Physically he rose out of the mine. In his heart he has never ceased contact with the mind of the worker. But at the same time—and here is the great quality of the man as a mediator—without letting go of the point of view of the party with the lamp in his hat four hundred feet under ground, John Williams can also sit in the office of the president as he drives the great industrial organization that reaches down to the man in the pit, or he can swing about with him in his chair until, instead of facing his executive desk, he sits at the foot of the long directors' table and makes accounting of his policies to the men who represent the owners of the property and who compose the soul of which he directs the body. It was really this capacity for seeing the employer's side of a labor controversy which brought John Williams to his peculiar mission in life.

"Puppy Love"

Drawn by R. Van Buren

Many times employers go out of a session in which he has done a large share of the talking not only with the impression that he has told them something they very much needed to know, but suspecting that certain of their interests are safer in his hands than in their own.

Mr. Williams has served as an official arbitrator for the miners and mine operators of Illinois and has now mediated successfully in so many labor difficulties that he has worked out a set of principles to guide him. In settling a strike, however, he does not try to solve all the problems of the universe, but merely feels about for the fractured bedrock of self-interest which binds all employers and all employees together, and seeks to fuse the broken edges. It was that way in the garment workers' trouble.

When the firm of Hart Schaffner & Marx in Chicago were deadlocked with their ten thousand or more employees, Mr. Williams stepped into the middle of this situation and made his usual first-hand intimate study of every detail of the controversy. Then he laid down in his own mind two propositions: for the workers—*the union must be preserved*. For the employers—*quality, production, discipline, and labor supply must be maintained*.

Months and months of patient mediation were necessary before these two simple propositions could be worked out into the detailed terms of a written agreement covering all the complexities of garment manufacture and in a manner satisfactory to both parties. When the agreement was finally drawn, a question arose as to the principle of interpretation which should govern in the small differences that would inevitably arise under its practical operation. Over this seemingly trivial matter there was a long halt.

The peace of a great industry hung in the balance. Ten thousand employees of this one firm were directly concerned; while the forty thousand other garment workers of Chicago were likely to be involved in any warfare that resulted.

But one night Mr. Williams got out of bed and wrote down this simple sentence:

Every interpretation of this contract must have in mind two things—the strengthening of the union and the increase of shop efficiency.

This axiom was accepted by both sides. The strike was not declared, the great factories are humming busily, differences arise, but are adjusted under the terms and in the spirit of agreement, and should a disagreement seem irreducible, why, there is John E. Williams, less than one hundred miles away, ready to come at a moment's notice and pour in the oil of disinterested intelligence.

The success of this piece of mediation was the more notable because it had to do with an industry with which Mr. Williams was entirely unfamiliar and because the garment workers themselves were an almost entirely unassimilated mass of immigrants to whom both the language and institutions of the country were strange.

However, these newly engrafted Americans bore themselves in such a way as to win the following encomium from Mr. Williams:

"They proved themselves," he declared, "to be unionists of rare and unusual quality. The leaders were men whom the suspicion of graft had never tainted, men of lofty ethical ideals, men not yet permeated by the sordid commercial spirit of the age, which even the trade-union of to-day, alas! has not escaped."

It seems hard to realize that the man who wrote these sentences, and the others which have been quoted, was but a little while ago lying on his back in a coal mine, his whole firmament the little dome of air above his head in which to swing a pick.

The surprising sequel to the story is that Hart Schaffner & Marx, who, at one time, so dreaded the union and so feared the loss of efficiency and productiveness, have just published the best annual statement in the history of the company. *Their net profits were double that of the preceding year.*

Were such a constructive policy generally pursued, Mr. Williams believes it would result in the unionization of all the industries of the country, for no sensible employer would oppose a union which would bring such advantages.

He is not so Utopian as to believe that such a unionization would solve the labor problem, but he does believe it is a fundamental prerequisite of the economic reorganization of society, whether it be on cooperative or socialistic lines.

The professional peacemaker, who is the subject of this sketch, therefore, does not conceive his work as the sporadic activity of an altruistic individual; but regards it as a cause, an ideal movement, which has for its purpose the direction of an economic process—a fundamental and indispensable next step in the progress of industry and business.

EDITOR'S NOTE: *Since this article was written, Mr. Williams has been chosen permanent mediator between the organization of garment makers and garment manufacturers of New York City.*

At Gettysburg Battle

(Continued from page 11)

for my friends among the seminary students used to get buttons from their mothers and sisters—everyone wore buttons, not hooks and eyes and patent fasteners, as they do now. It went twice around my neck and hung below my belt. As I stood by the officer when he made that nice little speech I was looking straight at a button which was on a level with my eyes. It had a tree on it with a top like a feather duster, and I spoke right out: "Please give me a button for my button string."

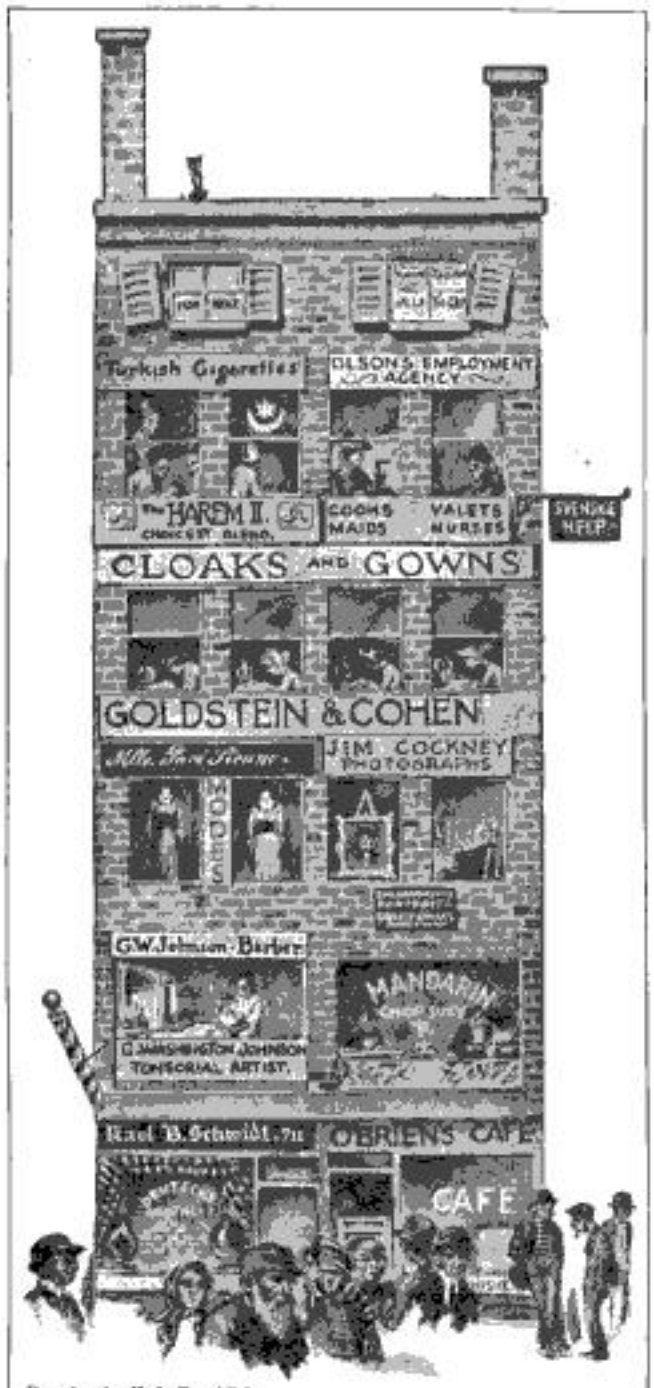
"I will be glad to," he said, and he took out his knife and cut one off. "Do you know what it is? It is the seal of South Carolina, the Palmetto State." And then he was gone. I have the button yet. When I went South last winter with the children and saw palmettos growing, I thought of that young officer and wondered, as I had a thousand times before, what became of him.

As I stood on the doorstep I looked again toward the bodies in the street. They had been stripped of their clothing and piled in a heap. At that moment a gray soldier was pulling the boots off the one who, I had fancied, moved a little. The handling roused him and I heard him say in a faint voice: "I'm not dead yet, but if you will give me a drink from your canteen you may take the boots."

The other gave an exclamation and let go of the boot he had in his hand: "I'm not such a beggar as that; I will get you a drink from this pump here."

At that I ran in for my blickey, quickly pumped it full, and carried it to the dying man. I heard the two soldiers talking together. The Confederate took the officer's sword instead of his boots and promised to send it to his wife. Then he rose from his knees and said to me: "Give me some of that water; it's heavenly cool," and he drank and filled his canteen. "Now run home, little girl, you can do nothing more for that officer. He is dead."

I FILLED the blickey again and went into the house, looking over my shoulder and wishing I had the buttons from the Union soldiers' coats. I heard Bertha saying to mother: "Why did that officer say he prayed that Walter would not be in Pennsylvania to-day?"



Mother looked at me and I looked at her. There was a curious understanding between us: for the first time I had a revelation of what war was, and we conspired together in that exchange of glances to conceal it from Bertha. There had come over me while the officer was speaking of his young wife a sudden clarity of vision, an insight for the first time into the dignity, the sanctity of expectant motherhood—and it took an invasion of South Carolina troops to open my eyes! I went up to Bertha and put my arms around her.

Mother sent us into the cellar then, and the first thing we saw by the light of our candle was the soldiers. They had buried their coats under the floor and they begged us for civilians' clothing so that they could pass for citizens of Gettysburg. I knew my brothers' clothes were hanging in their rooms, so I ran upstairs and brought down an armful, but when the soldiers were dressed they stayed in the cellar, and I don't wonder, with the rebels in possession of the town and the awful noise of battle going on overhead.

WHEN I went for those clothes I made a dash into Bertha's room to get some sewing. She had a big basket of things. As I did not know what to look for I took the basket and ran into the cellar.

Mother was tumbling things down the cellar stairs: a feather bed and pillows, a piece of carpet, some chairs, a ham, and I don't know what else. The firing was getting worse all the time. She came down herself with her arms full; father came, too, and Gustave with a hen in his arms. They came just in time, for a cannon ball crashed through a window just after and lodged in the wall over the table. That was the way Jennie Wade was killed.

OTHER Confederate soldiers had been in the kitchen and taken what the first had overlooked—all the bread and pies and everything in the cupboards, even the strings of schnitz. They had robbed the garden of the lettuce and onions and half-grown potatoes, and they had taken the horses, pigs, and chickens from the barn. They had paid for the stock with Confederate bills, which mother had contemptuously put away in the cracked teapot.

Drawing by H. L. Druckleb

"Therefore is the name of it called Babel; because the Lord did there confound the language of all the earth"

GUSTAVE had saved the hen—it was a pet—by taking it off the nest. Mother had hidden a sack of flour behind a fireboard, and there were some pans of milk in the cellar, but no other food.

It is natural for some people to make the best of things; if they found themselves in hell they would seek out some consoling advantage. Mother was of that sort. Now it was candles! There was a box of candles in the cellar which she had made a few days before in her new candle mold. I heard her say over and over: "What would we have done without plenty of candles?" The candle mold was a modern invention, very up to date in 1863. I have seen it in a museum of antiques lately. The original candles were *dipped*. We set the candles in bottles around the cellar.

We were safe from shells and cannon balls, but we were afraid of the rebels themselves, for we thought those we had seen were exceptions. What if the Louisiana Tigers should come? There was no way of fastening the cellar door. Gustave had an ax. He said he could defend the steps, but father made him put it away.

There were two rooms in the cellar with a wall between, and in the inner we laid the feather bed for Bertha, who was beginning to be ill. I stayed in the outer room with the others while mother took care of Bertha. Once she came to the door and said: "Can somebody get a doctor?" Her tones were despairing and she was very white. It was like asking a man to go to his death, but one of the soldiers said he would attempt it. She told him where the doctor lived. He went up the stairs and out of the house; he never came back and the doctor did not come. It seemed that hours went by; father began to pace the cellar, hobbling with his cane over the rough floor; mother would come to the door and look in. "The doctor has not come?"

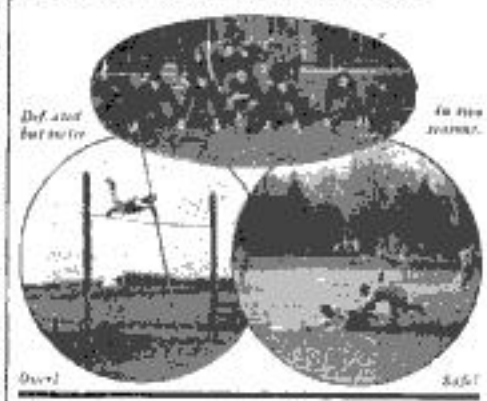
AT last the other soldier could stand it no longer. "I will try it," he said, and he went. It was like Noah sending the birds out of the ark, only there was no olive branch, for he did not come back either and the doctor never came.

I opened Bertha's basket to look for some unfinished work, but there was nothing there: everything was finished, so daintily and neatly. Little shirts of fine linen with delicate lace edging; tiny, short-sleeved dresses with long, sweeping skirts; pretty embroidered flannels; sacks with scalloped edges. In the dim candlelight, amid the coarse surroundings of potato bins and tiers of pork and vinegar barrels, they appeared like fairy garments.

Some time after the second soldier had gone there was a strange, squeaking cry in the inner cellar, and soon after mother came out with a little bundle in her hands which she gave to me, saying: "Hold it very carefully, Elizabeth."

"How is Bertha?" asked father, stopping in his uneasy walk. Then I saw that mother was crying.

"I am afraid she is going," she said.

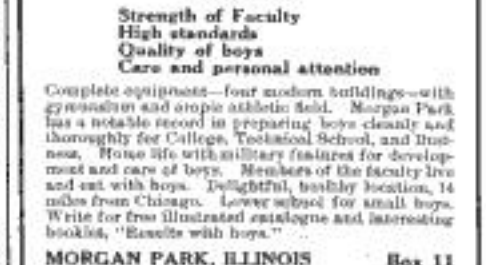


FATHER went in with mother, and I sat there overwhelmed. I had never thought distinctly about the baby; I had never even seen a young baby. It was crying and clenching its little red fists as we saw when Gustave and I peeped under the piece of blanket in which it was wrapped, and *it wore no clothes at all*. I was awfully shocked, although I don't suppose I really had thought that they came ready dressed. It was one of the things I had never thought about at all. All at once I felt tremendously responsible and grown up—the baby was in my care, mother could not even be consulted, it must be washed and dressed. I had plenty of clothes, but no water. I made Gustave hold it a moment while I made a search. There was not a drop of water in the cellar, but there was plenty of milk. Why not? Milk was water with cream and butter and cheese and smearcase in it. I did not see how any of them could hurt the baby. So she had a milk bath and I put her clothes on, while Gustave stood by and handed me things. Small as they had appeared, they were too large, and I turned up the sleeves and folded over the waists to fit her better. I finally wrapped it in one of the soft little blankets, and when all was done it was asleep with a thumb in its mouth. I had a fresh terror now—the fear that the Confederates would hear it cry, for I could hear them walking overhead in the kitchen whenever the firing would cease for a little while, and I held it very still while it slept.

After a while father and mother came out and closed the door. Mother sat down and put her face in her hands. The

Boys' Educational Institutions

The Peddie boy is educated — not merely instructed



Because Peddie is endowed it offers, at $450 to $550, the advantages and equipment of expensive schools. All colleges admitting on certificate accept the Peddie graduate without examination. Features to help his work and keep him happy are: 60-acre campus, cinder track, lake, gymnasium, pool, diamond, gridiron, library, laboratories, observatory, etc. Every boy is systematically and scientifically trained to athletics and public speaking. School is located at Hightstown, N. J., on Pennsylvania R. R., between Philadelphia and New York. Lower school for boys of 11 to 14 years. For booklets and catalog write Roger W. Swetland, Headmaster, Box 7 M, Hightstown, N. J.

Mercersburg Academy
MERCERSBURG, PA.

Aim of the School—A thorough physical, mental and moral training for college or business.
Spirit of School—A manly type of self-reliance under Christian influences from the great universities. Personal attention given to each boy.
Location—In the country, on the western slope of the famous Cumberland Valley, one of the most beautiful and healthful spots of America.
Equipment—Modern and complete. Magnificent new gymnasium building. Write for catalogue and "The Spirit of Mercersburg."

William Mann Irvine, LL.D., Headmaster, Box 113

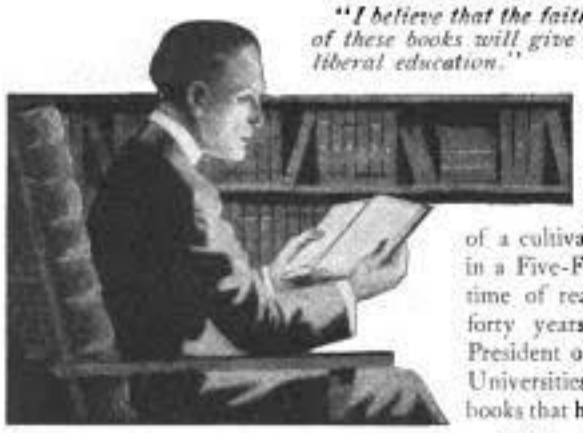
Quickest
in action
Safest
to carry

That's the Colt Revolver. "Our boys" did great work with these dependable weapons in the Mexican crisis over 50 years ago—today Colts are still the choice of the U.S. government. A Colt is made for real, man-fashion grip—to clutch it brings that feeling of security and strength and it comes into action the very instant you call upon it.



Colt
Revolvers

are safest to carry or have around the home. The famous Colt Positive Lock ensures absolute self-protection. This lock consists of a bar of solid steel which stands between the hammer and frame so that the firing pin cannot touch the cartridge until the trigger is purposely pulled to fire a shot. Examine a Colt—grip one—aim with it—try it for rapid fire—it's a mighty fine weapon for home protection.

Write today for booklet, "How to Shoot," and free catalog No. 14.

COLT'S PATENT FIRE ARMS MFG. CO.
Hartford, Conn.

"I believe that the faithful and considerate reading of these books will give any man the essentials of a liberal education." DR. CHARLES W. ELIOT.

FOR YEARS Dr. Eliot has maintained that the books really essential to the Twentieth Century idea of a cultivated man could be contained in a Five-Foot Shelf, and from his lifetime of reading, study and teaching—forty years of which were spent as President of one of the World's greatest Universities—he has put aside those few books that he considers most worth while.

Uniformly bound in 50 volumes, indexed and cross-indexed, and arranged in fourteen general Reading Courses, these great works have become famous as

THE FIVE-FOOT SHELF OF BOOKS

Now Yours for only a Few Cents a Day

Here are the great Biographies, the great Dramas, the great books of Fiction, History, Science, Philosophy and Religion, the master Poems, the most interesting tales of Travel. Here are books that picture the progress of the human race from the earliest times down to the present day, through the writings of those men who have made our civilization what it is.

A FREE BOOKLET FOR YOU

Every man who cares to read efficiently, instead of wastefully, should know what few books Dr. Eliot selected, and why.

He should know why 100,000 successful men are finding in The Five-Foot Shelf of Books just the mental stimulus they need.

All this is contained in a FREE BOOKLET. There is a copy for you—no obligation—merely clip the coupon.

Mail me, without obligation on my part, your free "Guide Booklet to Books" containing the story of the Five-Foot Shelf

If you have children and are interested in what they read, put a + in this square.

tears began to run down my face. I knew it was all over. She looked at the baby presently and gave a great sigh.

"Do you think it is alive?" she said in such a weary tone, as if she did not care whether it was or not.

"Come and see," I said, swelling with pride. Some time after that we realized that we had not heard firing for a long time. Mother went up the steps and came down quickly.

"It is night, the battle is over, the rebels say they won it."

On our doorstep was the body of a man dressed in my brother's clothes with his head blown off by a shell. Confederate soldiers were strolling along the street; a group of them had built a fire in our garden and were cooking supper. We built a fire in the kitchen stove and mother made bread with soda and put it into the oven; Gustave brought up the ham and she cut off slices into the frying pan, where they began to sizzle and give off heavenly odors. Oh, we were so hungry! "Take the ham down cellar!" she said to Gustave, but he did not obey quickly enough, for two soldiers came in and saw it.

"By your leave, madam!" said one, and he took the ham and went out. "By your leave," said another, and he speared the hot slices with a fork and walked off with them. Another opened the oven door and took out the pan of bread.

"If you must take it," said mother, "wait till it is baked."

The soldier laughed and broke apart the half baked loaf and began to eat, saying: "If I waited some other fellow would get it."

"I carried the blickey into the kitchen"

I HAD taken the baby into the room which adjoined the kitchen. This was where we kept our best furniture, the tall clock with red roses on its face, which came from the old country, and the German Bible, which had been grandfather's. A ball had splintered the window sash and scattered glass over the floor.

I could hear the soldiers in the kitchen, and a new terror seized me—*the baby was going to cry.* It was clutching the blanket and kicking. I put it on my shoulder and patted it, I carried it cautiously back and forth across the room, I gently jogged it, I tossed it; all was of no use; it began to give out awful screams. I heard one of the soldiers say: "Have you a baby here?"

My feelings at that moment were those of a cave woman, a tigress, of any female creature who fights for her young. I "saw red," as the stories have it nowadays. The day before mother had told a lie to save the Union soldiers. I thought the baby could be saved if she had presence of mind to say "It is a kitten crying," but what she replied was: "Yes." Then, raising her voice: "Elizabeth, bring out the baby."

I MAY have been a cave woman, a tigress, but I had been brought up to obey my mother; I walked into the kitchen as if I had been walking into a den of lions. There were six men there, more ragged than any tramp that had ever begged at our door. One of them took the baby from me and held it up against his rough, hairy face and talked to it; it stopped crying and twisted its face into a queer little grimace which looked like a smile, but which mother said afterward was colic.

"I reckon it is a girl," said one of the others. "André always was the fellow for the girls." They all crowded around and wanted to hold it, till mother said it must be fed. The soldiers sat in the kitchen and told us about their homes.

Our opinion of "rebels" was changing. I have heard that the negroes in the South used to believe that the Yankees had horns. I'm sure we had not believed the Southerners exactly human, but we saw that they were just men, or rather boys, just like our own boys, and homesick boys at that. André said: "Are you afraid of the rebels now?"

Mother answered: "I am not afraid of you, but I would be afraid of the 'Louisiana Tigers.'"

Oh, what a shout and roar of laughter went up in the kitchen as they yelled: "We are the 'Tigers'!"

After a while one of them asked about the baby's mother, and with the answer a hush came over them and they went out quietly, one of them staying behind a moment to kiss mother's hand. "You are so much like my own mother," he said.

EVERYONE who tells the story of Gettysburg divides it in three parts for the three days; I'm afraid mine will not divide that way, for many things are confused in my memory.

We spent the second day in the cellar also. Sometimes when there was a cessation in the firing we ventured upstairs and mother tried to bake something out of the flour, for we had nothing else except the milk, which had soured, and the egg which Gustave's hen laid; but the gray-coats ate most of her baking.

That night we buried Bertha. She had no shroud, no coffin. There was no undertaker, no minister, no sexton, no cemetery. With our own hands we dug a shallow grave in the garden by the arbor; by candlelight we dug it and laid her in, wrapped in a blanket. Some soldiers came by, took the tools from our blistered hands and filled up the grave. The soldiers were not so jubilant that night, for they were tired with two days' fighting, but they were still winning and our hearts were sore.

There was a time on the third morning when we had our heads above ground, for mother went into the street and accosted the colonel of the regiment. She asked him to have the heap of naked bodies on the street corner removed.

"Certainly, madam," he said, and he directed his men to carry them away. They carried them to a barnyard and deposited them upon a pile of stable manure. Of all the incidents of that time this impressed me most with the horror of war. That was the day we killed the hen. We were hungry all the time. Mother said if Gustave would let it be killed she would cook it so that the soldiers would not find it out. He finally gave in.

The fourth morning came. We began to learn that it was not a Confederate victory, even if it was not a Union victory. Little by little it leaked out that it was a Union victory after all. The Confederate troops were moving out of town and *they were moving south.*

All day they marched past our house; all day we stood at the pump and gave them water as they passed. Some of them were so badly wounded that we could not see their mouths as they lifted the cup to their mangled faces. All day there was firing by sharpshooters to cover the retreat.

When we came up out of the cellar we found all Gettysburg had been living in the cellars. We came up to a world of pain and misery and death, for thousands of horses lay unburied under the July sun. The churches were turned into hospitals and outside of them lay great heaps of arms and legs. Every private house was also a hospital where the wounded were cared for by the women of the city. Then followed the Gettysburg fever, which attacked the doctors, the nurses, the wounded alike; hardly a house escaped the scourge.

I do not know anything about military maneuvers; I did not see the conflict in the peach orchard or the wheat field; I did not see Pickett's charge. There are guides who will tell you how it was done. Our Gustave, who hid for three days in the cellar, is one of the best battle field guides; but I know what a battle field looks like when it is all over. When I hear about war, about the field of glory, I remember the seven men who lay in a stark heap at the corner of the street till they were thrown into a reeking barnyard. I remember the dying man who offered his boots for a drink of water. I remember the sharpshooter who fell from the window like a sack of wheat.

The Wilson Personality

(Continued from page 6)

from him. Allowance is not made for frailties of judgment or inadequacies in performance. He is not leniently judged. A theoretical degree of perfection is expected to be attained in his every thought, word, and deed. Of course he cannot always live up to these expectations, but when he does not he is blamed. A large part of Washington has got the impression of him that his constant endeavor is to execute absolute justice in a vacuum, without sympathy or tolerance. This is not a true conception of Mr. Wilson's ideal; nevertheless it is held, and more often than not he is judged accordingly.

The only ostentatious thing about Mr. Wilson is his modesty. It is as conspicuous as a red necktie with evening clothes. It doesn't detract from the sound and rightfully held good opinion that Mr. Wilson has of himself. He believes in himself and he has plenty of reason to believe in himself. But it makes him self-conscious.

Colonel Harvey's Catalogues

AFTER all, it is really a mad thing to attempt to set down Mr. Wilson's essential characteristics. George Harvey ought to be an awful warning to everybody who attempts the task. It is not so long ago that Colonel Harvey's chief occupation was to tell all about Wilson. He ranged free all over the uncharted confines of Mr. Wilson's character and from time to time came back with maps, diagrams, and topographical surveys of his discoveries. In the "North American Review" of March, 1911, and again in the same periodical in August, 1912, he listed Mr. Wilson's characteristics in this form:

Age in 1913—Fifty-six. Physique—Lithe, sinewy. Environment—South, East. Habitation—New Jersey. Ancestry—Scotch-Irish. Religion—Presbyterian. Recreation—Golf at minimum. Temperament—Daring. Manner—Graceful. Address—Charming. Nature—Just. Grain—Tenacious. Temper—Quick, zealous. Intellect—Keen, imaginative. Knowledge—Profound. Mental attitude—Self-reliant. Disposition—Uncompromising. Expression—Eloquent, persuasive. Diction—Fine. As lawyer—Analytical. Politics—Tilden Democrat. Political purpose—Reform. Political tendency—Intelligently radical. Political character—Luminous. Political convictions—Immovable.

This was one of the final reports of "the man who understood Wilson." All that he set down was true, but he didn't know all. The unknown factors determined the equation. Setting down Wilson in black and white is as gratuitous a form of folly as making political predictions.

All of the little things observed at close range and set down here are details. They are hardly known outside of Washington. Knowledge of them doesn't reach to the country at large. The people in the States see Mr. Wilson as a larger figure. It is not Wilson, the human being, but Woodrow Wilson, President of the United States, who bulks large on the screen of their vision. They are more familiar with his assets than with his liabilities. They are firmly persuaded that he is absolutely on the level; that he is not seeking personal advantage or party advantage; that he is working all of the time with a passionate interest and with an eye single to the good of the whole country. This is clearly recognized by the country at large. It is a sound belief, for it is wholly true. Mr. Wilson makes no effort to gain favorable public opinion. He apparently does not realize the meaning or the value or the significance of the uses of publicity in the conduct of his office. The powers of the Presidency are vast, almost without boundaries, but a President can do nothing without the support of sound public opinion. Mr. Roosevelt, when he was in the White House, was keenly alert always to the state of public opinion. He constantly spoke of it and day by day made systematic endeavor to learn what the people at large were thinking and saying. He courted public opinion and sought to shape it. He had great success in shaping it, too. Mr. Wilson does not do this. He is not ignorant of the Roosevelt practice, though, for in an article called "Hide-and-Seek Politics," in the "North American Review" of May, 1910, Mr. Wilson wrote:

"It was very amusing when Mr. Roosevelt was President to notice how seasoned politicians shivered when he spoke in public—shivered at his terrible indiscretions, his frank revelations, whenever he chose, of what was going on inside political circles, his nonchalant failure to keep any confidence whatever that he chose to make public use of. He spoke of any inside matter he pleased, as though it were the people's privilege to know what was going on within their own Government. He may have chosen, and chosen very astutely, which confidences to keep, which to break, but he was strong and popular in proportion as he broke them and gave the people the impression that he was really telling them all he knew about their business, about the men and the motives which were retarding the proper transaction of their business and the proper correction of abuses under which they were suffering at the hands of the men who enjoyed the confidence and protection of the managing politicians."

SENATOR OLLIE JAMES

Of Kentucky is, perhaps, the most notable acquisition among politicians that Wilson has made since he came to Washington

Before Mr. Wilson came to Washington he said that this was to be an "open-door" Administration. "The New Freedom" is full of references to common counsel and the desirability of taking the whole people into the confidence of the officers of Government. Maybe Mr. Wilson honestly thinks that his Administration is an open-door Administration, but, as a matter of fact, he takes fewer people into his confidence and tells them less than any President that anyone in Washington has ever known. He rarely disseminates through the medium of the press to the people of the country at large intelligence of consequence or importance, and he is almost as chary about telling members of Congress details of probable or contemplated action by the Administration or his reasons for taking any given line of conduct. He is almost unbelievably reserved and close-mouthed about affairs of Government. He does not tell any more than he has to tell, and what he has to tell he tells sparingly. His performance in this respect and his promise have been totally

Barrett Specification Roofs

Mississippi River Power Company, Keokuk, Iowa.
Engineers—The Stone & Webster Corporation, Boston.
Roofers—St. Louis Roofing Co., St. Louis, Mo.

On the great Keokuk Power-house

THE mighty Mississippi has been dammed at Keokuk, Iowa. Under the enormous power-house pictured above, the Father of Waters is now perforce spinning vast turbines with the power of 150,000 horses.

The entire enterprise is a triumph of modern engineering skill. Quality has been the first consideration in everything.

And the same engineering skill that harnessed the waters and constructed the foundation selected a Barrett Specification Roof as the building's crown.

How did it happen that a comparatively inexpensive roof was chosen for so monumental a building? Because The Barrett Specification Roof is the best at *any* price. It would have been used if it had cost *twice* as much.

Such a roof will probably last twenty years or more without a cent of expense for maintenance. Its unit cost, which is the thing that modern engineering science considers, is about a quarter of a cent per foot per year of service, a lower figure than that for any other type of roof.

The Barrett Specification prescribes with precision the materials to use and the method of application, thus furnishing a basis for competitive bidding that is fair to the conscientious contractor, and providing means for insuring correct workmanship and materials. Include it verbatim in your own building specifications and you are assured of the best roof at the lowest price.

Booklets on request.

Special Note We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding. If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

divergent and yet the performance has been eminently successful. He is convinced in his ways because the first year of his Administration was so successful and so packed with accomplishment.

The legislative achievements at the extra session fairly may be described as extraordinary. Things have gone slower at the beginning of the second year, but Mr. Wilson has yet to be defeated. He has yet to fail in any one of the things he has set out to do. There has been more opposition to him in his own party and out of it since the present session began. His way has been harder, but he has not attempted any task and failed of its accomplishment. As this is written, the settlement of the Mexican problem hangs fire. The natural reaction that sets in at the end of the first year of the Administration of every President is beginning to be discerned and commented upon throughout the country. This reaction is not of such strength and proportions that it cannot be overcome.

Steadfastness is a word that was created to describe one of Mr. Wilson's outstanding qualities. He is perfectly aware of the condition of the public mind. He is resolved to overcome it. The chief causes of the reaction that has set in, so far as it can be analyzed, are Mr. Wilson's Mexican policy and the general business depression. Mr. Wilson is responsible for one, but not for the other. If they work out, he will recover any ground that he has lost in popular estimation. How intensely he is resolved that they shall work out nobody knows better than those who have access to him.

"My word, old chap, but you look different."
"Yes, I was drawn by a different artist."

The Law of the Wolf Pack

THE persons who have the nearest view of Woodrow Wilson do not love him, but they are bound to respect him. He will be followed and obeyed so long as he is successful, but he is not the type to command adherence, support, and unfaltering loyalty in defeat. To survive he must "make good." Once let him be thoroughly beaten or begin to compromise and he will be done for. This applies with peculiar force to his relations with Congress. Perhaps the country at large would be more lenient. To him more than to any other man in public life applies the law of the wolf pack.

Now, what impression have you gained of Mr. Wilson from all this? Not that he is unworthy of his great office, I hope. I have concerned myself with details because Mr. Wilson is a man of details, and a man's intimate personal character is made up of an aggregation of details, of personal habits unconsciously formed, of daily routine acquired through natural tastes. If you view Mr. Wilson as a dry, meticulous, clerkly man, you see only one aspect of him, and that is the Scotch Presbyterian aspect. He would make a great moderator, and if it were not for the bigger qualities in him he would have made an ideal head clerk for the old-fashioned solicitor, the kind that you have read about in English novels.

Take as a single example of his passion for detail and his thoroughness this story, which comes from Wesleyan, where Mr. Wilson was professor from 1888 to 1890, explaining why he dropped Thomas from his name and became simply Woodrow Wilson. The newspapers printed the story the other day when the Class of '89 at Wesleyan held its reunion. According to the story, one evening in the course of a call upon a fellow professor a discussion arose on names and their effect on one's success in life. Mr. Wilson held that the effect of a name was due entirely to its formation in long or short syllables, and he is credited with saying: "For those who wish to achieve any success in public life the best kind of name is one that consists of a dactyl and a spondee; for example, Samuel Adams. The next best kind of name is one consisting of two spondees—Woodrow Wilson, for instance." It was almost impossible, Mr. Wilson thought, to achieve success if tagged with a name that ran all in dactyls. The worst sort of all was a name formed of three spondees, and therefore Thomas was thrown into the discard and Woodrow Wilson survived. This story may or may not be true. It is given currency here because it is the type of story told and believed about Mr. Wilson.

Distinction at a Stroke

MR. WILSON is a practical man. Nobody has called him "academic" since March 4, 1913. If a spondee stands in his way, why, off with its head. And mark the acute intelligence of the man. By dropping Thomas into the wastebasket he acquired distinction at a stroke. In the city directories there are legions of Thomas Wilsons. Placed end to end they would girdle the earth at the Tropic of Cancer, but in the whole round world there is but one Woodrow Wilson.

CARUSO

World Famous Tenor, says:

"Tuxedo completely satisfies my tobacco taste. It is mild and has a delicious flavor. Most important of all, from a singer's standpoint, Tuxedo does not irritate my throat."

Enrico Caruso

"Tuxedo Does Not Irritate My Throat"

It has recently been stated that Caruso will henceforth receive $3000 a night for singing in grand opera. Such a wonderful singer does not take the slightest chance of damaging the delicate membranes of his throat.

This *non-irritating* quality of Tuxedo which Caruso praises is due to the *original* "Tuxedo Process" by which the tobacco is treated. This process *absolutely removes all bite and sting.*

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Invented in 1904, the "Tuxedo Process" has often been imitated—but it is still a process known only to the makers of Tuxedo — still unequalled—still unapproached by its host of imitators.

SAMPLE TUXEDO FREE—

Send us 2 cents in stamps for postage and we'll mail you prepaid a souvenir tin of TUXEDO tobacco to any point in U. S. A.

Address
TUXEDO DEPARTMENT
Room 1258
111 Fifth Avenue
New York

Illustrations are about one-half size of real packages.

Every experienced smoker knows that pipe-smoking is the ideal way to enjoy tobacco. But many thousands of men think they cannot smoke a pipe for fear the tobacco might burn the tongue or throat. Tuxedo has absolutely done away with any such possibility. You can smoke Tuxedo all day long, pipeful after pipeful, without the slightest irritation—indeed with increasing pleasure.

Tuxedo is a rich, yet mild, fragrant, cool-smoking tobacco; made from the choicest crops of old Kentucky Burley (which makes the finest pipe-tobacco in the world.)

Make it your habit to buy Tuxedo. You will get a tobacco upon which pains, brains and money are lavishly expended to make it really and genuinely the best.

This Extra Half-Inch

means 20 per cent more air, one extra ply of fabric and a thicker tread

It means more mileage, less tire trouble and lower cost of upkeep

More Tire

The Only Way to Get a Better Tire

The Same Price

The same price as some tires cost you nowadays will buy a half-inch larger Goodyear.

And the wider tires fit the same rim.

You have choices like these, for instance:

A 30x3½ or a 31x4
A 32x3½ or a 33x4
A 34x4 or a 35x4½
A 36x4½ or a 37x5

The smaller tires, if you buy some makes, cost as much as the wider Goodyears.

No Extra Quality

To better Goodyear quality is utterly impossible. We have proved that by thousands of tests. Positively the only way to get a better tire is to get a larger size.

A half-inch added to the width means an extra ply of fabric. It means, on the average, one-fifth more air, which measures tire capacity. It means a thicker tread.

Get that extra size for your extra price, and you've something well worth having. It will lessen your tire troubles and reduce your tire upkeep.

Get These Things, Too

Get protection from rim-cuts. We guarantee that in Goodyear No-Rim-Cut tires.

Save the blow-outs due to wrinkled fabric. We save them for you by our exclusive "On-Air" cure, at a cost of $1,500 daily.

Combat loose treads. A patent method—used by us alone—reduces this danger by 60 per cent.

Get All-Weather treads. These are tough, double-thick anti-skids. They are flat and regular, so they run like a plain tread. And they grasp wet roads with deep, sharp, resistless grips.

Not one of these four great features is found in any other tire. Together they are saving tire users millions of dollars each year. And Goodyear tires, because of these savings, outsell any other tire.

GOODYEAR
AKRON, OHIO
No-Rim-Cut Tires
With All-Weather Treads or Smooth

Today they undersell 16 other makes because of our mammoth output. But they still are the best tires men can build. And they still are the only tires which offer you these four great Goodyear features.

Inner Tubes

Buy Goodyear Reinforced

(Never Colored)

In tubes we offer you the Goodyear Reinforced. They are extra thick where they meet the rim—where the pinching occurs which ruins most inner tubes.

They are made of pure rubber in layers. They have 30 per cent more rubber than the average inner tube—due to this reinforcement.

They are never colored—all are natural gray. To color a tube we would need to add a large percentage of mineral alloy.

There is no way known to lengthen tube service like this Goodyear reinforcement.

Any dealer, if you ask him, will supply these things to you.

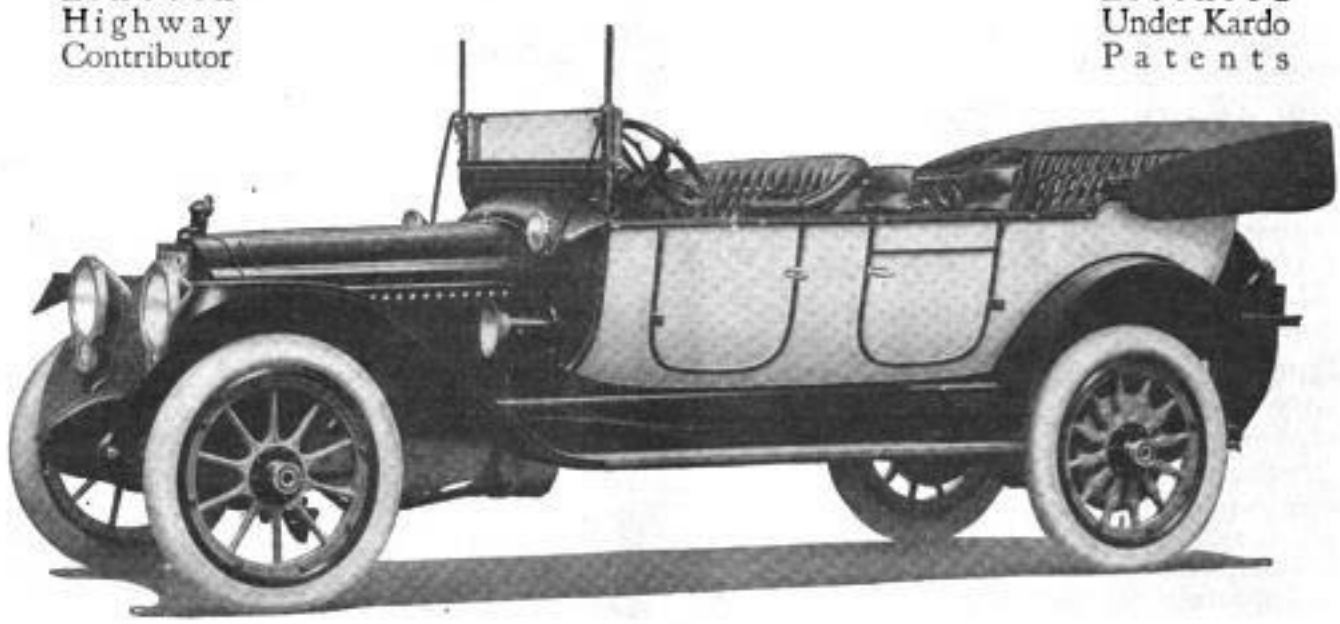
YOU CAN GET A PACKARD IN SEPTEMBER

The season's production of Packard "2-38" six-cylinder cars was sold out in April and fell 500 short of market requirements. We thank our patrons for this endorsement.

For the past month we have been accepting orders for the next model—deliveries to be made September 1.

The Packard "3-38" contains all the essential features of the previous model, and in addition those refinements which would naturally accrue at this advanced stage of Packard development.



Twenty styles of open and closed bodies, ranging from two to seven passengers, give a wide choice, fitted to every use and satisfying the individual taste.

There will be no advance in price. We invite your patronage. Any Packard dealer will be pleased to give you a demonstration. Catalog on request.

Packard "3-38" Standard Touring Car, Seven Passengers, Price $3,850

Digitized by Google

10,000 Demanded This Car

More than 10,000 persons, in the past seven years, have desired to own a car designed and constructed by Elmer Apperson —America's pioneer motor car builder. They wanted the famous Apperson quality. But they could not pay Apperson price. They did *not* wish a *low-priced* car—they demanded Apperson quality at a low price.

The car demanded is here!—the strikingly beautiful, efficiently built new Apperson "Light Four." The price is $1485—lowest in Apperson history. This big, five-passenger car with its 40-horsepower motor is the lightest weight car per horsepower in its class. Thus lower upkeep and maintenance are achieved. For five years Elmer Apperson, with his brother Edgar, has been perfecting this car. It embodies his priceless experience of 22 years of actual motor car building.

Apperson "Light Four" $1485

The Car Economical

The new Apperson body design radiates fascinating individuality. The full stream lines begin at the V-shaped radiator. They blend into the gracefully tapered hood. They leap upward at the cowl. They spread out with unbroken sweep to the full, broad back. The new car resembles a mechanical athlete—suppressed vitality in a clean, compact body. Its ease of operation, its "travel luxury," its speed, endurance and sturdiness are assured because—"It's an Apperson." The Apperson Brothers selected the raw material. They designed every part, they constructed 95% of the parts in their own factories. That is why they have achieved such a perfect motor, axles and transmission—such correct balance—such desirable light weight. Nothing vital was trusted to parts makers. Every detail bears the stamp of the 22 years' Apperson experience.

Hence you are offered the efficiency results of two great engineers plus the very latest motor car refinements, such as:

Sloping stream line body. V-shaped radiator. Tapering hood. Left hand drive—center control. Separate unit starting and lighting system. Magneto ignition better than battery ignition. Tire rim on rear. Rain vision windshield. Dimmer on search-lights. Especially economical carburetor. Finest Turkish upholstery. Ultra brilliant finish—22 coats. One-man top. Switches handy to driver. Wheel base—116 in. Abundant power. Lightest weight car per horsepower.

These desirable 1915 features are also found in the new Apperson Light Six now offered at $1785. Again, the Apperson Brothers have built the lightest weight Six per horsepower. Its compelling beauty, its sturdiness, its dependability commend it to all interested in an economical Six.

The Indian Sign

By Charles E. Van Loan

ILLUSTRATED BY ARTHUR WILLIAM BROWN

"SPECK" ADAMS was through. He knew it; Joe Cotter, the manager, knew it; the bleacherites were beginning to suspect it aloud in accents which rumbled like distant thunder, and the baseball reporters had been writing it between the lines ever since the opening of the season. Speck fought the inevitable as long as he could, for he needed the money, but a chronic Charley horse is not a thing which an outfielder may conceal or ignore. It has a way of thrusting itself into the box scores.

The end came in July. An ambitious recruit from Texas with two sound legs and a forty-one-ounce bat shunted the veteran to the bench, and the next morning Speck's epitaph appeared in all the papers. Most of the scribes were sympathetically merciful for old time's sake, but some extracted humor from the situation, as indicated by the following sample paragraph:

"That venerable ruin, Speck Adams, limped to the scrap heap in the fourth canto after McCue's line smash to center had gone for a home run. Time was when Speck would have caught that ball in his teeth; yesterday he needed a butterfly net, and alas, butterfly nets are not being worn by outfielders this season. One-legged men are also going out of style in the best circles and ball players who cannot outrun a milch cow are becoming passé in the big league. We long ago stopped guessing what Joe Cotter would do in an emergency, but with a close pennant race in prospect we venture to predict a change of air for Speck and a new signature on his pay check. This information will be received with loud, ringing cheers by that eminent moundsman, Thomas Aloysius Kernohan. Cannonball Tom is unquestionably the greatest living pitcher, but he will be the last to deny that Speck Adams is one batter who has always had his number. Speck's bludgeon will be missed whenever Kernohan faces our noble athletes. Heddon, who replaced Adams at center, gave a good account of himself at bat and in the field and will probably be listed among the regulars in future."

Joe Cotter, manager of the Blues, read this paragraph at the breakfast table and growled into his coffee cup. Joe was not a man who might safely be accused of sentimental leanings, but if questioned he would have admitted that he "liked" Speck Adams.

BETWEEN manager and player there existed a bond of friendship which had survived seven years of wear and tear and the compelling intimacy of the big circuit. Cotter and Adams had seen baseball history in the making and been a part of it. In the days when an opposition league invaded the field, tempting players with fabulous salaries, it was the quiet Speck whose advice to the youngsters preserved the Blue line unbroken. They would not have listened to their distracted manager, but they listened to Adams.

"It's just this way, boys," he had said. "I don't know much about this new league—it may be all right and then again it may not—but I do know Joe Cotter. When you're working for a man like Joe, you know exactly what to expect. If he says he'll give you more dough next season, he'll do it—and you can bet on it. Joe never tells you one thing when he means another, and if he makes a promise, he'll keep it. A boss that you can depend on is better than one that you don't know anything about. That's the way it looks to me."

The roaring in the stands died away. . . . Then, suddenly, there came a tremendous clattering of white ash

This argument bore fruit and later Joe Cotter, discussing the situation with Speck, learned something which surprised him. "Speck," said he, "it's a wonder the outlaws didn't try to grab you. They went after everybody else."

"Oh," said Speck, "they tried, all right. Mailed me a contract for a thousand more'n I'm getting. I sent it back."

"You—what?" Cotter's mouth opened in amazement. "Why, all the rest of these fellows worked me for a raise on the strength of the offers they got. You could have done it, too. Why didn't you?"

"Shucks!" said Speck. "You know I never had no notion of quitting this club, Joe. I'm satisfied."

"You're a chump!" said Cotter. "You could have made me come through as easy as rolling off a log."

"But, I tell you, I wouldn't have jumped the team anyhow!" explained Speck.

"You're a good fellow," said the manager, "but you're a rotten business man."

Because he remembered this and many other things, Cotter growled into his coffee cup.

"What's the matter now?" asked Mrs. Cotter. "Are they roasting you again, Joe?"

"Not this time, Milly. They're after Speck. Just because I took him out of the game yesterday, they're preaching his funeral sermon. Got him dead and buried already. Gee! I wish these smart newspaper guys would let me run this ball club alone for a year or so! They make me tired."

"But, Joe, didn't you say last night that you thought Speck was all through—too crippled to play any more?"

"What if I did?" The manager of the Blues answered with the aggrieved howl which is the special privilege of a ten-year married man under wifely cross-examination. "What if I did say he was through? I didn't say I was going to tie a can to him, did I? Here it's July already, ain't it? I'll stall along until I see how this pennant thing will come out. We got as good a chance to get into the World Series as anybody else, and if we do cut up that dough, you bet Speck will get his share of it—a full share, too. It's coming to him. He'll never get the worst of it from me, Milly."

"Not from you, Joe," said Mrs. Cotter soothingly. "But you know how Mr. Burgess is. He'll have a conniption fit."

"Let him!" said Cotter. "I'm managing this club, ain't I?"

THIS was a very bold thing to say, because Old Burgess was the owner of the Blues—a hard-faced, tight-fisted, elderly gentleman who had made a fortune out of sentiment without possessing a vestige of it himself and was consequently violently opposed to paying out good dollars without an adequate return. According to Burgess, ball players on the bench were ball players loafing on the job. An idle athlete drawing more than $2,500 a season was always a bone of contention between owner and manager.

"You'll hear from him, Joe," said Mrs. Cotter, who, like many good women, could not forego the pleasure of prophesying unpleasantness.

"It won't be the first time," said her husband grimly.

Indeed, he heard from Burgess that very day. The telephone summoned him to the downtown offices of the club, and there he was informed that Mr. Burgess was in his private sanctum and would see him immediately, if not sooner.

"Good morning, Joe," said the owner. "What are you going to do about Adams?"

"You've been reading the newspapers again!" said Cotter accusingly. "Are the reporters running this ball club, or am I?"

"There you go!" said Burgess. "That's an old argument, Joe. We won't revive it if you please. You know my views. When a man is too badly crippled to earn his salary he is too badly crippled to draw it. He's only fit to trade or sell."

"That's what you said about Jeff Penny when his arm went bad last fall." Cotter spoke bitterly and with some grounds for feeling. "You hounded me until I let him go to the Pink Sox for a measly three thousand dollars, and look what he's done this season! He's won twelve games already. If we had him back, there wouldn't be much to this pennant race. Only fit to trade or sell!"

"Penny was an exception," said Burgess. "He is a young man; Adams is an old one—for a ball player. He won't improve; he can only get worse."

"He might improve if he had a rest."

"He rested all last winter, Joe, and his leg was still bad in the spring. No, that argument won't do."

"Well," said Cotter, "I could use him for a pinch hitter."

Digitized by Google

Old Burgess laughed, a thin, crackling chuckle, having in it none of the elements of mirth.

"Adams a pinch hitter? He hit two-sixty-one last season. Guess again, Joe."

"All the same he'd come in pretty handy when Kernohan is working against us," said Cotter. "Kernohan can make monkeys out of most of the batters in this league, but Speck Adams has got the Indian sign on him—always has had it on him. It don't make any difference what Kernohan throws to him, Speck can hit it somewhere. You know that as well as I do, and don't forget that Kernohan is with the club that we must lick to get into the World Series. If this race stays as close as it is now one game may turn the trick for us. I'd keep him just for what he can do against Kernohan. Seems to me it's worth gambling on."

Burgess shook his head. "I never gamble, Joe. Keeping a four-thousand dollar man on the pay roll just for what he might be able to do in a pinch—that's foolishness, nonsense. I wish you'd feel around and see what kind of a trade you can make. If we can't get the sort of a dicker we want and the other clubs waive on Adams, we'll have to sell him. He's fast enough for a minor league anyway."

"But, boss, I tell you—"

"I'm busy this morning, Joe. See what you can do in the way of a trade and let me know."

Burgess turned back to his desk and Joe Cotter went out into the hall, where he relieved himself slightly by calling his employer a bloodless old turnip and other fancy names.

IN THE clubhouse the odor of liniment was heavy in the air, and there Cotter found Speck Adams, prone upon the rubbing table. Dr. Bones, the veteran masseur, was ministering to the recalcitrant muscles of Speck's left leg.

"How's she feel to-day, boy?" asked the manager.

"A lot better, Joe. The Doc here has been giving me a session."

"Yas, indeedy!" said the negro. "You leave it to the ole Doc to fix'm up, Misteh Cotteh. They ain't neveh been no Cholly hoss whut I kain't tame. I got some linimint whut gits right nex' to the bone!"

"Say . . . Joe?" Adams spoke hesitatingly.

"Well, Speck?"

"That kid, Heddon . . . he's all right an' a sweet ball player in lots of ways, but . . . seems to me he didn't look any too good on those ground balls yesterday. He got 'em all, Joe, but he went after 'em bad." Speck was claiming the privilege of the veteran, which is to fight for his job with every weapon at his command, but the situation was new to him and the words came hard. "I ain't knocking the kid, you understand, Joe. I want to be fair to him, but . . . what if he should let a ground ball go through him to-day? It's a tight race and we need every game. Can't I go out there this afternoon?"

"We'll see how you feel," was the evasive answer, and Speck's face lengthened. He too had read the morning papers. "Don't worry about it," Joe continued. "Everything will be all right. You know me, boy."

"You bet, Joe. Whatever you say goes with me."

Cotter plunged into his locker to escape a painful crisis in the conversation and Speck Adams, his fingers twisted behind his head, stared up at the low ceiling. After a time he sighed.

"Laig painin' yo' much, suh?" asked Dr. Bones. "Mebbe I better not rub it so hard."

"No, Doc. It wasn't my leg. You're doing fine."

"Heh!" ejaculated the negro, filling his palm with a pungent liquid. "They ain't no busher kin eveh play that outfiel' like you, Misteh Adams. Nobody, no time, no place—no suh! Wait till this new linimint gits action on 'at Cholly hoss! You'll be out there dancin' an' prancin' like a two-year-ole colt! Leave it to me, thass all yo' got to do!"

But in spite of the new liniment Heddon played center that afternoon and Speck Adams sat on the bench, nursing his worn glove on his knee. The official scorer credited Heddon with two hits, three put-outs and one assist without an error and the wise heads in the grand stand saluted the memory of Speck Adams with kindly flowers of speech.

"Speck'll never get back in the game if that kid keeps up his lick," said they. "Well, he was good while he lasted. He sure could make Tom Kernohan look like a two spot!"

BIG league news flies fast and box scores go by wire, relayed by lightning operators. Thus it happened that the Gamecocks, playing in St. Louis, had word of Speck's retirement as they emerged from the dressing room in their street clothes. Jimmy Heggerty bought an evening paper and thrust it into the hands of Tom Kernohan, the greatest pitcher in the league, a man as well known as any President of recent years and much more popular than some Presidents have been.

"It's up to you to celebrate, Tom," said Heggerty. "Heddon is in there playing regular and Speck is benched. Good news, eh?"

Cannonball Tom grunted.

"I don't wish that guy any bad luck," said he, "but I hope they ship him so far out of this league that it'll cost forty dollars to send him a night letter!"

Tom Kernohan was also a veteran of long service. He had been almost a national figure when Speck Adams brought his other shirt and reversible cuffs into fast company. Kernohan's acquaintance with Speck reached back to a sad day when an unknown recruit outfielder of the Blue forces whanged the Cannonball's fast one out to the fence and turned defeat into victory by a score of 3 to 2.

"Look here!" said McCann savagely. "You ain't pitching to that guy over there by the bench! Forget him!"

"Just nigger luck!" So the popular pitcher had said, salving his humiliation with plausible explanations. "That busher won't get another hit off me all season. I tried to slip the fast one over on him and he shut his eyes and took a Moriarity at it—that's all. Swung and had luck. Adams? Where did *he* ever 'tend bar?"

ON THE other side of the wall the Blues had congratulated the recruit.

"That's hitting 'em, boy!" said Joe Cotter, then a first baseman of renown. "Any time you bust up a game for Tom Kernohan they'll put your picture in the papers. And his fast ball, too!"

"If that big guy is the toughest pitcher in the league," said Speck modestly, "bring on the soft ones."

A few weeks later Kernohan again faced the Blues. He won his game, but the contest went to extra innings because the recruit outfielder tied the score in the seventh with a savage drive down the first base line.

"I told you I could hit that feller," crowed Speck. "He lays 'em right in my groove."

"It's nice that you feel that way about it," said Cotter. "I've been hitting against him for quite some time now and he ain't laid any in my groove yet. The best thing this Kernohan does is to keep 'em out of your groove—eh, boys?"

Before very long the baseball world had a problem to discuss. Why should this Adams person, an ordinary hitter against ordinary pitching, assault Tom Kernohan's delivery with such deadly effect? The theory of the groove was manifestly in error. Kernohan experimented upon Speck with his entire stock in trade—high balls and low balls, fast ones and slow—the result was the same.

"I give it up," said Cannonball Tom, morosely. "The sucker can't hit any right-hander in the league like he hits me. When there's nobody on and a safe wallop won't get him anything but a base knock, he's just liable to pop up or shoot one straight at a fielder, but when the bases are loaded he stings 'em a mile. Now why is that? He's easy for Jimmy Heggerty's fast ball which, not knocking Jimmy at all, ain't such a much, but he hits mine square on the nose. Dan Carter can make him break his back fishing for a curve. I got a better curve than Danny, and Adams couldn't miss it if he was hitting with a billiard cue! I thought at first it was only bull luck. Now I don't know what it is, but I certainly hate to see that freckled lobster coming up in a pinch! Maybe he's got something on me, eh?"

Through the seven years of Speck's service, Kernohan retained the right to call himself the premier pitcher of the big league, but in his seven years of war with the Blues the individual advantage had been with Speck. Time served but to crystallize superstition into the firm belief that the Blue center fielder had the Indian sign on Cannonball Tom Kernohan.

The Indian sign is not new in sporting circles. The prize ring has long recognized its existence, the cinder path has seen it at work, and it is as old as the diamond itself. Ball players believe in the Indian sign. They know that certain lowly tail-end clubs always play like champions against league leaders. They know of mediocre pitchers who display wonderful strength, but only against certain clubs. Ball players do not attempt to explain these things.

"The Indian sign," they say. The answer is as good as any.

LOOKING backward over seven years, Tom Kernohan felt no call to mourn the passing of one who had been such a persistent fly in his pot of ointment. It was a matter of common knowledge that more than once the personal note had crept into the war between pitcher and batter.

"I thought he was about due to skid," said Kernohan to Heggerty. "He was lame all last season and got by with it on his nerve. This year he's as slow as a truck horse. If I know Burgess, and I think I do, Cotter will be asking waivers pretty soon. Well, I don't care where they send him, so long as it's out of this league. He's poled enough long hits off me to reach from here to San Francisco. I wouldn't care if he was a great batter, but he ain't. He never was. Makes a fellow feel like a sucker to have a two-sixty batter hitting five hundred off him. Come on, Jim; I'll buy you a cigar."

"And," said Heggerty afterward, "he actually opened his heart and brought a couple of two-bit smokes. What do you know about that?"

Cannonball Tom's prognostication was wrong in one particular. July gave way to August and still Cotter did not ask waivers on Speck Adams. The veteran continued to nurse his glove on the bench, watching the youthful performances of Heddon with a gloomy eye. The situation led to another interview between owner and manager, during which the plain truth was spoken on both sides with the utmost frankness and considerable heat. Argument ended in a declaration and a threat.

"You can call it sentiment or anything else you like!" said Joe Cotter, goaded into the open by the owner's insistence. "Was it sentiment when I wanted to keep Jeff Penny? When you hired me to run this ball club you said you'd keep your hands off. You haven't done it. It's been nothing but interference at every turn. Haven't I given you a contender three years running?"

"But, Joe," interrupted the human cash register, "you're bringing in outside matters. We were talking about Adams. I know you're a good manager. I know you've made money for the club. I know—"

"Well, then, why 'don't you let me alone?" snapped Cotter, quick to realize that the enemy was weakening under fire. "I've told you why I want to keep Speck Adams until the close of the season. If you don't like the way I run this ball club, step out into the market and get another boy. If you want me to stick, Speck Adams will stick too, and that's all there is about it!"

"He crawfished, Milly," said Joe when describing the interview to his wife. "Crawled right into his hole and pulled it in after him. I'll never take any more lip from that old stiff as long as I'm running this club. I've got him buffaloed."

"Don't quarrel with your bread and butter, dear," said Mrs. Cotter.

"Huh!" snorted Joe. "My bread and butter better not quarrel with me! The old rascal knows that some of these other clubs would be tickled to death to grab me away from him. I've got him right where I want him now."

And so, through August and into September, Speck Adams received a pay check every two weeks, and Major Bones labored valiantly to tame the Charley horse, but without success.

"Don't you think I could get out there to-day?" This was the question which Speck asked from time to time. "It's an awful close race, and Heddon might get nervous and kick a game away. . . Not to-day? Well, all right, Joe, if you say so. You're the doctor."

OCTOBER came in with a flare of excitement and enthusiasm which blazed from one end of the league to the other. The hopes and fears and hard fighting of a six months' campaign were to center

Digitized by Google

upon a three-game series between the Blues and the Gamecocks—the East against the West for the championship of the league and the right to enter the World Series. It was the sort of heartbreaking, turnstile-clicking finish which club owners dream about; that the dream comes true so seldom is the best proof that baseball is our one honest professional sport.

At the end of September it seemed that the Blues would surely be beaten. The Gamecocks were leading them by three and a half games and were mowing down second-division clubs with a regularity monotonous to all but their frenzied supporters, who were already planning World Series pilgrimages and pricing special trains. But so long as baseball is baseball and pennant races are honestly run and won, the unexpected will prove a disconcerting factor in the final result. Hope of a slice of the World Series is a powerful stimulant. Cotter rallied his men on the ragged edge of failure and trounced a first-division club three times in two days, and while this was happening the worm turned and the despised cellar champions administered the same dose to the proud Gamecocks.

"And that," said Joe Cotter to his nervous but elated athletes, "makes it different again. They've got to come here to play those three games. They've got half a game on us, but they've never been a strong road team. Two out of three will turn the trick. Right at 'em, boys!"

THE Gamecocks came to town, ruffled and furiously angry, in search of a burnt offering to their wounded pride. To be thrust back from the lip of success, and by a tail-end team, is galling in the extreme. The Gamecocks had hoped that the closing contests with the Blues would be in the nature of light exercise and a workout for the World Series. Instead of this they found themselves under the stern necessity of winning two games out of three from a club which had fought them savagely on even terms since April.

"I suppose they'll shoot Kernohan at us," said Cotter. "Miles will want a flying start if he can get it."

But Billy Miles, manager of the Gamecocks, kept the Cannonball on the bench and put his faith in a tall, slope-shouldered Swede named Larson, who had lemon-colored hair, an annoying change of pace, sweeping curves, and the ability to put them where he wanted them to go. Larson pitched as if for his life, and though the Blues assured one another that the Swede didn't have a thing on the ball but the maker's name, he held them helpless, while the Gamecocks cruelly assaulted one pitcher and then another, winning by a lopsided score.

"Heads up, you guys!" said Joe Cotter in the dressing room. "We ain't licked yet. We ain't even got started. Heaven's sake, a little pep, everybody!"

The second day came and still no Kernohan.

"Billy is so sure of us that he's saving Tom to open the World Series," said Cotter with bitterness. "There goes Jimmy Heggerty to warm up."

When Cotter saw the inflammable Irishman unlimbering his curves he crooked his finger at "Germany" Ulrich, a broad, silent Teuton, devoid of nerves but possessed of a burning desire to make the final payment on sixty acres of Kansas farm land. A World Series check would do it nicely and leave the bank account untouched. An appeal to frugality goes straight to a German's heart.

"Are you there, Germany?" asked the manager.

"Forty ways!" was the economical answer, and Germany Ulrich, pitching for Mrs. Ulrich, the three little Ulrichs, and the sixty broad acres, stolidly spitballed his way to the long end of the score amid riotous demonstrations in the grand stand and on the bleachers.

"WELL, folks," said Joe Cotter as he surveyed a record-breaking crowd on the third day, "this is the one we've got to have. They've saved the toughest man to the last. Your old friend is warming up, Speck."

"Joe," begged Speck Adams, "let me get in there today. You know what I can do to this feller. Now Heildon—he hits pretty good against other pitchers, but Kernohan can make a sucker of him. My leg ain't so bad now, Joe; honest it ain't!"

Cotter shook his head and Speck Adams sighed.

"All right, Joe, if you say so. But it seems to me—"

A little later Cotter reviewed his pitching staff, six seasoned heavers perspiring in front of the home bench. Not one of them would have shirked the task of opposing the redoubtable Kernohan.

"I got something left, Joe," said Germany Ulrich, thinking of the Kansas farm. "I made suckers out of 'em yesterday, you know."

"I beat Kernohan once this year," put in O'Meara, a left-hander.

"The ole soup bone feels good, boss!"

"Get the break on this'n, Joe—a peach, eh?"

"All I want is another chance. I didn't have nothing the other day, but now—"

Thus they volunteered, each afraid to trust the winning of the prize money to another. The one who did not open his mouth was the one who drew the final searching inspection. Old Pete Kennedy stood at the end of the line, lazily uncoiling his aged arm, a joint at a time.

"How's the control, Pete?" asked the manager.

"Never better," grunted Kennedy.

"Think you can hold Kernohan to-day?"

"Hold him!" The veteran swore so earnestly that his profanity sounded like a prayer. "Where do you get that stuff about holding him? I can *lick* him!"

"'S fair enough!" said Joe Cotter. "You're elected, Pete. Go get the big stiff!"

A FREE-HITTING contest with plenty of runs, an alternating advantage, and a ninth-inning finish is thrilling enough in mid season when a game of ball is only a game of ball and nothing more. Won or lost, it is but a dot on the schedule, a skirmish in a long campaign. In October, when two teams are finishing side by side and the greatest financial prize in professional sport looms close, we have the pitchers' battle—the game where every ball counts and the ciphers hang in rows on the score board. To lose a game in July is a joke; to lose one in October is sometimes a tragedy.

"Kernohan and Kennedy!" said the fans. "It'll be a great fight!"

Old Pete, rather alderman'ic as to paunch, but otherwise fit and outwardly calm to the point of unconcern, began hostilities with a perfect strike which swished into the catcher's mitt. As the umpire jerked his right arm into the air a howl rose from the packed stands.

"Nice beginning, ole boo-oy!"

"Keep a-working!"

"Nobody walks! Make 'em hit!"

The aged fat man did not hear this outburst of baseball bromides. His faculties were concentrated upon the task of keeping the ball low and over the outside corner of the plate, and so well did he succeed that Stowe, lead-off man for the Gamecocks, trailed his bat back to the bench, profanely disgusted.

"Not a thing on the ball but the stitches!" said Stowe. "I'll bust one for him next time!"

Old Peter had neither sensational speed nor fast-breaking curves, but he owned something equally as good—perfect control of the ball and intimate knowledge of the batting weakness of every individual who faced him. He knew that George Edmunds prayed for a fast ball on the outside, so Peter threw George a succession of slow lobs which nearly grazed his chest, and Edmunds fouled out. Chapman, the fence breaker, fell a victim to a sensational running catch in deep center, and Heildon lifted his cap as he jogged to the bench.

"Nice catch, kid!" growled Speck Adams.

"Stake me to a run, boys," pleaded Kennedy. "Shove an ace over for me and I'll beat this feller with it! One run! Go out there and make it!"

CANNONBALL TOM also settled to the serious business before him without waste of time. Ordinarily it was his custom to exert himself only when men were on the bases—a prudent practice which had added years to the life of his pitching arm—but this was no ordinary occasion. The defeated team in a World Series salves its wounds with 40 per cent of the gate; the defeated team in a pennant race gets nothing—not even credit. Kernohan had given some earnest thought to these matters, and caring for money no more than he did for his right eye, he pitched as if every man who faced him was pinch-hitting with the bases full. His fast ball fairly whistled as it split the plate, and his curves buzzed as they broke across the corners. In the brief intervals of silence between deliveries a hoarse, bellowing noise was heard. It was Martin McCann, the Gamecock catcher, ridiculing the Blue batters and offering encouragement to his battery mate.

"Y' got everything to-day, Tom, everything! They'll be lucky if they get fouls off you! Keep a-working!"

(*Continued on page 23*)

Old Pete's pleading had taken on a querulous note. "One run, you rummies! For the love of Mike, have I got to hold 'em all day? Gimme one run!"

Dayton's Uncle Bountiful

By Fred C. Kelly

IF ONE may accept the decision of the United States Circuit Court, John H. Patterson of Dayton, Ohio, is a heartless type of American business man. Mr. Patterson makes cash registers for a living. No one else ever has done notably well at manufacturing cash registers—which fact may be attributed, largely, to Mr. Patterson. The evidence at his trial seemed to show that he likes so well to make cash registers that he would, as soon as not, make all of the cash registers for which there is any demand.

In consequence of his zeal for taking unto himself the burden of providing the public with all the cash registers needed—the Circuit Court is still furnishing my information, but not my verbiage—Mr. Patterson was sentenced to a year in jail. Within a few weeks, or months, depending upon the busyness of the Court (or the height of the red line in the thermometers), the United States Court of Appeals will review Mr. Patterson's case. If it affirms the decision to have him spend a twelvemonth in jail, the lamentations in Dayton when the officers arrive to take Mr. Patterson away will be worth journeying to hear. The people of Dayton will keenly resent having John H. Patterson placed in a cell. For he is Dayton's Uncle Bountiful; its idol, too. This has been particularly true since last year's flood disaster, when he was the hero of the situation; the master mind to the rescue.

He Acts as Host to Campers

NO MAN ever came nearer taking a whole great city under his wing and adopting it as a foster child than John H. Patterson has done with Dayton. While wicked in the drastic means of obtaining his money—according to the decision of the court—Patterson is beyond reproach when it comes to spending that same money. He is a philanthropist. Most of his philanthropy goes to improving the lot of his fellow townsmen. And being not only a philanthropist but an eccentric genius as well, his deeds take unexpected forms. Every little while he spends money in some good way that nobody else in the world would have thought of.

One of Patterson's contributions toward boosting the joy of life in Dayton is a vast park of several hundred acres. This place, called Hills and Dales, is unlike any other great city park in the country. It is as public as if it belonged to the city, but the title is vested in Patterson. And this is a great advantage to Dayton, for the city could hardly afford to keep up a park the way Patterson does it. Here and there over the rolling acres are little rustic cabins, patterned after the so-called "open camps" that one sees in the Adirondacks. These camps each contain rough cooking utensils, a complete set of dishes, a locker filled with potatoes, plenty of salt and pepper, and water both for drinking and washing the dishes. There are signs indicating just where everything is to be found and complete directions for baking the potatoes in the hot sand and ashes in the fireplace. The cooking outfit even includes wooden forks for toasting marshmallows. These were designed by John H. Patterson himself. In fact, he gave his personal attention to all the details of the camp equipment.

The use of the camps and contents is entirely free. Any citizen of Dayton, no matter how humble, can call up the welfare department of the National Cash Register Company and engage one of Mr. Patterson's cabins if they are not all taken for the date desired.

Another feature of Hills and Dales is an artistically arranged tea room. Tea and cakes, served in—or on—dainty china, is free to all, the only charge being a small tip which is kept by the pretty waitresses who serve the tea. No matter how many persons care for tea at Hills and Dales in the course of a day, Mr. Patterson is willing to buy the tea and sugar and cakes. Anybody can go and have all he wants. You who read this could go there and drink tea on Mr. Patterson and no questions would be asked.

"Please, May I Paint Your House?"

ALL over the place are signs, many of which go into more details than one ordinarily expects of a sign. Patterson has a fondness for signs, and also for appropriate maxims—every Christmas he gives his friends little memorandum books containing a maxim for every day in the year. At the edge of the alfalfa field is a sign which says: "This alfalfa is good to eat. Take some of it home with you and cook it as you would spinach. It is just as good to the taste and is much more nourishing."

Another reads: "The public is welcome to eat the cherries on the trees near the barn." And this one: "The public may crack and eat all the hickory nuts and walnuts they wish, but none are to be taken away."

At one fork in the road there is a big bronze tablet fastened to a big tree. It bears the verse about "Books in the running brooks, sermons in stones," etc. One sees numerous signs with just the words: "Poison Ivy."

A favorite form of philanthropy with Patterson is to make things more beautiful. The landscaping about his big factory is as carefully and elaborately done as might be expected in a big private estate. One day as he was driving in his automobile from his home to his office he observed that many homes had not been painted often enough to look attractive. The dingy weather boarding comprised a sour note in the general looks of things. Patterson had an agent go to the owners of the homes he had to pass every day and inquire if they would object to having the houses painted free of charge. A week or two later there was not a house in a stretch of more than two miles that needed painting.

John H. Patterson —"Being not only a philanthropist but an eccentric genius as well, his deeds take unexpected forms. Every little while he spends money in some good way that nobody else in the world would have thought of"

He Doesn't Overlook Details

AFTER the more serious aspects of the Dayton flood had been taken care of, a depressing feature of the situation was the number of once beautiful lawns covered with mud. It would take several weeks to restore a growth of grass by natural process. This outlook was too forbidding for Patterson. He employed scores of men to go out and buy wagon loads of sod, and he made brand-new lawns for one whole section of Dayton. While that work was going on he was having hundreds of sad-visaged little homes decorated with window boxes of flowers.

Throughout the grave period following the flood, whenever the authorities were handicapped by a temporary lack of funds, Patterson invariably said: "Charge it to me." One day Patterson complained to the director of public service that a big market house had not been cleaned up promptly. Men had been working at it for a few days, but it was a big job and one could scarcely see what they had done. The director said he hadn't the money to hire more men.

"That's a poor reason," said Patterson, and then in a bored sort of way he ordered the entire janitor force from his factory, a dozen or so carpenters, and a few other artisans, to come down. They were a small army and had the place cleaned up before night.

He is a master of details. When newspaper men began to come to Dayton to write about the flood situation, they were for the most part poorly equipped with suitable clothing. Patterson was the man who gave them woolen shirts, high boots, and even heavier overcoats if they needed them. No one knew where he got such outfits. He simply had them.

One afternoon he chanced to ask one of the local newspaper men where he was sleeping at night.

"I didn't sleep at all last night," the man told him; "couldn't get a boat to take me across downtown."

"Well, well," says Patterson, "we've been so busy taking care of the out-of-town correspondents that we have neglected our own boys. It's too bad." Then to one of the high-up officers of his company, whom he called over, he said:

"Here are some newspaper men who are working under a great strain—doing extremely hard, nerve-racking, mental work, under difficult conditions—and, to make matters worse, they have not had proper means of getting food and sleep. Get them a room somewhere in our plant—a room with cots in it, or, better still, with beds, and with a bath—both tub and shower. Let it be a room where there are facilities for darkening it in daytime, so that these men may go and take an hour's sleep any time they wish to. As I say, they're doing very trying work and must have their rest. See that they have plenty of good drinking water, also some sandwiches and malted milk. Malted milk is better for you than coffee, gentlemen, at a time like this."

A Blackboard for Interviewers

HE STOOD there rattling off these and various other orders about matters he had never thought of before, and not once did he pause to think. He talks quietly and with a slight impediment, but his mind works like lightning. There was none of the "now-let-me-see" hesitation that most people would employ. He thought of everything he wanted as fast as he could speak it, and when he stopped he was through. There was nothing more to think of.

It is the same way with everything he talks about, so I'm told. And he talks a good deal. That is, he holds many interviews with business associates and others. He is fairly accessible, and once a man gets to him, if he has anything at all in the way of interesting suggestions to make, Patterson will hardly let him get away. Patterson has a peculiar method of holding interviews, too. In his consultation room is a large easel, supplied with great sheets of white paper. When the caller comes in, Patterson leans back in his chair and asks him to step to the easel and write down with crayon the principal facts he is going to discuss. Some days he will have a dozen such interviews. Then at eventide, or when he is ready to take up the subject for final decision, the sheets are turned back and Patterson can refresh his memory. He says it has been a highly successful plan for keeping hold of important facts and eliminating those that are unimportant. A caller hardly has the nerve to step up to an easel and jot down a topic that is of small consequence.

Patterson is a good deal of a health crank. He is a follower of the Battle Creek school of thought, and is mostly a vegetarian. In the matter of exercise and sleep, as well as food, he sticks to a strict schedule. Short hours of work, an early morning horseback ride, plenty of outdoor air, and an afternoon nap, are included in Patterson's scheme of life.

Horseback riding is only one means that Patterson employs for keeping his liver in good fettle. When, several years ago, he was touring the Old World he had occasion to journey for a time on the back of a shambling, pious-faced camel. It was not as comfortable as the tonneau of an automobile, but it was exhilarating, and Patterson conceived an idea that if he could take a ride on a camel every day it would do him a lot of good. Not caring to ride about the streets of Dayton with a string of small boys following him, as if he were part of a circus, Patterson called in one of his mechanical geniuses when he got home and ordered an electrical camel. The man well knew that it was up to him, if he cared to keep on working for Mr. Patterson's cash register company, and in due course Patterson was provided with a machine that had all the uncomfortable motion of the average camel in real life. He gets aboard the camel nearly every day, throws it into the desired speed, and is off for an imaginary jolting across the desert.

And a Champion Corn Popper

ONE of Patterson's recreations, when the season permits, is to take a party of friends to his so-called cottage in the country and prepare popcorn for them. He has a special design of popper that he invented himself, and he knows just how to fix the log fire to get the right heat with the least delay. There is just enough of the boy in his make-up to give him the appearance of taking more pride in his corn popper and his knowledge of wood fires than in all his profitable achievements in manufacturing cash registers.

A Fine Domestic Finish

By George Weston

ILLUSTRATED BY ERNEST FUHR

WHO is this—sitting at her desk—counting out the money—dressed like a queen—powdered to the nine—eyes bright as—?

(Joyful cries of "No, no! Never! You don't mean madame, do you?")

But yes, mesdames! Ah, joy, messieurs! For a long time now have I been urging Mme. Dejole to continue those adventures for which she is so admirably equipped. For even if she did fail in her last two affairs, and even if she fails in this one and the next, is she not all the more attractive because of her very human failures? For myself (with diffidence I confess it) I rather like to hear of other persons' fall-downs, perhaps because I make such a horrible lot of slips on my own account. But anyhow—but anyhow—Tempus fidgets, and here is Truth lifting one eyebrow, waiting with impatience to be served

It was (then) half past two on a warm June afternoon. Mme. Dejole sat at her desk, queen (as ever) of the Restaurant Dejole, so agreeably situated on West Twenty-sixth Street in the last tottering stronghold of Manhattan's old French quarter. An hour before, the restaurant had been crowded with the faithful, ecstatically lining themselves with raptures while they cooked up pretty things to spring on madame later when they paid their bills. But when this extraordinary adventure opened, all the tables had been deserted—all but one.

"Eh, bien," thought madame. "We have all been lovers once. Ever' man has said such things, an' ever' woman has bend' her ear to lose not one singular syllable!"

IT WAS indeed a very young couple at the one occupied table.

"As yo'ng," reflected madame, "as ze babes in ze well. At soch an age one does not always recognize ze promenade of time." And, turning away with a vigorous twist of her back, she added: "Zey may be interest', but I have sworn it, 'Nevaire again!' I care not *what* he whisper in her ear!"

But half past two merged into a quarter to three, and still the young man poured his whispers into the pearly receptacle by nature duly provided. He was a nice young man (no other phrase describes it), though possessed perhaps of a few too many manners (if that be a fault), and she was one of those smoky-eyed, reluctant smilers who have brought Mr. Philip Belleau into fame and fortune. Indeed, at the time this story starts, our young lady was smiling at her escort's whispers with such reluctance that the net result was remarkably like a frown.

"Zey are looney-weels, I guess," muttered madame, twisting the words as unconsciously as she twisted back to watch them again, "having zeir firs' tiffy-tiffy. But wait."

The girl's left hand was latticed against her cheek, and madame noticed that her fingers were innocent of rings.

"Not married; no," mused madame. "Perhaps it is a lover's squabble, after all. Ha! Now, where goes he?"

The young man had suddenly rushed out of the restaurant, leaving the girl behind and the check unpaid for. "Peste!" thought madame. "Is it a trick so ancient which he play on my ver-ee nose? Mais non! I will not look in zis affair ontil I have to! 'Nevaire again!'"

AND so she set herself to the task of a'ding up the noon checks and had just started when the door opened like one of the portals of Tempest. In blew the young man and hurried to the girl.

"She is his firs'," thought madame with a tender little sigh, and, watching them (without knowing it) from the corner of her eye, she saw the young man give the girl some small article which she laid upon the table and viewed with evident distate.

"So his present is not to her liking, eh?" reflected madame, interested in spite of herself. "I remember when Emile gave me ze brosh an' comb! But zis—zis is so small. I wonder—wonder—"

From her throne, then, grandly arose Mme. Dejole, grandly curious and grandly disdainful of her "Nevaire again!"

She walked slowly to the pantry door, and as she passed the young couple's table she saw the girl unwillingly draw a ring upon her finger.

"Is it an engagement ring?" thought madame, passing through the pantry door and peeping through the wicket. "Zen why does she cover her face wiv her

"Now," she said, "look at her an' tell me: if you could earn your own living, would you marry your sweetheart?"

hands?" She emerged from the pantry, and giving them another searching look as she passed them by, her eyes fell, fascinated, upon that new and shiny ring. And thinking then of the short time in which he had been absent from the restaurant she suddenly stopped in her tracks and whispered to herself: "Zat's funny. Where did he get it?"

"WHERE did he get it?"

A disturbing question this, and often nowadays barred from the best society. "Where did he get it?" The answer may be a joy, a jeer, a joke, a jug—or a jail.

"An' still he whisper' so pouringly in her ear," thought madame. "But where did he get it? Ze jewelry stores are far away, an' he was on'y gone a minute.

The young man had signaled Louis, and Louis the Learned was writing the bill. Presently they would pass out. They had never come before; they might never come again. Was it any wonder that madame fidgeted on her stool at the prospect of losing a mystery, a mystery with a tale that simply pleaded for salt?

The couple was approaching the desk, the young man in the lead, full of his manners, the young girl following him, more smoky-eyed and reluctant of smiles than ever. "I never see a girl so little convulse' wiv enraptures," reflected madame. "She look to me as if she need her momma—if she has one."

She darted a look at the girl's left hand. In the rear of the restaurant, where they had been sitting, the incandescents had mellowed the light of day so that values were hard to appraise. But at the desk, where the daylight streamed through the windows, it only needed one sharp turn from the auger of madame's eyes to penetrate the cheap, brassy sheen of the ring. "Oh-ho!" thought madame as the young man opened a lean-looking pocketbook and extracted a one-dollar bill, "you are a funny fellow, eh? You wear a t'ree-dollar necktie an' a silk chemise, but you dazzle your bride wiv a ten-cent engagement ring, an' nearly bus' ze poor exchequer to pay for lonch."

WITH superb impassivity of countenance she took the dollar bill and turned to the girl.

"Trouble printed on her visage like figures on a time-table," breathed madame to herself with a growing feeling of tension. "It is maybe somet'ing deeper zan I suspect. Who knows?" Her imagination, long smoldering through the brush, suddenly began leaping up like a fire in a cedar grove. "Ze poor girl!" she thought. "He bring her here where he t'ink no one will recognize her. An' now she make her sortie an' may never be seen by ze world again! Maybe he take her in a row-boat wiv a trap-door under her feet. Halfway over he pull a string. P'resto, ze bottom fall out of ze row-boat, an' ze papers call it a shocking accident. Or maybe he ship a piano to ze middle of China, an' when it reach' its address some time nex' year a musical Chinaman fin' ze form of a beautiful yo'ng girl! Who knows? How many poor girls in ze papers have disappear' like such? But wait! If he t'ink ze girl is all unknown, I'll fool him! At leas' it will do no harm." And raising her voice she suddenly called: "Oh, mademoiselle!"

THE couple, who had reached the door, looked over their shoulders in wonder. Madame was beckoning the girl with her finger, like a smiling feminine Banquo after the feast. In growing wonder the girl returned to the desk.

"I did not recognize you at firs'," cried madame, "you have grown so tall. I hope ever'one is well at home? Zat's good! Remember me to your momma—an'—*good*-by!"

With shy uncertainty the girl answered her and then rejoined her escort. In silence they went down the steps to the street.

"Zat!" muttered madame, peeping through the curtains. "He is at his so devilish whispers again! I have hear' of Tom ze Peeper an' Jack ze Hugger. Zis mus' be Willy ze Whisper! Ha! Good! She fool him! She shake her head 'No!' An' now he say' somet'ing crooel! I see it in her eyes! An' now he take' her arm! An' now—"

Moved by a noble curiosity, madame ran out and stood on the stone steps, watching the young couple walking slowly toward the corner.

Most madames would have hurried back into their respectable restaurants with a worldly sorrowful shrug of the shoulders. But not our madame, thank God! With a patter-patter-patter of her high French heels madame snatched a fancy hairpin from her head and went down those steps of hers with the speedy staccato of a hungry woodpecker.

MME. DEJOIE held out the hairpin to the young girl. "My dear," she whispered, "you drop zis in my restaurant. You will pardon madame for bringing it? An' is zere any way I can help you? Any at all?"

The girl started to frown, but when she looked into madame's eyes two large, wet, glistening, eloquent tears slowly arose in her own.

"Yes, yes, I understan'," breathed madame with the air of one who is fully answered. "Zat is why I pursue' you. An' now you shall come an' sit by my desk a little—is it not so?—an' we will talk about—about your momma. Yes?"

With the gentle strength of protection she placed her arm around the girls' shoulder, and they started back toward the blue-and-white sign of the Restaurant Dejoie. As a second thought madame turned to

Digitized by Google

the thunderstruck young man. "An' you, m'sieur," she coldly remarked, "I have somet'ing important to say to you—if you are man enough to hear it. Wiv me!"

Thunderstruck? Ha! He looked as though the lightning had fetched him a swipe as well.

NOW, Tragedy, with the down-turned corners of thy mouth, begone! I'm through with thee! But you, my laughing little handmaids of the tickly chins, come give me aid, so that I may better report the pleasantry which Mme. Dejoie played on the world that summer afternoon. She seated her two new protégés at a table near her desk, seated herself between them, and then turned another flash of lightning upon that dazed young man.

"Well!" she exclaimed. "You are a nice one, eh?"

The nice one tried to frown, but, so far as he was concerned just then, dignity was one of the lost arts. "But look here," he said, protesting, "I don't see where you come in."

"You don't? Tut-tut!" Madame laughed and made a gesture as though calling all West Twenty-sixth Street to lean forward and witness this phenomenon. "I'm his good fairy," she reported, "an' he don' see where I come in. Imagination it!" Suddenly her voice lost its banter and became as incisive as any cross-examiner's. "You buy zis lady a ring?"

"Y-yes."

"You mean to marry her, of course."

"Of course I do," he exclaimed. "What do you think I am?"

"A ver-ee fool-ish yo'ng man who need' a strong arm to guide him. An' such a strong arm—c'est moi!" She paused for a moment, and even as before she had been a smiling feminine Banquo so now she looked like a charming female Sandow. "You love ze lady?"

"Of course I love her," he replied, his indignation more under the soft pedal. "I've loved her all my life. Ask her."

"An' you respect her, of course."

"Respect her? Of course I do!"

"Of course you do. Of course. An' now, m'sieur, I wish you to solve a riddle for Mme. Dejoie, if it pleas' you. Here you are, a strong, intelligent yo'ng man. Ver' well. An' here is your sweetheart, of whom anybody might be proud. You love an' respect her. Ver' well. Zen why, in ze name of common sense, don' you marry ze lady an' be done wiv it?"

The girl flashed a grateful look at madame for that, as though to say "Here, here! That's what I'd like to know!" And the young man fidgeted greatly like a showman who has just discovered that his wild man of Borneo is talking with a lisp.

"We—we can't afford it—yet," said he.

"Can't afford it?" almost squealed madame.

"Zen how can you afford t'ree-dollar jabots an' a chemise de soie?"

"Father makes me an allowance," he somewhat sheepishly answered.

"Oh-ho! He is rich?"

"Yes."

"An' you depend on him instead of working for yourself?"

"Y-yes."

"An' he doesn't want you to marry?"

"Well, not—not yet."

"Mm-mm-mm!" Madame's thoughts brought a twinkle to her eye. "Tell me firs'," she said, "about your poppa—what he is—what he does—his deespo-sition—his business—ever't'ing!"

IT WAS a large order and took some time in the telling, but when the young man was through madame took his hand and placed it around the hand of the girl, who sat across the table from him.

"Now," she said, "look at her an' tell me: if you could earn your own living, would you marry your sweetheart?"

"In a minute!" he cried, lost in the smoky-blue eyes across the table.

"Like a man?"

"Like a man!"

"You swear it?"

That was almost the best thing he did.

"Excellent!" cried madame, springing to her feet. "Louis, run for a taxi! An' you, m'sieur, I engage you at ten dollar' a week till I find you somet'ing else to do. An' to-morrow I give you a furnish' room upstairs. So now, if you excuse me a moment, I get my hat an' gloves an' we all go over togevver!"

"Over where?" asked the young man, marveling.

"Over to Jersey to get you a marriage license!" crowed madame. "You did not expec' us to take you to Californie, eh?"

WHILE he was still digesting that extremely rich food for thought, madame suddenly dropped her hat and ran to the girl. "Oh," she said, "I near' forgot. You like to telephone your momma? Yes?"

"I haven't any," the girl whispered back. "I—I haven't had one for five years now. And when you spoke about her first—when I was going out, you know—it almost seemed as though she were watching—and had asked you to speak to me—"

"Maybe she did, my dear," said madame gently. "Who knows?" She ran back for her hat, and there the young man was waiting to have a few private words in her ear.

"Look here," he said. "Dad'll go off the handle completely—"

"La-la-la!" scoffed madame. "Did he consult wiv you when *he* got married?"

"Now! Again! Ho-ho!
What sort of a game is it zis which it is!"
So they rehearsed . . . she in her derby, he in his white cap

"But when he hears—"

"M'sieur! M'sieur! For ze las' an' on'y time: are you a man or a moose?" (Madame meant a mouse, but in the excitement of the moment no one corrected her.)

"A man," he faltered.

"Zen follow!" cried madame. "To-day we get a license! To-morrow we get marrie'!"

She took the girl's arm. Together they went down the steps to the taxi.

And, being a man—why, first he hesitated—and then—he followed the ladies.

DO YOU know what life is, my children? Then listen to me. *I* know! Life is the Great Movie, and for the next sixty minutes I aspire to be the Great Drummer, sitting under the shadow of the stage and amusing myself with the ingenious tools of that most ingenious trade.

Honk-honk! Honk-honk! This is madame's taxi hurrying to the foot of West Twenty-third Street and containing three human beings in a state of mixed emotions.

Toot-too-oot! Toot-too-oot! The ferryboat leaving her slip for the sovereign State of New Jersey, where weddings are arranged privately, quietly, and without any publicity whatever.

Swish-swish! Swish-swish! On our right the Hudson River. On our left the river Hudson.

Clang-clang! Clang-clang! The trolleys at the Jersey terminal.

R-r-r-r-r-r-r-r! (Silence.) This is the taxi stopping in front of the nearest justice of the peace's office.

Rat-a-tat-tat! Tat-tat! Knocking on the justice's door.

Z-z-z-z-z-z-z! Being a delicate and subtle allusion to the J. P.'s military goatee.

And while the pianist softly plays "The Voice That Breathed," the justice (with many a judicial flourish) brings them one day nearer to that happy time when two fond hearts may beat as one and each shall beat like sixty.

It was five o'clock next day when madame led her newly married couple back up the restaurant steps. "Now, m'sieur," she said, "as I tol' you in ze taxi, ever't'ing depends on you!"

The young man made much of his chest, after the well-known fashion of those who have just been wed.

"You say your poppa gets home at six o'clock?"

THE young man nodded, and almost immediately his chest became normal.

"Dad's very proud," he said. "I don't know what he'll say when he sees me waiting."

"Proud!" snapped madame (her eyes snapping too). "Zat is ze twentiet' time you tell me such! You t'ink he is ze one an' on'y pridefulness? On second t'oughts I will not have you masquerade as a waiter. But as an omnibus!"

This time the bridegroom faltered in right good earnest. "An omnibus?" exclaimed he. "What'll I have to do?"

"Carry dirty dishes to ze pantry! C'est tout!"

"Of course you're running this thing," said the young man in a resigned tone. "But if you only knew what a temper dad has!"

"Temper?" cried madame. "All ze better! He will like to see ze sponk in his on'y son! Temper? Ma foi! If he try any of his temper on me, I bet you I put ze moutarde on his nose! Some moutarde, too! Omnibus? No! For zat you shall not be omnibus! You shall be dishwasher! Dishwasher extraordinaire!"

"Dishwasher?" he whistled.

"Extraordinaire! Come now! I will get you an apron an' cap, an' we will start rehearsals right away."

And such is the heaven-given force of feminine enthusiasm that before the young man knew what he was doing he was standing before the sink in the basement of the Restaurant Dejoie, adorned to his toes in a long, white apron and crowned with one of those charming white caps with which Maitre Childs embellishes his pancake artistes.

"Now!" said madame. "You stand here, washing dishes, an' I will take ze part of poppa. "Wait! She ran upstairs, clapped one of M. Dejoie's derbies on her head (to the utter stupefaction of that majestic gentleman) and tripped downstairs to the pantry. "Enter poppa!" she cried, and strode indignantly through the door. "Ho-ho!" she exclaimed, speaking in the lowest tones she could compass. "What sort of a game is it zis which it is!"

"What shall I say?" asked the young man, grinning despite himself.

"Say? Say 'Hello, poppa!' as zo you were busy an' couldn' be much interrupt'. Wait! We will write your part on ze wall where he cannot see it, an' zen if you forget your line ze wall will promp' you. Now! Again! Ho-ho! What sort of a game is it zis which it is!"

"Hello, dad!"

AND so they rehearsed, declaiming and writing it down, she in her derby, he in his white cap—rehearsed to such good purpose that when madame went upstairs at six o'clock she gave the bride such a resounding kiss as the Restaurant Dejoie has never heard before or since. "He is yo'ng, my dear," she laughed, "but we will make a man of him yet!"

"What you've done for me!" tearfully laughed the girl, her arms entwined around her good Samaritan.

"Tut-tut-tut!" twittered madame, dancing the other to the phone. "What I done (*Continued on page 31*)

Trouble — Chapter VII

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

IN THE pantry that evening the question of telling some one was discussed further. It was discussed over a number of glasses of Mr. Mergleson's beer. For, following a sound tradition, Mr. Mergleson brewed at Shonts, and sometimes he brewed well and sometimes he brewed ill, and sometimes he brewed weak and sometimes he brewed strong, and there was no monotony in the cups at Shonts. This was sturdy stuff and suited Mr. Darling's mood, and ever and again with an author's natural weakness and an affectation of abstraction Mr. Mergleson took the jug out empty and brought it back foaming.

Henry, the second footman, was disposed to a forced hopefulness so as not to spoil the evening, but Thomas was sympathetic and distressed. The red-haired youth made cigarettes with a little machine, licked them and offered them to the others, saying little as became him. Etiquette deprived him of an uninvited beer, and Mr. Mergleson's inattention completed what etiquette began. "I can't bear to think of the poor little beggar, stuck head foremost into some cobwebby cranny, blowed if I can," said Thomas, getting help from the jug.

"He was an interesting kid," said Thomas in a tone frankly obituary. "He didn't like his work, one could see that, but he was lively—and I tried to help him along all I could when I wasn't too busy myself."

"There was something sensitive about him," said Thomas. Mr. Mergleson sat with his arms loosely thrown out over the table.

"What we got to do is to tell some one," he said. "I don't see 'ow I can put off telling 'er ladyship—after to-morrow morning. And then—'eaven 'elp us!"

"Course *I* got to tell *my* missis," said Mr. Darling, and poured in a preoccupied way, some running over.

"We'll go through them passages again now before we go to bed," said Mr. Mergleson, "far as we can. But there's 'oles and chinks on'y a boy could get through."

"*I* got to tell the missis," said Mr. Darling. "That's what's worrying me. . . ."

As the evening wore on there was a tendency on the part of Mr. Darling to make this the refrain of his discourse. He sought advice. "'Ow'd you tell the missis?" he asked Mr. Mergleson, and emptied a glass to control his impatience before Mr. Mergleson replied.

"I shall tell 'er ladyship just simply the fact. I shall say: Your ladyship, here's my boy gone and we don't know where. And as she arsts me questions so shall I give particulars."

MR. DARLING reflected and then shook his head. "'Ow'd *ja* tell the missis?" he asked Thomas.

"Glad I haven't got to," said Thomas. "*Poor* little beggar."

"Yes, but 'ow *would* you tell 'er?" Mr. Darling said varying the accent very carefully.

"I'd go to 'er and I'd pat her back and I'd say 'bear up,' see, and when she asked what for, I'd just tell her what for—gradual like."

"You don't know the missis," said Mr. Darling. "Henry, 'ow'd *ja* tell 'er?"

"Let 'er find out," said Henry. "Wimmin do."

Mr. Darling reflected and decided that too was unworkable. "'Ow'd *you?*" he asked with an air of desperation of the red-haired youth.

The red-haired youth remained for a moment with his tongue extended, licking the gum of a cigarette paper and his eyes on Mr. Darling. Then he finished the cigarette slowly, giving his mind very carefully to the question he had been honored with. I think," he said in a low, serious voice, "I should say, just simply, Mary—or Susan—or whatever her name is."

"Tilda," supplied Mr. Darling.

"'Tilda,' I should say. 'The Lord gave and the Lord 'ath taken away, Tilda!—'e's gone.' Somethin' like that."

THE red-haired boy cleared his throat. He was rather touched by his own simple eloquence. Mr. Darling reflected on this with profound satisfaction for some moments. Then he broke out almost querulously. "Yes, but brast him!—*where's* 'e gone?"

"Anyhow," said Mr. Darling, "I ain't going to tell 'er, not till the morning. I ain't going to lose my night's rest if I *have* lost my stepson. Nohow. Mr. Mergleson, I *must* say, I don't think I ever 'ave tasted better beer. Never. It's—it's famous beer."

He had some more. . . . On his way back through the moonlight to the gardens, Mr. Darling was still unsettled as to the exact way of breaking things to his wife. He had come out from the house a little ruffled because of Mr. Mergleson's opposition to a rather good idea of his that he should go about the house and "holler for 'im a bit. He'd know my voice, you see. Ladyship wouldn't mind. Very likely 'sleep by now." But the moonlight dispelled his irritation.

How was he to tell his wife? He tried various methods to the listening moon.

There was, for example, the offhand newsy way. "You know tha' boy yours?" Then a pause for the reply. Then, "E's toley dis'peared."

Only there are difficulties about the word totally.

Or the distressed impersonal manner. "Dre'fle thing happen'd. Dre'fle thing. Tha' poo' lill' chap, Artie—toley dis'peared." Totally again.

Or the personal intimate note. "Dunno wha' you'll say t' me, Tilda, when you hear whattogottasay. Thur'ly bad news. Seems they los' our Artie up there—clean los' 'im. Can't fine 'im nowhere tall."

Or the authoritative kindly. "Tilda—you go' control yourself. Go' show whadyou made of. Our boy—'e's—hic—*los'*."

Then he addressed the park at large with a sudden despair. "Don' care wha' I say, she'll blame it on to me. I *know* 'er!"

After that the enormous pathos of the situation got hold of him. "Poor lill' chap," he said. "Poor lill' fell'," and shed a few natural tears.

"Loved 'im jessis mione son."

As the circumambient night made no reply he repeated the remark in a louder, almost domineering tone. . . . He spent some time trying to climb the garden wall because the door did not seem to be in the usual place. (Have to inquire about that in the morning. Difficult to see everything is all right when one is so bereaved.)

But finally he came on the door round a corner. He told his wife merely that he intended to have a peaceful night, and took off his boots in a defiant and intermittent manner. The morning would be soon enough.

She looked at him pretty hard, and he looked at her ever and again, but she never made a guess at it. Bed.

SO SOON as the week-enders had dispersed and Sir Peter had gone off to London to attend to various matters affecting the peptonizing of milk and the distribution of baby soothers about the habitable globe, Lady Laxton went back to bed and remained in bed until midday on Tuesday. Nothing short of complete rest and the utmost kindness from her maid would, she felt, save her from a nervous breakdown of the most serious description. The festival had been stormy to the end. Sir Peter's ill-advised attempts to deprive Lord Moggeridge of alcohol had led to a painful struggle at lunch, and this had been followed by a still more unpleasant scene between host and guest in the afternoon. "This is an occasion for tact," Sir Peter had said and had gone off to tackle the Lord Chancellor, leaving his wife to the direst, best founded apprehensions. For Sir Peter's tact was a thing by itself, a mixture of misconception, recrimination and familiarity that was rarely well received. . . .

Lady Laxton herself and the head housemaid went round the paneling with a hammer and a chisel, and called out "Are you there?" and attempted an opening wherever it sounded hollow

SHE had had to explain to the Sunday dinner party that his lordship had been called away suddenly.

"Something connected with the Great Seal," Lady Laxton had whispered in a discreet, mysterious whisper. One or two simple hearers were left with the persuasion that the Great Seal had been taken suddenly unwell—and probably in a slightly indelicate manner. Thomas had to paint Mergleson's eye with grease paint left over from some private theatricals. It had been a patched-up affair altogether, and before she retired to bed that night, Lady Laxton had given way to her accumulated tensions and wept.

There was no reason whatever why, to wind up the day, Sir Peter should have stayed in her room for an hour saying what he thought of Lord Moggeridge. She felt she knew quite well enough what he thought of Lord Moggeridge, and on these occasions he always used a number of words that she did her best to believe, as a delicately brought up woman, were unfamiliar to her ears. . . .

So on Monday, as soon as the guests had gone, she went to bed again and stayed there, trying as a good woman should to prevent herself thinking of what the neighbors could be thinking—and saying—of the whole affair, by studying a new and very circumstantial pamphlet by Bishop Fowle on social evils, turning over the moving illustrations of some recent antivivisection literature and rereading the accounts in the morning papers of a colliery disaster in the north of England.

TO SUCH women as Lady Laxton, brought up in an atmosphere of refinement that is almost colorless, and living a life troubled only by small social conflicts and the minor violence of Sir Peter, blameless to the point of complete uneventfulness, and secure and comfortable to the point of tedium, there is something amounting to fascination in the wickedness and sufferings of more normally situated people, there is a real attraction and solace in the thought of pain and stress, and as her access to any other accounts of vice and suffering was restricted she kept herself closely in touch with the more explicit literature of the various movements for human moralization that distinguish our age, and responded eagerly and gen-

Digitized by Google

erously to such painful catastrophes as enliven it. The counterfoils of her check book witnessed to her gratitude for these vicarious sensations. She figured herself to herself in her daydreams as a calm and white and shining intervention checking and reproving amusements of an undesirable nature, and earning the tearful blessings of the mangled by-products of industrial enterprise.

There is a curious craving for entire reality in the feminine composition, and there were times when in spite of these feasts of particulars she wished she could come just a little nearer to the heady dreadfulnesses of life than simply writing a check against it. She would have liked actually to see the votaries of evil blench and repent before her contributions, to have herself unstrapped and revived and pitied, some doomed and chloroformed victim of the so-called "scientist," to have herself participated in the stretcher and the hospital and humanity made marvelous by enlistment under the red-cross badge. But Sir Peter's ideals of womanhood were higher than his language, and he would not let her soil her refinement with any vision of the pain and evil in the world. "Sort of woman they want up there is a Trained Nurse," he used to say when she broached the possibility of *going* to some famine or disaster. "*You* don't want to go prying, old girl. . . ."

SHE suffered, she felt, from repressed heroism. If ever she was to shine in disaster, that disaster, she felt, must come to her, she might not go to meet it, and so you realize how deeply it stirred her, how it brightened her and uplifted her to learn from Mr. Mergleson's halting statements that perhaps, that probably, that almost certainly, a painful and tragical thing was happening even now within the walls of Shonts, that there was urgent necessity for action—if anguish was to be witnessed before it had ended and life was saved.

She clasped her hands; she surveyed her large servitor with agonized green-gray eyes.

"Something must be done at once," she said. "Everything possible must be done. Poor little Mite!"

"Of course, my lady, 'e *may* 'ave run away!"

"Oh, no!" she cried, "he hasn't run away. He hasn't run away. How can you be *so wicked*, Mergleson. Of course he hasn't run away. He's there now. And it's too dreadful."

She became suddenly very firm and masterful. The morning's colliery tragedy inspired her imagination.

"We must get pickaxes," she said. "We must organize search parties. Not a moment is to be lost, Mergleson—not a moment. . . . Get the men in off the roads. Get everyone you can. . . ."

And not a moment was lost. The road men were actually at work in Shonts before their proper dinner hour was over.

THEY did quite a lot of things that afternoon Every passage attainable from the dining-room opening was explored, and where these passages gave off chinks and crannies they were opened up with a vigor which Lady Laxton had greatly stimulated by an encouraging presence and liberal doses of whisky. Through their efforts a fine new opening was made into the library from the wall near the window, a hole big enough for a man to fall through, because one did, and a great piece of stonework was thrown down from the Queen Elizabeth tower exposing the upper portion of the secret passage to the light of day. Lady Laxton herself and the head housemaid went round the paneling with a hammer and a chisel, and called out "Are you there?' and attempted an opening wherever it sounded hollow. The sweep was sent for to go up the old chimneys outside the present flues. Meanwhile Mr. Darling had been set with several of his men to dig for, discover, pick up and lay open the underground passage or disused drain, whichever it was, that was known to run from the corner of the laundry toward the old ice house, and that was supposed to reach to the abbey ruins. After some bold exploratory excavations this channel was located and a report sent at once to Lady Laxton.

IT WAS this and the new and alarming scar on the Queen Elizabeth tower that brought Mr. Beaulieu Plummer posthaste from the estate office up to the house. Mr. Beaulieu Plummer was the Marquis of Cranberry's estate agent, a man of great natural tact, and charged among other duties with the task of seeing that the Laxtons did not make away with Shonts during the period of their tenancy. He was a sound, compact little man, rarely out of extreme riding breeches and gaiters, and he wore glasses, that now glittered with astonishment as he approached Lady Laxton and her band of spade workers.

"I can't bear to think of the poor little beggar, stuck head foremost into some cobwebby cranny, blowed if I can," said Thomas, getting help from the jug

At his approach Mr. Darling attempted to become invisible, but he was unable to do so.

"Lady Laxton," Mr. Beaulieu Plummer appealed, "may I ask—?"

"Oh, Mr. Beaulieu Plummer, I'm so *glad* you've come. A little boy—suffocating! I can hardly *bear* it."

"Suffocating!" cried Mr. Beaulieu Plummer, "*where?*" and was in a confused manner told.

HE ASKED a number of questions that Lady Laxton found very tiresome. But how did she *know* the boy was in the secret passage? Of course she knew; was it likely she would do all this if she didn't know? But mightn't he have run away? How could he when he was in the secret passage? But why not first scour the countryside? By which time he would be smothered and starved and dead! . . .

They parted with a mutual loss of esteem, and Mr. Beaulieu Plummer, looking very serious indeed, ran as fast as he could straight to the village telegraph office. Or, to be more exact, he walked until he thought himself out of sight of Lady Laxton and then he took to his heels and ran. He sat for some time in the parlor post office spoiling telegraph forms, and composing telegrams to Sir Peter Laxton and Lord Cranberry. He got these off at last, and then drawn by an irresistible fascination went back to the park and watched from afar the signs of fresh activities on the part of Lady Laxton.

He saw men coming from the direction of the stables with large rakes. With these they dragged the ornamental waters.

THEN a man with a pickax appeared against the sky-line and crossed the roof in the direction of the clock tower, bound upon some unknown but probably highly destructive mission.

Then he saw Lady Laxton going off to the gardens. She was going to console Mrs. Darling in her trouble. This she did through nearly an hour and a half. And on the whole it seemed well to Mr. Beaulieu Plummer that so she should be occupied. . . .

It was striking five when a telegraph boy on a bicycle came up from the village with a telegram from Sir Peter Laxton.

"Stop all proceedings absolutely," it said, "until I get to you."

Lady Laxton's lips tightened at the message. She was back from much weeping with Mrs. Darling and altogether finely strung. Here she felt was one of those supreme occasions when a woman must assert herself. "A matter of life or death," she wired in reply, and to show herself how completely she overrode such dictation as this she sent Mr. Mergleson down to the village public house with orders to engage anyone he could find there for an evening's work on an extraordinarily liberal overtime scale.

After taking this step the spirit of Lady Laxton quailed. She went and sat in her own room and quivered. She quivered but she clenched her delicate fist.

SHE would go through with it, come what might, she would go on with the excavation all night if necessary, but at the same time she began a little to regret that she had not taken earlier steps to demonstrate the improbability of Bealby having simply run away. She set to work to repair this omission. She wrote to the Superintendent of Police in the neighboring town, to the nearest police magistrate, and then on the off chance to various of her week-end guests, including Captain Douglas. If it was true that he had organized the annoyance of the Lord Chancellor (and though she still rejected that view she did now begin to regard it as a permissible hypothesis), then he might also know something about the mystery of this boy's disappearance.

Each letter she wrote she wrote with greater fatigue and haste than its predecessor and more illegibly.

Sir Peter arrived long after dark. He cut across the corner of the park to save time, and fell into one of the trenches that Mr. Darling had opened. This added greatly to the éclat with which he came into the hall.

Lady Laxton withstood him for five minutes and then returned abruptly to her bedroom and locked herself in, leaving the control of the operations in his hands. . . .

"If he's not in the house," said Sir Peter, "all this is thunderin' foolery, and if he's in the house, he's dead. If he's dead, he'll smell in a bit and then'll be the time to look for him. Somethin' to go upon instead of all this blind hacking the place about. No wonder they're threatenin' proceedings. . . ."

UPON Captain Douglas Lady Laxton's letter was destined to have a very distracting effect. Because as he came to think it over, as he came to put her partly illegible allusions to secret passages and a missing boy side by side with his memories of Lord Moggeridge's accusations and the general mystery of his expulsion from Shonts, it became more and more evident to him that he had here something remarkably like a clue, something that might serve to lift the black suspicion of irreverence and levity from his military reputation. And he had already got to the point of suggesting to Miss Philips that he ought to follow up and secure Bealby forthwith, before ever they came over the hill crest to witness the disaster to the caravan.

Captain Douglas, it must be understood, was a young man at war within himself.

He had been very nicely brought up, firstly in a charming English home, then in a preparatory school for select young gentlemen, then in a good set at Eton, then at Sandhurst, where the internal trouble had begun to manifest itself. Afterward the Bistershires.

There were three main strands in the composition of Captain Douglas. In the first place and what was peculiarly his own quality was the keenest interest in the *arky* of things and the (*Continued on page* 33)

COMMENT ON CONGRESS

SOME very fundamental questions of public policy are involved in the present status of affairs at Washington. One large class of these questions can be typified by this concrete one: "Ought an attempt be made to put the directors of the New Haven Road in jail?" On this question, stated frequently in broader terms, there is a difference of opinion which makes a more or less complete cleavage both among the leaders of the party in power and in public opinion generally. Stated in other terms, the question is, Is it still desirable to keep up that stern agitation which is necessary to unseat existing wrong? Stated in terms of party strategy, is it time to be less radical and veer toward the conservative? It is, of course, universally admitted now—even by Mr. Brandeis's most ardent enemies—that in the past of the New Haven a good deal was done that was wrong; sometimes legally wrong, sometimes merely morally wrong. It is also admitted that all of that has been uncovered now, that the New Haven has come into hands which are eager to run the road in conformity to the new standards. The evils that were inherent in the old régime have been undone. This being so, is it wise to go out after what may be called revenge? There is always the question how much that was done in the past was really crime committed with malevolent intent, and how much was merely the current morality of the times, commonly practiced by business, and sanctioned, or at least tolerated, through an indifference of public opinion. Mr. Thomas Jones, the appointee to the Federal Reserve Board, when under examination by the Senate Committee on Finance, made the point that standards of business morality have changed vastly during the past twenty years. The change is complete and the new standards have been accepted. This being so, have the benefits of exposure and agitation been completed? The reverse of the Government in respect to these practices is complete. That in itself is a great accomplishment. The reverse in public feeling about them is complete. These things will never again be even attempted by corporation heads and leaders of business. The Republican "old guard," which used to be sympathetic toward these practices, or at least indifferent to them, has gone and will never return. There is an opposition to the Democrats which has a political economy and a theory of the attitude of government toward business different from the Democrats. But the old corrupt fraternity between big business and government will never exist again.

Other Cases

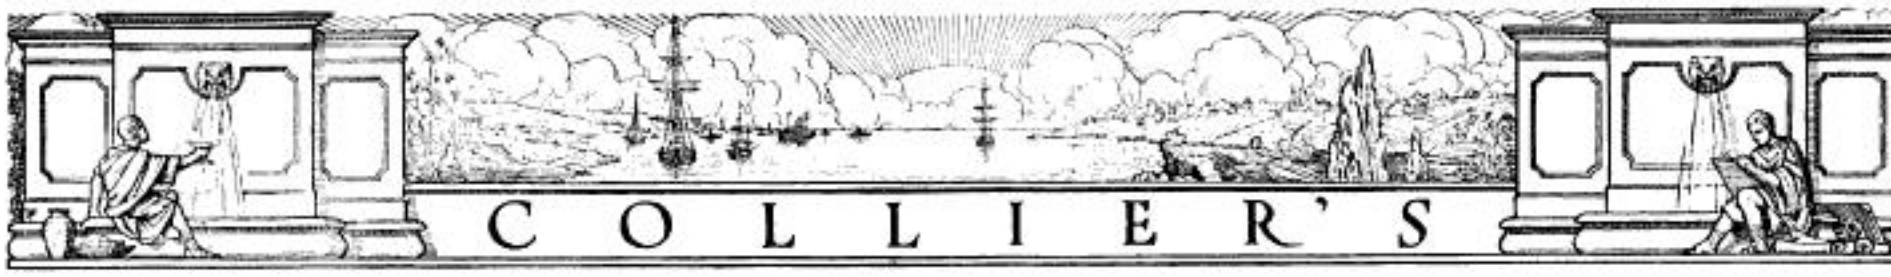
THE question comes up again in this form: there are some other railroads as to which improper practices are charged similar to those on the New Haven. One of these is the Rock Island. Another is the St. Louis & San Francisco. Probably at least one other large system belongs in the same group. Shall there be the same attack and exposure in these cases as in the New Haven? It is not very easy to argue the case for exemption for these, or any other roads or individuals who may be under well-grounded suspicion. It is not easy to argue for the suppression of publicity. Mr. Folk, the counsel for the Interstate Commerce Commission, it is well known, believes in going straight ahead and hewing to the root. It is not easy to argue against him.

Statesmanship

FITZ, in the St. Louis Post-Dispatch

On the Other Hand

IT MUST be admitted that both among the leaders at Washington and throughout public opinion generally there is some apprehension about the consequences of keeping up the present policy toward the New Haven and other railroads and toward organized business generally. The securities of the railroads now in receivership aggregate more than a billion dollars. Many of these securities are held by savings banks, trust companies, and, most menacing of all, life insurance companies. The consequences of any fundamental impairment of these securities are extremely uncomfortable for sober-minded persons to contemplate. Persons of not very sober responsibility who insist upon going ahead assume that the only persons who would be injured by the worst that can happen would be plutocrats of various degrees. As a matter of fact, the distress through impairment of the assets of life insurance companies and savings banks would be practically universal. The injury to these securities is not at all a necessary result of the about-face in the attitude of the Government or the conduct of railroads. It will be rather a result of the panic and lack of confidence apt to be caused by continued public hostility to some forms of private property. It will be, as President Wilson truly said, "psychological." These are the considerations which move sober-minded people toward hesitancy. Some others who are merely politicians also take the same view that it is time to veer toward conservatism. This latter group, being politicians, have a sense of public moods, and they feel that the public mood just now is a little tired of that very agitation which has been so agreeable to the public mood for a long time past.



Weather and Efficiency

A GOOD deal of the bickering and agitation in Washington is due merely to fatigue and hot weather. It all seems like important politics, and it gets large headlines in the newspapers, but at bottom it is nothing more than the irritations and explosions which come from tired men in the middle of a very hot spell. A few men in Washington maintain their serenity and the judicial coldness of their judgment. They are big men—intellectually. The great body of Senators, Congressmen, and others who are kept in Washington suffer more or less acute physical irritations. Many of them, in addition to enduring the discomforts of one of the worst hot-weather cities in the world, are fretting to be home looking after reelection.

Nevertheless—

WILSON had both strength and wisdom in insisting that Congress should stay and complete its work. Persons who clamored for Congress to go home before taking up the trust question were very shortsighted. It is inconceivable that business should be benefited by prolonged suspense. If Congress had gone home they would have returned at the beginning of the next session with a sense of leisure, with the election behind them. Probably they would have consumed two more years before finally completing their trust program. It is not conceivable that business should prosper during this suspense. It is very much better that the Democrats should have completed their program. When Congress will have passed the trust bills, Wilson will be in a position to say to business that the Democratic party has now done all it proposes to do in the way of fingering about the roots of business. He can assure business that it can look forward to a period of freedom from agitation. The Democrats will have enacted their idea of the attitude of government toward business. A good many people think that policy is old-fashioned, wrong, and pregnant with disaster. The best way to settle this difference of opinion is to try the Democratic policy out. If it is good, we ought to have a generation of comfort and good business. If it is bad, we shall find it out the sooner.

The New Haven Railroad Mess

THE REPORT made to the Senate of the United States by the Interstate Commerce Commission recites a vast amount of detail concerning the most infamous financial scandal this country has had in years. The main facts were already so well known that the stock of the railroad in question was selling at one-third of what used to be its normal value. But the full account is appalling. The whole thing may be summed up by saying that the New York, New Haven & Hartford Railroad was engaged in every sort of business save that of railroad work. Juggling paper securities, creating public opinion, buying steamships and trolley lines, influencing legislation and greasing certain mysterious politicians were a few of the activities to which this corporation devoted much of its best brains and a great deal of other people's money. The highly paid, highly trained, and well-reputed men at the head of it seem to have crawled through every sewer of crooked political finance in New York and New England. The usual chorus of apology and explanation is now being heard from the interested and sympathetic; the Interstate Commerce Commission is freely accused of suspicion, prejudice, political aims, and so forth, but it is only common sense to insist that honest men do not burn the books, nor deal largely with mysterious forgotten strangers, nor willfully confuse their own transactions, nor pay trust money for mere water. Facts like these cannot be smoothed over. They must be refuted or confessed.

Monopoly and Empire and the Facts

YET THIS SUPPOSED RAILROAD COMPANY was using the money of thousands of hard-headed American citizens; its directors numbered many of the best business men in New England. What were they after? Allowing for waste, arrogant dictation, carelessness, and the false confidence of long success, it remains clear that there was a great plan on foot. It seems to have been intended to build up and consolidate a unified transportation system, a railroad empire which should serve and guard and profit by the industrial greatness of New England. Every chance of competition, every possible shifting of the tides of trade and the channels of transportation, was to be anticipated and held in line. It was a great dream of enduring power; it regarded neither law nor ethics, and went to wreck on facts. Such an enterprise is a carcass for all the vultures of business and politics. It must be kept secret and be put through in haste, therefore it is blackmailed at every turn. Financial power can pay three prices for everything, but it cannot get three earnings. Receipts were falling and expenses rising, yet at the worst the railroad itself earned some twenty millions net. The old dividends could have been paid but for the $204,000,000 "invested" outside the steam-railway field. This water broke their backs and would have done so, investigation or no investigation.

The End of the Chapter

WHAT NEXT? The only certain thing is that the last ounce of political capital will be squeezed out of the incident. What we want is, on the one hand, enforcement of the law and, on the other, constructive work calculated to free and strengthen the vitally essential and truly national service of railroad transportation. The reputation of the Attorney General and the prestige of the Interstate Commerce Commission will depend quite largely on how they handle the issue thus presented to them. Above all, it will furnish a very severe test of the economic wisdom of the Democratic party.

Mr. Wilson's Attorney General

WE WISH the New York "World" were more even-handed in its distribution of praise and censure to the Wilson Administration. Its admirable support of WILSON would be still more effective if it were not so invariable and unquestioning. At the same time the "World's" uninterrupted prodding of Attorney General MCREYNOLDS does serious injustice to one of the most high-minded men in public life. Mr. MCREYNOLDS was taught in an old-fashioned school of law. The Tennessee community where he first made his way maintains rigid standards of propriety for lawyers. Its conventions forbid, for example, that a lawyer should exploit himself or his cases through public discussion outside the court room. Attorney General MCREYNOLDS does not see that these standards, which he acquired in his youth, may have relaxed a little in the course of time, nor does he see that the situation is changed when his client is the public. One may radically disagree with him as to what concessions to publicity a man in his position should make, but no one can help respecting him more than ever for sticking to his convictions. He has everything to gain personally and nothing to lose by casting off restraint; and to stick to what he thinks is the right and dignified course takes courage and character. These qualities he has. He is able and efficient in his office. Probably his efficiency is not impaired by the newspaper criticism which we regard unfair, but undoubtedly his comfort must be, and that is a real pity.

A Joke for the Dog Days

WHEN IT GETS TOO HOT FOR YOU just remember that Tammany has set up a "Bureau of City Inquiry" in New York and is now painfully reporting on waste, inefficiency, and expense in connection with snow removal last winter. The people in charge quote figures and state averages and unit costs with all the ponderous solemnity of a trained seal juggling wooden balls. When MURPHY gets this troupe in good form he ought to go into vaudeville—there's nothing on Broadway to touch it!

The Highroad

OF ALL THE RECIPES FOR SUCCESS boomed last June in the usual profusion, only one sticks in our memory. It is that of JOHN G. JOHNSON of Philadelphia, now said to be the greatest lawyer in the English-speaking world. It is indeed simple:

> He found out that very few lawyers really knew corporation law. And he made up his mind that he would learn it.

At the Northwest Gates

THE "DIAL," Chicago's greatest culture engine, prints some one's complaint that the article on Chicago in the new encyclopedia is years behind the age, and tells nothing of the latest skyscrapers and the highest totals of corn and oats handled by Chicago's elevators. But how can Chicago find anything to be prouder of than the fact that "Everyman's Encyclopedia" cannot keep up with her changes? A poet saw the city thus:

> Gigantic, willful, young,
> Chicago sitteth at the northwest gates
> With restless violent hands and casual tongue,
> Molding her mighty fates.

We have always considered this picture of Chicago by WILLIAM VAUGHN MOODY one of the keenest characterizations thinkable.

Chicago Honors a Poet

FOR EUGENE FIELD Chicago plans a worthy tribute. Just what form this will take has not been decided. But the city and the public have at last an opportunity to give in honor of a man who gave. His whole life was an outpouring of gifts: To the persons whose lives he touched, an inexhaustible fund of whimsical waggery which brightened the tedium of routine; to every fellow worker in the "newspaper game," the realization that no profession brings one closer to his fellows; to the professional humorist, knowledge that the daily routine in cap and bells may mean cheering and sweetening the world by mirth; to the lover of literature and books, encouragement in that passion; to every mother, such children's poems as "Little Boy Blue"; to every father, "Jest 'fore Christmas"; to every child, the chance to be better understood by grown-ups. Yes, the world may well do homage to the "good Knight, *sans peur et sans monie*," who nevertheless found his career in giving. His was the spirit that does not jeer at healthy sentiment, the philosophy that finds this world a good place to smile in, the sympathy which made him realize his ambition to be a vital sharer in the "companionship of humanity."

A Conducting Reformer

THE STREET CAR being crowded, we stood on the back platform with the conductor. He was genial and full of words. Naturally we fell into talk, mainly by him, with a "feeder" now and then from us. He advanced his theory as to why women get off a car the wrong way. He gave us the interesting information that the persons who handed him bills to change one day were the very ones who loaded him with pennies the next. He favored us with his reasons for ceasing to be a Republican, and explained why he considered MATHEWSON a greater pitcher than JOHNSON. The talk drifted to the ethics of his passengers. He expressed righteous indignation against anyone who swore in his car. On this point he burned with conviction. "*Yes*,

THE NATIONAL WEEKLY

sir," said he solemnly in conclusion, "*if any —— —— idiot swears on my car, —— —— him, off he goes!*" We often think of this conductor as we look at other reformers and compare principle and practice.

Nomination Seconded

A FEW WEEKS AGO we asked you to let us know what writers are most genuinely "American." One reader answers:

I nominate SARAH ORNE JEWETT for one of the two or three writers most truly American in spirit. She is *local*, I grant you, but so was O. HENRY, and yet they both had the human sympathy that is country wide. I imagine you meant *living* writers. Well, SARAH ORNE JEWETT is alive wherever there exists a volume of her stories.

Sounds sincere. And yet Miss JEWETT never wrote any "sex stuff" nor even a "strong" novel.

Applied Pessimism

ON THE EDITORIAL PAGE of the Wichita (Kas.) "Beacon," which declares itself with Kanspicuous modesty, "Official Paper of the People," we find a few paragraphs bemoaning the President's removal of JACK HARRISON, United States Marshal in Kansas—"who had yet a year to serve and who had made an excellent official." This removal, says the "Beacon," "was bad government and bad morals," and "a rank denial on the part of the Democratic party of all the high ideals the President is preaching." And the heading which Editor HENRY J. ALLEN runs over his lugubrious lament is this: NOT TRAVELED SO FAR AS WE THOUGHT.

Cheer Up, Brother!

OUR ADVICE to Brother ALLEN is: Cheer up! The world isn't a bad place. President WILSON hasn't so far scored a glorious success in Mexico, and his removal of JACK HARRISON was a mistake, yet the millennium never did come all of a sudden just because we had elected a new President. Mr. WILSON'S performance hasn't in every respect measured up to his preaching—but, honest, Mr. ALLEN, hasn't he given you the impression that he has been trying to make an advance upon the preceding Administration? You know perfection isn't attained all in a minute even in the newspaper business; in the very issue of the "Beacon" ("Official Paper of the People") which contains this lament of yours over JACK HARRISON and the marshalship there are a dozen or more advertisements of patent medicines, hair dyes, complexion creams, and stomach tonics that you probably don't tolerate in your own household. Yet we doubt if there are as many dope ads as appeared in the "Beacon" in President TAFT'S Administration—when Marshal HARRISON was safe in his job. The moral is: there's always room for improvement. Hence our advice: Cheer up and clear up!

"Aged"—Prematurely

TAKE A NIP at the liquor ads of a certain sort of magazine—each with a century-old date in its catch phrase. How they call up revolutionary memories:

Carstairs Rye—The Nightcap since 1788.
James E. Pepper, 1780—Born with the Republic.
Gordon & Co.'s Gin—Established 1769.
Johnny Walker—Born 1820: Still going strong.
Martell's Brandies—Established 1715.
Nicholl's—Great Britain's Standard for One Hundred Years.
Gibson's—Nearly eighty years the whisky standard.
Old Overholt Rye—Same for 100 years.
Evans Ale—1785.
Felton's Old Rum—1819-1914.

There is a rare vitality in the booze makers. But what about the takers?

On Closer Inspection
"Why, he's only a human being!"
Cartoon by F. G. Cooper

Civilizing the Home

A NEWS ITEM from Wisconsin shows how the world is moving toward justice within the family. We recommend this to those who regard the family as an obsolete device:

A wealthy farmer near West Salem has been farmed out to his wife by La Crosse County and will work for wages, all of which the county will turn over to the wife, under the new Wisconsin law.

She obtained her husband's conviction on an assault charge. Should he default or break faith, he will be subject to a penitentiary term.

What seems to be needed elsewhere and what is being applied in Wisconsin is this: A little common sense in law and a little recognition by the courts of the true responsibilities of the family relation. The home is not a place where a man can indulge his ill temper because he pays the bills. Not in Wisconsin.

Have You Letters from Riis?

JACOB RIIS wrote letters that were vivid and sparkling and rich in knowledge of life. Most of the friends who corresponded with him have kept his letters, and those of COLLIER'S readers who knew him will be doing a kindness to everyone else if they will address their letters from RIIS and any interesting reminiscences to

Mrs. JACOB RIIS, Pine Brook Farm, Barre, Mass.

When a book is made out of these materials, we shall all be gainers.

Words and Sales

NO DOUBT many of our hard-headed business friends feel that we often waste editorial space and time fussing over mere words. Well—a recent number of a well-known technical journal, the "Electrical Review and Western Electrician, with which is consolidated Electrocraft," comes forward with this most practical anecdote:

A wholesale baker told recently that he had quit calling the men on the wagons, who distributed his bread, "drivers," and was now referring to them as "salesmen."

"Business has increased 20 per cent since I made the change," he said, "because every man got a new angle on his work and felt that he was holding down a bigger job than he used to."

An increase of 20 per cent in sales is something to think for. Perhaps SOLOMON meant it literally when he spoke of the right word as bearing a resemblance to apples of gold.

"The Country Boy's Creed"

WE CAME UPON IT FIRST in the Greenwood (Miss.) "Commonwealth." But no source was given. We traced it, however, to its publication in the "Progressive Farmer" of Memphis, Tenn. That is as far as we have got, although a query to that paper brings the information that very likely the "Creed" was first used by a Boys' Corn Club in Virginia and was later adopted by all the Corn Clubs in that State. It would give us real pleasure to learn where and how this expressive statement of an ideal crystallized into words. Perhaps by this time you are curious to read it for yourself:

I believe that the country which GOD made is more beautiful than the city which man made; that life out of doors and in touch with the earth is the natural life of man. I believe that work with nature is more inspiring than work with the most intricate machinery. I believe that the dignity of labor depends not on what you do, but how you do it; that opportunity comes to a boy on the farm as often as to a boy in the city; that life is larger and freer and happier on the farm than in the town; that my success depends not upon my location, but upon myself; not upon my dreams, but upon what I actually do; not upon luck, but upon pluck. I believe in working when you work, and in playing when you play, and in giving and demanding a square deal in every act of life.

"Iron sharpeneth iron." Who knows a more succinct phrasing of the aspiration which this country nests through all its length and breadth?

Worthless Neighbors

By E. Miniter

ILLUSTRATED BY H. E. TOWNSEND

THE Old Woman did not worry much about the Hitchcocks.

She could plainly see their kitchen window at the top of the hillside path, and every afternoon at five, throughout the winter, she said to the cat and the kettle: "Anyhow, they've got kerosene."

And all three rested content.

Things, however, progressed rapidly at the Hitchcocks' since the day of Saint Martin's Summer when Dave fetched Lil home in a borrowed democrat, behind the wall-eyed horse that got cast on New Year's Eve. The Old Woman could not know this was to happen, but she did fear the creature would lie down before her door and refuse to rise. The long stop gave her a chance to observe the couple.

She had never thought much of David Hitchock. The best known about him was that on the day of his birth the doctor came by and said Hannah had begun on her last dozen. He was the thirteenth.

He had lately turned seventeen, and, of all things, started courting. Other young men put in a crop on shares, or went into the great world and sent home a picture of themselves taken at Coney in front of an automobile. He and Lilly Sanford had been exposed to the measles at the same moment. Afterward David made regular visits at the Sanfords', so he and Lil could have the disease nicely and sociably together.

THE measles was a thing of the past, and marriage had followed the courting.

"Seems to think that's all there is to it," observed the Old Woman, as she watched Lil yank the reins and David ply the willow switch. "Garden grown up to keckseyweed and pear-tree blight all over the apple orchard. Lilly Sanford give promise of being a real likely girl, only she does look some as if she relished another world."

The Old Woman thought of her own coming from the parson's. Abner had fetched her to this very house. Of course it was not the place she had made it since he had passed away and she got the insurance. But Abner had planted a beautiful garden—had even put love apples into it.

Lil's middy blouse and sailor were not the costume of a bride by long calculation. The Old Woman reflected smugly on her own white book-muslin gown, her mantelette from Molyneaux & Bell, her bonnet cape with its considerable kick, and the fact that the ivory handle of her parasol was jointed in three places.

A particularly harsh blow tickled the nag and the honeymoon journey continued. Having both arms woven about his girl, David drove with difficulty. Lil was thinking how dreadfully romantic it was to be married at fifteen. She had heard of a girl who got married so young she took her doll rags to her husband's home. Lil had always envied that girl. Being married meant, of course, that your fellow courted you the same as before, only he was there all the time, and you didn't have to give any account of yourself to a nosy parent.

DAVID stopped the rig at the side of the house, and with some dim idea of deference to a bride forced open the south door. It got shut again, and afterward Lil went out through the shed and by the swill barrel like the rest.

Into the darkness of the kitchen David propelled his voice.

"This is my wife Lil," he said. "Guess we'll take the north room for our'n."

One of the two derelicts got up and applied a match, first to the glow in his pipe, then to the charred wick of the lamp.

At the foot of the hill the Old Woman, watching for want of occupation, ejaculated: "Yes, they've got kerosene."

She treated herself to three sorts of preserves for supper—she always had two—before putting out the cat, winding up Seth Thomas, and retiring under a "Love in Eden" quilt.

The light showed the slip of a girl, three men, and Hannah. The men were old, and beyond being affected by any but the most violent shocks to the system, such as 100-proof alcohol, or the sight of money. Hannah, chair-ridden, stirred potatoes in an iron spider. Either the potatoes had gone bad, or she was frying them in rancid grease. Lil decided she would eat none of them.

The north room had been a noble apartment, but

"If you'd stir round, Lil," he was saying, "you'd feel better when you come to sit down"

that was before the Hitchcocks moved in. There were the remains of roses on the walls and the ceiling had divided itself into squares, some of which would fall before others, though all were about to come down. The furniture consisted of a box that had held soap, an ironical gift from the grocer.

Lil plumped herself upon it and began to cry. The Old Woman would have understood. She would not have understood the giggles that followed, when David, having set up a rickety four-post bedstead, and thrown a husk mattress upon it, suggested supper. He was squatting beside the box, and Lil was rubbing her chin on his shoulder like a little cat.

They supped on raw eggs, a form of dainty easily obtainable in the neighborhood. David showed Lil how to eat them from the shell, and they laughed and kissed and twittered with happiness, for it was their wedding night.

It was like a Hitchcock to marry in the offtime of the year. In summer David and Lil might have lived with trimmings of huckleberries. Harvest time was come, but the Hitchcocks had nothing to harvest.

THE Old Woman superintended the cellarage of a great variety of potatoes—Davis Seedlings, Jackson Whites, New York Mercles, Eastport Shenangoes, and Gidney's Seedlings. She supposed half of them would lie till they sprouted and be carted out in the spring. As for the apples—Congress, Baldwin, Seek-No-Further, and Mackintosh—they should not get ahead of her if she had to teach the cat to eat pie.

"If there don't go David Hitchcock," she remarked one December morning. "Been down to Sanfords' and come back loaded up with a little jag o' logs. Won't last long, for all signs point to a cold winter. Corn husks thicker'n usual and sparks on the bottom o' the teakettle every time I h'ist it."

David was husky; he could work. By vigorous prodding the old horse was induced to drag a plow over a fallow field not too grassbound, and he put in some rye. It winter killed. Then he cut his foot while working up wood in the village. He spent part of his pay setting himself up as a cobbler, and guaranteed himself, at the grocer's, to sole and heel with dispatch. The boots entrusted to him came back so boggled as to sole and heel, so generally with their patches pasted on, that Hitchcock as a cobbler became a joke, to be laughed at once, never patronized oftener.

The Old Woman presumed he'd picked up something, and it would help out. She thought the winter had been pretty considerable warm. Now ground-hog day had passed, she rather looked for three white frosts and then a storm. The melt of the pig had been heaviest at the back.

Then she peered up the hillside path and repeated her remark about kerosene.

SHE had not failed to do this since Lil was no longer seen meandering down the road "apiece" in her ridiculous little girl clothes, to bid David good-by as he stumped to the village. Of course what they had, or hadn't, was none of the Old Woman's concern. She only pitied herself because they had settled in her porridge dish, as it were. So she never worried about them, only said to the cat and the kettle: "Anyway, they've got kerosene."

And she and the cat and the kettle rested content.

David was bandaging his foot by the lamplight. The chimney had cracked so low down it didn't draw very well. He did the bandaging himself, most inconveniently, because cuts made Lil sick.

She sat right up into the stove, wrapped in a gray blanket, and still chilly. David could not understand the biting cold that began in the poor girl's bones and worked outward, where it showed itself in a red nose and pinched finger nails.

"If you'd stir round, Lil," he was saying, "you'd feel better when you come to sit down."

She made a petulant lip. "Stir round? And everywhere I go the rats run."

"Done the best I could to drive 'em out," he protested. "Went down cellar'n drummed on a pan like all possessed. Catched one and belled it."

"I wish to gracious you hadn't. I hear that tinkle-tinkle behind the plaster all night."

"Bung up your ears and go to sleep," advised David.

"But I can't—sleeping there, over that cupboard of hell," said Lil, with a scornful glance at the bed, whereunder the hound Venus and her growing offspring, boarded into winter quarters, were become a malodorous and heaving mass.

"It's only till spring," he said, soothingly. "Then I can trade 'em for something. Feller offered me a rifle for the pick."

"RIFLE!" cried Lil fretfully. "Won't the butcher take a couple? Seem's if I'd die if I didn't get my teeth into a beefsteak. I just don't see how we can hold out till spring."

"But we got to," replied David, in the discouraged manner of one repeating an oft-made explanation. "It's always hard sledding, but we pull through somehow."

"That old woman down there," moaned Lil, "I bet she's got everything. The grocer told me she was rich and lived in a kitchen with seven doors."

"Likely! I ain't stepped foot on her land since I run away when I was a little feller. She opened the door and threw out a mess o' b'iling hot dish water. Cricky, didn't I hyper for home!"

"I've heard say," murmured Lil, "that if you carry a rat out to the neighbors, and loose it, all the others'll follow on. It would be good enough for the Old Woman if you did that."

David's jaw slowly stiffened. "She ain't never done nothing to me," he observed.

There things rested; but later there came nights when Lil used to rouse him, (*Continued on page 30*)

The Thinker

Chicago

Chapter VI—Abroad at Home—*American Ramblings, Observations, and Adventures*

Winged Victory

By Julian Street

Illustrated by Wallace Morgan

IMAGINE a young demigod, product of a union between Rodin's "Thinker" and the Winged Victory of Samothrace, and you will have my symbol for Chicago.

Chicago is stupefying. It knows no rules, and I know none by which to judge it. It stands apart from all the cities in the world, isolated by its own individuality, an Olympian freak, a fable, an allegory, an incomprehensible phenomenon, a prodigious paradox in which youth and maturity, brute strength and soaring spirit, are harmoniously confused.

Call Chicago mighty, monstrous, multifarious, vital, lusty, stupendous, indomitable, intense, unnatural, aspiring, puissant, preposterous, transcendent—call it what you like—throw the dictionary at it! It is all that you can do, except to shoot it with statistics. And even the statistics of Chicago are not deadly, as most statistics are.

First, you must realize that Chicago stands fourth in population among the cities of the world and second among those of the Western Hemisphere. Next you must realize that there are people still alive who were alive when Chicago did not exist even as a fort in a swamp at the mouth of the Chicago River—the river from which, by the way, the city took its name, and which in turn took its own name from an Indian word meaning "skunk."

I do not claim that there are many people still alive who were alive when Chicago wasn't there at all, or that such people are feeling very active, or that they remember much about it, for in 102 years a man forgets a lot of little things. Nevertheless, there *are* living men older than Chicago, though I do not know of one who is as large or as strong and active.

A Capsule of Statistics

JUST one hundred years ago Fort Dearborn, at the mouth of the river, was being rebuilt, after a massacre by the Indians. Eighty-five years ago Chicago was a village of one hundred people. Sixty-five years ago this village had grown into a city of approximately the present size of Evanston—a suburb of Chicago, with less than thirty thousand people. Fifty-five years ago Chicago had something over one hundred thousand inhabitants. Forty-five years ago, at the time of the Chicago fire, the city was as large as Washington is now—over three hundred thousand. In the ten years which followed the disaster Chicago was not only entirely rebuilt, and very much improved, but also increased in population to half a million, or about the present size of Detroit. In the next decade it actually doubled in size, so that, twenty-five years ago, it passed the million mark.

Soon after that it pushed Philadelphia from second place among American cities. So it has gone on, until to-day it has a population of two million, plus a city of about the size of San Francisco for full measure.

There are the statistics in a capsule paragraph. I hope you will feel better in the morning. And just to take the taste away, here's another item which you may like because of its curious flavor: Chicago has more Poles than any other city except Warsaw.

Lusty Cheers—and Hisses

ONE knows in advance what a visitor from Europe will say about New York, just as one knows what an American humorist will say about Europe. But one never knows what any visitor will say about Chicago. I have heard people damn Chicago—"up hill and down," I was about to say, but I withdraw that, for the highest hill I remember in Chicago is that ungainly little bump, on the lake front, which is surmounted by Saint Gaudens's statue of General Logan.

As I was saying, I have heard people rave against Chicago and about it. Being itself a city of extremes, it seems to draw extremes of feeling and expression from outsiders. For instance, Canon Hannay, who writes novels and plays under the name of George A. Birmingham, was quoted, at the time of his recent visit to this country, as saying: "In a little while Chicago will be a world center of literature, music, and art. British writers will be more anxious for her verdict than for that of London. The music of the future will be hammered out on the shores of Lake Michigan. The Paris Salon will be a second-rate affair."

A City Alive to Art

REMEMBERING that the Canon is an Irishman and a humorist—which is tautology—we may perhaps discount his statement a little bit for blarney and a little more for fun. His "prophecy" about the Salon seems to stamp the interview with waggery, for certainly it is not hard to prophesy what is already true—and, as everybody ought to know by now, the Salon has for years been second-rate.

The Chicago Art Institute has by all odds the most important art collection I visited upon my travels. The pictures are varied and interesting, and American painters are well represented. The presence in the institute of a good deal of that rather "tight" and "sugary" painting which came to Chicago at the time of the World's Fair, is to be regretted—a fact which is, I have no doubt, quite as well known to those in charge of the museum as to anybody else. But as I remarked in a previous chapter, most museums are hampered, in their early days, by the gifts of their rich friends. It takes a strong museum indeed to risk offending a rich man by kicking out bad paintings which he offers. Even the Metropolitan Museum of Art in New York has not always been so brave as to do that.

"Who's Who" (which, by the way, is published in Chicago) mentions perhaps a score of Chicago painters and sculptors, among the former Lawton S. Parker and Oliver Dennett Grover, and among the latter Lorado Taft.

There are, however, many others who attempt to paint—enough of them to give a fairly large and very mediocre exhibition which I saw. One thing is, however, certain: the Art Institute has not the deserted look of most other art museums one visits. It is used. And, as you watch the crowds, you realize more than ever that Chicago is alive to everything—even to art.

As I stood there, studying the temperament of pigs, I saw the butcher looking up at me. . . . I have never seen such eyes

Our Traveltalker Falters

YEARS ago Chicago was musical enough to support the late Theodore Thomas and his orchestra—one of the most distinguished organizations of the kind which has ever been assembled in this country. Thomas did great things for Chicago, musically. He started her, and she has kept on. Besides innumerable and varied concerts which occur throughout the season, the city is one of four in the country strong enough to support a first-rate grand opera company of its own.

About twenty-five musicians of one sort and another are credited to Chicago by "Who's Who," the most distinguished among them, perhaps, being Fannie Bloomfield Zeisler, the concert pianist. But it is the writers of Chicago who come out strongest in the fat red volume among followers of the arts. With sinking heart I counted about seventy of these, and I may be merely revealing my own ignorance when I add that the names of a good two-thirds of them were new to me. But this is dangerous ground. Without further comment let me say that among the seventy I found such names as Robert Herrick, Henry B. Fuller, Hamlin Garland, Emerson Hough, Henry Kitchell Webster, Maud Radford Warren, Opie Read, and Clara Louise Burnham—a hatful of them which you may sort and classify according to your taste.

"This Reminds Me"

CANON HANNAY said he felt at home in Chicago. So did Arnold Bennett. Canon Hannay said Chicago reminded him of Belfast. Arnold Bennett said Chicago reminded him of the "Five Towns," made famous in his novels. Even Baedeker breaks away from his usual nonpartisan attitude long enough to say with what, for Baedeker, is nothing less than an outburst of passion: "Great injustice is done to Chicago by those who represent it as wholly given over to the worship of Mammon, as it compares favorably with a great many American cities in the efforts it has

Digitized by Google

made to beautify itself by the creation of parks and boulevards and in its encouragement of education and the liberal arts." Baedeker is quite right about that. He might also have added that the "Windy City" is not so windy as New York, and that old legend, now almost forgotten, to the effect that Chicago girls have big feet is equally untrue. Thanks to the present mode in dress, I was able to assure myself quite definitely upon that point. I not only saw Chicago feet upon the streets; I saw them also at dances—twinkling, slippered feet as small as any in the land; and again, owing to the present mode, I saw not only pretty feet, but also— However, I am digressing. That is enough about feet. I fear I have already let them run away with me.

When Natives Get Together

A FRIEND of mine who visited Chicago for the first time, a year ago, came back appreciative of its wonders, but declaring it provincial.

"Why do you say provincial?" I asked.

"Because you can't pick up a taxi in the street," he said.

And it is true. I was chagrined at his discovery—not so much because of its truth, however, as because it was the discovery of a New Yorker. I always defend Chicago against New Yorkers, for I love the place, partly for itself and partly because I was born and spent my boyhood there.

I know a great many other ex-Chicagoans who now live in New York, as I do, and I have noticed with amusement that the side we take depends upon the society in which we are. If we are with Chicagoans, we defend New York; if with New Yorkers, we defend Chicago. We are like those people in the circus who stand upon the backs of two horses at once. Only among ourselves do we go in for candor.

The other day I met a man and his wife, transplanted Chicagoans, on the street in New York.

"How long have you been here?" I asked.

"Three years," said the husband.

"Why did you come?"

"For business reasons."

"How do you like the change?"

The husband hesitated. "Well, I've done a great deal better here than I ever did in Chicago," he said.

"How do you like it?" I asked the wife.

"New York gives us more advantages," she said, "but I prefer Chicago people."

"Would you like to go back?"

The wife hesitated, but the husband shook his head.

"No," he replied, "there's something about New York that gets into your blood. To go back to Chicago would seem like retrograding."

A Word About Literary Gods

AMONG my notes I find the record of a conversation with a New York girl who married a Chicago man and went out there to live.

"I was very lonely at first," she said. "One day a man came around selling pencils. I happened to see him at the door. He said: 'I'm an actor, and I'm trying to raise money to get back to New York.' As I was feeling then I'd have given him anything in the house just because that was where he wanted to go. I gave him some money. 'Here,' I said, 'you take this and go on back to New York.' 'Why,' he inquired, 'are you from New York, too?' I said I was. Then he asked: 'What are you doing away out here?' 'Oh,' I told him, 'this is my home now. I live here.' He thanked me, and as he put the money in his pocket he shook his head and said: 'Too bad! Too bad!'

"That will show you how I felt at first. But when I came to know Chicago people I liked them. And now I wouldn't go back for anything."

There is testimony from both sides.

With the literary man the situation is, perhaps, a little different. New York is practically his one big market place. I was speaking about that the other day with an author who used to live in Chicago.

"The atmosphere out there is not nearly so stimulating for a writer," he assured me. "Here, in New York, even a pretty big writer is lost in the shuffle. Out there he is a shining mark. The Chicago writers are likely to be a little bit self-conscious and naïve. They have their own local literary gods, and they're rather inclined to sit around and talk solemnly about 'Art with a capital A.'"

Of Society and Shopping

NECESSARILY, when the adherents of two cities start an argument, they are confined to concrete points. They talk about opera and theatres and buildings and hotels and stores, and seldom touch upon such subtle things as city spirit. For spirit is a hard thing to deal with and a harder thing to prove. Yet "greatness knows itself." Chicago unquestionably knows that it is great, and that its greatness is of the spirit. But the Chicagoan, debating in favor of his city, is unable to "get that over," and is therefore obliged to fall back upon two last, invariable defenses: the department store of Marshall Field & Co. and the Blackstone Hotel.

The Blackstone, he will tell you, with an eye lit by fanatical belief, is positively the finest hotel in the whole United States. Mention the Ritz, the Plaza, the St. Regis, the Biltmore, or any other hotel to him, and it makes no difference: the Blackstone is the best. As to Marshall Field's, he is no less positive: It is not merely the largest but also the very finest store in the whole world.

I have never stopped at any of those hotels with which the New Yorker would attempt to defeat the Blackstone. But I have stopped at the Blackstone, and it is undeniably a very good hotel. One of the most agreeable things about it is the air of willing service which one senses in its staff. It is an excellent manager who can instill into his servants that spirit which causes them to seem to be eternally on tiptoe—not for a tip but for a chance to serve. Further, the Blackstone occupies a position, with regard to the fashionable life of Chicago, which is not paralleled by any single hotel in New York. Socially it is preeminently the place.

General dancing in such public restaurants as Rector's—the original Rector's is in Chicago, you know—and, in the dining rooms of some hotels, was started in Chicago, but was soon stopped by municipal regulation. Since that time other schemes have been devised. Dances are held regularly in the ballrooms of most of the hotels, but are managed as clubs or semi-private gatherings. This arrangement has its advantages. It would have its advantages, indeed, if it did nothing more than put the brakes on the dancing craze—as anyone can testify who has seen his friends offering up their business and their brains as a sacrifice to Terpsichore. But that is not what I started to say. The advantage of the system which was in vogue at the Blackstone, when I was there, is that, to get into the ballroom, people must be known; so that ladies who may still have doubts as to the propriety of dancing in a public restaurant need not, and do not, hesitate to go there and dance to their toes' content.

Of course we visited Marshall Field's. The obliging gentleman who showed us about the inconceivably enormous buildings, rushing from floor to floor, poking in and out through mysterious, baffling doors and passageways, now in the public part of the store where goods are sold, now behind the scenes where they are made—this gentleman seemed to have the whole place in his head—almost as great a feat as knowing the whole world by heart.

"How much time can you spare?" he asked as we set out from the top floor, where he had shown us

The bold front of Michigan Avenue wreathed in whirling smoke and that allegor

huge recreation room, gymnasium, and dining room, all for the use of employees.

"How long should it take?"

"It can be done in two hours," he said, "if we keep moving all the time."

"All right," I said—and we did keep moving. Through great rooms full of trunks, of brass beds, through vast galleries of furniture, through restaurants, grilles, afternoon tea rooms, rooms full of curtains and coverings and cushions and corsets and waists and hats and carpets and rugs and linoleum and lamps and toys and stationery and silver, and Heaven only knows what else, over miles and miles of pleasant, soft, green carpet I trotted along beside the amazing man who not only knew the way, but seemed even to know the clerks. Part of the time I tried to look about me at the phantasmagoria of things with which civilization has encumbered the human race; part of the time I listened to our cicerone; part of the time I walked blindly scribbling notes, while my companion guided my steps. Here are some of the notes:

. . . Ten thousand employees in retail store. . . Choral society, two hundred members, made up of sales people. . . . Twelve baseball teams in retail store, twelve in wholesale; play during season, and, finally, for championship cup, on "Marshall Field Day." . .

Digitized by Google

Lectures on various topics, fabrics, etc., for employees, also for outsiders—women's clubs, etc. . . Employees lunch: soup, meat, vegetables, etc., sixteen cents. . . . Largest retail custom dressmaking business in the country. . . Largest business in ready-made apparel. . . . Largest retail millinery business. . . . Largest retail shoe business. . . . Largest branch of Chicago public library (for employees). . . Largest subpostal station in Chicago. . . . Largest—largest—largest! . . .

Now and then when something interested me particularly we would pause and catch our breath. Once

g Grant Park . . . . great buildings
nfinity which confronts one as he looks eastward

we stopped for two or three minutes in a fine schoolroom, where some stock boys and stock girls were having a lesson in fractions. . . . "To fit them for better positions." Again we paused in a children's playroom, where mothers left their youngsters while they went to do their shopping, and where certain youngsters, thus deposited, were having a gorgeous time, sliding down things, and running around other things, and crawling over and under still other things. Still again we paused at the telephone switchboard—a switchboard large enough to take care of the entire business of a city of the size of Springfield, the capital of Illinois. And still again we paused at the subpostal station, where fifty to sixty thousand dollars' worth of stamps are sold in a year, and which does as great a postal business in the holiday season, as the whole city of Milwaukee does at the same period.

A Big Store's "World Unseen"

AT ONE time we would be walking through a great shirt factory, set off in one corner of that Gargantuan building, all unknown to the shoppers who never get behind the scenes; then we would pop out again into the dressed-up part of the store, just as one goes from the kitchen and the pantry of a house into the formality of dining room and drawing room. And as we appeared thus, and our guide was recognized as the assistant manager of all that kingdom, with its population of ten thousand, saleswomen would rise suddenly from seats, little gossiping groups would disperse quickly, and floor men, who had been talking with saleswomen, would begin to occupy themselves with other matters. I remember coming upon a "silence room" for saleswomen—a large, dark, quiet chamber, in which was an attendant; also a saleswoman who was restlessly resting by rocking herself in a chair. And as we moved through the store we kept taking off our hats as we went behind the scenes, and putting them on as we emerged into the public parts. Never before had I realized how much of a department store is a world unseen by shoppers. At one point, in that hidden world, a vast number of women were sewing upon dresses. I had hardly time to look upon the scene when, rushing through a little door, in pursuit of my active guide, I found myself in a maze of glass, and long-piled carpets, and mahogany, and electric light, and pretty frocks, disposed about on forms. Also disposed about were many "perfect thirty-sixes," doing the "débutante slouch" in their trim black costumes, so slinky and alluring—especially with piles of taffy-colored hair. Here I had a strong impulse to halt, to pause and examine the carpets and woodwork, and one thing and another. But no! Our guardian had a professional pride in getting us through the store within two hours, according to his promise. I would have gladly allowed him an extra ten minutes if I could have spent it in that place, but on we went—my companion and I dragging behind a little and looking backward at the Lorelei—I remember that, because I ran into a man and knocked my hat off.

At last we came to the information bureau, and as there was a particularly attractive young person behind the desk, it occurred to me that this would be a fine time to get a little information.

"I wonder if I can stump that sinuous sibyl," I said.

"Try it," said our conductor.

So I went over to her and asked: "How large is this store, please?"

"You mean the building?"

"Yes."

"There is fifty acres of floor space under this roof," she said. "There are sixteen floors: thirteen stories rising two hundred and fifty-eight feet above the street, and three basements, extending forty-three and a half feet below. The building takes up one entire block. The new building devoted exclusively to men's goods is just across Washington Street. That building is—"

"Thank you very much," I said. "That's all I want to know about that. Can you tell me the population of Chicago?"

"Two million three hundred and eighty-eight thousand five hundred," she said glibly, showing me her pretty teeth.

Then I racked my brains for something hard to ask her.

"Now," I said, "will you please tell me where Charles Towne was born?"

"Do you mean Charles A. Towne, the lawyer; Charles Wayland Towne, the author; or Charles Hanson Towne, the poet?" she demanded.

I managed to say that I meant the poet Towne.

"He was born in Louisville, Ky.," she informed me sweetly. She even gave me the date of his birth, too, but as the poet is a friend of mine, I will suppress that.

"Is that all?" she inquired presently, seeing that I was merely gazing at her.

"Yes, you adorable creature," . . . The first word of that sentence is all that I really uttered. I only thought the rest.

"Very well," she replied, shutting the book in which she had looked up the Townes.

"Thanks very much," I said.

"Don't mention it," said she—and went about her business in a way that sent me about mine.

Chicago's Happy Saleswomen

ASIDE from its vastness and the variety of its activities, two things about Marshall Field's store interested me particularly. One is the attitude maintained by the company with regard to claims made in advertising "sales." When there is a "sale" at Field's comparisons of values are not made. It may be said that certain articles are cheap at the price at which they are being offered, but it is never put in the form: "Was $5, Now $2.50." Field's does not believe in that.

"We take the position," an official explained to me, "that things are worth what they will bring. For instance, if some manufacturer has made too many overcoats, and we are able to get them at a bargain, or if there is a mild winter and overcoats do not sell well, we may place on sale a lot of coats which were meant to be sold at $40, but which we are willing to sell at $22.50. In such a case we never advertise 'Worth $40.' We just point out that these are exceptionally good coats for the money. And, when we say that, it is invariably true. This advertising is not so sensational as it could be made, of course, but we think that in the long run it teaches people to rely upon us."

Another thing which interested me in Field's was the appearance of the saleswomen. They do not look like New York saleswomen. In the aggregate they look happier, simpler, and more natural. I saw no women behind the counters there who had the haughty, indifferent bearing, the nose-in-the-air, to which the New York shopper is accustomed. Among these women, no less than among the rich, the Chicago spirit seemed to show itself. It is everywhere, that spirit. I admit that, perhaps, it does not go with omnipresent taxicabs. I admit that there are more effete cities than Chicago. The East is full of them. But that any city in the country has more sterling simplicity, greater freedom from sham and affectation among all classes, more vigorous cultivation, or more well-bred wealth, I respectfully beg to doubt. . . .

No, I have *not* forgotten Boston and Philadelphia.

A Cataract of "Mona Lisas"

IN AN earlier chapter I told of a man I met upon a train who, though he lived in Buffalo, had never seen Niagara Falls. In Chicago it occurred to me that, though I had worked on a newspaper, I had never stood as an observer and watched a newspaper "go through." So, one Saturday night after sitting around the city room of the Chicago "Tribune"—which is one of the world's great newspapers—and talking with a group of men as interesting as any men I ever found together, I was placed in charge of James Durkin, the world's most eminent office boy, who forthwith took me to the nether regions of the Tribune Building.

With its floor of big steel plates, its towering presses, vast and incomprehensible, and its grimy men in overalls, the pressroom struck me as resembling nothing so much as the engine room of an ocean liner.

The color presses were already roaring, shedding streams of printed paper like swift waterfalls, down which shot an endless chain of Mona Lisas—for the Mona Lisa took the whole front page of the "Tribune"

Digitized by Google

colored supplement that week. At the bottom, where the "folder" put the central creases in them, the paper torrents narrowed to a disappearing point, giving the illusion of a subterranean river, vanishing beneath the floor. But the river didn't vanish. It was caught, and measured, and folded, and cut, and counted by machinery, as swift, as eye-defying, as a moving picture; machinery which miraculously converted a cataract into prim piles of Sunday newspapers, which were, in turn, gathered up and rushed away to the mailing room—whither, presently, we followed.

In the mailing room I made the acquaintance of a machine with which, if it had not been so busy, I should have liked to shake hands, and sit down somewhere for a quiet chat. For it was a machine possessed of the Chicago spirit: modest, businesslike, effective, and highly intelligent. I did not interrupt it, but watched it at its work. And this is what it did: It took Sunday papers, one by one, from a great pile which was handed to it every now and then, folded them neatly, wrapped them in manila paper, sealed them up with mucilage, squeezed them, so that the seal would hold, addressed them to out-of-town subscribers and dropped them into a mail sack. There was a man who hovered about, acting as a sort of valet to this highly capable machine, but all he had to do was to bring it more newspapers from time to time, and to take away the mail bags when they were full, or when the machine had finished with all the subscribers in one town, and began on another. Nor did it fail to serve notice of each such change. Every time it started in on a new town it dipped its thumb in some red ink, and made a dab on the wrapper of the first paper, so that its valet—poor human thing—would know enough to furnish a new mail bag. I noted the name to which one red-dabbed paper was addressed: *E. J. Henry, Bosco, Wis.*, and I wondered if Mr. Henry had ever wondered what made that florid mark.

It was near midnight then. All Bosco was asleep. Was Mr. Henry dreaming? And however wonderful his dream, could it surpass, in wonder, this gigantic organization which, for a tiny sum, tells him, daily, everything that happens everywhere?

A Path of Glory's Termination

THINK of the men and the machines that work for Mr. E. J. Henry, resident of Bosco, in the Badger State! Think of the lumbermen who cut the logs; of the Eastern rivers down which those logs float; of the great pulp mills which convert them into paper. Think of the railroad trains which bring that paper to Chicago. Think of the factories which build presses for the ultimate defacement of that paper; and the other factories which make the ink. Think of the reporters working everywhere! Think of the men who laid the wires with which the world is webbed, that news may fly; and the men who sit at the ends of those wires, in all parts of the globe, ticking out the story of the day to the "Tribune" office in Chicago, where it is received by other men, who give it to the editors, who prepare it for the linotypers, who set it for the stereotypers, who make it into plates for the presses, which print it upon the paper, which is folded, addressed, and dropped into a mail bag, which is rushed off in a motor through the midnight streets, and put aboard a train, which carries it to Bosco, where it is taken by the postman and delivered at the residence of Mr. E. J. Henry, who, after tearing the manila wrapper, opening the paper, and glancing through it, remarks: "Pshaw! There's no news to-day!" and, forthwith, rising from the breakfast table, takes up an old pair of shoes, wraps them in his copy of the Chicago "Tribune," tucks them under his arm and takes them down to the cobbler to be half-soled. *Sic transit gloria!*

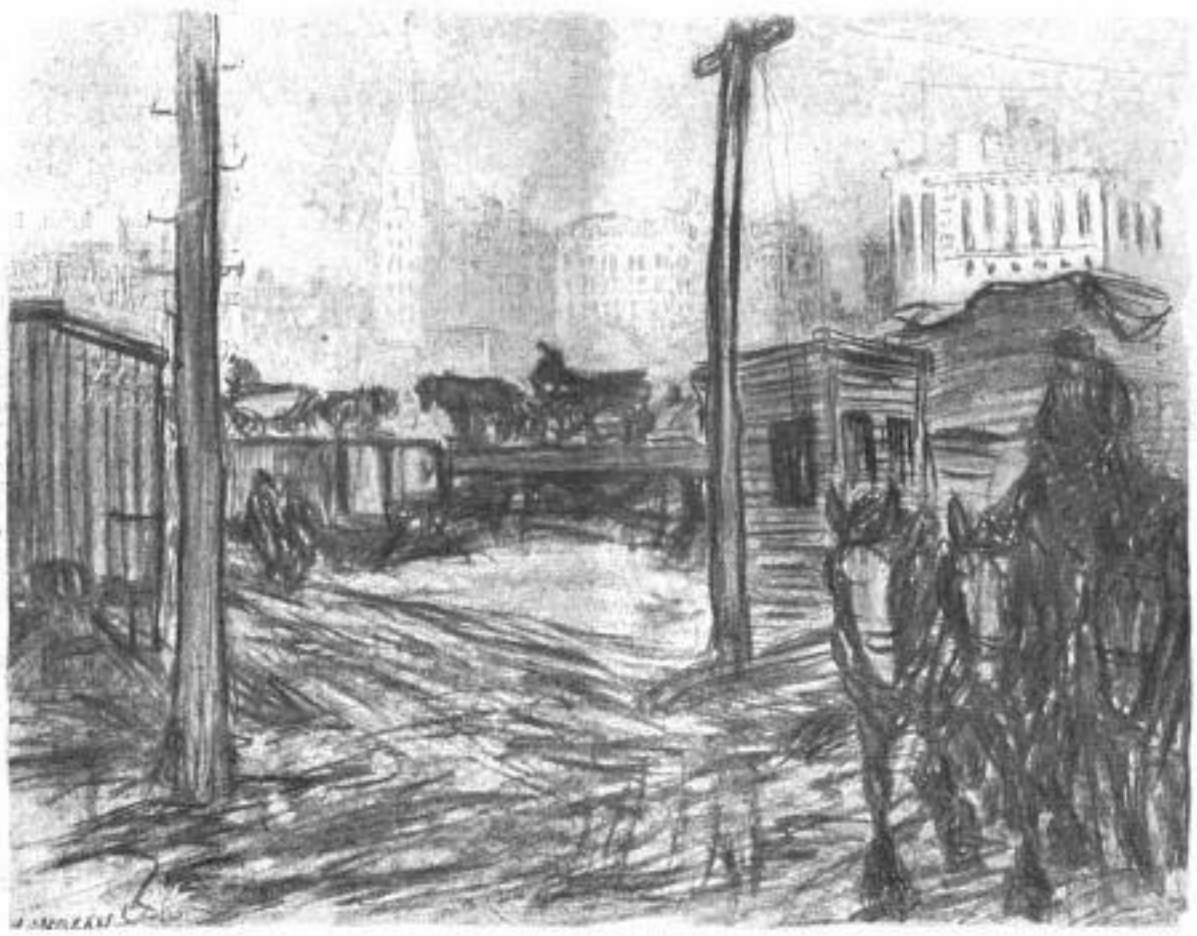
Home of the First Free Lunch

IT IS rather widely known, I think, that Chicago built the first steel-frame skyscraper—the Tacoma Building—but I do not believe that the world knows that Kohlsaat's in Chicago was the first quick-lunch place of its kind, or that the first "free lunch" in the country was established, many years since, in a basement saloon at the corner of State and Madison Streets. Considering the skyscrapers and quick lunches and free lunches that there are to-day, it is hard to realize that there ever was a first one anywhere. But the origin of things which have become national, as these things have, seems to me to be worth noting here. And it is perhaps worth adding that the loyal Chicagoan who told of these things seemed to be prouder of the "free lunch" and the quick lunch than of the skyscraper.

Off for the Stockyards

OF TWO things I mentioned to him he was not proud at all. One was the famous pair of First Ward aldermen who have attained a national fame under their nicknames, "Hinky Dink" and "Bathhouse John." The other was the stockyards.

"Why is it," he asked in a bored and irritated tone, "that everyone who comes out here has to go to the stockyards?"



"Are you aware," I returned, "that half the bank clearings of Chicago are traceable to the stockyards?"

His answer was a noncommittal grunt.

His was not the attitude of the Detroit man who wants you to know that Detroit does something more than make automobiles, or of the Grand Rapids man who says: "We make lots of things here besides furniture." He was really ashamed of the stockyards, as a man may, perhaps, be ashamed of the fact that his father made his money in some business with a smell to it. And because he felt so deeply on the subject, I had the half idea of not touching on the stockyards in this chapter.

However the fact that my companion and myself were there to "do" Chicago was printed in the papers, and presently the stockyards began to call us up. It didn't even ask if we were coming. It just asked *when*. And as I hesitated, it settled the whole matter then and there by saying it was coming for us in its motor car, at once.

I may say at the outset that, to quote the phrase of Mr. Freer of Detroit, the stockyards "has no esthetic value." It is a place of mud, and railroad tracks, and cattle cars, and cattle pens, and overhead runways, and great ugly brick buildings, and men on ponies, and raucous grunts, and squeals, and smells—a place which causes the heart to sink with a sickening heaviness.

Chicago's sky line from the docks (looking westward toward Grant Park and Michigan Avenue). . . . A city which rebuilt itself after the fire; in the next decade doubled its size; and now has a population of two million, plus a city of about the size of San Francisco

An Unexpected Bit of Beauty

OUR first call was at the Welfare Building, where we were shown some of the things which are being done to benefit employees of the packing houses. It was noontime. The enormous lunch room was well occupied. A girl was playing ragtime at a piano on a platform. The room was clean and airy. The women wore aprons and white caps. A good lunch cost six cents. There were iron lockers in the locker room—lockers such as one sees in an athletic club. There were marble shower baths for the men and for the women. There were two manicures who did nothing but see to the hands of women working in the plant. There were notices of classes in housekeeping, cooking, washing, house furnishing, the preparation of food for the sick—signs printed in English, Russian, Slovak, Polish, Bohemian, Hungarian, Lithuanian, German, Norwegian, Swedish, Croatian, Italian, and Greek. Obviously, the company was doing things to help these people. Obviously it was proud of what it was doing. Obviously I should have rejoiced, saying to myself: "See how these poor, ignorant foreigners who come over here to our beautiful and somewhat free country are being elevated!" But all I could think of was: "What a horrible place the stockyards is! How I loathe it here!"

On the North Side of Chicago there is an old and exclusive club, dating from before the days of motor cars, which is known as the Saddle and Cycle Club. The lunch club for the various packing-house officials, at the stockyards, has a name bearing perhaps some satirical relation to that of the other club. It is called the Saddle and Sirloin Club, and in that club I ate a piece of sirloin which will always remain sacred in my memory.

After lunching and visiting the offices of a packing company where, we were told, an average daily business of $1,300,000 is done—and the place looks it—we visited the Stockyards Inn, which is really an astonishing establishment. The astonishing quality about it is that it is a thing of beauty which has grown up in a place as far removed from beauty as any that I ever looked upon outside a mining camp. A charming, low, half-timbered building, it is like something at Stratford-on-Avon; and by some strange freak of chance the man who runs it has a taste for the antique in furniture and chinaware. Inside it is almost like a fine old country house—pleasant cretonnes, grate fires, old Chippendale chairs, mahogany tables, grandfather's clocks, pewter, and luster ware. All this for cattlemen who bring their flocks and herds into the yards! The only thing to spoil it is the all-pervasive smell of animals.

From there we went to the place of death.

Through a small door the fated pigs enter the final pen fifteen or twenty at a time. They are nervous, perhaps because of the smell coming from within, perhaps because of the sounds. A man in the pen loops a chain around the hind foot of each successive pig, and then slips the iron ring at the other end of the chain over a hook at the outer margin of a revolving drum, perhaps ten feet in diameter. As the drum revolves the hook rises, slowly drawing the pig backward by the leg, and finally lifting it bodily, head downward. When the hook reaches the top of its orbit it transfers the animal to a trolley, upon which it slides in due course to the waiting butcher, who dispatches it with a knife thrust in the neck, and turns to receive the next pig.

The Conduct of Fated Pigs

THE manners of the pigs on their way to execution held me with a sort of horrid fascination. Pigs look so much alike that we assume them to be minus individuality. That is not so. The French Revolution—of which the stockyards reminded Dr. George Brandes, the literary critic, who recently visited this country—scarcely could have brought out in its victims a wider range of characteristics than these pigs show. I have often noticed, of course, that some people are like pigs, but I had never before suspected that all pigs are so very much like people. Some of them come in yelling with fright. Others are silent. They shift about nervously, and sniff, as though scenting death. . . . "It's the steam they smell," said a man in overalls beside me. Well, perhaps it is. But I could smell death there, and I still think the pigs can smell it, too. Some of the pigs lean against each other for companionship in their distress. Others merely wait with bowed heads, giving a curious effect of porcine resignation. When they feel the tug of the chain, and are dragged backward, some of them set up a new and frightful squealing; others go in silence, and with a sort of dignity, like martyrs dying for a cause.

A Butcher's Impressive Eyes

AS I stood there, studying the temperament of pigs, I saw the butcher looking up at me as he wiped his long, thin blade. He was a raw-boned man with a pale face, high cheek bones, and large brown eyes, holding within their somber depths an expression of thoughtful, dreamy abstraction. I have never seen such eyes. Without prejudice or pity they seemed to look alike on man and pig. Being upon the platform above him, right side up, and free to go when I should please, I felt safe for the moment. But suppose

Guess Who—A Famous Preacher Back in Baseball

AT first glance the baseball player in this snapshot seems to be Jim Thorpe, the Olympic hero and member of the New York Giants Baseball Club. It isn't, though! This is none other than Billy Sunday, center fielder for the Chicago White Sox in bygone days and now America's best known evangelist. Sunday got back into baseball at Colorado Springs when a benefit game was played between the lawyers and ministers. He played center for a few innings, pitched a little, made four hits and four runs, stole home, and made a star catch in center. Only two errors were charged to him. Three thousand people saw the game.

A Plain Citizen Wins a Fight with an Octopus

WHILE fishing for groupers off Long Beach, Cal., Captain A. H. Mason hooked a large devilfish. The octopus came up fighting, and before Mason had time to realize what was happening, it lashed him around the neck with one of its tentacles and pinned his right arm with another. Then two more tentacles took hold of the fisherman, while others gripped the bottom of the boat. With his left hand Mason grabbed a gaff hook and plunged it into the monster's head. One blow was not enough—not by any means. The octopus fought on, and once it pulled Mason's head and his shoulders over the edge of the boat. The fisherman corroborated his story by bringing home the catch.

An Inventor Gets a Big Check for a Little Idea

THE check was the largest ever paid to an inventor for a single invention. It was for $300,000. The little idea that won this big sum is one by which any amateur photographer may autograph a picture when he makes it. Above appears a portrait of the inventor adding an autograph to a film (in the insert) and a snapshot—the finished product.

The inventor took the check because he wanted to be able to forget all about cameras and the making of cameras and go back to his laboratory to mull over some other little $300,000 idea. A royalty contract with the Eastman Kodak Company would have mussed up his mind and kept it busy for years to come on kodak business.

A New Era for Inventors

THIS one little idea made H. J. Gaisman a rich man overnight. Bankers fished for his check with promises to pay him $60 a day in interest for its use. Gaisman was glad both to receive it and to advertise its earning power for the reason that he saw in the treatment of himself by George Eastman the dawn of a new era for inventors, an era in which commerce will treat them with something of the spirit in which Henry Ford treats his employees.

"How did you get the money out of Eastman?" I asked the young inventor on the day he received the big check.

"I got it," he said, "by putting my case in Eastman's hands. I saw he wanted to be fair. I saw he was coming at me without a word of haggle or higgle. I saw he was not dickering with me as many inventors have been dickered with. So I told him to make the best terms for me with the Eastman Company that he felt were just. I made him my agent, and he made good!"

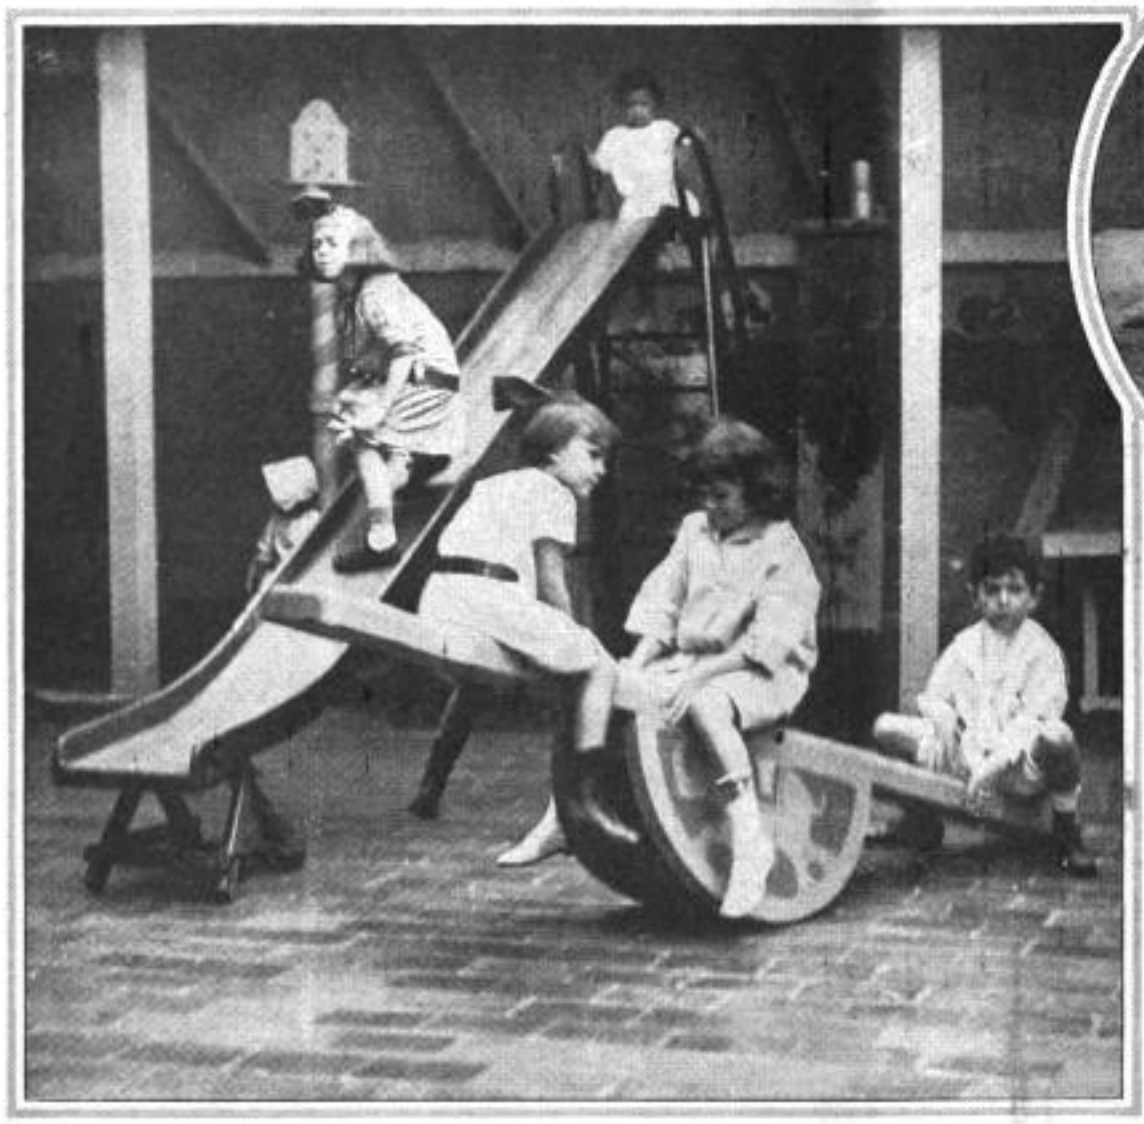
The item came to me as a piece of news. I had not been in at the breaking of the news about Henry Ford's plans, but I thought that this was the next biggest piece of news of its kind of the era. I pressed Gaisman to tell me more about how he invented the device which was to fulfill the world's oldest dream of going to sleep quite poor and waking up of a morning a rich man.

Worked on It Four Years

KODAKING was one means of spending the leisure of the summers, and Gaisman was angered because his vacation films were all mussed up and could not be identified at the end of the season.

"Why not an autographing kodak?" he said to himself—one which would let you take your sweetheart's picture and let her sign it for you. And one that would let you take scenery and brand it at the same time, so you would always know what scenery it was.

The idea was a little one—well, engineers of the Eastman Company had been working on it for half a dozen years and hadn't perfected it. Gaisman told me he worked on the idea four years, and that five times in those four years he completely despaired. His final idea was a bit of protective paper over the film so thin that normally it would keep the light out, but when stretched by a pencil point it would let enough light through to take the picture of the writing.



Padlocked His Patent

GAISMAN picked up a little kodak to which he had fastened a yale lock. "I took this thing out with me," he said, "and took pictures and autographed them till I made it a success. One day I took Henry Ford's picture. I always kept the kodak locked in its case until I had my patents granted. You see, an inventor has to have horse sense as well as inventive sense, like all other kinds of folks."

Housetops for Children's Playgrounds

Having a good time in the Garden of the White Rabbit atop the Hendrik Hudson Apartments, New York City. The children breathe fresh air, get plenty of exercise, and have desirable playmates

Contentment in the sand box

THE newest thing in romping places for youngsters is the apartment-house-roof playground. An idea of what it is may be gathered from the snapshots at the left and above, taken in the Garden of the White Rabbit, atop the Hendrik Hudson, on Riverside Drive, New York. This playground was planned by Mrs. Helen Speer, a designer of nurseries and playgrounds. The first housetop recreation places for children were fitted up on the roofs of school buildings. Then followed the settlement-house-roof playground, which is now regarded as indispensable in the crowded sections of New York. The one in the photograph below is typical. The housetop playground is expected to become popular in practically all the large cities, not only because it is the only kind that can be had where park or vacant-lot space is unavailable, but also because it insures the maximum of sanitation, safety from accidents, and protection from the evil influences of the streets.

A modern playground on a West Side Settlement House in New York. The children are safe from recklessly driven motor cars and other street perils

The Indian Sign

(Continued from page 7)

Kernohan kept working, so did Pete Kennedy, and the double file of ciphers lengthened upon the score board. It was a pitchers' battle in every sense of the word, enlivened by brilliant bits of defensive fielding and not without anxious moments on both sides. In the third inning Pete pitched himself into a hole and out again; in the fifth an outfield fumble sent a Blue runner to second base, but the Cannonball poured his speed over the plate and struck out two men in succession. On the benches the players were feeling the strain of scoreless innings. Old Pete's pleading had taken on a querulous note.

"One run, you rummies! For the love of Mike, have I got to hold 'em all day? Gimme one run!"

Kernohan also addressed his support caustically.

"How long are you going to let that old fossil get away with it? Think I can play the whole game, do you? A little life, you wooden Indians, a little life!"

THE seventh inning saw a break in the Blue defense—a tiny one, but big with consequences. Padden, the first Gamecock hitter, sent a jumpy grounder toward third base, and Mike Kershaw, trying for a flying pick-up and throw, juggled the ball. Padden reached first, stole second, went to third on a sacrifice bunt, and scored on a long fly, beating the throw to the plate by ten feet. The whole thing happened in less than three minutes, and when the teams changed sides a figure 1 appeared on the score board, conspicuous among the ciphers. The Blue rooters looked at it and shook their heads, dazed by the misfortune which had come upon them so swiftly. Down on the Blue bench Mike Kershaw humped his broad shoulders under a storm of abuse.

"Why didn't you play it safe, you fool?"

"Wanted to make it look fancy, eh?"

"Just handed 'em a run, that's all!"

ALL poor Mike could say was that the ball had taken a bad bound, this being the most reliable alibi known to infielders.

When the Blues came to bat in their half of the seventh the rooters offered the usual rising vote of confidence, but Tom Kernohan, listening to the uproar from the stands, recognized the high note of hysteria and smiled grimly. Scared, were they? He would give them something to be scared about, so he proceeded to strike out two men and make the third pop up an infield fly.

The eighth inning slipped away and the first half of the ninth. The Blues came up to make their last stand; between them and the prize money a single figure loomed among the ciphers. It looked as big as a mountain. Joe Cotter hitched his trousers and raged up and down the bench while the Gamecocks were trotting to their positions.

"One run never licked us yet!" he cried. "We can trim this big stiff! We're due, I tell you, we're due! Mike, you're first up. Go out there and square yourself!"

MIKE KERSHAW snarled as he walked to the bat pile and began raking noisily among the timber. With that penetrating rattle in his ears, Joe Cotter's glance fell upon Speck Adams, nervously cracking his finger joints in the shade of the water cooler. There was an unspoken appeal in the veteran's eyes. Quick as a flash the manager beckoned and Speck sprang to his feet, fumbling with the buttons of his sweater.

"Who do I hit for, Joe?" he asked.

"Listen and get this!" said Cotter. "I'm going out there to coach. When Mike steps up to the plate I want you to begin knocking those bats around. Make a hell of a noise, see? Whalen is up next—"

"But, Joe, ain't you going to let me hit?" It was almost a wail.

"Maybe. I don't know yet. Stay right with that bat pile until further orders, but don't go so strong with it that the umpire will chase you off the field. Rattle 'em like hell, *see?*"

"Whatever you say, Joe, but—aw, let me in there, won't you?"

A minute later Kershaw stepped up to the plate. The roaring in the stands died away as Kernohan dropped into pitching position, the ball cuddled against his chest. Suddenly there came a tremendous clattering of white ash, and, rising above it, the voice of Joe Cotter addressing Kershaw.

"Get on, Mike, get on! There's somebody comin' up that always could hit this big stiff a mile! Get on!"

"Hey!" bellowed the quick-witted McCann. "Don't pay no attention to that ole Charley-horse wreck! Pitch to this guy, Tom!"

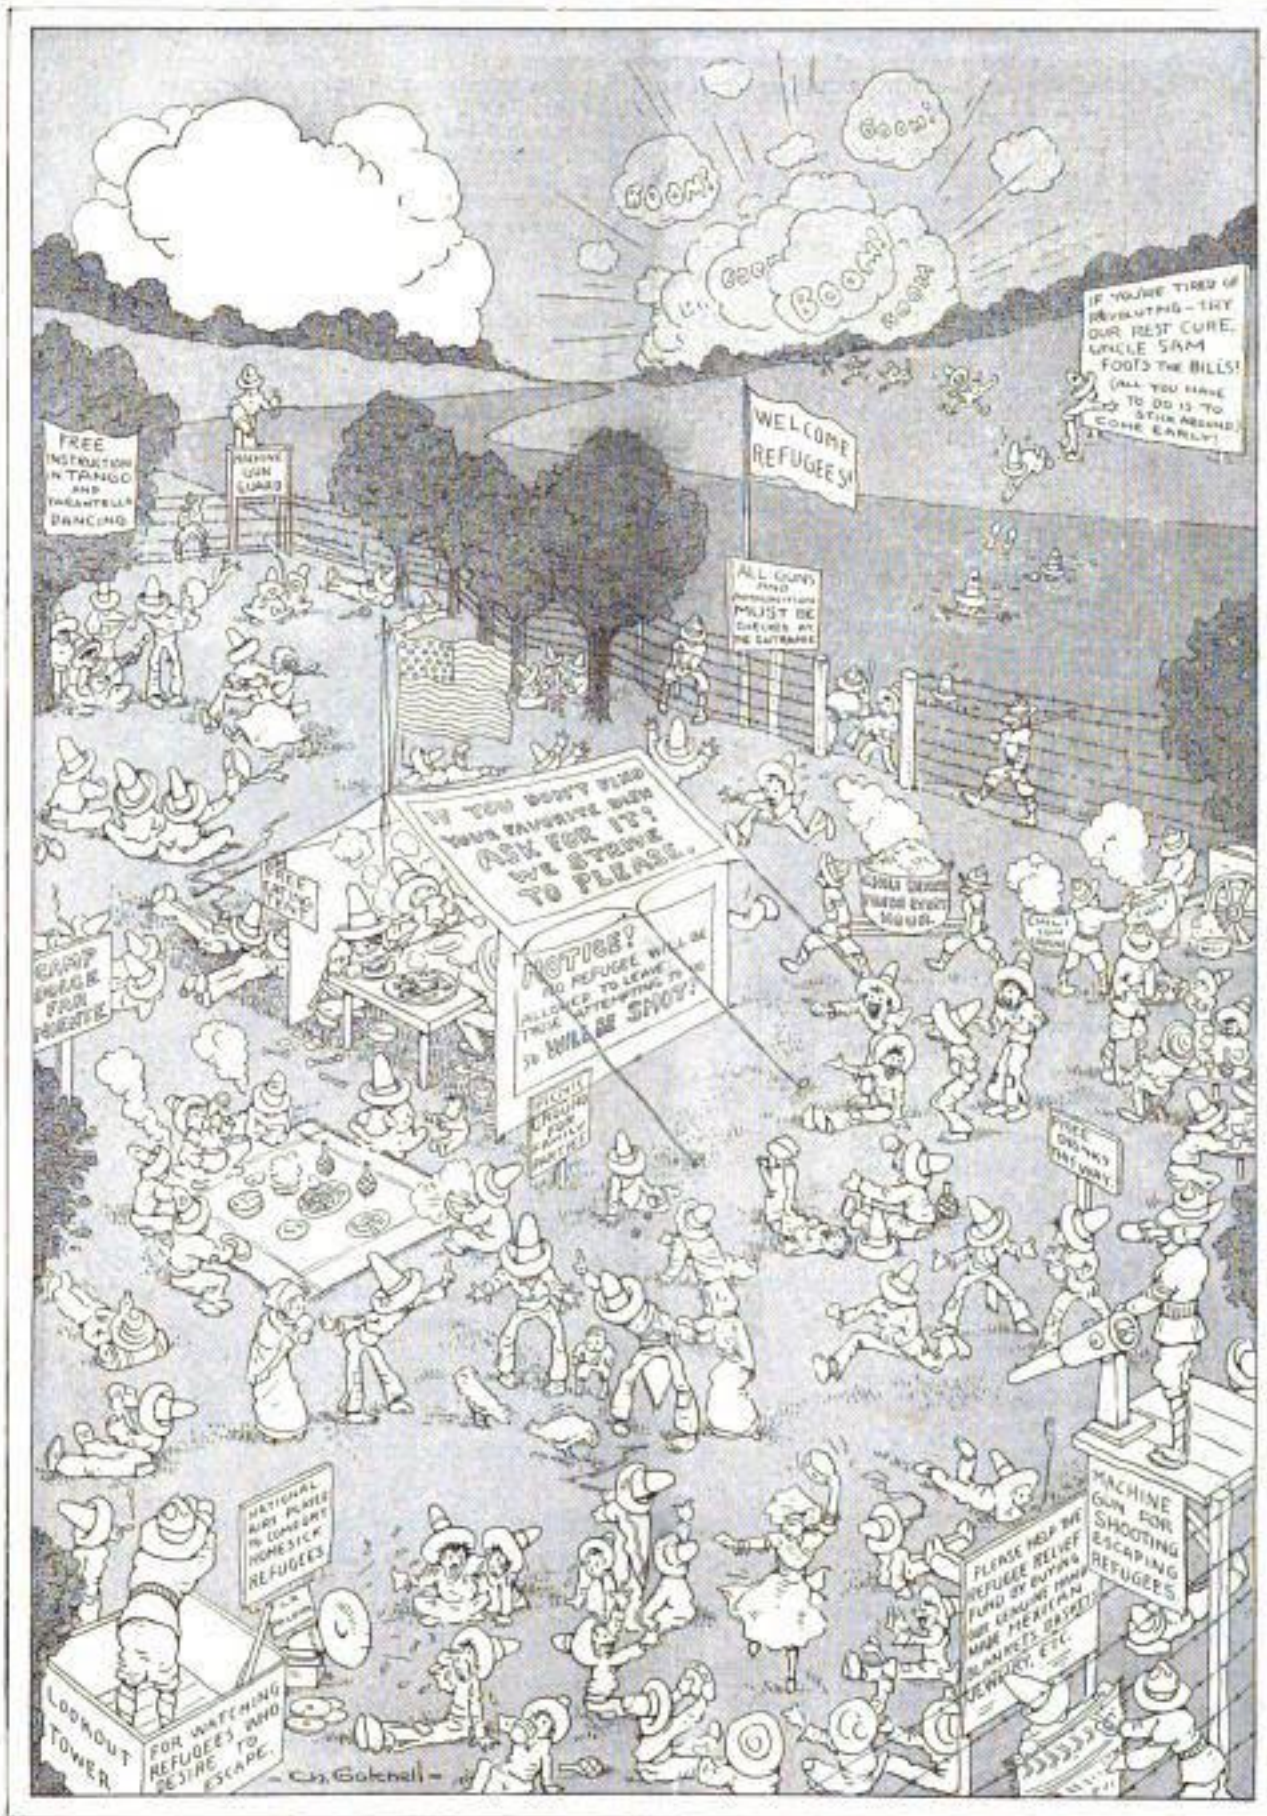
Kernohan recovered himself with an effort and began to pitch, but he was listening for the rattle of the bats and wondering if Joe Cotter would be fool enough to let Adams hit, and since few men can do two things well and none can do three simultaneously, he mislaid the outer corner of the plate, and three balls stood charged against him before he found it again. A strike followed, but by this time several thousand people were yelling "Adams! Speck Adams!" so there was some excuse when the fifth attempt went a bit wide and Mike Kershaw trotted to first.

"Wonder if he'll send him in now," thought Kernohan. But no, little Whalen was standing at the plate, grinning maliciously.

"He'll fill 'em up and then we'll let Speck clean house!" yelled Cotter. A subdued clatter from the white ash rounded out the threat, and with that jarring racket humming in his ears Tom Kernohan delivered his fast ball—delivered it two feet inside the plate, almost fracturing a rib for little Whalen. Whalen dropped like a log, but revived in time to limp to first base—a ball player limps no matter where he is hit—and there he found his breath and lavished it on all the Kernohans, past, present, and future.

FOR weeks afterward the amateur psychologists analyzed Kernohan's sudden loss of control, a psychologist being a person who explains many things which he does not understand. The steadiest pitcher of the period, his game well in hand, had walked one weak batter and hit another, hence the need of analysis. The simple key to the mystery was offered by Kernohan himself when Martin McCann, perspiring anxiously, trotted into the diamond for a consultation.

"Two on, boy, and nobody out. What's the matter?"



"Damn it!" cried Cannonball Tom. "If they're going to send him in to hit, why don't they *do* it?"

"Look here!" said McCann savagely. "You ain't pitching to that guy over there by the bench! Forget him! You pitch to the next man that comes up—and it's Daly."

And, instead of Speck Adams, it was Daly—Daly, who could bunt if nothing else. He dropped a slow, twisting ball in the direction of first base, and it required great exertion to retire him, but he had sacrificed himself in a good cause, for Mike Kershaw reached third and Whalen went to second.

"Now, then, Speck!" whooped Joe Cotter. "We've got him right where we want him! Get in there and bust one a mile!"

IT was then that Speck Adams, never celebrated as a baseball strategist nor yet as a psychologist, added the touch which deserves the Hall of Fame. He had been bending over the bat pile, enduring the agony of suspense. As he heard his name called he grasped his blunt war club and swept it across the others with the final, irritating, ear-splitting flourish of a xylophone soloist. Then slowly, in order to give the grand stand and the bleachers a chance to take up the refrain, he advanced to the plate.

The Greatest Picnic of Modern Times

This Texas picnic party costs Uncle Sam $2,500 a day. It is a tremendous social success — a seven months' riot of fun. And the funniest thing of all about it is that the host continues to labor under a delusion that his guests would like to depart!

"Advertising does nothing more or less with us than to make known to the consumer our products, and, of course, in praising our products we have to be particularly careful that the product itself in quality and appearance comes up to all that we say about it.

I cannot in any way accede to the supposition that advertising increases the price to the consumer of the majority of advertised products.

The cost of advertising is in all cases equalized by a lower cost of production due to increased sales, and if advertising were not done, then in my judgment the cost of production would increase, and as a result the selling prices to the consumer would have to continue the same."

"Speck Adams! Adams! Adams! Oh, you, Speckie!"

Speck said something to the umpire in chief, who whipped off mask and cap and went through the motions of making the announcement as provided by Rule 73.

Nobody heard him or cared to listen to him. Thirty thousand voices were booming the news; the telegraph operators in the press stand were hammering it over the wires: "*Adams batting for Heddon.*"

IN the one slight lull which followed the storm, as pitcher and batter faced each other, Martin McCann managed to make himself heard.

"Oh, Tom! Look what's here, playing hookey from the graveyard! Wonder where he left his crutches!"

"Huh!" snorted Speck, jerking his bat in short, ugly circles and digging his spikes into the dirt. "This club is all the crutch I need! I could hit this big stiff if they had to bring me up in a wheeled chair!"

It may be that the amateur psychologists are right and that Tom Kernohan remembered the Indian sign and the long hits of the Seven Years' War. It may be so—but it is best to take Kernohan's own statement.

"Scared? Hell, no! I thought I could strike him out!"

The first ball that Tom Kernohan pitched came low and true over the outside corner, and lightning fast. In location and speed it was exactly the sort best calculated to annoy a man who had not seen fast ball pitching in months, but Speck Adams, bending slightly forward from the hips, swung as if he realized that he would never swing at another ball in the big league.

What is more important, he hit it quite hard enough to make up for that deprivation.

THERE was a sharp crash, the Gamecock first baseman leaped into the air, the right fielder raced toward the bleachers wall and, stopping, threw up his hands in a gesture of impotent despair. Speck Adams, pounding down to first base on his game leg, would have made the turn toward second, but Joe Cotter leaped upon him and threw his arms around his neck.

"That's enough, old boy!" yelled the manager. "You put her into the bleachers for a home run!"

IN November Old Burgess and Joe Cotter had another discussion.

"What were you thinking of doing with Adams?" asked Burgess. "We might work him in on that trade, you know."

But Joe Cotter shook his head.

"No," he said. "I'm going to give him an unconditional release and sign him for a scout. He may have a kink in one leg, but there's nothing the matter with his judgment."

"Will he make a good scout?" asked Burgess.

"He will—as long as I'm running this ball club," said Cotter.

"Oh, well," said Old Burgess, "fix it up to suit yourself."

Chicago

(Continued from page 20)

I were not so. Suppose I were to come along to him, hanging by one leg from the trolley. . . . What would he do then? Would he stop to ask why they had sent another sort of animal, I wondered? Or would he do his work impartially? . . . I should not wish to take the chance.

The progress of the pig is swift—if the transition from pig to pork may be termed "progress." The carcass travels presently through boiling water, and emerges pink and clean. And as it goes along upon its trolley, it passes one man after another, each with an active knife, until thirty minutes later, when it has undergone the Government inspection, it is headless and in halves—mere meat, which looks as though it never could have been alive.

From the slaughterhouse we passed through the smokehouse, where ham and bacon were smoking over hardwood fires in rows of ovens big as blocks of houses. Then through the pickling room with its enormous hogsheads, giving the appearance of a monkish wine cellar. Then through the curing room with its countless piles of dry salt pork, neatly arranged like giant bricks.

The enthusiastic gentleman who escorted us kept pointing out the beauties of the way this work was done: the cleanliness, the system by which the rooms are washed with steam, the gigantic scale of all the operations. I heard, I noticed, I agreed. But all the time my mind was full of thoughts of dying pigs. Indeed, I had forgotten for the moment that other animals are also killed to feed carnivorous man. However, I was reminded of that, presently, when we came upon another building, consecrated to the conversion of life into veal and beef.

The steers meet death in little pens. It descends upon them unexpectedly from above, dealt out by a man with a sledge, who cracks them between the horns with a sound like that of a woodman's ax upon a tree. The creatures quiver and quickly crumple up.

It is swift. In half a minute the false bottom of the pen turns up and rolls them out upon the floor, inert as bags of meal. Only after death do these cattle find their way to an elevated trolley line, like that used for the pigs. And, as with the pigs, they move along speedily; shortly they are to be seen in the beef cooler, where they hang in tremendous rows, forming strange vistas—a forest of dead meat.

The scene where calves were being killed according to the Jewish law, for kosher meat, presented the most sanguinary spectacle with which my eyes have ever burned. Two rabbis, old bearded men, performed the rites with long, slim, shiny blades. Literally they waded in a lake of gore. Even the walls were covered with it. Looking down upon them from above, we saw them silhouetted on a sheet of pigment utterly beyond comparison—for, without exaggeration, fire would look pale and cold beside the shrieking crimson of that blood—glistening, wet, and warm in the electric light.

I shall not attempt to conceal the fact that I was glad to leave the stockyards.

Has it ever struck you that our mental attitude toward famous men varies in this respect: that while we think of some of them as human beings with whom we might conceivably shake hands and have a chat, we think of others as legendary creatures, strange and remote—beings hardly to be looked upon by human eyes?

Some years since, in the courtyard of a hotel in Paris, I met a friend of mine. He was hurrying in the direction of the bar.

"Come on," he beckoned. "There are some people here you'll want to meet."

I followed him in and to a table at which two men were seated. One proved to be Alfred Sutro; the other Maurice Maeterlinck.

Great Men

TO meet Mr. Sutro was delightful, but it was conceivable. Not so Maeterlinck. To shake hands with him, to sit at the same table, to see that he wore a black coat, a stiff collar, a black string tie, a square-crowned derby hat; to see him sitting in a bar and sipping beer like any man—that was not conceivable.

I sat there speechless, trying to convince myself of what I saw.

"That man over there is actually Maeterlinck!" I kept assuring myself. "I am looking at Maeterlinck! Now he nods the head in which 'The Bluebird' was conceived. Now he lifts his beer glass in the hand which indited 'Monna Vanna!'"

Nor was my amazement due entirely to the surprise of meeting a much-admired man. It was due most of all to a feeling which I must have had—although

In Picnic Time

By STOKELY S. FISHER

OH, come with me! Should the daisy chain
Be woven only by youthful lovers?
Where richly the white and the red bloom covers
The shaded shore and the sunny plain, [hovers,
Where the great hawk sails and the kingbird
Oh, come with me!
We'll take the babies and play with them,
And dally the whole of the day with them;
We'll frolic and sing and be gay with them,
Bohemians on the lea!

Come, smack the delight of the vagabond free
In clothes of comfort, with mind to be merry!
We'll smell the flower and taste the berry
Where floats the butterfly, feasts the bee,
And catch the spirit of wild birds airy,
Their secret of joy!
Oh, ramble once more abroad with me,
To read the poems of God with me
In fields that of old you trod with me,
Where pleasures cannot cloy!

Come, truant from care, to the tenting trees,
No gypsy more joyous, no child heart bolder!
Oh to roam, oh to rest your head on my shoulder,
In pictured reveries wrapped, and at ease—
Forget we are poorer, forget we are older,
From the world apart!
Where love wove its blossomy chain for us,
And builded the castles in Spain for us,
There is gladness and infinite gain for us,
There still is the rest for the heart!

Digitized by Google

I was never before conscious of it—a feeling that no such man as Maeterlinck existed in reality; that he was a purely legendary being; a figure in white robes and sandals, harping and singing in some Elysian temple.

I experienced a somewhat similar emotion in Chicago on being introduced to Hinky Dink. In saying that, I do not mean to be irreverent. I only mean that I had always thought of Hinky Dink as a fictitious personage. He and his colleague, Bathhouse John, have figured in my mind as a pair of absurd, imaginary figures, such as might have been invented by some whimsical son of a comic supplement—by a Winsor McCay.

Now, as I soon discovered, the Hinky Dink of the newspapers is, as a matter of fact, to a large extent fictitious. He is a legend, built up out of countless comic stories and newspaper cartoons. The real Hinky Dink—otherwise Alderman Michael Kenna—is a very different person, for whatever may be said against him he is a very real human being.

I clip this brief summary of his life from the Chicago "Record-Herald":

Born on the West Side, August 18, 1858.
Started life as a newsboy.
"Crowned" as Alderman of the First Ward in 1897.
Reelected biennially ever since.
Owner in fief of various privileges in the First Ward.
Lord of the Workingmen's Exchange.
Overlord of floaters, voters, and other liege subjects.

The Workingmen's Exchange, referred to above, is one of two saloons operated by the Alderman on South Clark Street, and it is a show place for those who wish to look upon the darker side of things. It is a very large saloon, having one of the longest bars I ever saw; also one of the busiest. Hardly anything but beer is served there; beer in schooners little smaller than a man's head. These are known locally as "babies," and, by a curious custom of the place, the man who removes his fingers from his glass forfeits it to anyone who takes it up. Nor are takers lacking.

"I'll tell you a funny thing about this place," said my friend the veteran police reporter, who was somewhat apologetically doing the honors. (Police reporters are always apologetic when they show you over a town that has been "cleaned up.")

"What?" I asked.

"No one has ever been killed in here," he said.

I had to admit that it was a funny thing. After looking at the faces lined up at the bar I should not have imagined it possible. Presently we crossed the street to the Alderman's other saloon; a very different sort of place, shining with mirrors, mahogany, and brass, and frequented by a better class of men. Here we met Hinky Dink.

A Portrait of Hinky Dink

HE is a slight man, so short of stature that when he leans a little, resting his elbow on the bar, his arm runs out horizontally from the shoulder. He wore an extremely neat brown suit (there was even a white collarette inside the vest!), a round black felt hat, and a heavy watch chain from which hung a large round charm with a star and crescent set in diamonds. Though it was late at night, he looked as if he had just been washed and brushed.

His face is exceedingly interesting. His lips are thin; his nose is sharp, coming to a rather pronounced point, and his eyes are remarkable for what they see and what they do not tell. They are poker eyes—gray-blue, cold, penetrating, unrevealing. My companion and I felt that while we were "getting" Hinky Dink, he was not failing to "get" us.

Far from being tough or vicious in his manner or conversation, the little Alderman is very quiet. There is, indeed, a kind of gentleness about him. His English is, I should say, quite as good as that of the average man, while his thinking is much above the average as to quickness and clearness. As between himself and Bathhouse John, the other First Ward fixture on the Board of Aldermen, it is generally conceded that Hinky Dink is the brains of the combination. On this point, however, I was unable to draw my own conclusions. The Bathhouse was ill when I was in Chicago.

In the ordinary conversation of the Honorable Hinky Dink there is no trace of brogue, but a faint touch of brogue manifests itself when he speaks with unwonted vehemence—as, for example, when he told us about the injustices which he alleged were perpetrated upon the poor voters who live in lodging houses in his ward.

The New City Boarder

Hinky Dink's Views on Vice

THE little Alderman is famous for his reticence.

"Small wonder!" said my friend the police reporter. "Look at what the papers have handed him! I'll tell you what happens: some city editor sends a kid reporter to get a story about Hinky Dink. The kid comes and sees Kenna, and doesn't get anything out of him but monosyllables. He goes back to the office without any story, but that doesn't make any difference. Hinky Dink is fair game. The kid sits down to his typewriter and fakes a story, making out that the Alderman didn't only talk, but that he talked a kind of tough-guy dialect—'deze-here tings'—'doze dere tings'—all that kind of stuff. Can you blame the little fellow for not talking?"

I could not.

But he talked to us, and freely. The police reporter told him we were "right." That was enough.

As the "red-light district" of Chicago used to be largely in the First Ward before it was broken up, I asked the Alderman for his views on the segregation of vice versus the other thing, whatever it may be. (Is it distribution?)

"I'll tell you what I think about it," he replied, "but you can't print it."

"Why not?" I asked, disappointed.

"Well," he returned, "I believe in a segregated district, but if I'm quoted as saying so, why the women and everybody on the other side will take it up and say I'm for it just because I want vice back in the First Ward again. I don't. It doesn't make any difference to me where you have it. Put it out by the Drainage Canal or anywheres you like. But I believe you can't stamp vice out; not the way people are made to-day. They never have been able to stamp it out in all these thousands of years. And, as long as they can't, it looks to me like it was better to get it together all in one bunch than to scatter it all over town.

"Now I know there's a whole lot of good people that think segregation is a bad thing. Well, it is a bad thing. Vice is a bad thing. But there it is, all the same. A lot of these good people don't understand conditions. They don't understand what lots of other men and women are really like. You got to take people as they are and do what you can.

"One thing that shocks a lot of these high-minded people that live in comfortable homes and never have any trouble except when they have to get a new cook, is the idea of commercialized vice that goes with segregation. Of course it shocks them. But show me some way to stop it. Napoleon believed in segregation and regulation, and a lot of other wise people have, too.

"Here's the way I think they ought to handle it: they ought to have a district regulated by the Police Department and the Health Department. Then there ought to be restrictions. No bright lights for one thing. No music. No booze. Cut out those things and you kill the place for sightseers. Then there ought to be a law that no woman can be an inmate without going and registering with the police, having her record looked up, saying she wants to enter the house. That would prevent any possibility of white slavery. Personally, I think there's a lot of bunk about this white-slave talk. But this plan would fix it so a girl couldn't be kept in a house against her will. Any keeper of a house who let in a girl that wasn't registered would be put out of business for good and all. Men ought not to be allowed to have any interest, directly or indirectly, in the management of these places.

"Now, of course, there's objections to any way at all of handling this question. The minute you say 'cut out the booze' that opens a way to police graft. But is that any worse than the chance for graft when the women are just chased around from place to place by the police? Segregation gives them some rights anyhow.

"Some people say 'segregation doesn't segregate.' Well, that's true, too. But segregation keeps the worst of it from being scattered all over town, doesn't it? When you scatter these women you have them living in buildings alongside of respectable families, or, worse yet, you run them onto the streets. That's persecution, and they're bad enough off without that.

"Say, do you think Chicago is really any more moral this minute because the old red-light district is shut down? A few of the resort keepers left town, and maybe a hundred inmates, but most of them stuck. They're around in the residence districts now, running what they call 'buffet flats.'

"I was talking about this white-slave stuff a while back. There was a good example of the kind of talk that goes on about that right here in Chicago the other day. An attorney named Butler, arguing against segregation at a big luncheon at the La Salle Hotel, told a story about four skeletons being dug up from the cellar of an old dive in the levee district. They were supposed to be the skeletons of poor, unfortunate girls—white slaves that had been murdered.

"And what's the straight of the story? A colored man named Pony Moore used to keep a saloon there, and he gave his customers pork chops with the free lunch—you know Chicago beats the world for free lunch. A nice hot pork chop was a big drawing card, and Pony used to buy more pork chops than any man in town. If he'd had good sense he'd have sold the bones to a glue factory, but instead of that, what does he do but chuck them down cellar by the basketful. And it was nothing in the world but Pony Moore's old pork-chop bones that this man Butler resurrected, to act the part of murder victims. Can you beat that?"

His O.K. on the Interview

LISTENING to the little Alderman I was convinced of two things. First, I felt sure that, without thought of self-interest, he was telling me what he really believed. Second, as he is undeniably a man of broad experience among unfortunates of various kinds, his views are

When I take down my ole fiddle
An' I rosum up the bow,
I find the sweetest music
In the tunes of long ago.
Thar's a kind o' mellow sweetness
In a good thing growin' old;
Each year that rolls around it,
Leaves an added touch o' gold.

We love the ole fren's better
Than we'll ever love the new.
We get the greatest comfort
When we wear the oldest shoe.
An' I find my greatest pleasure
When I'm smokin' fragrant, ripe
Age-mellowed, smooth, old VELVET
In my oldest, sweetest pipe.

Velvet Joe

A GOOD thing growin' old! Who would exchange a well thumbed, well loved old book, that the years have mellowed into a classic, for a dozen modern "best sellers"?

Who would lay by his "old familiar" pipe, nut-sweet and browned by use and smoke, for the finest, sweetest, newest pipe ever made?

You, who like the *good things growin' old*, will like VELVET, the Smoothest Smoking Tobacco—Kentucky *Burley de Luxe*, with an aged-in-the-wood mellowness, the result of more than 2 years' careful curing.

Actual Size

5c Bags 10c Tins
One Pound Glass Humidors

The Quest of Cold Light

Talks about MAZDA No. 5

"Not the name of a thing but the mark of a Service"

SWITCH on the current that causes an electric incandescent lamp to glow. What happens? You get light, but also heat. Since your eye is a special instrument particularly sensitive to light, since you read a book with light and not with heat, the more light that you get from your lamp the more satisfactory should be the result in every way. A light which is brilliant but *cold* would represent the ideal of efficiency.

Whether this ideal is ever reached, the incandescent electric lamp will grow steadily colder, steadily more efficient, thanks to the Research Laboratories of the General Electric Company at Schenectady.

In these laboratories a corps of picked men, each an expert in some phase of illumination, men who are in communication with the foremost European investigators of light, are constantly at work. After many months of patient experimenting the art of drawing tungsten into a delicate wire was developed in these laboratories. Thus it became possible to make the new filament which glows in the MAZDA lamp of today and which has supplanted the old carbon filament because three times as much light can be obtained for a given amount of current.

The Research Laboratories of the General Electric Company represent almost every branch of technical knowledge — chemistry, metallurgy, physiology, psychology, physics, microscopy, engineering, optics.

In these laboratories scientists conduct many researches along advanced theoretical lines. What is the secret of the phosphorescent glow that emanates from certain marine animals and decaying organic matter?

Why can the glow-worm shine in your hand and never burn your skin? What is the exact color of daylight? Is the best artificial light a miniature sun or a body with a brilliancy not so white? Scores of such problems must be attacked in the quest of the ideal light.

But even more important commercially is research that gives promise of immediate results. Suppose that chemists, for example, discover a way of preparing an element so that it is able to yield much light without breaking down readily under the electric current. Their discovery may mean the birth of a new lamp, or it may come to naught. It must be subjected to critical study by other scientists. The physicist steps in with his analytical instruments to discover how much of the glow that comes from the new material is light and how much is heat, in other words, how much more efficient is the new material than anything thus far discovered; he estimates what is the candle power of the new material for a measured amount of current; he devises better physical conditions for the material to perform its function. Next, the microscopist, perhaps, studies it to learn how it withstands the pitting and the scoring action of the current.

Thus the new material is passed through successive laboratories, from scientist to scientist, from engineer to engineer. If the discovery proves to be of commercial importance the General Electric Company transmits it to its own lamp manufacturing centers at Cleveland and Harrison and to other companies entitled to learn of it.

This constant research, this ceaseless effort to improve the incandescent lamp, this transmission of an important discovery from the General Electric Company constitute MAZDA Service. When you see MAZDA on a bulb, think not of the shining lamp itself, but of the *Service* received by its particular authorized manufacturer, of the thousands of experiments that had to be performed, in his interests and your interest, of the hundreds of light producers that were developed and tested before one was finally selected and included in the MAZDA that you screw into its socket.

Because the work of the Research Laboratories is never ended, MAZDA Service is continuous. As new discoveries are made that bring us a little nearer the ideal cold light they will be applied in making new lamps, which like their predecessors will be marked MAZDA. Hence MAZDA will always be found on the latest lamps evolved by MAZDA Service—a lamp in which the best scientific thought of the time is embodied.

You can hold a glow-worm in your hand—the light is cold. It is one object of MAZDA Service to discover the secret of cold light.

MAZDA Service means constant experimenting, constant testing, constant selecting of new developments in producing light. Specialists in every branch of science are engaged in this endless task, all with the aim of making MAZDA always the mark of the furthest advance in the science of illumination. Here a microscopist is shown at work.

GENERAL ELECTRIC COMPANY

interesting. Nor am I by any means certain that they are not sound.

"I wish you'd let me print what you have said," I urged as we were leaving his saloon.

He shook his head.

"I'll tell you what I'll do," I persisted. "I'll write it out. Perhaps I can put it in such a way that people will see that you were playing square. Then I'll send it to you, and, if it doesn't misrepresent you, perhaps you'll let me print it after all."

"All right," he agreed as we shook hands.

Buildings Aged While You Wait

THE Chicago Club is the rich, substantial club of the city, an organization which may perhaps be compared with the Union Club of New York, although the inner atmosphere of the Chicago Club seems somehow less formal than that of its New York prototype. However, that is true in general where Chicago clubs and New York clubs are compared.

The University Club of Chicago has a very large and handsome building in the Gothic style, with a dining room said to be the handsomest club dining room in the world; a Gothic hall with fine stained-glass windows. Between this clubhouse and the great Gothic piles of the Chicago University there exists an agreeable, though perhaps quite accidental, architectural harmony.

The Chicago University is the one great university I have seen which seems fully to have anticipated its own vastness, and prepared for it with comprehensive plans for the grouping of its buildings. Architecturally it is already exceedingly harmonious and effective, for its great halls, all of gray Bedford stone, are beginning to be toned by the Chicago smoke into what will some day be Oxonian mellowness. Even now, by virtue of its ancient architecture, its great size and massiveness, it is not without an effect of age—an effect which is, however, violently disputed by the young trees of the campus. Though these trees have grown as fast as they could, they have not been able to keep up with the growth of the great institution of learning, fertilized, as it has been, by Mr. Rockefeller's millions. Instead of shading the university, they are shaded by it.

She — *I consider, my dear, that sheep are the stupidest creatures living.*
Her Husband (absently) — *Yes, my lamb.*

Clubmen Without Ennui

THE South Shore Country Club is an astonishing resort: a huge pavilion, by the lake, on the site of the old World's Fair grounds. It is a pleasant place to motor to for meals, and is much used, especially for dining, in the summer time. The building of this club made me think of Atlantic City; I felt that I was not in a club at all, but in the rotunda of some vast hotel by the sea.

I had no opportunity to visit The Little Room, a small club reported to be Chicago's artistic holy of holies, but I did have luncheon at the Cliff Dwellers, which is the larger and, I believe, more active organization. The Cliff Dwellers is a fine club, made up of writers and artists and their friends and allies. I know of no single club in New York where one may meet at luncheon a group of men more alive, more interesting, or of more varied pursuits, and I may add that I absorbed while there a very definite impression that between men following the arts and business men the line is not so sharply drawn in Chicago as in New York.

At the Cliff Dwellers I met a gentleman, a librarian, who gave me some interesting information about the management of libraries in Chicago.

"Chicago is a business city, dominated by business men," he said. "We have three large public libraries, one the Chicago Public Library, belonging to the city, and two others, the Newberry and the Crerar, established by rich men who left money for the purpose.

"The system of interlocking directorates, elsewhere pronounced pernicious, has worked very beautifully in effecting cooperation instead of competition between these institutions.

"About twenty years ago, at the time of the Crerar foundation, the boards of the three libraries met and formed a gentlemen's agreement, dividing the field of knowledge. It was then arranged that the Chicago Public Library should take care of the majority of the people, and that the Newberry and the Crerar should specialize, the former in what is called the 'Humanities'—philosophy, religion, history, literature, and the fine arts; the latter in science, pure and applied. At that time the Newberry Library turned over to the Crerar, at cost, all books it possessed which properly belonged in the scientific category. And since that time there has been practically no duplication among Chicago libraries. That is what comes of having public-spirited business men on library boards. They run these public institutions as they would run their own commercial enterprises. The Harvester Company, for example, wouldn't duplicate its own plant right in the same territory. That would be waste. But in many cities possessing more than one library, duplication of an exactly parallel kind goes on because the libraries do not cooperate. Boston affords a good example. Between the Boston Public Library, the Athenæum, and the library of Harvard University there is much duplication. Of course a university library is obliged to stand more or less alone, but it is possible even for such a library to cooperate to some extent with others, and, wherever it is possible to do so, the library of the University of Chicago does cooperate with others in Chicago. Even the Art Institute is in the combination."

I do not quote this information because the arrangement between the libraries of Chicago strikes me as a thing particularly startling, but for precisely the opposite reason: it is one of those unstartling examples of uncommon common sense which one might easily overlook in gazing at great buildings wreathed in whirling smoke, or in contemplating that allegory of infinity which confronts one who looks eastward from the bold front of Michigan Avenue along Grant Park.

How Motors Change the Map

THE automobile, which has been such an agency for the promotion of suburban and country life, seems to have the faculty of invading for its own commercial purposes those former residence districts in cities which it has been the means of depopulating. I noticed that in Cleveland. There the automobile offered the residents of Euclid Avenue a swift and agreeable means of transportation to a pleasanter environment. Then, having lured them away, it proceeded to seize upon their former lands for showrooms, garages, and automobile accessory shops. The same thing has happened in Chicago on Michigan Avenue, where an "automobile row" ex-

Digitized by Google

tends for blocks beyond the uptown extremity of Grant Park, through a region which but a few years since was one of fashionable residences.

A Lament for the South Side

I DO not like to make the admission because of loyal memories of the old South Side, but—there is no denying it—the South Side has run down. In its struggle with the North Side for leadership it has come off a sorry second. In point of social prestige, as in the matter of beauty, it is unqualifiedly whipped. Cottage Grove Avenue, never a pleasant street, has deteriorated now into something which, at least along certain reaches, has a painful resemblance to a slum.

It hurt me to see that, for I remember when the little dummy line ran out from Thirty-ninth Street to Hyde Park, most of the way between fields and woods and little farms. I had forgotten the dummy line until I saw the place from which it used to start. Then, back through twenty-eight or thirty years, I heard again its shrill whistle and saw the conductor, little "Mister Dodge," as he used to come around for fares when we were going out to Fifty-fifth Street to pick violets. There are no violets now at Fifty-fifth Street. I saw nothing there but rows of sordid-looking buildings, jammed against the street.

Strange sensations, those, which come to a man when he visits, after a long lapse of years, the places he knew best in childhood. The changes. The things which are unchanged. The familiar unfamiliarity. The vivid recollections which loom suddenly, like silent ships, from out the fog of things forgotten. . . . In that house over there lived a boy named Ben Ford, who moved away—to where? . . . And Gertie Hoyt, his cousin, lived next door. She had a great thick braid of golden hair. . . . But where is Guy Hardy's house? Where is the Lonergans'—the Lonergans who used to have the goat and wagon? How can those houses be so completely gone? Were they not built of timber? And what is memory built of, that it should outlast them? . . . Mr. Rand's house—there it is, with its high porch! But where are the cherry trees? Where is the round flower bed? And what on earth have they been doing to the neighborhood? Why have they moved all the houses closer to the street and spoiled the old front yards? . . . Then the heartshaking realization that they *hadn't* moved the houses: that the yards were the same; that they had always been small and cramped: that the only change was in the eye of him who had come back.

No; not the only change, but the great one. . . Almost all the linden trees that formed a line beside my grandfather's house are gone. The four which remain aren't large trees, after all. . . .

The vacant lot next door is blotted out by a row of cheap apartment houses. . . . But there is the Borden house standing stanch, solid, austere as ever, behind its iron fence. How afraid we used to be of Mr. Borden! Could he be living still? And has he mellowed in old age?—for the spite fence is torn down! . . . Next door there is the house in which I went to my first party—in a velveteen suit and wide lace collar. There was a lady at that party; she wore a velvet dress and was the most beautiful lady that I ever saw. She is several times a grandmother now—still beautiful.

The gentleman who owns the house in which I used to live had heard I was in town, and was so thoughtful as to think that it would interest me to see the place again.

I never was more grateful to a man!

The house was not so large as I had thought it. The majestic "parlor" had shrunk from an enormous to a normal room. But there was the wide hardwood banister rail, down which I used to slide, and there was the alcove, off the big front bedroom, where they put me when I had the accident; and there was the place where my crib stood. I had forgotten all about that crib, but suddenly I saw it, with its inclosing sides of walnut slats. . . . But it was not until I mounted to the attic that the strangest memories besieged me. The instant I entered the attic I knew the smell. In all the world there is no smell exactly like the smell which haunts the attic of that house. With it there came to me the picture of old Ellen and the recollection of a rainy day, when she set me to work in the attic, driving tacks into cakes of laundry soap. That was the day I fell downstairs and broke my collar bone.

On a Hunt for William

LEAVING the house I went out to the alley. Ah! those beloved back fences and the barns in which we used to play. Where were the old colored coachmen who were so good to us? Where was little Ed, ex-jockey and ex-slave? Where was Artis? Where was William? William must be getting old.

At the door of his barn I paused and, not without some faint feeling of fear, knocked. The door opened. A young colored man stood within. He wore a chauffeur's cap. So the old surrey was gone! There was a motor now.

"Where's William?" I asked.

"William isn't here any more," he said.

"But where is he?"

"Oh, he's most generally around the alley, some place, or in some of the houses. He does odd jobs."

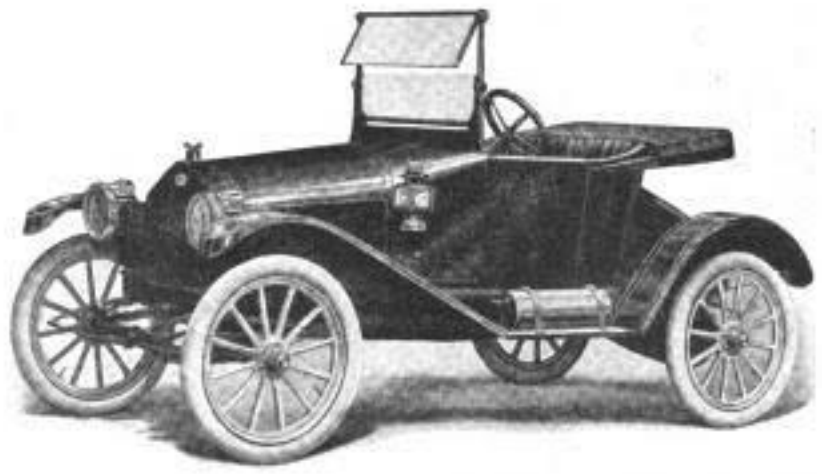
"Thanks," I said and, turning, walked up the alley, fearing lest I should not be able to find the old colored man who, perhaps more than anyone outside my family, was the true friend of my boyhood.

Then, as I moved along, I saw him far away and recognized him by the familiar, slouching step. And as I walked to meet him, and as we drew near to each other in that long narrow alley, it seemed to me that here was another allegory in which the alley somehow represented life.

How glad we were to meet! William looked older, his close-cropped wool was whiter, he stooped a little more, but he had the same old solemn drawl, the same lustrous dark eye with the twinkle in it, even the same old corncob pipe—or another like it, burned down at the edge.

"Light of Other Days"

WE stood there for a long time, exchanging news. . . . Ed had gone down South with the Bakers when



Sport for Sport's Sake

Brown (playing the last hole in the club tournament): ***"I've a notion this confounded branch is rotten. But blamed if I'm going to lose a stroke at this stage of the game"***

METZ "22"

New Fore Door Model

Stream Line Body, Plate Glass Rain-Vision Wind Shield. The Ideal Car for Cross Country Driving or City Use.

$495 Equipped Complete

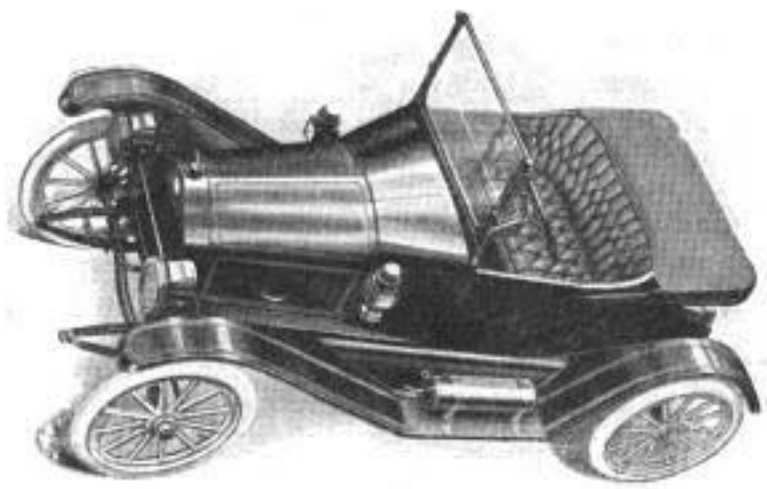
Big, roomy seats, with thick, tufted upholstery and deep cushions, built for luxurious comfort.

Four-cylinder 22½ H. P. water-cooled motor, Bosch high tension magneto, Prest-O-Lite tank, best quality Goodrich clincher tires.

Fore doors of liberal dimensions, 20 inches wide.

Left hand drive, with center control.

Gearless transmission—the kind that won the Glidden Tour.



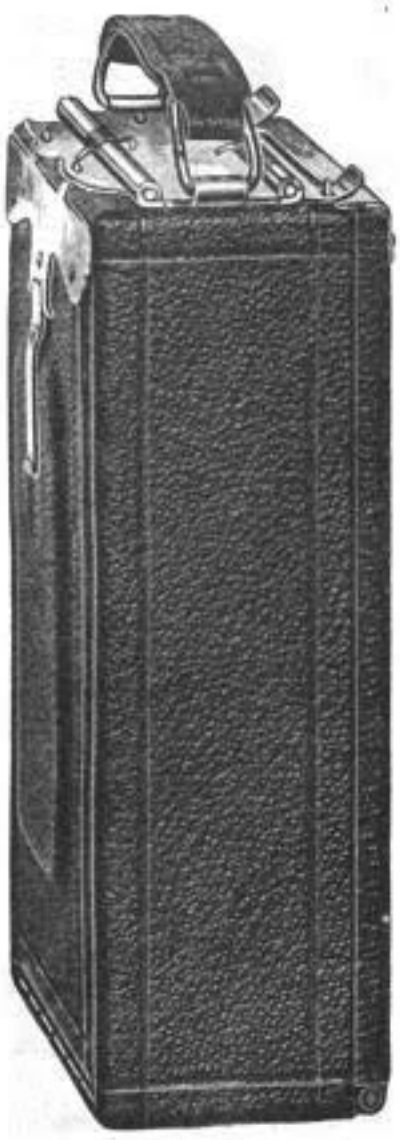
Winner of the Glidden Tour

The METZ "22" in open competition with cars of all makes and prices, won the last Glidden Tour, from Minneapolis, Minn., to Glacier National Park, Mont., the three METZ cars being the ONLY cars that held *perfect scores*, without time extension or additional allowance of any kind, for the entire eight days of the contest. The METZ cars were the only cars in the Tour that were equipped with gearless transmission.

Mr. Chas. H. Metz has been building cars of this type, and developing their perfection, *sixteen years*. As a result, the METZ "22" is today the most *practical* car on the market, regardless of price, horse power or any other qualification.

In the hill climbing contest on the 18th of June at Uniontown, Pa., the METZ "22" won event two against a field of 13 special racing cars. Time, four minutes three-fifths seconds. Kline second, Mercer third, Chandler fourth. Ford, Maxwell, Buick, Overland and Hudson in order named. And the METZ "22" also won second place in the Free-for-All, beating 15 of the big special racing cars, including Simplex, Mercedes, Packard, Mercer, Oldsmobile, Buick, Stutz and Lozier, all the way from 25 seconds to one minute and 22 seconds. These cars finished in the order mentioned.

If any further evidence were needed of the desirability and efficiency of gearless transmission, this latest performance of the gearless METZ "22" surely supplies it in overwhelming measure.



The METZ "22" is extremely economical in operation and upkeep. METZ owners travel 28 to 32 miles on 1 gallon of gasoline, 100 miles on 1 pint of lubricating oil, and 10,000 to 12,000 miles on a single set of tires. It makes 50 miles per hour, and at hill climbing is unsurpassed. Its engine develops more horse power per 100 pounds of car weight than any of the big touring cars, and its gearless transmission does away entirely with gear trouble. It is easy to drive and easy to take care of; and it costs so little to buy it, and so little to run it that it combines in greatest degree absolute *economy* with absolute *luxury*.

In this small compass lies the very maximum of photographic efficiency.

Premoette Junior Special

The illustration shows the actual size of the camera, which makes 2½ x 3½ pictures and is fitted with Zeiss Kodak Anastigmat lens *f*.6.3 and Compound shutter attaining the high speed of 1/300 of a second.

With this equipment the camera will make the best of pictures under all conditions where amateur pictures could possibly be made.

It loads in daylight with twelve exposure Premo Film Packs and is richly finished in a manner becoming a camera of its high grade. Price, $36.00. Same type of camera for 2½ x 4¼ pictures—$41.00.

We also furnish the Premoette Junior fitted with best grade of meniscus achromatic lens and Kodak ball bearing shutter as follows: 2½ x 3½, $5.00; 2½ x 4¼, $8.00.

The Premo catalogue describing these cameras and many others in detail can be had at all dealers, or we will gladly mail it to you on request.

Rochester Optical Division

Eastman Kodak Co. Rochester, N. Y.

they moved away. Artis was on "the force." . . .

"The neighborhood's changed a good bit since you was here. Lots of the old families have gone. I'm almost a stranger around the alley myself now. I must be a pretty tough old nut, the way I keep hangin' on." He smiled as he said that.

"Of course I'll see you when I come out to Chicago again," I said as we shook hands at parting.

William looked up at the sky, much as a man will look for signs of rain. Then with another smile he let his eyes drift slowly downward from the heavens.

"Well," he said in his nasal drawl, "I guess I'll see you again some time—some place."

I turned and moved away.

Then, of a sudden, a back gate swung open with a violent bang against the fence, and four or five boys in short trousers leaped out and ran, yelling, helter-skelter up the alley.

I had the curious feeling that among them was the boy I used to be.

Mr. Street's adventures in ST. LOUIS, the next in the series, are to be related in the issue of August 15

Suffrage—The Greatest of Press Agents

By HARYOT HOLT DEY

"WOMAN SUFFRAGE is the biggest press agent there is," said the real-estate man from the West.

"My wife is an ardent suffragette, and she put the scheme up to me to get the men of our town to elect a woman for mayor. Well, you know there are always wheels within wheels, and no one knows to this day that a real-estate concern was back of it. No sooner did we start a boom for a woman mayor than the suffrage press bureaus from one end of the country to the other took it up, and from being a little unheard-of, no-account place with hardly sidewalks enough to go around, we all at once found ourselves on the map.

"That's what suffrage does. It puts towns on the map.

"My wife called my attention to it.

"'Look at that dead little town in New York State that calls itself Seneca Falls,' said Wife to me.

"'What about it?' said I.

"'What about it?' repeated Wife after me, in her most matronly, rebukeful tone. 'Why, in the year 1848 a small group of women called a Woman's Rights Convention there, and that town was immortalized. It is known to the remotest corners of the globe. That little body of women was ridiculed by a popular sentiment which rightfully regarded it with conscientious contempt, and—'

"Wife was launching forth into a suffrage speech.

"'Why don't you hire a hall?' I asked.

"It always makes Wife furious to ask her why she doesn't hire a hall.

"'Even Mr. Asquith, the Prime Minister of Great Britain,' she went on without deigning to notice the interruption, 'is known to the remotest hamlet of this great globe, not because of his statesmanship and his high position, but on account of his attitude toward votes for women. Whoever heard of the town of Alderborough in England until Mrs. Garrett Anderson was made its Mayor? Then her wise administration of this unusual position made that little town famous.'

"'Whenever a woman's convention is held in a town, nowadays, the world learns to know about that town as it never did before. And more than one town in California has reported its population just doubled since the women were enfranchised. How came it? Simply because the suffrage press bureaus all over the country got busy.'

"Wife was beginning to warm up to her subject and I was doing a very quiet thinking part.

"'Real-estate agents and railroads have spent hundreds of thousands of dollars,' Wife went on, now thoroughly aroused, 'to advertise the climatic, scenic, and commercial values of Seattle, but when the women by their votes recalled the Mayor of that city, the name of Seattle rang all the way round the earth, and they gave it more publicity than any amount of paid advertising could have done.'

"'Consider Los Angeles,' exclaimed Wife without stopping for breath.

"'I tell you it beats anything how these suffragists come at you with the facts,' commented the real-estate man in his little monologue.

"'The great fight in the mayoralty election in the first year after the women got the vote in Los Angeles,' she went on, 'advertised that famous resort of health seekers as years of paid advertising had never done. If there is a city which wishes to advertise itself, it can do no better than to elect a woman mayor or alderman; it even gets somewhere with appointing a policewoman.'

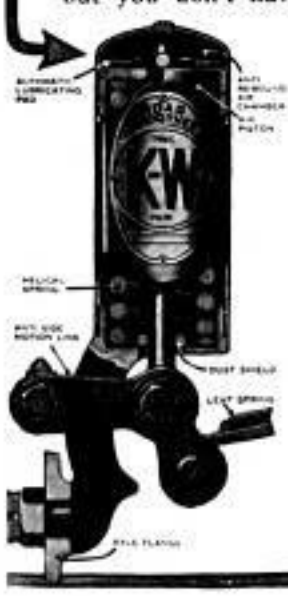
"'Some towns are getting on to the scheme, nowadays,' admitted the real-estate man, 'and it's not so rare as it was. But we put it through in our town.'

"'No,' said the man from the West, 'I shouldn't care to tell you the name of the town. We put it over all right, and real estate has gone way up. But if you want to get your unheard-of hamlet on the map—just you negotiate with the suffragists. They'll fix you up all right!'"

With Your Eyes Shut You Can Safely Buy—

TRADE K-W MARK

Road Smoothers



REG. U.S. PAT. OFF.

Quickly applied to your Ford Car

LIKE the Master Vibrator and other K-W Products K-W Road Smoothers are built up to a standard, not down to a price.

Go to your nearest dealer—ask him to show you how the helical spring takes up shock, the air cushion chamber with the carefully made piston checks rebound—how the anti-side-motion links prevent side-motion and the chassis from getting out of alignment—how *this combination* Smooths out the Roughest Roads.

Then tell your dealer to put a set on your car. He will do it promptly, but you don't have to wait and inspect *your* set. We do that at the factory not once, but at every stage of manufacture.

K-W Road Smoothers are all of one quality and built the K-W way. Of course you get phosphor bronze bushings throughout—high grade heat treated drop forgings and electric smelted vanadium steel springs, *but* you get far more. You get that K-W guarantee for satisfactory, "no worry," service—Ask any one of the half a million users of K-W Products—what this service is.

K-W Road Smoothers are sold by dealers who know the difference, everywhere, *at one price*. Beware of imitations. There is only *one* Road Smoother.

$25 SET OF FOUR ONE FOR EACH WHEEL

If your dealer cannot supply you, sent direct on receipt of price. Write for Booklet "Taking out the Bumps."

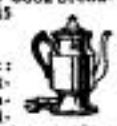
Westinghouse Electric "Manufacturing Engineers"

THE Westinghouse Electric Trademark comes before the public on all forms of electrical machinery and apparatus. You see it on electric motors and meters—on electric locomotives and electric street car control apparatus—on electric fans in public places and private homes—on electric cooking and heating apparatus. And this trademark appears in a multitude of places where the general public never sees it.

It is important for every person who uses electrical apparatus or expects to use it, to know that the Westinghouse Electric trademark not only stands for goods guaranteed for the kind of workmanship that insures long service—but it stands for engineering design of the highest order. This is something that only the experienced user of Westinghouse Electric apparatus can thoroughly appreciate. But he does appreciate it—and shows it by his preference for the Westinghouse Electric name in new installations.



The literature listed here is a liberal education in practical electricity. Send for any in which you are interested by filling out the coupon and writing in the numbers you want.

How the Bell System Spends its Money

Every subscriber's telephone represents an actual investment averaging $153, and the gross average revenue is $41.75. The total revenue is distributed as follows:

Employes—$100,000,000

Nearly half the total—$100,000,000—paid in wages to more than one hundred thousand employes engaged in giving to the public the best and the cheapest telephone service in the world.

For Supplies—$45,000,000

Paid to merchants, supply dealers and others for materials and apparatus, and for rent, light, heat, traveling, etc.

Tax Collector—$11,000,000

Taxes of more than $11,000,000 are paid to the Federal, state and local authorities. The people derive the benefit in better highways, schools and the like.

Bondholders—$17,000,000

Paid in interest to thousands of men and women, savings banks, insurance companies and other institutions owning bonds and notes.

Stockholders—$30,000,000

70,000 stockholders, about half of whom are women, receive $30,000,000.

(These payments to stockholders and bondholders who have put their savings into the telephone business represent 6.05% on the investment.

Surplus—$12,000,000

This is invested in telephone plant and equipment, to furnish and keep telephone service always up to the Bell standard.

Worthless Neighbors

(Continued from page 16)

and make him lie awake while she whimpered for good food, and taunted him with "always running round like the button on the barn door."

WHEN it was March, and red morning came, he would escape from her tentacle-like arms that clutched rather than embraced his throat, and going into the yard, would ram his head against the rough-barked cherry tree.

"The devil's horning me all right," he would tell himself.

The Hitchcocks were used to hard winters, but now David suffered not only with his own chilblains and empty stomach, but with every misery of Lil's. She showed him reasons for wretchedness which he had never known. They had been there all the time; now he would never lose them from sight. Lil did not allow memory a moment of content or merriment upon which to fasten. He could not escape from the ideas she gave any more than he could escape from the pitiful sight of her colorless face, her bony arms, and the big square bone bulging up in front of her neck.

Lil even made David think he was afraid of the Old Woman at the foot of the hill. He would say, when taunted thus, that he was not afraid of her, but he was not going to ask her for anything. Never. Not if Lil yelled his ears off.

It got to be April and the worst of the year was over. Next week the Old Woman might banish the air-tight and the sitting room would become parlor-fied again. Still it was chilly enough for her to be rejoicing in a bug-me-tight when she saw David Hitchcock turn halfway down the path and hustle up the hillside. The Old Woman was just letting in the cat.

THE sight of her had sent David flying back. He had started quite bravely when Lil shrieked out between moans that she must have help, that some one must sit beside her until the doctor came. But he returned to the kitchen as to a sanctuary. It was fairly empty, the men having been driven from the house by Lil's screams. Hannah, in her chair, was groaning in a sort of heavy sympathy.

Finally she managed to articulate: "They went f'r the doctor. Said they'd ruther then stay round. You go an' set with her a spell."

David crept to the north chamber apprehensively and watched the writhing Lil. Then he furtively made his way back to the kitchen.

"Can't you do nothing, marm?" he asked, helplessly. Anyone was certainly at the end of his rope who sought aid from Hannah Hitchcock. "You had a mess o' childern."

Hannah shook her head, bewildered. She had had them, to be sure, but all allevintions had been the suggestions of others. "Maybe," she said slowly, "if I had a rennet—"

DAVID, tortured beyond the sufferer by Lil's tortures, dashed from the house and walked blindly about the yard, bruising himself against the stone walls. His feet at length set themselves on the hillside path, and he went so swiftly that he seemed to slide rather than run.

The Old Woman, emerging into her woodshed in search of a handful of likely chips, found a stout young man busily exploring a well-filled cupboard wherein was stored what of ancient ironmongery had escaped the passing of three generations of Abners.

"David Hitchcock," she observed severely, "what isn't worth asking for isn't worth having."

He continued his rummaging and asked for nothing. Curiosity conquered indignation. "What do you want?" she inquired.

"You don't seem to have it," said he in a tone of annoyance. "I've looked this gol rammed contraption through from a to izzard and I'm just about where I started. Got any more hideaway places?"

"Whether I have or not—" she began in sheer amazement at his audacity, then, struck by something sinister in the frowsy countenance, she said, more sharply: "For goodness' sake, what is it you're after?"

"Rennet!" was his succinct reply from the cupboard's depths.

"Rennet! Surely you're not making cheese thus early?"

"God!" he exclaimed with a suddenness that nearly floored the Old Woman. "It ain't cheese. It's my wife. Didn't you know I was a husband?"

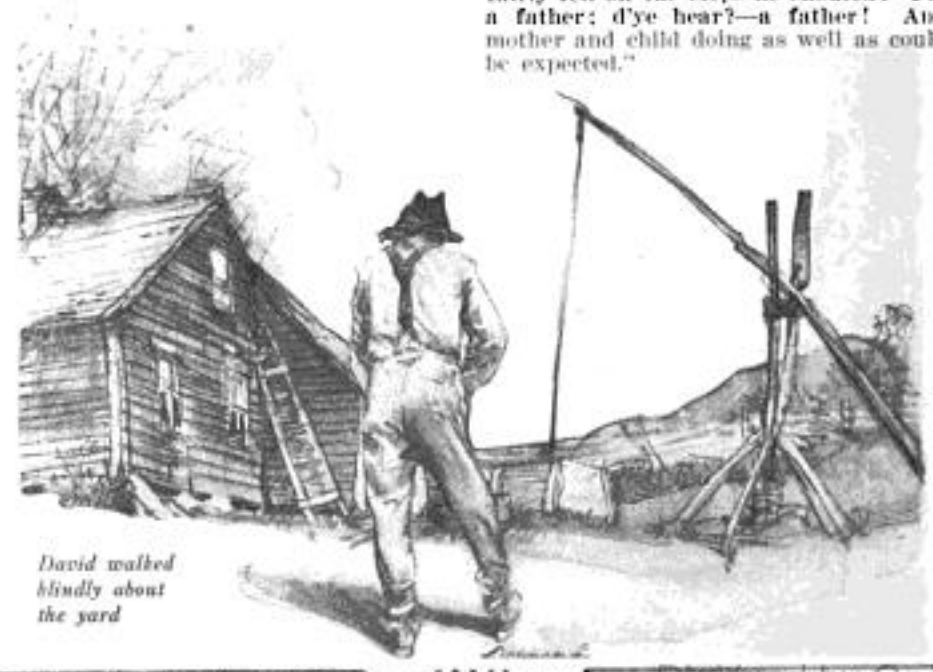
THE Old Woman hastened to her buttery, within the kitchen, and returned with what he desired. He snatched it like a hungry dog and departed without a word of thanks.

The Old Woman, at her fire making, pursed her lips knowingly. The cat, as it purred, and the kettle, as it hummed, seemed also to be wise.

It was too bad the Old Woman, if she knew so much, hadn't told David what the rennet was good for. Hannah didn't remember, after all. Lil's voice turned hoarse, so she was less troublesome, but David could only bear to look at her for small moments. Beads of sweat lay on her pale forehead and her blue eyes seemed popping from her head.

The doctor came. He knew what any room in the Hitchcock house looked like, for he had seen Hitchcocks die in most of them. At first he thought it would be a slow affair, and go on like this for days, because Lil was so young, and had enfeebled her system by keeping indoors all winter. It turned out differently.

THE hours wore on to noon. The Old Woman, having finished knitting a round since the sun had reached the mark of twelve on the stoop, thrust the needles into the sock, and rose to prepare dinner. At the moment she became aware of a thundering knock.



"It's me," shouted a voice she knew to be David Hitchcock's. "Where's your onions?"

He spoke as one commanding a right, not entreating a favor.

"My onions?" The Old Woman was bewildered by the sudden application.

"Yes, onions! Two quarts and quick as Billy-be-damned."

The Old Woman actually dashed into her own cellar and returned with the vegetables. She never went below for herself, leaving that for a hired man who feared neither ghosts nor rats, but David Hitchcock spoke as one not brooking delay. As he grabbed the measure and fairly fell off the steps he shouted: "I'm a father; d'ye hear?—a father! And mother and child doing as well as could be expected."

David walked blindly about the yard

Digitized by Google

The Old Woman brightened the fire and meditatively fried a few flapjacks. Before sitting down to them, with maple molasses, she observed: "If as well as could be expected, why onions?"

The cat being asleep and the kettle cold, she heard no response.

EVENING is slow coming early in April. There was a brassy glare at the west for half an hour after the sun went down, and the Old Woman enjoyed Blind Man's Holiday without any other light. For want of better company she sat and patted the cat until that arching creature's fur spit electricity. Unprefaced, the door was flung open, and the bulk of David Hitchcock appeared against the sky.

"Put out your fire," he ordered, beginning operations regardless of bare hands. "I've got to have stovepipe."

In a moment both cat and kettle would have been forlorn.

"There's plenty of old stovepipe in that cupboard you was mousing over this morning," said the Old Woman. "Haven't you any memory at all?"

He looked up with that in his bleared eyes which she was never to forget.

"This morning," said he, "I was a husband. And this noon a father. Now I'm a widower. Has the pipe you speak of got an elbow?"

The Old Woman was shocked, but she rallied with spirit. "If a widower," said she, "it's the work of Providence, and you must demean yourself as such."

"Providence?" he asked vaguely. "Oh, yes; the feller that does all things well. That's true enough for Lil. She's out of it now. No more being cold nights and hankering after meat. I begin to think Lil always was a cute one, she was."

She watched him up the hill until he seemed to sink into the house

THE Old Woman stood in a maze while he got what he wanted from the cupboard. She watched him up the hill until he seemed to sink into the house.

"Hankering after meat," she thought, and thought also of the beef creature and the hog that had palled upon the appetite of even the cat as February drew to an end. How that boy had looked when he told the tragedy. Would Abner have looked thus had she passed on during their first year together? Did she look so when Abner himself died, after years of companionship? Perhaps the tie was closer between those who suffered in company than when the link was all diddered up with ease, plenty, and real San Domingo mahogany.

Darkness arrived with finality, but from the Hitchcocks' kitchen came no answering gleam.

"Land!" she cried to the cat and the kettle. "I don't believe they've got even kerosene."

A Fine Domestic Finish

(Continued from page 10)

for you isn't one-two-trois to what we're goin' to do to poppa!"

And now behold a beautiful sight, messieurs, namely, Mme. Dejoie the Innocent seated once again in her restaurant—counting out the money—dressed like a queen—powdered to the nine—eyes bright as baby's. The evening rush had well set in, but madame still wore an expression of charming expectation and kept it turned toward the door.

"So pr-r-r-roud an' short temper', is he?" madame was thinking. "Poo-oor poppa! I t'ink he's had his way too moch! A slight reverse will give tone to his system an'—yes, yes, I t'ink he comes!"

A limousine had stopped in front of the restaurant with a loud, indignant rumble; the door of the car slammed open and shut, and a moment later the Restaurant Dejoie was graced with an irascible, gray-haired bundle of masculine nerves whose familiar features looked like a composite picture of Peter the Headsman and Beau Brummell—a composite picture that had been started in a hurry and finished in a rage. He glanced around and made for the desk as though he would take it by storm.

"I'm Mr. Noyes," he announced. "You phoned me?"

"Meester Noyes?" asked madame, raising her eyebrows thoughtfully. "Oh, yes, of course. Ze poppa of—oh, yes, I know! I telephone' you so you would not worry about your son. But I hardly expect' you to call."

She made change for a group of the faithful, bent her ear to receive her usual meed of compliments, and then turned to the fuming figure by the side of her desk. "So hot," said madame. "It feel' to me like t'under, in ze air!"

"You say he's working here?" demanded the other.

"Working, yes. Of course he hasn' much experience. But wiv practice comes technique. M'sieur has probably found it so himself."

"Where is he? I want to see him!"

"Downstairs—washing dishes."

Mr. Noyes made a choking sound, like an empty bottle suddenly immersed in water, which madame politely pretended not to notice. "I will take you down," she said. The dishwasher extraordinaire probably heard them coming, for when they opened the door he was swishing a plate in the water and whistling "Some Smoke."

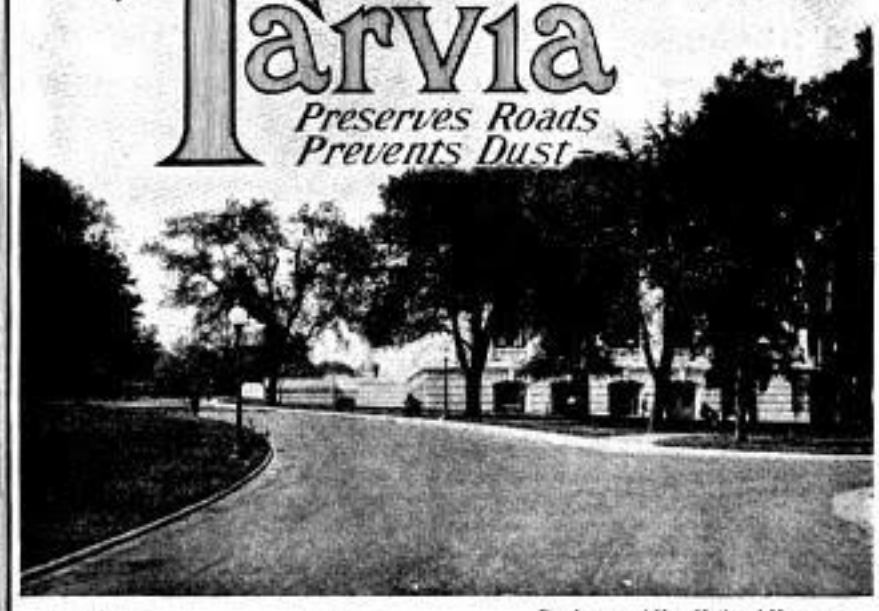
"What — what — what — what — what — what — what?" began Mr. Noyes, Sr., his indignation popping like a volley of corks.

"Hello, dad," said the young man.

"What — what

Pictures No Artist Can Paint

By C. L. EDSON



SIX YEARS AGO Gid Cracken out in Belleville, Kas., had drunk so much drug-store chemical whisky that the doctors told him he'd have to give up the stuff if he wished to avoid going blind. "Well," said Gid, who was a short-grass Omar, "I get more pleasure out of being drunk than out of looking at this landscape. I've seen about everything, anyway."

The next year a motion-picture show opened in Belleville and old Gid saw a man eating spaghetti in the movies. "What in thunder kind o' grub is that?" asked old corn-fed Gid. He decided there were things after all that he hadn't seen. And he quit drug-store whisky so he could save his eyesight for the moving-picture films.

Because people in humdrum places can find the relaxation in the movies that they used to find in bottles is why there have suddenly sprung up enough "picture houses" to reach from New York to Hartford if placed side by side. They were not placed side by side, however, because that would have been a poor business location. They are scattered like the population from Broadway, N. Y., to "The Narrows" on Clinton Mountain, Ark.

Every three days as many Americans see the movies as the total population of Mexico. And some humorist has estimated that every two years as many Mexicans are lynched by cowboys in the movies as there were actual Mexicans killed at the battle of Torreon.

Tarvia
Preserves Roads
Prevents Dust

Roads around New National Museum, Washington, D. C. Constructed with "Tarvia X".

This road is three years old—

HERE is a Tarvia-built road that for three years has carried the heavy traffic of sightseers to the New National Museum in Washington.

Ordinary macadam would have lasted but a few months in this location.

The addition of "Tarvia X" as a binder, when the road was constructed, has been sufficient to keep the surface in splendid condition for three years, with the prospect of very little maintenance expense in the near future.

Tarvia is a dense, viscid coal tar product of great bonding power. It introduces an element of plasticity in the roadway and binds the stone in a tough matrix. Internal friction under heavy loads is prevented. Water runs off the surface instantly, and the tarviated macadam will not ravel on slopes. The surface is automobile-proof, producing no dust.

Tarviated macadam in the end costs no more than ordinary macadam—its first cost is a little higher, but its maintenance cost is very much lower.

Tarvia is made in three grades: "Tarvia X" is suitable for building Tarvia-macadam roads; "Tarvia A" and "Tarvia B" are thinner grades suitable for roads already in use, to preserve them and make them dustless.

Booklets free on request.

New England CONSERVATORY OF MUSIC

George W. Chadwick, Director

Year opens Sept. 17th, 1914

BOSTON, MASS.

The Largest and Best Equipped School of Music

Located in the music center of America. It affords pupils the environment and atmosphere so necessary to a musical education. Its complete organization, its imposing Conservatory Building, splendid equipment, and the Residence Building offer exceptional facilities for students.

Complete Curriculum. Courses in every branch of Music, applied and theoretical, including Opera.

Owing to the practical training in our Normal Department, graduates are much in demand as teachers.

The free privileges of lectures, concerts and recitals, the opportunities of ensemble practice and appearing before audiences, and the daily associations are invaluable advantages to the music student.

A Complete Orchestra offers advanced pupils in voice, piano, organ and violin experience in rehearsals and public appearances with orchestral accompaniment.

Dramatic Department. Practical training in acting.

Scholarships. A limited number of scholarships in Composition (Director's Class) available 1914.

Address RALPH L. FLANDERS, Manager.

Belle Didn't Worry—

"Might have been anxious before we got a Basline Autowline—but now, a breakdown is just a matter of letting some nice young man tow us home; that's all!"

Basline Autowline

"The Little Steel Rope With The Big Pull"

gives the motorist a feeling of real security. He knows that ordinary road troubles won't leave him crippled miles from repairs. He can receive help—or give it—and is satisfied. Basline Autowline is made of Yellow Strand Powersteel—the sturdy steel wire rope that is used for constructing and engineering purposes the world over. About 25 feet long, ¼-inch diameter, 4½ pounds weight. Sold by all supply dealers. Price, east of Rocky Mountains, $2.50.

FREE Illustrated circular giving all Autowline information

"Married!" mocked Mr. Noyes. "Stuff 'n' nonsense! How could you get married?"

—what—what's all this I've heard?" cried the other. "Dammy-dammy-dammy, what's the meaning of it all?"

"About me getting married?" asked the son.

"Married!" mocked Mr. Noyes. "Stuff 'n' nonsense! How could you get married? What you got to get married on?"

The young man turned his face to the wall. "Well," he began, "I've got a wife who loves me and a place where I can earn a living till I find something better. I'm going to prove myself worthy of my wife's love and my father's respect—" (Madame's coiffure kept bobbing up and down like that of a teacher well pleased with her pupil.) "Nothing the matter with that, is there, dad?" asked the young man, turning around.

MR. NOYES looked at his son with the same goggle-eyed astonishment that a bird fancier might display upon hearing a very young canary recite the Declaration of Independence.

"I'm not particularly stuck on dish-washing," continued the young man, turning his face back to the wall, "but I'll probably hear of something else pretty soon. Madame's going to send a couple of fellows down to see me to-night—h-hem!—newspaper men—they hear of lots of things every day, you know."

"Billy!" gasped the father, recalling. "Do you—do you want to kill your mother? Reporters! Why, they'll publish columns about it—pictures and interviews—everything! Think of it! 'Financier's Son Washing Dishes for a Living!' 'Society Matron's Son Turns Dishwasher for Love!' Dammy-dammy-dammy, we'd never hear the end of it!"

"Oh, that's all right, dad. It's an honest occupation, you know, and I've got to do something. Didn't you make your first half dollar hoeing potatoes? Well, I'm scraping 'em off the plates. Not much difference, is there?"

"But, Billy—Billy! What do you suppose I've been making the money for? Or brought you up like a gentleman? And then you run off like this and get married! Well, all I can say is this: I didn't know you had it in you; that's all! My God, you're a better man than I thought you were! It's the Spencer girl, I suppose? Good! Consider yourself forgiven, my boy. And take off that confounded apron—and that cursed cap—quick—before anybody comes! And—and—oh, yes—where's the wife? Good! Let's go get her, then, and we'll all go home in the car!"

TEN minutes later, when Mr. Noyes, Sr., had kissed the bride and started the young couple down the steps to the waiting limousine, he turned to madame, his face shining with pride.

"Good-by," said he. "Good-by! I tell you now, he's a fine young fellow; what?"

"An vrai, m'sieur!"

"Yes, yes! Proud of him! Grit in him! Brought him up myself, gave him a good start, and that's everything. Good-by, again!"

"Good-by, m'sieur!" cried madame with her innocent look, like baby's. And watching the bridegroom hand his bride into the waiting car below, she thought: "Eh, bien, yes! You may have give' him ze good start, m'sieur, but it was me—mon Dieu!—it was me who give him ze fine domestic finish!"

Nary a Cuss Word

By LABERT ST. CLAIR

BESIDES being one of the best prose poets at large, Walt Mason is one of the few telegraph editors in America who can handle a wire all day and be funny in the evening. All of his poems and magazine stories are written after the Emporia "Gazette," on which he holds down a desk, has gone to press.

Mason delights in practical jokes, and his friends, especially William Allen White, editor of the "Gazette," keep on their guard constantly lest he trick them.

Years ago, when Mason was working in Atchison, Kas., he became acquainted with one of the loudest-praying and most vehement "cussing" elders in the world. But he never swore in the presence of Mason. The budding poet felt slighted, and he vowed to trap the elder into swearing before him.

While the elder was in Kansas City one day, his barn was destroyed by fire and twenty-six horses burned to death. When Mason heard of the catastrophe he rushed to the elder's family and obtained permission to break the sad news to the head of the household.

Scarcely had the elder alighted from the train than Mason was at his side and fairly shouting:

"Your barn burned down to-day and twenty-six horses were killed!"

Reverently the elder raised his right hand and said in a voice filled with praise:

"The Lord giveth and the Lord taketh away: blessed be the name of the Lord. We shall build a new barn even larger than the old one was, brother Mason, and fill it with horses of a nobler strain of blood than I ever had before."

Crushed and defeated, Mason retreated to his office and wrote a heavy editorial on slavery in the Congo

A New Use for the Rubber Stamp

By LEONARD HATCH

THE midsummer sprint through Europe is on again, when lots of people attempt to read, mark, learn, and inwardly digest a half-dozen countries and a couple of dozen cities in a few fleeting days. What is more, they have to come across with some evidence to prove to their stay-at-home friends the accruing store of pleasure and profit. Letters home? Not on your life, with a picture gallery, four churches, a park, a famous battlefield, and two cafés to visit before the train leaves. But picture post cards—yes, by all means thinks the itinerary-ridden traveler.

Yet even the writing of many post cards takes precious time. Therefore, why not have appropriate rubber stamps for sale with the post cards? These would provide the one telling phrase or indispensable adjective. Just to start the movement, here are a few tentative and fragmentary hints which may later be crystallized into rubber:

LONDON: Foggy—Full of Historical Associations—Can't compare with little old New York.
RURAL ENGLAND: Peaceful—Finished.
PARIS: Gay—Tinsel—Joie de vivre—Ghostly immorality.
BERLIN: Interesting—Uninteresting—Better run than an American city—Not so well run as an American city.
SWITZERLAND: Inspiring Scenery—Not equal to Canadian Rockies.
VIENNA: A second edition of Paris.
ROME: See London (omitting foggy).
HOLLAND: So quaint!

One might go on indefinitely, but this will give you the idea. *Thump—thump, thump—thump,* and lo—the tourist has turned off a score of post cards for home consumption in less time than it used to take to pen two or three.

Bealby

(*Continued from page 12*)

hone of things and the general mechanism of things. He was fond of clocks, curious about engines, eager for science; he had a quick brain and nimble hands. He read Jules Verne and liked to think about going to the stars and making flying machines and submarines—in those days when everybody knew quite certainly that such things were impossible. His brain teemed with larval ideas that only needed air and light to become active, full-fledged ideas. There he excelled most of us. In the next place—but this second strand was just a strand that most young men have—he had a natural keen interest in the other half of humanity, he thought them lovely, interesting, wonderful, and they filled him with warm curiosities and set his imagination cutting the prettiest capers. And in the third place, and there again he was ordinarily human, he wanted to be liked, admired, approved, well thought of. . . . And so constituted he had passed through the educational influence of that English home, that preparatory school, the good set at Eton, the Sandhurst discipline, the Bistershire mess, . . .

Now the educational influence of the English home, the preparatory school, the good set at Eton and Sandhurst in those days—though Sandhurst has altered a little since—was all to develop that third chief strand of his being to the complete suppression of the others, to make him look well and unobtrusive, dress well and unobtrusively, behave well and unobtrusively, carry himself well, play games reasonably well, do nothing else well, and in the best possible form. And the two brothers Douglas, who were both really very much alike, did honestly do their best to be such plain and simple gentlemen as our country demands, taking pretentious established things seriously, and not being odd or intelligent—in spite of those insurgent strands. But the strands were in them. Below the surface the disturbing impulses worked and at last forced their way out. . . .

IN one Captain Douglas, as Mrs. Rampound Pilby told the Lord Chancellor, the suppressed ingenuity broke out in disconcerting mystifications and practical jokes that led to a severance from Portsmouth, in the other pent-up passions came out before the other ingredients in an uncontrollable devotion to the obvious and challenging femininity of Miss Madeleine Philips. . . . His training had made him proof against ordinary women, deaf as it were to their charms, but she—she had penetrated.

Are You a "Business Anarchist"?

Do you prefer to shop in a store where cut prices on standardized articles are the rule and not the exception? If you do you are "penny wise" but "pound foolish" and are aiding a business anarchist in pulling the wool over your own eyes. That is emphasized in the following Editorial on Price Maintenance by Dr. Frank Crane, from "The Globe," New York.

Many requests have been received for reprints of an article on the same subject by Richard Washburn Child which appeared in the July 4th issue of Collier's, entitled "The Price Knife and the Law." A small quantity of these booklets remain. Would you like one?

H. C. Hamerstrom.

Advertising Manager Collier's Weekly

*BUSINESS ANARCHISTS

By DR. FRANK CRANE

(Copyrighted, 1914, by Frank Crane)

There are certain persons who are doing their best to assassinate society itself. They oppose all government, all policemen, all laws, all morals. They are commonly known as anarchists.

The anarchist in business is the price-cutter.

There are two ways of selling goods—the oriental or primitive way, which is by haggling; and the modern way, which is by one price.

The old way was suited to provincial life, to bazaars and small pushcarts. It never in the world could have produced big business, because it was incapable of organization.

By adopting the one-price system business was enabled to get upon a basis of COMPETITION IN VALUES, and not competition in trickery.

It is absolutely essential to sound business that price should be standardized. No great concern will continue to manufacture the best possible typewriter, cash-register, talking-machine, or soap unless the retail price to the public can be maintained.

If A. B. C. soap, for instance, is sold at the same price everywhere it is in a fair competition with all other soaps, which is good business and encourages the A. B. C. people to go on making the best soap they can. But if it is sold at cut rates it is in competition with itself, which is suicide.

The maker of a standard trademark article ought to have the right to say how much the retailer shall ask the public for it.

The Supreme Court, by an amazing decision, has said that he has not that right.

A bill (H. R. 13,305) is now before congress to legalize price-fixing. It ought to pass.

The government compels railways to maintain one price for all. Why prevent the manufacturer from doing the same thing?

It is not one price; it is cutting the price that is the serious charge against the great trusts. By cut prices they slaughter small dealers.

The public has an erroneous idea that price agreement is a conspiracy against the consumer. Exactly the contrary is true. Price chaos eventually injures the consumer, and meanwhile it puts the honest manufacturer out of business and encourages the cheat.

The business of the United States ought to be on a sound basis. There is none other such than one price to all.

The bill spoken of above, known as the Stevens bill, ought to receive the enthusiastic support of all commercial clubs, boards of trade, publicists and intelligent citizens.

It is a sensible move toward settling conditions so that prosperity may continue.

The gist of the matter was thus stated by the Supreme Court of Washington:

"It seems to us an economic fallacy to assume that the competition that benefits the public is competition between rival dealers. THE TRUE COMPETITION IS BETWEEN RIVAL ARTICLES, A COMPETITION IN EXCELLENCE."

And a principle of eternal law which should be kept in mind is thus stated by an English judge, Sir George Jessel:

"If there is one thing more than any other public policy requires it is that men shall have the UTMOST LIBERTY OF CONTRACTING, and that their contracts shall be held sacred and shall be enforced by courts of justice."

* The Globe, New York, May 14, 1914.

Agents Of Ability And High Character Wanted on a new household article. Large profit. Special selling plan that pays results. Address Merritt & Brock, 33 to 40 Temple Place, Boston, Mass.

And impulsive forces that have been pent up—go with a bang when they go. . . .

The first strand in the composition of Captain Douglas has still to be accounted for, the sinister strain of intelligence and inventiveness and lively curiosity. On that he had kept a warier hold. So far that had not been noted against him. He had his motor bicycle, it is true, at a time when motor bicycles were on the verge of the caddish; to that extent a watchful eye might have found him suspicious; that was all that showed. I wish I could add it was all that there was, but other things—other things were going on. Nobody knew about them. But they were going on more and more. He read books.

"Why, Kitty, what are you doing with my powder puff?"

"It's all right, mother, I've been eatin' candy an' I'm only just simply covering up some stickiness."

Not decent fiction, not official biographies about other fellows' fathers and all the old anecdotes brought up to date and so on, but books with ideas—you know, philosophy, social philosophy, scientific stuff, all that rot. *The sort of stuff they read in mechanics' institutes.*

He thought. He could have controlled it. But he did not attempt to control it. He *tried* to think. He knew perfectly well that it wasn't good form, but a vicious attraction drew him on.

He used to sit in his bedroom—study at Sandhurst, with the door locked, and write down on a bit of paper what he really believed and why. He would cut all sorts of things to do this. He would questions—things no properly trained English gentleman ever questions.

And—he experimented.

This you know was long before the French and American aviators. It was long before the coming of that emphatic lead from abroad without which no well-bred English mind permits itself to stir. In the darkest secrecy he used to make little models of cane and paper and elastic in the hope that somehow he would find out something about flying. Flying—that dream! He used to go off by himself to lonely places and climb up as high as he could and send these things fluttering earthward. He used to moon over them and muse about them. If anyone came upon him suddenly while he was doing these things, he would sit on his model, or pretend it didn't belong to him or clap it into his pocket, whichever was most convenient, and assume the vacuous expression of a well-bred gentleman at leisure—and so far nobody had caught him. But it was a dangerous practice. And finally, and this now is the worst and last thing to tell of his eccentricities, he was keenly interested in the science of his profession and intensely ambitious.

He thought—though it wasn't his business to think, the business of a junior officer is to obey and look a credit to his regiment—that the military science of the British army was not nearly so bright as it ought to be, and that if big trouble came there might be considerable scope for an inventive man who had done what he could to keep abreast with foreign work, and a considerable weeding out of generals whose promotion had been determined entirely by their seniority, amiability and unruffled connubial felicity. He thought that the field artillery would be found out—there was no good in making a fuss about it beforehand—that no end of neglected dodges would have to be picked up from the enemy, that the transport was feeble, and a health service—other than surgery and ambulance—an unknown idea; but he saw no remedy but experience. So he worked hard in secret; he worked almost as hard as some confounded foreigner might have done; in the belief that after the first horrid smash up there might be a chance to do things.

OUTWARDLY of course he was sedulously all right. But he could not quite hide the stir in his mind. It broke out upon his surface in a chattering activity of incompleted sentences which he tried to keep as decently silly as he could. He had done his utmost hitherto to escape the observation of the powers that were. His infatuation for Madeleine Philips had at any rate distracted censorious attention from these deeper infamies. . . .

And now here was a crisis in his life. Through some idiotic entanglement manifestly connected with this missing boy, he had got tarred by his brother's brush and was under grave suspicion for liveliness and disrespect.

The thing might be his professional ruin. And he loved the suppressed possibilities of his work beyond measure.

It was a thing to make him absent-minded even in the company of Madeleine.

SAXON $395

Price of $395 includes windshield, top, storm curtains, lamps, tools, jack and tire repair kit f. o. b. Detroit.

Actually just as stylish and up-to-date as it looks in the picture.

Judge the SAXON by What it is Doing

The picture above represents the Saxon in a new dress, with a new color scheme—elegant dark blue body, and black running gear, with running boards, headlights in front, gasoline filler cap extending through cowl, hinged bonnet and 38 other detail refinements.

ON July 4 the Saxon car finally demonstrated its independence of all road conditions. For on that famous day a Saxon reached San Francisco, having traveled 3389 miles overland from New York in 30 days across the Lincoln Highway—the first automobile to make a continuous trip from New York to San Francisco over the Highway and the first car of its size and price to make the journey from coast to coast.

Over the Alleghanies, over the Rockies, over the Sierras went the Saxon without faltering. Through mud, through sand, over the great plains, across the Great American Desert, the Saxon held to its schedule, and averaged 30 miles to the gallon of gasoline all the way.

It went from New York to Canton, Ohio, across the long grades of the Alleghanies through the hottest weather of the year, without needing a drop of fresh water in the radiator. Folks used to say "Cool as a cucumber," now they say "Cool as a Saxon."

8,000 Miles in 60 Days

The same car from April 8 to May 8, ran 135 miles a day for 30 consecutive days—4050 miles—averaging 30 miles to the gallon of gasoline and 150 miles per quart of oil, covering the entire distance on the original set of tires. In 60 days this transcontinental car has covered almost 8,000 miles—as far as the average owner drives in two years.

On May 16, 100 regular stock Saxon cars in as many towns all over the country, made non-stop runs of 200 miles each, averaging 34.53 miles per gallon of gasoline—less than half a cent a mile for fuel, less than ¼ cent a mile per passenger.

On May 28 and 29 two Saxon cars were driven from Detroit to the Indianapolis Speedway races in a cross country tour of the Wolverine Automobile Club with cars of all sizes and prices. The Saxons kept up with the other cars, arriving on time, averaging 25 miles an hour for the entire distance, making 31.3 miles to the gallon of gasoline and taking no car's dust.

C. L. Simmons, Richmond, Ky., has just made a trip of 1,000 miles in eight days over the sand roads and through the swamps of Florida, averaging nearly twenty-five miles to the gallon of gasoline.

Walter W. Wood, Marietta, Ohio, reports a 500 mile trip. He says, "Gas consumption was one gallon to each 35 miles. Motor never gave us a minute's trouble."

W. A. Coleman and wife, of Warsaw, Ind., drove to the Indianapolis Speedway races, making the round trip of 290 miles at a cost of $1.10, averaging 35 miles to the gallon of gasoline.

More Saxon Records

The remarkable feats described above are only a few of the records being made every day in all parts of the country by the thousands of Saxon cars now in use.

The Saxon Company, itself, has made some striking records to date. Note these:

Nearly 6000 Saxon cars shipped since March 1.

Present shipments averaging 75 per day, with a high mark of 102 on June 22.

Orders received for immediate shipment of cars average over 100 every day.

One day in June we received 290 orders.

Orders—What They Mean

The remarkable rate at which orders continue to flow in is significant. When orders are numerous in response to the announcement of a new model, they may be accounted for on the ground of public curiosity over a novelty, or a quick response to a sensational price, or a stampede of buyers as the result of big advertising.

But when nearly 6,000 cars of any model have been shipped and the orders continue to come in stronger from week to week, it can mean only one thing: That the car itself is making good.

Secret of Wonderful Records

It is plain to understand why these performances, and hundreds of others in owners' hands, are possible, when you consider the high quality of material used in Saxon cars, the care employed in building them, the thorough testing in the factory and in road tests, the logical, scientific design, and the sturdy construction.

From the start we set out to build a ***good, low priced car***—to secure quality in the Saxon. Performances every day, everywhere, prove that the Saxon is just what it is represented to be—a sturdy, reliable, comfortable, economical, good-looking car of standard design and standard features.

High Priced Car Features

For example, it has a 4-cylinder motor of special Saxon design—all anyone can ask, we believe, in motor excellence—a long stroke motor that gives almost the power and flexibility of a "six."

The Saxon is handsome, with French lines—the only car below $950 with genuine French line body. An indication of style in the Saxon.

You get comfort in the Saxon as in no other small car—as much leg room as in high priced "sixes." Comfort comes also from the cantilever type of spring suspension, so successfully used on many high-priced English and French cars. Saxon upholstery is of the best design.

A honeycomb radiator, the finest type known, with large cooling surface, keeps the motor cool.

Wire wheels on most other cars cost from $25 to $100 extra. On the Saxon they are standard equipment—no extra charge.

Further evidence of high priced car construction in the Saxon is found in the sliding gear transmission, which engineering experience has proved to be the best type.

In addition, the Saxon employs a dry plate clutch—just such as $2000 cars use—another indication of quality.

Order Your Saxon Now

With all this evidence before you there is no reason for hesitating to buy your Saxon now. You who have been waiting to know whether the car would make good can now purchase with absolute assurance.

Why not get the benefit of the motoring season, now at its height—in a Saxon? The demand for these sturdy cars is great, so we urge you to act quickly. Call on the nearest Saxon dealer and place your order today, for the earliest possible delivery.

Catalog and dealer's name on request.

America's Wealthiest Men Among Saxon Owners

Leaders in Financial World and Substantial Citizens Everywhere buy Saxon Cars. Here is a partial list of representative Saxon purchasers.

Pitiless Publicity

Placed Goodyear Tires on Top

A million and a half of men are passing judgment all the time on automobile tires.

Every trouble affects them. Every cost is counted. And most of them keep mileage records on odometers.

Each tells his results to others—his praises or complaints. Any tire which shows shortcomings meets a hail of furies.

There are no illusions about motor tires.

Four million Goodyears have been subjected to these pitiless comparisons. For 15 years these tires have stood the glare. Today they outsell any other tire in the world. And they are this year gaining new users faster than ever before in our history.

Don't you regard that as irrefutable evidence that No-Rim-Cut tires excel?

Then Why Pay More?

Tires are utilities, and they should be judged as such. Class and exclusiveness don't apply to tires. Their only appeal is lessened trouble or lowered cost per mile.

No-Rim-Cut tires have won on these points—in a decisive way. They won top place when they cost more than other tires. They hold it today, and their low price is one result. It is due to our mammoth output.

No-Rim-Cuts embody the best that men know about tire building. We have long spent $100,000 yearly in laboratory tests, seeking ways to improve them. They mark the present-day limit in low cost per mile.

In four ways—cited at the right—they excel any other tire. And one of those exclusive features alone costs us $450,000 per year.

Yet Goodyear tires now sell for less than 16 other makes. Four Goodyears cost you no more than three of some makes cost. And numerous other prices buy a half-inch wider Goodyear.

Consider these facts. Can you believe that other tires are worth that extra price?

Why Goodyears Won

These are four features which none can obtain save in Goodyear No-Rim-Cut tires:

The No-Rim-Cut feature—the faultless way to end rim-cutting. It has completely wiped out the chief cause of tire ruin for every No-Rim-Cut user.

The "On-Air" cure—an exclusive cure on fabric tubes under actual road conditions. It saves for our users all the countless blow-outs due to wrinkled fabric.

Our rubber rivets—We form hundreds in each tire, during vulcanization, to combat tread separation. This patent method—used by us alone—reduces this danger by 60 per cent.

All-Weather treads—the tough, double-thick anti-skids. Flat, smooth treads which run like a plain tread, but which grasp wet roads with deep, sharp, resistless grips.

In those ways we combat your four greatest tire troubles as no other maker does. They are costly features to us, but they save tire users millions. You get them all—at Goodyear prices—when you buy No-Rim-Cut tires. And any dealer, if you ask him, will supply you with these tires.

Sixty-One per cent Increase in the Sale of Franklin Cars—Explained

During the past year the sales of Franklin cars have *increased sixty-one per cent.*

Today, that a car in its thirteenth year should show such a growth can mean but one thing. A few years ago it would not have been extraordinary. But conditions in the automobile industry have changed. Competition is keen. The demand no longer exceeds the supply. There are many good cars. The customer no longer has to wait indefinitely for deliveries. He has a wide choice and has learned to exercise it.

An increase of 61%, therefore, particularly in a car of a distinctive type of construction, can mean only the *deliberate preference* of buyers, expressed after comparing many cars and studying efficiency, comfort and economy.

A Tendency—Not Chance

A *few* purchasers might for slight reasons happen to select the Franklin rather than some other car. But 61% increase represents not mere chance, but a *tendency.*

This tendency toward the Franklin we ascribe to these facts:

We have been manufacturing on the same basic idea for thirteen years.

In all essentials we have been producing the same model continuously for the past four years.

As fast as improvements are developed they are added to the working model and incorporated in all subsequent production, without waiting for the expiration of some arbitrary period. The refining process goes on continuously.

Scientific Light Weight

At the beginning we adopted as the fundamental of Franklin construction *light weight, scientifically obtained.* Toward that end we have directed the experience of thirteen years. During that time came the vogue of big, heavy cars. We continued striving more and more for light weight. Today light weight has finally become the chief demand of discriminating automobile buyers. They have, therefore, been turning to the Franklin as the dominant light car—the car which as the result of the uninterrupted production of light cars for thirteen years is scientifically light—which means greater comfort, less depreciation, greater endurance and greater mileage from gasoline, lubricating oils and tires.

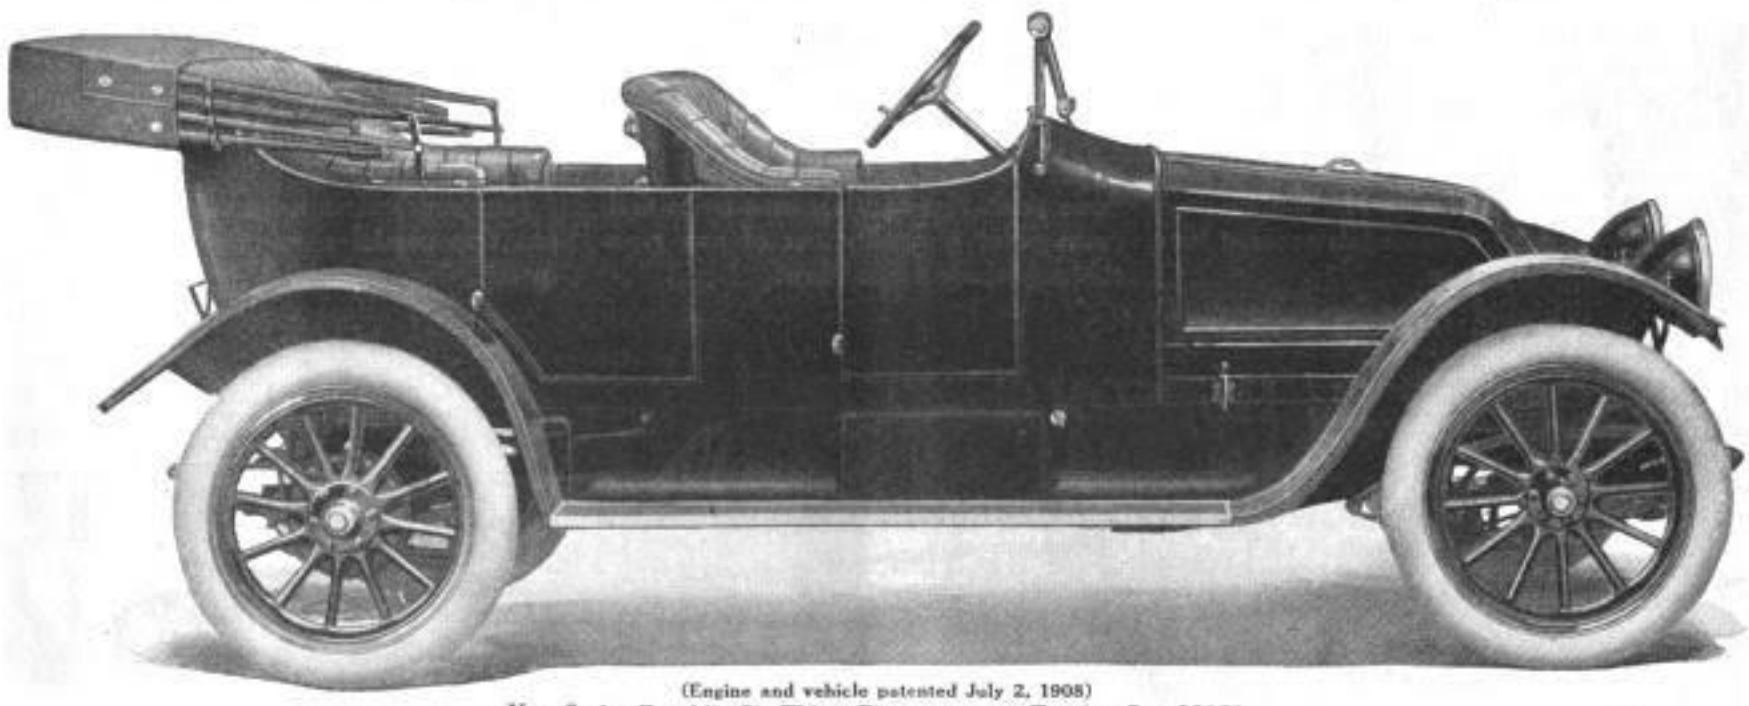
The other influential features of Franklin construction include flexibility, direct cooling, large tires.

Flexibility

Flexibility is obtained by constructing the frame of laminated, shock-absorbing wood instead of rigid steel, by four full elliptical springs and by the absence of strut rods or torque bars. It results not only in increased comfort and reduced strain on the driver, but also in greater durability of the car.

Direct Cooling

Franklin direct cooling has proved a success because it is the simple method. The Franklin can be driven on low gear all day without trouble. Its service on mountains is phenomenal. There is no freezing and no overheating under the most extreme conditions of weather or driving.



Large Tires

Tire size, in proportion to the weight of the car, is given as much thought in Franklin design as the axle, transmission or any other part. The Franklin car is not only light but it has for many years been equipped with large tires, which has had much to do with the exceptional service obtained from tires by Franklin owners.

The Latest Franklin

We are now beginning to sell the "Series Six" Franklin. This series will demonstrate once more the refining influence of continuous production of the same model. Among the numerous improvements, it contains none that is radical. No startling departures such as were necessarily made when we brought out the first four-cylinder in the days of one and two cylinders, or when we brought out the first six-cylinder. Consistent, however, with the Franklin policy of constantly increasing efficiency, we have made one important advance in the matter of tires. The Franklin is now regularly equipped with Goodrich Silvertown Cord tires or Goodyear Power Saver tires. As is well known these tires are higher priced and increase the efficiency of the car itself about 25%. Your dealer will point out a number of other refinements, all making for increased style, convenience or efficiency.

Send for new catalogue of the Series Six Franklin, to Franklin Automobile Co., Syracuse, N. Y.

(Engine and vehicle patented July 2, 1908)

New Series Franklin Six-Thirty Five-passenger Touring Car, $2150

Specification:

Wheel base 120", tread 56".
40" full-elliptic springs, 4½" opening in front, 6" opening in rear.
30 H. P.; valves in head; seven bearing crank shaft.
Aluminum body and hood.
Eisemann magneto with automatic spark control.
Needle valve, oil, hot and cold air controls on instrument board, all operated without stopping car or engine.
Re-circulating individual pressure feed oiling system.
Semi-floating type rear axle with bevel differential and spiral bevel gears.

HUDSON Six-40—This Year $1,550

New-Day Refinements

Which Now Mark the Quality Car

The HUDSON Six-40 for 1915 is a very fine example of the latter-day car. You should see it at once—all you men who watch advances in car building.

It marks the fruition of countless hopes, shared by owners and designers. And last year's model proved this type to be the coming car. Its popularity compels us this year to build three times as many.

No More Over-Tax

Men have come to rebel at excesses in cars. Not in price alone, but in upkeep, in operative cost, in weight. This new HUDSON Six-40, in all ways, offers ideal relief.

First, in modest size. The wheelbase is 123 inches, yet no one is crowded. Not even when the car is carrying seven with the two extra tonneau seats. What need is there for a larger car, unless it better meets your idea of impressiveness?

Next, in modest power. This motor shows 47 horsepower. That's ample, unless a car has excess weight or size.

Next, in lightness. This new HUDSON Six-40 weighs 2,890 pounds. That's 1,000 pounds less than former averages for cars of this capacity. Yet last year proved this light-weight Six one of the sturdiest cars on the road. Skillful designing and better materials account for this record lightness.

Next, in operative cost. This new-type motor—a small-bore Six en bloc—reduces fuel cost immensely. The lightness saves on tire cost. In these two items we save you fully 30 per cent.

New-Day Comforts

Here are also attractions which make old-time cars seem crude and inartistic. The body is a perfect streamline. The finish is superb. The seats are high-backed, wide, luxurious.

Here is new weight distribution. No extra tires, no gasoline tank to overload rear wheels. Here are many new ideas in equipment.

During all last year the 48 HUDSON engineers worked on nothing but refinements. Every part and detail now shows their final touch. You will revel in the beauties of this car.

The New-Day Price

This exquisite car—the finest model that we ever built—sells for $1,550 this year, f. o. b. Detroit. Last season's price was $1,750, and that was the year's sensation. We are saving $200 now by building three times as many.

In your old ideas, $1,550 meant a low-grade car. Not a six on the market three years ago cost less than twice that price. Not a quality car of any type sold anywhere near so low.

Now that price buys the finest HUDSON model. It buys the latest production of Howard E. Coffin and his famous corps of engineers.

It buys a car whose very lightness denotes the costliest materials and the ablest designing.

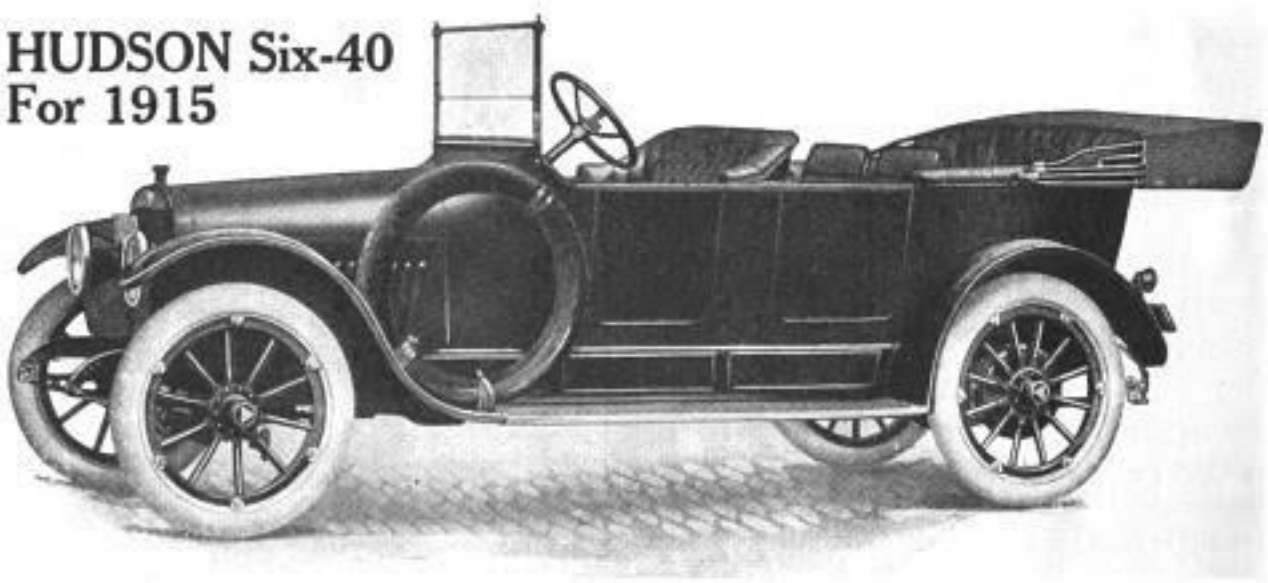
The car shows its quality. Every detail proves it. You will see no chance to better any feature in it. The price simply shows how HUDSON efficiency has brought down high-grade costs.

Our Lucky Car

We are frank to say that this car's excellence is partly due to luck. The perfect balance, for instance—the hardest thing to attain. Mr. Coffin's great skill has been helped by good fortune.

But the result is a car which we regard as the top-notch car of the times, and you'll agree with us, we think.

We don't argue Sixes these days. They have proved themselves, and won. Continuous power is a matter of course in practically every quality car.



But note what a revolution we have wrought with a HUDSON Six, with seats for seven passengers. You never expected that price, even in a high-grade Four.

Hudson dealers are everywhere. So see this model car. Catalog on request.

Some Features

- A perfect streamline body.
- Disappearing tonneau seats.
- Invisible hinges.
- Hand-buffed leather upholstery.
- Gasoline tank in dash.
- Tires carried ahead of front door.
- "One-Man" top with quick-adjusting curtains attached.
- Dimming searchlights.
- Simplified starting, lighting and ignition system.
- Wires in metal conduits.
- Locked ignition and lights.
- Speedometer drive on transmission.
- Automatic spark advance.
- New-method carburetion.
- Horn button in wheel.
- Trunk rack on back.

HUDSON Six-40
For 1915

Phaeton, seating up to 7 Passengers, $1,550 f. o. b. Detroit
Standard Roadster, same price

HUDSON MOTOR CAR COMPANY, 8083 Jefferson Avenue, Detroit, Mich.

Is Roger Sullivan a Boss?

By Peter Clark Macfarlane

SOME people would like to know. Some have already made up their minds. Colonel Roosevelt has said that he is. Colonel Bryan has voiced the same opinion loudly and widely, and held to it stubbornly. You can read that he is a boss in the papers of his home town, Chicago. You can hear it from the lips of his fellow citizens, both friend and foe.

But as for Roger—he argues the question. Once the appellation would have made him proud; to-day it gives him pain. He offers a quit-claim deed to the title. Whosoever will lift that doubtful laurel from his brow may have the Sullivan gratitude—and the Sullivan gratitude in the political purlieus of Illinois is recognized as no mere emotion, but a bond with coupons that may be clipped and cashed, for Roger is a man with rock in him. He stands like Gibraltar by any man who stands by him. They allege many things against Roger in Illinois—but they do not allege ingratitude. Leaders of the uplift will tell you that if Roger had but served his commonwealth with half the zeal with which he has served his political associates that commonwealth would be more certain to support him in the hour of his aspiration to be a Senator of the United States.

However, right at the starting point, I am going to admit that, in the loose sense in which we use that bit of slang, Roger Sullivan is a boss.

But what kind of a boss? The word carries various connotations. There, for instance, is Mr. Croker, living in Ireland on the profits of his boss-ship. There is also Mr. Ruef, occupying a cell in San Quentin as the consequence of his. And there is yonder Mr. Murphy, whose place and quality in the category of bosses has been rather definitely fixed in the public mind since Mr. Roosevelt pointed a derisive finger at his wealth and demanded raucously: "Where did he get it?"

But Roger Sullivan is a boss who is neither in retreat nor retirement. He lives to-day, a millionaire, within a half mile of the spot where he worked with his hands thirty-five years ago for a dollar and a quarter a day. He has never been so respectable as now. At the moment of writing he is actively campaigning for the Democratic nomination for United States Senator, and in this campaign is standing stoutly upon his record. That makes his record a thing of vital interest in this inquiry. The starting point for such an inquiry is undoubtedly the fortune of which to-day the man stands seized.

Where His Money Comes From

ROGER CHARLES SULLIVAN owns a cracker factory over on the West Side wherewith he has bucked the Biscuit Trust for ten years, and which flourishes strong and healthy in its very shadow—is indeed the largest independent concern of the kind in the country. He owns a piece of stock in the Great Lakes Dredge & Dock Company, which is a healthy-looking $5,000,000 corporation, with branches all the way from Duluth to Boston. Of course he has other bits of property stuck around, some of which, invisible to the naked eye, may yet be larger than either of these. The total of his wealth is variously estimated at from $1,000,000 to $5,000,000. The first figure is probably a bit too small, the second much too large.

Seeking for the source of this fortune, we find the "Ogden Gas deal" is at once the chief admission of Roger and the chief allegation of the people of Chicago. About this much-discussed and long-drawn-out transaction generalizations bristle like a picket fence in the moonlight, but specifications are not so obvious. A search for them takes us back along the trail of Sullivan to a time in the year '79 when a ruddy-faced Irish-American lad of nineteen, whose home was on the prairie, a hundred miles to the west, rode into town in a hay wagon and got a job as "maid of all work" in the machine shop of the West Side car barns. His wages were $32.50 per month. He paid $20 a month for his board to Barney McDevitt, the superintendent of the shop; sent home $10 to his mother in Boone County, where there were other mouths to feed, and the remaining $2.50 he reserved for his personal expenses. Roger was an energetic, likable young chap, who lived soberly but got a lot of fun out of life and made heaps of friends in the social circles that clustered around the car barn.

Sullivan as he is to-day

Sullivan at the age of twenty

Sullivan is of only medium height, but heavy — weighing 210 pounds, and yet without being paunchy. The expression of his mouth is good-humored, but there is, too, a nasty curl to the upper lip of Sullivan when he is in anger, and his white, regular teeth clamp like the bite of steel shears. He looks almost the same now as he looked at twenty. In forty years he has not changed

In 1882 came a mayoralty campaign. The Republican primaries were on. Barney McDevitt marshaled the car-barn vote for the espoused candidate of the street-car company, whoever that was, and asked Roger to assist him. Although a Democrat by inheritance, the young man obeyed his employer and proved an efficient worker, demonstrating that he had the natural instinct of his race for the kind of thing then and since called ward politics.

When the Democratic primary approached, Matt Clancy, noticing Roger's aptitude and knowing his Democratic leanings, said: "Roger I'm making a little fight for one or two fellows at the primaries. I want you to come in and help me."

"All right, Matt," promised Roger, delighted with the opportunity.

But to Sullivan's astonishment, when Democratic primary day came, Barney McDevitt said: "Roger, I want you to come down and help me at the primaries again."

"But you are a Republican," protested Roger. "This is a Democratic primary."

"All the same, that is my business, too," declared McDevitt firmly, thereby giving the young man one of his first lessons in corporation politics, a game whereat young Roger was greatly to better the instruction of his tutor.

"Well, I'm sorry," replied Roger, "but I promised Clancy to help him and I have to stick to my word."

Politics and Bread and Butter

STICKING by his word was an early principle of Roger. He holds to it now. Men admit that Roger fools them, that he tells them 97 per cent of the truth and leaves them to be misled about the other 3 per cent, and might if cornered prevaricate sufficiently for his purpose, but they declare that once his pledged word is passed it becomes a bond that will not lightly break.

"Oh, all right," said McDevitt, and they went off to the primary where Roger worked busily in the cause of his friend, and McDevitt just as busily in the cause of his bread and butter. The next day Roger, all unsuspecting, was discharged, flat and cold.

"Just for that?" pleaded Roger, sick to the heart.

"Just for that!" affirmed McDevitt doggedly.

That night Roger Sullivan, twenty-two years old, and not much afraid of anything but the loss of the $10 a month to send home, shut himself up in the little room that had been his and cried because his job was lost.

Yet in the midst of his tears he knew that he had learned another lesson in the game which was to be his profession for life. It was this:

"Never do politics against your bread and butter."

Digitized by Google

If Roger ever forgot that lesson till he had his own bread and butter permanently secured, the spot in the record where the lapse occurred does not loom large.

However, Roger's political service to Clancy was presently made to earn him a bread-and-butter reward. He found a job as custodian of properties at the County Hospital, salary $40 per month. Roger's education had been limited. He spent the two years this job lasted taking a rudimentary course in political science; yet he read no books. The pages he scanned were those of the human documents around him, the people of his precinct and his ward.

These taught him lessons in citizenship: that the government was dim, far-off, and abstract; that the political organizations of the day were near and plain and concrete. The fruits of government were admittedly justice, freedom, and equality—fine things all right, but rather intangible and sometimes mildly impotent. The fruits of the organization were friends, favors, and jobs! In the exercise of his supposed freedom Sullivan's job had been taken from him by McDevitt; surely there was small justice and no equality in that. On the other hand, for his service to the organization Clancy had got him a job. That was something real and substantial. That way progress lay. Therefore, the duty of the citizen, in order to make sure of his freedom, to maintain equality and secure justice, was to chase no phantom ideals but to serve the organization. The material of the organization was human beings, not as they ought to be, but as they are. Roger was to be an organization man, and he must study the disposition of these human wheels in the big machine.

As a Human Being

THE people of the wards had troubles, sorrows, embarrassments, poverties. Roger Sullivan was naturally sympathetic and quick to render service within his power. He got a job for this man, he lifted the pressure on that one, he was the first practical sociologist of his time. He was a sort of crude Hull House on legs. He learned that gratitude was not so rare a virtue as the cynics say; that just a handshake or a slap on the back will make some men remember you and vote for you on primary or election day; that a stick of candy to a child, or a bit of thoughtfulness to the old or helpless, watching one night by the bed of the sick, or appearing solemn-faced and sympathetic at a funeral, would make political assets of a whole family, whose ramifications of aunts and cousins and friends might appear in the most unexpected places, enlisting powerful influences so delightfully and effectively as often to turn the tide of victory in the face of overwhelming odds.

The voters liked amiability, therefore Roger was amiable; they liked loyalty, therefore Roger was loyal; they liked notice, appreciation, flattery, representation, places on committees, organization honors; therefore Roger noticed, flattered, appreciated, honored, and rewarded.

Casting His Bread Upon the Waters

YOUNG Sullivan did all these things with an open hand, seldom exacting a promise in return. He conceived that this old life is a tree full of plums that grade in size all the way from very small to very large, and that if he shook the tree for John, Tom, Jerry, and Mike, thus helping them to get theirs, that three out of the four of them, if the affair were properly managed, could be counted on to help shake off a larger plum for himself.

Deliberately Roger began a system of putting the world under obligation to himself. He watched for opportunities to do favors. Each new favor got him power to do more. He has practiced this not only in the precinct ward, and city, but when opportunity offered he practiced it in the State and nation. He not only practiced it upon politicians, whose aim was no different from his own, but he practiced it upon his political enemies—as when ten years ago he directed his Springfield convention to instruct for Hearst. And the bread usually comes back! For instance, to-day, when Roger's Senatorial boom is getting under way, the Hearst papers, usually so denunciatory, are strangely silent.

Roger Sullivan has also been careful to bestow his favors upon high causes and upon the leaders of high causes, one and another of whom, as I have interviewed them, have confessed to me that their judgment of the man is unavoidably softened because of such favors, as, for instance, when a dozen years ago the good-government forces were urging a resolution at Springfield to permit Chicago to vote upon a charter convention. Its defeat seemed certain until Sullivan, by a nod of his head, delivered forty votes and saved the measure.

He loves his home and spends much time in it. Mrs. Sullivan is a woman of very impressive appearance. There is a son, Bartus, who has just been graduated from Yale, and three daughters

The bright particular example, of course, and one that comes near to gaining Roger deathless fame, was at the Baltimore Convention, when he put Woodrow Wilson, his party, and the nation under obligation to him by his part in the nomination of that gentleman.

That act is just now the greatest political asset of Roger Sullivan. It is the Shasta daisy of his ward-born policy. But there are other features of the ward-born policy which we might consider now.

Sullivan as a party leader knew how to make cunning capital from the political ambitions of others. A man who aspired to office might confide his ambitions to Sullivan; if Sullivan liked the man, or thought he might become politically useful he would encourage him; or he might send him out to see what he could do in the precinct, the ward, or the district. If he brought back evidence that he could make a winning fight, Sullivan might encourage him—might give him $100, $500, or $1,000 for his campaign fund, and might at the same time do some service for his opponent. Thus whoever won was under bonds, as he sat in Council or Legislature or Congress, to come to Sullivan's aid when Sullivan needed aid.

Sullivan the Politician Appears

SULLIVAN, too, built his machine upon a broad complaisance. He seldom hogged things. Who was it that said: "Politics is the science of getting 51 per cent of the voters with you?" Sullivan quotes that to-day. He always kept his eye upon the larger thing. Men might have the small things of the precinct if they would give him the larger control of the ward, and they might have the honors of the ward if they would obey his nod in the Council or the Legislature. They might fish in what ponds, cut bait with what interests they would; they might stand to gratify all their private likes and dislikes, until the hour came up when a Sullivan interest was represented; then they were expected to forget all else and stand with him.

This, of course, was no patent of Roger Sullivan's. It is the way of the boss everywhere. It is the source of much bad government, and it is the source of one of the gravest charges against Sullivan.

His influence upon city politics has been bad because he permitted bad men to have their way in the small things that he might have his way in the large things. Some of the notorious Sullivan men were and are notoriously bad men—the gray wolves and the black sheep of Council or Legislature.

As an individual, the man possesses an enormous self-confidence and lays a large stress upon the ego. He is immensely proud of his achievements, and "I, Roger Sullivan," is a phrase which breaks frequently into his conversation. Yet, as a leader, Sullivan was neither domineering nor vindictive. Many times he commanded when men did not know they were commanded. He did not always appear to plume himself on leadership. A party conference might talk and wrangle, split hairs, and shake shillalahs by the hour, with Sullivan merely an observant spectator until he judged the proper moment had come, when, with the mild declaration, "Well, boys, I think this [or that] is what we'd better do," Roger would take the helm.

When opposition arose he could fight with animosity that seemed implacable. He could punish with severity; but he could also forgive and condone.

"Oh, that young fellow made a mistake this time. He'll be all right. Try him again," he has been known to urge when a deserter came up for discipline.

Climbing the Rungs

BUT we must go back now in our narrative and start with Roger in his first political job as custodian of property at the County Hospital with its monthly warrant of $40.

Two years passed and Cleveland had been elected President. In the distribution of patronage young Sullivan developed just pull enough to land himself a job as Government storekeeper at $4 per day. In four years he advanced—on his merits, Roger thinks—to be a gauger, and then deputy collector. He saved his money, too, and by the time the election of Harrison turned him out of office he had a little teaming business going that was bringing in $700 or $800 per month, and was fairly on his way to that opulence at which he has now arrived.

From then on, too, his political progress was amazingly rapid. In 1890 he was elected Probate Clerk of Cook County. The salary was $6,000 a year. Roger has a notion now that he saved it nearly all. Anyway, at the end of his term he found himself with an amassed capital of something like $25,000, the result of his savings and his teaming business. Moreover, the political going was still good, for he had the Democratic nomination for County Clerk. But up sprouted a labor ticket that cut the Democratic vote to ribbons and left Roger deep in the ruck of defeat.

The Mark Against Him

THE closest and most important political friend Sullivan had made was the John P. Hopkins already mentioned, a man of wealth and a power in Democratic politics. At the time of Roger's defeat Hopkins was Mayor of the city. Roger, although hopelessly out of office, still had his $25,000.

"Better get into some kind of paying business, Roger," said John; "politics is uncertain."

This remark of the Mayor to his political lieutenant brings us plump against the Ogden Gas deal, without the discussion of which no justice can be done the feeling of Chicago regarding this one of its eminent citizens.

Stated so briefly as to do justice to neither side, yet at sufficient length for the general reader who cares nothing in particular for Chicago's internal woes, but would merely understand something of the ethics of a man who may soon find a seat in the United States Senate, this much may be said:

In the nineties, the putting through of "strike" franchises, gas or electric, and the organization of companies that never intended to manufacture but merely to "hold up" operating companies already in the field by selling out to them at an exorbitant price, was a profitable and familiar game in the City Council.

The Ogden Gas Com-

Thief of the World

By Patrick Casey

ILLUSTRATED BY FREDERIC DORR STEELE

She called "Jo-Jo! Jo-Jo!" There was no answer of any kind. "It's off with that run-the-hedge Patch at every chance he gets, and me worryin'," she said

THE woman came out of the doorway under the stairs. A green plaid shawl was about her slight shoulders; a blue apron hung from her waist. She crossed the little brick-paved court. She looked up and down the back street. She called: "Jo-Jo! Jo-Jo!" There was no answer of any kind from the sleeping back street.

"It's off with Patch Clancy he is," she said in a low tone. "There's no mindin' of me, but it's off with that run-the-hedge Patch at every chance he gets, and me worryin'."

SHE pulled the shawl about her slight shoulders. She returned across the court to the house. The house was a small, two-story box of brick. There was an outside staircase climbing up one side of it from brick-paved court to upper story. She opened the screen door beneath the staircase and locked the inner paneled door.

The staircase over her head shook in every rickety step. A woman had come out on the landing of the flat above. She rested flour-whitened arms, bare to the elbows, on the balustrade.

"Mrs. Fannan," she called, "be you locking up to let yourself chase after that little open-mouthed Jo-Jo?"

The pale, shawled woman stepped out of the damp of the stairs.

"Have you been after seein' him?" she asked, a great appeal in her blue-shadowed eyes.

The woman on the landing nodded.

"Not an hour since by the clock," she said. "'Twas himself and some other little run-the-hedges and my scamp boy, Patchin; him leadin', after all his work of the night. But don't be after destroyin' of yourself with worry, Mrs. Fannan—"

"It's myself cannot help it, God pity me! with my own man no use over there in the barn. It's wanderin' the wharves they be, and the coal bunkers overhead, Mrs. Clancy, and the water all round. I must be goin' down after him, as always."

SHE gave another tightening tug to the green plaid shawl. Her eyes were wide and dry. She stepped out of the little court to the sidewalk. She ran up the quiet back street.

Mrs. Clancy looked long at the large red stable across the narrow street. Slowly she shook her head above the empty court.

"Ah it's the sick heart she has, sure, with the husband of her lyin' drunk in the barn. And a sore puzzle of a child is that little whity Jo-Jo with the blue eyes of him and the open mouth. Always he do be followin' my Patch, and my Patch gallivantin' the wharves. And it's more of a man Patch should be, with him soon in long pants and a-workin' these nights at the runnin' job."

But that night Patch Clancy did not work at the "runnin' job."

Patch Clancy worked in the editorial rooms of a morning newspaper. The newspaper had been burned out of its quarters uptown. It had located temporarily in two long low sheds on the very water front of San Francisco. There were few conveniences.

There were no pneumatic tubes for the handling of copy between the editorial rooms and the mechanical departments. It was Patch's work to act in place of such tubes. From six o'clock in the evening to two o'clock the following morning he ran with fistfuls of copy through the engraving room to the composing room in the adjoining shed and back, with proofs still damp and sticky from the hand press. That was the running job.

It was lacking five minutes to six o'clock, the next evening, when the chief copy reader stopped Patch midway across the newsroom. "Report to O'Gorman," he said. "That was a big story yesterday, Patch. The follow's bigger. Gorry's writing it."

O'GORMAN was news editor. He was an editor that could write. Double-leaded stuff on the first page as a rule was signed:

"J. CLARENCE O'GORMAN."

He was sleek and well fed—but that came of his fat salary. He could do things. He could make men do things. In his squat, strong frame was the husky drive of personality.

O'Gorman worked shirt-sleeved at a roll-top desk. A row of cigarettes was laid out at his elbow along the edge of the desk. There was reason for their readiness to hand. One was always in his mouth. A few long inhalations sucked it to a butt. The butt lighted the next.

The while he smoked, he hurried through the evening papers. He consumed the papers much as he consumed the cigarettes. With each butt thrown away was thrown away an evening paper. A litter of papers rose about his desk.

Ankle deep in that litter of papers the boy waited. The editor threw the last paper upon the litter.

"You were in that fire yesterday, boy? What do you know about it?"

THE boy's hand nervously fingered the curved top of the desk. He wet his lips. "I don't know, sir—but we left Silver Street in the mornin', after I got up—and Jo-Jo comes taggin' along. I'm the leader of the gang and I didn't want Jo-Jo—"

"Who left, boy? What's their names? Say, what's your name, boy? And how old are you? The real age now. I'm wise."

"Patrick Clancy, sir. And I'm thirteen, and none of the others is old as me. And they was me and Beauty Mulcreavy and Dutchie Schroeder"—he counted off on dirty, cloth-wrapped fingers—"and Fat McDevitt and Butch Flynn and Cocky Hughes and—and—"

"And this Joseph Fannan. Say, why didn't you want him along?"

"I'm the leader of my gang—and you see Jo-Jo was only seven, and his mother allus came after him. She'd chase along the wharves, sir, and it allus skeered us—the look in her eyes."

"Where's the father?"

The child's pale face showed some surprise and a great dismay.

It was as though the editor had discerned some dreadful secret. He hesitated.

"Well, you see, sir—Jo-Jo's father—" Slowly his hand began to climb up the curve of the desk. "You see, sir, Jo-Jo's father is a hack driver. He's a drinkin' man, sir. He has a stall fixed up with blankets, and there himself sleeps when he's got a drop taken. He allus has that, sir—it's cold drivin' a hack, my ma says. He never comes home."

O'GORMAN was a "drinkin' man." He nodded slowly.

"I know," he said quietly. "So he sleeps with the beasts!"

The peaked face of the boy brightened at being so sympathetically understood. He went on with his story:

"I was tired from runnin' copy all night. I takes my gang down near the coal bunkers for a swim, so I'd freshen up. I swims underneath the coal dust on the water till I comes out to the clear stuff at the end of the pier. I was gettin' into my clo'es—and an engineer of the collier, what was lyin' alongside the pier, ast me did I want a job—"

"And you took the job, boy, and you working here nights!" There was a note of reproach in the editor's voice.

"He offered us a dollar apiece, sir—what 'ud have made me earned seven this week—and, 'course, my ma 'ud give me more'n a dime of that for movin' pictures and—" The boy stopped abruptly. On his face was a sudden scared look. The hand fell from the curve of the desk. It dove deep into his right trousers pocket. There was a moment of anxiety. Then the peaked face glowed; the hand came out; the unspent dime was still in the pocket.

"JO-JO was too small to help on them big boilers, so we left him outside on the wharf. We was to divvy with him—and we leaves him sittin' on a pile of screenin's underneath the bunkers—and he was to give us hickey if the hookey cops come.

"I's, we was give heavy hammers, and led down the iron steps, and round the landin's—what was only rails of iron you could see through—and down to a dark, stuffy place. We was tole to hammer the rust from the outside of them boilers. Afterward they was goin' to paint 'em.

"A couple of old bums was down there, and they was already hammerin' them cold boilers—what had no fires goin'. Them bums allus was along the wharves, and allus sore at my gang for moochin' in on their jobs. They grumbles at us, but we starts to work with them hammers. We was makin' an awful lot of noise.

"Them bums ast me to go outside for a dime's worth of beer in a pail. It was so clost down there I'd 'a' liked to go, but I was skeered I'd lose my job. They offered me a nickel to go, and I wouldn't. Then they offers me a whole dime. After a while I goes up to

Digitized by Google

the Widder Olsen's and brings back the pail of beer. I brings back 'most a whole cigar, besides—what I picked up near the pile of screenin's where Jo-Jo was sittin', waitin'—and Jo-Jo hadn't seen it. I gives this to the grumbliest bum to smoke, and he gives me the dime for goin' for the beer.

"The bums hid that pail sum'eres in the dark behind them boilers—and I keeps watchin' them go round and come back, wipin' their mouths. It was clost down there—and we was gettin' thirstier and thirstier all the time, watchin' them bums—and no water we could find to drink.

"The bum what had the cigar keeps chewin' and chewin' and walkin' round to that pail more'n the others—and I sneaked round once when no bums was lookin'. But they wasn't a drop left in it. Then along comes that old bum and him a-chewin' on the cigar. I hides behind the boiler. He holds up the pail and there's no beer and he swore and said the others drunk it all. He strikes a match and lights that cigar and goes away, smokin' fierce.

"I FOLLOWS, and all the way I sniffs that old cigar—what was smellin' awful—and they was a smell of sum'thin' burnin', too. I couldn't hammer no more when I got back—it was gettin' awful clost—and I lays down on the iron plates behind my boiler. Then my head didn't ache no more—and I must 'a' went to sleep.

"And then it all happened, sir. I heard an awful roar and some one yells 'Fire!'—and the place all black and full of smoke. All us kids was coughin' and cryin' and runnin' along. A bum came runnin' past and screamin'—and he pulled one of us kids, what was right ahead of me, off the ladder we was all tryin' to climb. And there come a red flash—and he was stompin' on that kid and tryin' to climb the ladder. Then I couldn't see no more, but I hears that kid moanin'—and I didn't know what one of us kids it were.

"And then we was on that landin'—what was rails of iron—and another bum runs past. We runs up and up, and along the deck, and by the big hole in the deck where the coal was, and over the front of the ship, and down the ropes—and we cuts our fingers on them rat tins.

"I sits on the planks. Dutchie Schroeder was already there, and his face was all dirty. And then Butch Flynn drops down and Cocky Hughes—and his eyes goin' all round—and Fat McDevitt, and then Beauty Mulcreavy. I was awful glad at seein' Beauty, 'cause I thought maybe he was the kid what was stomped on. And then I thinks: Who was it? Then I hears some one cryin' to hisself, and I looked. It was Dutchie, and that starts the whole gang—and they jest cried and cried.

"THE whole sky was black—hidin' the sun—and we was in shadder. Me, I jest sits and looks along the wharves at Rincon Hill. It was in the sun, far off. And then, runnin' along the wharf, I sees Jo-Jo's ma. She was in that green shawl and blue apron and her black hair flyin'. She was wavin' her arm at me, I thinks. And then she comes under the shadder and I could only see her comin' on. She was the funniest woman—Jo-Jo's ma. When she'd find Jo-Jo, she'd allus snuggle him up close in that apron and then swing him out, and cryin' all the time.

"'Where's Jo-Jo?' I thinks. I hollers: 'Here's his ma!'"

[A reporter, hat in hand, rushed through the newsroom toward the roll-top desk. He heard the last words of the boy. He moved back into the dark. He sat down on a silent telegraph table and watched the boy.]

"And then I was runnin' round the wharf to the coal bunkers where Jo-Jo had sat. But he wasn't there. I see'd the pile of screenin's where he had sat—but he wasn't there.

"I'm the leader of my gang—and I tole Jo-Jo to give us hickey, and he allus did what I tole him. Anybody could see that smoke—and I thinks, right then, he's runnin' round wild to give us hickey.

"I runs under them bunkers to the end of the wharf—and I didn't find Jo-Jo!

"There was a great black openin' in the side of the collier—and I had see'd men wheelin' boxes in there on trucks, before I got the job, and packin' in meat acrost the boards. And I see'd it now—and the smoke is comin' out black. And then I sees on them boards Jo-Jo's sailor cap!

"I was awful skeered. I picks it up, thinkin' how pretty it is. And all the time I knew Jo-Jo had gone through that black hole!

"And 'twas me tole him; he was mindin' me.

"When I gets inside I can't get no breath in that smoke. I runs along. I'm tryin' to yell: 'Jo-Jo!'—but I couldn't, 'cause my mouth is all full of choky smoke. My eyes hurt and I can't see—and there was water sloppin' up 'bout my feet.

"I comes out on the landin'—what was only rails of iron. I never knew that black hole leads to the ingine room, or I'd 'a' come out that way, 'stead of runnin' up all them iron steps—and them bums screamin' past. Sum'eres down there I hears the fire scrunchin' in the coal—and the smoke was comin' up fearful through the rails. I goes down the ladder. In my head they was terrible sounds like the sounds my ma says the giants in Ireland make tossin' stones among the reeks. I was awful dizzy; but I goes down.

"I knew better'n to fall now, 'cause we'd both go into the water. Then I see'd Jo-Jo's ma. She was holdin' her arms out to me—and they was terrible white"

"THERE comes a red flash—and, lyin' at the foot of the ladder, I sees Jo-Jo!

"Comin' up I was horrible sick and sleepy. I 'most dropped Jo-Jo lots of times. Lots of times I comes near fallin' myself—but I jest wouldn't. And I wouldn't let Jo-Jo fall.

"I was awful sorry. The bum had stomped on him—and I lookin'—and him only tryin' to give us hickey. I'm awful sorry.

"Comin' out that black hole, I sorter slid down them boards. But I knew better'n to fall now, 'cause we'd both go into the water—and Jo-Jo was awful cold already. Then I see'd Jo-Jo's ma. She was holdin' her arms out to me—and they was terrible white. I laid Jo-Jo in them."

THE reporter came out of the background. He stood at the other elbow of the silent editor. He bent down. In a weary, apologetic undertone he spoke to the editor.

Patch could not hear what the reporter said. But what the reporter said exasperated O'Gorman. It shocked him into sudden life. Out of his chair O'Gorman jumped. Through the litter of papers, back and forth, he stamped. He came back to the reporter. When he spoke, exasperation clogged his voice: "Couldn't get it? Why, man, we gotta get that kid's picture! You heard the story, didn't you? This kid Jo-Jo's a hero! He ran back into that burning ship! It was to warn the others! Only seven—dead—and he's a hero! I tell you, Ike, we gotta get that kid's picture!"

"SHE just shakes her head and cries. There's nothing doing, Gorry. I tell you that! There's nothing doing. She's got a picture all right. But you can't get it!"

"Oh, I know she's got a picture. Didn't I try yesterday myself? She told me it was in the parlor. I tried to get into the parlor. I'd have copped it!"

"She saw through me, too," said the reporter. "Couldn't get a peek at it!"

O'Gorman went silent. Suddenly reflective, he fingered his close-shaven chin. He turned slowly toward the waiting boy.

"Say, boy," he asked calculatingly, "did you ever see this picture she's so blamed crazy about? What does it look like?"

"It don't look a bit like Jo-Jo, sir. He's awful skeered—he's only three—and the bonnet's fallen way down on his eyes. It's only a baby picture, sir." O'Gorman nodded his head. He turned to the reporter.

"Do you get that, Ike? It's only a baby picture. That's a cinch. We can fake it! These days we've got hundreds of baby pictures in the office. Little white face, all eyes, lot of white clothes—they all look like that. Every three-year-old in the contest looks like that. That blamed falling bonnet's the only distinction.—No, it isn't! Why, there was a picture run last week on the 'Golden Rain' page—and you couldn't see the kid's eyes for the bonnet! The leading baby in the contest last week; don't know whether it was boy or girl—Phyllis Bevans, Georgie Bevans, or something. We'll hunt that picture up and run it for this Jo-Jo!"

THE newspaper was conducting a contest to boost its circulation. It was a subscription-getting contest. Each subscription gained for the paper meant a certain number of votes gained for the contestant. The contestant that worked hardest for subscriptions, and therefore, at the stipulated closing date of the contest, had the most votes, would receive the capital prize—a building lot in the suburbs. The four next highest would receive lesser prizes—a seven-passenger automobile, a five-passenger automobile, a set of furniture, and a diamond ring.

Basically, it was the same as that of all newspaper circulation-boosting contests. There was one difference—the "Golden Rain" contest was limited to babies. Anyone could work for the subscriptions. But the votes gained from those subscriptions must be entered in some baby's name. Only babies' pictures were run on the contest page. But each day the page was crowded with smiling and scared baby faces.

Now, J. Clarence O'Gorman saw, in his necessity, a new use for the baby contest. He purposed using the picture of one of those infant contestants, and foisting it upon the public as the likeness of the mascot of Patch's gang, Jo-Jo, who had lost his life, the day before, in the fire on the collier.

There was something about the whole scheme that hurt Patch deeply. He *(Continued on page 26)*

The Kickin'est Mule

By Sloane Gordon

ILLUSTRATED BY G. P. ENNIS

"HEY!" yelled the mine boss—his name was McGraw—"keep away from there! For th' love of Heaven, man," he added as he came running up the narrow passageway, "be careful of that mule."

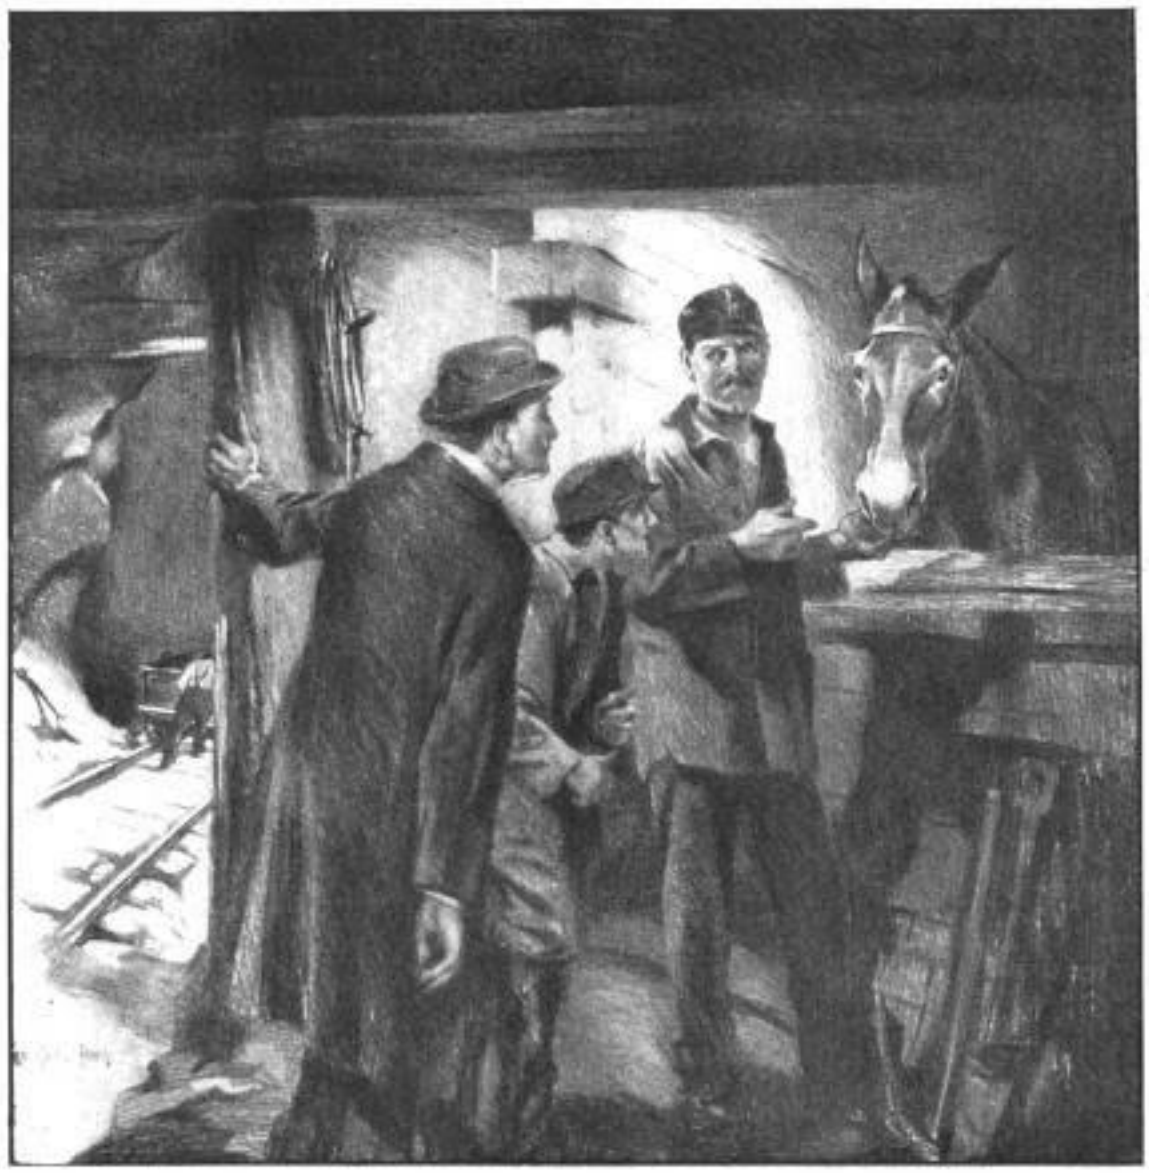
I was perfectly willing to be "careful of that mule" or any other mule, for the matter of that, only I hadn't seen any mule and hadn't felt the necessity for caution.

"Now I'll show you what you just barely missed," McGraw continued as he picked up a piece of a board and hung his hat on the end of it: "I'll show you the kickin'est mule in north Michigan."

Following which assertion the versatile Mr. McGraw made a few clucking noises with his lips after the manner of drivers who are urging their steeds to greater effort, and pushed the hat-decorated stick through the door, which led into the next chamber. A miserable little incandescent globe cast a stingy yellow light on the straw that littered up the floor and dimly outlined a number of board partitions that appeared to stretch into the vast beyond.

THERE was immediate response to the advances of Mr. McGraw. A lively snort preceded the upstage appearance of a pair of iron-shod heels and only the quickness of McGraw's hand saved the hat.

Then there was a commotion in the place from which the heels had so suddenly emerged and sounds indicative of unrest and disappointment.



"He'd 'a' hit *you* if you'd stepped inside," commented Mr. McGraw in a rather prideful way as he replaced the hat on his head.

This was, of course, reassuring and good to think about. But, better than that, it offered something of unusual speculative interest. Outside of the mysterious dark and the rusty drip and the awesomeness of the damp underworld, there isn't a great deal to interest one in the bowels of an iron mine. You scramble across rough places and squeeze yourself against a slimy wall to let a tramcar pass; you climb wet, muddy ladders and swing down into fearsome depths in big buckets that bump against projecting rocks; you watch the flickering lights on the caps of the men who trudge noisily hither and thither through the echoing corridors, and you hear, now and then, the roar that tells of a successful blast—the roar of the charge and the roar and roll of the loosened tons of ore that tumble and grumble and crash and scream and appear to be entering vociferous protest against the awakening that has come after the slumber of eons.

Not a great deal to interest one, did I say? Well, a great deal to awe one, at least. But the incident of the mule and the kicking qualities of him were divertingly different. We all sensed it. McGraw reveled in it. That was plain. He took more pride in the cussedness of that mule than he did in the fact that his mine was one of the biggest producers in the Gogebic Range or that one of his Swede workmen had just captured the heavyweight championship of the North Peninsula. The Swede's achievement was, it is true, a matter of satisfaction to McGraw, but I still think that the possession of the "kickin'est mule" was his one best boast.

THE place where we encountered the mule was "the stable." It was so far underground that you wouldn't have been more surprised had you found a fairy palace down there. A plank floor and a lot of straw and half a dozen or more stalls, and harness on wall pegs and grain bins, and even a "hay-mow" just like the stable out on the farm. Only there wasn't any sunshine—just the flickering, stingy little incandescent. Not a hen to cackle her egg triumph; not a rooster to crow; not a pigeon. They said there were some big rats, but they weren't in evidence. Even a scampering rat would have helped some.

"That's Dick," commented McGraw as he led us around to another and safer entrance to the stable,

The mule was long of ear and unspeakably sad of eye. McGraw patted his head affectionately. "This end of 'im's perfectly safe," he reassured us

"and I'll back him against any mule that ever dragged a tram. He'd sooner kick than eat."

We looked Dick over in the dim light from a safe distance and wondered about him. He wasn't a pretty mule. He was gray and shaggy and rawboned and nervous. You could tell that he was nervous by the way he twitched and switched his sparsely settled tail.

"Five years and a half," remarked McGraw, "since he came down here. And he ain't been above this level since."

HERE was food for thought. Five years and a half underground! Not a ray of sunshine! Never the sight of a blade of green grass! Only the drip, drip, drip of rusty water and the endless, hopeless slavery of tramcars! No night, no day, just a feeding time and a rest time that might as well start at midnight as at noon for all the difference it could make to Dick.

"Aren't you ever going to take him up?" I asked.

"When he's dead," answered McGraw, incidentally.

"Kicka lika da hell," interjected Tony, a Napoli tram boy who was acting as assistant guide.

"He sure does," assented McGraw, the observation volunteered by Tony appearing to awaken memories.

"That mule's a devil," he added; "he'd kick his grandmother. But he's the best workin' mule on the range. He never loafs on the job. He hasn't had the sick day nor the lame one since he came down. But I have, bad luck to him."

Mr. McGraw grew eloquent then. He recounted Dick's numerous exploits—how he had kicked the "straw boss" and broken the arm of "Roundhead Olsen."

"But 'twas their own fault," he apologized, "and when they wanted me to get rid o' Dick I told 'em to always come at him from in front and they'd save their bones and hides. He never bothers anybody who knows how to handle him. And say, if you was to be shut up here for five years wouldn't you like to kick a Swede?"

One has to admit that under those conditions it might give one great pleasure to kick a Swede or a Norwegian or one of any nationality. Only, it appears, not all of the mules in that particular mine had Dick's spirit nor his love of diversion. Dick was, unquestionably, "the kickin'est mule."

By threading a labyrinthine passage we got around to the bridle end of the mule and viewed him over the manger. He was long of ear and unspeakably sad of eye. McGraw patted him affectionately and fed him some oats, and the rest of us placed cautious hands on the shaggy head of old Dick, who seemed to appreciate the gingerly attentions.

"This end of 'im's perfectly safe," McGraw reassured us.

And then we went away and left the rusty water that drip-drip-dripped.

The great pumps down on the twelfth level pulsed and groaned as they lifted the iron slime up to the light. The sun was shining brightly when we got out of the "cage." It seemed as though it had been months since we saw that sun and the green of the trees and the flutter of the leaves.

IT HAD been unique—that trip through the mine. But I couldn't think of much except Dick, the mule, and the lonesomeness of him. Three times during the next few weeks I hunted up McGraw at the company's office and talked to him.

Once I ventured to suggest that old Dick be given an outing—that he be brought up on top of the ground and allowed to glimpse the day. This philanthropic suggestion caused McGraw to blink in wonder. Take that mule up in the cage! Run the risk of wrecking the mine!

McGraw grew facetious about it. He speculated on the troubles that Dick would inaugurate. His conclusion was that it would be next to suicidal to even attempt such folly.

"When he's dead," was the verdict.

IT WAS about the middle of June, and the day was bright with that startling brightness of the summer northland. The grass was green with the freshness of early spring and there was just enough tang in the air to remind one that he was not in a land of perpetual summer. McGraw sat on the doorstep of the main office, only a stone's throw from the entrance to the "big shaft." Over in the engine room there was the hum of wheels and the swish of belts and the rumble of cogs. Two dust-begrimed Finnish laborers stopped to ask the way to Hurley. A score of noisy, quarrelsome sparrows chattered in the bushes across the road.

McGraw opened the blade of his long knife and whittled at a piece of pine lath.

Suddenly, like the crack of a gun, came a yell from the engine house, accompanied by the clanging of bells and the rattle of chains.

"Ding-ding-ding—ding-ding," snapped the bells.

That's the danger signal. "Three and two" the miners call it. McGraw's knife clattered against the door as he flung it behind him in his leap toward the engine house. He slipped on the platform and fell headlong, but was up and running in a flash. Already the engineer had swung the levers that govern the "drums."

"Skips" and "cages"—the cars of the mine elevator system—were making express speed up and down.

MCGRAW listened at the mouth of the shaft, his face drawn and blanched, his hands clenched.

"My God!" he said with tense earnestness, "she's flooded."

It wasn't long, but it seemed a year before the first cage reached the surface. The pallor that threatened death brings was ill concealed by the reddish grime on the faces of those who tumbled from the crowded car. The "skip" brought another load and yet another.

Bruised, scared men gathered about the shaft and waited. Sobbing women (for the news that the mine

Digitized by Google

was flooded had spread to the nearby hovels) came running from everywhere. Children cried and screamed. McGraw waved them back. Hoarsely he gave orders to the engineer. Profanely he directed a clerk to "check 'em up"—referring to the survivors. Brutally he yelled at the men to "get out o' th' way."

ANOTHER load of men came up in the "cage." Most of them were dripping wet. A dozen tried to talk at once and in many languages. Two Italians embraced and kissed fervently as they gained the earth's surface. A stoop-shouldered, battered Cornishman, a typical "Cousin Jack," staggered over in the direction of the office and fell prone upon the ground at my feet. His left arm doubled beneath him as he fell. It had been broken in the mad scramble for safety that took place down in the rusty dark when "three-and-two" sounded its awful warning. He had received other hurts. He died that night.

"There's eight more of 'em." It was the voice of the clerk who had been "checking 'em up."

"Put 'er down again!" shouted McGraw, and the cage went spinning toward the center of gravity to the accompaniment of clanking chains and groaning machinery. It all seemed to be straining toward the accomplishment of the impossible. Drums and cables and cogs and chains appeared to have taken on life. One could almost fancy the steel muscles of the links stretching and knobbing under the tense demand. One could imagine the ribbed projections on the big windlass to be blood-gorged veins.

For rigid ages no man spoke. The very sobbing of the women was stilled and the children stood back beyond the road and focused their wondering eyes on "Boss" McGraw.

I'll never forget one little dark-eyed, shriveled Neapolitan woman who knelt in the dust of the road and held a crucifix to her lips. Her "man" was among the eight. And yet she made no sound.

A little girl, flaxen-haired, wide-eyed, terrified, came running down the road. As she approached the mouth of the shaft she screamed. It was the scream of a wild thing wounded. She ran to McGraw and clutched his arm. His eyes, apparently, never rested on her. His arm shot out and she went sprawling in the wet dirt. Whimpering and dazed, she slunk back to the inner rim of the dumb and trembling circle.

THERE came a signal from below—the ting-a-ling of a bell and the big drum turned—oh! so slowly—and grumbled. The cables strained and slipped and then, faster and faster, coiled about the cylinder. The car came to the surface. There was another moment of even deeper silence and then a shout that must have reached the birch and tamarack forests that skirted the distant lake.

There were eight in the cage! Every man had been brought to the surface! To be sure, they were battered; most of them were exhausted; some were babbling after the manner of those bereft of reason. Hysterical rejoicing took the place of speechless sorrow. Men and women—brothers, wives, husbands, sisters, friends, and strangers—embraced and mingled tears and hosannas. It takes a pin-point escape from annihilation to bring forth all the latent sentiment in man to furnish the world with a glimpse of the universality of brotherhood.

And then the story came out. It was an old one—a blood-chilling repetition. The blast gang on one of the levels, halfway up the honeycombed interior of the earth, had struck a stream of water that rushed in and "drowned the pumps," filling up the lower levels and threatening to sweep out the staging above and cause a collapse that would ruin everything. We heard the disjointed accounts of it from excited groups of miners. Each man had his word to say.

Of course the financial loss would be great. It would take weeks to repair the damage. Vast workings were ruined. New pumping arrangements must be made and the water invasion repelled, if possible. Tramcars were, no doubt, smashed, rails torn up, and tons of valuable explosives rendered worthless. And the live stock! God, had no one thought of the mules? Who thinks of mules when men are dying?

THAT thought seemed to come to all of us at once. There was a lull in the clamor and I think a wave of pity swept over the assembled crowd. And then, over and above the roar of that subterranean flood, there came a sound that was unlike any sound I had ever heard before. Weird sounds have been described as resembling the wailings of lost souls. Maybe it was like (*Concluded on page 23*)

The Streak of Gold

By E. E. Moise

ILLUSTRATED BY WALTER BIGGS

NEWS of the clash in "The Planters' Rest"—Red Dancy's place—spread swiftly as news of a crevasse in the levees at high water. It stirred up gossip and argument and here and there a quarrel, and the calm contentment of many a speckled hound dog was disturbed by "hot talk." If "Fighting Frank," lately the "star dep" on the sheriff's staff, was "Yaller Frank," it was sensational news—"astonishin', sir, astonishin'." Denied, reiterated, again denied and then affirmed, the news was finally admitted to be "gospel truth," and that in Natchez, too, across the river, before another sun had set. Men on horseback and in buggies carried it over the Parish of Concordia in Louisiana, and the County of Adams in Mississippi; and the steamboats picked it up and delivered it wherever they moored.

John Merritt got a highly colored version of the story from Liver-Lip Sam, Colonel Richard Caswell's "favorite nigger" and body servant, at the foot of the big spiral staircase in the St. Louis Hotel, later known as the Royal Hotel. Ignoring "that new-fangled contraption," the elevator, he ran up two flights and dashed into the Colonel's room. Merritt left the Colonel half an hour later, walking slowly, thinking deeply, and well flushed with cognac imported from the valley of the Charente in France. He had a suffocating constriction about his throat, cold sweat under the brim of his black sombrero, and a sickening sensation in his heart as it went down, down, down in his bosom. Not that he cared so much for Frank Mayo "personally," he told himself, but that "such an old friend of the family" should turn craven before "the Arkansaw blackguard." "None of my funeral," Merritt told himself for consolation—"none of my funeral."

MARDI GRAS, that multicolored day of maskers, pageants, and unbridled liberty, was never after any more than a mixed and hazy memory of cocktails, absinthe drips, and sloe gin rickeys to the meditative and embittered visitor from "Concordia Parish, sir." Rex and his glittering entourage of brilliant "floats" and the gleaming cavalcade of "Dukes of the Realm" were not within his notice. It took Merritt all forenoon and afternoon to work off the novelty of unaccustomed drinks and decide to go back home and lead an uprising against all immigrants from Arkansas. Captain McCawley of the *Belle of the Bends* found him in the early evening, a leather valise in each hand, arguing with an imaginary cab driver in front of the customhouse while the great Comus parade, with flaring lights and syncopating brass bands, wound its flashing way from St. Charles into Canal Street like an enormous glowworm. The Captain "hated to miss Comus," but he laboriously steered the unwieldy babbler to the Poydras Street landing and, having removed his boots, deposited him in the lower berth of a stateroom.

Wednesday, Thursday, and Friday were hard days for John Merritt. The *Belle of the Bends*, fast as the best river craft, he elaborately cursed for slowness and rechristened the *Queen of the Scours*. The few passengers bored him. Captain McCawley's assurance, "There's nary a drop of yaller in thet boy," was no comfort—"Colonel Caswell was dead sure of his info'mation, sir." Argumentative analyses from the pilots could not efface the mental picture of Frank Mayo brooking insults and fleeing before Custer Larkin, "that Arkansaw blackguard," nor could coffee and brandy drown it out. Yet, he remembered, Deputy Sheriff Mayo had often made good his almost daily boast that he could "pull so slick and shoot so nice he didn't have to kill no man to stop him." Some half dozen or so of "bad ones" brought to the parish jail with broken arms and one dead river gambler, "too far off, boys, to take a chance on him," had been certain proof of the quick hand, sure eye, and dauntless nerve of "Fighting Frank."

"Pomp, what do you hear of Mr. Frank Mayo and Custer Larkin?" asked the young master when coffee was brought to his bedside early Sunday morning

"What's this stuff I hear of Frank Mayo and Custer Larkin?" Merritt asked Billy Quigg, Red Dancy's chief assistant, less than ten minutes after he came over the gangplank of the *Belle of the Bends*. "Colonel Dick Caswell's toting a line of talk that paints him yaller as a Dago's lemons."

BILLY QUIGG was the chief purveyor of news in a countryside that read little more than the cotton column in the Natchez "Democrat." Billy Quigg catered to a quick-tempered and sensitive clientele, and he had an acceptable way with him. Therefore Billy had never been "mixed into any ructions" and was "everybody's friend."

"Well, sir," said Billy, after Merritt had set down his liquor glass and sipped some seltzer water, "I ain't got no theories to account for it and nothin' to say 'cept how it happened. Both of 'em has been pretty square white men so far's they've ever had any dealin's with me.

"Holdin' to the strict facts, eggs-ackly as they have got to my knowledge, Frank Mayo comes in here the same night as you boarded the Cairo packet in the mornin' for New Orleens. He was expectin' to ketch the ferry and stay with the Widow Scott in Natchez, plannin' to ride her back to the Black River country next mornin', and—"

"Slough out the details," Merritt interrupted with a gesture toward the bottles.

"Yes, sirree," responded Billy. "Ten-year liquor, ev'ry drop.

"Well, sir, the ferry had done tied up for the night, and the weather bein' a bit nippy the skiffers wasn't out. Frank Mayo puts up his hoss and buggy at the liv'ry stable and saunters into here. Tiger Hopkins and him swaps yarns for a while and then Tiger goes on up to the jail. Then Custer Larkin comes in and asks Frank Mayo to join him. Frank Mayo turns down Custer Larkin's hospitality, sayin' he ain't done no drinkin' nigh a year. That's facts, Mr. Jack, he's quit, as ev'rybody knows. He—"

"Those Scott ladies is very dominatin' people," Merritt snapped, a vaguely reminiscent gleam smoldering in his reddened eyes. "Miss Lucy's got Frank under hack."

"AS TO that, I don't say," returned the judicious bartender in a tone that dismissed the subject of the Scott ladies. "I don't know nothin' about his fam'ly affairs.

"Frank Mayo sits by the winder over there for quite a spell. He was just goin' to look up a bed somewheres when Ross Buckley comes in. Him and Ross Buckley talks crops and levees and bear huntin' and old times, and pretty soon Frank Mayo forgets he's married and joins Ross Buckley.

"Well, sir, just as them glasses hit together, Custer Larkin comes to the door and tells the nigger to trot

Digitized by Google

out some La Flor de Creole segars. Seems Ross Buckley's overseer hired Custer Larkin's three best cotton pickers last crop and he was kinder grouched. Custer Larkin tarried there in the door, lookin' at 'em, and I could see by his face he wasn't tickled at Frank Mayo's refusin' his hospital'ty and then joinin' Ross Buckley.

"After a spell, Frank Mayo and Ross Buckley goes back and sits in with Custer Larkin and two mule sellers from M'souri. I ain't a goin' to stretch m'self disputin' that Custer Larkin was tol'rable drunk. I seen the way he kep' Nigger Jim totin' the stuff back to—

"Yes, sirree. Ten-year liquor, ev'ry drop. Glad you like it.

"Accordin' to that pox-marked mule man—name o' Fitz somethin'—I ain't met him offen—'long erbout four hands after he started, Frank Mayo lays a card face down, goin' to show he'd broke the pair he opened the pot with. The Fitz feller had it after the ruction was over that Frank Mayo breaks a pair of jacks, holdin' the jack, deuce, tray, and queen of hearts. He gets the ace of spades, a bluff goes, seein' he drawed only one card, and there's nigh to a hundred up when Custer Larkin calls.

"ROSS BUCKLEY and the mule fellers had dropped out and the pox-marked mule man, bein' next dealer, brushed all the cards together. Bein' moderate drunk, maybe he's excus'ble, but he didn't have no right snatchin' a card so close to Frank Mayo. Anyhow, Frank Mayo's hand don't show no open'rs and the hand begins to play.

"Accordin' to the mule feller, Custer Larkin jumps up, slips a hand to his gun and slaps his cards in Frank Mayo's face. The first I hear myself was Custer Larkin yellin' and cursin' like a insane Sioux. The pox-marked mule feller said Frank Mayo acted kinder queer. First he—"

"Queer?" ejaculated Merritt. "Kind of queer! That's a soft way to speak it. Gi' me a Flor de Creole."

"'Queer' was e g s - a c k l y what he said," retorted the precise historian, "and describin' it as he done, Frank Mayo gives Custer Larkin a squintin' look fierce as wildcats and jerk'd his hand t'ards his chest and then, all-uv-er sudden—quicker'n you could bat an eye—he turns whiter'n milk and shoots both arms up. The crowd had done slipped outer winders and run in the kitchen, not carin' to witness in case there was litigatin' comin'. The mule fellers got under the table just as Ross Buckley started at Larkin.

"THEN the ruction got where I seen it myself. Ross Buckley comes backin' into here, Frank Mayo holdin' his arms and forcin' him through the door. He's got a power in the grip like the jam of a cotton press. Custer Larkin was still hollerin' and I heard him scrapin' the silver off the table. I've heard some pretty strong names called in my day, Mr. Jack—thirty years tendin' bar from St. Louee to New Orleens—but them Arkansaw cursin' names of Custer Larkin's beats 'em all out easy.

"Ross Buckley was pleadin' for Frank Mayo not to be no coward, and Frank Mayo kep' a answerin' he couldn't afford to make no fight. Just then the sheriff comes gallopin' in, and hearin' Custer Larkin cursin' and comin' this way, he dances 'cross the floor, smooth and quiet footed as a cat, and squats down 'longside the door. I never seen a man in my life quicker'n Tiger Hopkins at gettin' the heft of a scrimmage Custer Larkin comes wobblin' out and the sheriff goes up like a strikin' snake, grabs his gun and cracks that big, bony fist of his'n on the jaw. The gun cuts loose, borin' a hole in the ceilin', and Custer Larkin goes to sleep. When that gun fired, Mr. Jack—I seen it myself—Frank Mayo turns and runs—yes, sirree, runs—like a swipe of lightnin'—and Ross Buckley stands kinder dazed and then walks out—"

"Was Frank Mayo heeled? Are you sure he was heeled?"

"As to that, I don't say," replied the cautious Quigg, "but the mule man said he seen a pearl-handled forty-four under his left arm when his coat spread from shovin' his arms high in the air. And next mornin' he goes by with the Widow Scott and I seen a Winchester sittin' up between 'em. He was drivin' a two-thirty gait passin' here, and, calculatin' from the distance, I'd say the Widow Scott was givin' some hot talk."

"D'ye think he's turned yaller?" Merritt asked in a subdued tone of complete disappointment, but with a vague hope that Billy Quigg would answer in the negative. "Gi' me a drink."

QUIGG held his reply until Merritt swallowed the drink, for the bartender loved to watch him do it; intently eying the full glass of scalding liquor until it reached his lips, he jerked back his head, opened his mouth, and took it into his stomach with one caressing undulation of a large and weather-beaten Adam's apple. This was followed by a few delicate and sparing sips of seltzer water. Seltzer water, he frequently declared, contained minute particles of the carbonating marble dust used to "put the zip in it," and these particles were dangerous enemies to the human system.

"As to that, I don't say," Quigg went on at last, "havin' no opinion or thought at all. But I remember, once upon a time, how Tiger Hopkins's brother Sam let a carpetbagger Yankee pass insults in the billiard parlor at the St. Charles Hotel. A year after—up to Vicksburg—he stuck a Spanish knife clean to the gizzards of the fool. I seen it done. And I remember, once upon a time, how—"

"Ah, shucks, Billy, I know all about them historic postponements. Where's Ross Buckley?"

"Down to Pointe Coupée Parish on the levee contracts. He allows he's comin' up the river in four weeks or so."

BILLY QUIGG glanced toward the street and smiled. "Please, suh, Mr. Jack, please, suh," sounded a quavering, scared voice from the sidewalk—"please, suh, have mercy on a po' ole nigger, but Miss Josie say it sho' is powerful late, suh, Mr. Jack."

Old Mrs. Josephine Merritt, "Miss Josie," was the only person whom the sole surviving heir to the whilom glorious Merritt Hall Plantation ever felt constrained to obey. Had he always felt so constrained, he would not have been called "a first-class drinking man."

"Where's all the gay dogs to-night?" Merritt asked, ignoring the voice.

"Leg show at the Natchez op'ra house, dog fight over to Bud Hopkins's, and coon huntin'," detailed Quigg. The plaintive wail outside was repeated.

"Come in!" yelled Merritt, waving an arm eccentrically to express extreme irritation. "Come in, nigger!"

A black Goliath, older looking than the mummy of Rameses the Great, stepped trembling through the door, one quivering hand holding a rather new felt hat furtively against his shiny frock coat, the other timidly defending his gray wool. This was Uncle Pompey.

Uncle Pompey smiled and ceased trembling. Mr. Jack was just a little too drunk to make trouble, too drunk to recognize the hat.

"I done got yo' verlises at de landin' house," said Uncle Pompey as he tenderly assisted the young master into the buggy.

"Pomp, how'd mother know I'm back?" Merritt asked as he settled in the seat.

"De Cap'n uv de *Belle uv de Bends* giv' a nigger a quarter an' he brung word."

MERRITT HALL was kept quiet Saturday during the young master's indisposition. He almost persuaded himself that it resulted from "too much greasy Creole cooking in New Orleans."

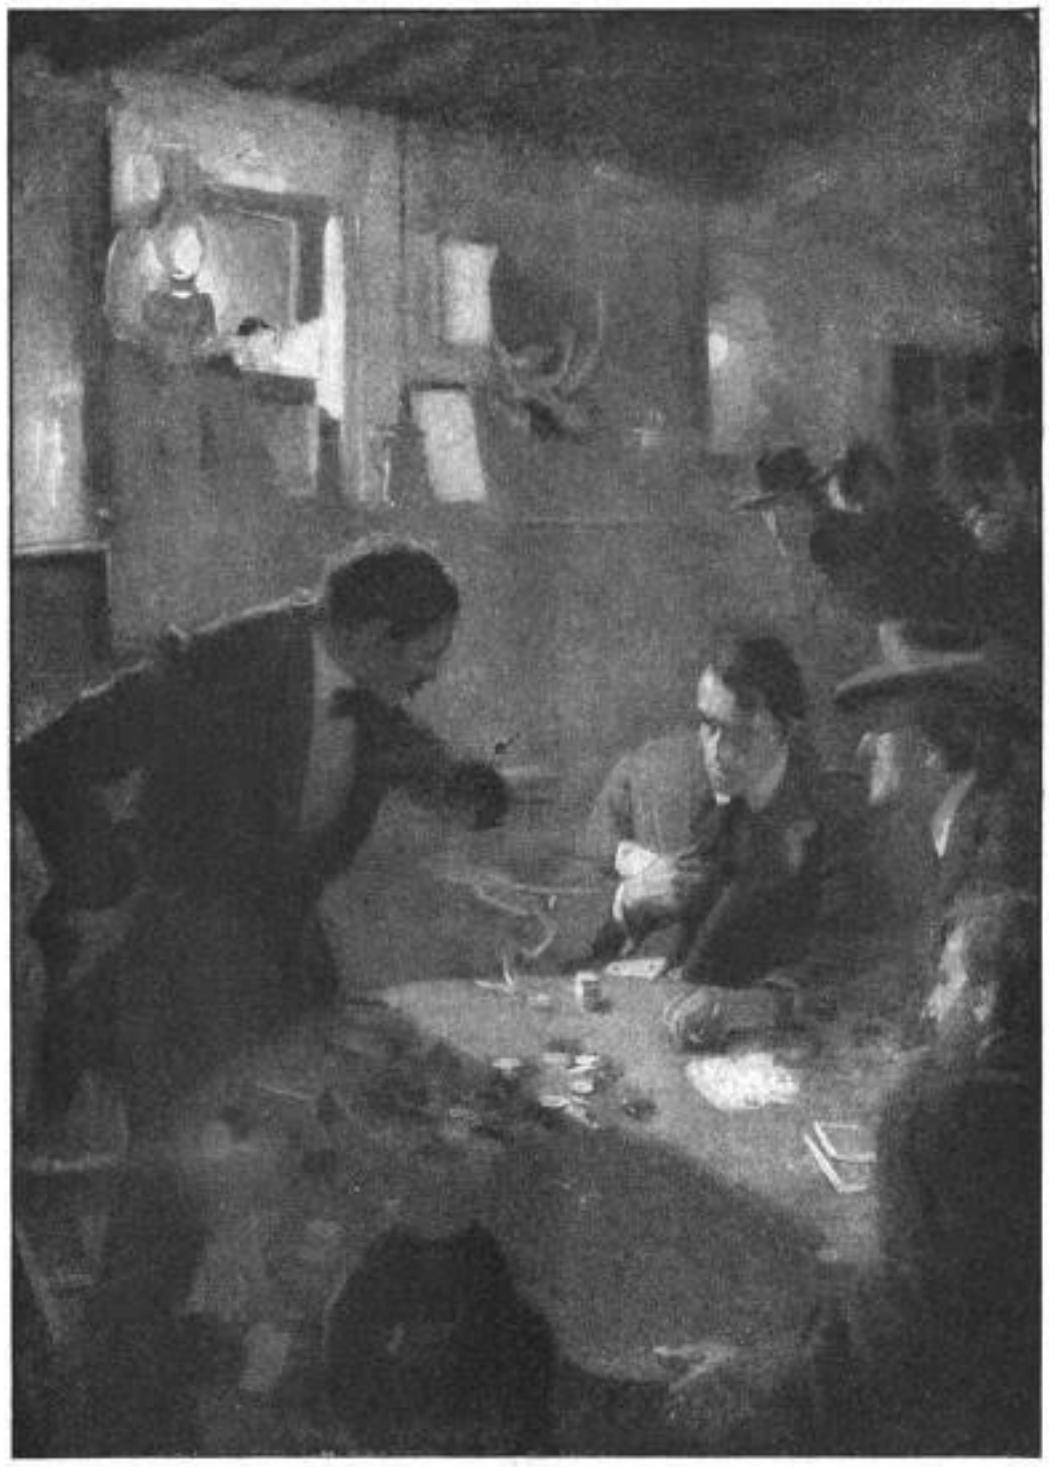
"Pomp, what do you hear of Mr. Frank Mayo and Custer Larkin?" he asked when black coffee was brought to his bedside early Sunday morning.

"Lawd, Mr. Jack," responded Uncle Pompey with a chuckle, "dat harum-scarum tale is jes a passel o' lies outer de whole cloth. I ain't heard no white folks mention on it, but one uv dem dirty niggers off de Larkin place tol' me a whopper 'bout Mr. Custer Larkin callin' Mr. Frank a card sharper and gettin' off wid a whole skin. I jes bash de black skunk on de haid and sen' him hollerin'. Lawd, Mr. Jack, please, suh, Mr. Frank—"

"Mother's calling you," Merritt interrupted, and Uncle Pompey shuffled out, his shoulders heaving in pleasurable memory of the black skunk's sufferings.

"Have you heard of the—er—er—incident concerning Frank?" he asked his mother, at breakfast, in a tone suggesting a desire to discuss the subject rather than an inquiry.

"Certainly," she replied with a touch of acidity, "and I give him my entire approval for everything but gambling with such as Custer Larkin. The boy has more sense than most of you. Why should he risk his life, and perhaps Lucy's—"



"He got his sense too sudden to suit me!" Merritt blurted out, too soon to catch his mother's last words. "Pass the flapjacks, Pomp! Come on, Pomp, pass the sirup!"

MRS. MERRITT spoke no more of the "incident." She reflected that if her son knew what she knew, he might construe it as she did; and then he might take up a quarrel with Custer Larkin himself—she shuddered; he had left Arkansas after killing two men in open fight with all the odds against him. Later, when her son had left the dining room, the little parentheses of a faint smile played about the corners of her expressive lips.

John Merritt spent the following month working from dawn to dark, directing his plowmen with appropriate oaths, cursing the sloth of the singing negroes who cleared the ditches, overseeing repairs to the gin, and otherwise devoting his strength to the thousand and one details of the factory system applied to agriculture for the production of cotton with black labor. His one most frequent thought was: "None of my funeral."

It did not occur to him to write to Frank Mayo; he was "not much of a literary feller" and his mother penned all business correspondence for his signature. The few friends who came on Sundays to shoot partridges, rabbits, and squirrels felt constrained to maintain a courteous reticence on the subject until Merritt spoke of it, and Merritt said nothing. Then the time came when he went to Natchez "to arrange for a couple of thousands" with Colonel Richard Caswell.

Jefferson Davis, "the finest saddle horse in these parts," had hardly borne his erect rider around the turn where the rim of the rising sun topped the levee when Mrs. Merritt unfeelingly ordered the protesting Uncle Pompey to hitch Old Judy to the buggy and deliver a basket, securely tied against curious fingers, to Mrs. Scott at Mr. (*Continued on page 33*)

"Custer Larkin was still hollerin' and I heard him scrapin' the silver off the table. Them Arkansaw cursin' names of his beats 'em all"

Chapter VIII
Love Demoralizes the Captain

By H. G. Wells

ILLUSTRATED BY HENRY RALEIGH

NOT only were the first and second strands in the composition of Captain Douglas in conflict with all his appearances and pretensions, but they were also in conflict with one another. He was full of that concealed resolve to do and serve and accomplish great things in the world. That was surely purpose enough to hide behind an easy-going, unpretending gentlemanliness. But he was also tremendously attracted by Madeleine Phillips, more particularly when she was not there.

A beautiful woman may be the inspiration of a great career. This, however, he was beginning to find was not the case with himself. He had believed it at first and written as much and said as much, and said it very variously and gracefully. But becoming more and more distinctly clear to his intelligence was the fact that the very reverse was the case. Miss Madeleine Phillips was making it very manifest to Captain Douglas that she herself was a career; that a lover with any other career in view need not—as the advertisements say—apply.

And the time she took up!

The distress of being with her!

And the distress of *not* being with her!

SHE was such a proud and lovely and entrancing and distressing being to remember, and such a vain and difficult thing to be with.

She knew clearly that she was made for love, for she had made herself for love, and she went through life like its empress with all mankind and numerous women at her feet. And she had an ideal of the lover who should win her which was like an oleographic copy of a Lazlos portrait of Douglas greatly magnified. He was to rise rapidly to great things, he was to be a conqueror and administrator, while attending exclusively to her. And incidentally she would gather desperate homage from all other men of mark, and these attentions would be an added glory to her love for him. At first Captain Douglas had been quite prepared to satisfy all these requirements. He had met her at Shorncliffe, for her people were quite good military people, and he had worshiped his way straight to her feet. He had made the most delightfully simple and delicate love to her. He had given up his secret vice of thinking for the writing of quite surprisingly clever love letters, and the little white paper models had ceased for a time to flutter in lonely places. And then the thought of his career returned to him from a new aspect, as something he might lay at her feet. And once it had returned to him it remained with him.

"Some day," he said, "and it may not be so very long, some of those scientific chaps will invent flying. Then the army will have to take it up, you know."

"I should *love*," she said, "to soar through the air."

HE TALKED one day of going on active service. How would it affect them if he had to do so? It was a necessary part of a soldier's lot.

"But I should come, too!" she said. "I should come with you."

"It might not be altogether convenient," he said, for already he had learned that Madeleine Phillips usually traveled with quite a large number of trunks and considerable impressiveness.

"Of course," she said, "it would be splendid! How could I let you go alone? You would be the great general and I should be with you always."

"Not always very comfortable," he suggested.

"Silly boy!—I shouldn't mind *that!* How little you know me! Any hardship!"

"A woman—if she isn't a nurse—"

"I should come dressed as a man. I would be your groom. . . ."

He tried to think of her dressed as a man, but nothing on earth could get his imagination any further than a vision of her dressed as a Principal Boy. She was so delightfully and valiantly not virile; her hair would have flowed, her body would have moved, a richly fluent femininity—visible through any disguise.

THAT was in the opening stage of the controversy between their careers. In those days they were both acutely in love with each other. Their friends thought the spectacle quite beautiful; they went together so well. Admirers, fluttered with the pride of participation, asked them for week-ends together; those theatrical week-ends that begin on Sunday morning and end on Monday afternoon. She confided widely.

And when at last there was something like a rupture it became the concern of a large circle of friends.

The particulars of the breach were differently stated. It would seem that looking ahead he had announced his intention of seeing the French army maneuvers just when it seemed probable that she would be out of an engagement.

"But I ought to see what they are doing," he said. "They're going to try those new dirigibles."

Then should she come?

He wanted to whisk about. It wouldn't be any fun for her. They might get landed at nightfall in any old hole. And besides people would talk—especially as it was in France. One could do unconventional things in England that one couldn't in France. Atmosphere was different.

For a time after that halting explanation she maintained a silence. Then she spoke in a voice of deep feeling. She perceived, she said, that he wanted his freedom. She would be the last person to hold a reluctant lover to her side. He might go—to *any* maneuvers. He might go, if he wished, round the world. He might go away from her forever. She would not detain him, cripple him, hamper a career she had once been assured she inspired. . . .

THE unfortunate man, torn between his love and his profession, protested that he hadn't meant *that*.

Then what *had* he meant?

He realized he had meant something remarkably like it and he found great difficulty in expressing these fine distinctions. . . .

She banished him from her presence for a month, said he might go to his maneuvers—with her blessing. As for herself, that was her own affair. Some day perhaps he might know more of the heart of a woman. . . . She choked back tears—very beautifully, and military science suddenly became a trivial matter. But she was firm. He wanted to go. He must go. For a month anyhow. He went sadly. . . .

Into this opening breach rushed friends. It was the inestimable triumph of Judy Bowles to get there first. To begin with, Madeleine confided in her and then, availing herself of the privilege of a distant cousinship she commanded Douglas to tea in her Knightsbridge flat and had a good straight talk with him. She liked good straight talks with honest young men about their love affairs; it was almost the only form of flirtation that the Professor, who was a fierce, tough, undiscriminating man upon the essentials of matrimony, permitted her. And there was something peculiarly gratifying about Douglas's complexion. Under her guidance he was induced to declare that he could not live without Madeleine, that her love was the heart of his life, without it he was nothing and with it he could conquer the world. . . . Judy permitted herself great protestations on behalf of Madeleine, and Douglas was worked up to the pitch of kissing her intervening hand. He had little silvery hairs, she saw, all over his temples. And he was such a simple, perplexed dear. It was a rich, deep, beautiful afternoon for Judy.

AND then, in a very obvious way, Judy, who was already deeply in love with the idea of a caravan tour and the "wind on the heath" and the "gypsy life" and the "open road" and all the rest of it, worked this charming little love difficulty into her scheme, utilized her reluctant husband to arrange for the coming of Douglas, confided in Mrs. Geedge. . . .

And Douglas went off with his perplexities. He gave up all thought of France, week-ended at Shonts instead, to his own grave injury, returned to London unexpectedly by a Sunday train, packed for France and started. He reached Rheims on Monday afternoon. And then the image of Madeleine, which always became more beautiful and mysterious and commanding with every mile he put between them, would not let him go on. He made unconvincing excuses to the "Daily Excess" military expert with whom he was to have seen things—"There's a woman in it, my boy, and you're a fool to go," said the "Daily Excess" man, "but of course you'll go, and I for one don't blame you." He hurried back to London and was at Judy's trysting place even as Judy had anticipated.

And when he saw Madeleine standing in the sunlight, pleased and proud and glorious with a smile in her eyes and trembling on her lips, with a strand or so of her beautiful hair and a streamer or so of delightful blue fluttering in the wind about her gracious form, it seemed to him for the moment that leaving the maneuvers and coming back to England was quite a right and almost a magnificent thing to do. . . .

This meeting was no exception to their other meetings.

The coming to her was a crescendo of poetical desire, the sight of her a climax and then—an accumulation of irritations.

He had thought being with her would be pure delight, and as they went over the down straying after the Bowles and the Geeiges toward the Redlake Hotel, he already found himself rather urgently asking her to marry him and being annoyed by what he regarded as her evasiveness.

HE WALKED along with the restrained movement of a decent Englishman, he seemed as it were to gesticulate only through his clenched teeth, and she floated beside him, in a wonderful blue dress that with a wonderful foresight she had planned for breezy uplands on the basis of Botticelli's "Primavera." He was urging her to marry him soon; he needed her, he could not live in peace without her. It was not at all what he had come to say; he could not recollect that he had come to say anything, but now that he was with her it was the only thing he could find to say to her. "But, my dearest boy," she said, "how are we to marry? What is to become of *your* career and *my* career?"

"I've *left* my career!" cried Captain Douglas with the first clear note of irritation in his voice.

Digitized by Google

"Oh! don't let us quarrel," she cried. "Don't let us talk of all those *distant* things. Let us be happy. Let us enjoy just this lovely day and the sunshine and the freshness and the beauty. . . . Because you know we are snatching these days. We have so few days together. Each—each must be a gem. . . . Look, dear, how the breeze sweeps through these tall, dry stems that stick up everywhere—low, broad ripples."

SHE was a perfect work of art, abolishing time and obligations.

For a time they walked in silence. Then Captain Douglas said: "All very well—beauty and all that—but a fellow likes to know where he is."

She did not answer immediately, and then she said: "I believe you are angry because you have come away from France."

"Not a bit of it," said the Captain stoutly. "I'd come away from anywhere to be with you."

"I wonder—" she said.

"Well—haven't I?"

"I wonder if you ever are with me. . . . Oh!—I know you *want* me. I know you desire me. But the real thing, the happiness—love. What is anything to love—anything at all?"

In this strain they continued until their footsteps led them through the shelter of a group of beeches. And there the gallant Captain sought expression in deeds. He kissed her hands, he sought her lips. She resisted softly. "No," she said, "only if you love me with all your heart." Then suddenly, wonderfully, conqueringly, she yielded him her lips.

"Oh!" she sighed presently, "if only you understood." And leaving speech at that enigma she kissed again. . . .

But you see now how difficult it was under these mystically loving conditions to introduce the idea of a prompt examination and dispatch of Bealby. Already these days were consecrated. . . . And then you see Bealby vanished—going seaward. . . .

EVEN the crash of the caravan disaster did little to change the atmosphere. In spite of a certain energetic quality in the Professor's direction of the situation—he was a little embittered because his thumb was sprained and his knee bruised rather badly and he had a slight abrasion over one ear and William had bitten his calf—the general disposition was to treat the affair hilariously. Nobody seemed really hurt except William—the Professor was not so much hurt as annoyed—and William's injuries though striking were all superficial, a sprained jaw and grazes and bruises and little things like that; everybody was heartened up to the idea of damages to be paid for; and neither the internal injuries to the caravan nor the hawker's estimate of his stock in trade proved to be as great as one might reasonably have expected. Before sunset the caravan was safely housed in the Winthorpe-Sutbury public house, William had found a congenial corner in the bar parlor where his account of an inside view of the catastrophe and his views upon Professor Bowles were much appreciated, the hawker had made a bit extra by carting all the luggage to the Redlake Royal Hotel and the caravanners and their menfolk had loitered harmoniously back to this refuge. Madeleine had walked along the road beside Captain Douglas and his motor bicycle, which he had picked up at the now desolate encampment.

"It only remains," she said, "for that thing to get broken."

"But I may want it," he said.

"No," she said. "Heaven has poured us together and now He has smashed the vessels. At least He has smashed one of the vessels. And look!—like a great shield there is the moon. The Harvest Moon, isn't it?"

"No," said the Captain with his poetry running away with him. "It's the Lovers' Moon."

"It's like a benediction rising over our meeting."

And it was certainly far too much like a benediction for the Captain to talk about Bealby.

That night was a perfect night for lovers, a night flooded with a kindly radiance, so that the warm mystery of the center of life seemed to lurk in every shadow and hearts throbbed instead of beating and eyes were stars. After dinner everyone found wraps and slipped out into the moonlight; the Geedges vanished like moths; the Professor made no secret that Judy was transfigured for him. Night works these miracles. The only other visitors there, a brace of couples, resorted to the boats upon the little lake.

Two enormous waiters removing the coffee cups from the small tables upon the veranda heard Madeleine's beautiful voice for a little while and then it was stilled. . . .

THE morning found Captain Douglas in a state of reaction. He was anxious to explain quite clearly to Madeleine just how necessary it was that he should go in search of Bealby forthwith. He was beginning to realize now just what a chance in the form of Bealby had slipped through his fingers. He had dropped Bealby and now the thing to do was to pick up Bealby again before he was altogether lost. Her professional life unfortunately had given Miss Philips the habit of never rising before midday, and the Captain had to pass the time as well as he could until the opportunity for his explanation came.

A fellow couldn't go off without an explanation. . . .

He passed the time with Professor Bowles upon the golf links.

The Professor was a first-rate player and an unselfish one; he wanted all other players to be as good as himself. He would spare no pains to make them so. If he saw them committing any of the many errors into which golfers fall he would tell them of it and tell them why it was an error and insist upon showing them just how to avoid it in future. He would point out any want of judgment, and not confine himself as so many professional golf teachers do merely to the stroke.

After a time he found it necessary to hint to the Captain that nowadays a military man must accustom himself to self-control. The Captain kept Pishing and Tushing and presently it was only too evident swearing softly; his play got jerky, his strokes were forcible without any real strength, once he missed the globe altogether, and several times he sliced badly. The eyes under his light eyelashes were wicked little things.

He remembered that he had always detested golf.

And the Professor. He had always detested the Professor. And his caddie; at least he would have always detested his caddie if he had known him long enough. His caddie was one of those maddening boys with no expression at all. It didn't matter what he did or failed to do, there was the silly idiot with his stuffed face unmoved. Really, of course, overjoyed—but apparently unmoved. . . .

"Why did I play it that way?" the Captain repeated. "Oh! because I like to play it that way."

"*Well*," said the Professor. "It isn't a recognized way anyhow. . . ."

Then came a moment of evil pleasures.

HE'D sliced. Old Bowles had sliced. For once in a while he'd muffed something. Always teaching others and he was slicing! Why, sometimes the Captain didn't slice!" . . .

He'd get out of that neatly enough. Luck! He'd get the hole yet. What a bore it all was! . . .

Why couldn't Madeleine get up at a decent hour to see a fellow? Why must she lie in bed when she wasn't acting? If she had got up, all this wouldn't have happened. The shame of it! Here he was, an able-bodied capable man in the prime of life and the morning of a day playing this blockhead's game—!

Yes—blockhead's game!

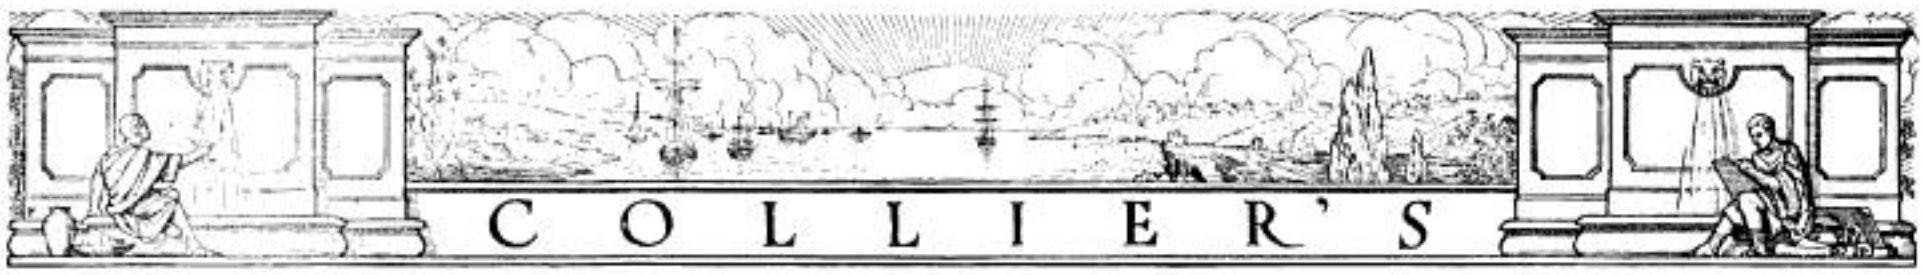
"You play the like," said the Professor.

"*Rather*," said the Captain and addressed himself to his stroke.

"That's not your ball," said the Professor.

"Similar position," said the Captain.

"You know you might *win* this hole," said the Professor.



"Who cares?" said the Captain under his breath and putted extravagantly.

"That saves me," said the Professor, and went down from a distance of twelve yards. (*Concluded on page 32*)

The Professor made sounds of friendly encouragement. But the Captain was going—going. He was on all fours, he scrabbled handfuls of prickly gorse, of wet sand. His feet, his ankles, his calves slid into the pond

Democracy and the Bogy Man

FARMERS HAVE VOTES and use farming implements. It follows that politicians can bid for the votes by attacking any large corporation which makes the implements. Therefore it is that for years past many Democratic candidates have been assailing the Harvester Trust and promising to smash it. This procedure is much more useful down South than attacking peonage or child labor, and it fits in very nicely with the underlying Democratic campaign doctrine that a big business enterprise located in some other State is quite necessarily crooked and oppressive. This buncombe is so thoroughly engrained in the Democratic consciousness that even President WILSON exhibited a streak of it in that curious letter wherein he spoke of Mr. JONES as joining the Harvester Company "to reform it"—a mistake which the nominee himself speedily corrected. The plain truth is that nearly all of the present Congressional leaders of the Democratic party have for years been participating in and profiting by a sham agitation of the trust problem, an agitation based on what President WILSON very justly described as "discriminations against particular classes of men." This was all very well so long as these statesmen were merely a critical minority, but the test came when they attained power and had to work constructively. The Jones incident seems to show that they have not the moral courage to follow the President, but feel compelled to keep up their old reliable campaign cries. This does not endanger very much the Wilson ascendancy over Congress, and the President has probably strengthened himself by sharply calling attention to the pernicious smallness of the opposition; but it does endanger the usefulness of the Democratic party to this country. Above all, it threatens to delay for partisan political advantage the establishment of social justice in the United States. The peanut jugglers may or may not reap the consequences of their folly at the polls, but the worst of it is that we must, for some years at least, rely for fundamental statesmanship upon a party insincerely holding a sham creed.

The Localization of Virtue

OUR FRIENDS in various parts of the United States are hereby asked, apropos of the New Haven, Rock Island, Frisco, and other business troubles, to remember that honesty and success are personal, not geographical. The chances are that more money has been sunk in fraudulent mining stock of the Pacific Coast and Rocky Mountain regions than in any two railroad embarrassments. The old Union Pacific-Credit Mobilier and star-route mail frauds of the seventies were worse than any financial scandals of to-day because the Government was directly involved. The greatest suffering and loss of all were probably caused by the untimely boom settlement of the dry lands of the western Kansas region in the later eighties and early nineties. Wall Street does not blow all the bubbles.

The Pension Scandal

ON PAGE 4 of Form 1040, "Return of Annual Net Income of Individuals," issued by the United States Internal Revenue Bureau, Instruction No. 16 specifies that: "United States pensions shall be included as income." Please remember that this form will not be used by anyone having less than $250 per month, about three times the earnings of the average American family. Form 1040 is defective in that any pensions grafted by these people will be buried among other items. Yet, apparently, the Bureau of Internal Revenue believes, officially, that we are paying pensions to those to whom a pension should be a shame and a disgrace. The Pension Bureau at Washington should consider Instruction No. 16 rather carefully.

Women and the State Constitution

AN EFFORT is now making to have women seated as delegates to the New York Constitutional Convention, which will assemble in 1915 to revise the Constitution of that State. The argument so far proceeds by showing in detail that "there is no legal objection to the nomination and election of women either as delegates at large or as delegates representing a Senate district." This is probably very true, but it is not very important. The broad facts are that the State Constitution is the fundamental law for the great body of our rights and procedures—as is proved by the merest glance at such matters as the family, property and taxation, police, poor relief, health, education, and others. Women are vitally and personally interested in these matters as individuals, and all are taking a very active part in many of these lines of administration. A State constitutional convention which did not enlist the experience and knowledge of the women now employed in education, poor relief, correction, immigration and labor regulation, and so on, would be a foolishly lopsided body. The legal fact of eligibility is a preliminary question only. As BRYCE has truly said:

> Law was meant to be the servant of politics, and must not be suffered to become the master.

The important thing is to make the proposed Constitutional Convention truly representative of the forces of the State. More progressive communities will watch New York with some interest to see if that State knows what is really going on within its borders. If it does, women will help in the work of revising the Constitution.

An American Abroad

WE BELIEVE that even those persons who are hostile to Mr. ROOSEVELT's political activities can sink their political prejudices long enough to take pride in the fact that an American citizen who has recently visited England was talked about in these words, which are from the London "Daily Mail":

> To those who have seen him in the last few days he has seemed, if anything, a shade more Rooseveltian, and therefore a shade more enthralling, than ever. His Brazilian experiences have thinned him somewhat, but he looks all the better for it. . . . To-day finds him as fit and muscular as ever, the very incarnation of physical force and intensity. And in other ways, too, he is just the same, and perhaps a little more so. The old confidence and dogmatism and masterfulness still stamp every word and gesture. He seems as time goes on to accumulate vitality instead of losing it. There is the same challenging rush into the theme of the moment, the same urgent impulsive self-expression. His talk, flexible, animated, profuse, and unhesitating, has to-day, as it has always had, something of the volume and vehemence, something also of the prismatic play, of Niagara itself. He still snatches from every hour of life sixty brimming minutes of emotion, work, and play. Everything about him bespeaks a man armed, gleeful, voluble, and dominant, full of the joy of life and conflict, and allowing everyone around him to see that he is having, in his own historic phrase, "a perfectly corking time." . . .

And these, from the "Pall Mall Gazette":

> Mr. ROOSEVELT's visits are so refreshing that the shortness of his present stay is truly regrettable. The interests of life touch him at so many points as to make his political connections seem a mere detail. Compared with him, GLADSTONE, who was once regarded as encyclopedic, appears limited and professional. Few statesmen give such a convincing impression that they really care for the big things in human development and the world's destiny.

More About Tainted News

THE POCAHONTAS (W.VA.) "TIMES" reprints in full a COLLIER'S editorial, entitled "A Real Case of Tainted News." This editorial referred to plate matter distributed by the Western Newspaper Union, that has received about $42,000 a year from the Canadian Government to print in American country papers glowing tales of how American farmers can make the Canadian prairie blossom as the rose. "It would be interesting to know something about the other persons, corporations, associations, or firms," ran our editorial, "who exploit themselves through the Western Newspaper Union." The West Virginia newspaper enlightens us upon this general subject.

> Some days before the above editorial appeared in COLLIER'S [says the "Times" editor] there was sent to the publishers of country newspapers a package containing a column of closely set "boiler-plate" matter, entitled "Home Rule Parade." It purported to be an account of a big mass meeting in Cincinnati, protesting against the temperance movement. BARTHOLDT was the speaker. He is the Congressman who clings to his liquor with all the tenacity that a man who is lowering himself into a dark pit clings to a rope. . . . With the plate and the proof was a statement by the news company sending it out that the plate was sent free of charge upon the request of the American Liquor Dealers' Association.

We thank our friends in West Virginia for this information. It was to be expected that the whisky boosters would take full advantage of surreptitious ways of influencing public opinion. Who knows of other interests that exploit themselves through amenable newspaper syndicates?

A New Drink

JOHN D. ROCKEFELLER'S seventy-fifth birthday was not remarkable for anything in particular save the New York "Sun's" discovery that the guests at luncheon were refreshed with "ice cold milk fresh from the cow." We refer to the matter at this late date because it seems to have been overlooked by the Department of Agriculture in spite of the arid need for such animals in our great (and hot) Southwest.

Immigration Tests

ILLITERACY and its rapid increase through immigration is costing the United States $500,000,000 a year, according to P. P. CLAXTON, United States Commissioner of Education. How this figure is arrived

THE NATIONAL WEEKLY

at we certainly do not know. But it revives the question of literacy as a test for immigrants who reach our gates. In literacy one finds proof of some sort of intelligence, although the question, *How does he use his ability to read?* is more important perhaps than the question, *Can he read?* "Will he learn to read?" is perhaps more important than either. *Have we the agencies for teaching him to read?* is greater still. It is of small consequence that an immigrant cannot read if he has the ability to learn and we possess the effective agencies for teaching him. Perhaps he would be a better American citizen if he came unlettered and we kindly took him in and taught him, but we do not ordinarily do this. The muslin-goods plant of D. E. Sicher & Co., New York, seems to have the right idea. They have established a school for the immigrant women in their employ, and one day last June forty Polish, Italian, and Russian girls, most of whom could not speak a word of English a few months ago, were given as diplomas the New York Board of Education's certificate of literacy. Since October these girls had been attending classes in the factory, receiving the same pay meanwhile as if they had been at work in the shop. "The purposes of this movement," the employers say, "are to eliminate the 10 per cent of illiteracy among our foreign workers, . . . reducing the friction caused by failure to comprehend directions, and to decrease the waste and loss of wage incidental to the illiterate worker. *We find that the workers who have been trained in this school have gained from 20 to 70 per cent in efficiency.*" After all, there are two kinds of immigration tests: the test of the newcomer and the test of ourselves, and the uses we make of this new human material.

Be Reasonable!

"WHAT SHALL WE DO with the Drunkard?" is the title of an editorial in one Boston newspaper. The real question is: What shall we do to prevent drunkard making? A full-fledged victim of the whisky habit may, of course, be rescued and restored to health; but prevention is always more important than cure. There are too many saloons and too much whisky is drunk in them. The public must be educated into the full realization of what the drink tax on health, efficiency, savings, worldly success, and happiness really comes to. It is a case for common sense—not passion.

——and the prime factor of efficiency is temperance!

Cartoon by F. G. Cooper

The Great Divide

THE PRONOUNCEMENTS on "newspaper English" made by a great English novelist—rumored to be a future Nobel prize winner—and the professor of journalism in Iowa State College:

> The newspaper style, which is becoming more and more essential in the equipment of every successful writer, is the clearest, most concise, and most interesting style in which things can be written. . . . It is the news sense which enables the writer to see through a mass of nonessentials to the essential, through dead rubbish to living facts, through husks and shells to the kernel of truth.—Professor F. W. BECKMAN.

> He [THOMAS HARDY] blames the newspapers for "their phrases of no language whatever, often incomprehensible at a casual glance. . . ." HARDY is justly censorious of the newspapers for their bad English.—JOHN MACY, in the Boston "Herald."

We fancy H. G. WELLS would take Professor BECKMAN's side. Do you?

The Critics

CRITICS will show you how such and such a writer repeated the thoughts of KANT or HEGEL, or used the phrasings of DANTE or MILTON, or stole the plots of BOCCACCIO or GUY DE MAUPASSANT. They often prove their wide reading, they sometimes demonstrate their sagacity, but they do not justify their existence as critics unless they go further than this, for the genius of authorship declares itself less unmistakably in gifts shared with forerunners or contemporaries than in gifts peculiar to itself. WALT WHITMAN or WILLIAM WORDSWORTH is neither understood nor elucidated when his possible pilferings have been listed; at best the ground has only been cleared for the critic's real work of insight and interpretation.

A Squirrel-Cage Business

AN AMERICAN HOTEL MANAGER has spent seven weeks touring the European hotels—which is all that some seekers after pleasure can accomplish without being paid for it. Says the hotel man:

> I made my first acquaintance with plovers' eggs, which I was told cost something like a dollar apiece, and a few other dishes not common to bills of fare over here, but in general I found that the eating in hotels was pretty much on the same lines as here, and that the standard of what constituted a first-class hotel in Europe and in the United States was pretty much the same.

This is one of the things that makes conventional travel without any definite object so deathly dull for intelligent people. People dress very much alike at hotels in the temperate zone, and their conversation is about equally insipid, and they eat very much the same indigestible food. Usually it is bad food (called by French names) and priced rather high.

A Civil Question

"BUT I LEARNED that there were new inventions in the world," writes C. L. EDSON in the New York "Evening Mail"; "and now I have seen the motion picture and slept in a Pullman." You have the advantage of us there, Mr. EDSON. What is your recipe?

The Elements

WE HAVE CHOSEN, or Fate has chosen for us, a dwelling place where grass grows only by pushing its way up stubbornly and deviously between bricks, in the crevices of unmended pavements, and in patches of park or tenement-framed court. The sun shines on us and the rain falls; but factory smoke dims the sunshine, and the rain, when it reaches us, is stained and dust-laden. Our feet pound hard pavements; our horizon is limited by lofts and marred by gas tanks and department stores. We are herded with other men and women in our comings and goings as sheep bound for the shambles, and in the squirrel-cage apartment houses and offices where we spend days and nights. We jostle people on the street whose look repels us, whose bodily contacts we resent, and other folk with whom we could enter into real sympathy did opportunity but offer. We see both too much and too little of human nature and human beings; we are at once too subtle and too stupid to live richly among sordid surroundings. But a day offers a release from all this, and we make the day an adventure. We turn our steps out of the city gates and renew our friendship with the elements. We lie at full length in green grass; we grub in the soil or let sand trickle through half-spread fingers. We revel in the shock of a plunge into waters that cool us and sustain; we brace our legs to the bucking of the boat deck; we squat beside the fire we have built of driftwood on rocks lapped by tireless tides, and light our pipe from the long stick that, ten minutes before, toasted our savory bacon. The good these expeditions do us is not physical alone; it mends the spirit. We return in harmony with life—and life includes all things material and immaterial; objects animate and "inanimate"; agencies human and agencies divinely mysterious. The hum of bees on pilgrimage, the fiddling of a cricket choir, the wind-blown odor of an unseen honeysuckle, attune us to the World Force and reconcile us to living in the human hive we call a city. We hear in the whir of dynamos and the throbbing of motors the very music of power that thrilled us when we heard those other tidings out of God's natural kingdom. Refreshed and reassured, we return to doing a modest share of the great world's work.

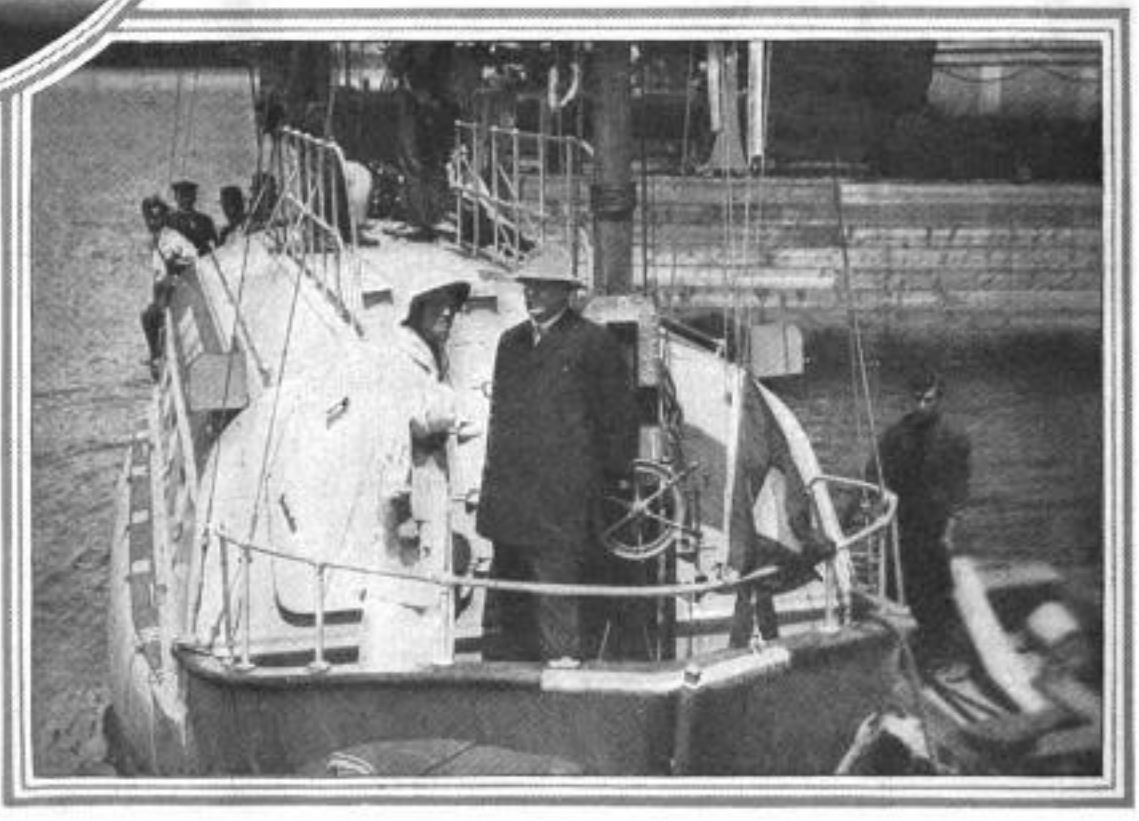
The Get-Away in the National Balloon Race



THE balloon *Uncle Sam* was the third of eight to start from the Motordrome in St. Louis the other day in the national elimination race, and W. H. Trefts, her pilot's aid, snapped the unusual photograph above as the *Aero Club of St. Louis*, the *Miss Sophia*, the *Pennsylvania*, the *Kansas City III*, and the *Goodyear* were leaving the ground. The *America III* and the *San Francisco 1915* rose ahead of the *Uncle Sam*. The *Goodyear*, with R. A. D. Preston as pilot, won the race, remaining in the air 24 hours and 45 minutes and covering 300 miles. The flights were for the purpose of picking three balloons for the international race at Kansas City on October 6. As we go to press the other two that qualified have not been officially announced.

A Blind Judge Who Sees Through a Girl's Eyes

JUDGE SAMUEL BELL of the Criminal Division of the Cincinnati Municipal Court is blind, but he is handicapped very little while on the bench. He arraigns an average of about fifty persons a day, and does all his character reading through the eyes of a young woman. Miss Emily Dupinal, Judge Bell's secretary, sits beside him in court, as in the photograph in the circle, and sizes up for him every accused person whose case requires a careful weighing of conflicting testimony and a close study of the alleged offender's personal appearance. Judge Bell is one of Cincinnati's most popular officials. He likes baseball and knows the game thoroughly

A Transatlantic Honeymoon Trip in a Motor Lifeboat

BARRING the unexpected, Mr. and Mrs. Einer Sivard of Long Island City, N. Y., will have got a good start on a wedding trip across the Atlantic in a motor lifeboat by the time you read this paragraph and take a look at them on their craft in the photograph at the right. The voyage is primarily for pleasure, but it has a much greater significance. Mr. Sivard designed the boat to take the place of the open lifeboats now in use on ocean liners, and he expects to prove its worth by going all the way to Queenstown in it. The boat is 36 feet long, has a 32-horsepower engine, and carries a wireless telegraph instrument. It is capable of carrying 100 persons in an emergency. The portholes close automatically when the boat is struck by heavy seas. Mr Sivard says the craft will turn over and readjust itself without the slightest injury. He has a crew of six experienced seamen. The little boat carries supplies enough for a three months' voyage.

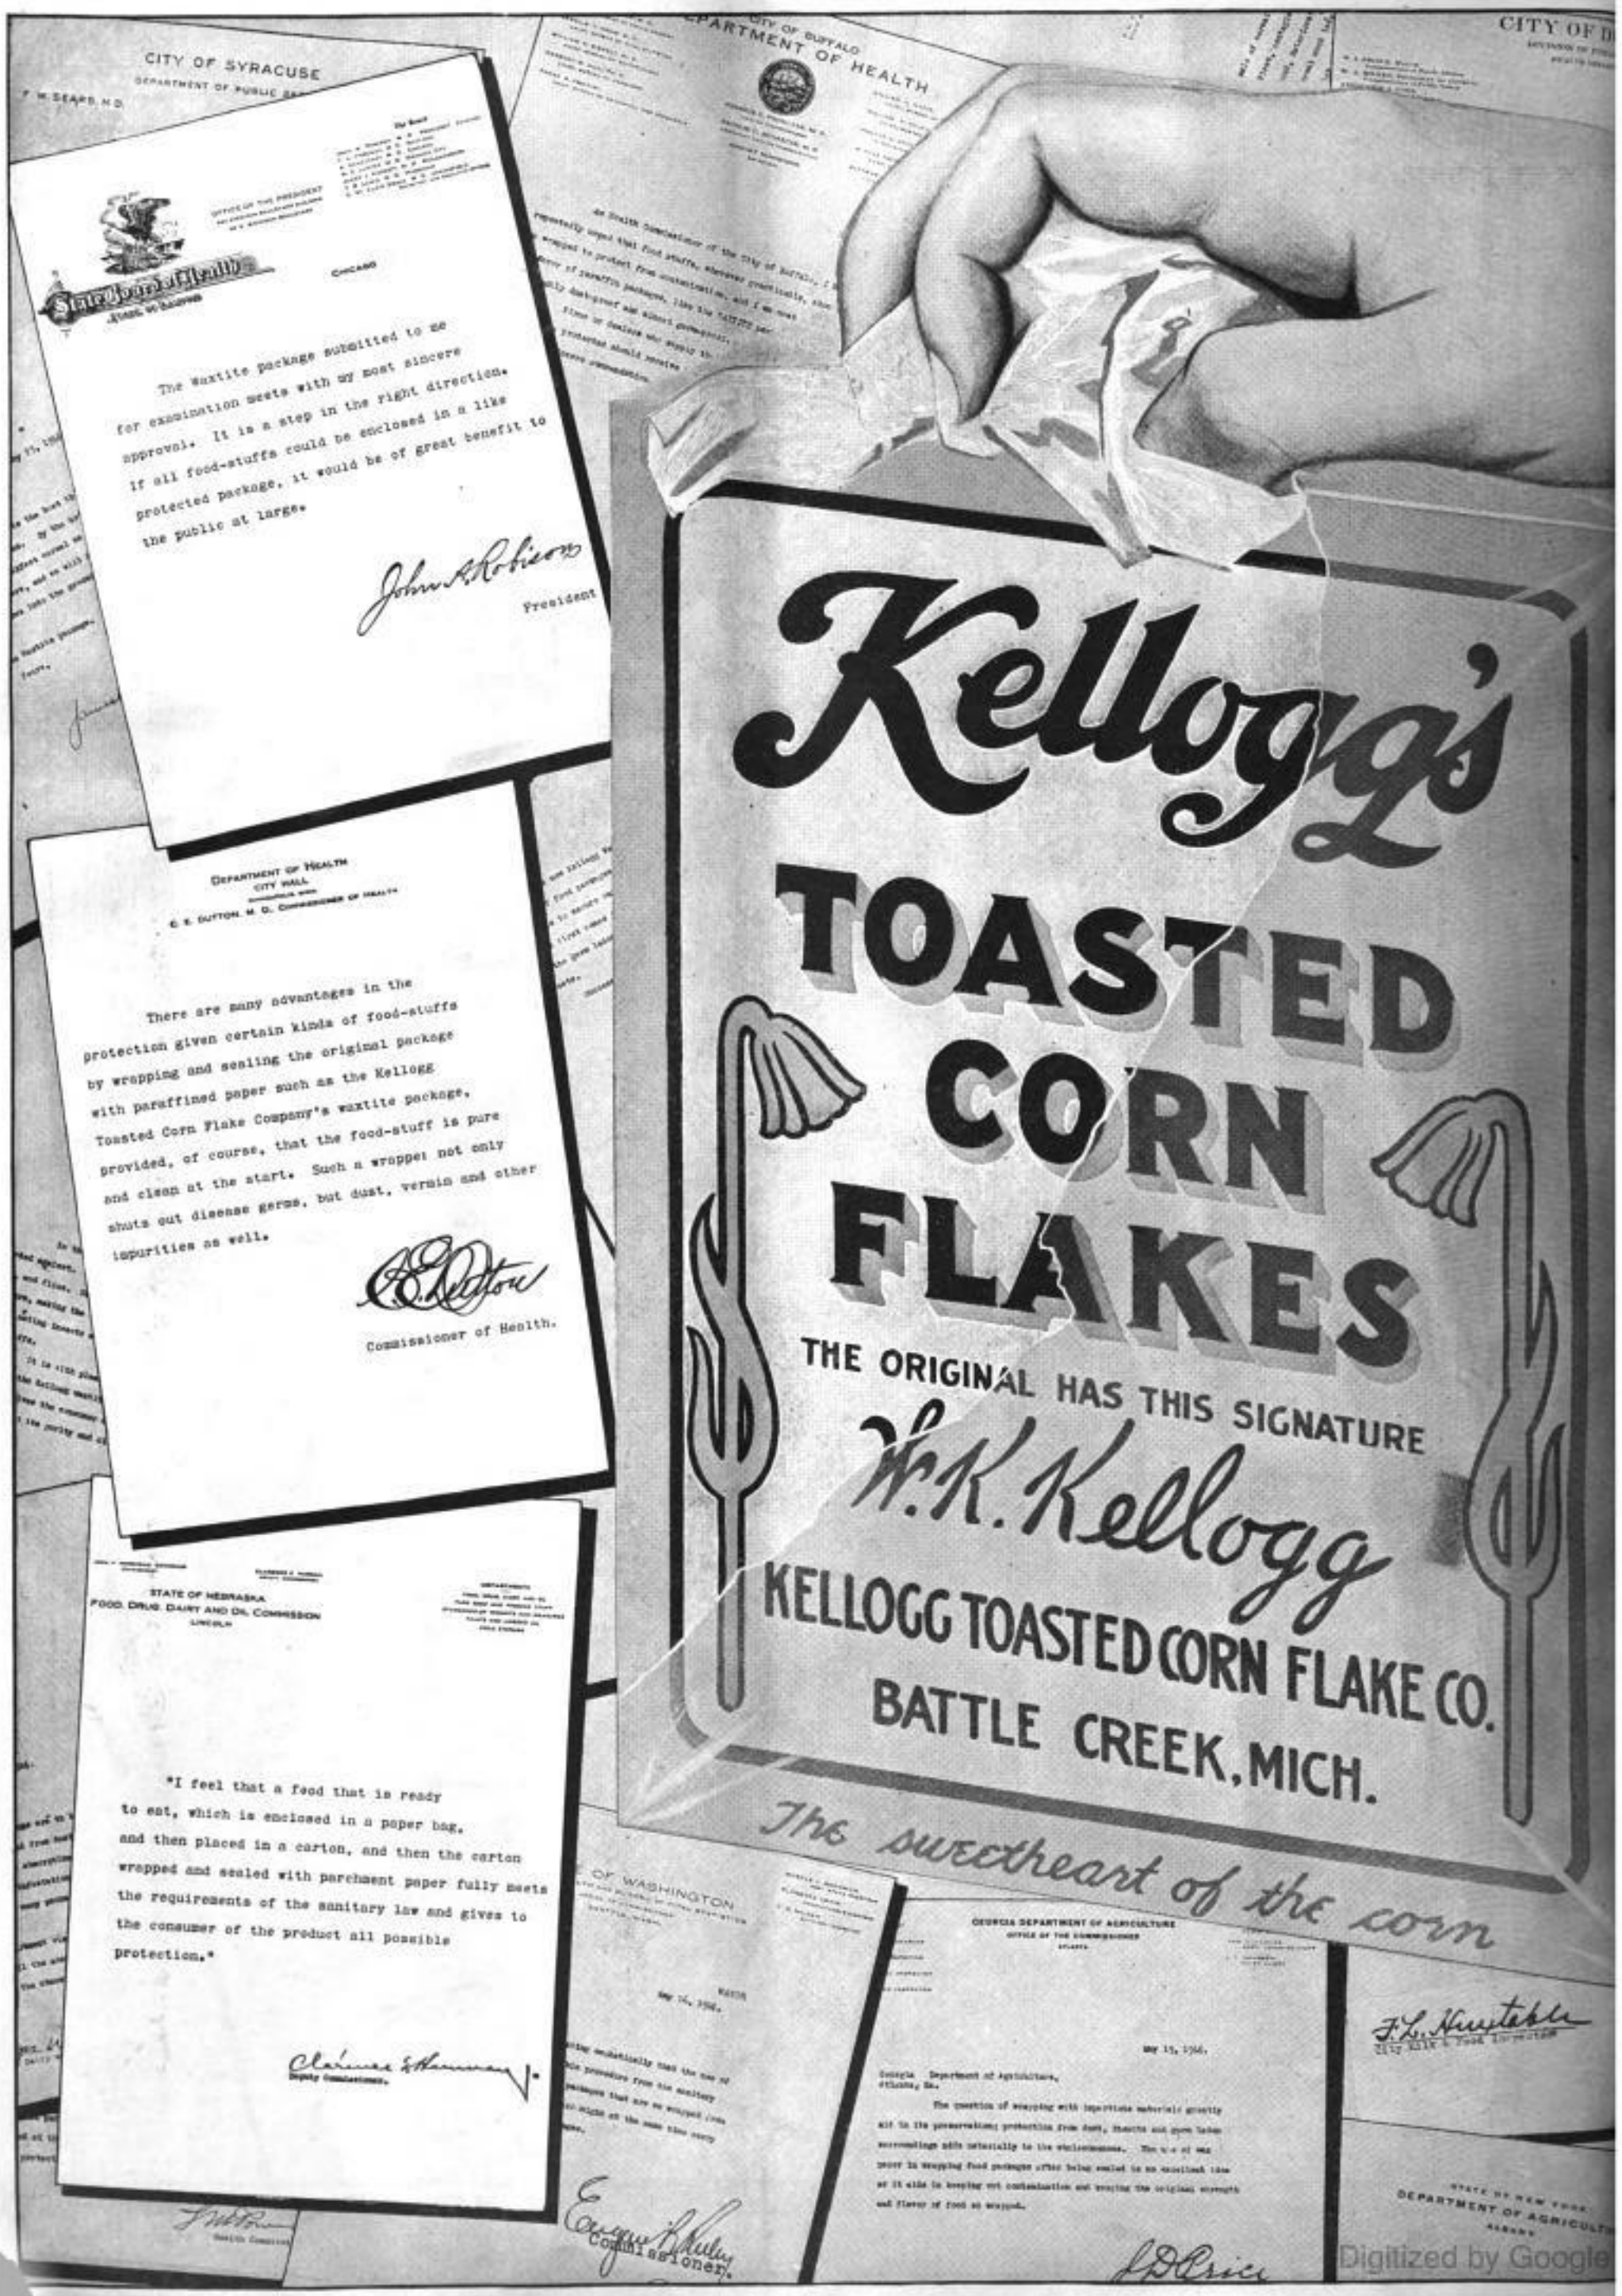
Lifting the Veil of Ignorance in Irish Creek Hollow

Thirteen lived in this cabin

Educators and district school trustees in the Virginia mountains. State Superintendent R. C. Stearnes is on the velocipede hand car



The heart of the once benighted district. The largest white spot in the meadow indicates a new schoolhouse, built by the mountaineers

TWENTY-ONE school-teachers declined a position in Irish Creek Hollow. They regarded the community as hopeless so far as education was concerned. The district, fifty square miles in area, tucked away in the remote Appalachian highlands of Virginia, was not only stagnant; it was actually slipping down the scale of civilization. The people seldom ventured out of their own neighborhood, practically all were unlettered, and many were degenerating physically as a result of intermarriage. Some families were without even the most ordinary conveniences. That was three years ago. To-day there is no illiteracy in Irish Creek Hollow and the people are enjoying modern advantages. The change began when Misses Sallie B. Dickinson and Jennie Patterson, with a twelve-year-old boy assistant, went into the district and opened a summer school in a tent. The two women organized morning classes of children and afternoon and evening classes of adults, and their teaching was successful from the start. They have received aid from State Superintendent R. C. Stearnes and other prominent school authorities. This summer nearly all the isolated mountain districts have schools like this one.

Miss Sallie B. Dickinson teaching a class of twelve grown-ups to read. All these were wholly illiterate when the school was started. The old woman in black, wearing the string of beads, has a granddaughter who studied the primer at the same time and each tried to surpass the other

48 Public Health Officials
Endorse *Kellogg's* WAXTITE Package

THIS Nation-wide endorsement from State and City Officials charged with the Public Health is an impressive testimonial for which we are sincerely grateful.

KELLOGG'S TOASTED CORN FLAKES needs no such endorsement. It has long enjoyed that most valuable of all testimonials: ***the largest sale of any ready-to-eat cereal food.***

But this ***official assurance*** that the WAXTITE package keeps its contents as crisp, fresh and pure as when they left our ovens, is a new and important reason for saying "KELLOGG'S-WAXTITE" to the grocer and looking for this signature:

W. K. Kellogg

Lincoln Enters Hostile Territory

Chapter V of "A Son of the Middle Border"

A Personal History—By Hamlin Garland

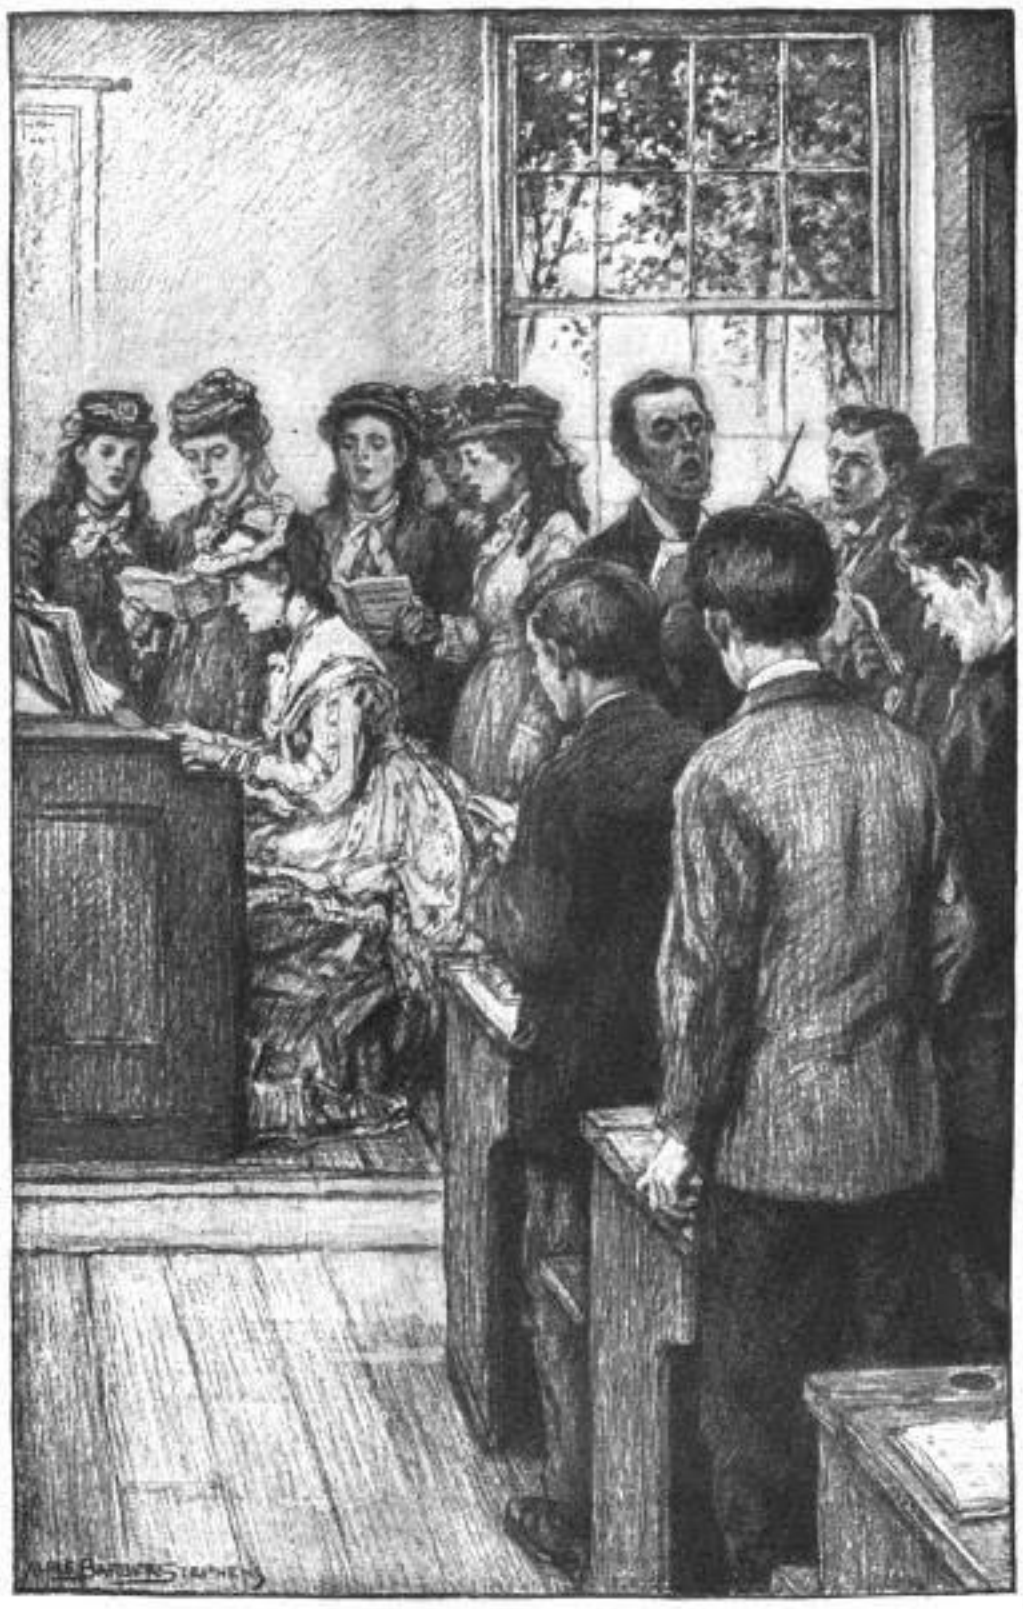
ILLUSTRATED BY ALICE BARBER STEPHENS

IN THE autumn of 1875 Duncan Stewart startled and thrilled his sons by announcing that he had rented the farm and was about to go into business in town—a momentous decision which came about through his relationship to a widespread social awakening in the county.

During 1871-73 an organization of farmers, officially known as the Patrons of Husbandry, had been growing up all over the Middle West. Its assembly halls were officially known as "granges," and, of course, the members were at once nicknamed "grangers."

"It was a social and educational organization at first, and its monthly meetings soon became important dates on our calendar," says Lincoln. "In winter its oyster suppers with their debates, songs, cold chicken, and cake drew us all once a fortnight to the Burr Oak schoolhouse, and each spring, on the twelfth of June, its annual picnic, also an official meeting, came to be almost as well attended as the county fair or the midsummer circus.

"The place of meeting was usually one of the groves along the Cedar River, and early on the appointed day we were up and dressed as for church, and mother, at seven o'clock, was almost tired enough to go to bed. The granges of our township came together at Burr Oak and moved in procession, each headed by a great chariot with uplifted banner on which was blazoned its name and motto. Several of them with hired hands approached, preceded by the beat of drums and flare of bugles, their marshals galloping to and fro in military order.



"IT WAS grand—it was inspiring," continues Lincoln, "to watch these processions winding down the barbed-wire lanes, joining one to another at the crossroads till all the lodges from Riceville, Stacyville, Burr Oak, and Liberty were fused into one mighty column streaming westward toward the picnic ground on the Cedar River.

"Nothing more picturesque, more human, more delightful, more necessary has ever risen out of American rural life than this order. Each of its meetings, with its poetic use of Ceres and Pomona, was a blessed relief from the sordid prose of the farm. It had its practical side, too, for it taught better methods of tillage and inspired a love for fruits and flowers."

It soon established a system of cooperative stores or agencies, with intent to defeat the middleman, and it was in distrust of the wheat merchants of Osage that the grangers of Mitchell County chose Duncan Stewart as their official grain buyer and put him in charge of a huge new elevator which had just been built at the north end of the switch on the edge of the village.

Lincoln writes: "My father's acceptance of this position shook us like an earthquake. It was as if the sun had shifted its place in the sky. What was north now suddenly became south. First of all, it arrested our pursuit of the sunset. For the first time since leaving Boston my father began to dream of making a living at something besides agriculture. It was to him, as to us, a fateful parting of the ways, and no doubt he came to the decision after much debate and trembled with doubt of the outcome."

DURING that summer and autumn, while Duncan drove to his new duties at the elevator, four miles away, Lincoln (though less than fifteen years of age) acted as head farmer. "I was put in charge of the workmen and tools, and gave orders to the hired men and supervised their action. But always with an eye to my father's nightly return," he adds, "for he possessed the glance of an eagle and was so exact in all his methods that he could detect instantly the slightest indiscretion or wrongdoing.

"We all loved to see the girls and hear them sing. . . . The Burr Oak Grove schoolhouse, the social center for the township, had an organ"

Often, as he came whirling into the yard at sunset, his ponies flecked with foam, his big round gray eyes (flashing from side to side) instantly detected something out of place or broken, and his voice rang out sharply in reproof; but it was all good discipline."

LINCOLN now fairly took his father's place on the farm. He drove the seeder rather than the harrow, and this seemed to him a worthy promotion. True, it was harder work than harrowing, and to make the wheel "track" required close application to the team; but the added responsibility was a satisfaction.

In corn-planting time he rode the marker and drew the seed rows (a very precise job), and when Cyrus Benson came with his new-fangled seed dropper Lincoln sat upon the driver's seat and took keen pleasure in the task. In harvest he ran the reaper, and in stacking time built all the wheat ricks—and these responsibilities caused even the hired man to treat him with respect.

Most of these hands were rough, hardy, obscene nomads from the South, who annually followed the line of ripening wheat from Missouri to Minnesota. They arrived suddenly from the South like a flight of unclean birds, and vanished into the North as mysteriously as they had come. Some of them had been soldiers, but for the larger part they were the wastrel sons of poor farmers and rough mechanics in States farther to the south and east. Some of them gave assumed names, as, "Harry Lee" and "Sidney Hall"; others were known only as "Big Ed" or "Shorty," and their boastful accounts of visits to St. Louis and Chicago reeked of saloons and carousals.

They had the most appalling yet darkly romantic conception of women. A "girl" was the most desired thing in the world, but she was only a thing, a creature without soul. The woman who yielded to temptation deserved no pity, no consideration, no regret. Her agony was amusing, her future of no account. From them the boys acquired a secret fund of evil information concerning South Clark Street in Chicago and the river front in St. Louis. I will not say these tales had no ill effect upon Lincoln, for they shocked and horrified him, but such cruelty, such debasing habits, were so squarely in opposition to the teaching he had derived from his father that his respect for virtue could not be uprooted. They seemed of a different race from his Uncles David and William—satyrs with enormous appetites to whom Saturday night meant debauchery and war.

"SATURDAY night on the farm!" exclaims Lincoln. "How it all comes back! I see a whisky-mad Wapsipinicon farmer walking barefoot up the middle of the street defying the world. From the shelter of an awning pillar I watch with shivering interest while a lithe, pock-marked stranger menaces a cowering young fellow in a soil linen coat. A burst of shouting, a trampling, is heard, and forth from the door of a saloon bulges a crowd of drunken, steaming, reeling, cursing ruffians, followed by Marshal McCarthy with an offender in each hand.

"We are riding homeward through the moonless night. Only part of our harvesters are with us. The others are roaring from one drinking place to another, having a 'good time.' Some of them will never return to work. The keen air is soothingly clean and sweet after the tumult and the reek of the town. Appalled, yet fascinated, I listen to the oft-repeated tales of what happened when heroic Jim McCarthy sprang into the dive and cleaned out the brawling bullies. I feel very young, very defenseless, as I listen, and I long for the strength of David, my giant uncle."

It would appear that the Burr Oak Grove schoolhouse was the social center for the township, and Lincoln makes much of it in all that he has written. It stood, as he describes it, in the midst of a noble grove of oaks at the intersection of three roads and possessed peculiar charm to those who dwelt on the windy, sun-smit prairie.

"All the town meetings and caucuses were held there, and two preachers 'officiated,' preaching alternately in order that Baptists and Methodists might be equally provided for. It had an organ also (the cause of constant discord), and was the place of assembly for the grangers.

"BACK of it and near by ran a small stream, and plums and haws and other fruits and nuts were abundant along its banks. A cluster of houses and a post office made it almost a village; indeed, it had been a village before the railway came. To us of Dry Run Prairie the building seemed sheltered, and of far higher appeal than our own district center. But had it been a bleak, windy hill it would have been alluring to Burton and to me, for it was the home of Hattie, Bettie, and Agnes, the acknowledged belles of the region. I was only a shock-headed, big-

Digitized by Google

handed, bashful youth to these radiant creatures, but I worshiped at their shrine as devoutly as did John or Edwin or any other of the more self-confident cavaliers.

"The question of dress was beginning to trouble me acutely. My best suit was of wool and winter weight, and for the reason that during the week I wore nothing but shoes, a hickory shirt, and a pair of brown denim trousers, I suffered tortures on Sundays when fully incased in a heavy coat, a starched shirt, and a paper collar I set out for church. No one, so far as I knew at that time, possessed an entire extra lightweight suit for summer wear, although a sort of long yellow linen coat, called a 'duster,' was coming into fashion. John Gardner, who was somewhat of a dandy in matters of toilet, was among the first of the boys to purchase one of these robes, and Burton followed his lead. Then my own struggles began. I, too, desired a 'duster.'

"Father did not see me as I saw myself. To him I was still a boy and subject to his will, even in matters of dress. My timid request for a linen coat was denied, and when during a visit to the store a certain black hat of antique pattern was recommended by the clerk as 'of excellent material and very serviceable,' my father bought it for me, although my vision led to a brown hat with a high peaked crown—such as the other boys were wearing.

"OUR differences at the moment appeared irreconcilable, but, supported by my mother, I heatedly argued that, as I was not only doing a man's work on a boy's pay, but actually serving as superintendent, I was entitled to certain rights in the matter of raiment. In the end I got a coat and a hat like the other fellows, but my victory over the old soldier gave me a shock. Having forced him to admit my growing individuality as well as my increasing usefulness, I receded. The fact that he, the inexorable commander, had given way to my demands made me very careful not to go too fast or too far in my assumption of the privileges of manhood.

"As I look at a tintype (taken at about this time) of myself and Owen, I can hardly detect the physical relationship between these mop-headed, clumsy, long-lipped lads and the gray-haired men of to-day. But the coats, the ties, the little stick pins on the lapels of our coats, bring back to me with almost painful stir the curious debates, the childish delights, the dawning desires which led us to these material expressions of adolescence. There is a kind of pathos, too, in the memory of the pleasure I took in the prize candy box which yielded to me that brass butterfly. And yet my joy was keener and my satisfaction more complete than any which the richest jewel of the earth could give to me to-day. Sometimes I agree with the Lacedæmonians: 'Hunger is the only sauce.'"

LINCOLN, like many another, passed a tall milestone on his course when one summer day he visited a barber shop for the first time. "From childhood my mother had trimmed my thatch, and notwithstanding my desire for a real hair cut, I was nearly fifteen as I timidly entered the 'tonsorial parlor' of the Western House with a quarter tightly gripped in my hand and took my first turn in a barber's chair. My pleasure, however, was mixed with ignoble terror, for not only did the man terrify me by his determination to force a shampoo (which was ten cents extra), but I was kept in great uneasiness lest I should someway lose my one small coin and be helpless in his hands.

"I came away from that barbering older and graver. I walked with a manlier stride. I confronted my classmates at the Grove schoolhouse with enormous accession of self-confidence. If only my pantaloons had not continued their distressing habit of climbing my bootlegs I should have felt almost at ease. But alas! every time I rose from my seat, it was still necessary to make each ankle smooth the other calf, and even then my trousers kept their dishonoring wrinkles. 'Some day,' I said to myself, 'I shall have pants that will fall smoothly over my instep.'

"Burton was quite as confused and wordless in the presence of girls as I, but John Gardner was discouragingly self-confident and facile. His father, being director of the Sunday school, procured for him almost too much distinction. We all bitterly resented his smiling assurance, as well as the fit of his trousers. His collars and ties were like those of the heroes in the 'Ledger.'

"We all loved to see the girls and hear them sing—and yet at times even these delights failed to hold us to the hot, close room. We sometimes slipped away into the glorious forest and down along the creek, to gather berries or nuts, or to loaf idly in the odorous shade, which seemed more sweetly sanctifying (after a week of sun-smit toil on the open plain) than any church. There was something indefinably poetic in the song of the little brook, in the flecking of light and shade on the woodland path, and in the ripples of the little ice-cold spring beneath the maple on the Frazer cattle lot. To drink of it was almost as delight-giving as the plate of ice cream which we sometimes permitted ourselves on Saturday night in town.

One of the memories of the winter that was the dividing line between Lincoln's boyhood and his youth. — "I am 'spelled down' at the Sheehan School"

"It was always hard to go back to the farm after one of these delicious Sunday outings. To return to our greasy clothes and milk-bespattered boots, to be forced into the society of fly-bedeviled cows and steaming, stinking horses, to tackle the currycomb and the swill bucket was hard. But we did it! And while we secretly hoped some time to escape it, we were all unprepared for father's amazing announcement that he had rented the farm. We were fairly stunned by the glory of the vista. A new life was opened up. Our secret desires seemed about to be realized."

Though his own joyous excitement was very great, Lincoln declares that he has no recollection of a single word of comment, either of delight or of grief, from his mother. "Undoubtedly she was quite as deeply pleased as we at the thought of escaping the drudgery of the farm, but nothing in proof of it remains in my mind, and yet so far as we knew this abandonment of the farm was final. Our pursuit of the sunset was at an end."

THE family did not move till the following March, hence the boys went to school as usual in the bleak little box at the corner of the farm, and Lincoln rejoices in many splendid memories of wintry roads, when trotting away to spelling schools (with Owen by his side) he raised his eyes to the low-hung, starry sky, or watched the great white owls flapping silently away before him. He says: "I am riding in a bobsleigh across the plain through the brilliant January sunshine. The box is crowded with a dozen boys and girls. We are 'visiting schools,' as we called it. I am witnessing a performance of 'Lord Dundreary' at the 'Barker schoolhouse.' I am a tousle-headed onlooker at the Christmas tree at the Grove. I am 'spelled down' at the Sheehan School, and I thrill once more to the haughty, composed dignity of Agnes Deane as she stops the fight at the sociable at Dudley's—and through all these scenes runs a belief that I am leaving them forever, a conviction which lends to every experience a peculiar poignancy of appeal."

This winter may be taken as the dividing line between Lincoln's boyhood and his youth, for he was rapidly taking on the airs of manhood. True, he did not use liquor or tobacco, and was not greatly given to profanity; but he boasted an ability to shoulder a two-bushel sack of wheat, and was able apparently to hold his own among his fellows.

I regret to chronicle, however, that there is no evidence of any special literary quality in his reading. On the contrary, his taste in fiction continued rather low.

"I read during this year," he confesses, "nearly fifty of Beadle's Dime Novels (little paper-bound volumes filled with stories of Indians and wild horsemen and dukes and duchesses and men in iron masks, and sewing girls who turned out to be daughters of nobility, and detectives who possessed charmed lives and had marvelous powers of disguising themselves), and I would have read many more had my means permitted.

"Of all these tales those of the border naturally had most allurement. There was Wild Bill, for instance, who rode disdainfully alone (like Lochinvar), rescuing maidens from treacherous Apaches and cutting death notches in the stock of his carbine, and 'the Quaker Trapper' who openly advocated nonresistance and secretly slew redskins by the score.

"One of these narratives I specially recall contained a phantom troop of skeleton riders, a grisly squadron, which came sweeping like an icy wind out of the darkness, striking terror to the hearts of the renegades and savages and then vanished with dry clatter of bones and diminishing roar of beating hoofs, leaving the hero and heroine safely on their way to the fort."

IT IS a question whether the reading of all this exciting stuff retarded Lincoln's development or not. He says: "Apparently this fiction had very little effect of any sort except that it made the borderland a great deal more exciting than the farm and interfered with the milking now and then. I had no great desire to go west and fight Indians, and I devoured 'Jack Harkaway' and 'Out of the Depths' with almost equal delight."

It would not be fair to say that Lincoln read nothing else but these easy-going tales. As a matter of fact, he labored at a copy of "Paradise Lost," which his mother presented to him for Christmas, but it was hard sledding. However, he derived some entertainment from the cursing passages and the battle scenes, and went about spouting the formal and formidable harangues of Satan with such vigor that the horses often stopped in the furrow to listen.

APPARENTLY he read the book of nature studiously, for in speaking of the impending removal he says: "In the five years of our life on this farm swift changes had come to the open lands of the county. The prairie was everywhere being fenced and plowed. Settlers now covered all the meadows to the north and west, and around many of the homesteads trees and shrubs were beginning to make life a little less barren and ugly. The houses were growing larger, carriages were increasing in number; and yet, with all these growing comforts, I was aware that something sweet and splendid was dying out of my world. The whistling pigeons, the wailing plover, the migrating ducks, the geese, the soaring cranes, the shadowy wolves, the wary foxes, the prairie chickens—all the untamed things—had passed or were passing with the native grasses and the dainty flowers.

"A grove of larch and cottonwood protected our house from the winter winds, and the maple trees which we had planted in the little lawn were beginning to spread a friendly shade in summer. It was all very humble and very restricted, but, after all, it was home, and when we drove away from it one windy March day I experienced a distinct pang of regret. I was entering upon a most exciting life in town, but at the moment I remembered only the good times I had enjoyed with Ben and John and Burton, and was sorry that life on the prairie and in the saddle could not in some way be combined with the joys of life in the village."

Pickups of Sport

By Grantland Rice

Illustrated by F. G. COOPER

Romance of a Ball Player

"YOU'VE *made a hit with me," he said—*
"You've got the curves—you've got the speed;
Come, jump to me and be my Fed,
And sign me up to be your feed."

He stuck a fast one round her neck,
The other, waist-high, sailed across,
And then, a startled, blighted wreck,
He heard her edge in with this toss:

"Nix on the squeeze—that's not my stuff—
Play off—don't hug the base so tight;
I'm wise to this Three Hundred bluff
From guys that bat around all night."

"Here comes the hit and run," she cried;
Her old man blew in off the street;
The player sprinted with a slide,
But he was thrown out twenty feet.

Trials of the Modern Batting Eye

THOSE who attempt to compare old-time batsmen with present-day Sons of Swat are working from widely varying angles. The wonder in the present day and time is not that more .300 hitters don't exist, but that any man can attain this average after facing the test of modern pitching.

The Batting Eye of to-day is up against the hardest test ever known to the game. It is no longer a question of meeting speed and two or three varieties of curves. To-day they get all the speed they are looking for from such people as Johnson, Marquard, Wood, etc. Against such pitchers as Nap Rucker and Eddie Cicotte they get a knuckle ball that breaks at weird angles and is widely different from the old-fashioned curve. Against Russ Ford they get a ball that sails and ducks with a sudden break—so sudden, in fact, that Chief Meyers once told us it was all he could do to catch Ford with a big mitt when he first handled his repertoire.

Then comes Mathewson with the fadeaway, and Tesreau and others with the spitter, both wet and dry, that take peculiar evolutions and break with puzzling dips and drops and turns. There are to-day fifteen or twenty varieties of curves. Many of these are hard to control, the knuckle ball in particular, as the ball when thrown is pressed against the knuckles where the grip is not nearly so firm. The art of pitching has advanced to a wonderful degree through varying methods of holding and throwing the ball where there is no room for any batting advance beyond a true swing and a steady eye.

When Enough Is Too Much

THERE are certain occasions when enough is entirely too much, if not even more superfluous. The victory of the Oxford relay team was held to be probable. It was generally expected that England would outpoint us at golf. Our polo defeat was a bit startling, but it was generally conceded that in sport many things might happen.

But since the heroic days of John L. Sullivan and Kid Lavigne America's supremacy in the prize ring had been unquestioned. From the featherweight on through the mastodon class America had ruled by greater power and greater skill—barring the brief reign of Robert the Red of Cornwall, otherwise known as Fitzsimmons. And he had shifted his home to American soil.

So with the slump of our other champions it was expected that the successors to Sullivan, Corbett, Jeffries—to Lavigne, McGovern, Britt, Nelson, and Wolgast—would in a less high-browish realm of sportdom achieve revenge. Vain hope—fantastic dream. The landslide moves apace. Our lightweight champion is outpointed in England, and for the first time in eighteen years a Briton wears the lightweight olive athwart his clammy brow. And as this blow falls our best white heavyweight, Mr. Gunboat Smith, is retired by a Frenchman. Nor does the fact that Smith lost for fouling help lighten the sogginess of things.

It may be that we, through too easy a trail, are slipping a little. It may be that others, nurtured and strengthened in defeat, are coming forward. Or it may be that this is just one of those years when Fate, with a chuckle, turns the expected upside down. Our opinion is that America has taught the world the lesson of victory—the lesson of careful training—of concentration—the lesson of dash and speed and aggressiveness—and having absorbed this lesson the rest of the world will no longer be any field of easy conquest. Which should mean a new stir in competition and a far greater interest in international sport than the past has ever known.

Another Reason

"WHAT," queries a reader, "do you see in golf that is so attractive?" We might mention fifteen or two hundred things, but here is one: In a recent match we thought an opponent was on the green in three shots. "No," he said, "I've had five shots. I dubbed one over in the woods and later on my ball moved as I addressed it."

When an umpire calls a base runner out, can you imagine said base runner walking away, saying: "You are wrong, umpire; he touched me before I slid in?"

Or a right tackle saying to the referee: "That last thirty-yard run of ours should be called back. I held the opposing tackle and illegally put him out of the play."

Or do you lack a world's championship imagination?

Fable

ONCE *on a time we attended a ball game where an Indian came to bat and no one greeted him with a war whoop.*

A foul ball driven into the stand was caught by a spectator and no voice roared: "Sign him."

The pitcher allowed four hits and no paper next day mentioned "mid-season form," "pitched masterly ball," "a hop to his fast one," or "couldn't hit him when hits meant runs."

MORAL

It was a beautiful dream but we woke up early.

For the Davis Cup

IT HAS been some years since America had the opportunity of making a home stand in defense of the Davis Cup—now known as the emblem of tennis superiority or the tennis World Series championship.

After a far journey to the other side of this fairly well-known globe, the cup came to England in 1912, and last summer it was lifted and brought back. And unless the landslide reverses itself America will have some trouble in retaining the trophy, for 1914 has been the toughest year the bewildered Eagle has ever known.

We know the strength of the team representing the British Empire—whether it be from England or from Australasia. But with McLoughlin, Williams, and their running mate on guard our Uncle Samuel sees no reason to be depressed. They have jolted him in several vulnerable spots, but they have yet to throw him into

rout. America is offering youth and dash against greater experience and greater steadiness. And we believe that America has a better chance of winning at tennis than she has of winning the yacht race. But at her best against Brookes and Wilding, if it should so develop, the odds are certainly not her way.

Easy Stages

MUCH *in sport that is charged to brain and skill is merely knack that has come without reason and no great amount of intelligent practice. Control, they say, is better than speed, but the crest is only gained by the combination.*

Any dub can star once in a while; but it's the star who only dubs once in a while.

Some men look before they leap and draw back from a chasm they might have cleared into the kingdom of fame with the impetus of a blind running start.

Most things even up. "Cowards," says Shakespeare, "die many times before their death." But they also know the thrill of coming to life again.

The Golfer Speaks

IF I SHOULD *die to-night,*
And as with folded arms in death I lay
Some beaten rival whom I'd put to flight
Should bend above my resting corpse and say:
"Old boy, you won by greater skill and pluck,
You had me trimmed from putting green to tee,
You had the stuff but I had all the luck—
I should have been six down instead of three."

If he said that,
Although my soul was even then a spook,
I'd rise at once in my large, white cravat
To get one look at him—one final look;
I'd make him say it over word for word
Till I was sure that I had rightly heard;
Yes, I'd rise up within my shroud, and then—
I'd drop back dead again.

(With Apologies to Ben King)

Baseball and Hypnotism

WAS a ball game ever won by hypnotism—by a pitcher hypnotizing a batsman or a batsman tossing the hypnotic curb into a pitcher?

Catcher Ivy Wingo of the St. Louis Cardinals claims that on four occasions this season Slim Sallee, the great left-hander, at a critical point of the game, with runners on bases, has walked up to within a few feet of the batsman, looked steadily into his face for ten or fifteen seconds, and then has returned to the mound and struck his man out, the batsman offering but feeble opposition on each occasion.

Mr. Wingo may have been spoofing his audience to pass off an idle hour, but the scheme isn't beyond the realm of possibility.

Baseball Prophecy

IT MIGHT also be written that a prophet is not without honor save when he aims at baseball as a target.

For fifteen years Pittsburgh had been a pennant winner or a pennant contender. But in the last few seasons the Wagnerian city drops back to second or third place through a late start and through the supposed need of a star first baseman.

This season the supposedly star first baseman arrives in the person of Konetchy, the poling Pole. A majority of the experts immediately agree that Pittsburgh at last is under way to Flagtown. On top of this, in place of the usual late and blighting start, Pittsburgh starts with a mad rush and gathers in fourteen of her first sixteen games. The landscape is flooded with the chorus of "I-told-you-so's."

Then what happens? Nothing much except that for the first time in fifteen years Pittsburgh drops into a wild battle for last place and mid season finds her firmly enmeshed in the second division. Outside of this everything developed just as everyone thought it would. The answer? There isn't any except that baseball is still baseball and the only wise prophets of the game are those who wait for the box scores.

The Value of Control

RUBE MARQUARD of the Giants and Babe Adams of Pittsburgh recently fought out a twenty-one-inning battle, breaking all National League records for duration of play.

For twenty of the twenty-one innings both men were invincible, yet apparently neither was using speed or curves beyond a normal status.

After the game we asked both slabmen what they considered the main factor in their record achievement. Both gave the same reply: "Well, I never had better control in my life; I felt as if I could throw in a cup."

It was neither speed nor curves in the essential, but the ability to shoot the ball almost exactly to the spot both were aiming it. It isn't what you've got but what you can do with it that compiles the answer.

Thanks, Mr. Inventor

By HOMER CROY

A MAN in Canada recently invented a luminous fly paper that can be seen at night by its phosphorescent glow. To our way of thinking, this man has done a great service to his country.

When this patent paper glows at night it attracts insects. We, for one, would not be inclined, were we to see an insect attracted by the strange glow, to turn it aside. No, we would let it go on to its ruthless fate.

We have no use, as a general rule, for fly paper at night. It has a way of waiting until the first breeze comes along and fluttering off on the floor that has lost it many friends. It always alights flies up. After due deliberation and after long and painful thought we say, without fear of successful contradiction, that no person can step on a sheet of fly paper without feeling that a different path to the water bucket would have been a happier one.

One day our wife came home from a forced sale of fly paper with a happy, exalted look on her face and her arms full of tanglefoot. That night, in rushing to a window before the storm, we stepped on something with our bare feet that brought hot, sudden words to our finely chiseled lips. Removing the paper and some of the glue, we started around the table in the other direction. Again we stepped into the forced sale. We thought of a number of words that we had overlooked on the other side of the table. Bending over to take the paper off, we rested our hand on the table. Hardly had our hand touched the table than we felt that we were crushing the life out of dozens of flies that had settled on the paper in a moment of idle curiosity. Pulling the paper off, with a few forceful words we turned our attention to the sheet on our feet.

Bending over to remove the paper we sat down in a chair that our wife had thought was frequented by flies. In a moment we saw that we should have chosen some other chair. Words became inadequate to express ourself. We needed furniture. By the time our wife reached us the dining-room table was a mass of wreckage and some of the furniture as far out as the spare bedroom looked worse for the wear.

If the product of the forced sale had been phosphorescent, the repair bill would have been cut in half. A luminous fly paper would keep lots of rough, uncultured words from being flung out in the quiet hours of the night.

The Kickin'est Mule

(*Continued from page 10*)

that. It was more than weird, though. It was uncanny, pleading, pathetic, hopeful—all in one. It was a sound that thrilled and chilled. I've heard a panther scream and break the silence of a Southern swamp. But the chill that that sound causes is one of fear. This was one of infinite sadness.

McGRAW, the man of action, was at the shaft in two leaps. He listened intently for a fraction of a breath.

"Come on, some of you flat feet!" he yelled. Not a man budged.

"Come with me or I'll break your head!" he shouted at a big Swede miner who stood near him. The Swede came forward, dully, uncomprehendingly, it appeared. Two other brawny miners hesitated toward the shaft.

"Get in there!" bawled McGraw as he pushed the three of them into the big cage. "Let 'er down!" he commanded.

Another circle formed about the shaft house. And again it was a silent crowd. The engineer obeyed orders like one in a trance. "The boss said to," he murmured to himself.

If there was tenseness when that last cage with its cargo of eight came up, there was tenseness intensified when it went down into the rumbling unknown of that mine with its three miners and McGraw. Slowly, very slowly, the descent was made. The engineer stood by with his hand on the lever that stops and starts the cage, his face set, every vein standing out, every muscle taut. We who watched scarcely breathed. One woman whose husband had accompanied McGraw stood wide-eyed beside the shaft and looked into the yawning hole like one distraught.

FIVE, ten, fifteen, twenty minutes went by. That's a frightfully long time to wait. Then came the signal to haul away and the puff, puff of the engine told us that the cage was coming back to the top of the world. We began to breathe again and the color came to our cheeks. What would it bring? Well, the fact that there had been life left to signal was the reassuring thing.

There were five in the cage this time—McGraw, three miners, and you know, of course—old Dick! He—that is, Dick, the mule—wasn't tied. There was a halter on him and the end of the strap was in McGraw's hand. He was trembling, old Dick was, and he was very wet. There was mud—red, sticky mud—on his legs and in his mane and on his back. When McGraw tried to lead him from the cage old Dick held back. Then he felt the landing platform with his right forefoot, for all the world like a blind man who taps the sidewalk with his guiding cane. That was it—he was tapping the unseen! His eyes blinked strangely as McGraw's rough hand patted his quivering nose. His great ears wagged questioningly as he took a forward step.

Then he stumbled awkwardly out of the shaft house and into the bright sunlight—the first sunlight that had warmed him in five years and a half! Stock-still he stood while McGraw caressed him. Gropingly he turned his head this way and that while McGraw urged him gently forward. Old Dick's eyes could see in the artificial light of a mine, but they were useless in the day. Over across the road the grasses were waving. The odors of the meadows filled his nostrils.

WE led him patiently—McGraw and I—to the field. The waters down in the mine were still roaring. Men were rushing about. The engineer was at his post, awaiting orders. The rescued miners had scattered. The women and children were homeward bound, tearful but happy.

Old Dick, the mule, sniffed the grass and took a fearsome taste. He ran into a bush and scrambled awkwardly aside. Slowly he turned around and around, his head lowered. Then the poor old limbs sank beneath him and Dick literally knelt at the altar of his new-found world. Into the fragrant verdure he buried his pathetic head and, with what must have been a blissful sigh, he rolled and rolled and rolled. I looked rather shamefacedly at McGraw, I guess. But I needn't have felt that way. The tears were streaming down his cheeks, too.

Getting Your Money

By William Maxwell

ILLUSTRATED BY W. J. ENRIGHT

MOST of the adventure was squeezed out of the collection business in 1898. I am pretty sure of the date, for my youthful zeal as a collector brought me several croppers before I got accustomed to the Federal Bankruptcy Law. It was in 1898—I am fairly certain of that.

Naturally a definite due date is an important factor in collection work. One of the most dangerous things a credit man or merchant can do when he extends credit is to say—or intimate—that the time of payment will be permitted to coincide with the customer's convenience or any other event that is the least uncertain in point of time. In extending credit to a mechanic, I should much rather have his agreement to pay me a dollar per week for fifty-two weeks than his promise to pay as quickly as he can—even though a literal performance of the latter undertaking would probably result in an earlier settlement of the debt. In opening an account with a Mississippi merchant I should much rather have his definite promise to pay on December 1 than an agreement to pay as soon as "cotton commences to move," although cotton usually commences to move before December 1. Next to an absolute refusal to pay at any time, an insolvent debtor's promise to pay when he is "able" and the collector's impotent acceptance of that promise mark about the most hopeless form a collection can assume.

When a note or account becomes past due and has entered the precarious state, a creditor should make up his mind very promptly whether he wants to bring suit or whether he doesn't. If he doesn't, he should keep the obligation as crisp and fresh as possible. If he takes a note, the creditor of course wants security, but a future due note without security is better than a past due obligation on which the creditor is unwilling to sue.

A Remarkable Story

I DO not have in mind alone the acknowledgment of a debt that ordinarily results from the giving of a note. Greater than that are the benefits to a creditor that frequently follow the execution of a promissory note or other negotiable instrument by a delinquent debtor. Although scarcely a typical illustration of what I have in mind, I am moved to relate the very remarkable result that was once produced by a St. Paul tailor's determination to change the status of a certain delinquent account. The debtor in question was a sort of promoter who had become indebted for a suit of clothing. The repeated presentation of the account by the tailor had brought no payments of any sort. Finally he decided, as distracted creditors frequently do, that "something must be done." He so informed the promoter and concluded this emphatic declaration with the heartfelt question: "Can't you do anything?" The promoter was not impressed. In fact, he was rather amused, and, to show both his amusement and unconcern, replied: "I might give you a sight draft on the Czar of Russia." The tailor, through a politic desire to show his appreciation of his debtor's humor or else because he was too much discouraged and exasperated to care what he said, replied that he would accept a draft on the Czar rather than let the account remain in its present condition. The promoter, although he had no claims upon nor credit nor acquaintance with the Czar, proceeded to prepare a draft upon the "Little Father." The tailor, feeling perhaps that the debtor's fantastic act constituted at least an acknowledgment of the debt, took the draft and went on his way. A series of circumstances not necessary to relate here resulted in the draft being deposited in the tailor's bank, whence in due course it arrived in Russia. The promoter had entirely forgotten the incident, when a couple of months later he received a communication from a bureau head at St. Petersburg, containing the information that while his draft had in that instance been paid, he must in the future refrain from making drafts upon the Czar personally, and must instead make requisition on the writer of the letter, such requisition to be accompanied by a full explanation of the services covered. This story is vouched for by a prominent and, I believe, truthful member of the Minnesota bar, who had an intimate acquaintance with the drawer of the draft.

"Can't you do anything?" asked the collector. The debtor was rather amused. "I might give you a sight draft on the Czar of Russia," he said smiling

Perhaps it doesn't much matter whether the story is true. If it is true, it doesn't prove anything, unless we want to accept the theory that Providence is on the side of the creditor who refuses to let his accounts grow stale.

A creditor always knows what he most desires a debtor to do. He wants the debtor to pay in full. If he can't have his first wish, he should know definitely what his second wish is and work definitely toward its accomplishment. A substantial part payment is usually the creditor's second choice. Then comes security for the entire debt. And finally, if nothing better can be obtained, and the creditor does not care to invoke the aid of the courts, an unsecured note is probably the creditor's best remaining alternative—and last, but not entirely to be despised, just a plain, ordinary, honest-to-goodness promise to pay on a certain date.

Theories of the Dun

A PLAIN appeal for a plain but definite promise occasionally has gratifying results. I remember that one December, about ten years ago, I decided to send a New Year's greeting to a lot of debtors whose indebtedness we intended to wipe off the books as uncollectible at the then fast approaching close of our fiscal year. The letter which we sent was pronounced by my superior officer: "About the silliest thing I ever saw." It started out with a more or less poetic reference to the dawn of the new year. We proceeded on the assumption that delinquent debtors are particularly conscious of their indebtedness on January 1, although I do not believe they are, nor that the emphasis laid on this point had anything to do with the success of our letter, except as it afforded a slightly different and decidedly less peremptory introduction than is found in most dunning letters. The important money-getting paragraph in this letter proved to be the following:

"From what we believe to be true of you as a man, the fact that you have not paid us can mean but one thing, viz., that circumstances over which you have had no control have prevented you from paying. It would be an impertinence for us to inquire into those circumstances. They are a part of your own private affairs. All that we ask of you now is that you tell us when you will pay. If you name a date when you will pay, we know you will do it. Your statement of the exact date upon which we may expect payment will be helpful to us because we have the same problems of raising money that you have. We are a large concern, to be sure, but for the same reason that a farmer keeps no more horses in his stable than he needs to plow his corn, we keep no more money in our business than we actually need."

You can't blame the man who called this a silly letter, yet it brought several hundred dollars in cash, and promises that ultimately netted several thousand dollars. One of the latter was from a gentleman who had been discharged in bankruptcy. He said: "I guess you don't know I'm an adjudicated bankrupt and don't owe you a cent under the law. If you did, you wouldn't write me that way. I don't have to pay you, but I will on May 1." He did. Another gentleman from the "Blue Grass," who had impoverished himself through his fondness for race horses, wrote: "I've never welshed yet. I'll send you the money by July 1." He sent part of it then and the rest later. Yes, sir, I'm a great believer in a promise that names a definite date of payment, if it serves to rehabilitate the promiser's self-esteem.

If I could announce a method that would unfailingly extract cash or security from debtors—good, bad, or indifferent—this would be a very valuable article. In fact, if I had any such method, I doubt if I should be generous enough to disclose it here. But I can give you some of my theories about the technique of collection making. You must take them for what they seem to you to be worth. The most that I can say in support of them is that I have practiced these theories with some success.

Selling Self-Respect

WHEN a collector tackles a delinquent debtor—either by correspondence or in person—I believe he should proceed on the theory that he has something to sell to the debtor. If you have chanced to follow this series in COLLIER'S, you already know that I regard *buying* as the *selling* of dollars. I am equally convinced that *collecting*, when truly defined, is simply another form of *salesmanship*.

What is it a collector can sell to a delinquent debtor? Perhaps the answer depends to some extent on the kind of debtor. I don't mean by this the debtor's character or temperament. I have encountered a good many different debtors and I haven't the faintest conception of the characters of any of them—not even the worst deadbeat among them. When I say the answer depends on the kind of debtor, I mean that it depends on some such thing, for example, as this: Whether the debtor is execution and garnishment proof; or is a solvent farmer who has stood off the grocers and implement dealers through so many crop failures that he has become habitually slow in paying his debts; or is a person who imagines himself so rich and powerful that a tradesman's unpaid bill has no significance except that the debtor hasn't time to check the bill and sign a check. Those are a few of the several types with which a collector may have to deal.

Let us consider the execution and garnishment proof man. Bullet-proof and bombproof are phrases that are frequently applied to him. What can the collector sell to such a debtor? There are several things, but all of them are specialties, and the collector has to work up their sale as carefully as the specialty salesman develops a purchaser's interest in his goods. Some of the

Digitized by Google

things that can be sold to a bullet-proof debtor in exchange for his reluctant dollars are self-respect and vanity. I have encountered a good many debtors who were not commonly regarded as possessing much self-respect, but in most cases it proved that some semblance of self-respect could be aroused within them.

Personally, I am a great believer in giving a debtor a hearty handshake when I introduce myself to him. If a male and not one whose age or station would make such a familiarity in bad taste, I like to use the old-time exhorter's method and put my left hand on the debtor's right forearm when I shake hands with him. I have had that sort of thing done to me, and I positively loathe it, but with the average debtor it seems to be one of the most conciliatory and confidence-inspiring things a collector can do.

It is a mistake for a collector to hem and haw about his mission. When he is shaking hands is the time to declare it. If he doesn't, the handshaking isn't much good. When I was actively engaged in collection work, my favorite—and most successful—opening speech was this: "I'm Maxwell of the So and So Company. I've got that little account of yours with me. Guess you overlooked it—or something. Anyway, I guess you don't generally let an account get in the past-due file this way."

Diplomacy

THAT doesn't sound like much, but it represents some experience and a good deal of study on my part. First of all, it is man-to-man talk without any frills—and, by the way, *reckon* should replace *guess* when one gets south of the Ohio River. In the second place, this greeting contains no implication of reproach or lack of confidence, but does imply that you have a good opinion of the debtor which you confidently expect he will fully justify. In the third place, this kind of approach puts it up to the debtor to explain everything to you.

In my judgment it is important that a collector should encourage a debtor to talk and that the debtor should divulge his entire list of excuses—or grievances—before the collector commences to do his talking. A good collector is always genuinely sympathetic when a hard-luck story is told. He can be that without being any less resolute in his determination to get an immediate cash settlement. Likewise, if the debtor disclaims indebtedness, the collector should be capable of listening patiently and attentively to the debtor's attempted justification.

I remember that a good many years ago I was in a little town in southern Illinois, collecting for a harvester company. For several days I had been driving out among the farmers. Finally I cleaned up the county except for one dilapidated old note which had reposed for several years in the collection files of the local attorney. One rainy Saturday afternoon I asked for the note. The lawyer laughed at me. "Nobody can collect that note. I've tried it and three or four collectors before you have tried. As a matter of fact, the fellow doesn't owe it. You people took the binder away from him over in Indiana without due process of law, sold it for $12, and now you're trying to collect the balance. This fellow is a jackleg carpenter around town here. He just makes enough to live on, and he couldn't pay if he wanted to—which you can rest assured he don't want to do. Furthermore his wife is a virago and is liable to throw boiling water on you if you go down there."

While this was not an alluring collection, it was in the line of duty. I found the man in his hen house, where he was repairing the roosts. He was not anxious to talk about his indebtedness, but appeared quite ready to quit work. The silencing of his hammer strokes soon brought his wife upon the scene. She proved to be all the lawyer had said about her. She called my company and me all the names that a good woman could well include within the limits of her vocabulary. I am not certain that she did not exceed such limitations. With hat in hand I listened fearfully but, fortunately, with a most respectful manner. At the conclusion of her tirade, withdrawing a threatening and formidable fist from the near proximity of my nose, she remarked with a sigh of relief: "You are the only one who would listen to me until I got through. Now you know what I think of you. We've got $80 in the house. If you want that you can have it, just because you're the first one that's ever come around here and treated us like we was white folks." Thus, practically without saying a word, I made a comparatively good-sized collection on a tolerably worthless claim—so worthless, in fact, that the local lawyer disbelieved my assertion that I had collected $80 on it, and neglected to claim his commission.

About Lawsuits

SUPPOSE a debtor claims he doesn't owe the debt. After the collector has heard the debtor's statement, it is up to him to say in effect: "I know exactly how you feel about this. You want to be fair and square, and so do we. The trouble with both of us is that neither of us can look at this proposition the way a third party would, and the trouble with third parties is that when you get twelve of them in the jury box and another up on the judge's bench, it costs both sides a lot of money to find out what disinterested third parties are going to think after all of the facts and law are brought out by a gang of high-priced lawyers. Then, if the fellow who loses the suit is dissatisfied and wants the higher courts to pass on the case, there is a lot more expense, not counting the time and worry and bother. You can get plenty of good lawyers who will advise you that you can beat us in a suit. We can probably get just as many who will advise us that we can beat you. They will all be honest about it, too, but in the wind-up you and my house will have some good big bills to pay, no matter which way the case goes. If there wasn't anything involved but dollars and cents, my house would a good deal rather compromise with you than bring a suit. They know there's no money in lawsuits. So do you and so do I; but here's the

She called my company and me all the names that a good woman could

point: My house can't afford to lie down on a proposition like this. If they did, it would be talked about all over the country in no time, and, as you can readily appreciate, it is better for them to carry a case to the Supreme Court—even if they finally lose it—than for them to lie down. You know what I mean.

"Now, what do you say to this: Before either of us starts in to buy law, suppose you and I try to forget that we are interested in this case, and see if we can't look at it just as if we were a couple of jurymen. We won't argue with each other, but we'll take up each point and discuss it from both sides, and try to make up our minds how a jury or the Supreme Court would look at the case. What do you say?"

What to Do with Excuses

WHAT is it that the collector sells to the debtor in this parley? Partly self-respect, partly vanity, and partly something else. Self-respect, because no self-respecting debtor can preserve his dignity and decline a courteous and tactful challenge to put his cards on the table. Vanity, because you give him credit for being a fair-minded man and ascribe to him all of the knowledge of the courts and litigation that you yourself possess. To justify your opinion of him he is virtually obliged to join you in your proposed judicial consideration of the disputed debt. As to the other things you try to sell him, one is the conviction that he is in for a lawsuit if an amicable settlement cannot be effected.

Now let us come back to the man who alleges no defense, but has a great many excuses—the hard-luck man. You tell him you know he wants to pay and intends to pay. You didn't understand why he hadn't paid until he told you why. Now you know; his excuses are perfectly good; no apologies are necessary; you will explain it to the house so they will understand it as well as you do. Everything is all right up to date, but now a time has come when the house is asking for money and is depending on you to get it for them. What excuse can you offer for not collecting this account? None whatever. If you can't collect this account, you've got to admit that you're a mighty poor collector. "Listen, Mr. Debtor, you know there is no excuse I can give them for not collecting from you."

Making Debtors Feel Good

IT is probably unnecessary to continue this hypothetical conversation. It is enough if I have made clear what is meant when I express the opinion that a collector should try to sell self-respect and vanity to a debtor.

Farmers frequently present a great collection problem. Not because farmers don't pay their debts, but because they don't always pay as promptly as manufacturers and jobbers expect a country merchant to pay for the goods he has sold to the farmers. If I were a country merchant, had a lot of good but slow farmers on my books, and needed money to pay the jobbers and manufacturers with whom I dealt, I should state the case to my farmer customers very frankly. As a starter I think I should tell them or write them something like this: "The manufacturers and jobbers from whom I buy goods like to have me pay them promptly, and I generally manage to do so. You know that I handle first-class goods and that I try to keep my selling prices as low as possible. The values and the service that the merchants in this town can give to their customers depend to some extent on their standing with their jobbers and factories. Prompt pay is the best standing a merchant can have, and that is the standing I try to maintain.

"You are my customer. I value your patronage. I want to keep it, and I know that I can keep it as long as I give you the right goods and the right service at the right prices. I have written this letter because I am sending you a statement of your account. I want you to understand, however, that this is not a dunning letter. On the other hand, if you feel like helping me out, I can assure you that the money will come in handy."

I know a good many farmers and I know a good deal about them. They are pretty good fellows, and while they frequently seem a trifle indifferent in regard to their notes and accounts payable, I have never known them to refuse to help a neighbor when he needed help, nor have I ever known them to refuse to help a good merchant when he needed help—provided he asked for it in the right way.

If I had a lot of fashionable millionaire delinquents, as many city merchants do, I should handle the collection of their accounts a good deal as if they were farmers.

In both cases I should try to sell the sense of gratification that anyone, whether farmer or millionaire, is likely to feel in bestowing a favor and at the same time discharging a debt that in any case would have to be paid some time.

This is the fourth of Mr. Maxwell's series of articles. Others will follow

Four seconds—from paper to inkwell and back to paper. Here is fountain-pen-filling that counts for something, whether you're in a hurry or not.

"Crescent-Filling" is such a simple, such a *clean* operation! You simply dip your Conklin in any inkwell (as shown above), then press the "Crescent-Filler," and there you are, with your pen full of ink. Full *inside*, mind you, not smeared on the outside to soil your fingers.

Conklin's Self-Filling Fountain Pen
NON-LEAKABLE

is the *only* fountain pen with the "Crescent-Filler." That's the way to *know* a Conklin. Look for the "Crescent-Filler" when you buy a pen—it identifies the *original* self-filling fountain pen, used by over a million people. That proves you can't go wrong when you buy a Conklin.

Sold by Stationers, Druggists, Jewelers, on 30 days' trial. $2.50, $3.00, $3.50, $4.00, $5.00 and up. Write for catalog and two little books of pen wit—all free.

Folding Bath Tub

The Robinson Folding Bath Tub gives every home modern bathing facilities. This Tub weighs but 15 lbs. and when not in use can be rolled up and laid away; takes up about as much room as an ironing board or broom. Can be used in any room in the house; up-stairs or down-stairs. Our special outlet device makes the Tub self-emptying. Absolutely guaranteed for 10 years. Made of the famous "Steeline" material.

Agents: Big Money. We need Managers, Agents, and General Agents everywhere. Big profits quickly made. Smith, Toledo, Ohio, got 18 orders first week; Breeze, Heyburn, Idaho, made $45 first day. W. A. Bachman, Halstead, Kansas, says: "Took 8 orders yesterday; $40 profit". John Huyck, Kanawha, Iowa, says: "Sold 3 tubs in 3 hours; $15 profit". The majority of homes have no bath-rooms. No plumbing, no waterworks needed. Nothing else like it. Solves the bathing problem. **Experience Unnecessary.** We grant **Exclusive Territory.** If you want **Big Money,** write for territory today.

H. S. Robinson, Pres., The Robinson Cabinet Mfg. Co.
323 Factories Bldg., Toledo, Ohio
Canadian Address, Walkerville, Ont., Can.

"The price of our shoes to the consumer has not been reduced as a result of the large output obtained through advertising. This is due to the fact that during the last five years leather has advanced in cost until it has reached the highest point ever known. The leather cost in a pair of men's shoes has advanced about sixty cents per pair during this period. There has been a large increase in the cost of other material used in shoes, and labor is higher today than it was five years ago.

Let me say, however, that our increased production, resulting from advertising, has kept the price down to a lower figure than would have been the case with a production of only half of what we are now turning out. We are actually selling shoes for less than it costs some manufacturers to produce shoes of the same quality. Our large volume, amounting to over fifteen million pairs per year, could not have been obtained without advertising."

Thief of the World

(Continued from page 8)

looked down at his cloth-wrapped fingers to hide a sudden warmth of moisture in his eyes. "I'm awfully sorry, sir," he said in a low tone; "but my gang won't like seein' a girl's picture for Jo-Jo. And what'll his ma say?"

HIS eyes slowly lifted to the face of O'Gorman. But the objection had caused no anger in O'Gorman. There was only, on his face, a certain appraising look. He eyed the boy. Suddenly he shrugged himself out of the thoughtful mood.

"I say, boy," he said. "Run across the street and get me a package of cigarettes. You know—my kind."

Patch looked down at the row of cigarettes, then up at the editor.

"What are you waiting for?"

"The dime, sir."

"Oh, go on over. I'll pay you later. I'm busy. Jump!"

O'Gorman sat down in the swivel chair. His eyes went up to the questioning eyes of the reporter. He winked.

At the cigar stand opposite the long, low sheds of the newspaper office Patch paid ten cents for the package of brown-paper-rolled cigarettes. It was the dime he had got from the bums. He came back between the long, bare counters of the deserted business office into the news-room, with its low-hanging lights, and laid the package beside the row of cigarettes on the edge of the desk. Again he waited at the editor's elbow.

O'Gorman looked round sharply. He saw the boy and his face brightened. "Gee, that was quick!" he said. And he smiled.

He swiveled round in the chair. He placed one hand on the boy's frail shoulder. The boy's frail shoulder quivered with nervousness. O'Gorman patted the shoulder. There was reassurance in his light touch.

"I say, Patrick," he said quite pleasantly. "You know this Jo-Jo's mother well—what? How about that picture of Jo-Jo? We want to run it awful bad!" He smiled steadily into the boy's eyes. "You know how it is. We'll have to run a girl's picture for Jo-Jo. Now we don't like to do that. Nor do you want to see a girl for Jo-Jo. But I'll tell you what you can do, Patrick. You get that baby picture of Jo-Jo for us!"

"I don't know, sir—it's the only one she's got."

"Oh, she'll trust you with it, Patrick! You played with Jo-Jo. You're the leader of the gang!" Into the boy's troubled face he looked admiringly.

THE boy blinked in a sudden shyness of pride. Never so slightly he drew up meager shoulders. Never so slightly O'Gorman's hand patted his shoulder.

"We won't keep it on her, Patrick. You know that. We'll use it to-night and return it to-morrow. We won't steal it. We'll give it back. You tell her that. We'll give it back to her. What do you say?" His hand tightened on the frail shoulder. The boy gulped: "If you gives it back—if you gives it back, Mr. O'Gorman—maybe I kin get it."

Quite quickly O'Gorman got afoot. He had achieved his purpose. The hand on Patch's shoulder gave the boy a sudden shove that started him toward the library. "Put on your cap, boy!" said O'Gorman. "Go out after it. Return here before eleven with that kid's picture!"

The boy went on toward the library. Over his shoulder he cast one look of misery. He whispered:

"I hates to go in all her sorrer."

Silver Street, as Patch walked up the hill of it, was dark and quiet. Behind the curtain, Patch knew, was Jo-Jo all in white. Patch entered the little brick-paved court at the side of the house. There was no one there.

Patch tiptoed across the creaking floor. Cap in hand, he entered the little parlor reverently. There were many candles in the little parlor. There were flowers and the heavy odor of flowers. There was one mourner. In the wavering light of the candles she was bending over the glass of the tiny white coffin.

Patch stole like a thief into the room. He sank to his knees beside the coffin.

The ceiling overhead creaked as he prayed, and the paper sagged and shook in the candlelight; and Patch knew that that was his mother moving weightily about in his bedroom above.

The sounds disturbed the woman in her sorrow. She pulled the shawl about her shoulders as with a sudden feeling of cold. Beneath the shawl her slight shoulders shook with slow, deep sobs. But she was worn with grieving, and after a little the sobs choked away.

"Oh, Jo-Jo, my heart is sick!" she sighed wearily. "My heart is sick, and me all alone now, and himself over there in the barn! Oh, Jo-een, with the silk hair of you and the mouth open, and you so small and innocent of all harm!"

SLOWLY Patch got to his feet. He dared not lift his eyes to the despairing eyes of the mother.

She did not look at him. But she made way for him. He bent above the glass. He saw a round, white face, a small mouth slightly open over two white specks of teeth, and closed, wide-spaced eyes with the lashes and the yellow bangs on the forehead dusted with powder. At last he looked up at the mother. She nodded her head quite bravely and wiped with her apron the dampness off her cheeks.

Minister — *. . . or else forever hereafter hold his peace.*
Bridegroom — *Er — I will.*

"If anyone is after askin' you, Patchin, tell them he was laid out all white and nice, and him dead but a day gone," she said. "It's little enough I could do, so lone I be and himself no help at all over there in the barn. But you won't be sayin' as how himself was no help, and the dumb beasts knowin' as much about Jo-Jo dead as him? You'll say, if anyone be after askin' you, that 'twas himself sat in this room by the coffin, and it comin' on dawn. And the drop taken he had—for they all will be knowin' of that—was only so few sups of whisky as would keep a man with his heart up, and he not keenin' like a woman over his son so tiny and white. You'll be after sayin' all that, Patchin, for the heart of you that is sobbin' with pity."

There was a great appeal in her blue-shadowed eyes. Patch could not meet those eyes. He looked down at the cap in his hands. He gulped:

"I'm awful sorry, Mrs. Fannan—and I'll do what you says—and I'm awful sorry." Then he looked swiftly up at the mother. A terrible desperation held in his eyes. "It's not me, Mrs. Fannan—I wouldn't come in all this sorrer—but he sent me—Gorry sent me—and he owes me a dime—and he says to get his picture—and I don't wanter, but I'll lose my job—and kin I have his picture, Mrs. Fannan?"

SHE nodded slowly, as though she understood. But that she did not understand, Patch knew from the far-away look in her eyes.

"'Tis there on the mantel, Patchin, and it's all that is left me. My heart is sick and no one is left me—no one but himself in the barn, God pity him! and the horses stampin'. I'm alone, Patchin, and spent with the grief of me—and all that is left me is the picture of Jo-een so proud in his whity bonnet, and the hair underneath like the soft hay the horses over there with himself do be eatin'. That is all that is left me. But I'll be after lettin' you look upon it, Patchin man, until the tears do comes upon you."

Behind two dried pine cones and a large sea shell on the mantel was the picture of a baby in frilly white, shrunk in a photographer's deep chair. Almost

Digitized by Google

down on the wide-set frightened eyes was a white bonnet. And the mouth was open in a tiny o, as though he was aghast at the still figure in the coffin.

The mother moved over to the mantel. She lifted up the picture. But she did not look at it. She looked back over her shawl at Patch.

"It's in the warmth of the kitchen I'll be showin' it to you, Patchin, and the fire keepin' comp'ny. But in here it's so shaky with them candles that I do be feared to look at it lest the picture of him move and himself so still in the coffin."

SHE closed the door behind them and moved across the creaking floor of the kitchen to a chair before the open-lidded stove. Patch, the picture in his hands, went to the other side of the stove. He sat himself patiently down in the wood box. He did not look at the picture. He looked askance at the mother. She was smiling faintly into the fire.

"'Twas not a cry he made that day," she said, "but stare and look for the bird-een in the photygraph machine. 'It's a wonder of the world he is, Mrs. Fannan,' says the photy man. 'Not a cry like other babies, and such a sight of child I've never seen a prettier.' And I looked at the stoop of the man and thought what a power of bold, strappin' man Jo-Jo would be and him grown like his father!"

She peered into the gloom of the wood box. "But it's not the picture you do be lookin' at there in the dark, Patch Clancy, and it's believin' I am some bad thoughts is botherin' you!"

Patch shrunk into the box. "I'm awful sorry, Mrs. Fannan—and I'm prayin' the time you is talkin'—but Gorry says so—and he owes me for the cigarettes. I tole him the story—and the runnin' job was easylike to-night—and he says, 'Get his picture!'—and I'm awful sorry—but kin I have the picture for the paper? Kin I, Mrs. Fannan—kin I?"

"For the paper, boy, is it?"

SHE quivered to her feet. She snatched the picture from him. Her thin, white hands pressed it to her shrunken bosom. Above the open stove her mother eyes blazed at the boy shrinking there in the dark. "Nothin' is left me! Nothin' is left me but the poor picture of him—and Joe Fannan himself dead drunk in the barn, bad cess to the likes of him! It's robbin' me of all I have you'll be—and you so small there looks not a bad bone in the body of you! Ah, Patchin! Patchin! it's evil you would do me, and me all alone this night with the mourners gone!" The picture rose and fell on her bosom. She swayed slightly. "All I have is in that room—all I have! And with Jo-een gone and the turf is thumpin' on the box, what will a lone woman have to look at, and remember—and you takin' his picture from me?" There could come no answer from the wood box.

Her eyes died. She slumped back into the chair. Only rose and fell on her bosom that tightly held picture. She sighed deeply, as with utter helplessness.

"Ah, it's a power they have, the newspapers!" she said plaintively. "It's alone in my grief I would be, but they do be sendin' men here and beggin' it of me—and me only able to cry. One do be forcin' himself in and the body not here for him to speed with prayin', so I knew 'tis robbin' he'd be after. And now you, Patchin, that played with him when the days were long!"

After a little a woeful voice fluttered from the dark of the wood box:

"I'm awful sorry, Mrs. Fannan—and I'm thinkin' that would be Gorry himself forcin' himself in—and he what owes me money with bossy ways that drives me to hate him. And I didn't wanter come, no more as I wanted Jo-Jo to come yesterday—but I'll lose the runnin' job—and Gorry says: 'I'll use it to-night and return it to-morrer'—and Gorry says: 'You tell her that.' And if I get it back agin, maybe I kin have it? If I get it back agin, maybe I kin have it, huh, Mrs. Fannan?"

THE light of the dying embers shook up on the papered ceiling and moved great shadows about the room. The room was very still.

"If I get it back from Gorry for you, I kin have it—huh, Mrs. Fannan?"

The mother looked down at the picture. She shook her head wearily.

"Ah, Patchin, it's a puzzle of the world you be with the promises on your lips," she said at last. "But it's myself am in sorrow enough to save sorrow from you and you losin' your job by me. You be a run-the-hedge and a puzzle sure, but no promises the men made me any time—so I do be thinkin' it's the truth you say. No wish of mine would be after causin' you the loss of the runnin' job, and your mother scrimpin' and scrapin' above to make ends meet. So I'll give the picture to you, Patchin man—and the promise given."

"I'm awful sorry, Mrs. Fannan—and I promise, honest."

He came hesitantly out of the dark. And she looked up at him, a terrible pathos in her eyes. "All I have—and the bonnet fallen! All I have to look at in the lonely nights and the fire playin' strange smiles on his face! You would not be after keepin' that from me long, Patchin?"

AGAIN Patch waited at the editor's elbow. He shuffled nervously with his feet the litter of papers. There held in his eyes a grave question.

"Remember the promise I tole you of, Mr. O'Gorman, when I gives you that picture last night?"

O'Gorman turned round sharply.

"Promise, boy? What promise? What picture? What are you talking about?"

"I came in, sir, and I put the picture in your hands, and I says: 'She give it to me, sir—and Jo-Jo in the other room—and she cried and tole me to bring it back to her—and I promised—and you says: "Good! Fine!"' So it was all a promise—and I thought you'd remember about the promise if you didn't 'bout other things. And has you the picture of Jo-Jo, sir, if you don't mind—and maybe you is done with it and not needin' it no more?"

"I don't know anything about it!" O'Gorman said. "See the librarian, boy."

"But he says as how you got it—"

O'Gorman got afoot in the litter of papers. "I tell you I don't know anything about it!" he shouted.

He banged his fist on the desk. A lighted cigarette protruded from that fist. At the shock of fist meeting desk the lighted end was jarred off. It fell, smoking and unnoticed, into the litter of papers at his feet.

"Don't know anything about it! I'm busy. Get me my proofs. Get the last galley on the baby contest. I'll give you something to think about beside promises. Jump!"

PATCH "jumped." He ran out to the composing room in the adjoining shed. In his mind was a growing fear.

"He remembers the promise given," he said to himself. "He says baby contest—and Jo-Jo was a baby—so he remembers the promise. I wonder has they lost it!" Patch came back to the news editor's desk. About it were a number of men. Some of the men were coughing and wiping their eyes. All were flushed and excited. A dry smoke as from burnt paper was in the air. There was no longer about the desk a litter of papers. What had been the litter of papers had burst into a sudden fire. There remained only a blackened mass, pulpy and foul smelling. O'Gorman stood in the center of the group. He was explaining in a nervous, shaken way. "Must have dropped a cigarette. First thing I knew it was warm about my feet. I looked down and the whole shooting match was blazing. Shows how easily fires can start in these rat traps. I got riled at that blamed questioning boy, I remember, and must have thrown my cigarette, all lighted, into those papers."

Patch came hesitantly through the cluster of editors and readers and idle reporters. He laid the single proof on the news editor's desk. O'Gorman caught his fear-filled eye. "Here, boy," he whipped out maliciously, "get down on your knees and clear away that mess you started. See there's nothing else burning."

As Patch obeyed, he stood over the little fellow. Patch picked up from the blackened heap a charred piece of cardboard thicker than the mass of news and copy paper. "What's that, boy?"

"It looks sum'what like a picture, sir."

An anxious frown knuckled O'Gorman's forehead. "Picture? It isn't the picture of one of those baby contestants, is it? We can't afford to lose one of those. We'll be announcing the winners to-morrow night, and we don't know who'll win. And we gotta run the winners' pictures. Let me see that!"

IT was but the fragment of a picture. It was the slanting, ragged, lower half of a photograph. There was visible beneath the smut the white clothes of an infant. The face had been consumed

completely. The frown deepened on O'Gorman's forehead. Quickly he turned the picture over. There was a strip of paper affixed to the base of the back. The name of the baby in the photograph was typewritten on the strip. O'Gorman read the typewritten name on the strip. He laughed. In his laugh was immense relief. He addressed the diminished cluster:

"No chance of me leaving them baby advertisers round so loose! I got all stewed up over nothing. This? Why, this is only the picture of the kid that got killed in that collier fire!" He dropped to the blackened litter the poor fragment of picture from which Jo-Jo once had stared. Patch reached convulsively for it. The fragment in his hands, he looked up from his back-stooping toil. Warm in his eyes were angry tears.

His promise had been broken. There was only for him that had broken and outraged that promise one name of scorn. "You thief of the world!" Patch sobbed. "You owes me a dime—and now you's burned it—and she's all alone! Oh, you thief of the world!"

But O'Gorman did not hear him. He was wiping off his fingers the smut from Jo-Jo's picture.

IT was late that night. Patch entered the little brick-paved court. The charred fragment of the picture was in his hand.

Through the transom of the door under the stairs played a dim light. Within, in the shadowy kitchen, Mrs. Fannan was bending over the fire, he knew, and listening against his return. He had promised to bring back to her that night Jo-Jo's picture. He tiptoed toward the staircase—a furtive shadow. He looked down at the sad fragment of the picture.

"Maybe," he said, "maybe she'd know I meant to keep my promise if I gives her this!" He opened the inner door the faintest space and peeped in.

"You were in that fire yesterday, boy? What do you know about it?" The boy's hand nervously fingered the top of the desk. He wet his lips

She was sitting by the stove. The lid was removed and the red ember light played vaguely on her face. Her eyes were upon the fire. He closed the door softly. Her eyes frightened him.

He lingered, his hand on the knob. He wanted to tell her; he dared not tell her. Piteously penitent, he put his face to the door between them. In so low a voice she never could have heard, he whispered: "Gorry's burned it—and I promised—but I can't give you this. I'm awful sorry." Through all the next afternoon he sat in his sunny bedroom. He did not go down to his gang. He was too fearful of Mrs. Fannan's eyes. Under his vest, hot against his side, was the fragment of the picture. In the hush of twilight, after five o'clock, he slunk down the rickety staircase to return to the running job. He heard the screen door below squeaking open. So she had been watching for him all that day.

She stepped out into the court, the green shawl about her slight shoulders, a clean blue apron over her skirt.

"I'm awful sorry, Mrs. Fannan," he trembled from the staircase, "but—but I thinks they's lost it!"

THE white arm of the woman clutched the shawl at her throat.

"Lost it? Lost it, you tell me? Is it lost it on me—Jo-Jo's picture!"

"I'm awful sorry, Mrs. Fannan—"

She turned on him. Her eyes were like glass. "Awful sorry you be! You with the fine promises the time I was sick with sorrow! Awful sorry! Oh, you thief of the world! You thief of the world that 'ud rob a lone woman! Yet you be gettin' down out of here the way you come, you thief of the world!" Patch huddled down out of sight behind the baluster trade. The woman moved slowly away.

"And now I'll be havin' to go after it myself, that has no fine words to beg for me and no man to fight," she said wearily to herself. "Ah, 'tis a thief of the world that 'ud rob a lone woman—and it in some dark host corner smilin'!"

Under the boy's vest, against his side, the fragment of the picture burned like a hot coal.

It was a busy night. Not that any big story had "broken." It was the night that marked the close of the "Golden Rain" baby contest. On that night were to be published the names and pictures of the baby winners of the lot, the two automobiles, the furniture, and the diamond ring.

IT was a hard night for Patch. He ran back and forth, back and forth, back and forth. "Here, boy!" shouted O'Gorman. "Get the picture for the first page! The topnoteher that won the lot! Jump!" Patch came out of the doorway of the library. The picture of the baby that had won the capital prize was in his hand. Coming down the newsroom—as he once had seen her coming along the wharf—was Jo-Jo's mother!

Patch crouched back into the dark of the doorway. His heart jumped against his ribs. Like terrible hammer strokes, it seemed to thump the fragment of picture against his ribs.

She stopped at O'Gorman's desk—a frail figure pitifully shrunken in awe into herself. O'Gorman looked up, an inquiring light in his eyes. The woman spoke hurriedly.

"Don't know anything about it, ma'm," Patch heard O'Gorman say.

The woman trembled on. Reddening, O'Gorman rose to his feet.

"I tell you we don't know anything about it!" he said in louder tones. "If he promised that, he'll bring it back himself. I can't be bothered. If you had given it to me when I asked for it, I might. Not now. I'm busy, madam!"

He grabbed up a cigarette and turned his back on the woman. He started away, puffing viciously.

The woman followed after him, a mere tremble of shawl and apron.

O'Gorman turned on her, shouting brutally: "You get out of here! We don't know a thing about your blamed picture! We don't want you in here! If you want the picture, sue for it!"

The woman shrunk from him. A lean whitish arm clutched convulsively the shawl at her throat. She turned from the low-hanging lights of the newsroom.

There, in the dark of the doorway, Patch struggled in his soul. He looked down through hot tears at the picture bent in his clenched, bandaged hands. He crouched back farther into the doorway. He looked hard at that picture.

He drew out from under his vest the fragment of picture that had been Jo-Jo's. That he dropped into the dark of the doorway. His eyes never left the picture of the prize winner in his hands. His hands felt across the back of the prize-winner's picture. He tore off the strip of paper. His eyes read the strip: "Phyllis Bevans."

He shoved the picture up under his vest. Ahead he saw Jo-Jo's mother moving silently into the long shadows of the deserted business office. He sidled out of the doorway and followed after her.

Slowly Patch came back into the newsroom. O'Gorman was waiting for Patch to come with the picture of the baby prize winner, Phyllis Bevans. Something caused him to turn round. He saw Patch.

"You!" he said. "What you doing out here? The Bevans baby's picture—where is it, boy? What'd you do with it?"

He looked at the empty hands of the boy. From the empty hands he looked to the boy's eyes. In those eyes, at once so bright and so pleading, he read the guilt of the boy! "You little thief! You gave it to that woman! They looked just alike—you gave it to her! Don't lie! You gave it to her!"

The boy was abject in his guilt. He

Digitized by Google

sniffled nervously like a cowardly little dog. "I couldn't help it, Mr. O'Gorman. The bonnet was over the eyes jest like Jo-Jo's—and I says as how you fixed up Jo-Jo in them whity laces so he'd look pretty in the paper—and she looked at it under the gas lamp on the wharf. 'It's Jo-een!' she says—"

O'Gorman reached out. He got the boy by the shoulder. By the shoulder, roughly, he shoved him toward the business office. "Go after it! Get that picture back! Get that picture back, you thief—or you're fired!"

But the boy held back, pleading:

"Will the dime pay for it? Will the dime pay for it, Mr. O'Gorman? Will the dime what you owes me for cigarettes pay for it?"

O'Gorman's hand dropped from the shoulder. Like a cowardly little dog, Patch crouched away in fear. But no outburst followed from O'Gorman.

SUDDENLY reflective, O'Gorman fingered his close-shaven chin. He looked at the sniffling, nervous boy. Into his eyes, as he looked, crept that certain light of appraisal.

Then he shrugged himself out of the thoughtful mood. He felt in a vest pocket. Very slowly he fished out a dime.

"I never meant to keep that on you, Patrick." He pressed the dime into the boy's bandaged hand. And his voice was very pleasant:

"I was going to fire you, Patrick. But I won't fire you. I see now why you did it. You just had to—eh, Patrick?"

Tears showed in the eyes of the boy. He had despaired of that dime. Never had he expected from O'Gorman such sympathy. He melted. He cried miserably.

O'Gorman put a hand on the boy's quivering shoulder. He patted that shoulder. "Don't cry about it, Patrick," he said with studied friendliness. "You've put us in a deuce of a hole. If you had only waited till to-morrow, now—but don't cry about it."

He smiled into the boy's face. Into the boy's face he smiled until at last Patch smiled back—a moist, little smile.

At that smile of the boy's, O'Gorman said: "Couldn't you get it back from her, Patrick, just for to-night? We'll return it to her sure this time. Just like I gave you back that dime." Wiping his eyes, but still sniffling, the boy went slowly and submissively into the night.

ONCE more Patch waited at the editor's elbow. O'Gorman looked round.

"Gee, that was quick, Patrick!" he said. The boy laid the dime on the edge of the desk.

"I'm awful sorry, Mr. O'Gorman—but she was still lookin' at it on the wharf under the gas lamp. 'It's Jo-een laughin' up at me in the light,' she says. 'God bless you, Patch!' And sir—she smiled. And I ain't no thief of the world, Mr. O'Gorman. I couldn't take that back from her—her smile."

O'Gorman slumped back in the chair. He looked down at the dime for a long time. "I've been thinking, Patrick—"

His face was very gray. He reached out. Very slowly he pocketed the dime.

"Well, we're even now," he began again. "I'll keep the dime. You keep the running job. Let the woman keep the picture. It's not Jo-Jo's. It's a baby girl's. But she'll never know that. And she can look at it in the nights when she's all alone." He lifted his gray face.

"Patrick," he said quietly, "couldn't you jerk up that man in the stable?"

Is Roger Sullivan a Boss?

(Continued from page 6)

pany appeared to the general view as just such a deal. Croakings of scandal were heard from the moment of the introduction of the bill, and they still echo, although it is twenty years since. Sullivan was early known as one of the parties at interest, and as the company's affairs worried along through the municipality for a dozen or fifteen years, appeared as its executive head.

That Ogden Gas Deal

IF the company was projected as a hold-up scheme, it did not work out that way in the beginning, for the old company did not buy it and it went to manufacturing gas upon its own account. If, on the other hand, it was a legitimate competitive enterprise, the competitive feature failed of its purpose, for it finally did pass into the hands of the older company, and that purchase price is a part of the burden upon the backs of Chicago citizens to-day. The sum realized ultimately by its promoters is admitted to be three millions, and alleged to be as high as nine. In either event, and whether three or nine millions, the moral issue, however, remains the same.

Sullivan, however, denies that there was a moral issue. He stoutly contends that the enterprise was legitimately competitive, and points to the fact that it entered upon the manufacture of gas, that a price war resulted and the cost of such fuel to the consumer was greatly reduced; and that, so far as selling out is concerned, his own holdings have just recently passed over, and that long after the city had gained the right to regulate the price of gas, and hence could have no further interest in maintaining competition.

Nor does Roger admit that either the transaction as a whole, around which have clustered the more important activities of his business and political life, nor his personal part in it, was in any way reprehensible.

A Corporation Man, But—

WITH him it was just a piece of bread-and-butter politics. Once the thing was launched he had to stay in politics, day and night for twenty years, to protect it from assault, and pave the way for its successful development and conclusion. To this end he had to have friends in the State Legislature and he had to have friends in the City Council, and he had them. He had to have a city organization, and a down-State organization, and he had them. He had to make trades and deals and alliances, and he made them. He aimed always to keep his political agreements. When he had to have help he never questioned the source from which it came. When obligations had to be repaid he found a way to discharge them. Both the Council and the State Legislature at times in these twenty years have been corrupt. I am not saying that Sullivan was corrupt. It may not have been necessary. I do not know whether or not he would have yielded if it had been necessary. He might have preferred loss to corruption, but it is not on record that he ever did lose voluntarily, or that he ever marched his forces off the field because some of his allies might be suspected of a taint.

During the long battle of the citizens of Chicago for control of their public utility corporations the Sullivan clan has usually been found going into action on the corporation side.

At the same time Walter L. Fisher, Charles E. Merriam, and other representatives of advancing civic standards say they sometimes found Sullivan far in advance of other corporation representatives in his appreciation of changing public sentiment.

Although he voted his cohorts against the bill to give Chicago the right to regulate the price of gas, he confessed to the proponents of the bill, and declared to his fellow opponents, that regulation was bound to come.

One Ear to the Ground

WHEN the bill became a law Sullivan stood with the People's Gas Company in its fight for the most favorable terms of regulation, yet when a deadlock developed he appeared as an intermediary between the representatives of the city and the People's Gas Company.

This is cited both to do the man justice and to show the extent of his political prescience.

Sullivan as a political leader has been practical—a man without ideals—who played the game as he found it. He is a sort of political barometer. As the popular standard has risen his standards have risen.

Here are a few of the barometer readings in Roger's case: At certain times in his career in Illinois he has cast the weight of his influence for the civil service, direct primaries, and the commission form of government, merely because he had sensed the advance in the popular mind. This is the most hopeful thing you can say about Sullivan to-day, apart from his brains and likableness—he is politically wise. He reads the drift—and follows it. Like Murphy, "If uplift's the word, he's for it." And yet Sullivan's record is long

Valparaiso University

(ACCREDITED)

VALPARAISO, INDIANA

FOUNDED 1873

One of the Largest Institutions of Learning in the United States

Thorough Instruction at the Lowest Expense

Group of Valparaiso University Buildings, Including the Departments of Medicine and Dentistry Located in Chicago.

THIS INSTITUTION was founded with the idea of giving to every person, whether rich or poor, a chance to obtain a thorough practical education at an expense within his reach. That it is performing this mission is indicated by the numbers who avail themselves of the advantages offered.

Valparaiso University was founded with 3 departments, 4 instructors, and an annual enrollment of 210 different students. Now there are 29 departments, 209 instructors and an annual enrollment of more than 5000 different students.

The reason for this growth is in the fact that this University constantly increases its facilities, strengthens its courses of study and offers additional advantages without making the expense to the student any greater. The University is well equipped with buildings, libraries and laboratories for giving instruction in the following

Departments Preparatory, High School, Education, Kindergarten, Primary Methods, Domestic Science, Agriculture, Scientific, Higher English, German, French, Italian, Spanish, Sciences, Classic, Engineering, Architecture, Manual Training, Expression and Public Speaking, Music, Fine Art, Law, Pharmacy, Medicine, Dentistry, Commerce, Phonography and Typewriting, Penmanship, and Review.

Dentistry The Department of Dentistry of the University is the well-known Chicago College of Dental Surgery, one of the oldest and best equipped dental colleges in the country. Dr. Truman W. Brophy, Dean, Chicago, Illinois.

Medicine Valparaiso University owns its college and hospital buildings in both Valparaiso and Chicago. The Chicago buildings are just across the street from the Cook County Hospital, in one of the greatest Medical centers in the world. Two years of the work may be done in Valparaiso, thus greatly reducing the expenses, or the entire four years may be done in Chicago.

Engineering The Department of Engineering provides such training in the class room, laboratory and field as to fit the student for the exacting duties of the modern Civil Engineer.

Law The Department of Law meets the demands of those who desire efficient training for this profession.

Music A thoroughly equipped department housed in a new building. An opportunity is offered the student to combine such work in the other departments of the University as may be desired with work in the Conservatory, at no extra expense.

Domestic Science and Agriculture The new Domestic Science and Agriculture Building will now enable the University to accommodate all who wish work in these departments.

Students enter the Departments of Law, Medicine and Dentistry at the beginning of the year only. All other departments at any time.

While the expense in all the Departments is exceedingly low it has not been made at the sacrifice of a high grade of instruction, but by applying business principles to

"The Cost of Living" so that the most satisfactory accommodations for board and room may be had at from $1.80 to $3.00 per week. Tuition $20.00 per quarter of twelve weeks, or $65.00, if paid in advance, for a year of forty-eight weeks. If the entire tuition is paid in advance for the year it includes all the departments, excepting Medical, Dental and private lessons in Music.

The total expense of board, tuition and furnished room for the regular school year (thirty-six weeks), need not exceed $119.80; or for forty-eight weeks $151.40.

Military Educational Institutions

NEW MEXICO
Military Institute

Nine months a year of outdoors at an altitude of 3,700 feet, in the garden spot of the southwest, trained for college or business under a military system that makes for manliness and self-reliance—that is what a course at the New Mexico Military Institute would mean for your boy. School owned and supported by State of New Mexico. 40-acre campus, 11 buildings. Our equipment, training and record win year after year ranking by U. S. Government as a "distinguished institution." Send for catalog.

Col. JAMES W. WILLSON, Supt.
Box K Roswell, N. M.

OLDEST AND LARGEST
MILITARY SCHOOL
West of the Mississippi
Rated by United States government as one of the ten "honor schools"
WENTWORTH
MILITARY ACADEMY
hits the mark in a Boy's Education. Reaches and develops, mentally, morally and physically, where ordinary day schools do not interest. Prepares for Colleges, Universities, Government Academies, or Business. Men teachers from Universities. Individual instruction. All athletics, system reaching every student. Swimming pool, new gymnasium. Situated in historic Lexington, on Santa Fe trail, 42 miles from Kansas City. Easy of access from all points. For catalog and further information address
The Secretary, 1824 Washington Ave. LEXINGTON, MO.

Culver Stands Alone

There are several fine military schools in the United States, but only one Culver. Culver is not old, but already its system of education is the last word in the technique of preparing boys capable of doing big things tomorrow. It is the model of many a lesser institution. If you are interested to know why, send for illustrated catalogue. Address

The Dean's Office
CULVER MILITARY ACADEMY
Culver, Indiana
(On Lake Maxinkuckee)

NORTHWESTERN

MILITARY AND NAVAL ACADEMY
Lake Geneva, Wis., and Highland Park, Illinois
A select school with a high standard of Academic work, supplemented by the physical, moral and social benefits of a Military and Naval life. Limited enrollment; references required. For catalogue which will be of interest to thoughtful and discriminating parents, address Col. R. P. DAVIDSON, Supt., Lake Geneva, Wis.

Western Military Academy

Prepares boys for college or business. Ten modern buildings in beautiful park. New fireproof barracks and swimming pool. Unsurpassed equipment. 36th year begins September 16th.
Room assignments for next September are now being made. Booklet, "Reasons Why," with other information will be supplied on request.
Col. A. M. Jackson, A. M., Supt., Box 25, Alton, Ill.

New Jersey, Bordentown-on-the-Delaware.
Bordentown Military Institute Thorough preparation for college or business. Efficient faculty, comfortable buildings, healthful location, careful supervision of athletics, military discipline that develops character, and 29 years of experience in training boys. For catalogue write Rev. T. H. LANDON, A. M., D. D., President. Col. T. D. LANDON, Commandant.

Co-Educational Institutions

Peirce School recognizes the individual requirements of each student. You get just what you need. There is no useless repetition of subjects already learned. Our work is thorough and prepares you to fill first-class positions. 50th Year Book sent upon request. Address
The Registrar, Record Building, Phila., Pa.

American College of Physical Education
Includes schools for Physical Directors, Playground Workers and Teachers of Swedish. (Co-Educational) Fall term opens September 16. Faculty of experts. Unequalled record of successful graduates. Magnificent $250,000 building, fully equipped. Address Secretary, Box 101, 4200 S. Grand Blvd., Chicago, Illinois.

DEFIANCE COLLEGE DeFiance, O. High grade Co-Educational. Ancient student body strong faculty. New building thoroughly equipped. Collegiate, Domestic Science, Academic, Teachers', Commercial, Music, Art, Elocution, and Physical Training Departments. All the best environment and tradition. Catalogue. P. W. McREYNOLDS, Pres't.

enough in this behalf that we may give him credit for some real sincerity. In fact, there is not much of seeming about Roger. His vices have been about as public as his virtues—possibly a trifle more so.

Sullivan's espousal of the cause of Woodrow Wilson is cited as another case in point. Of course, it may be pointed out that there was no necessary virtue in this—that when his political enemies, Harrison and Hearst, espoused the cause of Clark, there was nothing for Roger to do but espouse the cause of Wilson.

On the other hand, it was well known that when Sullivan returned from the meeting of the National Democratic Committee at Washington in December, 1911, after having heard the Bryans and the Clarks and the Underwoods talk, he made the statement to some of his friends that "this fellow Wilson put it all over 'em."

Still he did not come out for Wilson. He merely told Wilson one day when he was in Chicago: "When it is all over, I am satisfied that you will be satisfied."

I see no deep reason, therefore, for doubting that his support of Wilson was not as sincere as it was effective.

His Beginnings, and Now

THESE things are all pointed to by the friends of Sullivan to-day as an evidence of the progressive tendency of his life. They admit that he was schooled in low politics; that he bargained, traded, log-rolled, and blinked his eyes exactly as any man must do who would be a leader among the only kind of people Sullivan could lead; but they say that his horizon has widened; that his ethical standards have risen. They claim his career should be scanned with a sympathetic and an appreciative eye. Such offenses as are justly chargeable to Sullivan, they declare, lie far in the past, and that it is unjust, for instance, to measure the Ogden Gas deal of twenty years ago by the standards everywhere accepted to-day, nor to charge the ignorant and unethical operations of an obscure ward politician of the nineties against the aspirations of the intelligent and widely observant Roger Sullivan of the present.

"But," asks some one, "if Roger is the friend of President Wilson, why is he the foe of Secretary Bryan?"

Ah! By that keen question is pegged an interesting tale that tells almost as much about our versatile Secretary of State as about the resourceful lion of Chicago's Democratic jungles.

The beginning of the trouble was back, far back, for Mr. Bryan, it appears, has never been able to think well of Mr. Sullivan since he bolted free silver in 1896 and campaigned behind Palmer and Buckner.

The fires of Bryan's animosity having smoldered long, broke out in 1904 in a determination to erase Roger from the national Democratic map, something to which Roger was totally disinclined. The first skirmish was at the notorious "train-robber" convention at Springfield in that year. A Democratic State convention in Illinois is a complicated affair. There are county conventions, legislative conventions, and Congressional conventions, and with each convention a caucus or caucuses; there are committees—county, district, and State committees—wheels within wheels, caucuses within caucuses, conventions within conventions, side shows and open-air acts, all fusing in the great hippodrome of the main convocation with its fifteen hundred delegates.

Outplaying Mr. Bryan

THREE particular elements had desires of this convention. First might be mentioned Mr. Hearst. This was one of the times when Mr. Hearst aspired to be the Presidential nominee of the Democratic party. To secure the support of the Illinois delegation which this convention would name, Mr. Hearst's representative had expended much red ink and a sum reported at $350,000. Second, there was Mr. Carter Harrison of Chicago—desiring—well, I do not know exactly what—but desiring. Besides, he had a feud with Mr. Sullivan. Third, there was John P. Hopkins, of whom we shall hear later—with Sullivan as his major general in active command. Hopkins and Sullivan were generally at feud with Harrison, they were usually in a war to the knife with Hearst, and always seeking political power.

In the upshot Sullivan controlled this Springfield convention absolutely. How he controlled it has ever since been an issue between himself and Mr. Bryan, but there can be no doubt the convention itself rested in the hollow of the hand of Roger. It did what he permitted it to do. No one got consideration except by his favor. Contests were decided, nominations were made, delegates were chosen, resolutions were passed—all at the nod of Sullivan.

More Political Magic

SULLIVAN was elected to the Illinois place upon the National Democratic Committee, and a Sullivan delegation was elected to the St. Louis National Convention—a delegation which Roger, in the magnanimous mood that often comes to him in victory, permitted to be instructed for his enemy—Hearst.

But Mr. Bryan did not welcome this Illinois delegation to St. Louis with beaming smiles. Instead he fought it in the subcommittee on credentials, in the main committee, and upon the floor of the convention, where, to the full limit of two hours and the whole length of his vocabulary, Mr. Bryan denounced the Illinois convention as controlled by train robbers, of whom he indexed Roger Sullivan as the bandit chief. But denunciation failed to shake Roger loose. He clung to his place as National Committeeman, and to his delegates, which he voted with characteristic Sullivan stubbornness from the first ballot to the one upon which Parker was nominated.

But Mr. Bryan is a man somewhat set in his ideas. He had conceived of

Roger Sullivan and his daughter, Mrs. Leo Cummings, on her wedding day

Roger as a blot upon the fair escutcheon of Democracy and one which must be wiped out. The next chance to expunge Roger would be at the Illinois Democratic Convention of 1906, which was held at Peoria and sometimes known in history as the "doormat" convention—"doormat" because a correspondent of the "Record-Herald" wired his paper that the Peorians, after looking the delegates over, took their doormats in at nights.

But Roger was again in absolute control. He plumed his ascendancy by a bit of play in which sardonic humor and good politics were deftly mingled through the passage of a beautiful indorsement of Mr. Bryan as the man who "towers above all Americans as fittest to lead in the fight to rescue our Government from the hands of special interests and restore it to the people."

"Practical" Oratory

THE next order of business was on the motion to expunge Roger. Each side sent three gladiators to the oratorical fray, but the delegation demanded to hear Sullivan himself. The day was warm. Roger was in his shirt sleeves, and public speech was not his forte, but he climbed upon the platform and burst out in a piece of oratory that made the rafters tingle. It was like himself—rough and practical—straight from the shoulder.

Sullivan is of only medium height, but heavy—weighing 210 pounds, and yet without being paunchy. He is merely stocky; very stocky. There is a kind of primal courage about the man, which is made more engaging by an appearance of candor. When aroused he has abundant magnetism, he radiates energy, his cunning gray eyes dart light, and there is something leonine in his passion. The expression of his mouth is good-humored, but there is, too, a nasty curl to the upper lip of Sullivan when he is in anger, and his white, regular teeth clamp like the bite of steel shears. The total impression which the man gives off is that of resolute strength, combined with shrewd intelligence.

What the Speech Did

ROGER'S speech itself was cunningly phrased. He made the issue appear a personal one between himself and Mr. Bryan—and some of Mr. Bryan's lieutenants. There he left the matter. Sullivan had spoken ten minutes. His speech made a sharp impression. It cemented the victory his political skill had already guaranteed. By a vote of 1,038 to 570 the convention refused to expunge Roger. Two days before he had said that on roll call he would receive 1,035 votes—which in itself indicates that Sullivan as a politician deceives himself but slightly as to how the votes will hatch. Mr. Sullivan and Mr. Bryan are still at war.

But this, like other events described, is well in the past of Sullivan.

Casting about for some test of the up-to-the-minute political standards of Roger Sullivan, I came upon the situation in the Sanitary District of Chicago, which has to do with the maintenance and operation of the drainage canal. This district is managed by a board of nine trustees, who are elected by the people—a board which is just now in possession of the Sullivan Democrats. It has upward of five hundred names on its pay rolls, and its operations involve an expenditure of as high as two million dollars a year. There is no space here to go into the methods of the board, but a mere casual glance revealed things that lent no encouragement to the theory that Mr. Sullivan's standards have greatly advanced so far as goes the character of his political associates or the things which such associates may do.

No sketch of Sullivan would be complete that did not include a reference to his family life. He loves his home and spends much time in it. Mrs. Sullivan is a woman of very impressive appearance, tall, with strong, regular features, and large dark eyes, contrasting with a high forehead and masses of nearly white hair. She takes considerable interest in her husband's political career, and is herself a director in both the Democratic Woman's League and the Civil Service Reform Club.

There is a son, Bertius, a fine, sober-minded boy who has just been graduated from Yale and entered the practice of law in Chicago. There are three daughters, all married. These, with their husbands, who are fine-appearing men, and the grandchildren, when gathered about the Sullivan dining table, which is of baronial size, make a most attractive family party.

But now we draw toward the end.

In some points the human appeal of the man may have influenced me to do him more than justice; in some others abhorrence of low political practice may have caused me to do him less.

As He Sees Himself

SULLIVAN looks back over his career and is satisfied with it. He is sensitive over being called a boss, and he is a bit surprised at the hail of criticism that continues to descend upon him in the midst of what he deems a well-earned success. He believes that at all times he has correctly interpreted the will, the state of mind, and the ethical standards of the majority of his party in Illinois.

Indeed, it is more to demonstrate that he is a chosen leader and not a self-constituted boss than to gratify any ambition to be a Senator that Roger Sullivan has announced his candidacy at a time when, under the primary system, first, the voters of his party and, finally, of the State, may place the stamp of their approval or disapproval upon his past record and his present aspirations.

Lincoln Enters Hostile Territory

(Continued from page 21)

"The change from the farm to the village life was not so great as I had anticipated." Lincoln says. "Father not only carried with him several cows and a span of horses, but the house which he rented on the outskirts of the village possessed (unfortunately) a large garden, and not only were we forced to continue our milking and currying, we were set to work at once planting potatoes and other vegetables, and as the soil had been neglected for several years, the weeds sprang up like dragon's teeth. Work, it seemed, was not to be escaped even in the town."

THOUGH resenting this flavor of the farm and somewhat disappointed in the rented home, Lincoln admits that he was vastly pleased with his new surroundings. "The fact that we were within a few minutes' walk of Main Street, and could go to the store at any moment, was an ever-recurring delight.

Osage, only a village then, was situated on the prairie, just at the margin of a belt of hardwood timber through which the Cedar River ran, and though quite commonplace to passing strangers, was deeply significant to these farmer boys. "It was, in truth, the lair of an alien tribe, hostile and pitiless. Up to this time," Lincoln explains, "we had hated and feared as well as envied all town boys (they were our natural enemies), and now, suddenly, we were thrown among them and put entirely upon our own defenses. Of all this tribe we knew but one, a certain Mitchell Morgan, son of an old Scotch carpenter, and even he insisted on trying us out.

"Owen escaped with only a few bruises, but I was obliged to resort to craft in mastering Loring Hitchcock, who was strong as a moose and truculent as a weasel. In friendly tests of strength I succeeded in convincing him that I might be dangerous in battle. Moreover Mitchell was disposed to side with me in desperate crises, and so at last I won a sort of armed and watchful peace."

During April and May Lincoln worked in the little garden, but as the wheat harvest came on Duncan called him to help in the warehouse, and this turned out to be a most informing and pleasant experience.

The street, as it was called, was merely a wagon road which passed in front of a row of rude elevators of various shapes and sizes whose backs chuted grain into cars upon the switch. On this road the buyers met the farmers as they came to market, alighting upon the loads like hawks and bidding against one another for the grain.

"Several of these merchants were of a type I had never before known, humorous, shrewd, remorseless in warfare, yet good friends beneath it all. At certain hours of the day they had very little to do but banter or debate, and, as they were ready disputants, I learned much from their sessions. Among these men my father mingled as an intellectual equal, notwithstanding the fact that he was a granger."

LINCOLN'S work in the elevator consisted in receiving the grain and keeping the elevator going. He weighed the farmers' sacks, made out checks for the payment, and kept the books—in all ways taking a man's place. It was necessary also to watch the fanning mill in the high cupola in order that the sieves should not clog, and the three flights of stairs leading to the fanning mill had to be mounted many times each day. "I always ran up these steps when the mill required attention, but ignored them in coming down. One day as I swung from beam to beam and dropped from footway to footway like a monkey from a tall tree my mother, who happened to see me, exclaimed in terror and begged me not to do that again. I assured her that there was not the slightest danger—and this was true, for I was both sure-footed and sure-handed in those days.

"I enjoyed this work; indeed, it was a golden summer for us all. Mother found village life leisurely and father seemed to enjoy his companionship with the merchants and bankers of the town, while Owen, as first assistant in a candy store, was as busy as a bee in a sugar bowl. A part of every holiday was spent in fishing or swimming or in roaming the woods with Mitchell and George, but on Sundays we all dressed in our best and went to church as to a solemn function, fully alive to the social grandeur of Banker B and Congressman D—but still more alive to the wonderful toilets and stately beauty of their daughters.

"Theoretically there were no social distinctions in Osage, but in fact we stood in awe of every veranda and family carriage. Our visitors were never from the pretentious homes in the midst of leafy lawns but from the farm—but mother was apparently content with her callers from Dry Run and Burr Oak. I never knew her to utter an envious or bitter word."

Uncle Zeke: "Guess now with the help of these yer balloons, they'll perk up good and proper when the drouth comes"

SMALL as Osage was it had much to stir a plowboy's ambitions. The well-dressed people, the lovely girls, the music, and the subdued lights of the churches appealed to Lincoln with such power that he usually went both morning and evening—not from any real devotion—but to watch the Congressman's daughters go up the aisle. Outwardly a stocky, ungraceful youth, Lincoln was, inwardly, a squire of romance, a young knight longing for a steed, a shield, and a ladylove to fight for. "No one could be more essentially romantic than I was at this time—but I was careful to conceal it—even from Burton—I may say especially from Burton."

Contact with several young men who had been students at the little seminary which stood in the midst of the village developed new ambitions in our farmer boy. He resolved to enter for the autumn term, and to that end finally gained from his father a leave of absence and hired himself out to bind grain on the Marsh harvester. Although not yet sixteen years of age, he kept his place beside his partner day after day, taking care of his half of eight and ten acres of grain each day. With fingers raw and bleeding with the briers, with joints swollen and aching, he persisted, lured by the promise of better things in September.

IN this way, and as stacker, he earned enough money to buy himself a new suit, a resplendent pair of calfskin boots, and several necessary books, all in preparation for the schooling which was soon to begin. "Up to this time," he explains, "I had never owned an overcoat, and my shirts were still made at home, but I now purchased two boxes of paper collars and a 'store necktie,' and my satisfaction in these garments made my mother smile with pleasure and understanding humor.

"And yet," he continues, "in spite of my diagonal suit and purple tie, I felt very ignorant and very awkward as I left our house on that first day and started for the chapel. To me the tall brick building, standing bleakly in the center of the campus, was as imposing as I imagine the Harper Memorial Library must be to the present-day youngster entering the University of Chicago. To mount the steps to the door meant running the gauntlet of a dozen young men ready of speech, citified of dress—urban aristocrats fairly entitled to laugh at a hired hand like myself.

"I would have balked completely, had not David Pointer, a neighbor's son, volunteered to lead the way. "Gratefully I accepted his offer, and so passed for the first time into the lofty room which came to mean so much to me in after years. It was swarming with a hundred merry young people and the high ceiling, the Corinthian columns on the side walls, the big pipe organ, the stately professors on the platform, the self-confident choir—all these sights and sounds and faces reduced me to a condition of abject humility. What right had I to all this splendor? Sliding hurriedly into a seat, I cowered behind Walter Blake, glad of the obscurity which my short stature guaranteed to me."

The Cedar Valley Seminary at this time was very primitive, hardly more than a high school, and yet it served its purpose. It gave Lincoln and his like the opportunity of meeting those who were older, finer, and more learned than they, and every day was like turning a fresh and delightful page in a book of verse, not only because it brought new friends, new experiences, but because it symbolized the world, the field of conquest for these sons of the border.

"It permitted us to work on the farm seven months of the year and to wrestle with algebra, Latin, and calculus the other five. It filled a need which far-away colleges could not supply.

"The major part of the students were sons and daughters of our neighbors round about the country, but others came from the village, and a few were from distant parts of the State. The town-bred girls were especially awesome to me, so graceful, so well dressed, and so composed were they. One or two of the boys wore tailor-made suits, and the easy flow of their trousers and the fit of their collars became at once my envy and my despair.

"'Some day,' I said to myself, 'I'll have a suit that will not gape at the neck or crawl at the ankle. See if I don't.'" Thus did Lincoln's ambitions take their rise.

"Shoes were just coming into fashion," he goes on to say," and one of the students from Dubuque wore pointed box toes which filled us all with wonder. He also owned collars of linen (which cost a quarter and had to be laundered), and displayed three violently contrasting neckties. His broad cuffs were fastened with gold buttons, and on Friday afternoons, when he rose to speak from the platform, he seemed to wave these splendors before our eyes with malicious satisfaction." Of such complexion are the tragedies and triumphs of boyhood!

"How I envied that youth his calm and haughty bearing. Most of us from the farm entered chapel like rabbits sneaking into a turnip patch, but Loring and Jack and Walter came in with the easy and assured manner of Senators or Generals—so much depends upon leather and prunella.

"Gradually I lost my terror of the crowd, but took care to keep behind some friendly bulk like young Blakestee, who stood six feet four in his gaiters."

Notwithstanding all these torments, Lincoln loved the school and could hardly be wrested away from it even for a half day. He sprang at his books with eagerness. He joined a debating society and took a hand at all the games. "The days went by on golden, noiseless, ball-bearing axles—and almost before I realized it, winter was upon the land."

Young Stewart's first year at the Seminary appears to have been vastly in-

You Want the Best Rubber Soles and Heels Your Money Can Buy

Whether your hobby is golfing, yachting, tennis or merely walking, there is an Essex Rubber Soled Shoe in the style you want at the price you have fixed to pay.

Essex Rubber Soles and Heels Are Best

for any purpose—their remarkable popularity among shoe manufacturers conclusively proves this. They combine quality in material, expert workmanship in manufacturing and intelligent attaching—the progressive manufacturers use Essex Rubber Soles and Heels exclusively. Most of the Rubber Soles worn in the United States bear the Essex trademark.

Definitely specify Essex goods the next time you purchase a pair of rubber soled shoes. All good shoe stores, department stores, and repair shops carry or can get Essex Rubber Soles and Heels.

ILLINOIS COLLEGE OF PHOTOGRAPHY
940 Wabash Avenue, Effingham, Illinois

The College of Medicine of the University of Illinois

Minimum admission requirements to the Freshman year, 60 fifteenth units of work from an accredited High School and in addition two years in a recognized university or college including at least one year in college physics, biology, chemistry and six college hours in French or German.

For course of Medical study, four years are required.

With equipped laboratories and great hospital facilities. Eligible students will receive the degree of B. S. at the completion of the Sophomore year.

Excellent location in the heart of Chicago's great medical center.

Catalogue and Illustrated Booklet Sent Free.

For full information, including entrance requirements, fees, etc., address Secretary, Box 17

COLLEGE OF MEDICINE of the UNIVERSITY OF ILLINOIS
Congress and Honore Streets, Chicago, Illinois

MECHANICS INSTITUTE ROCHESTER, N.Y. **Technical Training**

For Engineering, Industry, Trades, Art, Home Economics, Teaching (Manual Training, Domestic Science and Art, Applied and Fine Arts). Two or Three Year Courses. Mechanical, Electrical, and other special courses for grammar school graduates. Engineering and professional courses for high school graduates. Inexpensive. Apply for special bulletin.

THE REGISTRAR, 52 Plymouth Avenue.

Detroit College of Law

Established 1891. Prepares for the Bar in all States. Two distinct schools—Day and Evening. Three years' course leads to the degree of LL. B. Students may witness 20 courts in daily session. Law Library 19,000 Vols. Catalog mailed free. Self-supporting students should write for pamphlet describing our efficient Bureau of Self-Help. Address MALCOLM McGREGOR, Sec'y, 540 Penobscot Building, Detroit, Mich.

Study Dentistry at the INDIANA DENTAL COLLEGE

YOUNG men and women, here is an exceptional opportunity for you to equip decidedly at a relatively moderate cost for business and living expenses. The course is three years. The demand is great and unsatisfied. Class is limited—enrollment. Write for catalogue. Address

INDIANA DENTAL COLLEGE
S. W. North St.
Indianapolis, Ind.

Music and Drawing

Special One-Year Course

Thoroughly equipped young men and women to teach these subjects in the Public Schools. The demand for these teachers greatly exceeds the supply. Field offers great opportunities and large salaries. We have been graduating teachers and placing them in well-paying positions for 24 years. Domestic Art, Domestic Science, Physical Training, Industrial Arts and Manual Training. Also two-year course. Strong faculty. Catalog.

The Secretary, Thomas Normal Training School, 4103 Grand Boulevard, Detroit, Mich.

WINONA COLLEGE OF AGRICULTURE

LEARN SCIENTIFIC FARMING

2 new agricultural courses prepare for all phases of farming. 13th Annual Session begins September 7. Experience on College Farm. Excellent Laboratory Equipment. Faculty of Experts. Limited number of students. Increasing demand for teachers of Agriculture. Good table living facilities. Athletics. Expenses reasonable. For catalog address

Opportunities for the clinical application of the principles of dentistry unexcelled. Infirmities gladly furnished. Write W. E. GRANT, M. D., D. D. S., Dean, 133 E. Broadway.

Girls' Educational Institutions

Mary Baldwin Seminary For Young Ladies Staunton, Va.

Term begins Sept. 16th, 1914. Located in the Shenandoah Valley of Virginia. Unsurpassed altitude. Modern appointments. Students from forty-seven States and foreign countries. Terms moderate. Pupils enter any time. Send for catalogue.

Miss E. C. WEIMAR, Principal.

proving. He records some of the changes. "My hands softened and lightened. My walk became each day less of a "galumphing plod," and no doubt the companionship of bright and interesting young people and the sight of well-dressed men and women in attendance upon lectures and socials did have a refining effect upon the graceless cub.

Some time during the winter Wendell Phillips lectured on "The Lost Arts" and Duncan took his whole family to see and hear this hero of his Abolition days in Boston. Lincoln admits a feeling of disappointment. "All I saw was a tall, handsome old gentleman with clean-cut features standing behind a pulpit in the Congregational church and reading a manuscript. He spoke quietly like a person addressing a group of friends, with scarcely a gesture and without once raising his voice in oratorical fashion. Toward the last he did, indeed, thrill us for a moment, but only for a moment.

"Father, too, was disappointed and shook his head sadly. 'He's not the orator he was in the good old anti-slavery days,' he said, and passed again into familiar account of that famous speech in Faneuil Hall.

"Much as I enjoyed this winter, greatly as it instructed me, I cannot recover from its darkness more than here and there an incident, a phrase, a song. It was all delightful, but so filled, so crowded with joyous hours that I retain but a general impression of satisfaction and regret—satisfaction with the life, regret at its inevitable ending in the spring—for my father, irritated by his renter, decided to put us all back upon the farm."

Judging from the entries in an old diary of 1877, our son of the Middle Border was given neither to introspection nor precocious poetic passion. On March 27 I find these words: "To-day we move back upon the farm." No more, no less. Not a word of comment to indicate whether he regretted the decision or welcomed it, and from other subsequent, equally bald, notes I derive the general information that Duncan retained his position as grain buyer and that he drove back and forth every day over the five miles which lay between the farm and the elevator. There is no mention of the mother, no hint as to how she felt, although the return to the loneliness and drudgery of the farm must have been at the moment rather grievous. In his later comment however Lincoln says: "My muscles were soft and my head filled with new ambitions, but there was no alternative. It was back to the plow, or out into the cold, cold world, so forth I went upon the soil in the old familiar way, there to plod endlessly behind the seeder and the harrow. It was harder than ever to follow a team for ten hours over the soft ground, and early rising was more difficult than ever before, but I discovered some compensations which helped me bear the discomforts.

"I saw more of the beauty of the landscape than before, and I now had a definite ambition to occupy my thoughts.

"The memories of the Seminary, the echo of the songs we had sung, gave the morning chorus of the prairie chickens a richer meaning than before. The west wind laden with the delicious smell of uncovered earth, the tender blue of the sky, the cheerful chirping of the ground sparrows, the jocund whistling of the gophers, the winding flight of the prairie pigeons—all these sights and sounds of spring swept back upon me, bringing something sweeter and more significant than ever before. I had gained in perception and the power of assimilation."

Without doubt this year in town can be regarded as a very significant event in the lives of these boys. It tended to warp them from their father's designs. "It placed the rigorous, filthy drudgery of the farmyard in sharp contrast with the care-free companionable existence led by our friends in the village, and made us long to be of like condition. We had gained our first set of comparative ideas and with them an unrest which was to carry us very far."

The Next Installment
GOLDEN DAYS AT THE SEMINARY
will appear in an early issue

Bealby

(Concluded from page 13)

The Captain, full of an irrational resentment, did his best to halve the hole and failed. "You ought to put in a week at nothing but putting," said the Professor. "It would save you at least a stroke a hole. I've noticed that on almost every green, if I haven't beaten you before, I pull up in the putting."

THE Captain pretended not to hear and said a lot of rococo things inside himself. It was Madeleine who had got him in for this game. A beautiful healthy girl ought to get up in the mornings. Mornings and beautiful healthy girls are all the same thing really. She ought to be *dewy*—positively dewy. . . . There she must be lying, warm and beautiful in bed—like Catherine the Great or somebody of that sort. No. It wasn't right. All very luxurious and so on, but not *right*. She ought to have understood that he was bound to fall a prey to the Professor if she didn't get up. Golf! Here he was, neglecting his career; hanging about on these *beastly* links, all the sound men away there in France—it didn't do to think of it!—and he was playing this retired tradesman's consolation! (Beastly the Professor's legs looked from behind. The uglier a man's legs are the better he plays golf. It's almost a law.)

That's what it was, a retired tradesman's consolation. A decent British soldier has no more business to be playing golf than he has to be dressing dolls. It's a game at once worthless and exasperating. If a man isn't perfectly fit, he cannot play golf, and when he is perfectly fit he ought to be doing a man's work in the world. If ever anything deserved the name of vice, if ever anything was pure, unforgivable dissipation, surely golf was that thing. . . .

And meanwhile that boy was getting more and more start. Anyone with a ha'p'orth of sense would have been up at five and after that brat—might have had him bagged and saf- and back to lunch. Ass one was at times!

"You're here, sir," said the caddie.
